Frontispiece

Vihāramahādevi, daughter of the King of Kālaniya, about to be set adrift to appease the sea gods.

Wall painting at Kālaniya Rajamahāvihāra.

IN MEMORIAM

We record with sorrow the passing away of Dr. L. P. N. Perera, Professor Emeritus, former Professor and Head of the Department of Pali and Buddhist Studies and one time Vice-Chancellor of the Sri Jayawardenapura University of Sri Lanka. An expert of the Pali language, he was a versatile writer on Buddhist Philosophy in the English medium and was accepted by scholars in general as a clever exponent of Buddha Dhamma. His contributions to the Encyclopaedia of Buddhism DEMOCRACY, EGALITARIANISM and HUMAN RIGHTS remain as monuments to his profound and indepth understanding of the sublime teachings of the Buddha.

Professor L. P. N. Perera served the Encyclopaedia of Buddhism as an expert consultant, for over 10 years.

JARA, old age, decrepitude, senescence, senility, frequently combined with the next stage in the process of life, death, as jara-maraṇa. As a characteristic of the process of change (vayadhamma or anicca) the state of senescence or senility is the common lot of all living beings in keeping with the decomposing nature of all that is composed (sahkhata). According to the Buddhist analysis of the nature of phenomena, they are constantly in a state of flux wherein three stages as birth or coming into being (uppāda), continuance (thiti) and dissolution (bhanga) are accepted. These stages are spoken of for purposes of clear understanding for, they are merely three aspects of the process of change, which, when applied to the human being, shows how beings are born, grown old and die. Normal old age or senescence as well as illness and senility have thus to be regarded as part of life.

Buddhism does not accept the phenomena of birth as the beginning of one's existence, for it teaches that birth is preceded by death which again is followed by birth. In this cycle of repeated births and deaths (samsāra) is found the characteristic of ageing as a part of it. And it is this fact that is repeatedly mentioned in the Buddha's teaching as 'birth is suffering, decay is suffering, death is suffering' in the explanation of the fourth Noble Truth (Vin. I, 10; A. I. 176, III, 416 etc.). This analysis shows that jara is inherited by man at his birth which fact is explained by Buddhaghosa in the following words, "just as budding toadstools (ahicchattaka) always come up lifting dust (paṃsu) on their tops, so beings are born with ageing and death" (Vism. VII, section 10). This natural tendency of living organisms for senescence and senility cannot be avoided unless the decayless and deathless (ajarāmara) state of Nibbāna, as preached by the Enlightened Ones, is realised.

People like to remain young and youthful and old age is not a welcome phenomenon. To be old and feeble, incapable of fulfilling the normal activities of life, is psychologically a painful thing and is inevitably followed by death and this is why jara is characteristically described as painful (dukkha). A stock description of the state of old age is found in several places in Buddhist literature which runs as "growing old is the decay the decrepitude, the breaking up, the hoariness (pālīca), the wrinkled state (valittacā), the shrinkage of life's span, the collapse of the sense-faculties (indriyānaṃ paripāka, D. II, 305, M. I, 49, S. II, 2 etc.). The fact that physical degeneration is inevitably accompanied by mental deterioration is meaningfully expressed by the phrase 'indriyānaṃ paripāka' which means the failure of all the sense faculties, which, having become incapable of fulfilling their functions have begun to give way, resulting in the atrophy and involution in the structure of organs and of tissues. A very graphic description of old age, especially in its physical aspects, is also found: "any human being, a woman or a man, eighty, ninety or hundred years of age, broken down, bent inwards like the rafter or a roof, crooked, staff propped and trembling as he/she goes along, ailing with youth gone, with broken teeth and grey-haired or hairless, bald, with wrinkled brow and limbs all blotched and spotted" (A. I, 138; M. I, 88). A rather philosophical and a poetic account is given by Buddhaghosa in the following words:

"With leadenness in every limb
With every faculty declining
With memory and wit grown dim
With strength now drained by undermining
With growing unattractiveness
To wife and family and then

1. Man is said to be burning (ādīta) from these forms of suffering (Vin. I, 34).
2. It is the prevalence of birth (jāti), old age (jara) and death (maraṇa) that necessitates the appearance of Buddhas in the world (A. V. 144).
3. Hardly an improvement is possible in this description of the physical appearance of old age in all its aspects. An important fact to be noted here is that the age of the old man is given as 80, 90 or 100 years from birth. A description found at J. I, 59, is not so comprehensive and picturesque. See also Vism. XI, section 36.
With dotage coming on, what pain
Alight of body and of mind
A mortal must expect to find!
Since ageing all of this will bring
Ageing is well-named suffering." (Vism. XVI, Section 45. Bhikkhu Nanamoli’s translation).

Buddaghosa, quite scientifically, describes ageing as three-fold. First is the physical old age visible in beings as earlier described and which has the characteristic of maturing material instances. Its function is to lead on towards their termination. It is manifested as the loss of newness without the loss of individual essence, like oldness in paddy. Its proximate cause is matter that is maturing and is called visible ageing (pakata-ajarā). Second kind is that of immaterial states, which has no such visible alteration and is called hidden ageing (paticchanna-ajarā). And thirdly the ageing that is found in earth, water, rocks, the moon, the sun etc. and is called incessant ageing (avici-ajarā: Vism. XIV, section 68).

The impatient and the conflicting nature of the unenlightened average man’s mind (assutāvā puthujjano) when brown old in the state of “second childhood and mere oblivion” is briefly but comprehensively described in a discourse of the Anguttara Nikāya (III, 54) as follows: “he mourns (socati), pines (kilamati), weeps and wails (paridevati), beats his breast (uratalle kandati) and fails into bewilderment (sammoham āpajjati). Pierced by the poisoned dart of sorrow he just torments himself”. The aversion that the human mind feels towards this unwelcome guest called old age is brought out here quite characteristically. By developing this attitude of impatience he would find his food not pleasing, ugliness would come upon his body and the activities of his life would be neglected. But the intelligent man, without thinking in the aforesaid manner, overcomes this feeling of impatience with philosophic calm by reflecting that old age is not his individual and private lot but something common to all beings, for whereas there is coming (āgati) and going (gati), passing out (cui) and arising (upapatti) of creatures, to all ageing brings decrepitude (jarādhamman jīrati). Contemplation on the unavoirable ability and the universality of old age is also recommended as a means of overcoming the mental fetter of the pride of youth (yobbanamada) due to which many people misbehave (A. III, 71 ff.).

The degree to which a person may be able to develop this philosophic attitude towards old age would decided the degree of sorrow he experiences due to it. Ability to develop such an attitude can make life more cheerful if death and this ability cannot be had suddenly, for it is the individual’s previous kamma that would decide it. It is owing to this fact that sometimes we come across me that exhibit varying degrees of wisdom, or grace anj patience in their old age.5

However, in the ultimate analysis, even this cheerful acceptance of old age as the inevitable lot of humanity is not the true solution that Buddhism offers for the problem of senility. It teaches that there is a state free from these sorrowful changes of birth, old age, disease and death in the changeless state called Nibbāna,6 which is accordingly described as free from decay (ajāra) and which state could be realised by following the Noble Eightfold Path as expounded in the fourth Noble Truth.7 Old age itself is a disease and it is for the sake of convenience that a distinction is made between old age and disease.8

A. G. S. Kariyawasam

JATAKA is the technical name in Buddhist literature for a story purporting to tell one or other of the previous births of Gotama the Buddha before he attained final enlightenment. Such story is sometimes called a “Bodhisattva story,” that is “a story in which the Bodhisatta (a being destined to become a Buddha) plays a part in one of his former existences, whether as the hero of the story or

4. Jarā along with disease and death is in fact called a visitor or a messenger of death in the Devadūta Sutta A. I, 138.
5. Compare also this statement in the Suttamīṭa (v. 581).
6. Since death and since
decay assail the world
The wise, who know
its laws, forbear to grieve.
(Lord Chalmers’s translation).
7. See also the Jarā-vagga of the Dhammapada (vv. 146–156) which has as its keynote the value of taking old age as a ground for urgency, for heedfulness.
8. Ayameva ariyo atthangiko maggo jarāmarāta-nirodhaṅgāminī patipadā (D. I. 305: M. I, 49). At A. V, 144 ff. the method of overcoming birth, decay and death is given as the purification of the mind of various defilements beginning from the three basic ones, passion (rāga), hatred (dosa) and illusion (moha). See also A. I, 51.
as a secondary character or as a spectator only." 1 The term is also used for the name of a collection of 547 such stories included in the Pali Buddhist Canon. In the Pali version these stories assume diverse forms. They may be simple tales or beast fables, stories of common life or narratives portraying the lives of kings and countries, usually told in prose with the climax or essential part in verse. With a very few exceptions, this verse or these verses, which as being utterances of the Buddha are regarded as canonical. Although the canonical book of reference is made to number or an exact one. certain, however, if the reference made was to a round niddesa; and continued to grow over a considerable time before their present form came into existence, nor how many of them were among the original number.3 What can ·be scriptures, not included in the work of that name. 

Some Jātakas have been included in a separate compilation, the Cariyā-piṭaka 4 (verses on the Buddha-perfections), while there are others in various parts of the scriptures, not included in the work of that name.

It is not possible to say exactly when the Jātakas in their present form came into existence, nor how many of them were among the original number.1 What can be definitely stated is that they must have come into being and continued to grow over a considerable time before they reached their final form. In the time of the Culla-nidāsa, there appear to have been 500 Jātakas, for reference is made to pāliça-jātaka-satāni.4 Five hundred was the number seen by Ywang Chan too. One is not certain, however, if the reference made was to a round number or an exact one.

1. Meaning of the Word. The generally accepted derivation of Jātaka is from Jāta, in the sense of 'born', 'engendered', 'birth' + ka. Thus jātakam (n.) would mean 'birth', 'nativity or 'life' and in the Buddhist sense, a story of one of the former births of the Buddha.5 In this sense, it occurs as one of the 9 categories (navagga) of library composition (M. I. 133, A. II, 103, 108, Vin. III, 8, Pug. 43). Also connected is the meaning of the word as referring to a story of, a previous life of the Buddha especially as an animal, in which sense it is not found in the 4 Nikāyas, but is found in the Bharhut 'Tape and occurs frequently in the Jātaka book. Following from this, the word is used as the name of a book in the Pali Canon, containing the verses of 547 such stories, referred to above.4 An alternative derivation of the word has been proposed and adopted in some quarters where jāta is taken to mean 'what has become', 'what has happened', and the word translated as "Geschichtchen, tale, story."7 As a noun in the masculine jātaka belonging to what has been born' means a son (J. I. 239; IV. 138).

In the Buddhist sense of a story of a former birth of Gotama the Buddha, the word Jātaka occurs for the first time in Buddhist Sanskrit literature, in the text Buddhas-carita.

In the last mentioned text in Sanskrit and especially in the Avadāna texts, the word occurs as a common noun identical in meaning with Pali Jātaka of the previous birth of the Buddha. This usage is found particularly in colophons to many stories in Mahāvastu, e.g. 1.282.13; also as a name of work or class of literature, sometimes at least referring to a collection of such stories like the Pali Jātaka as one of the nine (Mvy. twelve) pravacana, canonical texts (Mvy. dhārma-pravacana dharmas.9 Although the twelve-fold classification of texts came to be associated with the Buddhist, religious literature, having become popular through the writings of later scholars, reference to nine-fold divisions of religious texts must be quite early, for, it is mentioned in the verse 1.113.5.22.

2. Malalasekera, G. P. Dictionary of Pali Proper Names, 1. 951
3. Ibid
4. Ibid
9. Mahāvyutpattī ed. I. P. Minayeff, St. Petersburg, 1911, p. 62. gives the list of pravacana dharmas as follows in this order:
   11. edbhūtadharma 12. upadesa.
portion of the Saddharma-pundarīka. In an interesting reference in the mahākarma-vibhaṅga the term occurs in a single phrase combining both meanings. The context is one in which the question is raised as to what kind of act (karma) leads to a definite rebirth, and the answer given as an act performed in a former birth of the Exalted One. The relevant quotation, in translation, runs: "as it is depicted in the Jātaka (collection), in the Śyāmaka-Jātaka and such others beginning with it, the Exalted One's births (upapatti = rebirth) as (an act of) ardent desire. Such an act (karma) is one that leads to a definite birth."

Another meaning for the word has been proposed, on the basis of an examination of certain statements where it occurs as a masculine plural. The citations are taken from the Bodhisaṭṭva-bhūmi. It has been suggested that the meaning, in those instances, is "experiences in past births", particularly of Bodhisattvas. The relevant passage translated runs: "by the knowledge consisting of remembrance of former births he reveals to creatures, in order to make them well-disposed to the Buddha, his experiences in past births etc." where jātakān has been rendered by "experiences in past births." The expression may be more fully translated as "by the knowledge consisting of remembrance of former births, he proclaims to sentient beings, in order to inspire faith in the Buddha, jātakas (i.e. Jātaka stories), comprising the most marvellous conduct in his former career as Bodhisattva". The context does not elicit for certainty, the meaning of "experiences in past births for jātakān. It may well mean "birth story" or "jātaka story", the basic meaning of the term in Buddhist texts. The other passage cited is from the same work as the earlier one. Translated into English, it would read, "by the power of knowledge consisting of remembrance of former births, the Tathāgata recalls stories of past events and jātakas of the past... to those ready to be instructed." Here too the word could well mean "Jātaka stories" as translated above. There is no particular reason for it to be construed "experiences in past births", as it has sometimes been. The word occurs, in the present case along with itivṛttā which is based on Pali itivuttam (=skt. ityuktaṃ), but Buddhist Sanskrit has through hyper-sanskritism, been formally blended with itivṛtta(ka). This latter term, it has been pointed out, has been connected by Tibet transactors with -vṛtā rather than -uktā and, as a neut noun, was the name of a canonical work. And like jātā again, it could mean "story of past events, story of history". In the light of the contexts in which the word appears, there is thus hardly any justification for jātā to be taken as a secondary extension of its first meaning.

A third meaning of the word has been proposed on the basis of its occurrence in the Mahāvastu. That is the meaning of 'birth' or 'nativity' in the sense of (astrologically determinable) personality and destiny, as in Skt. tathāga, possibly "future birth." Since it has been contended the author of the BHS, that these passages, and especially the term, have been misunderstood by another well known scholar they deserve to be scrutinized more closely. Such a scrutiny will enable one to get a clear view of the term's meaning in context.

The first of these quotations, as given in the BHS record (bodhisattvacaritam...) Jātaka-paramātesu kovidā (desā...
yanti... śīvarā)\textsuperscript{22} and is there translated "Lords (Buddhas) being skilled in nativities (indicating personality and destiny, or future births) and in the thoughts of others proclaim the (future) course of Bodhisattvas...

where, it will be seen, the compound Jātakā paramatesu has been rendered as "in nativities and in the thoughts of others". Two comments may be made regarding this rendering. One is that "jātakā" has been translated by "nativities", in the sense of "birth" astrologically considered, with a suggestion indicating personality and destiny together with a possible alternative meaning of future births. The other is that the compound itself has been taken as comprising the two elements jātakā and paramata, both being construed as plurals and translated accordingly. With regard to the first, the question may be asked as to what the Lords (śīvarā) who in this instance are the Buddhas, are skilled (kovidā) in. One possible answer is that which the translator gives, namely "nativities and the thoughts of others." Another possibility is that it could be the jātakas (i.e. the jātaka tales) and the views of others. A third possibility is tied up with the analysis of the compound (could not the compound be analysed as jātaka + paramatesu?) Let us consider each of these alternatives separately. The author of the BHS has evidently broken up the compound, as noted above, into the elements jātakā + paramatesu, translated the first element as "nativities" and the other as "the thoughts of others." The only other instance where the word "paramata" occurs in this sense is a little later in the same text where the expression "sarvaparamatamo" is to be found\textsuperscript{23} and that in the singular (though it has been translated in the plural). What the Lords proclaim or preach, that is the direct object of "desayati", is "bodhisattvacaritam... damsādāna samvaram", "the course of Bodhisattvas (exemplified by or consisting of) self-control, charity and restraint" or alternatively "self control, charity and restraint... (exemplified or illustrated by) the course of Bodhisattvas." What they are, skilled in is the jātaka and paramata. Here the interpretation of the author of the BHS — namely "nativities" or "births cannot be ruled out completely, although it is more likely that the context elicits the meaning of "jātaka tales and the thoughts of others". This is taken as the second possible interpretation of the compound, referred to above. In fact, the translator of the Mv, quoted in the footnote earlier, translates the expression as "Jātakas and other lore", where jātaka has been taken in the sense of jātaka tales. Interesting also is his rendering of the second element of the compound as "other lore": (Could it be that he took the latter part of the compound as - aparamatesu and translated accordingly, for "other lore" is certainly not the same as "the thought of others"?\textsuperscript{7}). It is noteworthy also that the translator here takes "dama dāna samvaram" (= self-control, charity and restraint) as the direct object of 'desayati' grammatically and "bodhisattvacaritam mahāpākām," which he translates as "the qualities that bring a Bodhisattva career to a great maturity"\textsuperscript{24} as attributes of the three qualities mentioned and standing in apposition to them. The two compounds occurring in the verse may, of course, be interchanged without seriously impairing their meaning. Paramata has in classical Sanskrit the lexically attested meaning of "different opinion or doctrine, heterodoxy," while "mata" as a neuter noun means "a thought, idea, opinion, sentiment, view, belief, doctrine" and more. Thus the meaning given it by the author of the BHS is not entirely unacceptable. That is admissible, however, only if the compound is divided into the two components as he had done.

This leads us to the third possible interpretation which derives from the analysis of the compound. The natural division into components would be, as has been suggested above, jātaka apramatesu (rather than jātaka + paramatesu). The special attribute of the Lords (śīvarā) here is "skilled" or "learned" (kovidā). And skilled in what? In (the knowledge of) birth stories (jātaka) and other views (apramata), the latter term being understood in the sense of divergent opinions or heterodox views, views that were not countenanced by the Buddh. The

22. The complete quotation, which is in verse, is as follows:

"Bodhisattvacaritam mahāpākām
jātakāparamatesu kovidā
desayantī damsādāna-samvaram
bodhisattvaparāśavya śīvarā"

J. J. Jones, The Mahavattu translates it thus: "The lords, learned in the jātakas and other lore, preach to the concourse of Bodhisattvas self-control, charity, and restraint, as the qualities that bring a Bodhisattva's career to a great maturity". He adds the following note to the interpretation of mahāpākām: "Literally, great maturity, mahāpākām, shortened metri causa for the meaningless sahāyakam, Or, should we not read mahāpahalam, "great fruition"? (vol. I. 82. fn. 5).

23. Mv. i. 192. 18

24. Senart assumes rightly that "mahāpākām " here represents "mahāpākakām" and has been so altered for metrical reasons. He explains the word as "grande (c'est) dive difficile, longue) a "murir", that is great in the sense of difficult, long to ripen. He further adds that such shortening of vowels, though indeed rare, are not altogether absent and gives "parivara" for "parivāra" as an example (idem. 459 note on 1. 12 of text).
The next quotation which is a brief prose passage from the same text, appears almost immediately after the verse referred to earlier and, like it forms part of a dialogue between the Elders Mahā Kaśyapa and Mahākātyāyana. It takes the form of a question put by the former to the latter and the answer given by him, as the Mv. translator puts it, the question reads: "O Son of the Conqueror, to what stage of his Bodhisattva career does the Maryastaka of the Conqueror in the Jātaka texts have to be assigned?"

The reply, in translation reads: "My pious friend, the Jātaka related by the Conqueror go back to the eighth bhūmi." It may be noted right away that the translator renders "Yāminīni jīna-parānubhūthi" in the first instance, that is in the question, by "events related by the Conqueror in the Jātakas", whereas it is rendered by "Jātakas related by the Conqueror" in the second. What justification there is for identical expressions to be translated differently, and that too where the translation of a central term involves a change of meaning, is not clear. It is true that the expression "kutah-prabhūṭikām" occurring in the question and "āstamāṁ bhūmin" in the reply, raise certain difficulties but they do not permit two divergent interpretations of the same term, "bhūmi" in the present instance. The BHS author is right when he says that the meaning as Senart suggests, seems (from-prabhūṭikām) to be that they begin with the 8th bhumi, but may not be so when he goes on to say "but as this passage occurs in a description of the 4th bhūmi, it is future births or destinies that are meant". For, in both question and answer, the reference is to "yāminīni jīna-parānubhūthi" (i.e. Jātakas related by the Conqueror), and the variance resulting from the occurrence of these passages in a description of the fourth bhūmi and the assertion made that the Jātakas go back to the eighth bhūmi does not warrant the interpretation of "Jātakāni" as "future or destinies".

The third and last quotation from the same text, the word "Jātaka" occurs presents a problem different sort. Here the grammatical form and the meaning of "Jātaka" are doubtful. The text appears to indicate that it is a plural (unless it be a case of lengthening of the final vowel for metrical reasons) as has been so construed by both the BHS author and translator, with the difference that the former takes it as an indirect object of the verb "parīkṣanti" and translates second foot of the stanza in which it occurs as: "I perceive the disposition and the destinies (future births of all living beings) whereas the latter takes it as an attribute of "Sambuddha" occurring earlier in the stanza. It may be pointed out that the form of the word, if it be so construed, should be "Jātaka", according to norms of lexical Sanskrit usage. The translator reads the whole stanza into English thus: "The Buddhas, I understand good and bad conduct, know all the thoughts of others. In their various existences, they examine the disposition of all beings." If indeed the reading adopted in the text is correct, the translator's interpretation of the word (i.e. as an attribute of the Buddha and therefore nominative plural) is to be preferred to that of the BHS author. If Jātaka here was intended to mean jātakāni, originally had such a form, then the interpretation of the author of the BHS might hold. But there is no manuscript or other evidence in support of such a conjecture. However, the interpretation which the translator gives to be accepted, namely to take the word as an attribute of "sambuddha" then "Jātaka" could have a meaning: encountered elsewhere, either in Sanskrit or in Pali, meaning such as "in past lives, belonging to past lives". An interesting variant reading, appearing in a single verse cited by the editor of Mv. seems indirectly to support this interpretation, although with a slightly altered meaning. Instead of Jātaka, there occur the words yānakā, (which word is attested in pūrānic Sanskrit texts and bears the meaning of carriage or vehicle. In which case, sambuddhā... yānakā would mean "the supreme Buddhas... in their (sāṃśāric) careers". In the light of these considerations, a fresh translation of the stanza.
may be offered: "The Supreme Buddhas who understand good and bad conduct know all views of others.\(^1\) They, in their (different) lives perceive the intention of all beings." This interpretation, it will be seen, is based on the existing printed text.

Nonetheless, alternative interpretations are possible. Although textual evidence is not available to support the contention, it might well have been that "\(j\)at\(a\)ka" here stood for the word "\(j\)at\(a\)kan\(a\)" (masc. acc. pl.) and what has been omitted is only the last letter-\(n\), a minor scribal lapse. In keeping with regular Sanskrit usage, the text, in that case would have read "\(j\)at\(a\)k\(a\)ms sar\(v\)apra\(\tilde{\imath}\)\(n\)\(\tilde{\imath}\)\(n\)\(\tilde{\imath}\)am". If utterances of this nature took the form of prophecies, as many of them indeed were, and if the knowledge of the previous existences of all beings was considered a part of a Buddha's Supreme wisdom, then the word may have the meaning of "lives" or "past births." That meaning falls outside the two principal meanings of the word that we have noticed so far and will therefore have to be regarded as differing from them.

Certain other considerations relative to the text of the \(M\)\(h\)u. must also be borne in mind. It is not a composition of a single author written in a well-defined period of time, but rather a compilation which may have begun around the second century of the present era and was continued until the third or fourth century.\(^2\) The language did not remain unaffected by the influence of the Pali texts and other Prakrits, not to speak of the influence of the Mahāyāna text with their more radical departure from the proto-canonical Prakrit.\(^3\) The text is therefore not a homogeneous entity. These facts may, to some extent, account for the diversity of inflexional forms and other linguistic anomalies. Some allowance needs to be made also for the lapses of individual scribes.

From the foregoing discussion three distinct, though interrelated, meanings of the word \(j\)at\(a\)ka emerge. They may be summed up as follows:

1. a birth story or "life" of a previous birth of the Buddha, as found in the earlier books of the canon. As an extension of this, it may mean a birth story of the Bodhisattva in one or other of his numerous existences in his career on the way to enlightenment (i.e. Buddhahood), in the plural it could refer to the collection of such tales, usually 547 in number in the Pali text (see no. 3 below).

2. the name of one of the nine categories (nine and sometimes twelve in the later Sanskrit literature) or varieties of literary composition. In the Pali, this refers to a collection of verses - the \(j\)at\(a\)ka \(P\)\(a\)li.

3. the name of a narrative work in the form of a voluminous prose commentary - the \(j\)at\(a\)kat\(\tilde{\imath}\)\(a\)k\(\tilde{\imath}\)\(h\)ā, also known as \(j\)at\(a\)kat\(h\)a\(v\)i\(n\)\(n\)\(n\)\(n\)ā, in which the verses are embedded.

Besides the afore-mentioned principal meanings, it has been pointed out that in the Pali \(j\)at\(a\)ka collection the word has been in a very few instances, used to mean a son. Needless to say, this meaning of the word is exceptional. Likewise, there is the solitary instance in the \(M\)ah\(ā\)v\(a\)stu where the word may bear the meaning of 'previous existence' or 'past experience'. If the reading in the latter case is correct and the meaning properly understood, it may be compared with the first meaning in (1) above, here the reference is to past experiences of Buddhas.

2. Origins and development of the collection. Of the three principal meanings of the word \(j\)at\(a\)ka noted in section I above, those of the words as understood in (1) and (3) will be considered here. Of the two meanings given in (1), the extended meaning of the term to refer to a birth story of the Bodhisatta will be of primary importance, while that of a birth story of the Buddha as found in the early canonical works will be regarded as secondary and derivative. In the singular it would mean a single such story, generally included in the collection of such stories compiled later, while in the plural it would refer to the entire body of such stories. By collection is meant the voluminous prose commentary in which are included the verses (\(g\)\(a\)\(\tilde{\imath}\)\(h\)ā) referred to in (2).

The question of the origins and development of the \(j\)at\(a\)ka collection will be discussed here under four heads viz. (i) Sources (ii) Purpose of \(j\)atak\(a\)s (iii) the \(j\)at\(a\)kas in the Pali \(T\)\(i\)p\(i\)\(t\)a\(k\)a and (iv) The \(j\)at\(a\)ka commentary.

1. Sources. It is generally agreed that the collection of stories popularly known as the \(j\)at\(a\)kas, and in scholarly circles referred to as the \(j\)at\(a\)ka commentary or \(j\)at\(a\)kat\(\tilde{\imath}\)\(a\)k\(\tilde{\imath}\)hā, \(-\)\(a\)th\(a\)\(v\)i\(n\)\(n\)\(n\)ā, is a compilation which assumed its final form about the 5th century of the present era. It is the evolution of this voluminous work from its early beginning composed and written down in the Pali language by the Buddhist editor-commentator of a later epoch, that forms the subject of the present inquiry. The assertion that the collection assumed its final shape about a millennium after the demise of the Buddha, a relatively late period in the history of the religion, implies that the work must have gone through a long process of growth

\(^{31}\) That is the totality or entire body of other views. It is interesting to note that the same ms. which bears the variant '\(y\)ānākā' for \(j\)at\(a\)k\(a\)' has 'sar\(v\)aparamātan' for 'sar\(v\)-paramātan' adopted in the text. Senart, ibid.

\(^{32}\) Jones, op. cit. xi.

\(^{33}\) Ibid.
and development before it was put into writing. It implies also that the collection or compilation is not the work of a single author but the product of various hands. This is confirmed by the fact that this extensive corpus of story displays an astonishing diversity, not only in respect of the form and content of the narratives, but also in respect of size, structure and literary quality, gravity or frivolousness of episodes recounted, language and style, mode of presentation and attitudes of individual writers. The problem of origins entails two further issues which may be put in the form of questions:

1. How ancient are the *jātakas* tales? In other words, how far back do they go in the literary and historical tradition to which they belong and within which they have evolved?

2. What relation do they bear to other such tales in other literatures of India, such as for instance Vedic and classical Sanskrit, Buddhist Sanskrit and Ardha-māgadhī (Jaina), on the one hand, and what is the relation between them and their western counterparts, especially Greek and Latin parallels of the European classical tradition, on the other?

In a discussion of origins, answers to such questions, however brief and rudimentary they may be, will have to be provided. An exhaustive investigation of these questions will be out of place here, as some aspects of the issues raised in them will be dealt with separately in other sections of this present article. A discussion on the lines indicated above will help to bring to light certain important facts and elucidate certain points in the complex and obscure region of origins.

The term 'compilation' may be an inadequate description of the formation of the work which is popularly known as the *Jātaka* commentary. For, the final product of the *Jātakatthakathā* was not the result of mere composition, collection and accumulation of materials in a single volume albeit by diverse hands but the outcome of a laborious process that involved translating, retranslating, editing and even recasting of materials drawn from the most diverse sources, through a considerable period of time.

To return to the first question raised above: how ancient are the tales? To raise another related question: What was their original character and what form did they take, or might they have taken, when they are first heard of and known in literature?

The sculptured representations of scenes from the *jātakas* on the stone railings around the stūpas of Bharhut and Sānci are some of the earliest examples of monumental art. Those specimens bear witness to the existence and popularity of the tales as early as the 3rd and 2nd centuries B.C. though, of course, in a predominantly non-literary form. The Bharhut stūpa has preserved representations of a whole series of *jātakas*. On some of these sculptures are inscribed the names of the stories which they illustrate; in other cases, the inscriptions have been destroyed through the decay of the stone, and in certain others there have been no names at all. They include scenes not only from the *gāthās*, but also some that are related only in the prose commentary. These representations need not be taken as illustrations of texts of the Pali *Jātakas*. But these bas-reliefs provide incontestable proof that the tales were, in that early period, termed *jātakas* and considered sacred lore. (PLATES I, II & III).

There is literary evidence to show that the *jātakas* were known in a period anterior to that of the Bharhut and Sānci sculptures. There are instances of such stories recorded in the canonical literature which make them contemporaneous with the Buddha himself. It has been observed that the *Jātaka* collection does not include all the *Jātaka* stories which existed in North India in the early days of Buddhism. 34 There are stories in the canon which are technically *jātakas* because they purport to tell of the Buddha in an earlier birth, and conclude with an identification of characters, and are yet not to be found in the commentary: *The Ghaṭikāra Sutta* of the Majjhima Nikāya 35 where the Buddha himself says: "I was myself at the time the young Jotipāla, 36 the Kūtaganta and Mahāsuddassana suttas of the Dīgha Nikāya, and the Makkhādeva Sutta of the Majjhima Nikāya. The story of Dīghāvū is related in the Vinaya-piṭaka, without the hero being identified with the Bodhisattva.

The question was raised quite early in the last decades of the 19th century when Buddhism and its voluminous literature began to draw the attention of western scholars, as to what form the *jātakas* assumed when they first came into existence. The debate continued through the early decades of the present century. To put it in another way: were the verses (*gāthā*) earlier than the prose commentary? Or did the prose portions exist prior to the verses? Or, in the alternative was there, from the beginning, a mixture of verse and prose each component being of equal importance, or of one or other component having more weight than the other? It has been noted earlier that the *gāthā* portions are recognised as the canonical sections of the *jātakas* and are historically anterior to the commentary or prose portions. In a learned article, first

35. M. 11. 54
36. "aham tena samayena Jotipalo manavo ahusīm"
appearing in German and later translated into English under the title "The Prose and Verse Type of Narrative and the Jataka," Hermann Oldenberg, following Windisch, supported the view that in ancient India a type of narrative was popular wherein inside a general framework of prose there appear verses in emphasized passages, especially in the more important speeches and replies. For the conventional tradition of such narratives, it sufficed to teach and learn the verses. In that akhyāna type of narrative the prose was more liable to change in the course of being handed down, and that in its literary form rather than in meaning. The prose framework generally stood firm in relation to its sense and not to its narrative character. Poetic insertions could remain as part of established tradition, while the prose could be forgotten. Such verses remain unintelligible, in spite of the comments of the exegetes, and "will only perhaps, become, or begin to become, intelligible in proportion as our combinations succeed in restoring the forgotten framework of prose." The writer considers the Jātakas of the Pali canon as supplying the most essential support to these views. Their structure has been explained by Rhys Davids, Senart and others. Although the consensus of scholarly opinion favoured such a view, it was nonetheless not shared in all quarters.

In support of his theory, Oldenberg cites as an example Jātaka No. 212 (Uccitīthabhatta Jat.). He adduces the following arguments to strengthen his claim.

(a) The verses taken alone are to a large extent, me ningless, the prose introduced makes them clear, "that the verses were intended to complete just that context indicated by the prose is self-evident." Sometimes the story is entirely in prose (as in certain instances outside the Pali Jātaka). Sometimes it is recorded entirely in verse (e.g. Cāriyāpiṭaka), and sometimes first in prose entirely and then in purely metrical form, (No. 540, Sāma J., Mahāvastu, II, p. 209 ff).

(b) The type of mixed prose and verse narrative which is almost the only prevailing one, is the oldest or one of the oldest forms.

(c) But if prose additions, like those handed down in the Jātakatthavanānā (no. 212 above) belong necessarily, with a few exceptions, to the verses of our Pali Jātakas, then we must also add that this form of prose cannot be the original one.

(d) ..... in prose - especially in the minor decorative details etc., yet at times in those also of greater importance - traces of a more recent authorship than the verse are evident.

(e) A very large portion of these verses, ..... by its contents proves to have been composed just for the context - or for one more or less similar - in which we find the corresponding verses.

(f) The opening words of the first quotation apanāṇaka, become the title for the whole Jātaka.

(g) The verses constitute an essential element in the form wielded by the compilers of these stories. These verses are not given to the listener as quotations, as for instance, in the Pali Catatantra, where passages so often hear the stamps of having been taken from a thesaurus of popular philosophy. The prose-poetic narrative of Jātaka 151 appears here in another prose-poetic version, the verses in the one corresponding almost literally to the verses in the other.

(h) ..... the prose-and-verse form which the Jātaka collection bears for the most part, was already in existence and popular, at the time when the Nikāyas and the great Vinaya texts originated that, for instance, the Mahākāṇṭha Jātaka (pp. 253) appears in the Vinaya (Vol. III, p. 145 ff.) with exactly the same three verses as in the Jātaka collection, and also with a prose framework as in the latter, only with archaic prose in place of conventional prose.

(i) That the prose-and-verse Jātaka form was firmly rooted in the literary consciousness of India, may be seen by the fact that the form decisively asserts itself in the northern Buddhist Sanskrit literature too, and that at a time when purely metrical jātakas were actually to be found in it, yet co-existing quite distinctly beside them.

38. JPTS. 1910-12, ff. 19-50
39. JPTS. ibid.
40. A.B. Keith was one who opposed this view: "The Vedic Akhyāna and the Indian Drama", JRAS, 1911, 979 ff., exp. 985 f.; Hertel, J., argued that even in the Jātaka there was originally a fixed prose text. ZDMG. 62
41. This is contrary to the view expressed by R.O. Franke and certain other scholars who saw the Jātaka verses as borrowings from external sources. See Franke: "Jātaka Mahābhūrata Parallel" WZKM, x.x, 317 ff; Charpentier, ZDMG, xii, 745. Jat. 584 appears in MBL. II. 41; Jat. 151 in MBL. III. 194; Hertel, J., ZDMG-xiv. 1910, 58 ff. and WZKM, x.xiv, 1910, 121 ff.
42. Oldenberg notes here (Von Oldenburg, JRAS, 1893, 302; Pischel "Die lid Literatur" in Kultur der Gegenwart, T.1. Abt. viii. 188 that the different versions of the Jātakas generally agree in the verses, but are as a rule very different in the prose. This also testifies that the verses are at the base of the whole, (notice also the similarity in the Jātaka verses and the difference in the jātaka prose, in this Jaina parallels, in the case which Charpentier discusses, ZDMG, 1xii, 728.)
In the light of these considerations, it is reasonable to hold that the earliest form of the Jātakas known to us was a narrative of mixed prose and verse or a prose-and-verse ākhyānas. Oldenberg described it. The exact relationship of the two constituents remains somewhat obscure. One should, however, not fail to recognize the relative priority of the verse as well as its importance in providing the base and essential ingredient of the narrative. While maintaining the view that the jātaka, in its original form, was a narrative in verse within a general framework of prose, Winternitz goes on to explain the diversity of types that one encounters in the jātaka collection:

"Not one but several literary types", says Winternitz, "are represented in the Jātakas collection. There are some jātakas which were prose stories with only one or two or a few verses, containing either the moral or the gist of the tale. In these cases it is likely enough that the commentary has preserved more or less of the old prose stories. Another type of jātaka is that of Campu in which the story itself is related alternatively in prose and verse, in which case, the commentary is often an expression of the original prose text. But there are other jātakas which originally consisted of gāthās only. Some of them ballads in dialogue form, other ballads in a mixture of dialogue verses and narrative stanzas, others again epic or fragments, and some even mere strings of moral maxims on some topic. In all these the entire prose belongs to the commentary."

These last comments take us through almost the entire gamut of Jātaka stories from their early beginnings to the period of the commentarial collection. The view of the original form of the Jātakas put forward here agrees with that of an Indian scholar who says "a jātaka originally consisted of a verse or verses embodying in a concise form a part episode generally with a moral understood with the help of a prose narration, which for the most part remained implicit rather than explicit..." And further "The verses constituting the Jātaka proper, the story contained in them and narrated in prose was called "vattthu"and attuppatti", while its "vīthāra "or expansion was in the shape of either the identification of the past characters with the present ones or an extra moral made suitable for the occasion". The opinion of other scholars, too, tend to support the view that the earliest form of the jātaka was a mixture of prose and verse, a form which is a favourite method in Indian literature. Reciters of tales who introduced their songs in alternating stanzas to correspond to the speeches of the dialogue, must have prefaced them by a prose introduction, sometimes inserting explanations in prose, if and when the occasion demanded it. "The conjunction of a text in itself brief and obscure with an indispensable commentary is, one might say, the prevailing one in all periods of Indian literature down to the present. The figure of the poet who recites his verse in the middle of a prose narrative is still familiar in all parts of India, and may have been familiar to the earliest age".

Some of the poems, and a few of the prose narratives may perhaps reach back to such great antiquity. Some of the sayings and legends may indeed belong to the pre-Buddhist ascetic poetry. For the great mass of the verses, however, no greater antiquity than the 3rd century B.C. can be conscientiously urged, certainly not proved, and much of the prose assuredly belongs to the Christian era.

The second question raised here is what relationship these tales bear to other such tales in other literatures. While there are several jātakas scattered throughout the canonical Pali literature as well as the Sanskrit Buddhist Literature and even outside the literature of Buddhism, many of the stories of the Jātaka Book occur in the Pañcatantra, Kathāsaritsāgara and other Indian story books. Some stories have parallels in the Mahābhārata and in the Rāmāyaṇa, and still others in Jaina literature. There are also a large number of jātaka tales in the non-canonical Pali literature, notably in the Milinda-panha.

Since the place of the Jātakas in non-canonical Pali Literature and in Buddhist Sanskrit literature will be discussed in some detail below, some remarks regarding their connection with literatures outside the Indian sub continent seem pertinent. In this respect, the literatures of the classical European languages, Greek and Latin are particularly significant, while to a smaller extent the languages of modern Europe are relevant. Arabic literature also contains a body of stories which have connections with the Jātakas. In all these cases, the Jātaka tales have parallels in the story collections of those lands.

43. Indian Historical Quarterly (IHQ) Vol. iv. No. 1, 1928 March
44. Ibid.
45. De, G. Significance and Importance of Jātakas, Calcutta, 1951, pp. 26–45. The author, however, argues for a different origin of the Jātakas viz. their origin and development from non-Bodhisatta forms to later Bodhisatta forms. The Bodhisatta idea was not, according to him, an inherent feature of the original jātakas.
46. Ibid.
47. Ibid. 46.
49. Winternitz, History of Indian Literature, II. 121–122
Many Jātakas have parallels in the literatures of the West. The Nacca Jātaka (no. 32) where the peacock, dancing for joy at being selected as husband by the daughter of the king of birds, exposes himself, and is rejected, is an example. This fable (which is represented on the stūpa of Bharhut) was known to Herodotus (vi. 129) who narrates the story of Hippokleides. Another tale of interest is the Ucchānga Jātaka (no. 67) which is an anecdote of a woman whose husband, brother and son are condemned to death. Being offered a choice by the king, which one she would save, she chooses her brother and gives the reason, so that she would easily obtain a husband and a son but never again a brother. The same story is told by Herodotus (iii. 118-120) of the wife of Intaphernes, and Sophocles lets Antigone argue in the same way. The idea is to be met with in the Rāmāyana too in connection with an old Indian proverb which says that one can have everything in the world more easily than a brother. The story is thus very old both in India and Greece, but as Winternitz notes: ...... It is just as little characteristically Indian as specifically Greek, so that it can be hardly determined where its actual home is to be found. The gratitude of animals and the ingratitude of man is a common theme in the Jātaka tales. Thus one come by several instances of grateful animals and the ungrateful man. The Saccanīkā Jātaka (no. 73), which narrates the story depicting the base ingratitude of a prince, Duṭṭha Kumāra (Prince Wicked) by name and the gratitude of a snake, a rat and a parrot, is a good example. The Rūrumiṇa Jātaka (no. 482), a story of a rich spend-all who casts himself away on the Ganges, is another. The story goes on to say how a deer saved him, and he repaid the debt by betraying the deer to capture, but his aim was frustrated, and finally safety proclaimed by a monkey. The man makes an attempt upon the life of his benefactor, and for his ingratitude is smitten with leprosy. Such stories as well as that of the ungrateful wife, the Cullapaduma Jātakas (no. 193), relating the tale of a wicked wife who tried to murder her husband and finally was brought with her paramour for trial before her husband, then become king, and many others are widespread in Western literature. The MahāUnmāgga Jātaka (no. 546), a composite collection of stories in the form of a lengthy romance includes among its numerous anecdotes, riddles and narratives a version of the judgement of Solomon. It is of special interest also because it shows points of contact with the stories of the wise Ahiqār (Haikar or Heykar) in the Arabian Nights and with Planudes' Life of Aesop. Many Jātakas are well-known from their parallels of Aesop's Fables, as for example 'The Ass in the Lion's skin' in La Fontaine's Fables, in the Gesta Romanorum, in Chaucer's Canterbury Tales and elsewhere. Although in many instances it is possible that these stories migrated from India to the West, it is not impossible that in others Western movies were brought to India.

II. Purpose of the Jātakas: The primary aim of the Jātakas is to instruct, to teach the people the value of a good life. They serve as instruments of teaching the doctrine. In addition to this didactic purpose, there is no doubt that these stories are meant to amuse and entertain.

The Saddharma-puṇḍarīka Sūtra 54 says that the Buddha teaches both by sūtras and stanzas and by legends and jātakas. Again it is mentioned in the same work 53 that the Tathāgata, knowing the differences in faculties of his numerous hearers, preaches in many different ways, "tells many tales, amusing, agreeable, both instructive and pleasant, tales by means of which all beings not only become pleased with the law in this present life, but also after death reach happy states....." There is no reason to doubt, that the Buddha himself made use of popular tales in preaching to the people. The Mahāsudassana Sutta of the Dīghanikāya 56 where the Buddha preaches the Mahāsudassana Jātaka (no. 95), is one of many such instances recorded in the Pali Canon.
is certain that monks and preachers also did so. This was, indeed, a widespread practice throughout the length and breadth of India. The preachers of all religious sects there always took advantage of the native passion for story-telling and story-hearing, and made extensive use of stories to preach. They ventured frequently to take fables, fairy tales and amusing anecdotes from the rich store house of popular tales or from secular literature, altering and adapting them wherever and whenever necessary to suit their aims.

In the words of the compiler of the Nidāna-kathā (Introduction to the Jātaka) “The Apāṇḍaka and other Births, which in times gone by were recounted on various occasions by the great illustrious Sage, and in which during a long period our teacher and leader, desirous of the salvation of mankind, fulfilled the vast conditions of Buddhahood.”

III. Jātakas in the Pāli Tipiṭaka: In the canonical Pāli literature, especially in the Vinaya Piṭaka, there occur tales which subsequently became Jātakas, that is tales which in essence are Jātakas without the hero being identified with the Bodhisatta. Cullavagga VI, 3 may be compared with the Tittira Jātaka (no. 37) Mahavagga X, 2, 3 with the Dīghātīkāsala Jātaka (no. 371). On the other hand, there are some real Jātakas included in the Suttas. The Kīṭatadanta and Mahāśudassana Sutta of the Dīgha Nikāya and the Mahādeva Sutta of the Majjhima have corresponding Jātaka analogues.

There is a well-known reference to the Jātakas as a book of the Khuddaka Nikāya in the Cullāniddesa where a collection of 500 jātakas is mentioned. This collection, in the opinion of a reputed scholar, appears to be earlier than the scriptural basis of the Buddhist sculptures (at Bharhut and Sānchi) and hence earlier than the sculptures themselves, he goes on to say that “whatever the actual date of composition might be, it was certainly later than that of the suttanta jātakas scattered throughout the first four nikāyas.”

IV. The Jātaka Commentary: The extensive narrative work known as the Jātakatthavānaṇṇā from Fausboll’s edition of the work and more often as jātakatthakathā in other editions is the work of an unknown Sinhalese monk. It is a commentary or compilation of the 5th century A.C. E. J. Thomas thought that the Sinhalese text itself, upon which it was based, “was probably a translation of an older Pali work, and as several of the tales have been preserved in other parts of the Canon in a more ancient style.” According to the Gandhavamsa, a late Pali work of Burmese origin, the Jātakatthavānaṇṇā is a composition of Buddhaghosa. Rhys Davids quite early questions, on good grounds, the authorship of Buddhaghosa. E. W. Burlingame adds that both the language and style of the Jātaka Commentary differ from those of the authentic works of the great commentator. This commentarial work or indeed the attakathā in general, is said to have been written in Pali immediately after the canon, brought to Sri Lanka with the canon itself, there translated into the old Sinhalese (Eḷu) language, and then translated back into Pali by the compiler of the Jātakatthavānaṇṇā. Burlingame questions the validity of this and declares it to be unreliable and misleading on the grounds that Pali sources were used for the commentary. But as Winternitz suggests it may well be that it is only the prose which was translated into Sinhalese and then translated back again, the gathās were preserved unchanged in Pali. According to tradition, it is only the gathās which were included in the Canon. He observes further that “this tradition is probably correct in so far as both prose and verse originally came down orally; but the prose naturally had a less stable form than the stanzas so that when the prose was compiled, and later on, when it was written down, only the verses retained their original form whilst, in the case of the prose, the rendering of it was at first entrusted to the reciters, and it was only at a later period committed to writing by commentators.”

Fausboll referring to the statement of the Gandhavamsa that Buddhaghosa is the author of the Jātaka commentary, argues that while it is certain that the latter is the author of the Visuddhimagga, the Vinaya commentary and the commentaries to the four greater Nikāyas, it is incredible that he should have written six others equally long, especially if he remained only three years in the island, and was not only a translator, but also an independent writer.

Burlingame finds, as also does Winternitz, the arguments of Rhys Davids and Fausboll convincing. He adds that the strongest argument of all is, however, that the Jātaka commentary and the Dhammapada commentary, differ so widely in language and style from the genuine

58. Law, B.C., A History of Pali Literature, 1, p. 39
59. Life of Buddha, London, 1927, xvii–xxi
60. JPTS. 1886, p. 59
63. Winternitz, op.cit. p. 117
works of Buddhaghosa as to make it in the highest degree improbable that he is the author of either of them. Buddhaghosa is not the author of the Jātaka Commentary or of the Dhammapada commentary" he emphatically states, "Their authors are unknown".65

The Jātaka Commentary itself is a collection of 547 tales, each containing an account of the life of Gotama the Buddha during some incarnation in one of his previous existences as a Bodhisatta, a being destined to Enlightenment. That is the role he played before he became Buddha, the Enlightened One. The number of such "births" does not correspond to exactly 547 stories, since some of the tales occur more than once in a different setting, or in a variant version, and occasionally several stories are included in one birth. Each separate story is embedded in a framework, which forms the story of the present. This is generally an account of some incident in the life of the historic Buddha, such as an act of disobedience or folly among the brethren of the order, the discussion of a question of ethics, or an instance of eminent virtue. The Buddha then tells a story of the past, an event in one of his previous existences which explains the present incident as a repetition of the former one, or as parallel case and shows the moral consequences of the various acts performed. This is in most cases the real Jātaka. When reference is made to a Jātaka without any qualifying epithet it is that narrative that is generally meant. There is a third component of lesser importance the gatha or stanza forming as a rule, part of the story of the past, but sometimes also, of the story of the present. Another minor component is the grammatical and lexicographical comment known as veyyākarana, on the gathā, and lastly the 'joining together' or samodhāna of the two stories by identifying the characters of the story of the past with those of their 'lives' in the time of the Buddha.

As to when exactly the commentary was composed, there is no means of deciding. There is no doubt that a Sinhalese commentary in all likelihood, included verses in the original Pali and was translated or rather recast and reworked into Pali, formed the basis of the Pali compilation.

3. Literary Significance of the Jātakas: The Jātakas achieve a high degree of literary excellence both severally and collectively. This statement, however, needs to be qualified in order to forestall some possible misconceptions regarding the stories. In as much as one single story differs from another in shape and size, so too does an individual tale differ from each of the others, in respect of literary quality. This assertion is equally valid for the verse portions of the canonical jātakapāli (gathā) as well as for the later prose narratives of the commentary, Jātakaṭṭhakathā.

This section dealing with the literary significance of the Jātakas will be concerned, as its title indicates, primarily with a discussion of the value of the stories as pieces of literature. It is divided broadly into 4 sub-sections as follows:

(1) The intellectual milieu in which the stories originated and flourished; this will include some general remarks on their content and form, followed by a brief description of the arrangement of the stories;
(2) Individual Jātakas in the Pali Canon;
(3) The Longer Jātakas and
(4) Assessment of the stories as pieces of literary merit.

(1) The Intellectual Milieu

Although instances of claimed memories of previous lives, such as Pythagoras' claim to remember his past births as reported by Herodotus in his account of Aристeas of Proconnesus (iv. 14, 15) and Heracleides Ponticus' claim that he had once been born as Αθαλίδης and had then obtained a boon from his father as mentioned by Diogenes Laërtius (viii. 1) are not entirely wanting in Greek literary history, such events have generally been considered isolated incidents.66 The intellectual climate of India where the Jātakas flourished and one may add, in Sri Lanka where they were edited and written down, has been very different. In these milieus the recollection of previous lives is not a mere dubious theory but a widely accepted belief. It is a common feature in the histories of the saints and heroes of sacred tradition. Manu (iv. 148) mentions it as the reward of a self denying and pious life. This, along with its corollary, the doctrine of rebirth (punabhava), has played, since the Vedic times, such an important role in the life and thought of the Indian people that it has been a part of their national character and ethos. Buddhist literature from the earliest times has always assumed the reality of past epochs "as an authentic background to the founder's historical life as Gautama".67 Jātaka legends are found in the canonical literature, e.g. Sukhavīhārī Jātaka (J. 10) and Tittira Jātaka (J. 27) in the Cullavagga (vii. 1 and vi. 6); likewise the Khandavathā J. (203) in Culla vakka (v. 6); there are several other examples. So, for instance, a minor book, Cariyā-pitaka, of the Sutta Pitaka, consists of 35 Jātakas, retold in verse. All these can be identified in the Jātaka collections that have been published, which goes to show that the legends have always been recognized as an important constituent of Buddhist literature.

65. Burlingame ibid.
67. Ibid
This conclusion is confirmed by the fact that scenes from the Jataka tales are found sculptured in the carvings on the railings round the relic-shrines of Sânci, Amaɾāvatī, and especially at Bharhut where the titles of some stories are clearly inscribed over some of the carvings. The legends were also continuously introduced to religious discourses which were delivered by the various teachers in their wanderings, whether to magnify the glory of the Buddha or to illustrate Buddhist doctrines and precepts by appropriate examples.

Many scholars subscribe to the view that not all the stories contained in the Jataka collection are “Buddhist” in a somewhat restricted view of the term, or even that they emanated from a Buddhist milieu. Some of these birth-stories are patently Buddhist and depend for their point on some custom or idea peculiar to Buddhism, but many are said to be pieces gathered from folklore, “which have floated about the world for ages as the stray waif of literature and are liable everywhere to be appropriated by any casual claimant.” This is an interesting observation. It is however, worth noting that no proprietary rights have been claimed by Buddhists for these stories, apart from the claim that, by and large, they are tales with a Buddhist content and flavour and that Buddhist narrators and writers have invested them with a particular structure and form. Such appropriation of stories from a common stock by Buddhist samanâs in the course of their wanderings is therefore quite possible and is only to be expected, when one considers the historical and cultural context in which the stories originated. Equally important is it to recognize the fact that Jatakas tales have been, over the centuries, appropriated by storytellers belonging to far-flung regions to which they had migrated. They have been used by different authors to achieve their special objectives. Thus some of them have been used by Boccaccio or Poggio as merry tales whereas a Welsh bard has made use of them to embellish King Arthur’s legendary stories. “Chaucer unwittingly puts a jataka story into the mouth of his Pardonere when he tells his tale of “the ryotoures three”, and another appears in Herodotus as the popular explanation of the sudden rise of the Aecmalonidae through Maçgles’ marriage with Cleisthenes’ daughter and the rejection of his rival Hippocleides.”

It was remarked earlier that the compilers of the Jatakas have invested it with a special content, form and structure. The Jatakas are preceded in the Pali Text by a lengthy introduction styled the Nidâna-kathâ which gives the Buddha’s previous history (“lives”) both before his last birth and also during his last existence until he attained Enlightenment.

Each birth-story proper (i.e. ‘the story of the past’ or aṭṭavatta) is always preceded by a ‘story of the present’ or paccuppavatta which usually takes the form of a quasi-introduction to the former. This linking of ‘the story of the past’ and ‘the story of the present’ is an essential part of the plan of the original work. The Jatakas proper which is essentially a story of a by gone age is then always linked with some special incident in the Buddha’s life or with an episode describing his relationship with members of the sahâga. The question of the credibility of the historical data contained in “the story of the present” or the question whether such a story is a forced and laboured invention of the compiler or not, are irrelevant issues; for, the point is that each story is one element of a link which has already been made by the narrator.

Other indications of the compiler’s hand in the tales may be noted. Into many of the Jatakas there have been introduced grammatical or other explanations as, for example, in Apaṅgaka J. (1) when a haunted and waterless desert is mentioned; the mention is followed by a short but needless excursion enumerating several kinds of desert, and ending “now among these kinds, this one was of the haunted and waterless sort”. In other cases, still more pedantic notes are introduced. In the simple story of the peacock (Nacca J. 30) whose impudent strutting lost him his own future swan bride, the swan king (haṃsa-rāja) is made, in the heat of his own indignation, to draw a distinction between sense of propriety or conscience and sense of shame-sense of propriety which has its origin within the individual (hiri) and sense of shame which has regard to the opinion of others (uttappa).

The Tipalattha-miga J. (16) concerns a deer which had learnt the ruses of deer, being caught in a snare and eventually effects its escape. The tale which illustrates the cleverness of a deer who finally escapes from a hunter’s snare, is interpreted as a mere expansion of a popular rhyme that the deer has recourse to tricks by which he effects his escape, feigning to be dead. The relevant stanza translated runs as follows:

“In all three postures - on his back or sides -
Your son is versed; he strained to use light hoofs,
And save at midnight never slakes his thirst;
As he lies couched on earth, he lifeless seems;
And only with his under-nostril breathes.
Six tricks my nephew knows to cheat his foes." 73

The story merits quotation partly because it illustrates the point made with regard to the compiler's hand in the narrative and partly because it serves as an example of the direct and simple style of narrative.

"Once on a time a certain king of Magadha was reigning in Rajagaha; and in those days the Bodhisatta, having been born a stag, was living in the forest as the head of a herd of deer. Now his sister brought her son to him, saying "Brother, teach your nephew here the ruses of deer." "Certainly", said the Bodhisatta; "go away now, my boy, and come back at such and such a time to be taught". Punctually at the time his uncle mentioned, the young stag was there and received instruction in the ruses of deer.

One day as he was ranging the woods he was caught in a snare and uttered the plaintive cry of a captive. Away fled the deer and told the mother of the son's captive. She came to her brother and asked him whether his nephew had been taught the ruses of deer. "Fear not; your son is not at fault," said the Bodhisatta. "He has learnt throughout deer's ruses, and will come back straightway to your rejoicing." And so saying he repeated this stanza (cited above).

Thus the Bodhisatta consoles his sister by showing her how thoroughly her son had mastered the ruses of deer. Meantime the young stag on being caught in the snare did not struggle, but lay down at full length on his side, with his legs stretched out taut and rigid. He pawed up the ground round his hoofs so as to shower the grass and earth about; relieved nature; let his head fall; tolled out his tongue; beslavered his body all over; swelled himself out by drawing in the wind; turned up his eyes; breathed only with the lower nostril, holding his breath with the upper one; and made himself generally so rigid and so stiff as to look like a corpse; even the blue beetles swarmed round him, and here and there crows settled.

The hunter came up and smacked the stag on the belly with his hand, remarking, "He must have been caught early this morning; he's going bad already". So saying the man loosed the stag from his bonds, saying to himself, "I'll eat him up here where he lies, and take the flesh home with me." But as the man guilelessly set to work to gather sticks and leaves (to make a fire with), the young stag rose to his feet, shook himself, stretched out his neck, and, like a little cloud scudding before a mighty wind, sped swiftly back to his mother. 74

One may not entirely agree with Winternitz's view that "the stories of the present" are of little value being either very silly inventions of the commentator or borrowings from other texts, such as the Vinayapiṭaka, Suttapiṭaka or Apadāna, or from other commentaries (ER-E-Jātaka). There are many jātakas where 'the story of the present' has been well constructed and presented with elegance and lucidity of diction. But the classification of the tales proposed by him may still be helpful to the student interested in gaining an overall view of them. In respect of literary form, he recognizes 5 classes, which he proposes mainly for "the stories of the past" along with the canonical gāthās. He distinguishes the following:

(1) tales in prose which are included just one or two or few verses containing the moral or gist of the tale
(2) ballads (a) dialogues
   (b) mixture of narrative and dialogue
(3) long tales partly in prose partly in verse
(4) strings of moral maxims on some one topic
(5) regular epics or epic fragments.

In respect of content the tales are divided into the following groups:

(1) fables
(2) marchen (fairy tales, animal stories)
(3) anecdotes and comic tales
(4) tales of adventure and romance
(5) moral tales
(6) moral maxims
(7) legends.

The Jātaka collection, in its present form as a compilation of prose narratives together with the occasional verse or verses, is thus seen to be a unified work with the tales neatly organized and systematically ordered. It reveals the hand of an orderly compiler who was bent on producing, with the raw material available to him, a well constructed corpus of stories presented in an elegant and attractive manner. A large number of stories must surely have had, since the time of its compilation to the present day, as they have even for the modern reader, a varied appeal. Some tales are amusing while some are gruesome; some are romantic episodes while there are others that appeal to readers (or listeners) by startling them. Some stories are starkly realistic while others are plain flights of imagination into the realm of fancy. There are also stories

73. Cowell'd. op. cit. 49. The translator (Chalmers) states in a note that the commentator explains "eight hoofs" mentioned in line 2 as two hoofs on each foot of the deer, referring to the cloven hoof in each foot. The "six tricks" mentioned in line 6 are the three mentioned in line 1 and the three mentioned in lines 2, 3 and 5 respectively.

74. Ibid. ff. 49-50
that exploit the readers' love of the miraculous while still others strike the heartstrings of a near captive audience by their capacity to entertain as well as impart moral instruction. Some may draw the attention of the sophisticated reader as instances affording parallels to tales familiar from childhood.

There is no dearth of passages that display a happy blend of simplicity and ornament.

(2) Individual Jātaka Tales

As examples if stories having literary merit the "deer stories" may be cited. There are several Jātakas where deer figure as characters in the story, playing either the principal role or a subordinate one. Some of them are simple short tales while there are a few longer ones. Such brief tales do not exhaust the number of stories which could claim literary excellence. Lakhana J., Nigrodhamiga J., Kandina J., Vātāmiga J., Kharadīya J. Tipallathamiga J., (Nos. 11, 12, 13, 14, 15 and 16 respectively) are examples.

A single example would suffice to illustrate the neat and well-ordered presentation of the story, the simplicity and charm of style, and the felicity of diction.

The story of the past of the Vātāmiga J. (14 mentioned above) in Chalmer's English translation reads as follows:

Once on a time when Brahmadatta was reigning in Benares he had a gardener named Sanjaya. Now there came into the King's pleasure a Wind-antelope (Vātāmiga), which fled away at the sight of Sanjaya, but the latter let it go without terrifying the little creature. After several visits the antelope used to roam about in the pleasure. Now the gardener was in the habit of gathering flowers and fruits and taking them day by day to the king. Said the king to him one day, "Have you noticed anything strange friend gardener, in the pleasure?" "Only, Sir, that a Wind-antelope has come about the grounds". "Could you catch it, do you think?" "Oh yes; if I had a little honey, I'll bring it right into your Majesty's Palace."

The king ordered the honey to be given to the man and he went off with it to the pleasure, where he first anointed with the honey the grass at the spots frequented by the antelope, and then hid himself. When the antelope came and tasted the honied grass it was so snared by the lust of taste that it would go nowhere else but only to the pleasure. Marking the success of his snare, the gardener began gradually to show himself. The appearance of the man made the antelope take to flight for the first day or two, but growing familiar with the sight of him, it gathered confidence and gradually came to eat grass from the man's hand. He, noting that the creature's confidence had been won, first strewed the path as thick as a carpet with broken boughs, then tying a gourd full of honey on his shoulder and sticking a bunch of grass in his waist-cloth, he kept dropping wisps of the honied grass in front of the antelope till at last he got it right inside the palace. No sooner was the antelope inside than they shut the door. At sight of men the antelope, in fear and trembling for its life, dashed to and fro about the hall, and the king coming down from his chamber above and seeing the trembling creature, said, "So timid is the antelope that for a whole week it will not revisit a spot where it has so much as seen a man; and if it has once been frightened anywhere, never goes back there again all its life long. Yet, ensnared by the lust of taste, this wild thing from the jungle has actually come to a place like this. Truly, my friends, there is nothing viler in the world than this lust of taste." And he put his teaching into this stanza:

na kirattthi rascehi pāpiyo
ávāsehi vá saanthavehi vá
vātāmigam geheânissatam? 15
vāsamānesi rascehi Sañjaya ut? 16

There's nothing worse, men say, than taste to snare, At home or with one's friends. Lo! taste it was, That unto Sanjaya deliver'd up The jungle-haunting antelope so wild.

And with these words he let the antelope go back to its forest again.

It is worth noting that the story of the present of the Jātaka is no less interesting than the narrative cited above, from the point of view of literary merit.

(3) The Longer Jātakas

Some of the better known, longer narratives of the Jātaka collection are incorporated in the Mahāniśāta of the Pali Jatakatha-vanpanā. That portion of the Jātaka Book contains the last ten stories (nos. 538-547). They are entitled Mupakka, Mahājanaka, Sāma, Nimi, Khandañā, Bhūrīdatta, mahanārada-kassapa, Vīdhura-pandita, Mahā-ummagga and Vessantara are narrated in that order. Some of these stories like the Sāma Jātaka for instance, are prose romances, while others like the Vīdhura-pandita J. and the Vessantara J. are veritable epics, with the difference, however, that they are composed basically in prose and the intervening stanzas occupying generally a minor place. Some like the
JĀTAKA

...and the Mahāummagga Jātaka have in common with the novel of more recent origin. It is not even single stories but "story clusters".

It should be noted also, that although the Mahānipīṭa contains relatively long stories, many other such narratives have also been found in other sections of the story collection. For example, Kusa J. (531), Mahāhamsa J. (534) and Mahāsutta-jātaka J. (537) are a few example. There are several more scattered elsewhere in the work.

Many of the longer legends are qualified by the adjective mahā prefixed to the title in the Pali Collection; thus e.g. Mahābodhi J. (528), Mahā-dhammapāla J. (447), Mahāhamsa J. (534), Mahājanaka J. (539), Mahāānāra-Kassapa J. (544), Mahāpaduma J. (472) and so forth. Needless to say, not all stories which bear titles beginning with mahā are lengthy narratives, as, for example Mahāsudassana J. (95), Mahākānha J. (469), Mahākapi J. (407, 516), Mahāpalobhana J. (507), Mahāpānāda J. (264) and others will show; so, too, several stories which are not described as 'great' (mahā) such as Campeyya J. (506), Chaddanta J. (514), Sakhādīga J. (524) and Kusa J. (531) already referred to are quite lengthy stories in their own right.

A good example of the longer story is the Maha-bodhi-jātaka (528) which like so many other long stories, fall outside the Mahānipīṭa. The importance of the story lies not merely in the fact that it has been told concerning the perfection (paramī) of wisdom; there are other such stories which are narrated both succinctly and at length among the Jātakas. Some of them are to be found in the Mahāummagga J. (story of the Tunnel). Such stories have an intellectual appeal. In the Mahābodhi J., the Wise Bodhi refutes the doctrines of all disputants and vanquishes them. It illustrates his skill in debate, and insignificant also for the reason that it states the heretical views of the king's Counsellors who are identified with five (of the six) heretical teachers of the Buddha's day. It also gives an insight into the methods of disputation in learned circles, the statement of the different doctrines and of their refutation. The arguments of his adversaries, the replies of Bodhi and the presentation of his own views as alternatives to those of his rivals are significant in that they bring out clearly some of the fundamental teachings of Buddhism. And finally Bodhi's concluding sermon to the king expounding the Dhamma is a stirring exhortation embodying, among other things, the duties of a king (rāja-dhamma) towards his subjects.

Stories and discourses referring to heretics and heresies are not lacking in Buddhist literature. Such examples are to be found in the Jātaka collection. But instances where heretics are referred to, mentioned by name and identified as characters in a story and their views stated are certainly rare. The Mahāānāra-Kassapa J. (544), mentioned earlier, is one such example. Certain characters of the story, some of them in the role of the King's ministers are identified and the heresies they hold are stated. Here the king comes under the influence of a naked ascetic (acala) who held wrong views and takes to a life of pleasure. He is finally converted and led back to the right path by the Bodhisatta. This tale has a parallel in the Brahmajātaka (no. 29 of the Jātakamāla). An instance where heresies are identified by name, explicitly stated in the form of answers to questions put, and finally refuted, besides providing an instance where those elements are central to the story, is rare indeed. In this respect the Mahābodhi Jātaka is unique.

So much for the content of the story. The literary form and narrative style are no less interesting. The story is recounted in a mixture of prose and verse. The manner in which literary devices like the upamā (= simile), the felicitous turns of phrase and the metrical form deserve closer attention. In the final discourse to the king the Bodhisatta (Mahābodhi) after having vanquished the Counsellors who had been rendered 'devoid of lusture' (nippatibhāna) [according to one version who had become "like fireflies that had seen the spotless sun"] states: "Your Majesty, these fellows with whom you go about are five big thieves who plunder your realm. Oh! fool that you are! A man who consorts with wicked fellows such as these would meet with great misery, both in this world and that which is to come."

A well-known tale, the parable of the wolf disguised as a ram is introduced into the story here. The wolf in the Jātaka version, draws the unsuspecting herd towards itself, slays the creatures and scampers off. The English rendering of the Pali stanzas reads:

A wolf disguised as ram of old
Drew unsuspected nigh the fold
The panic-stricken flock it slew,
Then scampered off the pastures new."

77. Francis' translation of the Pali, The Jataka (tr.) V. p. 124. The Pali stanza is as follows:

Urabbharūpena bakāsa pubbe
asānīkito aṣṭāvaṃ upeti
hantvā urāniṃ aṣṭāvaṃ aṣṭāca
citraśayīvā yena kāmaṃ paleti
The other too is an ancient story, not unfamiliar to readers of the *Jātakas*, the parable of the ox leading a herd. The leader, along with the herd, comes to a stream which has to be crossed, takes a devious course, is followed by the rest of its members; and in the process of crossing they all perish. Another ox in similar circumstances takes a straight course, and all the animals cross in safety. Both stories are introduced in the form of similes, by way of illustration, to enlarge on the text of the sermon, and employed to expose the folly of the heresies held by the king’s ministers, and to put the king on the right path. The first is intended to bare the evil of hypocrisy, especially hypocritical practices prevalent among certain religious groups. The English translation reads:

The bull through floods a devious course will take. The herd of kine all straggling in his wake: 
So if a leader fortuous paths pursue, 
To base ends will he guide the vulgar crew, And the whole realm an age of license rue.

But if the bull a course direct should steer, The herd of kine straight follow in his rear. So should their chiefs to righteous ways be true, The common fold injustice will eschew, And through the realm shall holy peace ensure.  

The narrator mentions, in particular, monks and brahmīs who in the guise of wandering mendicants deceive the world. The other exposes the evil of crookedness, the wickedness of deceitful ways and extols the virtues of following the straight. Both ends are achieved with telling effect.

The *Nidānakathā* or introduction to the *Jātaka* commentary quotes in full the first two chapters of the *Buddhavamsa* (Chronicle of the Buddha). Chapter 2 of that work includes the story of Sumedha, a previous life of the Buddha Gotama, and the life of the Buddha Dipamkara, the first of the Buddhas of the present aeon (*kalpa*) and from whom the former first received his prophecy (*vivaraṇa*). This narrative is not without literary excellence. It includes the story of the life and experiences of the Buddha Gotama in his earlier existences and describes how the characteristics of a Buddha were exhibited by him in patience, self-sacrifice and other virtues. As the time drew nigh for him to enter the world in this birth, the gods themselves prepared the way before him with celestial portents and signs:

"Earthquakes and miracles of howling took place; flowers bloomed and gentle rain fell, although out of season; heavenly music was heard; delicious scents filled the air and the very water of the ocean lost its saltiness and became refreshing."

Before his birth also the prophecy was uttered concerning him that he would become either (1) a universal monarch (*cakravartin, cakkavatti*) or (2) a Buddha abandoning house and home, or who would put on the robe of a wandering mendicant and attain perfect enlightenment for the welfare and happiness of all sentient beings. He, himself, in the Tusita Heaven consenting to undertake the office makes the “five great observations” (*pañca-mahā vilokana*) in order to determine:

(1) the right family in which to be born  
(2) the right continent – Jambudīpa  
(3) the appropriate district – Majjhadesa  
(4) the proper time &  
(5) the predestined mother.

The body at the time of birth bore the thirty-two auspicious marks (*dvatimsa-mahāpurisa-lakkhanāni*) and the eighty sub-characteristics (*aṣṭī-anuṣṭhaṇānāni*). The chief of the divinities, Indra, was in attendance at birth, and the boy was received by the four guardian deities.

In many of the legends, the young prince Siddhartha performs marvellous feats of strength. His father also, mindful of the prophecy that his son would retire from the world, surrounded him with all manner of luxury and indulgence in order to retain his affection and prevent him from undertaking a vow of solitude and poverty. In particular, he tried to keep him away from the four signs,

78. The *Jātaka* (tr.) V. v. 125 cited also and translated in full in the *Rājovāda J.* (334) op. cit. III, p. 74. The corresponding Pali stanzas are:

Gāvaṭṭha taramāṇānām jinham gacchati pumgavo, 
sabbā tā jinham gacchanti ānate jinham gate sati 

eva evama manusse su yo hoti sethasammato, 
so cē adhammaṃ carati pāgava itarā pājā 
sabbam rattham dukkham seti rājā ce hoti adhammiko  
gāvaṭṭha taramāṇānām ujuṃ gacchati puggavo, 
sabbā tā ujuṃ gacchanti netti ujugate sati. 

eva evama manusse su yo hoti sethasammato, 
so ceva dhammaṃ carati pāgava itarā pājā, 
sabbam rattham sukham seti rājā ce hoti dhammiko (Ibid. No. 3493-3496)
the sight of which would impel him to take on the ascetic life.

Viewed from a literary point of view, the Jātakamālā of Aśyāśāṃ-pāda occupies a prominent place in Buddhist literature generally and the Jātaka literature in particular. Composed by a writer gifted with an innate poetic ability and literary craftsmanship, this work belongs to that genre of poetry which in Sanskrit literary theory is called campu i.e. a poem (kāvya) composed in a mixture of prose and verse. Judged by the standards of the literary criticism obtaining since the date of its composition, this collection represents a classic example of the campukāvya.

The Jātakamālā (Garland of Birth Stories) is a literary composition quite unlike the Jātaka collection in Pali. It is a Sanskrit rendering by Aśyāśāṃ, of only thirty four jātaka tales. This number is exactly the number of Avadānas in the Bodhisattvavādāna (Rajendralal Mitra-Sanskrit Buddhist Literature p. 49). It claims to be a florilegium, a selection of jātakas with the avowed object of rousing and instilling a genuine faith in the minds of its readers, (or hearers) as the case may be. It is distinguished no less by the superiority of its style than by the loftiness of the writers thoughts and sentiments. The verses intermingling with the artful prose are composed in the choice Sanskrit, while the prose itself reveals the author's supreme command of the classical Sanskrit. Much skill is displayed in the handling of a great variety of metres.

(4) Literary Value of the Jātakas: From the foregoing analysis of the literary significance of the Jātakas, it would have become clear that the stories achieve a high degree of literary merit. The generality of the tales contained in the large Pali collection possess poetic features of structure, content, form, arrangement and language which would match array compilation of stories in any language or literature. The orderly structure of the stories may sometimes appear to be somewhat stilted and artificial, but it still is quite characteristic of the Pali Collection. The structure and form of such tales helps one to understand that particular feature marks it out from other similar collections. The smaller Sanskrit collection, the 'Garland of Birth Stories' mentioned above, appeals to the reader for quite other reasons. There are also other such collections in Sanskrit, the Avadānas, not referred to earlier, which could well lay claim to literary excellence. Likewise, such a claim could be made for some of the narratives in the Sinhalese Jātaka Pota (s.v.). Reference has been made to individual tales as well as to the collection as a whole. Attention has been focussed on the varying quality of their value as pieces of writing and narrative. In sum, it may be stated without risk of contradiction that the corpus of stories, that go by the name of jātakas have inspired, entertained an delighted generations of its readers and listeners in the past, as they continue to do at present and undoubtedly will do in the future.

4. The Jātakas in Popular Buddhism: The jātakas with their varied assortment of characters made up of kings and royal personages, merchants and princes, householders and peasants, sea-faring adventurers and wandering mendicants, birds and beasts and denizens of the woods, gods and demons and spirits inhabiting trees and lakes, embody universal truths and the wisdom of the ages, in a lively and often dramatic form. Exemplifying the "Reflections" (pāramitā), the Bodhisatta, by his thoughts, words and deeds, reveals the path to enlighten­ment and offers an insight into the nature of bodhi or enlightenment.

It has been remarked earlier that these stories originated, developed and spread in lands and among peoples where a belief in the notion of recurrent lives (punabbhava) was prevalent. They show that such a view of life, a belief that all beings had already had previous lives and would have them in the future as well, was an integral part of the psychological equipment of both narrators and hearers. They illustrate poignantly the operation of karma (kamma), the law of moral action, by demonstrating how the Bodhisatta shaped his destiny through unending efforts on behalf of, and for the welfare of, all beings. In the animated world of these stories, the relationship between action and its result (kamma-vipāka, kamma phala) can be clearly seen, increasing our awareness of how the actions of sentient beings shape their experience. Reflection on the jātakas offers an opportunity to observe the workings of karma in everyday life and to appreciate more fully the moral choices open to individuals and society in the modern world.

This section is concerned with discussing briefly (a) the influence of the jātakas in the life of the people; (b) their sociological value under which reference will be made to the role of the story collection as an instrument for the propagation of the faith in addition to surviving as a vehicle of Buddhist propaganda. The stories have to be viewed and appreciated as they doubt less were in the days when they were first recounted, against the background of the notions of kamma i.e. the view that every action produces a reaction, a resultant effect, and that of punabbhava (rebirth). Both in the eyes of the narrators as well as the hearers, the Bodhisatta is an ideal being who, in all his previous existences, has demonstrated through precept and practice, one or more of the great virtues or 'Perfections' (pārami); (c) a reference to some popular stories as standard texts for the Bodhisatta ideal; (d) the story collection as the common property of all Buddhist countries. In that sense, the stories are the chief witnesses of popular Buddhism; and (e) the role of the temple in the writing, transmission, preservation and propagation of the stories among the common people.
Let us take each of these in turn. In interpreting the expression “the jātakas in the life of the people”, it is well to bear in mind that the term ‘people’ should be understood in a broad sense. People here does not mean the Buddhist population alone for the influence of these stories, not to mention the stories themselves, spread well beyond the confines of the Buddhist community not only in India, but in other lands as well. They are of such a miscellaneous character that their very diversity could be a major factor in their spread. Not all of them have directly moral aim and there are not a few stories that cannot be classed as definitely Buddhist. Some are stories aimed at teaching nīti (worldly wisdom), others are fairy stories, pure and simple. Most of the moral narratives, sayings and pious legends are the common property of Indian didactic poetry, it has been claimed and are only partly of Buddhist origin.39 It has also been stated that there is nothing specifically Buddhist in the short anecdotes, humorous tales and jokes38 that frequently occur in the jātakas. They give also particulars of the life of people of all classes, about some of whom there is scarcely any other information in Indian literature.41 The stories appeal to all strata of the population. They are understandable not only to the wise but even to the simple-minded. Only the all-too-clever will smile at them indulgently. They have not lost their human appeal and continue to exert a deep influence on the life of peoples.

It need hardly be mentioned that this influence is to be felt mostly in Buddhist lands like Sri Lanka, Burma, Siam and Cambodia where crowds of people would listen with rapt attention for hours when bhikkhus, during full-moon nights and on other religious occasions, recite the stories of the Buddha’s former lives. It has been reported that even in Tibet, tears in the eyes of sturdy caravan men have been seen, when sitting around the camp fire, listening to tales of the Bodhisattva’s suffering and sacrifices.42 For ordinary people “the jātakas are not merely literature or folklore, but something that happens in their very presence and profoundly affects their own life, something that moves them to the core of their being, because it is present reality to them.”43 In the lands of South-east Asia, these stories were no less popular. Pierre Dupont in one of his later works44 examines a modern version of the Nārada jātaka (doubtless the Mahānārada jātaka, No. 544), one of the 10 stories comprising the Mahānipāta. These stories appear to have become popular in Burma from about the 4th to the 13th centuries. Although it is to their sculptural and architectural representation that scholars have chiefly drawn attention, there are textual references to them in contemporary inscriptions. In Pagan, the 11th - 13th century capital of Burma, where most of the older traces of Buddhist Mon are to be found there are such stone inscriptions besides architectural and sculptural remains, terracotta and fresco.45 About 1054–8 A.C. the Burmese king Anuruddha captured the Mon capital Thaton (Yaksapura, Südhammadavat) and carried off to Pagan its Makuta, together with copies of the Tripitaka and Buddhist monks and artists of all kinds. The earliest Mr. description of the Great jātakas(i.e. those of the Mahānipāta) occur in Makuta’s pāndit inscription at the Schwezagon Pagoda, Thaton.

Prominent in several of these temples either in terracotta or fresco are whole series of the 560 jātakas. Among the jātakas depicted are Apannaka(1) and Mātanga(497) at the Ananda temple, Kyanzittha; Veḷāma and Mātanga in the West and East Petika Pagoda; Rohantamīga(501) in the Kurbyamkgi temple, Mypingan; Devatāpadha(350) in the Abyadana temple; Samiddhi(167) and Rādha (198) in the Pyatsa Shwe temple and Rohanta (miga) at the Wingalaezi pagoda. These sculptural or pictorial representations are accompanied by descriptive texts. For example at the Pyatsa Shwe temple the Samiddhi Jātaka is referred to as one where “the Holy One was a hermit” and the Rādha Jātaka as one where “our Lord was a paroquet” and the Rohanamiga Jātaka at the Mingalazedi pagoda as one in which the Buddha was a golden deer.46

Another aspect of the influence of the jātakas on the broad masses of the people, which included a relatively small group of learners and a much larger group of hearers, concerns the problem of the transmission of texts. Several elements were involved in this process of transmission. The first group referred to above was drawn from the monastic community consisting of

trainee monks, attached to individual temples, while the latter comprised the much larger community of lay persons, drawn from all walks of life. Then there was the preacher or reciter of the text, who was usually an erudite monk, and of course the book or the written text. There were two methods of transmission (1) oral transmission by preaching and/or the recitation of the text which in former times was a palm-leaf manuscript of the Jātaka Pota or more likely a few leaves from it selected for the occasion, which in modern times has been replaced by a printed book; this was an effective method of disseminating the stories among a vast concourse of people as well as a method of imparting instruction and propagating a knowledge of the doctrine. The venue for such a discourse was generally the village temple and the occasion involved the participation of the lay community and the community of monks, (2) the other method was one of a different order: the scriptural (textual) tradition of transmission. This was the method of writing on palm leaves the entire text of the stories, an elaborate process demanding deep devotion and dedication, a sense of commitment in addition to considerable labour and time. Bhikkhus have played a key role in both these methods of transmission.

The incidence of the availability in large numbers of jātaka manuscripts, distributed in all parts of Sri Lanka, is an index to the popularity of the story collection. The copying of the text by temple scribes as well as the regular printing of the work in modern times have contributed to the development of the reading habit.

A collection of Jātaka tales entitled Pāṭihāsajātaka has been one that has been particularly popular in Burma. These tales are not all paralleled in the Pali collection. Some of them bear a close resemblance to, and may be local adaptations of tales found in the Avadāna texts.

Among the Pali literary texts from Laos are to be found indigenous extra-canonical jātakas which have been seen as illustrations of the synthesis of Buddhism and folklore in South-east Asia. The fact that these stories are largely apocryphal and therefore of doubtful authenticity when viewed in relation to the canonical jātakas, does not militate against the view that the stories formed an important part of the popular literature and played a vital role in the shaping of the attitude to life of those peoples and in the formation of their world-view. Among the stories occurring in the post-canonical collection of the Pāṭihāsajātaka are the Sudhanajātaka occurring as the second story of that collection, the Dukamma­jātaka which is an illustration of a popular saying which dissuades a man from marrying a woman who has already had three husbands; from striking up a friendship with a man who has taken the monastic robe thrice and left the monastic life; and from entering a town where the king imprisons people without preliminary hearings; the Nandakumāra, also known by the title of Māilha, one of the protagonists of this history which begins like a sutta but is in reality a jātaka designed to illustrate the benefits of meritorious deeds (puññakamma) performed in previous births, the Candāgadha-jātaka, an apocryphal jātaka popular in Laos, Thailand and Cambodia relates the adventures of the Bodhisatta when he assumed the person of Candāgādhā, the son of a poor man of Campānagara, the Sambhamittajātaka also one of the fifty jātakas, appears more often under the title of Subhamittajātaka, the Suvannahamsa or Dvesījātaka, the Arindamigajātaka another post-canonical jātaka, the Suvannajītaka, a story of the Bodhisatta in the life of Suvannā. Only a fragment of this text has survived which narrates the garbled story of a child having a head and no body, the Bālasambhyaja-jātaka which relates the story of the conversion of a proud monarch, similar to King Jambupati, the Suriyavamsahamsa jātaka also known as the Pavara Vanahamsa Jātaka, but is not included in any of the apocryphal fifty jātakas, the story

of the prince with golden tongue Suvannajivhā which forms the subject of one of the most popular novels in Laos, the Suvannamegha jātaka or jātaka of the Golden Cloud, the Suvannahamsajātaka mentioned by Finot as being among the extra-canonical jātakas not included in the collection of the apocryphal fifty stories, the Lohagona jātaka or jātaka of the ox (stag?) with Coppered Horns which bears a similarity to the aforementioned but is not to be found in any known list of the Paññāsajātaka, the Gandhārajātaka literally the Jātaka of the destroyer of the perfumes, which is really the story of a frog; the Mūlakittiyājātaka which begins with a short invocation to the Triple Gem and, in the manner of the canonical jātakas, by indicating that it was told by the Buddha while he was dwelling in the Jetavana and concerns a monk who was very much attached to his parents, the Lakkhanavuttipāsutta also known under the title Lakkhanavutta jātaka and the Cundaśikarikasutta or Dhammikapāṇḍījātaka.

As the common property of all Buddhist countries, the Jātakas, as mentioned earlier, have spread well beyond the confines of the Indian sub-continent, into other parts of Asia, through Tibet, Mongolia, and Central Asia to China, Korea and Japan in the Far East. They have been the chief vehicle of Buddhist propaganda, and the chief witnesses of popular Buddhism. The Buddhist texts (and they include the written texts of these stories, that found their way into those countries) belong to a later date, are relatively younger than the Indian texts, and therefore carry the doctrinal imprint of a time far separated from the original texts, which themselves were already separated by some four hundred years at least of oral tradition, from the time of the Buddha. The Tibetan and Chinese texts of the Jātaka stories, for example, reflect the dynamic unfolding of Buddhist stories, which necessarily underwent a process of modification and elaboration, in the course of transmission.

The growth of a network of temples and monasteries formed an effective base of support for the spread of the Jātaka tales among the common people. These monastic establishments have played a key role in the conservation and propagation of the stories in many lands. They have been, and continue to be, centres from which radiates a knowledge of the Jātakas, they have contributed, in no small measure, towards the popularization of the stories. Temples and other monastic institutions have performed this function in several ways. Through the medium of the plastic arts of moulding and modelling, such as sculpture, pottery and ceramics, these nerve-centres of the body social have been able to transmit the life sustaining energy in the form of the stories to men and women in all ranks of society. Sculpture has played an important role in this process. Other art forms like architecture and painting, it would seem, have played no less significant part in the process of transmission. These stories have been represented in the construction of buildings too, especially in religious edifices. The art, architecture, sculpture and painting particularly in the Indian sub-continent and even in South and South-east Asia, not to mention, other countries where Buddhist civilization has spread, bear witness to the popularity of these tales. It is indeed, hard to come across a temple in an Asian Buddhist country, where representations of the Jātakas, in one form or another, are not to be found. Temples in Sri Lanka afford abundant examples. Such sculptures and paintings have, in many cases, been executed by rural craftsmen and painters, under the inspiration and guidance of bhikkhus. There are notable instances where Bhikkhus themselves have played the role of artists. Devaramapola Silvat Tiūna is one such member of the monastic community in Sri Lanka whose name is associated with the paintings of the Malvatu Vihāraya and Degaldoruwa in Kandy, Sri Lanka. (PLATES IV, V & VI).

Not only through the medium of the visual arts have the Jātaka stories been thus brought within the reach of the people. They have been put into writing and thus transmitted as written texts in many lands. Sometimes they have been translated from the original Pali into many Asian languages. Many other translations are based upon and derive from Sanskrit originals. They too have found their way into several countries of Euracia, extending from Western Europe to Far Eastern Asia. These translations of the legends are written in a variety of scripts. In this large-scale cultural enterprise of translation, bhikkhis or members of the Buddhist Sangha...
have played a dominant role. It has been a crucial one in the sense that members of the Sangha have acted as authours themselves, conservators of manuscript texts and sometimes functioned even as copyists. As authors, they have functioned not merely as writers but have sometimes engaged themselves as translators or compilers and served as scribes in copying and re-copying written texts. Certain monastic establishments of the past (as well as those of the present) have functioned as libraries where resident bhikkhus have worked as librarians. In addition to such diverse roles, bhikkhus have made a significant contribution to the spread of the Jātaka stories through the channel of oral communication. Bhikkhus have with or without the patronage of kings, ministers of state or ruling princes, helped to spread these stories by word of mouth. There are notable examples mentioned in historical records and other sources of eminent exponents of the Jātakas, great teachers and renowned preachers. This tradition has come down to the present day. Thus it is that the temple and monastery have continued to be a powerful base of support for the propagation and popularization of the Jātakas.

Ananda Salgadu Kulasuriya

JĀTAKABHĀṆĀKA, reciter of Jātaka. Buddhist teachings, together with its literature, were handed down from generation to generation through word of mouth or orally until they were written down in books at Aluvihāra, Matale, in Sri Lanka in the 1st century A.C. (Mhv. ch. xxxii). The stupendous task of preserving this massive literature was very successfully done through the process of division of labour and specialisation. This process commenced in the time of the Buddha himself. The whole literature was divided into several sections and each section was studied and specialised by a group of bhikkhus. Such groups of specialists were called bhāṇaka (reciters). Those who studied, specialised and recited the texts. The whole was studied and specialised by a group of bhikkhus. Such groups of specialists were called Jātaka or stories about previous births of the bodhisatta were called Jātakabhāṇāka.

According to Samantapassādikā or the commentary to the Vinaya (VinA. 1V, 789) a Jātakabhāṇāka should learn the whole Jātaka text with its commentary, but the Mahāpaccarī ṉṭhakatā, as stated in the Samantapassādikā, adds, Dhammapada and its commentary, too, to this group. Adikaram (E.W. Adikaram, Early History of Buddhism in Ceylon, p. 31) opines that this connection was due to the similarity of Jātaka tales to the tales woven round Dhammapada verses.

The commentators have recorded differences of opinion regarding some matters among these bhāṇaka. Thus in the story of the ascetic Mātaṅga, Buddhaghosa says that Diṭṭhamangalikā, whose pride and conceit was shattered by the piety of Mātaṅga, carried Mātaṅga in her arms and adds that Jātakabhāṇāka held the view that Diṭṭhamangalikā carried Mātaṅga on her back (SnA. 1. 186).

In the commentary to the Majjhima Nikāya (MA. II, 305) Buddhaghosa refers to a Jātakabhāṇāka therā who lived in the time of the Buddha, thereby giving the impression that Jātakabhāṇāka formed one of the oldest groups of bhāṇaka (E.W. Adikaram, op.cit. p. 30).

Milindapañha, a compilation older than the commentaries of Buddhaghosa, too, mentions the name jātakabhāṇāka, in a list of bhāṇakas designated as citizens in the city of the Dhamma (dhammanagara – Miln. p. 341 f.).

Incidents relating to Jātakabhāṇāka occur in several Pali texts. One of them – Jātaka-bhāṇaka-vattu- deals with jātakabhāṇāka therā who went to a certain house to beg for alms. The mistress of the house who was not inclined to making an offering told the therā that there was no cooked rice in the house. The therā, through a riddle, indicated to the woman that her statement revealed the availability of other food items in the house. The woman, realising that the ascetic (mūndaka) would not leave the premises unless an offering was made, gave him sweetmeat and rice cooked in ghee (VinA. p. 484).

The Mahāvamsa (Mhv. ch. xxxv. p. 30-2) makes reference to a Jātakabhāṇāka therā by name Mahāpadumā who lived in the Tulādhara Vihaaras in the south of Sri Lanka. King Ilanāga (33–43 A.C.) after listening to the Kapijātaka preached by this Therā, was greatly elated and restored the Nāgamaḥ Vihaaras.

The Manorathupūrāṇi (AA. II, 249) says that a young monk from the Tissamahārāma Vihaaras in the south of Sri Lanka had travelled a long distance to Dīghavāpi, a village in the east of Sri Lanka, to listen to the Mahāvessantara Jātaka preached by a therā named Mahājātakabhāṇaka. Regarding the term Mahājātakabhāṇaka therā, Adikaram (Adikaram E. W., op. cit. p. 31) says that the name can be interpreted to give two meanings: (1) the reciter of great Jātakas (Mahājātaka+bhāṇaka) and (2) the great reciter of Jātakas (Mahā+jātakabhāṇaka). If the first rendering is accepted, it leads to the conclusion that there were two types of Jātakabhāṇāka, those who specialised and recited the long Jātakas and those who dealt with short Jātaka. But, since the reference ce is made regarding the recitation of a long Jātaka which is held in high esteem by the devotees, the first meaning is more plausible. See BHĀṆĀKA.

Ruwan Bandara Adhikari
JATAKAMALA 'Garland of Jataka Tales', name of a class of writings of which there were several in the Northern Buddhist Canon, according to Speyer (SBB. I. Introduction p. xxiii). He quotes two stanzas from Somendra's introduction to his (Somendra's) father's Avadanaikalpalata, to substantiate his view. Hodgson mentions three Jataka works in his collection of Buddhist Sanskrit works of Nepal, namely Jatakavadana, Jatakamala and Mahajatakamala. He describes the Jatakamala as an account of the meritorious actions of Sakya in his five hundred and sixty-five births. Speyer (op.cit.) says that of these, only one is extant and that is the Jatakamala with thirty-four jatakas, and that the Mahajatakamala may be the work containing five hundred and fifty or five hundred and sixty-five jatakas. Winternitz, too, thinks that the Jatakamala is only a generic term and that various poets have written Jatakamala, that is, they have produced free renderings of selected Jataka in ornate, poetical language (History of Indian Literature, II, 273).

The Jatakamala, the 'garland of birth stories' or Bodhisattvaavadanamala, the garland of edifying stories of the bodhisattva's a work written in classical, chaste Sanskrit by the poet Aryasura. It was translated into Chinese under the title Pu'sa-pen-sheng-man-lun between 960--1127 A.C. (Nanjio, 1213). The title of the Tibetan translation is Skyes-pahi-rabs-kyi-rgyud. This text is the only extant Sanskrit work consisting entirely of jatakas, and these jatakas are mostly poetical renderings of stories found in the Pali Jataka book; twelve stories are identified with those found in the Cariyabhuta (HOS. I. preface p. ix, x), another poetical rendering of thirty-five stories about the past lives of the Buddha (in Pali). No parallel is so far found in the Pali Jataka or Cariyabhuta to the Vyagri Jataka, the first story of Jatakamala, but it is a very popular story among the Mahayanists and is found in the SvarabhAsottama Sutra, as the Vyagripavarta. H. Kern says that there are a few stories in the Jatakamala having parallels in non-Buddhist literature. As instances he says that the Vrtaka Jataka is related to the Sartga-kopayana in the Mahabharta 1, Adhy. 299 (Bombay ed.) and that the story of Unmadayanti is told three times over in the Kathasratisagara, where the heroine is called Unmadi. The tale of Taravolaka in the same work agrees with the Visvantara Jataka (HOS. I, preface p. x).

There is diversity of opinion regarding the original size of the work. H. Kern (op.cit.) and Winternitz (op.cit. p. 164 ft. note 4) opine that thirty-four was the original number of stories and that the work is complete with this number. Kern says that the official number of jatakas according to the Northern Buddhists is thirty-four. Both Winternitz and Kern refer to the epithet Catustrimshajatakajija, 'knower of thirty-four jatakas' in Hemachandra's Abhidhana Cintamani (233), in support of this argument. But Dr. Serge d'Oldenburg (URAS. 1893, pp. 306--9) believes that this work was meant to be completed with one hundred jatakas so that each perfection (paramitha) be discussed in ten stories. He bases his opinion on the fact that after the 10th, 20th and 30th stories follows an uddana or a table of contents. Further as support for his argument he quotes a tradition communicated by Taranatha, namely, that Aryasura proposed to put down in writing the ten times ten rebirths of Buddha, which up to this time circulated only orally and which corresponded to the ten paramitha, but when he had finished thirty-four, he died. In some legends it is related that pondering on the bodhisattva's gift of his own body to the tigeress, he thought he could do the same, as it was not so very difficult. Once, as in the tale, he saw a tigeress followed by her young, near starvation. At first he could not resolve on the self-sacrifice, but, calling forth a stronger faith in the Buddha and writing with his own blood, a prayer of sloka he first gave the tigeress his blood to drink, and when their bodies had taken a little strength, offered herself. Dr. Oldenburg rejects Kern's argument that the epithet Catustrimshajatakajija, too, indicate that the original contained only thirty-four stories, saying that this epithet could have been formed by looking at the extant Jatakamala with only thirty-four stories.

The Jatakamala consists of thirty-four jataka or birth stories of the bodhisatta. Unlike in the Jataka book the story of the present (paccuppanna vatthu) is not given. Speyer (op.cit.) says that it is really a collection of homilies, for the jatakas are not presented as in the Jataka book. A simple sentence of ethical importance is given at the beginning which is followed by the words: 'Thus it is heard' (tad yathanaustryate). Next follows a story from the Buddha's past lives, to illustrate the same. Sometimes the details given in the Pali Jatakas are curtailed, for instance in the second story the hideous particulars of the eye-operation dwelt upon in the Pali Jatakas are avoided. Some stories which are unwieldy on account of too many details are made more simple, for instance stories xvii, xviii, xxxi are much simpler and shorter than their Pali counterparts. The story is merely related. There are laudatory verses praising and pointing out the virtues of the hero; descriptive verses, containing pictures of fine scenery or of phenomena, are to be met with often; sometimes religious discourses of considerable length are put in the mouth of the bodhisatta, and frequently the verse narrative is interrupted by one or two sentences or sometimes by a whole passage of prose, which are meant to connect the various parts of the narrative.

The entire work, verses as well as the prose pieces, is written in the purest Sanskrit. Twenty-six metres are altogether employed (BST. 21, pp. 269--73), some of which are rarely met with elsewhere. The selection of metres to suit a particular situation is very cleverly done.
Speyer (op.cit.) commenting on the merits of the Jātaka-mālā, says, "Above all, I admire his moderation. Unlike so many other Indian masters in the Art of literary composition, he does not allow himself the use of embellishing apparel and the whole luxuriant mise en scène of Sanskrit alamkāra beyond what is necessary for his subject" (Introduction p. xxiv). See also the short note on Jātakamālā in the article JĀTAKA.

JĀTAKATTHAVANNANĀ. Synonym for Jātakaṭṭhaṭhakathā. See JĀTAKA.

JĀTI

1. Indian Ideas on Birth: Birth, as well as death, has been the most important matters of religious concern for Indians from ancient time. We find among Indians generally two noticeable tendencies of thinking on birth. Firstly birth is considered from the point of view of transmigration (samsāra), i.e. it is regarded as the most concrete expression of transmigration in living beings. Secondly, it is thought that birth is caused by the mysterious forces of vital and generative functions, and from this point of view many myths and metaphysical doctrines were developed, in which these forces were defied or looked upon as philosophical principles.

With regard to the first tendency, Indians thought that all living things in the world transmigrate under the rule of retribution and their coming into existence is the result of the deeds of previous lives. They comprehended birth as meaning repeated formations of life (punar-bhava) in the process of transmigration.

The early theory of transmigration was taught in the older Upanishads which were completed before the rise of Buddhism. The Aitareya-Upanishad, in particular, mentions three kinds of birth with regard to the self (atman), which is the personal subject of transmigration. (1) When the atman, which is brought forth as a sperm in man's body is poured into a woman, conception comes about. This is the first birth. (2) Thereafter, the atman, as it is no less than the father's child, is nourished by its father before and after birth, and having grown up it succeeds to the father's place. Thus the world is continued. This is the second birth. (3) After it grows old and dies, the atman leaves this world and comes to life again in a future world. This is the third birth.

Moreover, the Aitareya Upanishad mentions four kinds of birth in all living things, that is, those born from an egg (aṇḍaja) e.g. birds, etc.; those born from a womb (jarāyuja) e.g. man, mammal etc.; those born from moisture (sveda-ja) e.g. a mosquito, etc.; and those born from a sprout (Udbbij-ja) e.g. plants. But, on the other hand the Chāndogya Upanishad (VI, 3. 1) gives only three kinds of birth, i.e., those born from an egg, from a womb, and from a sprout. However, in orthodox Brahmanism the former theory of the four kinds of birth was accepted as a definite theory.

The Aitareya-Upanishad also mentions that a man who has understood the meaning of the above-mentioned kinds of birth in living things, by thus knowing the atman, will leave this transitory world and reach the heavenly world which is immortal. Without doubt, the word 'immortal' means here a state of release (mokṣa). According to Indian thinking a 'released' man becomes absolutely free from the bondage of transmigration, simultaneously with the disappearance of the body at his death and afterwards enters into the world of 'brahman' or of divinities, where he enjoys everlasting happiness and never returns into this world, to be born again. Accordingly, it was considered that there was neither birth nor death in a 'released' man, while, on the other hand, the phenomenon of birth, though it is physiological, was understood in the religious sense as a sign of transmigration.

The Garbha-Upanishad is an important scripture that describes the growth of an embryo and the phenomenon of birth. According to it, after fertilization is effected, a pulpy fluid (Kalala) is formed in one night; and in seven nights bubbles (budbuda) are formed; and in a fortnight a lump (piṇḍa); in a month solid flesh (kathina); in two months a body; in three months limbs; in the fourth month the ankles, the stomach and the waist; in the fifth month the backbone; in the sixth month a mouth, a nose, eyes and ears; and in the seventh month the mind (Jīva) combines with the above organs, and in the eighth month all the elements of an individual are completed. During this period the sex distinction of male and female is determined by the relative influence of semen between...
man and woman. Thus, in the eighth month the embryo is capable of mental functions and enjoys the perception of sound, taste, etc., by completion of all mental organs in its body, so that its soul (prāna) is advanced. In the ninth month, the embryo possesses all the elements and senses of an individual, remembering former lives and discriminating between good and evil deeds. The pain that the embryo feels as it is born from the mother's womb is the result of good and evil deeds in previous existences. But as soon as it contacts the open air, it forgets the pain by the grace of the gods and loses the memories of past lives and of past deeds whether good or evil.

It would seem that the above mentioned exposition in the Garbha-Upanishad follows the medical knowledge and the religious ideas prevalent among Indians of the day.

Now let us take the second mode of thinking about birth. The ancient Indians concerned a mysterious force in the appearance of birth or in the generative function and thought that it was ruled by a divine principle. They worshiped the principle and prayed to it in order to be given the grace of the gods to gain various advantages, for example, the prosperity of progeny, the breeding of domestic animals and the increase yield of crops. They thought therefore that the highest divine principle was the one which produces all things. In Brahmical texts, i.e., in the Rg Veda and later Brāhmaṇas, and the Upanishads etc., there are to be found numerous myths in which the existence of all things is frequently explained as having been born from the highest divinities. The representatives of the divinities are, for example, Prajāpati, Hiranya-garbhā, and others. Prajāpati means 'The Lord who generates all things'. Hiranyagarbha means 'the golden womb'. In many myths dealing with the creation of the world we clearly find generative ideas, such as a sperm (retas), and egg (anda), sexual desire (kāma), set out as the elements of the fundamental cause of the creation of the world. As the result of development of these myths, some abstract principles indicative of generative power, e.g. sakti, prakriti, etc., were established, so that a kind of metaphysics was developed. These principles are regarded as female principles.

11. Theories of birth in Buddhism: In Buddhism, as well as in general Indian thought, birth is considered from the standpoint of transmigration; the tendency is more remarkable in Buddhism, for Buddhists take a great interest in the problems of life, such as 'birth-and-death.' On the other hand, as they denied the mythology of the creation of the world, Buddhists did not evolve any philosophical theory that a particular metaphysical principle is to be found behind the phenomenon of birth.

In Buddhism birth is regarded as a concept relative to death. For instance, the Sūtanīpāta (vv. 574-576) says:

'Being born (in this world) have no way of escaping death. As there is always the risk of dropping for the ripe fruit so is the fear of death present for beings born (in this world), who are subject to death.'

According to the Theory of Twelve Causes, which is the formal explanation of our illusive existence, our life is a transmigratory state depending upon the law of continuous causality, and it is asserted that 'old age and death' (jāra-marāna) arises from 'Birth'. The word old age and death, is here understood as the conception of the most direct expression of our painful existence, and birth is considered from the theory of transmigration namely, as rebirth in the next world. Consequently it is further asserted that 'birth' (jāti) arises from 'transmigratory existence' (bhava).

To attain to release (mokṣa) is to be free from the bondage of such 'birth-and-death'. A saint who has reached mokṣa stands above transmigration and is free from attachment to birth-and-death, so that he is as good as void of them. It is in his 'last birth' that he is born in this world and his body is the 'last body'. Therefore he will never be born into this world in the future by repeating birth-and-death. In early Buddhist texts, there are often predicated definite phrases which express the state of the Saint who has attained to mokṣa, i.e., 'Done away with is birth...... I shall never be born again into such an existence', and 'This is the last birth... Now there is no new birth'.

On the other hand for the common people, who are bound by transmigration, their state of existence is laid down by the law of Twelve Causes. Among the many interpretations concerning the theory of Twelve Causes, the most important is the explanation that the whole of these twelve causes expresses the process of the causal series of transmigration of living beings through the three periods of time, i.e., past, present and future. In it therefore, the birth of living beings is explained in full detail.

First, all living beings are classified into four kinds of birth, namely, those born from an egg, those born from a womb, those born from moisture and those born by spontaneous generation (upāpāduka). This concept of four kinds of birth is a definite theory in Buddhism and 'spontaneous generation (upāpāduka) is accepted by Buddhists in place of 'birth from a sprout' (uddhīja) in Brāhmaṇism. It would seem that Buddhism recognized (upāpāduka) by adopting the popular opinion of the day.

Secondly, our existence, or bhava, is classified into four states, concerned with time, namely, upapattibhava, pūrvakalabhava, marapabhava and antarābhava. (1) Upapattibhava means the existence that is brought about into mother's womb at the moment of fertilization. (2)
Pārvakālabhava means existence in the period when a living being grows as an embryo in the womb and after birth, advances through childhood, youth, manhood, old age and finally to the time of death. (3) Maranabhava means existence at the dying hour. (4) Antarābhava is existence in the interval between the dying hour and the moment of the next rebirth, or, the next upapattibhava. Some schools contradict the reality of antarābhava and the problem whether it exist or not was discussed among the schools.

The term 'from the moment of upapattibhava to the moment of birth' is divided into five portions, that is, the so-called five stages inside the womb. They are as follows: (1) Kalalam: it goes on for seven days after fertilization, and means something like a pulpy lump that exists before the shape of the embryo is formed, (2) Arbudam: for the second seven days after fertilization; this would mean a small polypus. (3) Pesī: exists for the third seven days, it means flesh and blood. (4) Ghanam: exists for the fourth term of seven days, and means solid flesh, (5) Prasākhā: exists for forty days from the fifth period of seven days to the time of birth. It means the one who has limbs.

In contrast to the above-mentioned five stages inside the womb, there are also explained the so-called five stages outside the womb. It is the five stages concerned with the five when after birth a man grows and passes his life to the dying hour. (1) infancy: from the time of birth to the sixth year; (2) boyhood: from the seventh to the fifteenth year; (3) youth: from the sixteenth year to the thirtieth year; (4) manhood: from the thirty first year to the forties year; (5) old age: after the forty-first year.

Buddhism teaches us that birth is effected by deed (karman). Therefore, in the theory of Twelve Causes it is explained that the 'individual consciousness' (vijñāna), or the third cause in the twelve, is suited to the moment of fertilization that is effected by former deeds (samskāra), or the second cause in the twelve; and the other subsequent causes are interpreted from the theory of five stages inside and outside the womb. Therein the eleventh cause, birth (jāti), is understood as rebirth in the next world.

Buddhism also teaches us that the deed (karman) springs from the instinctive desire for existence. In consequence, it is thought that the birth of the embryo is caused by desire and for this reason, a tendency to see birth as impure is strongly marked in Buddhism. For instance, the following explanation, while mythological, is predicated concerning the determination of male and female sex at the moment of fertilization. When a man and a woman have joined together in sexual intercourse, a antarābhava, however remote it is, being able to see their sexual union, by force of 'karman,' is disturbed in mind and flies in a moment into the woman's womb. Then conception takes place. In this case, if the antarābhava is attached to the mother and is averse to the father, a male embryo is formed, and on the other hand if it is attached to the father and averse to the mother a female embryo is formed. There are cases where the antarābhava is identified with the god Gandharva.

Certain chapters in the Mahāvatudharma-parāyāsa-sūtra (translated into Chinese by Bodhiruci vol. 55–57, chapter xiii, Buddha's teaching to Ananda on the fertilization and chapter xiv & xv, Buddha's teaching on the growth of the embryo) give detailed explanations of the physiological phenomenon of birth. The point emphasized is as follows. Birth is impure and full of pain, because it is produced by 'karman.' Therefore, we have to comprehend that birth is abominable so that we have to escape the birth-and-death (i.e. the transmigration), and finally reach mokṣa.

Shingo Suguro
The continuous materialization and new karmic entanglement. The concept of momentary death (khanika-marana) as understood in Buddhism also implies its corollary, the concept of momentary birth as clearly described in the above extract. This, in other words, means the universal and the super-individual nature of the phenomenon of birth, as a part of nature, with its attendant forms of suffering and sorrow inherent in the physical birth of the individual which are described by Buddha ghosa in the following words: "The pain that arises in him when the mother gives birth, through his being turned upside down by the kamma-produced mind’s forces and flung into the most fearful passage from the womb, like an infant chasm and hugged out through the extremely narrow mouth of the womb, like an elephant through a keyhole, like a lenzen of hell being pounded to pulp by colliding rocks—this is the suffering rooted in parturition" (vijjaya-namilišakāṃ dukkham: Vism. XVI, section 40).

According to the Buddhist analysis of life jāti is a condition preceding ageing, sickness and death (jāti-emaccajārāmarasam etc.) and hence fraught with sorrow, pain and disappointment. Jāti is not the beginning of the individual nor death his end and all forms of pain and sorrow inherent in life cannot be overcome less the cause of this painful journey is removed. This ase is ignorance (avijjaya eva sā gati: Sn. v. 729), the ase of which would certainly give the peace and appiness that the human mind yearns for.

The inherent tendency of one, subject to repeated birth, decay and death is to be reborn and therefore he normally does what is conducive to repeated birth: kaccato attano jātihamma samāno jātihamman eva sīreyati. Therefore the true and noble search is to alise the dangers (ādinañava) inherent in what is liable to reborn (jātihamma) and to seek the unborn (ajāta), uttermost security from the bonds (amanātana-yogakkhamā), the state of release called Nibbana.

The fact that the phenomenon of birth is involved with in should not make one disappointed and pessimistic out life, but instead, one should search for the state free from birth, decay, disease and death with an optimistic me of mind as understood in the fourth Noble Truth, that teaches the way out of the entanglement (dukkha-nirrodha). It is the practical realisation of this optimistic attitude that is beautifully expressed in the paeon of joy that is attributed to released saints and is frequently occurring in the Nikāyas: “Destroyed is birth, lived is the pure life, done is what was to be done, there is no more tendency for being such and such.”

The Buddha’s advice is that one should give up speculating about philosophical problems like the state of the released saint after his physical death and to follow the path leading to the cessation of birth and death, so that pain could be annihilated. Speculation about this possible condition of freedom is an obstacle to its being practically realised. Consequently the state of the one who has overcome birth (khinā jāti) is left unexplained (avākata) and has to be understood through experience.

The conquest of Jāti is the conquest of sorrow and the one who has done so has conquered time as well, so that he does not worry either about the future or about the past (See M. III, 193). The burden of time is felt by the unintelligent man (digho bānanaṃ saṃsāro-saddhamman avijjanatam: Dhp. v. 60) who shuts his eyes to the facts of life. In the case of one who has conquered jāti both in theory and in practice (vijjā and carana) “there is nothing by which he is to be reborn” (nattthi yena jāyetha: M. III. 246), for in his case all substrata of rebirth (upadhi) are destroyed and with regard to whom it is said:

“With naught to bind thee thrall to life-thou art free
As forest lion from all fears of dread” (Sn.v. 572)

Lord Chalmers’s trsl.

Buddhaghosa after giving various meanings of the term jāti explains its meaning in the sense of repeated birth in the following words: “it is the manifestation of any aggregates (khandha) that are manifested in living beings when they are born anywhere that is called birth.... Its characteristic is the first genesis in any sphere of becoming (pathamābhimagattu) and it is manifested as an emerging here from a past becoming (aśīrāhava).” After explaining birth as suffering in its various aspects Buddhaghosa concludes, saying that, if not for birth all suffering would not be there and that therefore birth is

---

The Psychological Attitude of Early Buddhist Philosophy, Rider and Co. 1961, p. 50
It is by regarding and realising that the suffering involved in birth, decay, death etc., is natural and universal, that it is the common lot of all living beings that the intelligent man overcomes them.

Kiccham loko āpanno jāyati ca māyati ca cavati ca uppañjati ca. D. 1. 30.
This all important idea is fascinatingly discussed in the Ariyapariyesana sutta of the Majjhima Nikāya (1. 161 ff.).
Knīṇa jāti, visiṭṭha brahma-āriyāṇam katām karaṇiyam, nāparam ithatāyati paññāmi: S. V, 224, M. 1, 139, 279 etc.
A fascinating discussion on this interesting point is found in the dialogue between the Buddha and Cūlamālukkapputta occurring in the Majjhima Nikāya (11, 426 ff.).
JAṬILĀ, variably referred to as jaṭilakā, were a class of ascetics mentioned in Buddhist texts as having been active in the religious field during the time of the Buddha. These ascetics were called jaṭilā and jaṭilakā because they wore their hair in braids in the form of a jaṭā and the term jaṭilā must have been coined and used by the contemporaneous religious groups such as the Buddhists, and the Jains in a pejorative sense to denote this group of ascetics, just as the term mujḍākā (shavelings) was used by other religious groups in referring to Buddhist bhikkhus. The commentary to Udāna (Ud. 74, 330) describes them thus: 'Jaṭilā are ascetics. They are so named because they wore their hair in the form of a jaṭā (a matted top-knot).

The jaṭilā do not seem to have had a well defined religious philosophy or a recognised single teacher or founder. Some of them lived in groups under leaders like the three Kassapa brothers (Vin. 1, 24) who had independent large groups of jaṭilā under them, but many were the jaṭilā who practised asceticism individually.

The earliest mention of a jaṭila is found in the introduction to the Nālaka sutta where it is said that sage Asita (Kāladeva) paid a visit to king Buddhodhana on hearing of the birth of a son to the latter. Asita is depicted there as an ascetic wearing a jaṭā (Sn. v. 689). He is described as a person who had developed the ability to predict the future of persons. When the infant was shown to Asita he carefully studied the marks on the child’s body and was convinced that the child would grow up to be a unique teacher of men. Asita was grief stricken that he would not live to see the child blossom to be a great teacher due to his (Asita’s) advanced age and so he admonished his nephew Nālaka to become a disciple of the future Great Being.

Ascetics with matted hair (jaṭilā) seem to have lived in India even prior to the appearance of the Buddha, as is evident from the many incidents connected with jaṭilā occurring in Buddhist texts. Asita, the jaṭila, was greatly advanced in age at the time Prince Siddhārtha was born. The three famous jaṭila leaders, the Kassapa brothers, were prominent fire worshipping ascetics with substantial followers, when Siddhārtha Gotama attained Enlightenment.

The Buddha in the Pāyāsi sutta (D. II. 339) relates a fable wherein reference is made to a jaṭila living in a leaf hut in the woods tending a ritualistic fire. The context assumes that the fable quoted was already an old and wellknown one, indicating that jaṭilā existed as a particular and distinctive type of hermit even prior to the Buddha’s time.

The Pārāyaṇa Vagga of the Sutta Nipāta relates the story of a brahmin teacher by name Bāvari who had a large group of pupils (Sn. pp. 190–197). Bāvari’s pupils are described as having matted hair (jaṭā) and wearing antelope hide. B.C. Law opines that Bāvari was a jaṭila ascetic who had a large following of pupils (B.C. Law, Geography of Early Buddhism: Oriental Books Reprint Corporation, New Delhi, 1979, p. 17).

The existence of jaṭilā in significant numbers during the day of the Buddha is brought to light by two references to them in the Sānyutta and Anguttara Nikāyas. In one of them (S. I. 78) it is said that a group of contemporary religionists consisting of seven jaṭilā, seven nigaṇṭhā, seven acelā, seven ekasāṭikā and seven paribbajakā were hovering in the vicinity of Pubbārāma in Sāvatthi when the Buddha was once staying there. King Pasenadi Kosala who went to see the Buddha saw these ascetics on his way and asked the Buddha whether those ascetics were arahants or were on the path to arahantship. The Buddha explained to Pasenadi Kosala that the virtue of a person cannot be discerned by external appearance and that a person has to be associated closely for a long time to decide whether a person is virtuous or otherwise. The same list of ascetic groups occurs in the Anguttara Nikāya (A. III. 276) where jaṭilā are mentioned in the third place. In this context it is said that the ascetics named in the list who harm life, who rob others, who are not celibates, who utter falsehood, and who consume intoxicating drinks are destined to be born in hell after death. These and other references given earlier are sufficient proof to conclude that jaṭilā groups and individual jaṭilā were a significant religious phenomenon during the day of the Buddha in India.

As is evident from references to Jaṭilā in Buddhist texts, the majority of jaṭilā were brahmins who had fallen apart from their customary brahmanic practices and rituals to follow ascetic practices. Tending the ritualistic fire or fire worshipping seems to have been a popular practice of these jaṭilā in addition to practising asceticism and wearing matted hair. Some of them wore antelope hide. They were not agnostics. They believed in Karma and rebirth and human initiative.

8. So in the formula of dependent origination (pāṭicca-samuppāda), jaṭi precedes decay, death and other forms of suffering.
9. Ayaṁ antimā jāti natthi dāni punabbhavo: M. III, 123.
It was not very long after the Buddha's attainment of Enlightenment that he encountered the three well known Kassapa brothers, Uruvela Kassapa, Nadi Kassapa and Gayā Kassapa who were leading large groups of jātiḷā. The very fact that the Buddha decided to go to meet them in their own ascetic habits to confront them and convince them about the futility of their religious beliefs and practices speaks for the prominent position these jātiḷā leaders occupied in that society.

The Buddha did not receive a warm welcome at Uruvela Kassapa's hermitage. When the Buddha told Uruvela Kassapa that he wished to spend the night in Uruvela Kassapa's hermitage, he was bluntly told that there was no place in the hermitage, to be offered to him. Since the Buddha was insistent to stay the night there, Uruvela Kassapa agreed to accommodate the Buddha in his fire-chamber (aggisālā) where dwelt a ferocious and poisonous snake possessed of great magical power, hoping that the snake would attack the Buddha and kill him. When the serpent started to display its magical powers, the Buddha, too, performed similar psychic feats to subdue the serpent.

Early next morning Uruvela Kassapa went to the fire chamber to see what had taken place. To his dismay the Buddha was there alive and serene and the venomous snake was resting by a side near the Buddha.

Uruvela Kassapa did not accept the Buddha as an Arahant even after this incident and the text says that the Buddha performed 3500 miracles in all to convince Uruvela Kassapa, but the latter haughtily maintained that he (Uruvela Kassapa) was a worthier person than the Buddha.

Buddha, then, in a challenging tone declared that Uruvela Kassapa was neither an Arahant, nor was he one on the Path to Aranahntship. This surprised Uruvela Kassapa and being subducd expressed willingness to listen to the Buddha. Subsequently Uruvela Kassapa accepted the Buddha as a greater Arahant than him and expressed willingness to become a disciple of the Buddha.

Uruvela Kassapa and his five hundred disciples cut off their matted hair, discarded their ascetic garbs and all other paraphernalia used by them for their ascetic practices and became disciples of the Buddha. When Uruvela Kassapa's two brothers, Nadi Kassapa and Gayā Kassapa came to know about the conversion of their eldest brother along with his disciples as disciples of the Buddha, they too, along with their own disciples decided to follow the example of their eldest brother. Thus altogether one thousand and three jātiḷā became bhikkhus in the dispensation of the Buddha, almost at the outset of the Buddhist movement (Vin. I, pp. 24–32).

The Buddha led these new converts to the peak of a hill at Gayā (Gayālsa) and there preached to them the Adittapariyāya sutta (Vin. I, p. 35). It is said that all the former jātiḷā, one thousand and three in number, attained arahantship at the conclusion of the sermon.

Continuing his sojourn the Buddha went to Rajagaha. Seniya Bimbisāra, the king of Magadha hearing about the arrival of the Buddha in Rajagaha went to see the Buddha with a multitude of Brāhmaṇa Magadhan house holders. When they saw the former jātiḷā in the company of the Buddhist bhikkhus, they were a little bewildered as they were not certain whether the jātiḷā had become the followers of the Buddha or vice versa. The Buddha, reading their thoughts and to dispel their doubts posed a question to the former jātiḷā Uruvela Kassapa as to why he gave up his fire sacrifice and asceticism. Uruvela Kassapa described the circumstances under which he abandoned fire sacrifice and asceticism, and paid obeisance at the feet of the Buddha to dispel the doubts of the Brahmans' house-holders. (Vin. I, p. 36)

The Sela sutta (Sn. p. 103) records the meeting of the Buddha with another jātiḷā by name Keniya. According to the Suttanipāta commentary (Sn. l, p. 285) Keniya was a jātiḷā practising austerities while at the same time maintaining a wife and family, thus indicating that all the jātiḷā were not celibates and at least some of them maintained wife and children.

The jātiḷā who belonged to the wider group of religionists called the drahmanas (recluses) had some affinity with Buddhist and the Jains, in that too, were opposed to the Vedic Brāhmaṇa tradition and believed in karma and rebirth, and they were not sceptics of the moral order like Pūrana Kassapa (D. I, 53; 115). The Buddha was critical about their ascetic practices and external appearance and said that such things would not help to cleanse and purify a being. In the Dhammapada (Dhp. 141) the Buddha states: ‘not wandering naked, not matted hair, not dirt (mud), not fasting etc. purify a mortal who has not overcome doubts.’

The keenness shown by the Buddha to preach to the three Kassapa brothers and their disciples and to convert them, is indicative of the social prestige these jātiḷā enjoyed as religionists in the contemporary society. The maturity of the jātiḷā as religionists is evinced by their becoming Arahants on listening to the Adittapariyāya sutta preached to them by the Buddha, not very long after their conversion (Vin. I, p. 35). The Buddha permitted the bhikkhus to ordain jātiḷā and to give them the Higher Ordination (Upasampadā), too, soon after the ordination, without a period of probation (Vin. I, p. 11), a concession not given to many other converts.
JAUGADA, a ruined fort in the village of Berhampur in Taluka of the Ganjam district in Madras. The site is located about 18 miles to the north-west of the Ganjam town, on the northern bank of the river Rishikulya. Duplicates of fourteen Asokan Edicts at Dhauli are found engraved on three vertical slabs of stone rising to different heights in a range of rocks in this ruined fort. The inscribed slabs are surrounded by the debris of a high wall. The range of rocks where these inscribed slabs are found covers a large extent of land (Graham, W.F., Inscriptions of Asoka (1872) Vol. 1. p. 219).

The first slab contains five of these edicts (1 to 5), the second contains five more (6 to 10) and the third contains the last four (11 to 14) of these edicts. The edicts are partially erased due to the peeling of the rock surface (Cunningham, Inscriptions of Asoka, p. 19 f.). These edicts were copied in 1850 A.C. by Walter Elliot who was aware that these edicts are duplicates of Asokan edicts which have already been found at Shahbazgarhi, Girnar and Dhauli (R. Sewells, Lists of Antiquities, Vol. 1, p. 4). The rock is now protected by an iron roof and a railing.

The four edicts on the third slab at Jaugada were edited with those at Dhauli by Professor Kern. The first estampages of these were prepared by Burgess.

Two of the Jaugada edicts are directly addressed to Mahāmaitrās of the districts. The rest contain admonitions to people about moral behaviour.

In the first edict the emperor declares that no human being should be killed or sacrificed. Some festivals of an evil nature are also to be stopped, but festival gatherings of a religious character are to be allowed. Killing of animals and birds for food in the royal kitchen, too, was forbidden.

The second edict deals with the establishment of hospitals for men and cattle. They were established not only within his kingdom but also in the neighbouring countries such as Chola, Pandya, Satyaputra and the Yavana Kingdom of Antiyokus. In the same edict the emperor gives instructions to plant medicinal herbs and trees on either side of roads and to dig wells wherever necessary for the benefit of human beings and animals.

In the third edict instructions are given to high officers—Yuktas, Rājukas and Prādesikas to go on tour every five years to perform administrative duties and issue instructions on morality. The emperor instructs: 'obedience to father and mother should be observed; good relations with friends and relatives should be maintained; liberality towards recluses and brāhmaṇas should be practised; moderation in expenditure and possession should be pursued. The Council of Mahāmaitrās should order the Yuktas to supervise the implementation of these orders'.

In the fourth edict the emperor emphasises that no discourtesy should be shown to recluses and brāhmaṇas. It is also laid down there that living beings should not be harmed. Instead of the sound of war-drums, the sound of the drums of virtue has to be spread. In this edict the emperor expresses his desire to see his sons, grandsons and great grandsons following these instructions till the end of the world.

In the fifth edict the emperor says that those who neglect even a portion of these moral instructions would be performing evil deeds, "because, sin spreads fast". Further, the emperor says that no duty is more important to him than the welfare of the people. The edict says that the Mahāmaitrās were appointed in the thirteenth regnal year of the emperor to supervise the moral development of everyone including Yavanas, Kambojas, Gandhāras, Latikas and Petunikas.

In the seventh edict the emperor says that members of religious sects bent on self-control are free to live anywhere in his kingdom. It is also said in the same edict that though one may practise great liberality, if he lacks in self-control and purity, he cannot be considered a magnanimous person.

The eighth edict says that emperor Asoka in his tenth regnal year went on a pilgrimage to the Great Bodhi tree (Sambodhi).

In the ninth edict he says that servants have to be well treated and protected.

In the tenth edict the emperor says that all men (and women) are his children and as such they have to be provided with nourishment and protection, and their happiness has to be guaranteed.

The four remaining edicts, too, contain admonitions similar to those detailed above.

T. Arlyadhamma

JAULIĀN, a Buddhist site within the ancient kingdom of Takṣaśila (modern Taxila) where archaeological excavations carried out in the present century had brought to light a Buddhist monastic establishment. On grounds of masonry work and other evidences scholars have agreed to accept that this establishment was founded in the period of the early phase of Imperial Kushans who ruled over the Gandhāra kingdom.

Although Cunningham has done preliminary excavations in the Taxila area as far back as the middle of the 19th century (ASIAR, Vol. II for 1871, Report for the year 1863–64, pp. 111 ff., plate LVII), real large scale excavations were carried out only in the second decade of
the present century by Sir John Marshall, who explored the entire Taxila region including the Jauliān site.1

Jauliān is wellnigh related to the other Buddhist sites in Taxila like Mohra Morādu, Dharmarājika, Kunāla, Kalawān, Khāder Morāa, Giri, Ghai, Bhamāla, Bhallur, Lāchak and Bādelpur as well as to other Gandhāra sites further towards the n.w. frontier.

The remains of the Jauliān Monastery stand on a hill about 300 feet high. The site is less than three miles away from the Taxila railway station. The ruins are remarkably in a good state of preservation showing traces of late repair and redecoration and later additions to the main structure, before they were overtaken by the catastrophe which resulted in their burial. (PLATE VII).

The ruins comprise a Sanghārāma (monastery) with two stūpa courts to the south and north and another smaller court adjoining them on the west.

The main stūpa stand in the upper court with a number of smaller stūpas closely arranged on its four sides and with lines of chapels for cult images ranged against the four walls of the court and facing, as usual, towards the stūpa.2 The monastery contains an open quadrangle surrounded by cells, besides an ordination hall, refectory, kitchen, store-room, bath room, latrine and other chambers etc. (A.K. Coomaraswamy, History of Indian and Indonesian Art, p. 72 f.; Buddhism in Pakistan, A. Govt. of Pakistan publication, Karachi 1963, pp. 36 f; ASIMem, 1921, No. 7, p. 3).

Much of the superstructure of the main stūpa, including the dome and all but the lowest course of the drum has now disappeared, but the lofty plinth is still standing almost to its full height and some portions of its stucco decoration have been preserved. Marshall says the main stūpa at Jauliān must have been very similar in appearance to that at Mohra-Morādu (also a site in Taxila) consisting like it of an oblong plinth approached from one end by a flight of steps and surmounted by a cylindrical drum and dome, the whole embellished with plaster reliefs and crowned by a cattāravālī (a pinnacle in the shape of a series of umbrellas).3 The character of the figured decoration on the sides of the plinth of the main stūpa consists of a seated colossal Buddha in the dhyāna mudrā occupying the bay between each pair of pilasters, and of smaller Buddhas in a similar posture seated one above the other on the face of the pilasters.4 These figural characters of the Buddha, bodhisattvas and other characters belong to two phases according to Marshall and Foucher, some to the early classical period of Gandhāra Art and others to a later decadent period. (PLATE VIII).

The smaller stūpas which lie on the four sides of the main stūpa are diminutive copies of the main edifice, but differ from it in the decoration and shape of their plinths which were square in plan instead of oblong and usually relieved with more elaborate ornaments. The scheme of decoration of their plinths are usually richer and more intricate than that of the main stūpa.

The square plinth of these subsidiary stūpas is divided into several horizontal tiers which are richly decorated with carvings of figures of the Buddha, bodhisattvas, attendants, and other human and animal figures like atlantes, heads of lions etc. along with interspersed stunted pilasters of the Corinthian and peristepolitan order.

Marshall remarks that these reliefs are remarkable for the vigour and fidelity with which they are modelled and constitute an important addition to our knowledge of Buddhist art and iconography in the fourth and fifth centuries of the present era (ASIMem, op. cit. p. 8).

Among the other important finds at the Jauliān Sanghārāma were some relic caskets enshrined in the stūpas which contained ashes and bones removed from funeral piers, probably of Buddhist saints (arhants).

The inscriptions in Kharoṣṭhī script found in the pedestals of Buddha images of these miniature stūpas had enabled scholars to revise the earlier theory in regard to the date of disappearance of this script in N. India (see Rapson's Ancient India, p. 18, ASIMem, op. cit., p. 10).

The chapels that enclose the stūpa edifice were planned in the form of a quadrangle sufficiently large to enclose the main stūpa and all the subsidiary stūpas as well. The quadrangular plan of the chapels at Jauliān is supposed to be a later improvement on the circular plan at earlier

1. This essay is based on the observations made by J. Marshall and M. Foucher on the Jauliān monies which appeared in "the Memoirs of the Archaeological Survey of India, 1921, No. 7"
2. This arrangement of enclosing the main stūpa with a line of chapels is quite common in other Gandhāra monasteries also, of the earliest date like at Takhti-Bahi, Jamalgarhi, Dharmarājika stūpa. It is believed that this type was an innovation to replace the earlier pattern of stūpa construction with a surrounding wall and Toranas at four sides as at Sānchi, Buddhagaya, Barhat etc. (see Jamalgarhi, Ency. Bm.)
3. The conjectural reconstruction of the Jauliān stūpa is based on several miniature stūpas discovered in well preserved states at Taxila, of which the miniature stūpa at Mohra Morādu is most remarkable (J. Marshall, Guide to Taxila, Cambridge, 1960, p. 159, pl. XVII).
4. Marshall believes that all these figures are of a relatively late date and demonstrably more modern than the body of the stūpa.
sights like Jamalgarhi and Dharmarājika stūpa at Taxila, for certain advantageous reasons.

This novel architectural feature in stūpa buildings which was common in the north west India, was needed after the introduction of the cult image of the Buddha, which the scholars believe had originated in the Gandhāra field, after the first century of our era (ASI Mem. op. cit., p. 11; see also M. Foucher, L’Art Greco Bouddhique ‘due Gandhāra’).

Of the images which stood within the chapels only faint traces survive now, but it is possible to surmise that they housed only cult images of the Buddha and occasionally of bodhisattvas.

The primary monastery of the Jauliān sanghārāma, which includes the court of cells for monks’ residence affords a good illustration of the luxury and wealth of the Buddhist community of the period during which these institutions flourished (2nd to 5th centuries A.C. probably). It consists of an assembly hall, refectory, kitchen, store-room, bath-room and latrine indicating that the monks no longer depended upon the begging bowl for their daily food in accordance with the earlier established rule,1 (A.K. Coomaraswamy, op. cit. p. 72; Buddhism in Pakistan, p. 36 f; ASI Mem, p. 15 f.). On grounds of masonry work Marshāli believes that the original structure at Jauliān embraced only the court of cells and the assembly hall and all other chambers being later additions. “It was only in the 3rd or the 4th century A.C. that the bhikkhus developed the idea of possessing store-rooms and kitchens of their own and of embarking on a more luxurious mode of life” (ASI Mem. op. cit. p. 15).

Jauliān monastery founded in the early centuries of the present era had reached its final stage of development with additional compartments, renovations and enlargements, before it was destroyed by a fire probably a result of a conquering army of the white Huns (Ephthalites) who devastated the entire area of North-west India from the second half of the 5th century onwards.

When the Chinese pilgrim Hsuan-tsang arrived in Taxila in the latter half of the seventh century he found most of the Buddhist monasteries there in ruins and desolate. (S. Beal, Chinese Accounts of India from Huien Thsiang, Indian Edition, Calcutta, 1958, p. 179).

Foucher remarks that the plastic works of stucco and terracotta at Jauliān are the last manifestations of the Gandhāra school (ASI Mem. op. cit., p. 38).

Most of the Jauliān stucco and terracotta heads of Buddha and bodhisattva figures show stereotyped features which are not uncommon elsewhere in the Gandhāra field. It is believed that these large number of heads, discovered in well preserved condition, were produced on a mass scale at a certain repertory or so, to meet the great demand from the vast number of monasteries within Gandhāra and outside as well (ASI Mem. op. cit., p. 23 for Foucher’s remarks).

Jauliān provides material for the study of the last phase of Gandhāra Buddhist art as well as the cultural history of Buddhist monastic life from the beginnings of the present era up to the Hun invasions in the fifth century.

JAVANA. The term “Javana” is used in Pali, in the sense of ‘apperception’, ‘alacrity’, ‘readiness’, ‘impulse’ and ‘swift’ (PTS Dictionary). In the Abhidhamma, the term, javana is used in a purely technical sense.

When the mind is fully unoccupied as in the state of dreamless sleep, its thoughtless state is termed bhavanga (life continuum). Whenever the mind does not receive a fresh external object (such as a visible object) one experiences the bhavanga consciousness. When a visual object enters the stream of being, the object begins to assert its influence by impeding the bhavanga stream, with the result that the latter begins to vibrate for two moments. First of these two moments is called bhavanga-calana (vibrating of the stream of being). The second is termed bhavangupaccheda (arrest of the flow), because at the end of the latter the stream is ‘cut off’ by five-door cognition. This vibration lasts for two moments after which the stream ceases to flow because it is now ‘arrested’ by the ‘Five-door-turning-towards’ of cognition on occasion of sense (pañcaadvāravajjana) in which attention is more active than its concomitant mental properties.

At this stage the subject merely turns for one thought-moment to something that arouses its attention after having produced a disturbance in the stream of being, but knows no more about it. If the object is a mental one, there appears the mind door-cognition i.e. mind proper-manodvāravajjana instead of Pañcaadvāravajjana (Compendium of Philosophy – PTS 1979, p. 27, 28). Then visual sensation (cakkhuviññāna) reacts when the subject sees a certain object as to the nature of which it does not as yet know anything. This stage is followed by a moment of reception of the object (sampatic-
cana) so seen. There may be two modes of recipient reactions — reception of agreeable or of a disagreeable object.

Next comes the investigation faculty or a momentary examination of the visual object (very agreeable, moderately agreeable, or disagreeable). This is termed ‘sāntirana’; then the object is accomplished by the thought-moment of determining. This is a stage of representative cognition termed ‘votthapana’. Votthapana arranges the investigated material in such a manner as to constitute it into a definite object. It is done by differentiation and limitation by discrimination and definition. Up to the votthapana stage the mind is not yet intelligently aware of the nature and character of the object.

Then comes the apperceptive or the full cognitive stage (javana) wherein the object determined or integrated by the above activity is apperceived or properly cognized. This is held to occupy ordinarily seven thought-moments or none at all, except in the cases of death, stupification, performance of ‘Twin Psychic Phenomena’ (yamaka pāṭihāriya) and other special cases when a less number of moments than seven obtains. At this stage of apperception the being interprets the sensory impression and fully appreciates the objective significance of his experience. These thought moments are called ‘Javana’.

At this stage of apperception the being interprets the sensory impression and fully appreciates the objective significance of his experience.

The javana stage is the most important from the ethical standpoint, as it is the psychological stage in which good or evil is actually done. Whether the object presented to the mind is desirable or not, a person can make the javana — process good or bad. For instance a wise person might harbour a thought of friendliness, without allowing to arise in his mind thoughts of hatred, when he sees an enemy. There is the possibility to overcome the external forces such as circumstances, habitual tendencies, environment etc., exercising one’s own freewill and generate either good or bad thoughts at this stage.

After the Javana stage there follows two moments of registering or identifying (tadārammana). Then the consciousness re-absorbs itself in the stream of being (bhavanga).

The simile of the man and the mango-tree is presented in the Compendium of Philosophy (PTS. — 1979, p. 30). ‘A man in deep sleep is lying at the foot of a mango-tree, with his head fully covered. A wind stirs the branches, and a fruit falls beside the sleeping man. He is, in consequence, aroused from dreamless slumbers. He removes his head-covering in order to ascertain what has awakened him. He sees the newly fallen fruit, picks it up, and examines it. Apprehending it to be a fruit with certain constitutive attributes observed in a previous stage of investigation, he eats and relishes it and then putting back his head-covering once more resigns himself to sleep.

The dreamless sleep corresponds to the unperturbed current of the stream of being (bhavanga). The striking of the wind against the tree is like the ‘past’ life-moment, during which the object enters the stream and passes down with it, without perturbing it. The swaying of the branches in the wind represents the vibration of the stream of being. The falling of the fruit corresponds to the arrest or interruption of being, the moment at which the stream is ‘cut off’ by thought; the waking of the man to the awakening of attention in the act of cognition on occasion of sense; the removal of the head-covering to the sense reaction of sight. The picking up of the fruit is comparable to the operation of receiving; inspection of it recalls the examining function. The simple apprehension of the fruit as such, with certain constitutive attributes of its own, corresponds to the discriminative or determining stage; the eating of the fruit resembles the act of apperception. Finally the swallowing of the last morsels that are left in the mouth corresponds to the operation of retention, after which the mind subsides into the mere vital process, even as the man once more falls asleep.

For kamma, volition is involved in reflective or representative apperception (manodvāraka-javana). Thus the seven moments of volition involved in each reflective process (manodvāra) first javana lacks any cumulative conditionedness yielded by the preceding state of consciousness. Hence it is the weakest. Kamma effect of this javana may operate in the same existence in which it is exercised. This is termed “kamma to be experienced in this life” (diṭṭhadhammavedaniya kamma). If not, it becomes inoperative (ahosi) for ever as it is devoid of reproductive power (janaka-satti). The last of the seven volitional moments (javana) is the second weakest and a little stronger than the initial, because it stands in the relation called ‘succession’ or recurrence (āsevana paccaya). If sufficiently strong its kammic effect would operate in the next existence through its reproductive function (janaka-kicca). This is termed as ‘kamma to be experienced in the next birth’ (Upapajjavedaniya kamma). But if this javana moment is weak it would fail to effect the next rebirth and would be inoperative for ever (ahosi). The remaining five javana moments are termed ‘kamma to be experienced in after lives’ ( aparāpariya vedaniya kamma) as they are capable of operating (whenever circumstances are favourable) from the second birth onwards till the doer attains parinibbāna.

Maranāsanna Javana (volition of apperception before death) is too weak to effect a rebirth. It’s action is merely regulative of the next existence. Kiriyā Javana (inoperative apperception) are characteristic of the Buddha and
JAYATILLEKE, DON BARON

was born on 13th of February 1868 in the village of Warligoda in Kelaniya in the Colombo District of Sri Lanka. A descendant of two respectable and influential Sinhala families, he was the eldest son of Wickramarachchi Imiyá Rajakuruná Liyana Atukoralage Don Daniel Jayatilleke Senanayaka Liyanachchikotta Pattalagedera in Veyangoda, and Liyanage Dona Alisiana (Alisa) Perera Weerasinghe of Warligoda. Jayatilleke had an elder sister by name Susana and two younger brothers by name Don Simon and Simon Abraham. Jayatilleke's upbringing and subsequent career was very much influenced by the social conditions of that period.

The second half of the nineteenth century witnessed the regeneration of nationalism and a revival of Buddhist activities in Sri Lanka as a reaction against colonialism and proselytization activated by the Christian missionaries who were backed by the colonial rulers at that time. The missionaries of the Roman Catholic and Baptist denominations wielded considerable power and influence and were very active in many areas. They established churches and schools and attracted to them many Buddhists some of whom became converts to Christianity. The Buddhist parents were aware of the value of education and the advantage of learning the English language, but they did not have schools of their own to send their children for education and circumstances prevailed upon them to send their children for education to Christian missionary schools.

The passing away of Venerable Walane Siddhārtha Thera on 13th of February 1868 was a tremendous loss to the Buddhists. The establishment of Paramadhama-cetiya Pirivena in Ratmalana in 1841, the first Pirivena to be established under British rule, was a pioneering project of this erudite prelate. However, the Waragoda religious debate which took place in August 1865 and the Udanvita religious debate which took place on 1st February 1866 helped to keep high the spirit of the Buddhist revivalists. Jayatilleke was a child of three years at the time of the Gampola religious debate and was preparing to commence primary education at the time of, the renowned Panadura debate which took place on 26th and 28th of August 1873. The establishment of Vidyodaya Pirivena by Venerable Hikkaduwe Sri Sumangala Thera on 18th December 1873 and the Vidyālankāra Pirivena on 1st November 1875 by Venerable Ratmalane Sri Dharmaloka Thera strengthened the Buddhist revivalist movement greatly. These two Buddhist educational institutions produced many erudite scholars, both lay and clerics, who subsequently worked for the advancement of oriental languages education and research in Buddhist culture.

Young Jayatilleke was initiated to learning by Ven. Ratmalane Dharmaloka Thera, the founder of the Vidyālankāra Pirivena. He spent his formative years as a student of Vidyālankāra Pirivena thereby gaining a thorough knowledge of Oriental languages, Oriental literature and Oriental culture. Subsequently he received a thorough grounding in English and its culture under Wesleyan fathers at Wesley College in Colombo.

Jayatilleke gained the Bachelor of Arts (B.A) degree from the Calcutta University in India and the Master of Arts (M.A) degree and Bachelor of Law (LL.B) degree from the Oxford University in the United Kingdom. Later he was enrolled as a Barrister at Grey's Inn in the United Kingdom. He married Mallika Bantuwarda, daughter of Andreas de Silva Batuvantuduw, a daughter of Andreas de Silva Batuvantuduw of...
Jayatilleke's Contribution to Education: Jayatilleke had a natural inclination for teaching and his first assignment was the Principalship of the Buddhist High School in Kandy (which later changed its name to Dharmaraja College) in the year 1890. Incidentally, this school was one of several schools that came into being as a result of the Buddhist revivalist movement which sprang up in the second half of the nineteenth century. Colonel Henry Steele Olcott, an American educationist who was attracted to Sri Lanka on reading the reports of the Panadura religious debate, inspired and persuaded the local Buddhist leaders, bhikkhus as well as laymen, to set up schools for the education of Buddhist children. For this purpose Olcott himself set up the Buddhist Theosophical Society (BTS) under which organisation several schools were started in important towns such as Colombo, Galle and Kandy.

During the few years Jayatilleke was in charge of Dharmaraja College, he was able to raise the standard of that school in all fields, academic and extra curricular, and he was able to put up the necessary buildings for the school with the support of the general public. The suavity, enthusiasm and sincerity of purpose he displayed in all his social dealings won for him popular acclaim and co-operation of parents as well as well-wishers of the school.

In 1898 he was appointed as Vice principal of Ananda College and with the retirement of the Principal Mr. A. E. Bultjens two years afterwards, Jayatilleke was elevated to the position of Principal of Ananda College.

Jayatilleke's period of stewardship of Ananda College marked a remarkable progress and advancement in all activities in the school. The very good results of the school candidates in public examinations during this period attracted to the school more and more children from Buddhist families as well as from non-Buddhist families and the school expanded rapidly. A building programme, too, was launched by Jayatilleke to provide sufficient accommodation and other facilities to the children.

Jayatilleke was subsequently entrusted with a bigger task of assisting and directing the development of Buddhist schools under the management of the Buddhist Theosophical society as the General Manager of BTS schools and subsequently as the Secretary of the BTS., and this he did with tremendous success. By this time he had gained fame as a far-sighted educationist, versatile Buddhist leader, skillful manager and efficient organiser.

Jayatilleke played a key role in the founding of a Buddhist Girls College in 1917, and this college subsequently developed into the present leading Buddhist Girls school in Colombo - the Visakhä Vidyālaya. Jayatilleke was the first manager of this leading educational institute.

Contribution to Buddhism: Jayatilleke grew up during a period which was marked by enthusiastic Buddhist resurgent activities. As a person born and bred in an environment with strong Buddhist religious fervour he was sensitive to the pathetic plight of Sri Lankan Buddhists under foreign domination. Further his knowledge and conviction in Buddhism were strengthened by the erudite bhikkhus who were in the forefront of the revivalist movement at the time. When Jayatilleke was in the United Kingdom pursuing legal studies he got the opportunity of meeting young intellectuals from other countries with whom he discussed many aspects of the Buddha's teachings and he could convince many of them regarding its rationality and applicability in day to day living. He gained fame as a Buddhist scholar during the World Congress for free Christianity held in Berlin on 5th August 1910 where he very eloquently placed before that audience the essence of Buddhism.

Jayatilleke realised the importance of re-vitalising and strengthening the Buddhist revivalist movement launched by Buddhist leaders like Colonel H. S. Olcott, Venerable Hikkaduwe Sri Sumangala Thera and Venerable Migettuwatte Gunananda Thera to inspire the Buddhist population. He started the Young Men's Buddhist Association (YMBA) in Colombo on the 1st of March 1898 to cater to the needs of the Buddhist youth. He was the first President of the Organisation and continued to be elected annually to the post until 1944. With the assistance of other Buddhist leaders and well-wishers of the time he managed to procure a spacious building in Borella to set up the Office and Centre of the YMBA. This centre in Borella consisted of an auditorium, a library, a recreation room and a hostel for Buddhist Office workers from outstations. Jayatilleke also provided leadership to Buddhist enthusiasts all over the country to start YMBA Organisations in their own areas.

A common constitution for such organisations was provided by the Colombo YMBA and the newly formed YMBA were affiliated to the Colombo YMBA. To Publicize the activities of the Colombo YMBA and to publish educative articles on Buddhism 'The Buddhist' journal was restarted and Jayatilleke functioned as its editor for many years.

As President of the Colombo YMBA, Jayatilleke encouraged and helped bhikkhus in remote villages to start Sunday Dhamma Schools in their temples for Buddhist children and the Colombo YMBA provided a common syllabus, text books etc. for those schools. The
Colombo YMBA also conducted annual examinations to evaluate the Dhamma knowledge of annual children in these schools and issued certificates to those who passed in the examinations.

Jayatilleke's Literary Activities: Jayatilleke was a prolific reader and writer. His mastery of English, Sinhalese, Pali and Sanskrit languages opened for him the doors of an extensive literature written in those languages. He gained membership in several prestigious literary organisations like the Royal Asiatic Society (Ceylon Branch) and the Prāćīnabhāṣopakāra Samitiya and contributed much to their activities. In addition he contributed many learned articles on literature and Buddhist Philosophy to newspapers as well as to local and foreign journals.

Jayatilleke was invited by the government of Ceylon in 1929 to pioneer a project to compile and etymological dictionary for the Sinhala language. As its pioneer Editor-in-Chief the first thing he did was to scientifically edit several classical Sinhala texts like Dampiya Ātuvā Gātāpadaya, Katikāvat Sangārāva, Budugūṇa Alakāraya, Saddharmālakāraya, Tisasandesaya, Pārahkumbāṣirita and Sikavalandaviniṣa

Contribution to National Independence and Political Activities: The revival of Buddhist activities in Sri Lanka coincided and promoted the campaign for national independence. By this time Jayatilleke had won a name for himself as a versatile organiser, persuasive orator and Buddhist scholar and leader and naturally he became involved in the National Independence movement, too. He took leadership in the temperance movement and campaigned against the excise policies of the British colonial government. The riot that took place in 1915 was mis-interpreted by the colonial rulers as an attempt by the national leadership to overthrow colonial domination of the country and the Buddhist leaders who actively campaigned in the temperance movement were arrested by the British regime as instigators of the riot. Jayatilleke was arrested and imprisoned on the 21st June 1915 with the charge that his speeches and writings were seditious. He was released in August the same year and soon afterwards he proceeded to England to press for an impartial Royal Commission on the riots, and with this, his political career commenced. In England he made a strong plea to the Secretary of State against the inhuman handling of the Buddhist leaders by the colonial rulers in Ceylon. When the National Congress was formed by the Ceylonese leaders to fight for independence, Jayatilleke functioned as its spokesman in England to agitate for reforms.

When some constitutional reforms were granted in 1924 Jayatilleke contested the Colombo West seat and became a member of the Legislative Council with a view to fighting for full independence for Sri Lanka. When Sir James Peiris died on 5th May 1930 Jayatilleke was elected as the Vice-President of the Legislative Council.

In 1931 Jayatilleke was elected uncontested to represent Kelaniya seat in the State Council, where he functioned as the Minister of Home Affairs, Leader of the House and Vice President of the Board of Ministers. During this period too, he, along with other leaders, kept on pressing the colonial office for full independence.

In 1942 Jayatilleke assumed duties as High Commissioner for Ceylon in India. He received the title of K.B.E. in 1943. He died on 31st of May 1944.

Thalgodapitiya, Walter, Lives of Ten Patriots. K. D. G. Wimalaratne

Jayatilleke, Kulaṭissa Nanda. (1921–1970), besides being a professionally qualified teacher of philosophy, was one of the leading interpreters of Buddhism in modern times. He was himself a philosopher with a distinctive outlook shaped mainly by the teachings of early Buddhism and contemporary (British) empiricism, the key factors behind his intellectual development.

K. N. Jayatilleke (KNJ) had his early education at Royal College, Colombo, one of the leading schools in Sri Lanka. He entered the Ceylon University College in 1939 where he read for an Honours degree in Indo-Aryan Studies and obtained the Bachelor of Arts degree from the University of London in 1943 being placed first in order of merit. Subsequently (1945–47) he followed the Moral Science Tripos course at the University of Cambridge and obtained his second first degree. He also obtained an Honours Degree in Philosophy at the
University of London. It was during his stay in Cambridge that KNJ had the opportunity to attend for two years (1945-47) Wittgenstein's lectures delivered in his private quarters in Whewell's Court, Trinity College, Cambridge. Later in 1961 he was awarded the degree of Doctor of Philosophy by the University of London for his thesis which was later published under the title *Early Buddhist Theory of Knowledge* (George Allen and Unwin Ltd., London, 1963).

KNJ began his academic career as an Assistant lecturer in Philosophy at the University of Ceylon and reached the peak where he was elevated to the position of Professor of Philosophy in the same University.

KNJ was exposed to the western intellectual tradition from the very outset of his entry to higher education. The philosophical milieu in England during 1940's and 1950's which was marked by the rise of Logical Positivism exercised a great influence on KNJ's intellectual development. The logical positivist movement was started in Europe by a group of scientifically minded philosophers called the 'Vienna Circle'. They maintained that science represented the paradigm of knowledge, and they held in high esteem the scientific method which emphasized empirical evidence and verification of such evidence. The movement was highly influenced by Ludwig Wittgenstein's ideas as expressed in the *Tractatus* although Wittgenstein himself was not a member of this group nor had any direct association with it.

By 1940's when KNJ attended his lectures, Wittgenstein was revising the views he held during what has now come to be known as 'the early Wittgenstein', a stage of philosophical thinking which had influenced the program of Logical Positivism to a great extent. Nevertheless, this philosophical school with its antipathy towards metaphysics and emphasis on verification was still very much in vogue. KNJ was highly influenced by this view of philosophy. In particular, he seems to have inherited his demand for verifiability in matters of religion and his dislike for metaphysics (with some reservations, in this particular case) from Logical positivists. The major evidence for the Logical Positivist influence in KNJ's thinking can be seen in his *Early Buddhist Theory of Knowledge*.

KNJ's major intellectual work is *Early Buddhist Theory of Knowledge* (hereafter abbreviated as *EBTK*). The purpose of this monumental work is to establish that the foundation of early Buddhist theory of knowledge is not rationalist as scholars up to that time had believed, but empiricist. In order to establish this thesis KNJ begins with a thorough study of the history of Indian thought up to the time of the Buddha and identifies three broader categories under which he could accommodate all schools of Indian religious and philosophical thought. The three categories are: the 'Traditionalists', the 'Rationalists' and the 'Experientialists'. In order to support his thesis that the Buddha was an experientialist he makes use of the Buddha's admonition to the Kālamas in which the Buddha asks them not to accept any proposition just because it is so. Instead, he identifies six forms of authority and the other four as pertaining to a rationalist approach. According to KNJ, by rejecting these two major means of knowledge accepted by a large number of religious teachers of his day the Buddha sought an alternative way which is the experientialist position.

The position that KNJ attributes to early Buddhism is not a denial of the other two traditions in toto. According to him, the authority of the Buddha as well as logical reasoning play an important role in the path of liberation advocated in early Buddhism. Nevertheless, their scope is limited; therefore they fail to produce the ultimate religious experience aimed at by Buddhism. Even the method adopted in early Buddhism, namely, experience, has its limits. For example, early Buddhism on KNJ's interpretation does not believe in a kind of omniscience, as accepted in the Jaina or any other religious tradition of the day. Insofar as the alleged omniscience of the Buddha is concerned KNJ refers to *sūtra* evidence to show that the early Buddhist tradition did not attribute to the Buddha such knowledge. In other words, in the Buddhist view, there are limits to knowledge and furthermore, knowledge is only a means according to Buddhism. It is not concerned with knowledge for its own sake;
knowledge (ñāṇa) is only a means to emancipation (vimuttī).

The analytical outlook, in KNJ's view, is an outstanding feature of the thought of the Pali Canon. The tendency towards class fiction, definition and the delimitation of the meanings of the terms, encountered in the Pali Abhidhamma often owes much to this outlook. A major use of the analysis of linguistic concepts in the early Buddhist tradition was to eliminate certain metaphysical ideas, the concept of ātman being for most among such ideas.

After T.R.V. Murti's initial treatment (The Central Philosophy of Buddhism, George Allen and Unwin, London, 1955), it is KNJ who made a comprehensive philosophical discussion for the first time of the reasons behind the Buddha's not answering the so-called āvāyākta (undetermined) questions. In his discussion KNJ suggested that besides pragmatic reasons there must be philosophically valid arguments as to why they are left undetermined. Discussing the four questions on the after-death existence of the Arahant, KNJ draws our attention to the Aggi-vacchagottasutta where the Buddha shows that the question 'in which direction has the fire gone' cannot be answered owing to the very misleading nature of the question 'in which direction has the fire gone' cannot be The Blue and Brown Books (1958, p. 108) where the latter uses the identical simile ('where does the flame of a candle go when it's blown out') to highlight the error of the analogy involved here. Thus in KNJ's view there is a close resemblance between the approaches adopted by the early Buddhists and the Logical Positivists in dealing with certain types of questions.

The most significant distinction between the two systems, in KNJ's view, is seen in their attitude to the concept of the transcendent religious reality. Both Buddhism and Logical Positivism, as KNJ had shown earlier (in the cases of the Buddha's response to the questions regarding the after-death status of the Arahant and Wittgenstein's remarks on questions on where light of a candle goes when it is extinguished), make similar critiques about questions founded on mistaken logic of language. Nevertheless, according to KNJ, early Buddhism accepts the possibility of such a state (EBTK p. 475).

KNJ outlines how early Buddhism differs from Logical Positivism in some important respects. This shows that KNJ was not concerned with a superficial search for similarities. He was a critical scholar who knew both philosophical traditions well. His appreciation of Logical Positivism seems to originate from his acceptance of empiricism as the more reliable means of knowledge and the method of analysis as the key tool in philosophy. He went along with Logical Positivism insofar as these two important methodological principles were concerned. However it did not amount to his accepting the Logical Positivist ideology in toto, for he did not accept the Logical Positivist critique of ethical and spiritual propositions. As is clear from the writings of A.J. Ayer and others, the Logical Positivist critique of religion was levelled mainly and solely against the god-centred religion of the West. However this is not to say that Buddhism or any other religion may be spared from this critique altogether. Nevertheless, it may be argued that it does not amount to a full-fledged critique of a religion like Buddhism in which some of the key metaphysical notions such as God and Soul are rejected.

The history of religion in India shows that Buddhism rejected the two most important concepts in theistic religion (which is the religion in many cases) and still continues to be 'religious'. It was due to this Buddhist stand that some of the contemporaries of the Buddha branded him a nihilist. This line of criticism results from the assumption that religion is impossible without God and Soul. Not only during the time of the Buddha but even today the term 'atheism' carries the connotation of immorality and irreligiosity. Nevertheless, the Buddha rejected these two concepts and still maintained survival and moral responsibility. In a sense, KNJ's situation was similar: he maintained his Logical Positivist stand without rejecting the validity of propositions dealing with such matters as ethics, religion, spirituality and causality.

KNJ's analysis of the epistemology in early Buddhism constitutes a significant part of his contribution to Buddhist and Indian philosophy in particular and philosophy in general. In particular KNJ's analysis showed that the most recent trends in Western Philosophy, particularly those of linguistic philosophy and philosophy of language, were not quite new to Indian philosophical thinking. The line of thinking initiated by KNJ has more comprehensively been carried out (with regard to Nyāya and other Indian philosophical schools) by philosophers like Daniel Ingalla, Bimal K. Motilal, J.N. Mohanty and D.J. Kalupahana, to name a few. Another distinctive contribution made by KNJ to Buddhist Philosophy in particular and philosophy in general lies in his reinterpretation of Buddhist Social Philosophy on the epistemological grounds he had established in EBTK. KNJ was convinced that a viable social philosophy could be developed from the teachings of early Buddhism. From EBTK he showed convincingly that early Buddhism had epistemological tools necessary for this task. His next task was to show that a comprehensive social philosophy could be built on early Buddhist teachings. It is primarily in this task that KNJ occupied himself till his death at the age of 49.

The two most significant landmarks in this direction are his Buddhism and the Race Question and his lectures
the Hague on international law and Buddhist vinaya. The former was written in collaboration with the late Professor G.P. Malalasekera and was published by the UNESCO (1958). In this monograph, the authors identify major Buddhist arguments for the oneness of mankind, and thereby they provide us with the rationale behind the Buddhist disapproval of discrimination based on one’s skin colour, caste, race, etc. The actual Buddhist criticism was levelled against the caste system prevalent in India by the time of the Buddha. KNJ (and Malalasekera) show that the caste system in India was very much like the case of the plant and animal life, constitutes one single species. The Buddha outlines this fact in the Vassethasutta of the Suttanissita. Having outlined these arguments KNJ observes that is view accords remarkably with the findings of modern biological science. In addition to this, KNJ presents Buddhist arguments against caste and for the oneness of mankind. This is the rationale for the rejection of discrimination based on colour.

One of the key Buddhist arguments is based on the fact that mankind, unlike in the case of the plant and animal life, constitutes one single species. The Buddha outlines this fact in the Vassethasutta of the Suttanissita. Having outlined these arguments KNJ observes that his view accords remarkably with the findings of modern biological science. In addition to this, KNJ presents Buddhist arguments against caste and for the oneness of mankind, which is the rationale for the rejection of discrimination based on colour.

Having outlined these arguments KNJ was keen on demonstrating the Buddhist way of solving similar problems. He did not stop at the usual point common to any of this kind of discussion, namely, addressing the need for changing one’s heart.

One could argue that a philosopher need not worry about the social application or implementation of what he says. This would be quite true for a pure theoretician. Never for KNJ who wrote these words at a very early stage of his career as a philosopher, the practical aspect of what he said was equally important. This emphasis in his book may be understood as influenced by Buddhist osophy which lays emphasis on theory and practice or knowledge and conduct. Towards the end of his relatively short life, KNJ was very much motivated by the implementation of what he said. As a result, he became an active participant of the opposition to the existing government which KNJ thought was not led by a proper political philosophy.

The Principles of International Law in Buddhist Jurisprudence (published in 1967 by A.M. Sijthoff, Leyden as part of “Receueil des Cours” Vol. II) is a major contribution by KNJ to what may be called a Buddhist Philosophy of Law or Buddhist Jurisprudence. In this series of articles, KNJ reconstructs, through doctrinal and philosophical, historical and practical evidence from Buddhist Literature, a Buddhist Philosophy of law and tries to show that it is not merely an ideal but something that has been and could be put into practice.

Through the arguments and assertions outlined by him KNJ reinterprets the theoretical and practical aspects of Buddhism as constituting a quite valuable contribution towards building a more meaningful conception of law and international law. This effort too is based on the epistemological foundations KNJ had established in his magnum opus, EBTK. This also testifies to his life-long interest in interpreting the doctrine of the Buddha as providing the most solid and meaningful foundation for an ideology for the contemporary society.

A good amount of KNJ's work falls in the areas of comparative philosophy and comparative religion. Although KNJ did not discuss the methodological concerns of either of these fields of study, his writings remain textbook examples of studying philosophy and religion comparatively. The cardinal feature in KNJ's comparative methodology is that he was not a mere seeker of similarities, nor was he of the opinion that comparative philosophy or religion must engage only in comparisons, although this task was not excluded by him. Without being exclusivist or particularist, KNJ has shown that Buddhism, as any other system of religion, has its own unique message to humanity.

A difficult point in KNJ's analysis of early Buddhism is his interpretation of nirvana as "a state beyond space, time and causation (Na patiṣca-samuppanna) and therefore strictly beyond description" (Principles of International Law in Buddhist Jurisprudence Ch. III). This is in fact the conclusion of his EBTK in which KNJ's burden was to establish that early Buddhism is empiricist.

However, this difficult point in KNJ’s interpretation of Buddhism does not directly affect his overall assessment of the teaching of the Buddha. Nor does it affect the applicability of Buddhism to the problems of contemporary society, as envisaged by KNJ. In concluding the Buddha Jayanti lecture delivered in India in 1969 KNJ remarked:

“In my opinion, the philosophy of the Buddha presents a challenge to the modern mind and it should be a primary function and duty of modern philosophers to examine its solutions to basic questions.”

In the same manner, we may say that KNJ's views on Buddhism present a challenge for the modern mind and that it should be a primary function of students of Buddhism to examine his interpretation of Buddhism and his version of applied Buddhism. Such an exercise will result in furthering the process of developing some viable solutions to the problems of contemporary society through the teachings of the Buddha.

**JAYENDRA VIHĀRA**

A Buddhist monastery in Kaśmīr supposed to have been built by a noble, named Jayendra, who was the maternal uncle of king Pravara-sen II (between the third and the sixth century A.C.). According to the famous Kaśmīri historian Kalhāna, the noble Jayendra had also installed a colossal image of the Buddha in this vihāra (Rājarathana, II, 368).

In the 7th century A.C. the Chinese pilgrim Hsuan-tsang mentions this monastery as the place where he resided for two years, studying various śūtras and ādhyātmas and visiting other neighbouring Buddhist sacred places (A.K. Mookerji, *Ancient Indian Education*, London, 1951, p. 510; Watters' edition of Hiuen Tsang's *Life and Travels*, pp. 258 f.; *Cunningham's Ancient Geography of India*, edited by S.M. Sastri, Calcutta, 1924, p. 112).

So far no archaeological excavations have been made to find the exact location of the ancient Jayendra vihāra site. But it is believed that the monastery was constructed within the precincts of Srlnagara which was also the capital of King Pravarasena II (M. S. Sastri, op. cit. p. 111).

---

**JELĀLABĀD**

(var. Jalalabad), a town in the Swat valley in Afghanistan. The district, too, goes by the same name. The present town was built by Akbar in 1570.

Jelalābad is situated on the southern bank of the river Kābul at the confluence of the river Kunar. Excavations, carried out in the previous century by archaeologists like Messon, W. Simpson, L. Vivien de Saint Martin and others, have revealed that the site is an early centre of Buddhist art and architecture. They have found that almost the entire area, and stretching further beyond, was covered with the ruins of Buddhist stūpas and monasteries belonging to the Gandhāra period.

Several scholars have now identified the district as ancient Udyāna (Chinese, U-chang-na) and the city as the ancient Nagarabhāra (Chinese, Na-kie-lo-ho) of the Imperial Kuśāns.

In the time of Hsuan-tsang, Nagarabhāra signified both the district and the city as well, and was a vassal province of Kapila. According to Hsuan-tsang, the district of Nagarabhāra extended to about 600 li (about 100 miles) in length from east to west and 250 li (about 40 miles) in breadth from north to south. At Nagarabhāra, Hsuan-tsang had found many saṅghārāmas and stūpas, but all were desolate and ruined, with only a handful of priests living in them. This was, however the general picture of the entire Gandhāra area, during the 7th century A.C., when Hsuan-tsang visited it, which had been devastated by the white Huns (Epithalites) who did not spare any religious monument that stood in their way.

Hsuan-tsang attributes the construction of many of the stūpas at Nagarabhāra to emperor Asoka. According to

---

him the famous Dipankara episode of the Jataka Nidānakathā had taken place in this locality. The General observations made by Hsuan-tsang have to be taken as trustworthy on the grounds of evidence from the archaeological excavations carried out at these sites by scholars since the latter half of the 19th century. One such scholar W. Simpson, says: "On the north side of the Kabul river just opposite to the site of the town (Jelālābād) are rocky cliffs along which for nearly three miles there are remains of caves in the rock, and mounds left by topees and vibāras; this is to close to the site that the structures must have formed part of the ancient city. I found the remains of painted decorations and even vestiges of gliding".3

Simpson describes thus the wealth and glory of the area: "the multitude of remains which I have described are in themselves quite sufficient to tell us that there must have been in the past far greater food supply than at present. The costly monuments tell us of wealth which is not to be found in our day in any part of the country". As if to confirm Simpson's inference Hsuan-tsang has recorded that "the country is rich in cereals and produces a great quantity of flowers and fruits. The climate is moist and warm".6

The stūpas examined and described by Masson as existing around Jelālābād are thirty-seven in number, viz. eighteen distinguished as the Darunta group, six at Chahar Bagh and thirteen at Hidda. Of these about one-half yielded coins and relics of more or less importance, which proved the dates of their erection to extend from the Christian era, or it may be a few years before it, to be the seventh or eighth century.7 Ferguson believes that the caves and tumuli in the immediate vicinity of all these stūpas to have been residences of Buddhist monks.

All these accounts bespeak the past splendour and wealth of the area, being a part of the once powerful Kuśāna empire of Gandhāra. Benjamin Rowland says that along the river Kabul by Jelālābād rise the ruined cores of stūpas built in the same shape and of the same mixture of boulders and small stones used at Taxillā and observe that the types of these stūpas are no different from what may be seen in Gandhāra proper and were brilliantly decorated with polychromed stucco originally.8 Hsuan-tsang, too, says that these stūpas were brilliantly adorned and carved and some of them rise to heights of 200 to 300 feet.

Despite the efforts of antiquarians and archaeologists, nothing that has been excavated in this area has escaped the iconoclasm of the local Musalmans.9

It was at the same site that the Greek satraps founded their city Dionysopolis signifying the city of Dionysus, the god of wine.10 It was also the city Nyasa of Alexander's historian.11

JETAVANA (1). Jetavana, or Jetavānārāma, the first ever monastery built for the Buddha and his disciple monks in India was mostly referred to in early Buddhist sources by its full name Jetavana Anāthapindikā Ārāma, the "Monastery of Anāthapindika in Jeta's Park". It was built by the great Buddhist devotee and philanthropist Anāthapindika (Skt. Anāthapindada), a very rich

JETAVANA (1)

merchant from the kingdom of Kosala. As the first ever monastery built for the Buddha and the one single place where the Buddha had, according to legend, spent the most number of rains retreats (vassa) it has always been regarded by all Buddhists as the foremost monastic centre built in the name of the Buddha and the Saṅgha. The story of the building of this great monastery by Anāthapiṇḍika is recorded in the Cullavagga of the Vinaya Piṭaka in the Pali Canon1 and also in the Vinaya texts of the Mūlasarvāstivāda school.2

Anāthapiṇḍika, whose personal name was Sudatta was foremost among all the lay benefactors of Buddhism in the earliest stage of its existence. His caravans laden with merchandise plied the great trade routes of the sub-continent bringing great wealth to him and his native state of Kosala. Even before his conversion to Buddhism he had become well known as a benefactor of destitutes and was therefore bestowed the honorific title Anātha-piṇḍika‘Giver of rice-balls to the destitute’, better seen in the Buddhist Sanskrit title ending with -piṇḍada. It was by the same honorific title and rarely by his personal name that he came to be known among Buddhists after his conversion.

It was on one of his visits to Rājagaha, the capital of Magadha, at his brother-in-law’s residence that he heard of the Buddha. The very word Buddha thrilled him so much that he wanted to visit him immediately but was advised to postpone it for the following day. He was so restless on account of his impending meeting with the Buddha that he awoke several times in the night thinking it to be daybreak. Ultimately he set out to Sītavana even before daybreak and, assisted by a spirit, was able to reach the Buddha who was in his early morning ambulatory.

At this very first meeting with the Buddha Anātha-piṇḍika became a Stream-winner, for the dhamma-eye is said to have arisen in him on listening to the Buddha’s sermon. Immediately he declared his confidence in the Buddha and requested the Buddha to accept him as a lay devotee. At the conclusion of the forenoon meal the next day, offered by the new convert to the Buddha and the Saṅgha, he invited the Buddha to spend the next rains-retreat along with the monks at Sāvatthi, the capital city of Kosala. At this the Buddha said “Tathāgatas, O householder, take delight in houses devoid of people”. Anāthapiṇḍika indicated that he understood the Buddha’s wish. As the subsequent events show he apparently took the Buddha’s words to mean that he should construct a monastery for him and the Saṅgha.

The Mūlasarvāstivāda Vinaya says here that the Buddha directly told Anāthapiṇḍika that monks should visit and live only in places where there are monasteries. But this is highly unlikely because apparently there was no Buddhist monastery even in Rājagaha at that time. The king Bimbisāra who gifted the Vėluvana near Rājagaha, the first ever such gift to the Buddha by any one, had not constructed any buildings in it.3 If the Buddha made any such statement then the Pali version seems to be more reliable. Yet it is very doubtful that the Buddha would have given even an indirect indication with the hope of any material gain. However, Anāthapiṇḍika who was keen to see the Buddha spend the rains-retreat in his native city was determined to provide him with suitable accommodation.

Once back in Sāvatthi Anāthapiṇḍika surveyed the area around the city for a suitable spot for a monastery. He started this even before entering the city says the Mulasarvāstivāda Vinaya. It shows that the monastery was to be outside the city limits and not within. At the end a park belonging to a prince named Jeta was selected as the place satisfying all the conditions for a dwelling place for a group of monks who had renounced worldly-life. These conditions enumerated in the Cullavagga are: “not too far from the village and not too near, accessible, approachable by those who wish, not crowded by day, of little noise by night, having an atmosphere of seclusion from people and suitable for meditation”. He offered to buy it from Prince Jeta.

Anāthapiṇḍika, however, had an initial setback when Jeta said it was not for sale even if covered with gold coins laid edge to edge (kotisanghārena). Undaunted Anāthapiṇḍika said, “then it is bought”, but Jeta would not agree. Ultimately the ministers of justice settled the case in favour of the merchant because Jeta had quoted its value. Thus Jeta agreeing reluctantly to part with his property, Anāthapiṇḍika got down gold coins in carts and started to cover the park with them. The first load of

1. Vin. II. 158 ff.
3. Vin. I. 39
gold coins was found not enough to cover the entire park and a small portion of land near the entrance was left to be covered and the buyer ordered more gold coins to be brought. Jeta who was watching all this with more and more curiosity was by now convinced of the noble aim of the merchant. He offered to donate that portion of land as his gift. Anathapindika who saw the value of having such a well-recognized person as Jeta on the side of Buddhism readily agreed to the offer. The prince later built a gate-house on the land gifted by him, by utilising all the gold coins brought by Anathapindika.

Anathapindika himself built the monastery with all its necessary appendages. They included dwelling places, cells, gate-houses, attendance-halls, refectories, store houses for allowable articles, privies, ambulatories with halls, wells, bathing halls, ponds and pavilions. The Culla-vagga account of the construction of the Jetavana monastery ends here. Unfortunately it does not even speak of the dedication of the newly built monastery. One has to go to the commentaries to get an idea of the ceremony of dedication. According to the Jataka commentary the whole family of Anathapindika participated in the ceremony. The great merchant was attended by five hundred other rich merchants, and his wife by five hundred noble women. His son similarly had a retinue of five hundred youths and the two daughters also had the same number of maidens in attendance. The celebration lasted for nine months. A sculpture at Barhut depicts the laying of gold coins in the park and the dedication performed by pouring water by the donor. This shows that the story was well-recognized in Buddhist circles in the 1st century B.C. (PLATE IX).

The discourses in the Sutta Pitaka do not refer to any of these details found in the Vinaya texts. Since the Culla-vagga is generally regarded as a comparatively late canonical text one can even suspect that the detailed story and all the buildings described as comprising the Jetavana Complex could be a description of the monastery as it stood at a somewhat later period. What we can gather for certainty from the discourses is that many of Buddha's sermons have been delivered at the Monastery of Anathapindika in Jeta's grove situated near Sāvatthi.

This is very significant when we consider the statement attributed to King Pasenadi Kosala that the Buddha, like himself, was a Kosalan, and the two statements attributed to the Buddha that the Sakyan lived among the Kosalans and that they regarded the king of Kosala as their overlord. Therefore living near Sāvatthi, in fact, for the Buddha was to live among his own kith and kin and very close to his own native Sakyan country. Of all the kings who had close association with the Buddha, Pasenadi Kosala seems to have been the closest. The nikkayas contain quite a large number of discourses delivered by the Buddha to Pasenadi Kosala. Therefore it is not surprising that the Buddha spent the greater part of his ministry in Kosala and Jetavana must have been the most important centre of his missionary activities.

The commentaries add a few more interesting details about the Jetavana complex not found in the vinaya texts. Anathapindika spent eighteen crores each for buying the land, construction of the monastery and the ceremony of dedication. Hence it came to be called the Monastery of Anathapindika. The park itself was planted, developed and administered by Prince Jeta, and was therefore called Jetavana. Another reason for this designation was that the park was beautiful to look at with its flowering and fruitbearing trees, was endowed with the five qualities as not too near and not too far, enjoyed by people who came from various places and never boring to the occupants.

According to the same source Jeta expended all the eighteen crores he got from the sale of the land to construct the gate-house and gifted many crores worth of valuable trees as timber for the buildings. But the Jataka Commentary says that Jeta spent only half that amount for his building. Yet it was such an imposing building that once a non-believer mistook it to be the real dwelling place of the Buddha, and was surprised to hear that it was only a gate-house.

The Sumangalavilasini refers to four large houses (cattāri mahāghātāni) within the Jetavana premises viz. Karerikuṭi, Kosambakuti, Gandhakuti and Sala'aghara. But the Suttapāta Commentary names them Mahāgandhakuti, Karerimandalamāla, Kosambakuti and Candanāmāla. Possibly the last one was the same as Sala'aghara, which is also sometimes called Sala'āghara. Of these the first three according to the Suttapāta Commentary were built by Anathapindika at a cost of a

hundred thousand each. Salałaghara was built by King Pasenadi Kosala. The Karerikuti was constructed on pillars and resembled a celestial mansion. It was so named because a Karer or Varuṇa tree reared to as Kareri-māndapa, stood at its entrance. Similarly a Kosamba tree stood at the entrance to the Kosambakuti. Salałaghara is defined as a house made of sala wood (salaśamaya) or of sala trees (salaṇukkhamaya) or else a house with a sala tree at its entrance. There was also a seating-hall (nisidana-sālā) called Kareri-māndala-māla near the Kareri-māndapa. The latter stood, it is said, between the seating-hall and the Gandhakuti. Therefore the Gandhakuti the Karerikuti and the seating-hall were all together designated the Kareri-māndala-māla.13 Dhammapāla14 however held that the Kareri-māndapa and the seating-hall comprised the Kareri-māndala-māla. He also explains the term māndala-māla as an area, possibly a hall, protected from rain with a covering of grass and leaves (tinapannacchādanam anovassakam) or, for some, an arbour of creepers like atimuttaka. The Jētaka Commentary15 adds that the Gandhakuti was built in the centre with cells for the eighty Great Elders surrounding it. There were also ponds, ambulatories and dwelling places for day and night.

The Gandhakuti, rendered into English as the 'Perfumed Chamber was the place where the Buddha himself lived and it is called the first of its type. Chambers by the same name seem to have been later constructed at other monasteries for the Buddha. The Gandhakuti at the Jētavana became such an important place for later Buddhists that the area covered within the four posts of the Buddha’s bed in his cell in Jētavanārāma came to be classed among the “spots never abandoned” (avijāhitattāhānā)16 by the Buddhās. All the Buddhās have their beds located at the same spot.

There was a mango grove by the side (paccante) of the Jētavana. It may have been outside the boundary of the monastic premises. A road running by the park often brought various characters passing by into the monastic grounds. Some came there to quench their thirst and others, as in the story of Kāli-yakkhini, sought protection in the hallowed premises.

Whatever it is the picture of the Jētavanā Park preserved for us by the Buddhists was a place abounding in beauty left intact by those who constructed various buildings in the complex. Possibly this was done with the forest-hermitage concept in view. The idea may have been to build a 'forest-dwelling' aratiṇa-vāsā, in the vicinity of a big city. Many of the main buildings with a shady tree at the entrance, and the sitting-halls with thatched roofs or arbours also must have helped to preserve the ecology and the cool atmosphere conducive to a quiet contemplative life of the monastery. Even the sculptures of the dedication of the Jētavana monastery at Bharhut17 have preserved this picture of a forest hermitage surrounded by mango trees.

The two Chinese pilgrim monks Fa-hien and Hsien-Tsang18 who came to India in the 5th and the 7th centuries A.C. respectively visited Sravasti. However they were able to speak more about the legends connected with the origin of the monastery and the other legendary events believed to have taken place in and around it than of the actual state of things at the monastery itself. But in this matter Fa-hien is more helpful than Hsien-Tsang to visualise a picture of the Jētavana as it stood in their respective periods.

According to Fa-hien the Jētavana monastery was at first, of seven stages (probably storeys) but was apparently made into a two storeyed building after it was burnt down by an accidental fire caused by a mouse. It is said that the mouse carried away in its mouth a lighted wick from an oil lamp, causing a great fire. Speaking more of the past than of contemporary affairs Fa-hien says that kings and people of surrounding countries vied with one another in making gifts to this place. They decked the place with flags and silken canopies, offered flowers and burnt incense while lamps shone with equal splendour throughout the night.

The monastic building as it then stood had its main entrance to the east. The principal door was flanked by two side chambers in front of which stood two stone pillars. The pillar on the left had a wheel on it while the one on the right was surmounted by the figure of an ox. These two pillars, probably Asokan, were also noted by Hsien-Tsang. The pilgrim monk also speaks of the clear water in the ponds, the luxuriant groves and numerous flowers of variegated hues which combined to produce the picture of what is called a Jētavana vihāra. The image evoked in one’s mind from this brief description is not much different from the picture given by the Pali sources.

14. D.A. II. 270

17. J. L. 92 f.
18. BuA. 247
By the time Hsüen-Tsang came to Srāvasti Jetavana appears to have been in total ruin. So he could speak only of the legends preserved in the region about its foundation etc. But both pilgrims speak of the red sandalwood statue of the Buddha said to have been commissioned by King Prasenajit (Pasenadi). According to Fa-hien this was the first ever statue of the Buddha and was carved during the lifetime of the Buddha himself. In the Buddha's own words it was to be the model for all his future images. Curiously this tradition is preserved still in Sri Lanka. But according to Hsüen-Tsang, Prasenajit caused it to be carved after the one King Udayana, probably of Kausāmbi, had caused to be made.

Sir Alexander Cunningham who identified the ancient city of Srāvasti in the ruins of Sahet Mahet he discovered on the south bank of the Rapti also could locate the ruins of the Jetavana monastery outside the city limits at a distance of about half a mile from its southern gate. It was the pedestal inscription of a Bodhisattva statue he discovered that helped him to conclude that he had definitely discovered the ruins of Srāvasti. The inscription says that the colossal statue was a gift of a monk named Bala, an expert in the three pitakas, to the Sarvāstivādin teachers of the Kosambakūṭi where the Buddha stayed in Srāvasti. It is interesting to note that the reference to the Kosambakūṭi in this inscription has proved the historicity of some of the details regarding the monastery given in the Pali sources.

But Cunningham who has tried to identify the various buildings mentioned in the accounts of the two Chinese pilgrims among the ruins he found around the main monastic centre outside its boundary wall has thrown some doubts about the veracity of the extent of Jeta's Park and the exorbitant price said to have been paid by Anāthapiṇḍika to buy it from Prince Jeta. An extent of land one thousand cubits square, as shown in Sri Lankan sources, he thinks, could not have been covered even with the extravagant eighteen crores said to have been paid by Anāthapiṇḍika. Instead he proposes to exclude all the ruins outside the boundary wall of the Jetavana identified by him with the central mound locally known as Joginibāri in trying to locate the real plot of land bought by the merchant. The area covered by Jogini-bāri is only seven hundred feet by one thousand feet and curiously, he says, could have been covered by 180 million ancient Indian silver coins each measuring a little more than half an inch in length and breadth. The figures given in ancient accounts, he thought, are mere examples of Indian exaggeration.

C. Witanachchi

JETAVANA (2) or Jetavanārāma, the large scale stūpa with its monastery complex is situated to the north-east of the ancient city of Anuradhapura. The boundaries of this large monastery complex, which flourished as the centre of the Sāgaliya sect, one of the three Buddhist fraternities, from the third century to the 12th century A.C. are demarcated by the Malvatu Oya to the south and the east, Hālpān Āla to the west and the main road to the north.

Jetavanārāma is situated in an area which was a park known as Nandana in the third century B.C.

The confines of Jetavanārāma was known in the 3rd century B.C. as the garden of Nandana. Later it became known as Jotivana. The name Jotivana did not evolve into Jetavana, but the Jetavanārāma built in the Jotivana was often referred to as the Jetavana in short. Therefore, it is necessary to understand that while Jotivana was the name of a particular garden, Jetavana was the name given to an ārāma (monastery). It is believed that the construction of the Jetavanārāma in Anuradhapura was an attempt to re-create the beauty of ancient Jetavanārāma of Srāvasti in North India where the Buddha spent most of his days. In Polonnaruwa, too, there is a Jetavanārāma although it does not bear witness to a Jotivana.

Jetavanārāma erected by King Mahasena (276-303 A.C.) in the garden of Jotivana in Anuradhapura was later offered to a bhikkhu named Tissa of the Sāgaliya sect who lived in the Dakkhiṇa Vihāra (Southern Monastery). The king disregarded the protest of the Mahāvihāra bhikkhus over the fact that a monastery was being built within their precincts for a bhikkhu belonging to a different sect. Tissa there was later disrobed as he was found guilty of a pārājikā offence at an inquiry held by the Minister of Justice, despite the King's displeasure expressed at the disrobing. But this event does not seem to have hindered the Jetavana from becoming the centre of the Sāgaliya sect.

It is difficult to believe that all the buildings now remaining in Jetavanārāma in Anuradhapura were built by King Mahāsena alone. Out of them, he may have built the principle buildings necessary for the monastery complex. The Mahāvamsa records that Mahasena was unable to complete the construction of these buildings, and that they were later renovated and completed by his son Sirimeghavīlāha who succeeded him as king.

The Mahāvamsa as well as a few rock inscriptions record that some buildings at Jetavanārāma were constructed subsequently by kings who reigned after Mahasena. According to these records, King Aggabodi...
(604-614 A.C.) had erected a building with a pinnacle (kota) which consisted of a Vajira-cumbata (diamond hoop). Aggabodhi VI (733-772 A.C.) added yet another prāśāda to the Ratnamāi Pirivena believed to have been constructed by Mahasena. This was reconstructed by King Sena I (803-853 A.C.) after it was destroyed by a fire. In the inscription discovered near the monument called the "Buddhist Railings" was a Jalamaṇḍapa (water pavilion) of the doorway of the Ratnamāi Pirivena. The inscription belongs to the period of King Mahinda VI (956-972 A.C.). There is a similar Jalamaṇḍapa in the doorway of the Senevirad Pirivena of the Denā Raja Mahā Vihāra (Jetavanārāma). An inscription belonging to the period of King Dappula V (924-935 A.C.) mentions the Sinisagaṇ Gado Rad pirivena of Denā Vihāra. It had been built by a Tamil General during the reign of King Mahinda IV. The Dithakondaṇa vihāra, Sena I offered yet another golden Buddha statue placed a golden Buddha statue at the bodhihara of this vihāra, Sena I offered yet another golden Buddha statue after constructing the Minimeula Prāśādaya or Minipāya. Bodhisattva statues were added later during the reign of Sena II (853-887 A.C.). This pilimage (image house) was reconstructed by King Mahinda IV after it was destroyed by the Colas. (PLATE X)

Kassapasena-vihāra was constructed by a General of King Kassapa VI. Diyasen Upasathāgāra (Chapter House) renovated by Mahinda IV may have been constructed by King Mahāsena. It is also believed that the four pirivenas built separately by four officers during the reign of Mahinda IV are four Saṅghāvas (dwelling houses).

The Mahāvamsa records that the relics belonging to the three different sects were destroyed by the Colas. It is mentioned that the Buddhist clergy of the three sects lived in Ruhaana during the reign of Parakramabahu I. Therefore it is evident that there were branches of Jetavanārāma even in Ruhaana. The Dāθhakonandaṇa Ārāma in Sāgiriya which was constructed during the reign of Moggallāna I (495-512 A.C.) has been associated with Jetavanārāma.

The location of Veluvanārāma, yet another Saṅghārāma linked to Jetavanārāma and built by Aggabodhi II (608-618 A.C.) has not been found.

Apart from the ārāmas mentioned in the Mahāvamsa and in stone inscriptions, there may have been other monasteries elsewhere in the Island which had direct access to Jetavanārāma in Anuradhapura.

The Stūpa of Jetavanārāma: The central monument of Jetavanārāma is its large stūpa spread over an extensive area of eight acres which was equal in status to the Ruvanvīlī and Abhayagiri stūpas. Archaeological evidence suggests that this was the site where the remains of Mahinda Thera, who is responsible for the introduction of Buddhism to the Island, were cremated. A layer of ash and charcoal was discovered in close proximity to the one-metre-thick wall of the Salapathala Maluva (stone terrace) to the east of the stūpa. A scientific study of the bricks reveals that they belong to the third century B.C. It is according to this that Dr. Hema Ratnayaka states that this was the site of Mahinda Thera's cremation. He further points out that this place was known as the Thēranambandhāmalaka in the third century B.C. King Uttiya enshrined the ashes and also built a stūpa here. It is possible that the present Jetavanā rāma is a renovation of the original Mahinda stūpa. (PLATE XI)

According to the Saddharmaratnākaraya, the fourteenth century Sinhala work, the relics enshrined in the Denā Vehera (Jetavanārāma) are a part of the girdle of the Buddha. This is contrary to the idea that this site is identified with Mahinda Thera. However, this cannot be proved until the relic chamber is opened and its contents studied.

Scholars such as C.W. Nicholas and R.A.L.H. Gunawardena believe that the stūpa was first built by King Mahāsena. Except for the reference made in the Saddharmaratnākaraya there is no other evidence to prove that the stūpa was built by Mahāsena. If he did indeed build such a huge stūpa, it is surprising that it has not been recorded in the Mahāvamsa. However, the Mahāvamsa does say that King Mahāsena built a stūpa to the east of the city at the spot where the Devale (shrine) of Kälāvela existed. It is possible that this is the Mahāvamsa stūpa presently known as Nakhā vehera.

Second Phase of Jetavana Stūpa: Still it is not clear that a huge stūpa was built at Jetavanārāma by a king who ruled before Mittasena. The Mahāvamsa records that while King Mittasena executed pandals at the entrance to the elephant rampart, Dhātusena (459-477 A.C.) constructed the parasol and gilded it. The Hathivedi was constructed by King Mahānāga who also restored the crystalline circle, the plaster and the paintings. A parasol brushed with gold and embedded with precious stones was secured on the stūpa by king Aggabodhi I (569-571 A.D.). It was first renovated by Moggallāna III (614-619 A.C.) and later by King Parākramabahu I.

Art and Sculpture: Not only the vāhalkadas (frontispieces) and the parasols, even the interiors of the ancient stūpas were adorned with paintings. This is evident from the remains unearthed in archaeological excavations. Stone slabs with paintings have been uncovered at the eastern vāhalkada of the Jetavana stūpa. Therefore it is highly probable that the vāhalkada itself was originally decorated with paintings.
Although a large number of monuments and engravings have been found, no other paintings have been unearthed there.

Almost all the Buddha statues in Jetavanārāma have been destroyed. People ignorant of their cultural value may have demolished these monuments in order to obtain the stones to construct their buildings. A fragment of a statue of a seated Buddha without the head and the upper torso has been unearthed in recent excavations. It has a close resemblance to the statues of the Mathurā tradition of the Gupta period. It is hard to find another equal to its beauty in Sri Lanka. The head of a Buddha statue displayed today in the gallery of the Archaeological Museum in Anuradhapura may belong to this particular statue. But to come to a definite conclusion of this supposition the dimensions of the head and the torso in Jetavana have to be compared with each other.

Discovered recently on the pesāva of the Jetavāna stūpa were several small granite statues of the Buddha. Stylistically they differ from small local Buddha statues found in Sri Lanka.

As in the buildings of the Mahāvihāra and the Abbhayagiri vihāra, those of the Jetavana, too, have beautiful entrances. The moonstones, guardstones and balustrades are vital in relation to Buddhist art where architecture is concerned. Special attention should be paid to the systematic evolution of the various sections of the doorway to its symbolism and to its aesthetic value. The doorways of Jetavana are of great importance when compiling data about the history of doorways in places of worship in Sri Lanka.

The Centre of the Sāgaliya Sect: The Sāgaliya sect is named after Śaṅga Thera who formed the sect with about 300 other monks when they broke away from the Abbhayagiri vihāra of the Dhammaruci sect. The separation took place during the reign of King Gothābaya (255–266 A.C.) as these monks associated with the Vaitulya (Mahāvīra) monks, and as the expulsion of sixty Vaitulya monks by the king indicated that whoever associated with them may come to harm in the future. Doubtless these monks felt that it would be dangerous to associate with the Vaitulya monks whom the King was against. He was paying patronage to the Mahāvihāra which was very powerful at the time. Apart from this, there is no proof to believe that there was enmity between the two sects that led to the separation.

The Vāsatisappakāsini records that the Sāgaliya sect was formed 558 years after Buddhism was established in Sri Lanka. R.A. L.H. Gunawardene has taken this year to be 249 A.C.

The monks of the new sect first regarded as their centre the Dakkhina vihāra, (southern monastery) which was built by a minister of King Vaṭṭagāmini Abhaya in the first century B.C. We can assume that as he was the first patron of the Dhammaruci sect he also donated the Dakkhina vihāra to the monks of the sect. But there is no record of opposition shown by the monks of the Dhammaruci sect against it being used as the centre of the Sāgaliya sect.

The first king who embraced Mahāyanism in Sri Lanka was Mahāsena (276–303 A.C.). Impressed by a monk named Tissa who lived in the Dakkhina vihāra, he built the Jetavanārāma within the premises of the Jotivana and donated it to him. It is recorded that the King even disregarded the opposition of the Mahāvihāra monks against this. Thus, the Jetavanavihāra became the centre of the monks of the Sāgaliya sect who earlier lived in the Dakkhina vihāra.

Tissa Thera's expulsion despite the objections of the king, did not prevent the development of the new sect.

According to Gunawardene, although at first the Sāgaliya sect did not associate much with the monks of the Dhammaruci sect, during the reign of King Silakāla (518–531 A.C.), being encouraged by the Abbhayagiri monks, the sacred relics were taken annually to the Jetavanārāma and rituals were performed. If there was no friendship between the Dhammaruci sect and the Sāgaliya sect, the Dakkhina vihāra of the Dhammaruci sect could not have become the centre of the Sāgaliya monks. By the time of King Silakāla the Sāgaliya monks were ready to be guided by the Dhammaruci monks. Thus a re-examination of Gunawardene's views is necessary.

During the reign of King Agga-bodhi (517–604 A.C.), an Indian monk named Jotipāla argued and defeated the Mahāvāna monks. It is recorded that the defeated monks had lodged a complaint with the King through the viyatāṇa. However, after the death of the viyatāṇa, the monks of Jetavanārāma lived in harmony with the Mahāvihāra monks. These facts reveal that the Sāgaliya sect existed merely as a 'floating sect' between the Dhammaruci sect and the Mahāvihāra. Otherwise the Sāgaliya monks could not have been partial to the Dhammaruci monks during King Silakāla's reign and to the Mahāvihāra during King Aggabodhi's reign.

The Sāgaliya sect did not show any progress until the latter part of the seventh century. During the reign of Dāṭhopatissa II (659–667 A.C.) the Sāgaliya sect prepared a special edition of vinaya rules for themselves. It was formed by taking the Vībhāhga section (Pāñjikā Pali and Pācittiya Pali) from the Dhammaruci sect and the Khandhaka and Parivāra from the Sāgaliya sect. They also produced a series of new interpretations for this. Through this it is evident that in the beginning there was a Vībhāhga unique to the Dhammaruci sect and a
Khandhaka and Parivāra unique to the Sāgaliya sect. Vinaya Pitaka consists of three main components: Vibhanga, Khandhaka and Parivāra. The Vamsatātapakāsini states that the Khandhaka and the Parivāra of the Vinaya Pitaka had been changed to suit the needs of the Dhammaruci monks. Since there is no change in the Vibhanga section, it remains the same as in the Vinaya section of the Mahāvihāra. So it shows that the Sāgaliya sect maintained a Vibhanga section in accordance with the Mahāvihāra and the Dhammaruci sect. However, the Khandhaka and Parivāra sections were formulated in three different ways by the three sects. Therefore the difference between the Sāgaliya sect and the other two sects rests on the difference in the Vinaya pitaka as well as the system of interpretation of the Vinaya pitaka.

The Vinaya of the Sāgaliya sect was compiled by a monk of the Kurundacūlika Pirivena with another monk from the Colambahālaka Pirivena near the Abhayagiri vihāra.

The Sāttra and Abhidhamma Pitakas were shared alike by the Mahāvihāra, the Dhammaruci and the Sāgaliya sects. Accordingly, all three can be regarded as belonging to the Theravāda tradition.

The Dhammaruci sect respected Mahāyānism although there was considerable opposition from the Mahāvihāra towards it. Even the Sāgaliya sect which was apprehensive of Mahāyānism later grew to respect it as much as the Dhammaruci sect. Taking into consideration the evidence that the Ranpota (Golden Book) that contains a section of the Sāttra Pālavavinsati Sāhaśrika Pragālaparamitā, the Mahāyāna Bodhisattva statues and the Buddhābheka (anointing of Buddha image) existed, it is clear that both Sāgaliya and Dhammaruci sects had a similar attitude towards Buddhist sects, their beliefs and their literature. Since the influence of the Sāgaliya sect was much less than the other two, it was forced to be subordinate to the Theravāda tradition.

The monks of all three sects left for Burma during the reign of the Cola kings as they did not get royal patronage. King Vijayabāhu I who defeated the Colas and re-established the higher ordination by bringing back the monks belonging to all three sects from Burma as there was a shortage of monks for ordination in Sri Lanka. From this time up to the reign of Parākramabāhu I the Sāgaliya sect flourished. This king performed a complete revision of Saṅgha by bringing in monks from many parts of the country including Ruhuna. The King disbanded the Dhammaruci and Sāgaliya sects and gave the monks two options: either join the Mahāvihāra or disrobe and be employed in the government services. Thus he strengthened the Mahāvihāra as the only Buddhist sect in the island.

Literature belonging to the Sāgaliya sect was completely destroyed. Thus there is nothing more that can be said of their religious views.

During the Anuradhapura period there were Buddhist nuns associated with the three sects. But details of Bhikṣunis belonging to the Sāgaliya sect are extremely rare. We only find an account in the Mahāvamsa about the establishment of a Rañjini Mahaṇīvara for the Sāgaliya Bhikṣunis during the reign of King Moggalāliṇa. If not for this piece of evidence historians may not be able to say that there was an order of Buddhist nuns belonging to the Sāgaliya sect.

Chandra Wickramasigamage

JETAVANA (3) A monastery complex founded by King Parākramabāhu I (1153 A.C.–1186 A.C.) in the ancient city of Polonnaruwa. A large group of ruins around the platform of the Tīvanka image house has been identified as part of the ruins of this extensive monastery complex. The Cūlavamsa (Chapter 78, vv. 31–47) gives a graphic description of this monastery complex in the following words: "The King, having cleansed the sāsana by disrobing the heretics, caused a monastery complex by name Jetavana to be built which resembled in glory the Jetavanārāma (in India) of the Buddha's day, for the use of the numerous pious bhikkhus. In this grand monastery complex there were eight three-storeyed mansions (pāśāda) for the use of elderly virtuous bhikkhus; a special mansion complete with all essentials was put up for the residence of the Venerable Sāriputta Thera of great learning and piety. There were seventy-five pari-venas (parivenas are temples or dwelling houses for bhikkhus; the word parivena here does not mean a seat of learning as the parivena connotes today)."

The most important structures in this monastery complex were: (1) the three-storeyed image house that contained in it the colossal standing Buddha image posted in three bends (tīvanka), the walls of this image house were elaborately adorned with paintings; (2) another
mansion, entirely built with granite, that housed the Tooth Relic of the Buddha; (3) eight bathing ponds built with granite. Of these bathing ponds one was outstanding in its beauty and grandeur. It was constructed in the form of a full blown lotus of eight petals and was called Padumashana Kottha (The lotus bathing pond).

In addition to the above mentioned structures there were many other units that were of utility to the resident bhikkhus such as libraries, dining halls, preaching halls, refectories (aggisālā) and cloisters (cakkama). The Čūlavansa account concludes by saying that the Jetavana complex consisted of 520 building units in all.

T. Arlyadhamma

**JHĀNA**, a Pali technical term – its Sanskrit equivalent being dhyāna implying a particular religious consciousness that flashes in the course of meditation. Jhāna as a term is of pre-Buddhistic origin and it was adopted by the Buddha to describe the state of ecstacy reached in meditation. Basically, the Buddhist meditative process in itself has to be identified with jhāna which is closely related to concentration of the mind (samādhi, q.v.). The relationship between jhāna samādhi, according to the Nettippakaraṇa, is that jhāna obtains in the four jhānas (samākhñyayam catusu jhānesu dattabhābam, Nett. p. 19) which is the proximate cause of samādhi (ekaggatālakkhana samādhi, tassa jhānām padattahānam, ibid. p. 28). Jhāna thus represents serenity or tranquility of the mind (Vbh. 258) and it is accompanied by sampāsādana (Vism. 156).

In an attempt to define the term according to the commentarial system of etymology two functions are assigned to jhāna, namely, that it burns up (Skt. root kṣī not dhyāi) what is hostile to, or stands in opposition to, the path of religious progress (paccanika jhāpanato) and it sets the mind of a yogin on a theme for meditation (arammaṇupanijhānato, Vism. 150; VinA. I. 145 f. cf. Ps. I. 49). In other words, jhāna is said to burn up or destroy elements hostile to religious progress while meditating on a theme. As this meditative process implies both a purge of the disruptive tendencies and viewpoints of human mind and a gradual attainment to higher grades of intuitive awareness, convenient points of reckoning have been established, and these different stages in turn have come to be called severally the first, the second, the third and the fourth jhāna. The first jhāna or the initial stage of the jhāna process is associated with five mental factors collectively termed the constituents of jhāna or jhānaṅga, namely, vitakka, vicāra, pīti, sukha and cittasekkaggā, the last constituent signifying concentration of the mind (samādhi, M. I. p. 294, III. p. 25; Dhs. 26; Vbh. 25); they are called Jhānaṅga because jhāna first arises when these five factors arise only (Vism. 146).

Thus, jhāna brings about samādhi and samādhi forms the basis for the acquisition of pañña (D. I. p. 76 ff). Jhāna therefore embraces not only the system of meditation but also the process of transmitting the lower state of consciousness to a higher state, to the summit of progress in mental training. There is no suggestion of trance, but rather of an enhanced vitality and efficiency of the mind, for it is samādhi which is attained through jhāna that enables one to intuite the truth which leads to the realisation of freedom (vimutti... paññāya cāsas divā āsavā parikkhinnā honi), M. I. p. 160.

As regards the practice that sets one firmly on the path of jhānic-development, the four preliminaries are given in the suttas, namely, (1) morality (sīla, q.v.), (2) restraint as regards sense faculties (indriya-sampāda, q.v.), (3) mindfulness and self-possession (satisampāda, q.v.), and (4) contentment (santuṭṭhi, q.v., D.I. pp.70–71). Possessed of these qualities, says the sutta, the bhikkhu gets to a place of solitude and starts on an introspective self-examination. In the process he gets rid of the five hindrances (nīvaraṇa, q.v.) which impair the efficiency of the mind, and thus qualifies him to embark on the path of jhānic development (ibid. 71). The mind that hankers after sense-stimuli (kāma, kāmacchanda, kāmaraga) is not and cannot be concentrated on an object of a salutary nature. It does not enter upon the path of progress which leads to release from sensory emotions. The mind that is harassed by ill-will (vyāpāda) cannot proceed at once towards one-pointedness (ekaggata). The mind that is submerged in sloth and torper (thānamiddha) is not fit for intensive mental activity. Obsessed with worry and flurry, distraction and agitation (uddhaccakukkucca) the mind does not repose but wonders. Struck by perplexity and doubt (vicikicchā) it does not even approach the path that leads to the attainment of the jhānic state. Thus, these five factors are inimical to jhāna and are therefore called hindrances (nīvaraṇa). Such hindrances must be eliminated by a systematic practice of the contemplative exercises. Thus we find: ‘putting away covetousness for worldly things, he abides with his thoughts free from covetousness’ etc. (D. I. p. 75).

When these five hindrances have been put away he looks upon himself as being freed from debt, rid of disease, released from jail, a free man and secure. Gladness (pānujja) springs up within him on his realising this freedom and joy (pīti) arises in him, thus gladdened and so rejoicing his whole frame becomes serene (paññādha). and being thus serene he is filled with
happiness (sukha) and the mind of the happy one becomes concentrated (sukhino cittam samadhiyati).

This concentration of the mind is the basic requirement for the realisation of truth and consequently the attainment of arahantship. The Vattthupama-sutta says that the monk who has attained this concentration of mind, after perfecting such qualities as metta, karuna, mudita and upekkha, attains arahantship, without embarking on the jhānic process. He has to realise that there is a state higher than these qualities and that that stage is nothing other than release (nissaraṇa) brought about by realising the truth (M. I, pp. 38-39).

Thus, we see that the religious training branches off at this point of samādi, and the trainee may or may not follow the jhānic process as a means to arahantship and that he is in a position to engage his mind in a practice which directly leads him to arahantship by the total destruction of all influxes (āsavakkhayā) as is stated in the Vattthupama-sutta, or else he can direct his mind towards jhāna as is explained in the Sāmaññaphala-sutta (D. I, pp. 73 ff.) and elsewhere.

Those who take the former step are described in the commentarial literature as sukhattipassaka (q.v.) or vipassanāyānika or sūddhāvipassanāyānika while those who follow the latter path are called the samathayānikas (Vism. 11, 587-88; DhpA. 1, 9; KhP A. 178, 183). Those who opt to follow the latter course enter the state of jhāna (D. I, p. 73).

The jhānic process commences with the five factors vitakka, vicāra, piti, sukha and ekaggatā mentioned above which elevate the consciousness of the yogin from normal sensory experience to a higher form of purity, and it is this consciousness which becomes associated with these five factors on the eradication of the five hindrances and dissociates oneself from sense pleasures and evil ways that is termed jhāna (D. I, pp. 73f. M. I, p. 294; Vbh. 257). In the ordinary state of mind too, the five psychological factors, vitakka etc. appear as common elements of the psychological process, but then they arise as the conditions of the complex state of sensory emotion and hence do not correspond to jhāna, which is to be attained, as the formula emphasises, by the attainment of sense desires and evil thoughts as referred to above.

The first jhānic thought, as is stated above, has five constituent factors (jhānānaga), and these constituents correspond to the five hindrances (nīvaraṇa) as their opposite numbers and the arising of the former coincides with the elimination of the latter. The first factor, i.e. vitakka, by applying the mind and its concomitants to the theme of meditation (ārammaṇa, kammaṭṭhāna, q.v.) eliminates sloth-and-torpor (thīnamidda, q.v.), one of the five hindrances. Vicāra, the second factor, means sustained mental application upon the same object or theme with a view to investigating and keep the mind continually engaged in the exercise; and thereby perplexity and doubt (vicikicchā), another hindrance, is dispelled. Piti arising in opposition to illwill (vyāpāda), another hindrance, brings about by degrees an expansion of interest in the same object or theme. It is intensive rapture or zest which arises infusing the whole being of mind and body. Sukha is a feeling of ease which invariably arises consequent on this diffused zest; it dispels another hindrance, namely, distraction and agitation (uddhacca-kukkucca) and leads the mind to concentration. The mind of him who is happy becomes concentrated (sukhino cittam samādiyati, D. I, 75; Vism. 141 f; DhsA. 114 f.). Concentration thus leads to one-pointedness of mind.

When these five factors thus arise in the mind simultaneously eliminating the five hindrances from it, the first stage of jhāna is attained. This attainment, being the transition of consciousness from the sensuous plane (kāmāvacara), is said to be the escape from sense desires (kāma-saṁūla, D. III, p. 275), for when this jhāna is attained, the consciousness passes beyond all lower impulses and emotions caused by external objects and is opposed to sense desires. The mind becomes self-possessed since it is established in inward serenity and unshaken by external stimuli. The jhāyin, i.e., the person in this state, experiences a new life, a new vision unlike anything he has ever before experienced. His whole being is suffused with indescribable joy and happiness; there is no part of his body that is untouched by zest and happiness born of inward solitude (D. I, 73; DA. III, 217).

This is the first stage reached in the jhānic process and is, therefore, termed the first jhāna (pathamaññājāhana). The process does not end here; it has other, and higher stages that may be attained if the jhāyin is prepared to continue. The systematic elimination of the constituent factors of the first jhāna itself produces the higher stages of jhāna intensifying it at each stage and culminating in the fourth stage, which is the zenith of the material plane (īṭāpavacara), in which consciousness of the jhāyin becomes associated with perfect mindfulness and equanimity (upekkhā) free from all attachment to the earlier sensuous plane (kāmāvacara) and to the three lower stages of jhāna itself.

The jhāyin who has attained the first jhāna, explains the Visuddhimagga, by continuous practice, fixes his attention upon the same theme and practises this repeatedly in order to make it habitual in his psychological process. He gains mastery (vasiṭṭa) over this practice; i.e. he acquires the ability to reflect upon the first jhāna just attained or upon one of its five factors, wherever he
pleases, whenever he pleases and for so long as he pleases without sluggishness in reflecting. When he becomes able to direct the mind immediately to the five factors of the jhāna, then the habit of reflection is established. In the same way the ability to enter into the state of jhāna to remain in it as long as he wishes, to rise from it whenever he wishes, to review or recollect it must be acquired (Vism. 153 f.).

He who is conversant with this practice rises from the first jhāna after his practice of it has been perfected and realises the weakness inherent therein, thus: "this jhāna has the service of vitakka and vicāra which have a rare enemy in the hindrances. It is not entirely calm, for it still has the waves of attentive sustained thinking. He sees that their absence would result in greater calm." Then giving up his attachment to the first jhāna he strives to dispel vitakka and vicāra. In the course of the practice his mind becomes rid of them, rises in zest, happiness and onepointedness which constitute the second jhāna which is born of concentration, tranquillity and developed exaltation of mind. Although the first jhāna is said to be associated with concentration of the mind, it is the second jhāna which is really worthy of being associated with concentration because of its being born of concentration and its freedom from disturbing qualities which include vitakka and vicāra. Without them, jhāna becomes firm and well established (D. I. 74; Vism. 156 f.).

When the second jhāna is thus attained he must gain proficiency in and mastery over it, as he did in the case of the first jhāna referred to above. And rising from the second jhāna he perceives the shortcomings therein. "This jhāna has a near enemy in Vitakka and Vicāra. It is weakened by the emotion of zest (piti) which is a perturbed condition of mind." Then he repeats his meditation, as he has done before; now the third jhāna arises devoid of zest but accompanied by happiness (sukha) and concentration (ekaggatā). He abides therein with equanimity (upekkhako) and mindfulness (satimā), maintaining a process of mental flux in a well-blanched state. This is the most blissful state of happiness, for it is free from all disturbances. A person who has attained this state of jhāna is said to be truly happy by the 'Aryan' standards. When he has become thoroughly acquainted with this jhāna, the jhāyin perceives that even this state has its weaknesses; for it has a near enemy in zest and owing to the gross nature of happiness, it is unstable. So he continues to concentrate upon the same theme in order to put away the gross factors and attain perfect calm. Then the fourth jhāna arises accompanied by equanimity a neutral state of feeling (upekkhā) in regard to his body and mind and by pure mindfulness born of this equanimity. In this fourth jhāna there ensues that mental emancipation which is a neutral feeling (adukkhamasukhă cetovimutti M. I. 296). In this state the jhāyin experiences neither pain nor happiness, physical or mental (D. I. 74 f.; Vism. 156 f.).

In this process we notice even the elimination of four of the five factors which constitute the first jhāna. Vitakka and Vicāra one got rid of in the second jhāna; and piti in the third jhāna. Upekkha has taken the place of sukha in the fourth jhāna. Only ekaggatā persists which is the common factor.

In the fourth jhāna, the consciousness of the jhāyin is associated with perfect mindfulness and unmodified equanimity free from all attachment to the world of senses. All the activities of the lower mind are completely arrested and the person in this state is not by any means in a state of hypnotic trance or subconscious state produced by auto-suggestion, or as it were, in a cataleptic condition. On the contrary, he is intensely conscious and mindful of the theme wherein his mind is fixed, free from all mental disturbances; having eliminated every kind of activity, both physical and mental. As is stated in the Saṃyutta Nikāya, the person in the first jhāna is free from speech, for the innermost silence is manifested after the five hindrances are gone; in the second jhāna, he is free from Vitakka and Vicāra, which are called Vāca-saṁkāra, concomitants with the spoken word. In the third he is free from the emotion of zest and in the fourth, from breathing in and out (assāpasāsā) which is called kaya-saṁkāra, or the vital current of the body (S. IV. 217; cf. M. I. 201; S. IV. 293). Thus, with perfect stillness of body and mind, he lives visualising the condition within himself (A. V. 209).

The four stages of jhāna have been rearranged in the Abhidhamma in a scheme in which one more state is given in between the first and the second jhāna described above, as given in the suttas. In the Abhidhamma system, vitakka and vicāra are eliminated in two successive stages, instead of simultaneously. While, according to the sutta tradition, the second jhāna is attained by the elimination of vitakka and vicāra, thus retaining the other three factors, i.e., piti, sukha and ekaggatā, in the Abhidhamma tradition, the elimination of vitakka alone produces the second jhāna thus retaining four factors including vicāra (Dhs. pp. 33 ff.).

Buddhaghosa explains that the Abhidhamma system of five jhāna stages is an optional teaching, depending on the particular mental disposition of the disciple. To some, when reviewing the first jhāna vitakka is the first factor to appear gross while the other four seem subtle? To such a one, the teacher formulated a second jhāna with four factors, that is without vitakka but with vicāra, piti, sukha and ekaggatā (DhsA. p. 179). He substantiates his explanation on the authority of the suttas themselves. He quotes a sutta in the Anguttara Nikāya (IV, 310 f.) in which three kinds of samādhi are given, namely (1)
samādhi with vitakka and vicāra, (2) samādhi without vitakka but with vicāra and (3) samādhi without either, vitakka or vicāra. Of these, he says, the second represents the Abhidhamma interpretation of five stages of jhāna (DhsA. 179 f.).

At the fourth stage of the jhāna, the jhāyin is again offered a choice. Now, basing himself on this fourth jhāna, a stage in the jhānic process in which the mind of the yogin is described as serene, pure, transcendent, cultured, devoid of defilements, supple, ready to act, firm and imper turbable, he can apply and direct his mind towards knowledge and vision (pañnadassana) and attain arahantiship by the total destruction of all influxes (āśava, D. I, 76). In other words, the residual content of the fourth jhāna consciousness which is dominated by sublimated and clarified mindfulness, the result of perfect equanimity, gives rise to inward vision or intuition (paññā). This jhāna is therefore specifically called the base-jhāna (paṭada-jhāna, also called abhiññāpādaka-catutthaj-jhāna) in the commentaries (Vism. 397, 412), for it is in this state that the jhāyin is able to direct his mind towards paññā culminating in arahantiship, on the destruction of all passions.

The jhāyin is also free to develop his jhāna practice and reach higher and subtler stages in the jhānic consciousness. There are four such stages enumerated and explained in the texts, namely, ākāsānaññācayatana, Viññānaññācayatana, akiññāññācayatana and neva-saññāññācayatana (D. I, 183 f.; M. I, 159–60; III, 45, S. II, 210–14; A. I, 41). In the suttas, these four stages are not designated jhāna; they are termed jhūp (q.v.) in the Visuddhimagga (ch. xii). The term jhāna is however applied to them and is commonly used to describe the eight attainments (samāpatti) of the jhānic process; the four jhānas and the four jhūpas (Vism. II, 587).

Perhaps, saññāvedayita-nirodha or simply nirodha-saññāpatti (q.v.) represents the highest expression of the jhānic experience.

The four jhānas belong to what is called the material plane (rupāvacara-bhūmi), which is to be reached on transcending the sensuous plane (kāmāvacara-bhūmi). The yogin preferred rupāvacara-bhūmi, the material plane when he realised that the kāmāvacara-sphere has its faults and desired to be free from those faults. His desire to be free from faults has no limit and when he, basing himself on the fourth jhāna of the rupāvacara-sphere, sees faults inherent in it, he becomes disgusted with it and wishes to transcend it (Vism. I, 327). Thus the yogin by passing beyond the consciousness of matter (rupasaññā), by putting an end to the sense of resistance (patighasaññā), by paying no heed to the idea of diversity (nānattasaññā), thinking that space is infinite, reaches up to and remains in the mental state in which the mind is concerned only with consciousness of the infinity of space (ākāsānaññācayatana); the consciousness of matter passes away, and there arises in him the blissful consciousness, subtle yet actual, of his being concerned only with the infinity of space, and he becomes a person conscious of that (D. I, 183).

With this attainment the Yogin transcends the sphere of matter and enters the immaterial plane (arupāvacara-bhūmi). This sphere has three more stages to be attained.

Thus, by passing quite beyond the consciousness of space as infinite, thinking: “consciousness is infinite,” he attains the mental state of the infinity of consciousness (viññānaññācayatana); then by transcending the consciousness of the infinity of consciousness, and thinking that there is nothing that really is, he attains the more subtle mental state in which the mind is concerned only with the unreality of things (ākāsānaññācayatana). And, finally, finding that even the akiññāññācayatana is not subtle enough, he passes beyond it and attains the state in which there is neither perception nor non-perception (neva-saññācayatana, D. I, 183 f; M. I, 159 f).

Neva-saññācayatana is the highest and subtler mental state to be attained not only in the immaterial sphere but in the entire mundane (lokaya) existence. The yogin reaches that state through training (sikkhā) by shaking off lower and coarser states of mind and thereby attaining higher and subtler states. These eight attainments (samāpatti) of the jhānic process do not necessarily lead to nībbaṇa and, therefore, not necessarily exclusively Buddhistic. “Their attainment,” says the Buddha, “is not the ultimate goal of the Buddhist life” (M. I, 41). To imagine that their attainment is equivalent to the attainment of arahantiship is condemned as a heresy (D. I, 37 f.). The former teachers of the Bodhisatta, Ālāra Kālāma and Uddaka Rāmaputta, are said to have attained these states, the former the seventh attainment, i.e., akiññāññācayatana and the latter, the eighth neva-saññācayatana (M. I, 165). Ter the seventh attainment, i.e., akiññāññācayatana and the latter, the eighth neva-saññācayatana (M. I, 165). The Buddha unconditionally adopted them in his system of training as being conducive to samādhi which is a necessary condition for the acquisition of paññā which results in emancipation (Vimuttis, nībbaṇa), and we find in the texts numerous instances of monks practising them. The Buddha himself, even after his attainment of Enlightenment, practised them whenever he wanted to be aloof from worldly disturbances (D. II, 159).

The zenith of the jhānic experience, perhaps, is called cessation of consciousness and sensations (saññāvedayita-nirodha, abhisamāvedayita-nirodha or simply nirodha-saññāpatti), a state in which consciousness and sensations become totally extinct. In the eighth jhānic attainment,
nevasaññā nāsaññāyatanā, there still remains a touch of consciousness; it being not entirely free from thinking. This thinking possesses the potentiality of giving rise to coarse and lower ideas. The text says that from the time the bhikkhu is conscious in a way brought about by himself from the time of the first jhāna, he goes on from one state to the next and from that to the next, until he reaches the summit of consciousness (saññāyata), and when he is on the summit, it may occur to him. "To be thinking at all is the inferior state. It would be better if I be without thinking. Were I to go on thinking and fancying these ideas, these states of consciousness I have reached would pass away, but others, coarser ones, might arise. So I will neither think nor fancy any more". And he does not think. And to him, neither thinking nor fancying any more. The ideas, the states of consciousness, pass away; no others, coarser than them, arise. So he touches cessation (niruddham phusati), i.e., he attains the state in which conscious ideals are extinct (D. I., 184; DA. II., 375).

This is a state that appears very much enigmatic when judged by worldly standards. Mahākāśyapa says that the person in the state of saññāvedayatanirodha, who has neither empirical consciousness nor feelings would appear to an ordinary observer, as though he were in a state of coma, with his senses act functioning, and in a condition very similar to that of death. Sāriputta explains that in this state, there remain in the body life (āyu) and breath (ūsma) both of which are absent in death (M. I., 296). It is said, a little earlier in the same connection that when life, breath and consciousness (viññāṇa) leave the body, it lies rigid and motionless like a log of wood (ibid. loc. cit.). It is clear from this that the mind and body of the person do not function while in the state of niruddham- samāpatti but his sense organs are intact (not vipariṇābhinna) and clear (vippasanna).

This ninth attainment, it should be stressed, is purely Buddhist; and Poṭṭhadāsa to whom the Buddha was explaining that abhisamāñeyatathāgaṇtha could be attained only by those anāgāmins and arahants who are established in the jhāna. Even these Arahants who are described as sukkha-vissampaka or vipasanniyayānīkā because they have followed the path of vision, and not that of jhāna cannot attain this state (Vism. II., 702).

The most formidable barrier that has to be shattered in order to enter the jhānic process is the consciousness of sensuality (kāsamāññā) just like the view of a self within (sakkayaditthi) is the initial barrier to be shattered before entry into the Āryan path to nibbāna. In the former case, the barrier is an emotional one whereas in the latter it is intellectual. The person who embarks upon the jhānic process by shattering the emotional barrier has still to shatter the intellectual barrier if he were to enter the stream that carries him to nibbāna.

The removal of those barriers brings about in the person concerned a complete change in his attitudes. It is a qualitative change which enables the person to view the whole world, himself included, in a way entirely different from the way he is used to view it till then. In the case of the person in the jhānic process, consciousness of sensuality does not disturb him any more, and in the other case, the person becomes free of the belief in a personality; and, once the process or the stream is entered into, the higher stages to be attained therein is a matter of course; for, if the person is sincere as regards the purpose and the goal, he is certain to attain those higher stages in the process, in course of time. If the person confines himself to the jhānic practices, there is the possibility of his attaining the eighth stage, the stage of neither perception, nor non-perception. And if he is capable of combining the two courses, he attains nibbāna, in addition to the eighth stage in the jhānic process. Such a person is called an arahant who has adopted samādhi as his vehicle (samathayānika). And he is able to attain the ninth stage in the jhānic process, i.e., saññāvedayatanirodha.

The Sanskrit equivalent of the Pali term jhāna is dhyāna which, in the Buddhist Sanskrit texts, is employed in almost the same sense as in the Pali texts. According to the Sūtraśāstraśīkā-prajñāpāramitā, dhyāna is primarily and principally the means by which serenity and tranquillity of the mind (samatha) is attained (Ssp. p. 276). The opposite of dhyāna is viśeṣa, distraction of the mind or manahsobha, agitation of the mind (Ssp. p. 95, Jātaka-mālā, ed. H. Kern, Boston, 1891, p. 112).

In the Mahāyāna schools, dhyāna forms one of the pāramīs (q.v.), i.e., chief factors in a bodhisatta's discipline (see Dhyāna-pāramiṭā).

Dhyāna includes, as in the Pali tradition, nine mental states that follow one another in regular succession. They are, therefore, called anupūrva-viśeṣa (Pali anupubbavihāra) which like in the Pali texts, consist of four dhyānas of the material sphere, four samāpattis of the immaterial sphere, the attainment called the cessation of consciousness and sensations (samjhāvedayita-nirodha; Ssp. pp. 1143-45; Dāsabhūmika Śūtra, ed. by Rahder pp. 33-34).

Although jhāna does not constitute, in the Pali tradition, an indispensable step in the way to nibbāna, (while cultivation of the mind or adhicitta sikkhā or samādhi does) it has acquired importance in the Mahāyāna as an essential quality in the career of a bodhisatta. Furthermore, it has become a very important doctrine in the development of Buddhist theory and practice in China and Japan where a special school has developed (Chān in China and Zen in Japan) in which
JīVAKA, the distinguished royal physician of King Bimbisāra of Magadha who was also one of the most devoted patrons of the Buddha. From his early infancy he was adopted by a royal prince named Abhaya and hence young Jīvaka came to be called Jīvaka Komārabhacca (Vin. 1. D. I. p. 47).

As a young man Jīvaka went on his own to Takkapili, a place famous for learning, and studied the science of medicine under a famous teacher (disāpamokkhi,kāriya) for seven years. Having nothing more to learn he returned to Rajagaha and was in due course appointed the royal physician of king Bimbisāra. Among those who received treatment from him were the Buddha, kings Bimbisāra and Candapajota, the disciples of the Buddha the ladies of the court of king Bimbisāra, wealthy merchants and members of their families.

The Vinaya Pitaka (Vin. 1, 268 ff.) contains a fairly comprehensive account of the different methods of treatment adopted by Jīvaka in treating his patients. The details are interesting, for they reveal the advanced state of medical practice in India at that time and also the skill of Jīvaka both as a physician and a surgeon. We are told that in Sāketa a merchant’s wife had a disease of the head for seven years which no physician could cure. Jīvaka made her lie down on her back and gave her some medicine mixed with ghee to be administered through the nose. The ghee came out through and injury caused by a splinter from the stone rolled down by Devadatta at him (cp. J. IV. 430; V. 333).

Jīvaka being invited to treat him observed the uneasiness of the patient and determining the nature of his ailment, made him lie down on a couch and having strapped him to the couch, cut open the skin of his head; having opened the skin in the skull he drew out two living creatures (pānaka) one small and the other large. After this operation the merchant was made to lie down for three weeks after which he was perfectly cured. The son of a merchant of Benares suffered from a twist in the bowels resulting in indigestion, and consequently he became very lean. Jīvaka, diagnosing his ailment from his uneasiness cloistered him with a curtain, tied him to a post, cut open the skin of his stomach, drew out the twisted bowel and straightened it, put it back again and having sewn up the skin of the stomach applied an ointment and thus cured him.

When king Bimbisāra was suffering from a fistula and his outer garments were stained with blood, Jīvaka, still in his youth was summoned to treat him. The physician removed the king’s fistula with just one ointment. It was as a reward for this treatment that Jīvaka was appointed by the king as his physician and as the physician of the ladies of his court as well as of the Buddha and the monks. Subsequently, when king Pajjota of Ujjeni was suffering from jaundice a request was made to King Bimbisāra to send Jīvaka to attend on him. The king was averse to ghee but his disease was such that it could not be cured without ghee. The physician secretly cooked up the ghee with various medicines so that it had the colour, smell and taste of an astringent decoction and gave it to the king. The latter on discovering that he had been given ghee was furious with the physician but subsequently calmed down when the medicine cured him. In appreciation of this he presented the physician with a pair of very valuable siveyyaka cloths which be subsequently presented to the Buddha.

The treatment given to the Buddha was for a disturbance of the humours of his body. Jīvaka had the Buddha bathed for a few days and then desiring to give him a mild purgative mixed three handfuls of lotuses with various medicines and gave them to the Buddha to sniff saying that each handful would purge the Buddha ten times. Further, the physician advised the Buddha that until his body came back to normal the Buddha should take only juices. On another occasion, as stated in the Anguttara commentary (AA. II. 6), Jīvaka performed an operation on the Buddha’s foot to remove a blood-clot formed through and injury caused by a splinter from the stone rolled down by Devadatta at him (cp. J. IV. 430; V. 333).

The above account of the different methods of treatment adopted by Jīvaka clearly indicates his professional skill both as a surgeon and as a physician. Taking into account the reports given in the Vinaya texts he appears to have performed operations which could even be viewed as complicated brain-surgery. The fact that the Buddha and two kings were regularly treated by him indicates the high esteem in which he was held. One of the merchants treated by him offered his entire wealth to Jīvaka and chose to become his slave when he was cured. Jīvaka declined this offer and requested the merchant to give a hundred thousand (pieces of gold) to King Bimbisāra and another hundred thousand to himself. Other merchants who obtained the services of the physician too showered gifts on him very lavishly. Jīvaka is represented in the Buddhist texts as a very faithful and pious lay devotee of the Buddha. The Anguttara Nikāya (A. III. 451) describes him as one of those with unwavering faith in the Buddha, the Dhamma and the Order, āryan virtue, āryan knowledge and āryan release.
and has seen the Deathless (amataddaso). On another occasion the Buddha declared him as the most popular of his lay disciples (A. I, 26; cp. A.A. I. 398). The Jivaka Sutta (A.V. 222 f.) was preached to him by the Buddha in reply to certain questions put to him by the physician. These questions indicate the nature of matters in which the physician was interested—how does one become a lay disciple, how is a lay-disciple virtuous, how does a lay disciple help in his own welfare and in that of another. The commentary on this sutta states the circumstances in which Jivaka constructed a monastery in his mango grove for the Buddha and his disciples. After treating the Buddha and presenting him with the pair of the siveyyaka cloths, which he received from King Pajjota, the physician attained the sotāpatti phala at the conclusion of the thanks-giving by the Buddha and thought to himself: "it is necessary that I should come twice a day to attend on the Buddha, and to do that Veluvana is too far. My mango grove is quite near and I should construct there a monastery for the Buddha." Thus he constructed a fully equipped monastery in his mango grove (cp. DA. I. 133). There were occasions when Jivaka invited as many as five hundred monks headed by the Buddha for alms at his house (DhpA. I. 244, 247; AA. I. 215; J. I. 116 f.). In another discourse also titled Jivaka Sutta (M. I. 368 f.), preached to Jivaka in his mango grove, the Buddha declared that meat may be used by monks if the slaughter of the animal is not seen, heard or suspected to have been done on purpose for a monk.

Other incidents connected with the life of Jivaka show that he was greatly interested in the welfare of the Sāsana. He was instrumental in getting the Buddha to lay down several Vinaya rules for the welfare of the Sāsana. The Buddha accepted the siveyyaka presented by Jivaka and ordained that henceforth monks could accept householders' gifts for robe material. Until then the monks had been permitted only rag-robins (pamsukūla-cīvara). On another occasion seeing monks very ill after partaking of sumptuous food, Jivaka saw the need of a place for the monks for walking up and down (cānkama) and a fire-place (agguśāla) for their use and requested the Buddha to allow them to the monks, so that the monks would be less prone to illness (Vin. II. 119). Jivaka was instrumental in getting the Buddha to lay down another Vinaya rule, viz. to prohibit the monks from ordaining persons afflicted with any one of the following five diseases: leprosy, boils, eczema, consumption and epilepsy.

After King Bimbisāra's death his son and successor King Ajātasattu appointed Jivaka as his chief minister who was instrumental in introducing Ajātasattu to the Buddha (D. I. p. 49).

**JIVAKA**

**JIVAKAMBAVANA**

Jivaka, a mango grove in Rajagaha belonging to Jivaka (q.v.), the celebrated physician who was contemporary of the Buddha. Jivaka was much pleased in the teachings of the Buddha and became his follower and before long realised the first stage of the Path namely the stage of stream-entry (sotāpatti). He was very keen to meet the Buddha often, but was unable to do so due to the long distance he had to travel to Veluvana to meet the Buddha. So he decided to build a monastery for the Buddha in his own mango-grove (ambavana) in Rajagaha. The monastery was completed in a short time and was ceremonially offered to the Buddha and the congregation of bhikkhus (DA. I. 133). The Buddha on his visits to Rajagaha stayed in this monastery with the bhikkhus and on such occasions Jivaka waited upon the Buddha and the community of monks with devotion and respect. Once when the Buddha was staying in this monastery King Ajātasattu paid him a visit with his royal retinue and the Sāmaññaphala sutta (q.v.) was preached to the King by the Buddha (D. I. 47 ff.). On another occasion Jivaka in conversation with the Buddha at Jivakambavana asked the latter whether it was true that animals were being slaughtered specifically for the meals of the Buddha. In reply the Buddha preached the Jivaka Sutta (M. I. p. 368 f.) to him wherein the Buddha explained that he had forbidden the eating of meat if a bhikkhu sees, hears or suspects that an animal has been slaughtered expressly for his meal. Further, the Buddha told Jivaka that it is a great sin if one slays an animal to prepare a meal for the Buddha and the congregation of bhikkhus. Jivaka was very much pleased with this explanation.

When Devadatta hurled a massive rock to kill the Buddha, a splinter from the rock injured the foot of the Buddha and the Buddha was taken to Jivakambavana for treatment by Jivaka (DhpA. II. 164). Cūḷapanthaka thera attained arahantship under the guidance of the Buddha at this monastery (J. I. 114 f.). Over five hundred bhikkhus lived in this monastery occasionally and bhikkhnīs (therīs), too, went to this mango-grove for their noon-day siesta (ThigA. 245 f.).

**D. Saddhasena**

Jivita, literally 'that which has come to live', a derivation from jivati to live. What is living is nothing but life which, according to Buddhism, is a process (santati: S. III, 143) in which both physical and psychological phenomena (dhamma) play their part. As these phenomena are conditioned and interdependent (paticca-samuppaina or paccayuppanna), life itself is always subject to change, like an ever flowing stream. No two moments of this process, (i.e., life) are identical; the nature of the following
moment being always conditioned by the moment which immediately precedes it. So life is momentary; it is always in a state of flux. Nothing about it is permanent. It is anicca, dukkha and anatta.

The above-description of life applies equally well to what is called becoming (bhava); and, therefore, it is imperative that a distinction between jīvita and bhava should be maintained. The term bhava is sometimes used synonymously with jīvita (e.g., marananti ekabhava-pariyāpannassa jivitindriyassa upacchedo: death is the interruption of the faculty of life confined to one state of existence - Vism. 189) and also punabbhava, (re-birth), there being no qualitative difference between the two; the difference is only quantitative. A jīvita may be described as one of the innumerable units (ekabhava) that constitute bhava (becoming). It begins with the conception of an individual and ends with his death. The beginning of bhava, which is synonymous with samsāra, is unknown (S. II, 178); it continues through innumerable lives and ends only in Nibbana. Thus death is the end of life whereas nibbāna is the end of becoming (bhava).

As stated above, life begins with conception. For conception to take place (gabhassa avak kanti), according to the Mahātanhasākhaya sutta, there should be the conjunction of three factors: there should be the coitus of parents, the mother should be seasonally well disposed and gandhabba (q.v.) must be present (M. I, 265). The same fact is stated in the Anguttara Nikāya in a different way where it is said that conception takes place on account of six elements (dhamu), namely, the element of earth (pathavi-dhamu), of water (āpo-dhamu), of heat (tejo-dhamu), of wind (vāyo-dhamu), of space (ākasa-dhamu) and of consciousness (viññāna-dhamu: A. I, 176).

The first two factors of the Majjhima, which are biological, namely, coitus of parents and the mother being seasonally disposed, as well as the first five elements of the Anguttara which are ontological, represent the material qualities present at conception. Gandhabba in the Majjhima and viññāna in the Anguttara, which refer to one and the same phenomena represent the psychological aspect of conception. Thus, life originates on account of both physical and psychological phenomena.

Not only does life originate on account of both physical and psychological factors but also it persists on account of them. The same six elements given in the Anguttara (I, 176) as the originating causes of life are given in the Dātuvibhanga Sutta as the components of life; it is said there that man is constituted of six elements: earth, water, heat, wind, space and consciousness (M. III, 239). According to the Mahāvedalla Sutta life consists of three factors, namely, vitality (āyu), heat (usmā) and consciousness (viññāna); when these three factors leave the body it lies rigid and motionless like a log of wood (M. I, 295 ff.; S. III, 143; Dhp. v. 41). Vitality and heat in this context represent matter.

Āyu is described as the faculty of life (jivitindriya), i.e. vital force, vitality: and usmā is described as the element of heat born of kamma (kammaja-tejo-dhamu. MA. II, 349 ff.; S. A. II, 323). And, now, what is viññāna?

Viññāna in this context is not empirical consciousness, for empirical consciousness is absent from a person who is in deep sleep or in a state of jhāna (absorption) called the cessation of consciousness and sensations (saññāvedayita nirodha: M. I, 296; Miln. 300). The absence of the empirical consciousness is not death.

Viññāna as an essential constituent of life is identical with the third link in the formula of dependent origination (pati ca-samuppāda), it arises depending on karmic formations (saññāka), and it conditions the arising of the psycho-physical entity (nāma-rūpa: saññākaraappacayā viññānaṃ, viññānapaccayā nāmarūpaṃ). It again is identical with the samvattanika viññāna of the Anena sappāya Sutta according to which it continues up to the state of jhāna (absorption) called neither-perception-nor-non-perception (nevasaññāñāñāñāñayatana: M. II, 264).

This viññāna which is thus described from different angles in the suttas is summed up in the Abhidhamma under the name of bhavanga (q.v.) and is described as sine qua non of existence (bhavassāhga). And it is this Viññāna that maintains identity and continuity as well as moral responsibility of life which is of momentary existence. It is also the factor that accounts for memory.

Upali Karunaratané

JĪVITA-NAVAKA-KALĀPA, the group of material (physical) phenomena which has Jivitindriya (faculty of life, vitality) as its ninth factor. This group is formed by adding Jivitindriya to the group of eight physical phenomena called the suddhaṭhatakakalāpa (pure eight-fold unit). The factors constituting the 'pure eight-fold unit' are: solidity (pathavi), liquidity (āpo), heat (tejo), motion (vāyo), colour (vaṇṇa), smell (gandha), taste (rasa) and nutriment (oja), See RUPAKALĀPA, RUPA and MATTER.
Jñāna (Pali: ñāṇa) knowledge, specially in the sense of knowledge leading to enlightenment and emancipation or in other words the saving knowledge or gnosis. In this sense knowledge has been generally classified as (1) conventional (sāṃvṛti or sammuti) and (2) absolute (paramārtha; paramattha). This is the most fundamental of the various divisions into which knowledge has been classified in Buddhism. The conventional knowledge is the knowledge that deals with the ordinary activities of life but not leading to insight and release from suffering. In describing this knowledge the Kathavatthu (p. 331) says that the knowledge pertaining to medical requisites on the part of a donor of them falls into the category of conventional knowledge. But as this knowledge is not conducive to the comprehension of the Four Noble Truths it is called conventional (sammuti). In another classification of knowledge found in an older part of the Canon (D. III, 226) four kinds of knowledge are referred to as the direct knowledge of the dhamma (Dhamme ñāṇam), the inductive knowledge (anvaye ñāṇam), knowledge of the others’ minds (paricchedhe ñāṇam) and conventional knowledge (sammuti-ñāṇam). All knowledge except that of the first three kinds is conventional truth (Vibh. 330). This two fold classification of knowledge is generally accepted throughout the Indian religious tradition from the Upanisads onwards (AA. I, 94 and Mādhyamika-kārikā, Chap. XXIV, v. 8).

It may be observed here than although a division of this type is maintained in explaining the dhamma, knowledge, like everything else, cannot be classified in any absolute sense. The ambivalent attitude seen in the Buddhist as well as in other Indian systems in general, is based on the concept of illusion (māyā) or ignorance (avidyā) which obstruct true insight as if with a veil (cāda). Buddhist epistemology demands that the difference between the relative and the absolute aspects of knowledge are realized and eliminated so that the ambivalence of the mind would cease to operate. That kind of realisation, from the epistemological point of view, could be described as the realisation of the absolute, but in the sense that once that condition is realised the individual does not see any difference between the relative and the absolute aspects of knowledge. Non-attachment to views (drṣṭi) is also an important characteristic of mind that has achieved true jñāna; for, as no view is absolutely correct or absolutely wrong. Such a mind will not fix itself to any view. The Tathāgatas always avoid such extreme views and follow the middle course that leads to knowledge, insight and nibbāna (Cakkhumārāṇi fānakāraṇi….. nibbānāya samvattati: M. I. 15). And it was this idea that has been fully developed into a system of abstruse dialectics in Prajñāpāramitā literature and in the works of Nāgārjuna. As D.T. Suzuki observes (Studies in the Lāhakavatārā Sūtra, p. 403) Jñāna is a very flexible term, as it means sometimes ordinary worldly knowledge, knowledge of relativity, which does not penetrate into the truth of existence, and also sometimes transcendental knowledge in which case it is synonymous with prajñā or āryajñāna”.

Knowledge and insight (jñānadārśana) that make one realise the absence of a ‘difference between relative and absolute aspects of knowledge also mean the realisation that there is no difference between samsāra and nirvāṇa, as often emphasised in the Mahāyāna works. The saving knowledge is not something outside life but the realisation of the true nature of life (yathābhūtā) in this very life (dīṭheva dhamme). It is not the annihilation of life but its perfection as beautifully conceived in the concept of Prajñā-pāramitā of the Mahāyāna. Hence the realisation of Nirvāṇa, the saving knowledge, is a change of attitude resulting in the realisation of the true nature of things (yathābhūtānādassana), the condition in which all differentiations and divisions are obliterated. It is an experience which cannot be grasped purely by logical analysis (atakkāvacara) and the person who has realised this state completely can be described as having full knowledge and insight, an embodiment of insight, of knowledge, of dhamma and of sublimity (bhagavaññānaṁ jānāti passaṁ passati cakkhu bhūtā fānabhūto, dharmabhūto brahmabhūto... M. Ī, III; A. V, 226). This kind of

1. The word jñāna is used to mean knowledge in general but its classifications are many and varied. What is attempted in the present essay is to present a brief explanation of the Buddhist concept of jñāna as leading to enlightenment (bodhi) and release (vimukti).
2. Knowledge in the sense of saving knowledge (vimukti-jñāna) is often compared to light as opposed to the darkness of ignorance (avidyā). The Buddha, in his first discourse after enlightenment uses the form sīloka meaning light in apposition to Jñāna (S. II, 105; Vin. I, 5). Tamomuda meaning ‘dispeller of darkness’ is an epithet of the Buddha.
3. For instance Nāgārjuna says in his Mādhyamika Sastra (Ch. XXV, v. 19):
   "There is no difference at all
   Between Nirvāna and Samśāra;
   There is no difference at all
   Between Samśāra and Nirvāna,
   - Stcherbatsky's translation
person representing the ideal Buddhist saint knows what he sees and sees what he knows and to him there are no mysteries and hence he is aptly called the embodiment of sight and knowledge (cakkhu-bhūta: jnāanabhūta). For him there is no difference between the eye of truth (Rājasicca-kkhu) and the eye of flesh (māmsacakkhu).4 Ignorance (avidyā) is overcome and true knowledge obtained.

The following observations about jñāna found in the general introduction to the Gos. edition (No. XC) of the Sekoddesatikā may be quoted here: "jñāna, the highest human and superhuman faculty by which one discovers the ultimate truth and becomes one with it, is an experience transcending all that in normal knowledge is bound to the logical frame and is capable of being transmitted to others". It is further observed, "More properly jñāna is the supreme abstract knowledge, a transcendent consciousness which does not cling any more to concrete objects and is not at all affected by the normal characteristics of human consciousness. Prajñā is a mystic element usually opposite to upāya and related to it as the idea is to its actuation or potentiality of the act. Prajñā has always a definite object; while jñāna is rather a faculty. For those who are acquainted with early Christian heresies jñāna may be translated as gnosis and prajñā as sophia." (Ibid. p. 33).

The Satāsahasrīkā-prajñāpāramitā (Ssp. p. 1440) classifies jñāna into eleven aspects as the knowledge of sorrow (dukkhajñāna), of the cause of sorrow (samudaya-), of its cessation (nirodha-), of the path leading to its cessation (māra-), of the cessation of lust, hatred and delusion (kṣaya-), of non-origination (anuttā pa-) of the true nature of the aggregates (dharma-), of the fact that everything (i.e. sense organs and faculties, the elements, birth, death etc.) is subject to change (anvaya-) of the minds of others (saṃvṛtti), of the opposites (paricaya-) and of the phenomena as they really are (yathābhūta or yathākata).5 This classification with the Four Noble Truths around which the system of jñāna revolves but other kinds of knowledge also.

A classification of jñāna that has a long tradition in the Mahāyāna tradition is its division as recorded in the Mahāvibuddha (see above) and the Dhamasangrha (sections 92 to 97) to these five kinds of knowledge. B. H. Hodgson (Essays on the Language, Literature and Life of Nepal and Tibet, p. 27) that the Ādibuddha, the epithet paśca-jñānātmika (possessed of other knowledge) because he possesses them. These five kinds of the universal law (dharma-dhāta-jñāna), knowledge like knowledge (ādarsa-jñāna), investigating or critical knowledge (pratyavēkṣana-jñāna), knowledge of equality or lack of duality (sama-ta-jñāna incorrectly given by Hodgson as Sānta-jñāna), and the knowledge that enables one to carry out one's duties well (kṛtyānugta-jñāna). It is by virtue of these five jñānas that the Ādibuddha, by five successive acts, brought forth the five dhyāni-buddhas. These five kinds of knowledge are generally regarded as attributes of a Tathāgata and are identified with five dhyāni-buddhas Vairocana, Akṣobhya, Ratnasambhava, Amitābha and Amoghasiddhi respectively.

It may be remarked in conclusion that whether Mahāyana, or Hinayana, the epistemological theme that runs through the teaching is the same. The fact that release and enlightenment are based on jñāna is fully admitted in both systems and in addition to prajñā, jñāna is regarded as a pāramitā as well. The most significant feature as a whole is the pragmatic nature of this theory. It is to be practised and experienced so that knowledge would not become a burden as explained by the simile of the raft in the Alagaddhāpama Sutta (M. 1, 130 ff.), where one is advised to use knowledge as one would use a raft to cross over a stream.6 Knowledge is practice and practice is knowledge.

A. G. S. Karlyawasum

---

4. Herein lies the significance of the Pali phrase jñānāsāsana meaning knowledge and insight or jñānī pāsatāi meaning knows and sees. For a discussion of this point on the basis of the Pali Piṭaka see K. N. Jayatilleke, Early Buddhist Theory of Knowledge, Allen and Unwin, 1963, Chapter IX.

5. The explanations given here are those given in the subsequent pages of the text. Other explanations are, however, possible for some terms at least. E.g. Saṃvṛtti or Saṃvṛtika could be explained as conventional knowledge and paricaya as knowledge gained from experience. See also Dharma-sanghara section 93 and Mahāvibuddha section 123-43. B. H. Hodgson also gives this list with slight variations as the attributes of the Adibuddha (op. cit. p. 92). A tenfold division of jñāna as found in the Sarvāstivāda abhidharma work Prakaraṇapāda of Vasumitra, given by B. C. Law in his History of Pali Literature, 1, p. 340. See also JPTS. 1904-5, p. 90.

6. The concept of the unexplained questions (avyākta) too admits the fact that certain kinds of theoretical knowledge are obstacles to the realisation of jñāna.
JÑANAKAYA or body of knowledge is the fifth in the fivefold classification of the body of the Adibuddha (Tathagata) as recorded by B. H. Hodgson (Essays on the Literature and Religion of Nepal and Tibet, Trubner and Co., London, 1874, p. 92). The preceding four are the Dharma, sambhogakaya, nirmanakaya and the mahasukhakaya. This shows that jñana means the metaphorical representation of the Tathagata’s unbounded knowledge conceived on the same analogy as in the case of the other four concepts of which dharma has been developed as one of the most significant ideas in later Mahayana.

A. G. S. Karlyawasam

JÑANAPRASTHÅNA, the main abhidharma work of the Sarvastivåda school of Buddhism written by Kātyāyanaputra of Kashmir, about 300 years after the demise of the Buddha, during the reign of King Maniska. Along with its six pādas or the subsidiary texts† the work is lost in its Sanskrit original and is preserved in Chinese into which language it was translated in 383 A.C. under the name Abhidharmasagratana or as it is more generally known as the Astagrantha (Nanjio, 1273) by a Kashmirian monk called Gautama Sānghadeva. Another translation was made later in 657-660 A.C. by Hsuan-tsang and it is this translation that is designated as Jñanaprasthâna (Nanjio, 1275) under which name the work is generally known. The Jñanaprasthâna is, however, much shorter than the Astagrantha. Both the versions contain eight sections with slight differences in some of the titles of chapters.

The first section contains eight chapters dealing with transcendental knowledge (lokottara-dharma), knowledge in general (jñana), individuality (pudgala), love and faith, lack of moral shame and moral fear (abhirikâno ttappa), material aggregates (rûpa), self mortification (anartha) and mental functions (cetanā).

The second section contains four chapters dealing with roots of evil (akusalamkāra), the once-returning saint (sakrīdgaśmin), beings (sattva) and the ten fetters (samyojana).

The third section contains five chapters dealing with the adept and the non-adept (śāikṣya and asaikṣya), views (dsṛti), thought-reading (paracittajñāna), cultivation of knowledge in its tenfold nature and the realisation of knowledge by the ārya-pudgala or the saint.

The fourth section contains five chapters dealing with wicked actions, erroneous speech, injuring being, intimation and non-intimation (vijñapti and avijñapti) and evil actions bearing evil consequences.

The fifth section contains four chapters dealing with organs of sense, composition of elements (bhūta), external objects and internal objects. It is an elucidation of the aggregate of matter (rūpaskandha).

The sixth section contains seven chapters dealing with organs of sense, forms of becoming (bhava), primal mind (mūla-citta), consciousness, causality, planes of existence and various forms of touch.

The seventh section contains five chapters dealing with conditions of the past, causality, liberation (vimukti), th. non-returning saint (anāgāmin) and the once-returning saint (sakrīdgaśmin).

The eighth section contains six chapters dealing with the application of mindfulness (smṛti-upasthana), desire (kāma), perception (samjñā), knowledge (jñāna), views (dsṛti) and verses (gāchā).

The above tabulation shows that the metaphysical views of the Sarvastivādins, who, like the Theravādins, were a conservative school of the Hinayāna, were somewhat different from those of the Theravādins. Almost all the fundamental doctrines of the Pali pitakas are dealt with in this work and the following words of Professor Takakusu may be quoted in conclusion “Kātyāyanaputra’s Jñanaprasthāna is, be it stated again, the fundamental and all-important work of the Sarvastivāda school and it seems to have occupied a prominent position in its literature, for it is to this, as we have seen above, that the so-called ‘feet’ (pāda) stand in the relation of supplements and it is on this again that the great commentary, Mahāvibhāsā has been drawn up”.

JODOSHU, the Pure Land sect, which is also sometimes referred to as Amidism, Amida Pietism, is a Buddhist sect that is extremely popular in Japan. Its central teaching is

---

† These six pādas are Sangitiparāya, Prakaraṇapāda, Viśnuṣakāya, Dhaṭukāya, Dharmakāya and Prajñāntisāstra. Unlike in the case of the seven Abhidharma works of the Theravāda these works are attributed to individual authors.

JPTS. 1904, p. 84.
that the repetition of the *Nembutsu*1 secures rebirth in Jodo,2 the western Paradise of Amida3 Buddha.

In Japan Honen (q.v.) is regarded as the founder of the Jodo sect. Yet it is obvious that its roots lie elsewhere, for Honen himself was led to believe in the efficacy of the *nembutsu* through the influence of Genshin's famous work the *Ojyosho*, which itself is based on a commentary on the *Amityurdhyanā Sūtra* by Zendo (Chinese Shan-tao, 613–682 A.C.), the third patriarch of the Amidist sect in China. Though Honen through the influence of zendo's work, considered *Amityurdhyanā sūtra*4 as the primary source of his teaching, there are two other Sanskrit works which are of equal importance with regard to Jodo and its development. These are the two *Sukhāvatīvyūha Sūtra*,5 the larger and the smaller. This makes it apparent that the earliest traces of the origin of the worship of Amitābha could be safely traced back to India.6 Though there is no consensus of opinion regarding the exact dates of the three Sanskrit texts i.e. the basic authorities of the Jodo sect referred to above, their Chinese versions7 establish the great antiquity of the original texts.

The fact that the Chinese version of the *Sukhāvatīvyūha Sūtra* appeared by about 186 A.C. the latest, proves that its Sanskrit original is anterior to it at least by a few decades. From this it is possible to surmise that the cult of Amida worship arose somewhere around the beginning of the Christian era or perhaps even a little earlier in the pre-Christian era.

Once the Amida worship and the texts around which the belief was built were transmitted to China, the new converts to Buddhism appear to have accepted it willingly.

The appearance of a number of versions of the *Sukhāvatīvyūha* and the subsequent rendering of the other two texts suggest the rapid spread of the belief. By about the 4th century A.C. it developed almost into an independent cult of which Hui Yuan (234–416 A.C.) is generally regarded as the founder. T'anluan (=Jap. Donran, 476–542 A.C.) is another note-worthy teacher who wrote many treatises on Amida worship. He greatly stressed the importance of self-surrender to Amida's saving grace. According to him, invoking Amida's name with faith is the way to salvation through the 'easy practice'. Tao-cho (Jap. Doshaku, 562–645) developed his teaching on the premise that this is the 'decadent age' and that an "easy way" to salvation is necessary in such an age. In fact, it is he who first distinguished between the Holy Path (Shodo) and the Pure Land Path (Jodo). This division roughly corresponds to salvation through practice i.e. through one's effort and salvation through faith i.e. through the grace of an external power. he firmly believed that the latter path is the only one suited for the "decadent age".

Shan-tao (Jap. Zando, 613–682) further developed Taocho's ideas and pointed out the possibility of even an ordinary person's securing rebirth in the Western Paradise of Amida by invoking his name. He did not consider such other practices as meditation necessary for the attainment of salvation. Besides these, Hui-kan or Ekan and Shao-K'ang or Shoko, too propagated the Amida cult.

The popularity of the Amida cult seems to have given rise to another tendency, namely, a tendency on the part of the other established sects to accommodate certain features of Amidaworship. Thus, Chih-i (538–597) of the T'ien-tai (Jap. Tendai), Hui-yuan (523–592) and Ch'it's'ang (549–623) of the San-lun sect (Jap. Sanran) showed deep interest in the Amida cult. They, on the one hand, attempted to maintain that the teachings of their sects were superior to those found in the Amida cult and on the other, sought to adapt Amidism to suit their own teachings. Thus, Amidism became a secondary aspect of all established religious sects.

The belief regarding Amida and his Western Paradise appears to have been known in Japan at least from the latter half of the 7th century. Tradition, however, records that a public recitation of the *Sukhāvatīvyūha Sūtra* was

1. This is the name of the formula *Namo Amida Butsu* which is the Japanese equivalent of the Sanskrit *Namo Amitabhāya Buddhāya* meaning, Adoration to the Buddha Amitābha.

2. Jodo is the Japanese rendering of the Chinese term Chingt'u, which is the name given by the Chinese to Amida's paradise. In Sanskrit it is known as Sukhāvatī.

3. The Buddha Amitābha is known in Japan as Amida, and for the sake of consistency the latter form is used throughout this article.

4. The Sanskrit original of this is presumably lost. An English translation of its Chinese version is found in the SBE, Vol. XLIX, p. 161 ff.

5. English translations of these two sutras are also found in the SBE XLIX. For the Sanskrit originals see BST, No. 17.

6. Though Elliot (Japanese Buddhism, London 2nd impression 1959 p. 390) see the possibility of tracing its origin to Iran, there is not enough proof to establish his hypothesis.

7. The first Chinese translation of *Sukhāvatīvyūha-Sūtra* is said to be by Lokaraksu (147–186 A.C.). Subsequently there appeared two more translations one between 223–253 A.C. and another by Sangharvan in 252 A.C. In 400 A.C. Kumarajiva is said to have rendered into Chinese the smaller *Sukhāvatīvyūha* while Kalavara is said to have translated the *Amityurdhyanā Sūtra* somewhere about 424 A.C. Besides, the Chinese tradition credits An-Shih-kao (147–170 A.C.) with having preached about Amida worship and also translating *Sukhāvatīvyūha Sūtra* in about 148 A.C. Whatever the truth of this tradition is, it suggests that the Chinese considered that the Amida-worship was introduced at a very early date.
held in the Imperial Court in 640 A.C. It was by about the 8th century that Chiko (709-780) wrote the Muryoju-ky Sơnshaku 8 explaining the teaching associated with the Amida cult. It appears, however, that it was mainly with the spread of Tendai that the spread of Pure Land teaching too, became accelerated. As it was in China, in Japan, too, Amida formed an integral part of many other sects. Thus; Dengyo Daishi (762–822) the founder of Tendai in Japan, adopted the practice of chanting the nam butsu as an aid to meditation. His disciple Ennin (Jikaku Daishi, 794–864), who seems to have studied both the Shan-toe and Fa-chao teachings on nembutsu made a significant contribution to the spread of this practice of chanting the nembutsu. He got a special hall erected for this purpose and himself recited the nembutsu. Ryogen (912–985) wrote his well known Gakuraku-Jodo-kushon-ojogi and therein tried to establish that the original vows of Amida are so efficacious that even a wicked person on hearing Amida's name is destined to be born in his paradise.

In this respect Genshin's (Esin 942–1017) contribution is extremely noteworthy. In his famous work Ojoyoshu he strove to establish the belief that this is the "decadent age" and that the recitation of the nembutsu is the only way of attaining salvation. Another eminent monk of the Tendai sect namely, Ryonin (1072–1132), who was also convinced that the prevalent religious teachings including Tendai were too abstruse to grasp and practise in a "decadent age", did his best to promote the belief in the efficacy of repeating the formula nembutsu. In fact, he laid emphasis on an aspect that had not been very much emphasised until that time. He tried to bring into focus the altruistic aims of the Mahayana and argued that the recitation of the nembutsu becomes infinitely more meritorious and effective both to oneself as well as to others, if it is recited, without any selfish motive, on behalf of others. This teaching which appears to be a syncreticism of the doctrines found in the Saddharma-pundarîka, the Avatamsaka and the sūtras on Amida seems to have had a great appeal, and Ryonin was able to form a separate sect which came to be known as Yusu Nembutsu.

The Shingon sect, seems to have indirectly helped the spread of Pure Land teachings. Kakuban (1095–1143), who started a new branch of Shingon, practically identified Vairocana and Amida and made meditation on Amida part and parcel of his own teaching. Jitsuhana (circa 1144), Yokwan (=Eikan 1033–1111) and Chinkai (1092–1152) also recommended the use of the nembutsu as an aid to attain salvation.9

Though Ryonin managed to somewhat separate Amida worship from the rest of the established traditional form of worship, it was really Honen who fully succeeded in raising it to a powerful, widespread religious movement which at first vied with other contemporary sects and subsequently surpassed them all in popularity. Numerous factors contributed to this phenomenal rise of Jodo Buddhism. Primarily, as evident from the above summary of the history of Jodo Buddhism in Japan, it is clear that this was no spontaneous development. This was a movement that was gradually gaining momentum with steady increase in the number of adherents. This process of gaining momentum was undoubtedly accelerated by the political and social revolution that took place in Japan in the 12th century. The last phase of the Fujiwara period showed all signs of decadence in social and moral life. The members of the royal family, addicted to luxurious and ostentatious living, were fighting against each other. The administration of the country was in a chaotic state. Civil war engulfed the whole nation. The main monasteries were more like political camps. Religion had boiled down to mere ceremonies and rituals which were of no great consequence. The masses were alienated from the religion; uncertainty, instability and insecurity were staring in the face. The conditions that prevailed were grave enough to convince all that it was truly the "decadent age". Search for an easy way of solace became the common concern of all. None could look up to China for help because, on the one hand, China as the source of religious inspiration, was on the point of exhaustion and on the other, after the establishment of the Minamoto dictatorship, all connection with China were suspended. Therefore, a new religious movement, in keeping with the times, had to rise from within. Thus, the background was set, a suitable doctrine was extant, and only a dynamic personality capable of presenting it to suit the requirements of the times was needed. This need was fulfilled by the appearance of Honen (also called Genku) on the scene.

Honen (q.v.) was convinced beyond any doubt that this was the "decadent age" (mappo) and that the prevalent traditional religious schools were not suitable for such an age. In his search for a suitable doctrine he was deeply touched and impressed by Zendo's work and particularly by the following passage: "Only repeat the name of Amida with all your heart whether walking or standing still, whether sitting or lying down: never cease to follow this practice for even a moment. This is the practice which brings salvation without fail, for it is in accordance with the original vow of the Buddha." In

8. This is a commentary on Vasubandhu's work and deals with Amida worship.
9. Besides these monks another monk worthy of note in this regard is the famous itinerant preacher and social-worker Kuya (901–92 A.C.) who went all over Japan popularising the recitation of the nembutsu, thus bringing this practice closer to the masses.
10. Cf. C. Eliot, op.cit. p. 262
this, he thought, he found the “easy way” open to all alike who opt to give up dependence on self-reliance (jiriki) and depend solely on self-surrender (tariki) to a higher external power. Ever amiable Honen, who was like a living embodiment of Amida’s compassion had no difficulty in putting across this message to the masses who were eagerly awaiting a simple form of religion guaranteeing salvation. In 1198 Honen wrote his famous work popularly known as Senchakushu in which he explained the Jodo doctrine. In this he exhorted the people to abandon the Holy Path (Shodo) and select the Pure Land Path (Jodo) which meant the giving up of numerous religious practices and undertaking the repetition of the nembutsu. The gist of his teaching is found in one short passage which runs as follows: There may be millions of people who could practise (Buddhist) discipline and train themselves in the way of perfection, and yet in these latter days of the Law there will be none who will attain the ideal perfection. Consider that it is now an age full of depravities. The only way available is the Gateway to the Land of Purity.

Thus, Honen’s teaching was centred on absolute faith in the redeeming power to Amida; and this absolute faith on the part of the devotee is displayed by the repetition of the nembutsu with a heart full of child-like trust in Amida in Amida’s Paradise.

Though Honen attached special importance to the Amitayurdayaṇa sūtra, he did not consider meditation as necessary to secure Ojo. Thus in his Testament in One Sheet of Paper he says: “Our practice of devotion does not consist in that of meditation as recommended and practised by the sages of the past. Now is our (calling the name) nembutsu uttered in consequence of enlightenment in truths attained through learning & wisdom. When we invoke Buddha and say ‘Namō Amida Butsu’, with the firm belief that we shall be born in Buddha’s Paradise, we shall surely be born there. There is no other mystery here other than uttering His Name with faith.”

While discarding the meditational aspect found stressed in the Amitayurdayaṇa sūtra, he laid much emphasis on another aspect mentioned therein, namely, that even a great sinner is not excluded from the all-embracing compassion of Amida. And hence he says, “there shall he no distinction, no regard to male or female, good or bad, exalted or lowly; none shall fail to be in His Land of Purity after having called, with complete desire, on Amida. Just as a bulky boulder may pass over the sea, if loaded on a ship, and accomplish a voyage of myriads of leagues without sinking; so we, though our sin be heavy as stone, are borne on the ship of Amida’s primeval vow and cross to the other shore without sinking in the sea of repeated births and deaths”.

It is true that by discarding traditional religious practices and by being merciful towards sinners Honen did not by any means condone the practice of committing sin. Yet it is possible that the overemphasis of the repetition of nembutsu almost to the neglect of the practice of virtue left room open for the abuse of his teaching. The frequency with which Honen, in his subsequent writings returned to repudiate the charge of encouraging people to commit sin proves that this was a major problem Jodo had to face. Therefore, he had to make explicit what was earlier implicit in his writings. Thus, writing to Rensu he says: “If you have any time to spare after saying the nembutsu, then you may apply it to doing good works...... If you say the nembutsu thirty or fifty thousand times, even if you should break a few of the commandments, that cannot affect your attainment of Ojo at all!” This reveals his attempt to keep the practice of the repetition of the nembutsu in the forefront without, however, excluding the practice of virtue. In another instance, he says: “while believing that even a man guilty of the ten evil deeds and the five deadly sins may be born into the Pure Land, let us for our part not be guilty of even the smallest sins.”

Though Honen tried his best to prevent all antinomian tendencies in Jodo, yet he was not saved of accusation and persecution. Not only Honen, even his disciples had to face the task of defending the Jodo teachings against such accusation for sometime, until finally Jodo triumphed over the prevalent religious teachings and got firmly established.

Honen had seven prominent disciples. They are Shokobo (or Bencho), Zennebo (Shoku), Syukan, Chosai, Seikaku, and Shinran.

Shokobo (1169–1238), founded the Chinzei school of Jodo while Zennebo founded the Seizan school and these are the two main divisions of Jodo proper.

11. The full title of the work is Senjakuhangan ‘nembutsu shu.
13. Ibid. p. 178
14. See B.E. XLIX. pt. 1. p. 197 f. Here it is stated that even those who are guilty of the five deadly sins i.e. matricide, patricide etc. are not without hope for, if they, on the eve of their death, happen to utter the name of Amida, will ultimately secure enlightenment.
15. Anesaki, op. cit. p. 174
17. Ibid. p. 395; cf. p. 403
The Chinzei school appears to be a compromise between the prevalent religious practices and the main teachings of Jodo. Honen himself, it was seen, tried to accommodate numerous religious practices without reducing the importance of the practice of the repetition of the nembutsu. Thus, Honen is said to have declared: "You should not think lightly of, in the least despising those excellent sutras, the Lotus and Prajñāpāramitā. Though you may believe in Amida your faith is one sided if you despise the many Buddhas and doubt Shaka's holy teaching... It is no obstacle in the way of the sole practice to pray for worldly good not only by reciting the nembutsu... by reading copying the sutras or by making images of the Buddhas." 18 Shokobo placed this teaching on a more authoritative ground by dividing Amida's vows into two categories as particular and general. The particular vows are those that are found in the Sūkhāvatīvyūha sūtra, and the general ones are, those undertaken by all the Buddhas including Amida. By this categorizing he tried to show that both the repetition of the nembutsu, through which one comes under the redeeming power of Amida, as well as morality, discipline, and practice through which also one comes within his saving grace are effective in securing rebirth (Ojo) in the Western Paradise.

As authority for this he cited the Amitāyurdhyāna sūtra which, while upholding the efficacy of chanting Amida's names, lay stress also on the practice of virtue, on the study of the scripture and the practice of the sixfold remembrances as being efficacious in securing rebirth in the Pure Land.

Zennebo (or Shoku) who differed from Shokobo did not consider this conciliatory attitude as keeping with the true spirit of Jodo. He, too, agreed that even Amida attained Buddhahood by fulfilling the general vows. But to him what makes Amida the incomparable saviour is his particular vows of which the vow number eighteen is the most important. Hence he stressed that only the chanting of the nembutsu is efficacious in bringing about salvation, and that all other practices are futile. 19

While Chosai seems to have favoured Shokobo's view, Seikaku, Ryukan and Kosi in line with Zennebo upheld that nembutsu is the sole means of attaining salvation.

Besides these differences there seem to have been certain differences of opinion with regard to the interpretation of some technical points. One such issue of (ichinen-gi) dispute was the question of "one calling" (ichinen-gi) or "many callings" (tanen-gi). As for Honen, the chanting of the nembutsu had to be made the main vocation of one's life. On this Ryukan was in complete agreement with his teacher. He held that one should engage in calling the Buddha's name throughout one's life until the time of his death. But there were others such as Kosi who, while not objecting to "many callings", argued that "one calling" done as a solemn act of faith and trust is absolutely sufficient to bring about the desired end.

Differences of this nature, however, did not generate so much of enthusiasm and interest among the followers as did the interpretation of Jodo by Shinran, the most distinguished disciple of Honen. While Honen brought religion down to the level of the ordinary masses by preaching Jodo Buddhism, Shinran went a step further and rid Jodo of whatever remaining features of traditional rituals and spiritual exercises it entertained and tried to harmonize the religious and secular lives by doing away with monasticism, and making religion a part and parcel of day-to-day life of all alike. This new branch of Jodo founded by Shinran is called Jodo Shinshu or simply Shinshu. An analysis of its main features suggests that Shinshu could be the result of an attempt to go back to the earliest form of Jodo in which Amida is looked upon as the sole saviour, and absolute faith in the saving power of his primeval vows (hongwan-rikiki) as the sole means of attaining salvation. It is in the process of emphasising these features that Shinshu effected further modification with regard to the role of faith on the part of the devotee. It was seen that Honen himself stressed the importance of self-surrender (tariki) as against self-reliance (jirokiki). However, it is apparent that self-surrender which springs out of faith in Amida's saving grace displays a certain amount of personal effort, personal involvement. Shinran seems to have felt that this element of personal involvement or personal effort however minute it may be, betrayed a certain amount of lack of absolute faith in Amida's grace. Therefore, in his teaching he completely

18. Ibid. pp. 404, 460; cf. p. 422
19. SBE. XLIX, p. 188, n. 2 explain this as, "sixfold remembrance, i.e. of the three jewels, the precepts, the charity of the Buddha, and Bodhisattvas and the world of Devas."
20. There are 46 vows (prāṇidhāna) in the Sanskrit Sukhāvatīvyūha Sūtra whereas the Chinese translation contain 48 vows. The 18th and the 21st vows found in the Chinese version are wanting in the Sanskrit. A part of the 19th vow in the Sanskrit text forms a part of the 18th in the Chinese version. Honen refers to the 18th vow as the "King of Vows". The following is Nanjio's translation of the 18th vows as found in Sanghavarman's version (SBE. XLIX p. 11, p. 73): "When I have obtained Buddhahood, if those beings who are in the ten quarters should believe in me with serene thoughts, and should wish to be born in my country, and should have ten times thought of me (or repeated my name), if they should not be born there, may not obtain the perfect knowledge; in having only those beings who have committed the five deadly sins, and who have spoken evil of the good law."
rejected this aspect of personal involvement in securing one's Ojo and declared faith itself to be a gift of Amida's all embracing grace. According to Shinshu teachings Amida's "Primeval vows" (Skt. pūrva-pranidhāna; Jap. hongwan) are a definite guarantee of salvation to all, irrespective of personal distinction; all beings are included in Amida's scheme or salvation which he declared in his vows. Therefore the salvation of all is pre-destined, is almost an inevitable "natural" event. Faith, therefore, is an involuntary act, a manifestation of Amida's grace. As no other power could impede the working of Amida's grace, the salvation of all beings is pre-determined and absolutely certain.

Owing to this emphasis on absolute self-surrender any idea of attainment of salvation became superfluous to Shinshu teaching. Therefore, even the chanting of the nembutsu came to be viewed from a different angle. Shinshu granted the importance of chanting the nembutsu yet not as a means of attaining salvation but as an expression of trust and gratitude, some sort of expression of ecstatic joy in anticipation of the bliss to be experienced. Viewed from this angle the difference between "many callings" and "one calling" became meaningless. Though shinran did not object to "many callings" he seems to have been inclined to accept "one calling" as sufficient to secure one's salvation. Not only the chanting, of the nembutsu but all other activities, according to Shinshu, are acts of expression of gratitude to Amida; and all actions of an individual should be motivated by faith in Amida. Thus Shinshu, with faith as the motivating factor, tried to harmonize religion and the day-to-day activities of its followers. The Shinshu doctrine teaches that life ought to be regarded as a service which Amida demands of us and when one regards life as such and all activities as expressions of gratitude one becomes free of selfishness.

Another distinctive feature of Shinshu is the abolition of strict monasticism, for Shinran, who was himself married, gave permission for the Shinshu clergy to marry. This annulled the main difference between the religious and secular life.

It is, however, seen that the new philosophical interpretation given by Shinran and his followers to old Jodo teachings as well as the innovation effected with regard to the life of the clergy left room open for numerous corruptible tendencies to find their way into Shinshu teachings. The fact that Rennyo Shonin, the eighth patriarch of Shinshu, had to insist on the necessity of observing moral precepts and giving up of selfish desires and indulgence in lustful activities shows that such corruptible tendencies were busy making in roads into the teachings and practices of Shinshu.

Besides the above mentioned major divisions, there is another minor school of Jodo founded by Ippen (1239-1289) (q.v.) an itinerant monk, who travelled about the country dancing and preaching his version of Jodo which is called Jishu. This is called Jishu (Time Doctrine) because it inculcated pious thoughts at every moment and also because the service to be held regularly six times a day was considered to be essential for salvation. Another reason why it is so named is that Ippen himself maintained that it was the most suitable religion for the times in which he lived.

Zen Buddhism appears to have had some influence over Ippen's interpretation of Jodo. He stressed the necessity of developing singlemindedness when chanting the nembutsu. He discarded faith as an activity of the corrupt human mind and insisted that one should chant the nembutsu without any reliance on self-effort. His belief in the efficacy of the chanting of the nembutsu was so great that he held that the mere sound of Amida's name even when uttered by an unbeliever, is capable of effecting salvation.

JŪJAKA, a destitute old brahmin who lived in Dunini-vīthha in Kālīga when the bodhisatta in a previous birth was born as Vessantara. Jūjaka eked out his living by begging and after sometime he could save one hundred coins (kaṭaṭapana) which he handed over to a trusted brahmin family for safe keeping. Jūjaka did not turn up to collect his money for quite a long time, and the brahmin family utilised that money for their needs thinking that Jūjaka was dead. After a very long time Jūjaka returned and demanded his money and the bewildered brahmin parents, unable to return the money, agreed to give away their young daughter Amitattāpī to Jūjaka as wife.

Jūjaka returned to his village with Amitattāpī and settled down. Amitattāpī ungrudgingly managed all Jūjaka's household work efficiently. But after sometime the jealous women in the village who gathered at the common well started to laugh at and tease Amitattāpī about her old and crooked husband. Amitattāpī was much annoyed and refused to fetch water from the well any more and refused to do household work unless a servant was brought to her.

In search of a servant, Jūjaka set out on a long and tedious journey to meet Vessantara who was then living an ascetic's life in a far away forest mountain cliff called Vaṅkagiri. Before Vessantara retired to Vaṅkagiri, he had given away all his royal wealth indiscriminately to the people of his country. He had retired to his forest
retreat as a pauper accompanied only by his wife and the two children, Jāliya and Kannajinā.

After many days of tedious and painful travelling Jujaka managed to meet Vessantara at Vankagiri. Having enjoyed Vessantara’s kind hospitality, Jujaka told him the purpose of his visit and requested that his two children be given to him to be taken away as slaves for his wife. Vessantara who was fulfilling his Dāna pāramitā and who had given away all what he possessed lavishly without any greed for them, was shocked when his two children, Jilīya and Kāhajinā, were dragged after him, beating them and abusing them without any greed for them. Jujaka was so much shocked when his two children, Jilīya and Kāhajinā, were dragged after him, beating them and abusing them without any greed for them. Jujaka rushed to the spot with attendants and led Jujaka and the children to the palace. The king gave much wealth to attendants to feed Jujaka lavishly. The greedy brahmin, who had tied with a creeper and the two children whose hands he tied with a creeper and who had given away all what he possessed lavishly without any greed for them, was shocked when his two children, Jilīya and Kāhajinā, were dragged after him, beating them and abusing them without any greed for them, was shocked when his two children, Jilīya and Kāhajinā, were dragged after him, beating them and abusing them without any greed for them.

The Buddha identified Jujaka as a previous birth of Devadattā (J. IV, pp. 521–593).

D. Saddhasena

Junnār, an early Buddhist site in Western India in the present Maharashtra state, situated about forty-eight miles north of Poona. It has been identified as the ancient Jrapanagara, the capital of the Kṣatrapa (king) Naḥāpana of the Saka family. Some scholars are in favour of identifying Junnār with the ancient city of Tagara of Greek writers and of the early Indian tradition.

Junnār, in the heart of a country thickly interspersed with sites of early Buddhist rock-cut sanctuaries, itself became famous with the discovery of a series of Buddhist rock-cut cave shrines of the earliest period. These caves at Junnār were known to the Antiquary since the second quarter of the 19th century. In 1833 Colonel Sykes published a series of inscriptions copied from ther (JRAS. Vol. IV, pp. 287–291). Dr. Bird noticed them in his Historical Researches (1847); Dr. Wilson described them in the Bombay Journal (1850); Dr. Stevenson republished these inscriptions in the same journal (Vol VIII, 1859); Mr. Sinclair of the Bombay Civil Service wrote an account of them in the Indian Antiquary (1874, February).

Around this old city different directions are Buddhist cave shrines nearly equally distributed in five different localities, containing not less than 120 separate caves. These five groups could generally be described as: (1) The Sivaneri Hill Fort to the west-south-west of the Junnār town; (2) The Tulja lena group to the west; (3) The Ganaša lena to the north of the town; (4) Another group, on a spur in the Sulaiman Hills about a mile from the Ganaša lena group and (5) The fifth group to the south in the Manmodi Hill. Vidya Dehejia of the Department of History of the University of Sydney has classified the group in the following manner; (i) Nānaghat; (ii) Tuljā lena; (iii) Bhūta lena-Amba/Ambikā lena-Bhīma Shankar, all three in the Manmodi Hill group; (iv) Lenyadri and (v) Shivānēri.

I. Sivaneri Group: To the south-west of the town at the Sivaneri hill are smaller rock-cut vihaaras and a caityagharā with a wide door, containing a stūpa. Of the stūpas, only a part of the dome is now extant. On the south and of the hill is another cave of two-storeys with a stairway in the north end leading to the upper floor. This cave yields a short inscription which could be dated on palaeographical grounds to the pre-Christian era. It has been conjectured that these caves, meant for the residence of bhikkhus, had probably all wooden fronts. There are holes in the stone for fastenings which could only have been in wood. In the same group is a large vihaera cave, called Bārā, Kotri, with twelve cells, with a stūpa in bas-relief in front of a large cell, with a stone bed in it.

Next in the same group is a lofty flat-roofed caityagharā with a small stūpa in the back of the inner hall 10 feet 3 inches in diameter. The Chattra of the stūpa, as in the oldest caityaghara, is carved in the roof and connected with the capital by a short stone shaft. The ceiling of the hall has been neatly painted and still retains large portions of the colouring in the decorations of circles within squares, in orange, yellow, red, white and

1. JRAS, Vol. IV, p. 34; Mc Crindle’s Ancient India as Described by Plutarch, p. 176 f; Eli, XXV, p. 168; See also Jüninagara” in B.C. Laws Historical Geography of Ancient India.
2. The account here on Junnār is based primarily on the findings of J. Burgess in the Cave Temples of India, ed. J. Ferguson and Burgess, London 1880.
5. J. Ferguson and J. Burgess, op. cit. pl. XVII, figs. 1 & 2.
black and there are traces of paint on the stūpa as well.⁶ The Sīvaneri group contains nine inscriptions all of which belong palaeographically to the time of king Pulamāvi.⁷

II. Tuljā-lena Group: In a hill about two miles north-west of Junnār lies the Tuljā-lena group of caves. They consist of a number of cells and a small caityagāra of unique form.⁸ It is circular in plan, with a stūpa in the centre surrounded by twelve plain octagonal shafts, supporting a dome over the stūpa. The central nave is flanked by an aisle which is roofed by a half arch rising from the wall to the upper side of an architrave. The stūpa is very simple and plain. Scholars are of opinion that this circular type found at Junnār presupposes the existence of structural monuments of the same type and their thesis is subs tanti ated with the discovery of a structural brick-built shrine of the same type at Bairāt (see Ency. Bsm. BAI RĀT). Religious monuments of the same type of the early Buddhist architects, with slightly varying characteristics are discovered at such other Indian sites like Kondavite (near Bombay), Guntupalli and Salihundam (both in the Āndra Pradeṣh), Furgusson remarks that the pinacle of this stūpa has been removed to convert it into a Sivalinga by the Brahmin worshippers who later appropriated the caves.⁹ Traces of painting may be seen on the pillars of the Tuljā cave and one relatively well preserved fragment depicts the figure of a woman. A recent scholar comments that the elegance and grace of the pose is reminiscent of the Chaddanta Jātaka scenes in the Ajantā Caitya, but any positive judgement on the basis of a single fragment is hardly justified.

III. The Gaṇeṣa-lena Group: This group has derived its name Gaṇeṣa lena at a recent date, after one of its caves was appropriated by the Hindu worshippers of the god Gaṇeṣa. A recent writer calls this the Lenyādri group; there are some thirty caves here including an apsidal Caityagāra, a large quadrangular Vihāra and a number of cisterns.¹⁰

In the more elaborately carved cave with a circular apse, the side aisles are divided from the nave by five stelae (stambha), on each side with beautiful carvings on the pillar capitals. Commenting on this cave Burgess says that this is one of the most perfect caityas to be found anywhere, and nothing was in wood except the umbrella which is now removed. It is in fact the best example we have of the perfect caityagāra of the first century of the Christian era. The cave has a narrow veranda in front, containing four columns. The veranda pillars, as well as those in the interior, rise from a pot (ghata) on a stepped pyramidal base and terminate in an inverted pot (ghata).

An extremely simple caityagāra, rectangular in shape and flat roofed with a small stūpa, the umbrella of which is carved on the rock surface of the roof and connected by a stone shaft, is found among this group.¹¹ The extreme simplicity of this arrangement and of everything about this cave seems to mark it as the earliest caityagāra in the group, or perhaps in any of the other groups in Junnār.

IV. Sulaiman Hill Group: In this group are found several small caves and a small caityagāra to the east, which Burgess dates to the earliest phase of excavations about Junnār. The identification of the Sulaiman Hill group is not conclusive and tentatively it is said to correspond with the Nanaghat group of caves.

V. Manmodi Hill Group: This group lies towards the south-south-west of Junnār. The principal cave here is an unfinished caityagāra which yields an unique piece of low-relief carving above the entrance, covering the place usually occupied by the horse-shoe window in later rock-cut caves. This is the depiction of Śrī or Gajalakṣmī motif common to Buddhist art of Sāncī, Bhārhat, Buddhagayā and the other early sites.¹² Burgess remarks that though its employment here is a solecism, this bas-relief is one of the most interesting pieces of sculptures for the history of art, to be found in the whole range of the western caves. The carvings of two mythical beings above the window arch, one winged and the other with snakehoods, remind the nāga-suparna motif of the ancient orient. Here the two arch-enemies of oriental mythology are depicted in close proximity, probably a suggestion of the Buddha's preaching of universal compassion that leads enmities to be forgotten, depicted allegorically in the sculptor's art.

There is a horizontal soft structure in the rock which has probably led to the works of this cave being relinquished in its present unfinished state. In the south-east and of the same hill are some more groups of unfinished caves and ruined cells which have been later converted by Jains and Brahmins to suit their worship. Of these the Ambā/Ambikā group of the Bhīma Saṅkār group are the most

prominent. The names Ambikā and Bhima Sankār seem to be of recent origin, probably in the present century. Fergusson and Burgess have not observed any such names given to these caves.

Summary: The significance of the Junnār caves lies in their archaic characteristics which resemble those in the rock-cut sanctuaries at Bhājā, Bedāsā, Śīnā, Kuḍā Tālājā in the earliest phase as well as certain East Indian (Orissan) caves. The absence of richly carved sculpture and sculptural representation of the Buddha in either human or symbolic form, makes the group of caves more significant in the study of the development of rock-cut architecture primarily, and the Buddhist Art and Architecture in its earliest phase in general. In this respect the following remark by J. Burgess is noteworthy: "Although none of these caves can compare either in magnificence or interest with the caityas of Bhājā or Karle, or the vihāras of Nāsik, their forms are still full of instruction to the student of cave architecture." 15

Another prominent feature of the Junnār group is that it comprises specimens of almost all varieties of rock-cut monasteries and caityagharas and many other forms of cave architecture, not found elsewhere. The date of the Junnār caves has not been fixed with much precision, but on palaeographic and architectural grounds scholars are at a consensus in placing these rock-cut shrines at a date about one or two centuries before the present era, for the earliest group. The later ones, however, range from the first to the third century A.C. with additions and innovations on the earlier ones, too. The later innovations were done by Buddhists as well as other religionists like Jains and Hindus who had later appropriated these caves and converted them for their own religious purposes. The appropriation of these early Buddhist rock-cut sanctuaries by non-Buddhist religious sects lasted for several centuries and is being perpetuated even in the present day.

JURISPRUDENCE. The term Jurisprudence in its widest sense could be interpreted as "the Science of Law" which is referred to as the original and etymological meaning of the term. It is also the interpretation "to which the best usage conforms."

Do we have a Buddhist Law in existence? A monastic code containing a set of enforceable rules of conduct is found in Buddhist texts. These laws are precisely stated and codified with a set of procedures laid down in the constitution for trial and conviction in case of infringement. These laws of the community of monks "had the sanction of the state" (Bhagavat, D. N., Early Buddhist Jurisprudence, I, V) and these laws can "claim all the dignity and prestige of Jurisprudence as far as the Sangha and the relation of the Sangha to the State were concerned" (op. cit.).

Buddhist Jurisprudence developed primarily out of the body of disciplinary injunctions known as the Vinaya. The Vinaya texts of different schools are available in Pali and Sanskrit languages as well as in Chinese and Tibetan translations. The Pali texts belonging to the Theravāda school, considered as the most complete, in which almost all sections are preserved intact, serve as the best source for our information. The Vinaya deals exclusively with monastic discipline; but glimpses into Buddhist Jurisprudence available in other areas of the Buddhist literature are also being utilised in this article.

Referring to the Buddhist monastic fraternity it is stated that it appears from the very beginning to have been a society governed by law. The completion of a procedure by law was necessary to the reception of a postulant into the society. The Law of the Order pointed out to him, his course of action and of omission. The society itself as a court of discipline secured conformity to the ecclesiastical rules by keeping up a regular judicial procedure.

The historical and sociological background to the Vinaya rules provides us with a flood of light that falls on the area of the origin of Buddhist Jurisprudence. Each rule or law as given in the Vinaya Pitaka is traditionally said to have been promulgated by the Buddha himself. The basic idea is to provide an undisputed authority to Buddhist Law. There is no doubt that the major rules trace their origin to him. The minor rules that may have grown with the passage of time, included in the basket of disciplinary laws have their authority foisted on the Buddha. Unfortunately there is no way available to us today to determine the Historical Order in which the laws came into existence. The laws grew out of empirical instances in which Buddhist Philosophy was applied to practical situations.

The legislation thus enacted when a situation arose had a number of reasons for its enactment. "I am enacting rules of training (Sikkhāpada) for the monks: (i) for the well-being of the community, (ii) for the convenience of

---

the community, (iii) in order to curb miscreants, (iv) for the ease of well-behaved monks, (v) in order to restrain misbehaviour in the present, (vi) in order to check future misbehaviour, (vii) in order that those who have no faith (in this religion) may acquire faith, (viii) in order that those who have faith may be further strengthened in their faith, (ix) in order that the good doctrine (dhamma) may last long, and (x) for the promotion of discipline" (Vin. III, 21).

These reasons bring into focus two important purposes behind such legislation. Firstly, there is the utilitarian and pragmatic motive that inspired the enactment of laws. The laws are made in the interests of the entire community. Public opinion influenced the creation of such laws and the maintenance of discipline was considered as an advantage in itself.

Secondly, the Doctrine (dhamma) is regarded as the fount of all justice. The Buddha states how the doctrine should serve as the 'teacher' for the community of monks, after his demise. If the community of monks so decides, it could abolish the minor rules of the community (D. II. 154), the flexibility attached to such minor laws to meet different sociological situations is observed here. Both these ideas are important from the development of secular law.

The disciplinary laws were not promulgated in a vacuum. As the community of monks grew, problems arose that needed solution. The community of monks entirely depended on the laity for their material sustenance. The relationship established between the monks and the laity was a symbiotic one. This relationship allowed the criticism about the behaviour of monks to emanate from laymen and laywomen. A number of Buddhist laws had their origin in this sociological experience.

The historical background helps us to widen our knowledge of this sociological experience. As the community of monks increased, they began to assume the character of a settled community rather than a wandering group, more conspicuous by their eremitical character. This relatively settled life necessitated rules and regulations, customs or habits to regulate their conduct with each other, with the laity as well as the outside world.

According to the Buddhist tradition, the need for the legalised administration of the community of monks arose only with the lapse of time (Vin. I, 21). This took place twenty years after the establishment of the community of monks. During those twenty years there was no occasion that demanded the enactment of any law. But with the passage of time, as misconduct increased and discipline faltered, the time for the enactment of laws for the community of monks arose. Buddha had stated categorically, that rules and regulations are laid down by him only as the need arises i.e. "when conditions causing the cankers appear in the order" (M. I, 445).

The laws in the Vinaya are listed according to the gravity of the offence committed. Within each type, the specific offences are stated in a definite form. The laws are organised in the following manner:

1. A story leading to a rule (case history) together with promulgation of the law with the particular penalty stated;
2. The old commentary known as padabhājanīya (i.e. legal definition of the terms and phrases of the law as formulated);
3. More stories (further case histories) telling of deviations from the rule and showing that either they were not so grave as to entail maximum penalty, or they were reasonable to warrent, in certain circumstances, a modification or relaxation of the existing rule, or that they are not such as to be rendered permissible by any extenuating circumstances.

Buddhist laws are organised with a certain form in view. The laws are arranged in an order that emphasises the gravity of the offence. First of these are the most serious offences, four in number known as pārājikā. Commission of an offence of this category means automatic expulsion from the order of monks. Under the second category there are the thirteen Sanghādisesa which are serious offences for which punishment was parivāsa or probation in some form. Further, Sanghādisesa required the formal meeting of the Sangha in the beginning to pass an enactment and at the end for pronouncing the rehabilitation and the atonement for the offence committed.

These are followed by two Aniyatā-laws referring to undertrmined offences. They were so called probably because of the flexibility of fixing the legal charge against...
the accused available in these laws. Probably, the paucity of evidence to prove the charge may have led the Buddhist jurists to create this type of law. One could develop the insight here to consider the *aniyatas* as a precursor to the plea bargaining found in U.S. criminal justice.

Offences for which punishment is not serious include the following categories:

*Nissaggiya* — thirty in number; *Pācittiya* — ninety two in number; *Patidesaṇīya* — four in number and *Sekhiya* — seventy-five in number. These offences are given simple punishments ranging from forfeiture, expiation, admonition, confession etc. There are also three derivative offences, namely, *Thullaccaya, Dukkata* and *Dubbhāsita*.

The first is derived from *Pāriyākā* and *Sahghadīsesa* offences. The other two are derivative offences from minor offences, but not violations of specific laws. It must be mentioned here that in the case of *Dukkata*, direct violation of a law (*Sikkhāpada*) takes place only in the case of *Sekhiya*.

The offences may be presented in the form of the following chart:

### Types of Offence

Other typologies could be easily adopted to categories Buddhist Law. These laws are exhaustive in nature. "Practically every conceivable relation with other human beings, whether fellow monks, nuns or laity, are brought under review and legislated for in the minutest detail through the seven classes of offences" (*Pāriyākā*, *Sahghādisesa*, *Aniyata*, *Nissaggiya*, *Pācittiya*, *Patidesaṇīya* and *Sekhiya*).

The first two categories could be taken as serious offences and the rest as simple offences, if one desires to demarcate these laws into two broad categories. Otherwise it is not difficult to divide them under: (1) crimes against persons (*Pāriyākā* I, III and IV and other relevant *Sahghā-

---

Buddha lived—to His followers He was the obvious formal source of law. But towards the end of His life, the doctrine and discipline (dhamma vinaya) gradually assumed an importance as the formal source of Buddhist Law.

There is no doubt that Buddhism upholds that Law must have a universally acceptable moral basis to be deemed binding. One need not obey unrighteous laws even for the sake of the State (Vin. III, 138). The moral base is due to the fact that morally good actions result in pleasant consequences, and morally evil actions are followed by unpleasant consequences. According to Buddhism, human beings should not attempt to return evil for good, but strive to establish an enlightened attitude. The wrong-doer is morally responsible for his actions. Wrong-doing is conditioned by economic, social and psychological causes. Those who sit in judgement should act out of compassion towards the wrong-doer as well as in their own interests.

Buddhism upholds a natural law-theory in recognising that man's conscience is generally aware of right and wrong even though conscience is admitted to be sometimes fallible: “Your conscience attha is aware whether it is truth or falsehood...... therefore be guided by one's conscience (atthadhipatetrya) as well as by public opinion (lokadhipatetrya) and the dhamma (dhammãdhipatetrya)” (A. I, 149, 150). Reason also enables one to understand why righteous law should not be violated. It is that a person should reason thus, when confronted by a situation of this type; “If a person boasts about himself and be little others, such a person is disliked by me; therefore, if I were to boast about myself and belittle others, I would be disliked by others” (M. I, 97).

Buddhist Law pre-supposes three dimensions: (1) The karmic dimension. (2) The sociological dimension. (3) The karmic dimension. A law has been promulgated; and when it is violated, due process takes place and the punishment follows. This is the legal dimension. The violation of law inevitably leads to sociological implications. Public ostracization culminating even in physical violence could be the social outcome of an infraction of the law. Finally, violation of a law involves a karmic impact when such a violation is volitionally undertaken. The karmic result would follow either in this life or in the next.

The importance attached to the legal questions and their settlement in Buddhism had not escaped the attention of scholars. “The whole subject of legal questions and their settlement, although complicated, must be studied by anyone who wishes to grasp an important branch of disciplinary proceedings of the Order together with the exact machinery laid down for carrying them out” (SBB. Vol. XX, p. viii).

In the Buddhist legal system there are two main kinds of disputations: They are (1) disciplinary disputations and (2) non-disciplinary disputations. The second category is more or less ritualistic in character, and is associated with ceremonial ritualistic acts such as the grant of higher ordination. The first type of legal disputes is classified under four categories: “Legal questions arising out of disputes, legal questions arising out of censure, legal questions arising out of offences, legal questions arising out of obligations” (SBB. Vol. XX, pp. 117–118; also Vin. III, 164).

A legal dispute is identified by its salient characteristic, and then placed under the relevant category. There are seven methods laid down in settling legal disputes. These seven methods show the salient features of the Buddhist judicial system, and as such, these are of great significance to those interested in Buddhist Jurisprudence. Thus a brief description of the seven methods would be of practical use.

1. Sammukhâvinaya: Verdict in the presence of (a) the accused (the presence of the accused in the Court at the time of bringing the charge is considered as vital in the Buddhist judicial system); (b) the assembly of monks (the court) as stipulated by law; (c) the disciplinary rules (or laws) and (d) the application of such rules in the given context (Vin. II, 66, 73).

2. Sativinaya: Granting of the verdict of innocence through a simple process. This is done when the accused is (a) a monk who is of unblemished character and (b) he is charged with four specific offences; (c) he makes a formal request of innocence and (d) when the assembly (Court) grants the request according to rule (Vin. II, 74–80).

3. Patînhātakarana: The third method is employed when a monk is accused of a slight offence an offence for which the punishment is making amends) and he pleads guilty to it in the 'Court' (Vin. II, 80–83).“The carrying out of the acknowledgement”, in this case, it is interesting to observe how it is stipulated that provision is made to take disciplinary action with the acknowledgement of the guilty monk.

4. Amûlvavinaya: The verdict of past insanity is granted to a person who has caused an offence or offences while he was in a state of mental derangement (Vin. II, 80–83).

5. *Yebhuyyasikā*: The next method is the arriving at a unanimous decision by the assembly (Court). This is only when such an unanimous decision is not favoured that a majority decision was sought (*Vin. II, 84*).

6. *Tassapāpiyasaikā*: The next method is carried out when an accused prevaricates himself in Court. On being examined before the Order, having denied, acknowledged, denied, shelved the questions and lied consciously, the singularity of this method lies in the fact that the evidence for its execution arises while in the course of the trial (*Vin. II, 85*).

7. *Tinavatthāraka*: The final method is, settling disputes "by the covering up as with grass" (*Vin. II, 86-88*). This is done when there is a multiplicity of disputes arising from a judicial assembly leading to numerous quarrels and strifes, and when it would be difficult to deal with all of these practically and effectively.

It is seen here as to what extent the Buddhist Law exerted itself in order to render fair justice. Formal acts of the community of monks being disciplinary or non-disciplinary, were considered invalid if any aspect of the law laid down was violated. We saw how the trial should take place in the presence of the accused. "Monks, a formal act of guidance, banishment or reconciliation or suspension should not be carried out against monks without confrontation" (*Vin. II, 73*). "Confrontation involved four things; viz. (1) Confrontation with the full assembly authorised to conduct the trial; the consent of those entitled to send their consent having been obtained, and no member of the assembly being challenged by any other, (2) and (3) confrontation of the letter and spirit (i.e. moral basis) of the law under which the accused is charged along with an account of the procedure for settlement as laid down by the teacher (Buddha), and (4) confrontation with the complainant."

In the procedure at the Court, it is indicated how an attempt should be made to secure a confession by reminding the person of the circumstances related to the commission of the offence. As far as the "Court" is aware, the formal charge is made thereafter, giving a full opportunity for the accused to present his case and point of view.

A vivid picture of the nature of the formal proceedings is seen in the following example: First the monks (the accused—italics mine) should be reproved; having reproved them they should be made to remember; having helped them remember, they should be charged with an offence; the *Sāṅgha* should be informed by an experienced, competent monk, saying: "Honourable Sirs, let the *Sāṅgha* listen to me. If it seems right to the *Sāṅgha*, the *Sāṅgha* may carry out a (formal) act of censure against the monks who are followers of (the *accuse*—italics mine). This is the motion (*āṭṭi*); a (formal) act censure is being carried out by the *Sāṅgha*.

"Monks, if it is possessed of three qualities, an (formal act of censure comes to be not legally valid, and no disciplinary valid, and one that is hard to settle (that to say), if it is carried out without the confrontation, if it is carried out without interrogation, and if it is carried out without the acknowledgement (of the accused). Further if it is possessed of these three qualities, (formal) act o censure comes to be hard to settle; (that is to say), if it is carried out without having reproved him; if it is carried out without having made him remember; if it is carried out without charging him with an offence" (*SBB* Vol XX, pp. 3-4).

The legal procedure at the assembly of monks (the Court) reminds us of the function of a modern Court. The presence of the law, the stipulated number of judges, the prosecutor, the accused physically available (except in very rare instances), the procedure of interrogation as well as references to a jury system enables one to draw a number of parallels between the Buddhist system of Justice and modern Courts. The jury in the instance cited, had a woman as one of its foremost members—a feature worthy of appreciation.

The 'Courts' were categorized under five main types, depending on the number of judges that constituted them. Accordingly, there were (1) a Court with four judges (a four-fold Order of monks); (2) a five-judge Court; (3) a ten judge Court; (4) a twenty-judge Court; (5) a Court with more than twenty judges. Each Court had its own specified jurisdiction (territorial aspects of jurisdiction) laid down by law, including the legal boundaries within which they could function. "The jurisdiction of each *Sāṅgha* extended only as far as its geographical boundaries or 'territorial limits' which were strictly defined, and this was another innovation of the Buddha". The qualifications of judges were spelled and strategies adopted to ensure their impartiality. Legal provision was made to punish anyone who violated these stipulations.

The "Court Procedure" was carefully spelled out. A formal act ('a charge') could be introduced after permission had been obtained to introduce it. Thus a motion is forwarded and followed by three proclamations in "Open Court". The intention of the doer (*Mēna Reśān* in modern parlance) was to be proved in order to establish guilt. Evidence, both direct and indirect is carefully analysed in the 'Court' before the verdict is given. If a formal legal act is not carried out according to the law, it could be subsequently challenged.

The quality of evidence is emphasised by the insistence on facts heard, seen or suspected to be very precise. The witness should know exactly what be had seen, heard or
suspected; when and where "it is seen, heard or suspected
and how it is seen, heard or suspected". In the Court,
there was provision for the witness to be closely
questioned. If it is seen that the witness is giving false
evidence, it could lead to a legal procedure being initiated
against him.

A decision taken by the 'Court' had in it the mechanism
to put into effect. An example is the passage of the act of
reconciliation (SBB. Vol. XX. pp. 25-27). Here, a monk
who is asked by the "Court" to request pardon from a
layman is given a Court witness to go with him. This
enables the monk to make his request for pardon in the
presence of the Court witness. When probation is imposed,
the entire mechanism necessary to put such probation
into actual practice is facilitated by the Court decision
itself (Infra).

The decision of the Court should be specifically for the
offence charged, and not for any other offence. According
to Buddhist practice, such judicial decisions could be
made by (1) the entire Sangha; (2) by a committee of the
Sangha; (3) by a number of referees belonging to the
Sangha, and (4) by the vote of the majority. But "one kind
of tribunal could not be substituted for another, except
under specified circumstances" (Dutt, S. Early Buddhist
Monachism, 1924, p. 164). If the 'Court' fails to arrive at
a decision, it would not be proper at once to proceed to a
majority decision.

All sorts of precautions are taken when this method,
minority decision, is resorted to. "It is worked out in a
rather protracted manner, and is resorted to only after
the failure of other methods" (Dhirasekera, Jotiya,
alternative methods suggested is the selection of a
committee, and the attempt made to arrive at a solution
acceptable to all. Careful consideration is given to the
qualifications of members selected to such a committee.
Even when the majority was taken, elaborate checks and
balances were introduced in order to ensure a fair and just
decision. The underlying idea is to see that a majority
decision, if it is arrived at, serves the just and righteous
cause.

It is possible for a Court decision to be challenged. The
mechanism of such appeals was carefully laid down. A
monk on whom a punishment was inflicted by the
Sangha finally came with his appeal to the Highest Court,
i.e. the Buddha (SBB. Vol. XIV, pp. 446-450).

The intention was always looked into when an inquiry
was made in the Court. This was done by examining the
case with its history, questioning the accused as well as the
witnesses. If it was proved that there was no willful
intention to commit the offence, the accused was
charged. "There is no offence as you did not consent."

In Buddhist Jurisprudence, there are two categories of
acts of punishment. They fall into these categories on the
basis whether the offence was caused before the Court
proceedings or while in the judicial process. Seven acts of
punishment belong to the first category, and two to the
second category. Act of censure (tajjanjyakamma), act of
guidance (nissaya-kamma), act of reconciliation (patisa­
rañiya-kamma), act of suspension (ukkhepaniya-kamma),
act of information (pak assassiya-kamma) and act of
"Turning the bowl upside down", (pattani kujujana-
kamma) act of banishment (pabbajaniya-kamma) (SBB.

In the second category, one finds the following two acts: (1) act of specific depravity; (2) act of covering up as
with grass (SBB. Vol. XX. p. 115).

The philosophy of punishment does not constitute a
significant aspect of the Buddhist penal system. As stated
by the Buddha, punishment, in fact, is regarded as morally reprehensible according to Buddhist thought:
"All tremble at punishment. All fear death.... life is dear
to all. Whoever seeking his own happiness harms A Mahāyāna text ((Ratnāvali of Nāgarjuna, JRAS. 1936,
thereafter (Dhp. vv. 129-132).

Punishment when inflicted on others should serve to
the extent that it dissuades others from wrong-doing. A
comparison is observed in the goldsmith's action in
heating the metal to the extent that it serves to melt
extraneous matter found in gold. So should any punish­
ment inflicted on an individual serve, if the punishment is
to bear positive results.

The basis of punishing any other, either by the
imposition of physical or mental pain or through some
other means, is the desire to make that person realise his
wrong-doing. Any punishment rendered without this
fundamental characteristic has no worthwhile meaning.
A person who is out of his normal mental faculties may
not know what he had done, There is no purpose in
inflicting punishment on such a person. In the Buddhist
sense, punishment is not punitive or retributive. It is
basically restorative and conciliatory, attempting its best
to make the wrong-doer realise his wrong and become a
useful member in society.

In the Indian tradition, the study of Law was called
"the science of punishment" (danḍa-niti). Buddhist Juris­
prudence adopts a different interpretation of punishment.
Although punishment does have a place in law, the law itself is based on consent resulting from emanating, understanding, friendliness and mutual interest. Our virtuous behaviour could be due to our respect for the dictates of our conscience (atadhipateyya); respect for public opinion (lokadhipateyya) and respect for righteousness (dharmadhipateyya). Shame and dread (hiriyottappa) also act as factors that keep control over us. In the world, there would be people who do refrain from crime, solely because of the fear of punishment. Such people are referred to in Buddhism as those who "out of fear of punishment do not plunder the goods of others" (A. I, 48). But penal laws in a Buddhist sense are based on primarily reformatory and only secondarily deterrent forms of punishment.

Punishment was never retributive or vindictive in the Buddhist sense. According to the Jātaka (IV, 192), "there was no greater punishment than that of beating, warning and banishment (tālana, garahana, pabbajjana); there was indeed no cutting-off of hands and feet and execution (battha-padachedana-gāhātana); and these things came into existence afterwards during the times of cruel kings."

A Mahayana text (Ratnavali of Nāgārjuna, JRAS. 1936, p. 436) states that (which is a discourse to a king): "You must punish them out of compassion and from a desire to turn them into worthy persons as you do as regards worthy sons; and you must not be moved by hatred or by the desire for material gain."

It is thus very necessary to have compassion towards wrong-doers. To show hatred to them who are punished, imprisoned or beaten in accordance with the law is not the Buddhist attitude. Such people (or prisoners) should be well looked after. All human beings in this world are subject to insecurity and suffering; but in all of them the potential to develop to the very highest is also discernible. No one thus should be condemned eternally for the faults he committed (torture, capital punishment, life-long imprisonment are thus eschewed in the Buddhist theory of Criminal Justice).

Probation is treated as the main method adopted in the Buddhist Law to offenders. Except for the four very serious crimes, all other types of crime contain an element of probation in them by way of "punishment". The thirteen Sanghādisessas or serious offences or crimes are "punished" by means of probation (Ratnapala, Nandasena. Probation, the Heart of Buddhist Discipline, pp. 19-27). This probation is of two types: (1) mānatta, lasting for a specific period of 51 days and (2) parivāsa, without any limitation on the duration of time.

The Parājikās, regarded as the graved of offences, 'admit of no remedies or atonements'. "The penalty for parājikā offences being complete excommunication and loss of monastic status; it is spontaneously brought about by the commission of the crime" (Dhirasekera, J. Buddhist Monastic Discipline, 1981, p. 149). All other offences could be remedied by different penalties and punishments; particularly the forms of probation included in Buddhist Law. Even in the case of an individual who had committed Parājikā offence, although he may lose his monkhood, he could still remain as a novice monk (sāmanera), if he so wishes. In all this, one observes how the spirit of vindictiveness or retribution is totally absent from Buddhist Law.

Under modern proceedings, probation could be imposed with the conditional suspension of the sentence, or with the conditional suspension of the execution of the sentence. The former is supposed to be of U.S. and English legal origin while the latter is associated with British legal practices.

In Buddhist Law a person was placed under probation only after careful and meticulous consideration of the case. The execution of the sentence was postponed substituting an alternative to penal remedies represented in drastic actions such as banishment or suspension. The inherent attempt is to treat the individual as an individual rather than as a class or concept. The caring judicial process enabled the selection of individuals, substantial portion of whom "could be assisted while at liberty to form correct habits and attitude without a penalty and to use a great variety of methods for this purpose" (Sutherland 1947; 383; also el. Nandasena Ratnapala 1993, 200).

Bibliography
Further the Expositor says: ‘the grossness and subtleness... same matter. Food (nutriment) means, it is ‘taken into’.

Continuing the discussion on kabaliṅkārāhāra, the Expositor says: Now ‘stomach-filling’ is said to show that substance by virtue of function. For the substance swallowed, such as roots and fruits, etc., as well as boiled rice, sour gruel etc., fills the stomach. This is the function of the substance. Kabaliṅkārāhāra is further divided into two as gross (olārika) and fine (sukhuma). It is stated that the nutritive essence in gross substances is weak whereas in fine or subtle substances it is strong. As an example it is stated that after eating coarse grain etc., one becomes hungry again after a short time, but one who eats butter etc., need not take food again for quite sometime. Further the Expositor says: ‘the grossness and subtleness should be understood with varying references. Thus the nutrient of peafowl is subtle as compared with that of crocodiles. These are said to swallow stones and digest them in their stomach; peafowl eat such creatures as snakes and scorpions. And the nutrient of hyenas is subtle as compared with that of peafowl, for they are said to eat horns and bones discarded for three years, and which become soft as bulbs and roots the moment they are wetted by their saliva. The nutrient of elephants is subtle as compared with that of hyenas, for they eat leaves of various trees, etc. More subtle yet than that is the nutrient of the gayal, the wild ox, deer etc., which eat the pithless leaves of various trees, etc. More subtle than that is the nutrient of cattle, which eat grass, wet and dry. More subtle still is the nutrient of hares, more subtle still is that of birds, more still that of frontier people, more still that of village pensioners, more still that of kings and ministers, more still that of Universal monarchs, more still that of earthly gods, more still that of the four firmament guardians, each being more subtle than the last, as far as the Yāma and Paramimmita-vassavatti beings, whose nutrient attains perfect subtlety. See Āhāra.

KĀCARAGĀMA (var. Kājaragāma), which is presently known as Kataragama, is a village located about fifteen kilometres to the north of Tissamahārāma (q.v.) in the deep south-east region of Sri Lanka. The earliest mention of this village is found in the chronicle Mahāvamsa where it is said that a sapling of the sacred bodhi tree at Anurādhapura was caused to be planted in Kācaragama by Devānampiyatissa (Mhv. ch. 19, v. 62) during whose reign theri Śānghamittā brought the southern branch of the sacred bodhi tree at Buddhagaya to Sri Lanka. The Kātriyas of Kācaragama were participants in the ceremony of the planting of the sacred bodhi tree at the Mahāmehavana in Anurādhapura (Mhv. ch. 19, v. 54). Tradition ascribes the construction of the massive dāgāba known today as Kirivehera at Kataragama, to a king by name Mahāsena who is believed to have ruled in Mahāgāma in Rohana at the time of the third visit of the Buddha to Sri Lanka. The Buddha is said to have sanctified the spot where the dāgāba stands now by spending a short time in meditation at that spot, and king Mahāsena is supposed to have constructed the dāgāba at that spot in commemoration of that event, after the demise of the Buddha. According to Epigraphia Zeylanica (Vol. III. p. 214) brahmī letters of about the first century B.C. were found inscribed on bricks fallen from the dome of the dāgāba. Further, one of the inscriptions found at the site records the enlargement of the old dāgāba in the 1st or 2nd century A.D., and hence the dāgāba may well be ascribed to a very early date, although its exact date of construction cannot be established with certainty, with the data available (PLATES XII, XIII).

King Mahāsena of Mahāgāma must have been a just and an efficient ruler loved by the people and he was therefore deified after his death. The deity has been called ‘Kataragama deyyo’ and ‘Mahasen,Deyyo’ by the people. The deity is believed to wield great power and is placated by believers to obtain various favours. A legend says that King Dutṭhagāmanī before waging war with Elāra, visited Vādahiṭi Kanda to pay homage to the Kataragama deity and there he had resolved to build a shrine for the Kataragama deity after defeating Elāra in battle. It is popularly believed that the shrine or devale that is found at Kataragama today had been originally built by King Dutṭhagāmanī by way of fulfilling his vow. The Kahakuru Sandesaya (verse 150) refers to the Kataragama devale built by King Dutṭhagāmanī. Likewise the Kirala sandesaya (verse 169), Mayura sandesaya (verse 186) and Śālikhīni Sandesaya make reference to the same matter.
Legends about Kataragama Deity: A legend connected with Kataragama occurs in the epic heroic poem Skandha Purāṇa. The original Skandha Purāṇa written in Sanskrit goes back to the fifth century B.C. and its Tamil version is supposed to have originated in the eighth century A.C. Skandha or Subramanya as he is called by the Hindus is the central figure of this legend.

As with many other gods, the Kataragama deity too, has several names which are used in different parts of the island according to the occasion and type of ceremony. "Murugā", a name by which he is familiar among his devotees, is used only in ceremonial occasions because it is considered far too holy to be commonly used and written down. "Kuha Netra Suta' (son born from the eyes), Kārttikeya (the one coming from the Pleiades), Gāngeya (born out of the Ganges), Agni-bhū (The Fire-born), 'Sanmugam (One with six faces) are some of his many names which denote his origin.

The legend describes his supernatural birth thus: The gods (ṣura) and titans (asura) fought against each other for a long time and there was a time when the gods were defeated by the asuras. Under the guidance of Indra, gods went to Siva and appealed to him for his help to defeat the asuras. Siva had five faces and each of them had three eyes which flashed in anger. A sixth face with another three eyes developed and simultaneously a spark shot forth from each middle eye so that the beings of the three worlds, the gods the titans and the humans, trembled with fear. Indra caught these six sparks and handed them to Agni, so that he could use them as weapons against the asuras. As they were too hot he threw them into the Ganges from where they came to lake Saravana. The six Kārttika virgins who lived there got these sparks and protected them and the sparks developed into six lovely children. One day Siva came to Saravana lake with his spouse Umā and saw the six children. "Whose children are these?" Umā asked Siva. "They are our own" was his answer. Umā hugged all six of them into her arms and they became a single being with six faces. Thus was born, Skanda, the God of War.

When he became a handsome, robust youth the gods appointed him their leader. He formed a retinue of thousand warriors and each warrior was provided with a lance with a flaming blade. With this army he waged war against asuras and defeated them. For this reason the lance became the symbol of this god and he is always represented by it, and it is venerated in his name. In gratitude for the victory over the asura, Indra gave his daughter Deva-Senā in marriage to him. They both went to Kanda Velpu and lived there happily for a long time.

Siva Purāṇa presents another legend relating to the supernatural birth of Skanda. It is said that asura Tāraka urged Brahmā to give him a boon and Brahmā agreed to do so. The boon was that only one of Siva's sons should be able to kill him. At that time Siva had no wife. In Dakṣa's sacrificial fire, Śatī, the wife of Siva had burnt herself. Tāraka thought that Siva who was living an ascetic's life would not marry again. Tāraka who had been favoured by Brahmā received a thousand sea-horses from Kubera or Kuvera. The seven sages gave him the cow Kamadhenu. Through Tāraka's actions the sun lost its radiance. The moon always remained full and the wind obeyed his orders.

The gods decided to slay Tāraka. This could be done only if Siva had a son. Śatī was born again as Umā, daughter of ṇīmālājī. She was persuaded to beg for the affection of Siva. When she went to Siva he was in deep meditation and he took no notice of Umā. Then Indra appealed to Kāma, the god of love and implored him to go to Mount Kailās and stir Siva's passion. Kāma obeyed him. His wife Rati (passion), and his friend, Vasanta (Spring) accompanied him. When they went there Siva was absorbed in meditation. He sat on a tiger-skin and his eyes were closed. With some flowers for Siva, Umā came. When she was about to put the flowers into Siva's hands Kāma shot an arrow. It struck Siva, and he woke from his meditation and just managed to see Kāma making off with his bow. Siva opened his third eye and by the radiated glow Kāma was burnt to ashes. But passion had been kindled in Siva. He saw Umā next to him and desired her as his wife. They were childless. After that the gods turned to Agni, the god of fire for help. Agni went to Mount Kailās just after Siva and Umā had cohabited. Agni transformed himself into a dove. He managed to catch a little of Siva's seed. He dropped it into the seeds growing along the bank of the Ganges. Immediately a boy arose from it. He was as glorious as the moon and radiated a light like the sun. He was called Agnibhū, Skanda and Kārttikeya. Sarajanma, meaning the One Born in the Seeds, was another name for him.

Six princesses used to bathe at the place where the boy was born. They were the Pleiades. They saw the boy and each one wanted him for herself. Each offered her breast to him. Then the child got six faces and for this reason he was called Saḍmāṭrīya, which means owner of six mothers. In this way the god's wish was fulfilled. They had a warrior to fight the asura Tāraka. His only weapon was a lance (vel). Vel, vel, veti-vel (lance, lance, victorious lance) - the children sing thus in the Kataragama procession. The fight between the sura and asura is dramatically enacted during the festival season in Kataragama. Two figures to represent a god and an asura are exhibited on this occasion. The two figures run towards each other and in this way the battle is re-enacted.

Another legend says that Valli was so named as she had been found among wild yam creepers. The messenger of
the gods Nārada, also called Brahmāputra, told Skanda about Valli Ammā and he decided to go in search of her. Valli threw herself at his feet and begged his pardon, as she had at first treated him very rudely. The marriage was consummated but Skanda got into difficulties over it.

When the veddha and his wife, who had earlier adopted Valli Ammā, returned to the cave, they did not see her there. They, with other tribesmen searched for her and ultimately found her with Skanda. Veddás tried to kill Skanda, but they did not succeed. In a short time Skanda killed many people with his spear. Valli was quite enraged at this and decided to leave Skanda. To appease her he called back to life all the veddhas he had killed. Peace was restored. The young couple settled down on the top of one of the neighbouring hills, which is now called Vīkṣajīl-Kanda. To commemorate this event, people visit this place during the annual festivities.

When Devasena, Skanda's first wife named Thevānī Ammā, came to know about his second marriage, she became restless. The jealousy that flared up within her gave her no peace of mind. She complained to her father and asked him to intervene. Then Indra came into contact with Kalyāṇagiri who knew how to make protective talismans (yantras). With the help of these talismans Skanda was to be captured and brought back. Hearing of their attempt to capture him, Skanda, with the help of the veddhas, the relatives of Valli, made the yantra and spell cast by Kalyāṇagiri ineffective. The creator of the yantra, Kalyāṇagiri, was transformed into a linga. Thevānī, Skanda's first wife, being unsuccessful with her attempts to get back her husband, decided to come to Sri Lanka. Escorted by many Brahmins she came to Sri Lanka and to get back her husband, decided to come to Sri Lanka. Since then Kataragama has become a shrine sacred to the god of Kata ragamā. Coloured pictures of this deity and various other deities are sold at Kataragama. Among them Skanda, also, is represented. The only symbol is the vel (lance).

In the Mahā-devāle the pilgrims really have nothing to see as in many other places of worship. The front room of the temple is simple and bare. This room is separated from the room behind by three curtains of different colours. The room behind is the sanctum. It can be entered only by the Mahā kapurāla, the chief and the second kapurāla. On the first curtian the deity is painted with the two wives and their mount the peacock. In the rear of the sanctum, the most holy room, there is a small box which contains the precious yantra made by Mutulingaswāmī. This is supposed to be of gold and nobody except the two kapurālas (first and second) have ever seen the object. Some allege that it only represents the six directions.

This small box containing the yantra, plays, of course, the major role during the processions. This precious object is the heart of everything. Every evening it is brought by the second Kapurāla who is completely covered in a long white cloth, out of the most holy room of the Mahādevāle on to the back of an elephant. Soon after the elephant carries it in a procession to the Valli Ammā temple after going around other temples there. For about a quarter of an hour the box with the yantra is kept inside the devāle by the second kapurāla. The sanctum of this temple is entered only by the first and second kapurālas. During ten successive nights this is repeated. On the last day (the tenth day) the box which contains the yantra is kept until dawn in Velli Amman Kovil. This is the wedding night of the god.

The main shrine (devāle) of the Kataragama deity is a small, unimpressive building. Adjoining it, is another smaller shrine for the god's elder brother, Ganesa. Close to Ganesa's Devāle are two recently built shrines for Viṣṇu and the Buddha. The compound of the main shrine is connected to the shrine of Velli Ammā, who is considered to be the mistress of the god of Kataragama. Kirivehera, the ancient stūpa stands behind the main shrine, about one kilo-metre away from it. To the left of the main shrine, is the devāle of his legitimate spouse Devasenā or Tevayānī Ammā.
The main shrine is divided into two apartments or rooms. The pilgrims are allowed to assemble only in the outer part of the hall. Any one who enters the devale precincts through the main gate can see the high stage decorated with leaves. It is through this decoration of leaves that one has to enter the main shrine to set foot on the outer room. The awe-inspiring high brazen frame of the door is a striking feature. The door fixed to it is also decorated with carvings. The key to the lock of the door is as large as a hand-axe. The moon-stone placed in front of the doorway is a modern one, but it is a fine example of the traditional indigenous art of the local craftsmen. Besides the main entrance there are two other smaller doors to admit worshippers.

The outer room with wooden pillars reminds us of the structural features of traditional architecture of the Tamils. Inside of the walls of this hall is blackened due to constant burning of camphor, scented sticks and such other material and is capable of infusing mystic feelings in the minds of the visitors.

The area connected to the entrance to the inner room is called "vattarāma" which is meant for the performance called "āllattipiliyāwa". The entrance to the inner hall has an old stone carving called "koravakgala". A large curtain with a design of the god Kataragama covers the entrance to the inner hall. Near the entrance, a pot of water mixed with sandalwood powder is placed for the servicemen to wash their feet before they enter the shrine room. This place is known as "Sandun Maṇḍapaya". A short distance away from the Sandun Maṇḍapaya there is what is called Lathī Maṇḍapaya. Above the narrow verandah between these two maṇḍapayas there is a canopy of cloth which serves the purpose of a ceiling. Two large traditional oil lamps are burning constantly. In the lamps lighting ceremony (āllattipiliyā) lalatt ammās light the lamps from these brazen lamps. During the festive season two precious tasks beautify this verandah. It is believed that these tasks originally belonged to King Duṭugemunu. This maṇḍapaya (enclosure) is used for chanting pūrith during the festive season.

No details are revealed about the inner shrine of the Mahā Devalē because it is forbidden to do so.

The Devāle is roofed with copper plates. A careful study of the Devāle shows that several additions have been made from time to time. The decoration of leaves has been a long-standing feature. According to the legend it is King Duṭugemunu who introduced this ceremony. These leaves are replaced by new leaves annually.

Daily Rituals Performed for the Deity: At the Kataragama devale, as in many other devales performance of rituals begins in the early hours of the morning. The rituals begin with the blowing of the conch, peeling of the bell, and beating of drums. Offering of food and drink reminds one the ceremonials and rituals held in the palaces of royalty in the past. Purity on the part of the service-personnel is sine-quâ-non though the shrine has become dirty by lighting of coconut oil lamps and camphor.

A series of principles are being observed to safeguard the purity of the devale. People – both men and women who come from unclean places or women in their monthly periods or women who have given birth to children recently and those men and women who come directly from funeral houses are not allowed to enter the shrine. The devale will be closed for the public if a death has taken place within the precincts of the devale. Several days later the devale is purified by sprinkling turmeric powder-mixed water and will be open for the public again.

A Five-fold offering consisting of oil lamps, scented smoke, incense, betel and food with a beverage, comprise the daily offering to the deity. On special occasions the pāñcāṁrūta beverage (a drink made with five kinds of medicinal food namely; butter, ghee, jaggery, curd and bee-honey) is offered.

The kapurāla, the attendant official of the god brings the appeals of the devotees to the notice of the deity. He places the offerings made by the devotees before the god and makes a solemn request from him. These requests are two-fold. One is a request to invoke his blessings on the devotees and the other is a request to curse his enemies. In a humble request made from the deity he is praised by uttering his great and super normal qualities and in a curse his birth, cleverness and dexterity are praised.

For what type of favours is this Deity placated? God Kataragama is said to be capable of blessing and cursing. Devotees make offerings for these two purposes. They think that god Kataragama is a living deity who grants favours in their time of need.

In order to win the favour of the god devotees offer sweet-meats, fruits, flowers and incense. Those who are suffering from diseases make vows to the deity. They chant psalms in his praise for some days, especially on days set apart for the deity. Saturday and Wednesday are considered as auspicious days to placate the god and to draw his attention.

Today, many people irrespective of their race and religion go to Kataragama to invoke the blessings of the deity. In order to win the heart of the loved ones, to secure employment, to ensure success in trade and industry, to achieve success in examinations and interviews, to achieve political power, and for many other human needs the help of the Kataragama deity is sought. People give pledges and vow to do various things to please the god when their wishes are fulfilled. Many Hindu Tamils undergo
penances and mortify their bodies by way of redeeming these vows.

Festivals at Kataragama: Every year three festivities take place in Kataragama. The first is the *āsala* Perahera, the main festival of Kataragama which lasts for two weeks. It is heralded by the Magul Perahera, which is held for ten successive nights. In these, the love affair of the deity with his beloved and their union are symbolically demonstrated. Water cutting is held after the last night. This takes place in the morning of the full-moon day. The second festival is the *Ilmahākacchi* Festival that lasts for three days. The third festival is called *ālut avurudda*. It is held in April and coincides with the new year festival of the Sinhalese and the Tamil Hindus. The first festival is above all, of highest importance.

There are eight *kapura/as*, of whom one holds the title Mahā Kapura. They are all under a Basnayaka who is the chief of the administrators. Basnayaka and *kapura/as* are all Sinhalese. In addition to these officials or employees there is a group of women called *ālatti ammās* attached to the Devale. These temple damsel or women correspond to the *deva dāsis* of South Indian temples. They are said to be the descendents of Valli Ammā. Ālatti is the term for a small bronze oil lamp. Before the *perahera* begins the damsels light their lamps from large candle-sticks in front of the Mahā Devāle. Carrying these lamps they go in the procession directly in front of the elephant carrying the palanquin. After the last *perahera* they dance for a fairly long time in front of the temple of Valli Ammā where the relic is kept for the whole night, to please the couple, Valli Ammā and the god. Originally there were twelve in their group, but the number has now been reduced to eight.

Representation of *veddas* at the *āsala* perahera is a regular feature. This is an ancient custom continued up to the present. During the *āsala* perahera season, many pious Islamists come to Kataragama, but they always stay within the area allotted for them. They never visit the shrine of the Hindus and the Buddhists and do not take part in the *perahera*. Everyday, they arrange a procession around their mosque. There are leaders of prayers who perform usual services inside the mosque.

The Pageant (perahara) at Kataragama: The annual perahera of the Kataragama Devale starts on the *pura pālaviya* day (on the first day of the new moon) in the month of *āsala* (July-August) and ends with “Water Cutting” and “Water Sports” in the morning after full moon (avā pālaviya). This is a pageant that portrays piety and devotion of the believers to the god Kataragama, and it celebrates his passion and sensuality. In brief, it is a glorification of sensuous life.

People from all walks of life, young and old, men and women participate in the perahera. Especially the young join kāvādi dancing, for a devotion to him.

A legendary and mystic (also known as kāveri) is performed here beautifully decorated with the following:

Siva once ordered Agasthī to cut the two small hills of Mount Kailasa. This was a task to one of his pupils, a demon named Vibhīṣaṇa. The demon saw the Brahma's stick (amrutha) on top of one of the two hills and a snake in the other. The demon took the stick and tied the two sticks to the ends of the stick using the snake as a rope. With the help of the stick he carried the load to the south and when tired on his way he decided to rest for a while and placed the load on the ground. When he tried to lift the load again the two hills had been fastened to the ground. Skanda himself had caused the two hills to be stuck to the ground and from that time it is said the two hills remained there at Kataragama. In remembrance of this incident pilgrims carry kāvādi or kāveri on their shoulders in pilgrimage to Kataragama. Two small pots of milk and sugar are tied to each kāvādi as offerings to the deity.

Kāvādi dancing has enhanced the beauty of the annual pageant of Kataragama and has become a striking feature of it. Carrying kāvādis on the shoulders, the devotees dance to the rhythm of drums and other musical instruments. In front of the chief shrine (Mahā Devale) kāvādi dancers dance for some time and go to the devale of Ganeṣha, Buddhist temple, Bo-tree and the Thevāni Ammā Kovil and the temple of Mutulinga sāmi respectively.

Fire Walking: Fire walking is the most attractive ritual performed at the Kataragama Devale. The day before the ceremony one has to get one’s name registered with the trustee, if one wishes to walk on fire the following day. The chief fire walker or the leader appointed by the trustee checks each person and permits him to walk on fire after applying vibhītu (sacred or holy ash) on his forehead.

Fire walking at the Mahā Devale (the main shrine) had been the monopoly of Hindus for many years and now it has become an exclusively Sinhala practice. In a trench about thirty feet long wood is stacked to the height of about four feet and ash that remain on top after burning is brushed off to keep the surface red hot continuously.

Fire walking is performed to fulfill the vows people have made, to cure patients and drive away evil powers of harmful ghosts or spirits. Some devotees say that they achieve ākarṣana by this performance. Ākarṣana is the *sakti* or *diṭṭhi* (power) of the god that reaches the devotee's body. Some believe that it is through devotion or bhakti to the god that one can walk on fire. Mutukūḍa
Though the water in the river is scanty and muddy to enter the sacred area—many have their bath in this river. Before the pilgrims cross the river ceremonially the river named Sīlā Gātigula at Kataragama. Mānik Ganga flows through the frontiers of the sacred city of Kataragama and before the pilgrims cross the river to enter the sacred area many have their bath in this river. Though the water in the river is scanty and muddy throughout the year the devotees deem it to be sacred. Those who cross over the bridge to the sacred area can see at every nook and corner of the river men, women and children of different ages and social position dipping themselves in this river in order to make themselves clean and pure.

Having purified themselves by thus bathing, the votaries dress themselves up in clean cloths (mainly white) and make their way towards the main shrine of the Kataragama deity which is several hundred yards away from Mānik ganga. On their way they buy pūjā vatti (baskets woven in reed into which several items of offering are put) from wayside boutiques packed with these items. Normally a pūjā vattiya contains a few betel leaves, a husked coconut, a bunch of plantains and a few other fruits like mango, papaw and pine apple. The richness of the pūjā vattiya varies according to the paying capacity of the votary.

On entering the precincts of the shrine through the archway the votary breaks a husked coconut by striking it with force on a slab of granite meant for that purpose. It is customary to pick one or two pieces of the crushed coconut and bite them. PLATE XIV

The votary next hurries towards the shrine to take his place in the queue to enter the shrine. Entering the shrine the votaries assemble in the small hall, eagerly awaiting their turn to hand-over the pūjāvatti to the kapurāla (agent of the deity) to be offered to the deity. Normally a fee has to be placed in the pūjāvattiya before it is given over to the kapurāla. The kapurāla takes the pūjāvatti individually and take them behind the curtain. A little while later he returns the pūjāvatti to the votaries with half of the material in those vatti. The offerings are thus made to the deity.*

KAIĐĀN, Japanese equivalent of the Pāli and Sinhala term Śimā (q.v.), a place for performing the ceremonies of Higher Ordination (upasampadā). The first kaiđān in Japan was constructed in front of the main shrine of the Todaiji temple in Nārī in 754 A.C., by the Chinese monk Ganjin (687–763 A.C.). See SIMĀ

---

* The author courteously acknowledges utilizing material from the under-mentioned books in the compilation of this article:
KAKACUPAMA SUTTA, the first sutta of the third of the five divisions (tatiya vagga) of the first fifty discourses (Mūlapaṭṭhānāsaka) of the Majjhima Nikāya (M.: I. pp. 122-130). The Sutta derives its name from a parable used in the discourse, namely, the parable of the saw (kakaca).

Kakacupamasutta was preached by the Buddha when he was once staying in the Jetā's Grove in Sāvattī. A bhikkhu named Moliyaphaggutta was living in close intimacy with the nuns and was angry and displeased with other bhikkhus when they spoke in dispraise of the nuns. When the Buddha came to know about Phaggun, he summoned the latter to his presence and advised him not to be angry and displeased at others' censure and instructed him not to allow his mind to get disturbed and utter evil speech. The Buddha further advised him to dwell with a mind full of friendliness and devoid of hatred, even if anyone disparages him, gives him a blow with the hand, with a clod of earth, with a stick or with a weapon.

After admonishing Phaggun thus, the Buddha addressed the congregation of monks and told them about the benefit of taking a single meal a day. Such a practice leads to good health to develop physical strength, to cause lightness of body and to comfortable living. Further the Buddha said that some monks are very gentle, meek and tranquil as long as disagreeable ways of speech do not assail them. To illustrate this point the Buddha related the story of a house-wipe named Vedehikā who had a good reputation of being gentle, meek and tranquil. Vedehikā's attendant, Kāli, wanted to test her mistress and one day she awoke late in the morning. Vedehikā was much displeased at this and frowned on her. Kāli wanted to test her mistress further and she awoke much later the following day and Vedehikā became greatly annoyed and uttered harsh words. In this manner Kāli continued to sleep much longer gradually, and each day Vedehikā became more furious and ended up by beating Kāli with a club and injuring her. After this incident a bad reputation spread about the lady Vedehikā that she was violent, not meek and not tranquil.

Further the Buddha advised the monks to respect dhamma, revere dhamma and honour dhamma as it was the way for them to become amenable and develop suavity. The Buddha explained to them the five-fold speaking pattern of people, i.e. they speak at the right time or at the wrong time; in keeping with facts or not in keeping with facts; gently or harshly; on what is conducive to good or not conducive to good; with a mind of friendliness or with a mind full of hatred and viciousness and instructed the monks to dwell with a kind and compassionate mind.

Lastly the Buddha giving several similes explained to his disciples how, when others speak to them, and advised them not to be angry or displeased even if low-down things are said limb from limb with a double-hand (kūṭa-gāna).

KAKUHAN (1095 A.C. – 1155 A.C.) was a renowned Japanese monk of the Shingon sect. He founded the new branch of Shingon called Shingi-Shingon or Reformed Shingon.

Kakuhan, after joining the order, first studied under Kanjo at the Ninnaji temple, and later at Nara, Mt. Koya and also at the Daigo-je temple. Though he studied almost all the forms of Buddhism prevalent in Japan at the time, his special bent was towards the mysticism of Shingon Buddhism which he thoroughly mastered. In recognition of his scholarship and erudition he was appointed as the chief incumbent of the Kongobu-ji temple. Subsequently he was made also the head monk of the Daidembo-in temple. However, a majority of the monks opposed this subsequent appointment and Kakuhan, on account of their strange opposition, was forced to give up that post. Finally he left the Kongobu-ji temple, too, and established the Negoro monastery at Kii, and with it was founded the new branch of Shingon called Shingi-Shingon.

In his new teaching Kakuhan attempted to blend Amidism with Shingon Buddhism by incorporating the invocation of the name of Amida into the rituals of Shingon mysticism. He taught that in essence Amida is same as the Buddha Vairocana of whom, according to Shingon Buddhism, the whole world is a manifestation. Arguing on this assumption he pointed out that all beings are already in Amida's Pure-Land and that they have only to comprehend this fact in order to realize that they are saved. As the Pure-Land is everywhere, he pointed out that he who meditates on Amida in accordance with the teachings of Shingi-Shingon is able to attain Buddhahood here and now.

As evident from the subsequent history of Japanese Buddhism this new branch of Shingon, with its head-quarters at Nagoro flourished and became a formidable force that influenced even the course of secular history of the country.

KAKUSANDHA (Skt. Krakucchanda) – The twenty second of the twenty four Buddhas who preceded
Gautama Buddha (Buv. p. ix) and the first of the five Buddhas of the present world period called bhaddha-kappa (Buv. p. 101). His parents were brahmin Aggaddita, chaplain to King Khemañkara of the Kingdom of Khemavatî, and Visakha. He was born in the Khema pleasantness and lived for four thousand years in the household in three palaces—Ruci, Surucû and Vañ¿hana (or Ratiñ¿hana). His wife was Virocamâ (or Rocana), and he had a son named Uttara. He renounced worldly life riding in a chariot and practised austerities for eight months. Before he attained Enlightenment he partook of a meal of milk-rice offered by the daughter of the brahmin Vajirinda of the village of Sucirinda. Grass for his seat was given by Subadda, a farm boy. Kakuíandha Buddha attained Enlightenment under a sirisa-tree, and his first sermon was preached to eighty thousand bhikkhus in the park named Makila. He performed the Twin-miracle under a säla tree at the gates of Kannaukûja. Among his converts was a fierce demon (yakkha) named Naradeva.

Kakusandha Buddha’s chief disciples were Vidhura and Saññjiva among bhikkhus and Sâmi and Campâ among bhikkuñis. His personal attendant was Buddhija. Accuta and Sumana were his eminent supporters among lay men, and Nandâ and Sunanâ among lay women. Accuta built a monastery for Kakuusandha Buddha on the site where, in the present age Anathapindika built the Jetavanârâma. The monastery built by Accuta was half a league in extent and the land was bought with gold kaccapas sufficient in number to cover it (J. I. 94).

Sri Lankan chronicles state that Kakusandha Buddha paid a visit to Sri Lanka. The island was then known as Ojadi-pa and its capital was Abhayanganâra ruled by King Abhaya. The Mahâmegha park was called Mahâtiûtha. The Buddha came with forty thousand disciples to rid the island of pestilence caused by evil spirits and stood on the Devakûta mountain from where all inhabitants of the country could see him. The Buddha and his disciples were entertained with a meal and after the meal the Mahâtiûtha garden was presented to the Order of Bhikkhus. The Buddha went to several spots in the garden and sat there in meditation in order to consercate those spots. At the Buddha’s wish, the bhikkuñi Rucânanâda brought to the island a branch of the sacred bodhi tree. The Buddha gave to the people his own drinking vessel as an object of worship and returned to Jambudîpa, leaving behind his disciples Mahâdeva and Rucânanâda to look after the spiritual welfare of the new converts to the faith (Buv. chap. xxiii, Dpv. chap. 2, v. 66; Mhv. chap. 15; vv. 57-90).

Kakusandha Buddha lived for forty thousand years and passed away in the Khema pleasantness. A thûpa one league high was erected over his relics at the site of his passing away (s. v. DPPN).

KĀLA-CAKRA, the wheel or the circle of time, was a particular phase of Tantric Buddhism, which accordingly, is designated as the Kāḷacakra-yâna. The particular teaching of this school is mainly based on the text called Śrī-kāḷacakra-tantra which is available in Tibetan (M. Winternitz, A History of Indian Literature, 11, p. 401, note 4) and also in the original Sanskrit in manuscript form in the Cambridge University Library as we are informed by S.B. Dasgupta who quotes from it (An Introduction to Tantric Buddhism, pp. 66, notes 1, 2 and 3).

As indicated by the term kāḷacakra, the philosophy of this school is based on the concept of time conceived as a wheel or a circle without beginning, without end. The futility of attempting to find the first beginning of anything is an admitted fact in Buddhism and therefore the whole existence is treated as a wheel under the more common term samāṣṭa-cakra. This is the general concept of life in Buddhism and when Time is regarded as an aspect of existence or in other words, when existence is conceived from the viewpoint of time, one can easily evolve a system of philosophy and ritual out of it and this is what has happened in the case of the kāḷacakra-form of Buddhism. Time in this sense is regarded as the ultimate, immutable and unchangeable element underlying all phenomena in the same way as the concepts of dharma-kāya, kharma-hatu, śunya or nirvâṇa are considered. In this sense Time is the ultimate and absolute support of all phenomena and is thus described in the Sekoddesadikā (GOS. XC, p. 8) which is a commentary on the section dealing with consecration (abhiseka) in the kāḷacakra-tantra, in the following terms: “Time is of the nature of observing and is symbolised by karunā and śunyatā. Śunyatā is said to be like a wheel and hence the wheel of time (kāḷacakra) is non-dual and imperishable” 2.

1. A large number of works dealing with the Kāḷacakra system are found in the Tibetan Tripitaka as shown in the Taisho Index. See under Śrī-kāḷacakra. See also JRAS. Bengal Branch, 1952, p. 2, pp. 71-6

   kāḷacakro ṛvayamaksayam.
KĀLA-CAKRA

The identity of the macrocosm and the microcosm is another important philosophical tenet made use of in this system. Hence, at the beginning of the Kālacakra tantra (Dasgupta, loc. cit.) the Buddha is made to state that the Kālacakra system of yoga, with all its accessories of magic circles (mandala) and consecrations (abhiśeka) is explained within this very body. The Buddha further explains how the entire universe with all its objects and localities is found in the human body itself and how time with all its divisions (i.e. day, night, fortnight, month, year etc.) too is within the body in its process of the vital wind (prāṇavāyu). And this is nothing different from the Buddha’s statement occurring in the Nīkāyas, (A. II, 48 and S. I, 62): “Verily, I declare unto you, that within this very body, mortal though it be, and only a fathom high, but conscious and endowed with mind, is the world, the waxing thereof, and the waning thereof and the way that leads to the passing thereof.”

In his account of the Kālacakra system based on the commentary of the Kālacakra-tantra, called Vimalaprabhā (manuscript in the RASR library and quoted by Dasgupta, op. cit. p. 53, note 1), Dasgupta says (p. 67): “Here he (i.e. Kālacakra) is saluted as of the nature of Śūnyatā and karuṇā; in him there is the absence of the origination and destruction of the three worlds, he is a unification of the knowledge and the knowable; goddess Prajñā who is both with form and without form, is embraced by him; he is bereft of origination and change; he is immutable bliss bereft of all lower pleasures; he is the father of the Buddhas, possessing the three Kāyas, the knower of the three times (i.e. past, present, and future), the omniscient, the ultimate and original Buddha, the non-dual-Lord”.

This account shows that Lord Kālacakra is the same as the Ādibuddha or the Vajrasattva. And, in fact, the Kālacakra system is called Ādibuddhayāna or the Ādiyāna in the Kālacakra tantra itself (B. Bhattacharyya, Indian Buddhist Iconography, Calcutta, 1958 edition, p. 187). It is the personification of the absolute on the basis of the concept of time. And hence he is addressed as the benevolent, all-powerful Lord in the following words:

“Be homage to Kālacakra for the removal of all obstructions, to him who is the highest, the imperishable, the bliss perfect. Be homage to thee who is knowledge incarnate.

“O Lord, be gracious to me today, consecrating me with that consecration, which is imperishable, the bodhicitta, which is of the nature of Śūnyatā and of karuṇā.

“I shall be your slave for all time, with my wife and children. To me there is no other refuge until enlighten-

ment is attained” (Sekoddess-tika, GOS, XC, p. 24). Hence it symbolises Nirvāṇa from the viewpoint of Time. In the ritualistic side of the system it is seen that all the important elements of Indian yoga such as postures (āsana), breathing exercises (prāṇayāma), magic circles (mandala), consecrations (abhiśeka) etc. were incorporated. In this respect the following words of W. Y. Evans-Wentz may be quoted here: “In the Kālacakra system, the inscrutable powers which work through nature, bringing into manifestation universes and then absorbing them, and causing men to live and die, are personified not only in their dual aspect by the shakta and shakti as in the older Tāntricism but also in the dual functions of preservation (represented in Hinduism by Vishnu) and destruction (represented in Hinduism by Shiva). Thus there came into Tāntricism two new groupings of deified personifications, one being the order of peaceful deities, personifying the powers making for preservation, the other being that of the wrathful deities, personifying the powers making for destruction”.

The Kālacakra system is said to have been popular in northern India, Kashmir and Nepal by about the 10th century A.C. It is generally believed this system originated in Sambhala, which has not yet been identified with certainty. According to S.C. Das as quoted by Evans-Wentz (op. cit. p. 59) it is a city said to have been located near the river Oxus in Central Asia and according to Monier Williams it is a town situated between the Rathapra and the Ganges and identified by some as Samthal in Mondonad where the future Kalik incarnation (avatāra) is said to appear.

Another authority observes: “Within the fold of Vajrayāna there arose in or about the 10th century A.D. a school known as Kālacrāvānā, which should not be regarded as a separate school of Tāntrik Buddhism distinct from Vajrayāna. The supreme deity in this school is called the Lord Śrī Kālacakra. Kālacakra means the ultimate immutable knowledge (prajñā) or the state of Śūnyatā while cakra means the cycle of the world process, or the body of the Lord containing the potency of the existence of the universe which is just the principle of Upāya. Kālacakra, therefore implies the absolutely unified principle of prajñā and upāya and he is thus the bodhicitta. In some tantras he is characterised as Śūnyatā and karuṇā unified, as the non-dual Lord or as embracing prajñā. There is therefore no essential difference between the two conceptions of Kālacakra and Vajrasattva” (R.C. Majumdar, The Struggle for Empire, Bhāratya Vidyā Bhavan, Bombay, 1966, p. 422).

The Buddha is said to have promulgated the Kālacakra system in Orissa (Dhanyakaṭaka) and that Sucandra, the
KĀLA–CAKRA

king of Sambhala, received the teaching miraculously and wrote the Kālacakra-tantra, although it was not published till the tenth century A.C. According to Tibetan authorities the system was introduced into Nālandā by a pandit called Chulu and accepted by Nārātapa who was then head of the University and thence it spread to Tibet.¹

The iconographical description of the God Kālacakra, as given in the Viśpannayogāvalī (pp. 83–4) is as follows: “God Kālacakra (bhagavān kālacakraḥ) dances in aḻīḍha attitude on the bodies of Anāṅga and Andra lying on the back. He is blue in colour. He wears tiger skin and has twelve eyes and four faces. He is endowed with three necks and six shoulders. With the principal twelve hands on each side and the subsidiary hands, the total number of his hands is twenty four thousand (caturvinsati-sahādhaḥ). Two of his right hands are blue, two red and two white. The hands are similar in the left. Thus along with subsidiary hands, four are blue, four red and four white. They occur both in the right and in the left.

“In the four hands of blue colour are held the vajra, the trisula and the kārtr. In the four hands of red colour are held the fire, the arrow, the vajra and the āṅkusa. And in the three white hands are shown the discus, the knife, the rod and the axe. In the four left hands of blue colour are shown the vajra-marked bell, the plate, the khatvanga with the gaping mouth and the kāpāla full of blood. In the four hands of red colour can be seen the noose, the jewel and the lotus. In the four hands of white colour, there are the mirror, the vajra, the chain and the severed head of Brahma” (The English translation is as given by B. Bhattacharyya in his The Indian Buddhist Iconography, pp. 187–8). Bhattacharyya also informs us that images or paintings of Kālacakra are rare in India. In Tibet and China he is a more popular deity. He also suggests that owing to the blue colour of the deity, Kālacakra is to be regarded as an emanation of the dhyāni-buddha Akṣobhya. His representations further has a third eye in each hand. He also wears a garland of skulls and a belt of ornaments of vajra. He is always represented in yab-yum (father–mother: yuganaddha) posture embracing his female counterpart or Prajñā, who is designated Viśvamātā or Universal Mother (Niṣpannayogāvalī, p. 84). The god’s two original hands are at the goddesse’s back, and hold the vajra and the ghanta with the wrists crossed in the vajrabhumkāra-mudrā. The goddess is two or four-faced and eight-armed. She too has the third eye in each face and is orange-coloured and holds the kārtkā and kāpāla in her two original hands.

KĀLĀMA SUTTA

KĀLĀMA SUTTA is included in the Mahā Vajra of the Abguttara Nikāya of the Sutta Pītaka of the Pali Canon.¹ A sutta with very similar content is found in Abguttara Nikāya Vol. II, pp. 190–193. The Kālāma Sutta was preached to Kālāma when the Buddha was met by them at their township named Kesaputtain the land of Kosala. The Kālāmas of Kesaputta point out to the Buddha that different recluses and Brahmans visit them at Kesaputta and instruct them in accordance with their own theories and dogmas. They complain to the Buddha that each one of these teachers exalts one’s own teaching and disparages, and finds fault with the teachings of others. Since these teachers propound mutually contradictory doctrines, the Kālāmas report to the Buddha that they are sceptical about all the theories. They seek guidance from the Buddha for overcoming their scepticism. The other Sutta having a similar content was preached to Bhaddiya Līchchavi by the Buddha when the Buddha was living at Mahāvana, in the Kūtāgara Hall in Vesāli. The occasion for preaching the latter was the reference made by Bhaddiya Līchchavi to a certain allegation made against the Buddha that the Buddha used some kind of magic to make converts to his own religion. Here too the Buddha mentions the ten grounds which he rejected in the Kālāma Sutta for determining the truth of an assertion, and points out that they should discover the truth in their own experience.

Many scholars believe that the Kālāma Sutta represents the essence of the Buddha’s epistemological teaching. For, it is in this Sutta that the Buddha presents ten grounds which should not be relied upon for determining the truthfulness of a statement. In this Sutta it is also explicitly stated that a statement should be accepted only when one has personally known it to be true. The importance of the Sutta lies in the fact that it mentions a number of grounds which were not acceptable to the Buddha as ultimate criteria for determining the truth of a statement. The grounds mentioned in the Sutta are significant from the point of view of the early Buddhist theory of knowledge in particular and from the point of view of the history of epistemology in Indian philosophy in general. Some of the terms used in the Kālāma Sutta.

². Alice Getty, too, gives a description in her Gods of Northern Buddhism, p. 128.

A. G. S. Karlyawasem
probably had acquired a certain technical meaning in the philosophical and religious discourses of the time of the Buddha. They occur in the same form or with some variations in other Suttas of the Pali canon as well as in the religious and philosophical literature of pre-Buddhist and post Buddhist India. Many modern interpreters of Buddhism quote the Kālāma Sutta as evidence for characterizing early Buddhism as a non-authoritarian, rational and empirical system of thought. It is also viewed as advocating the principle of free inquiry particularly in the spiritual and the moral spheres which usually give rise to much diversity of opinions. It is also important to point out that the Kālāma Sutta is not just one isolated instance in which Buddhism advocates a non-authoritarian attitude. The Buddhist attitude reflected in the Kālāma Sutta appears to be consistent with a number of other discourses in the Sutta Piṭaka. Therefore, the Kālāma Sutta may be viewed as a standard formulation and statement of the Buddhist critique and evaluation of certain commonly accepted criteria of truth during the time of the Buddha. The observations made by the Buddha are relevant to any seeker of truth today as much as to those to whom the Sutta was addressed by the Buddha in his own time.

The Kālāma Sutta could be better understood in terms of the Sangārava sutta of the Majjhima Nikāya in which the Buddha responds to a direct question regarding the ground on which he based his teachings. Here the Buddha classifies all teachers into three groups. K. N. Jayatilleke in his Early Buddhist Theory of Knowledge (EBTK) has interpreted the classification mentioned in this Sutta as (1) traditionalist, (2) reasoners and metaphysicians, and (3) experientialists. The term 'traditionalists' is used as a rendering of the Pali term anussutikā in the Sangārava Sutta. The first ground which is rejected by the Buddha in the Kālāma Sutta is anussava. The term anussava is derived from the prefix anu which has the meaning "successive" and the verbal root ātthu meaning "to hear." Buddhism too used the term suttis to indicate learning from some authoritative source. A person who is much learned or well versed in the teaching of the Buddha is described in the Suttas as pathussato (D. I, 93, 137, Vin. II, 95). The knowledge of the teaching of the Buddha possessed by a person who has learned it from the Buddha or from some accepted source of authority in Buddhism is called sutamassiyā paññā (D. III, 219). Such usage suggests that it is reasonable to

an omniscient and personal being (or Prajāpati, who is identified with Brahmā). Examining the evidence in the Pali Nikāyas, as well as the pre-Buddhist Vedic literature, Jayatilleke concludes that there are three possible senses in which the term was used in the Pali canonical literature. The more specific and important sense attached to the term comes close to “divine revelation” accepted by brahmanical teachers. It also has the sense of authoritative tradition. The more uncommon and non-technical sense in which the term may have been used is “report”.

Two other terms used in the Kālāma Sutta in the sense of traditional authority are paramparā and pitakasampadā. Their usage in the Pali suttas shows that these terms are also closely associated with the Vedic tradition. In the Majjhima Nikāya (II, 169) the two terms occur as brahmanānam purāṇam manta-padām itīha itīha pāramparāya pitakasampadāya. In the same text (M.I. 520) the expression andhaveṇi paramparāya is used to refer to the Vedic tradition.

The next kind of knowledge based on authority mentioned in the Kālāma Sutta is itikāra. The Pali commentarial tradition explains the term itikā in terms of the term anussava. There is a correspondence between itikāra and itihāsa itiha. In Pali both ha and kara are used in introducing anecdotal material. The dhamma pronounced by the Buddha is said to be one which is antīthā which may be taken as the opposite of itīthā. K.N. Jayatilleke points out that the Vedic term sitihāsa included the speculative material of the brahmanical religion pertaining to the religious life. The education of the Brahmīn student appears to have included the study of legendary and historical lore referred to in Buddhist sources as itihāsapurāṇam. Jayatilleke concludes from the above evidence that the criticism of itikāra seems to be directed at the validity of the legendary and historical material as well as the speculative theories of the Brahmāpas, Aranyakas, and possibly the early Upanisads, all of which were classified under sitihāsa in the brahmanical tradition at this time. The Kālāma Sutta, however, does not mention the expression itihāsa itiha. According to Jayatilleke this may be due to the fact that it is identical with itikāra. Like anussava, itikāra also included much of the Vedic tradition. However, the term may apply even outside the Vedic tradition and its criticism may be understood as a criticism of a person’s tendency to rely on the words of others without any concern about the experiential basis for the beliefs involved.

The term pitakasampadā is explained in the PTS dictionary (PED) as “according to the pitaka tradition or on the grounds of the authority of the pitaka. According to this explanation the application of the term is restricted to the authority of the Buddhist scriptures which were later classified into three pitakas or collections. Jayatilleke points out that the term pitaka has been used in reference to the Vedic tradition as well, e.g. in itihāsa paramparāya pitakasampadāya (M.I. 520, II. 169). The term appears to have had a wider reference than just to the Buddhist collections. It must have meant any collection of scriptures which was considered to be authoritative.

Jayatilleke interprets accepting a view on bhavyarūpatā also as a form of acceptance on the basis of authority. In his view it falls under the category of the testimony of reliable persons. It is translated in Gradual Sayings (II. 200) as “because it fits becoming”. Jayatilleke finds this translation objectionable and contends that bhavyarūpatā should be interpreted as referring to the person from whom a proposition is accepted rather than to the proposition itself (EBTK p. 201). He points out that bhabba in the sense of “suitable” or “capable” qualifies persons rather than non-persons. He also points out that the commentarial explanation of the term as ayam bhikku bhavbarūpo imassa katham gahetum yuttam, i.e. “this monk is a capable person, one ought to accept his statement” (AA. II. 305) supports the interpretation that he proposes. It is to accept a statement on the basis of the competence of the person who makes the statement. Jayatilleke relates this to the later Indian conception of āpyopadesa or āpyavacana. The last form of acceptance of a view on the basis of authority mentioned in the Kālāma Sutta as samaṇo no gara also can be easily classified under the same category as acceptance on the testimony of reliable persons.

It is probably because the term anussava could cover the other five forms of acceptance of a view on authority that they are not mentioned in the general classification of epistemological positions referred to in the Sangārāva Sutta. The Kālāma Sutta merely state these different forms of acceptance on authority and disapproves of such acceptance, but it does not give the reason for such disapproval. The Buddha’s criticism of acceptance of a view on the basis of authority is found elsewhere. The criticism, however, is given only under the head of anussava, but it may be understood as applying to other forms of acceptance on authority as well. The general criticism made here is that the value attached to the authoritative source is no ultimate criterion for the truth.

8. Kīra saddo anussavattē (Jataka I. 158); kīrāti anussavatthe nipīto (J. II. 430).
10. Majjhima Nikāya Vol. II. 170
of a given view. Even a highly esteemed authoritative source may lead to beliefs which are empty, hollow and false. On the other hand, a belief which is not supported by such authority may be true, real and in accordance with fact. A further criticism of anussava is added in the Sandaka Sutta, where it is pointed out that a person who attempts to base the truth of a statement on anussava may sometimes suffer lapses of memory which might distort the very source on which he tries to establish a truth. 12

The remaining four grounds which the Buddha rejected in the Kālāma Sutta could, according to Jayatilleke, be considered under the general category of reason. In his opinion, just as anussava heads the list of all forms of acceptance of views on the basis of authority, takka heads the list of all forms of acceptance on the basis of reason. There is evidence in the Pali canonical sources as well as the pre-Buddhist Indian philosophical and religious literature to the effect that reason was used in order to formulate philosophical theses, defend them, and also attack alternative theses which contradicted a thesis held by a particular theorist. The product of such rational speculation was considered by the Buddha to be strongly held dogmas (ditthi). In the Brahmajāla Sutta the Buddha specifies some of the dogmas which were the product of such rational speculation11. Also in the Aṭṭhakavagga of the Suttanipāta the Buddha is critical of the attempt of many teachers who call themselves experts to determine what is true and false on the basis of dogmas constructed by means of rational speculation. 14 The exact nature of such reasoning is not illustrated fully in the Buddhist sources. Probably it was similar to the method followed by philosophers of the Western rationalist tradition exemplified by philosophers like Descartes, Leibniz and Spinoza, who constructed systems of “truth” on the basis of a priori or self evident premises and deductive inference. Although it may not be proper to attribute to Indian thinkers during the time of the Buddha, a distinctly worked out rationalist method of philosophizing as in the case of the classical rationalist philosophers of the West, metaphysical speculation on the basis of reason appears to have taken place among the Upanishadic thinkers, and the materialist and sceptical thinkers of India during this period. 15 The Aṭṭhakavagga shows that public debates were held on philosophical issues between persons who argued their case at public gatherings where even a judgment appears to have been made regarding the victor in such debate. 16 The fact that the Pali suttas make a distinction between views that have been well reasoned and those that have been ill reasoned (sutta kitam and dutta kitam) shows that there were certain commonly accepted methods of valid reasoning in a public debate. People who constructed philosophical views on the basis of reason (takka) would have done so in conformity with these accepted standards of valid reasoning. The Buddha did not believe that one could arrive at the truth by means of such a method. On the contrary he believed that it merely leads to interminable conflicts and debates which produce unwholesome emotions detrimental to a person’s moral progress. This explains the Buddha’s characterization of the truth he discovered as one which cannot be comprehended by means of reason (atakkāvacaro).

The early Buddhist criticism of takka is similar to the general criticism of anussava. A belief which is the product of reasoning according to accepted norms of good reasoning may turn out to be true or false whereas a belief which is not supported by such reasoning may be true (sutta kitam pi hoti dutta kitam pi hoti, tathā pi hoti aṭṭha kitā hoti - M. I. 520).

The next ground rejected by the Buddha is referred to as naya hetuin the Kālāma Sutta. The Trairāṣika Ājivakas and the Jains were known to have logically evaluated theories of reality on the basis of standpoints. 17 The Buddha does not consider this as an ultimate ground on which a belief could be established as true.

The other two grounds mentioned in the Kālāma Sutta namely ākārāparivitakka and diṭṭhinijjhānakkanti occur in other contexts also along with three other grounds which are rejected by the Buddha. 18 One of these three is anussava which has already been adequately discussed. The other two are saddhā and ruci. Ākārāparivitakka is interpreted by the commentator as kārana – parivitakka (by a consideration of reasons). 19 The PTS Dictionary also gives “reason, ground, account” as

11. apica svañussutaṃ yeva hoti tañca hoti ritam tuccham musā, no ce pi svañussutaṃ tañ ca hoti bhūtaṃ taccam anaññathā (ibid).
12. M. I. 520. See also K.N. Jayatilleke’s discussion in EBTK, pp. 186-187
13. The ground of some of the dogmas enumerated in the Brahmajāla sutta is described as follows: takkapanāhataṃ vimannāsucaritaṃ sayam patibhānam etat aha. D. I. 21
15. For a detailed discussion of the use of reason in Indian philosophy in pre-Buddhist India and during the time of the emergence of Buddhism, see EBTK section on “The Historical Background”.
17. See in this connection Jayatilleke’s discussion, EBTK, pp. 154-160.
18. Majjhima Nikāya Vol. II. 170
the fifth meaning of ākāra. The term occurs in this sense in M. I. 320 (ke...ākāra ke anavyā yen āyasī evam vadesi: sammāsambuddho bhagavā...). The term ākāra
vaśī saddhā is also used in a context where the Buddha speaks of the faith or confidence of a person who has
taken certain reasons into consideration without being
moved by a blind or baseless faith (amūlikā saddhā).
However, the fact that ākāraparivitakka is classed along
with purely subjective grounds such as saddhā shows that
conclusions reached on a consideration of reasons alone
cannot amount to knowledge. Dīṭṭhinijjhānakkhanti, the
other ground mentioned in the Kālāma Sutta is some-
times mentioned in other contexts with approval by the
Buddha. It is sometimes said to be a result of examining
the meanings of what one has learned by hearing (sutvā
dhammam dhāreti, dhatānam dhammānam athām
upaparikkhati, athām upaparikkhatto dhammā nijjhāna-
am khamanti—M. I. 133). In such contexts it is referred
to as part of the psychological process associated with a
learning experience. Jayatilleke interprets it as "the
conviction that results from thinking about a theory". All
the available evidence seems to support this interpre-
tation. It is the subjectivity involved in total dependence
on such a ground that is objectionable from the Buddha’s
point of view. That is why it is classed with other grounds
such as saddhā and ruci (like, inclination or preference).

The Kālāma Sutta is not an attempt to show that the
ten grounds mentioned in the Sutta are totally useless
from the point of view of a person searching for the truth.
The Buddha is willing to admit the usefulness of hearing
from an authoritative source as a preliminary stage in a
person’s search for truth. A noble disciple is one who has
thus acquired learning by hearing (sutvā ariyasāvakā).
The usefulness of suti is recognized although it is not
taken as an ultimate criterion of truth. Similarly reason
may also have a limited use. The Buddha does not deny
the usefulness of rational faith, or the confidence gained
as a consequence of a consideration of reasons. What the
Buddha appears to be denying in the Kālāma Sutta is that
any of the grounds mentioned could be a substitute for
the direct experiential understanding of the truth.

It is clear from a study of the background on which
Buddhism emerged that there were many divergent
theories about the nature of reality and the ultimate goal
and good of man. Many teachers appear to have claimed
themselves to be experts on spiritual matters, and holding
firmly to their own views, criticizing the views of others.
In view of this diversity of theories, some thinkers had
taken a sceptical stand for epistemological reasons.
By the time of the rise of Buddhist materialist teachers who
expressed doubts about the reliability of the Vedic
tradition as well as teachings which went beyond the
experience of the ordinary senses argued against the
possibility of claiming any metaphysical or higher
knowledge. It is this emerging critical outlook that is
reflected in the Kālāma Sutta of the Buddha. For, the
Buddha also belonged to the generation of critical
thinkers who were unwilling to subscribe to the Vedic
orthodoxy. Unlike the sceptics and the materialists, the
Buddha maintained that there are certain spiritual truths
that one could realize by oneself without depending on
external authorities and pure rational speculation. There
are, according to the Buddha, moral and spiritual truths
that can be immediately experienced and known. The
Kālāma Sutta is a reaffirmation of the Buddhist
characterization of the nature of the dhamma discovered
by the Buddha. For according to the Buddha, the
dhammais sanditthiko (immediately observable), akāliko
(not with delayed results), ebhiṣassiko (verifiable),
opanāiko (leading to an intended goal), paccattām
veditabbo viṭṭhāni (to be individually realized by the wise
ones). The Kālāma Sutta is also one like the Apannaka
Sutta which is addressed specifically to the critical
minded and the intelligent who were unwilling to accept a
view without valid grounds for acceptance.

The Buddha appeals to the experience of the Kālāmas
themselves in showing them that moral truths can be
known by oneself in one’s own direct experience. He
points out that in the common experience of mankind
excessive greed, hatred and delusion lead to forms of
behaviour that are harmful to the individual as well as to
society. Greed, hatred and delusion are, therefore
unwholesome and are productive of unwholesome
behaviour. The moral and the spiritual life is known to
consist in the cultivation of non-greed, non-hatred
and non-delusion. The Kālāma Sutta also draws attention
to the fact that the spiritual life is one which is immediately
rewarding. It is not merely a theory or a belief which
assures a reward for the faithful in the next life. The
Kālāma Sutta shows that the rewards of the practice of
the four sublime abidings (brahmavāhāra) are to be
experienced immediately in this life. The absence of
hatred and malice in one’s heart itself is a great reward
that one can experience immediately from the cultivation
of boundless compassion, sympathy, sympathetic joy
and equanimity. For, it is a state of mental sanity, bliss
and well-being here and now. These are experiential
truths, unlike what is accepted on the basis of external
sources of authority or pure rational reflection and
speculation.

It may be said that the Kālāma Sutta is a clear answer
to the sceptic and agnostic who was puzzled by the
diversity of opinion that existed regarding moral and
spiritual matters during the time of the Buddha. The

80. Majjhima Nikāya Vol. I. 400-413.
Buddha points out that there is no need to be puzzled if one depends on one's own personal experience. Authority and rational speculation lead inevitably to diversity of opinion. But there cannot be a disagreement regarding what is evident to the common experience of mankind. Thus the Kalâma Sutta maintains that moral and spiritual truths also can be established on objective and experiential foundations. Their objectivity, however, is shown to rest on their intersubjective or experiential verifiability.

KALÂNIYA TEMPLE. See KÂLYÂNI

KÂLI. See ÂLI and KÂLI

KÂLÎNGA, name of a country in India often mentioned in the Jâtaka and several other Pali texts and commentarial works. It is one of the seven political divisions mentioned in the time of the mythical King Renu and is given first in the list, its capital being Dantapura and its king Satabhù (D. II, 235-36). According to Mahâgovinda sutta Disampati, King Renu's father, was the ruler of a very large kingdom, and at his death Renu succeeded Disampati. Renu not wishing to keep the very large kingdom for himself, got his chief minister and advisor Brahmin Govinda to divide the kingdom to seven equal parts and appointed six of his very close friends as kings of six parts, keeping just one part for himself (ibid. p. 236). Kâlînga, however, was not included in the list of sixteen Janapadas appearing in the Aghuttara Nikâya (A. I. 213), but it occurs in the extended list of Janapadas in the Niddesa (Nd. II. 37). Buddhavamsa (ch. xxviii v. 6) records that one of the four Tooth relics of the Buddha, removed from the funeral pyre of the Buddha, was taken to Kâlînga where it was venerated as a religious treasure for a long time, until it was brought to Sri Lanka in the time of King Sîrimeghavanâ, by Hemamâlâ daughter of King Ghahasiva of Kâlînga, and her husband Dantakumâra, a prince of the Ujjeni Royal family. This Tooth Relic now reposes in the Temple of the Tooth Relic in Kandy, Sri Lanka. See DALÂDA MÂLIGÂVA.

The Jâtaka contain various references to Kâlînga. In the Kurudhamma Jâtaka (J. II, 365 ff.) it is said that a severe drought that lasted for a long time in Kâlînga once dried up the rivers and streams and the land was parched and people were subjected to much difficulties. The King of Kâlînga, at the request of the people, brought from the adjoining kingdom of Indapatta the auspicious elephant, whose presence was believed to bring rain to any country experiencing a severe drought, but the rains did not come. On inquiry it was revealed that the power to cause wonders, was not so much in the elephant but in the king, his queen, his mother and several others who practised the Kurudhamma. The King of Kâlînga then sent several men to the kingdom of Indapatta to learn what this Kurudhamma was, and it was revealed to them that Kurudhamma was the Pañcasîla or the five precepts. It is said that the king of Kâlînga learnt well the Kurudhamma and practised them sincerely and subsequently there was rain in the country. Another king of Kâlînga was the contemporary of Aruna, the Asaka king of Potali. The Kâlînga king in his eagerness for a fight, picked a quarrel with Aruna, but was defeated in battle and had to surrender his four daughters with their dowries to Aruna (J. III. 3 f.).

The Kâlînga-bodhi Jâtaka (J. IV. 232) relates the story of another ruler of Kâlînga while, according to the Sarabhanga Jâtaka a certain king of Kâlînga went with two other kings, Âtthaka and Bhumaratta, to ask Sarabhanga questions referring to the fate of Dânâki. There they listened to the sage, and all three kings became ascetics. Another king of Kâlînga was Nâlikâra, who having ill-treated a holy man, was swallowed up in the Sunakhâ-niraya, while his country was laid waste by the gods and turned into a wilderness (Kâlînga-râhita M. I. 376). In the Kumbhakâra Jâtaka (I. III. 376) the Kâlînga king's name was Kârañâu.

From early times there seems to have been political intercourse between the peoples of Kâlînga and Vânga; Susima, grandmother of Vîjaya, founder of the Sinhalese race, was a Kâlînga princess, married to the king of Vânga (Mhv. vi; Dpv. ix. 2 ff.). Friendly relations between Ceylon and Kâlînga were evidently long standing, for we find in the reign of King Aggabodhi II (601-11 A.C.) the king of Kâlînga, together with his queen and his minister, coming over to Ceylon intent on leading the life of a recluse and joining the Order under Jotipala Thera. Aggabodhi and his queen treated them with great honour (Mhv. xiii, 44 ff.). Later, the queen consort of Mahinda IV came from Kâlînga, and Vîjaya-bahu I, married a Kâlînga Princess, Tilokasundari (ibid. ix. 30). The scions of the Kâlînga dynasty had many times attained to the sovereignty of Ceylon and there were many ties of relationship between the royal families of the two countries. But it was Mâgha, an offspring of the Kâlînga Kings, who did incomparable damage to Ceylon and to its religion and literature (ibid. Ixxx. 58 ff.).

According to Indian inscriptions, in the thirteenth year of his reign Asoka conquered Kâlînga, and this was the turning point in his career, causing him to abhor war. Among the retinue sent by him to accompany the branch
of the sacred Bodhi Tree on its journey to Ceylon, were eight families Kalinga (DPFN, s.v.)

**KALPA (Pali Kappa)**, a fabulous period of time which cannot be reckoned in years as so many hundreds of years, so many thousands of years and so many hundred thousands of years and so on.

In the Vedic tradition a *kalpa* is the duration of time between a creation and destruction, a day in the life of Brahmā, the all powerful Creator God. Thirty *kalpas* make a month of Brahmā’s life and twelve such months or three hundred and sixty-five *kalpas* make a year of Brahmā. His life span is one hundred such years, i.e., 36500 *kalpas*. According to the Mahābhārata (ERE, Vol. I, p. 201) fifty years of Brahmā’s life have already elapsed. The world system becomes annihilated at the end of each *kalpa*, i.e., at the end of each day of Brahmā the world system becomes annihilated and Brahmā creates a new world system the following day (*kalpa*).

The Vedic tradition speaks of two other ages of the world called *manvantara* and *yuga*, both of which are shorter than a *kalpa* and come within a *kalpa* (Monier Williams, Sanskrit–English Dictionary, pp. 786–7). *Manvantara* (Manu+antara) is the period or age of a manu, a super divine being. A *yuga* is another long mundane period of time. There are four such ages, namely (1) Krita *yuga*, (2) Treta *yuga*, (3) Dvāpara *yuga* and (4) Kali *yuga*. Their durations in human years are as follows: 1. Krita or Satyayuga – 1,729,000 years; 2. Treta *yuga* – 1,296,000 years; 3. Dvāpara *yuga* – 864,000 years and Kali *yuga* – 432,000 years. The *yugas* are named after the sides of a die, i.e. Krita the lucky one being the side marked with four dots; Treta, that with three dots; Dvāpara, that with two dots and Kali, the losing one, with one dot (ERE, Vol. I, p. 200).

Out of the four *yugas* Krita *yuga* is considered the most fortunate, for, during this period people adhere very closely to rules of caste and ethical precepts as taught in the Vedic tradition. People lead peaceful lives and conflicts among them are unheard of, and they are blessed with long life. But virtue or dharma becomes diminished by one quarter or foot in every succeeding *yuga* until in the last *yuga* only one foot of virtue remains, and the life span of people, too, becomes reduced very much. The length in time of the *yugas* when added together forms the Great Period or a Mahāyuga. The length in time of seventy one such Mahāyugas is equal to the period or age of a Manu or *Manvantara*. The total in time of fourteen *Manvantaras* forms one day of Brahmā or a *kalpa* (Monier Williams, Sanskrit – English Dictionary, p. 786). The present world system is now in the Kali *yuga* which began at mid-night between the 17th and 18th of February 3102 B.C. (Monier Williams, op. cit. p. 854).

Buddhism, too, has its own concept of an extremely long period of time designated as *kalpa*. The teaching about samsāra (faring on) of beings is a fundamental doctrine in Buddhism, and every being is in this samsāric process till such being attains emancipation or nibbāna. The length in time of the samsāric process of a being is beyond imagination and hence its “beginning and end are alike unthinkable” (anamettaggo yam bhikkh have samsāro pubbākoti na paññāyati avijñāna vañjanānām sattānaṁ tanhāsam yojanānam andhāvatam samsārataṁ – S. II, 178). The Buddha – aspirant (bodhisattva), too, since he received the prediction that in the distant future he would become a Buddha by name Gotama, was wandering in Samsāra for over four incalculable world periods, which world periods consisted of hundreds and thousands of aeons (*ito kappasatasassathāhikānam catunnam asankheyānaṁ maññake – J. I, p. 2). Since that time of the prediction and up to the time the bodhisattva concluded fulfilling the perfections (*pāramī) as King Vessantara, he had been wandering in samsāra in hundreds and thousands of births. The *Jātaka* contains stories of about 547 such births.

In the Mahāparinibbāna Sutta (D. II, 103) the Buddha in conversation with bhikkhu Ananda, reveals to the latter that a person who has developed four types of psychic powers (iddhipāda), if he so wishes may live for a *kappa* or even beyond a *kappa*, and that the Buddha, too, had developed them. Bhikkhu Ananda did not utilise that opportunity to invite the Buddha to live for a *kappa* for the benefit of gods and men. Several months later when the Buddha told Bhikkhu Ananda that the Buddha would pass away three months hence, Bhikkhu Ananda began to plead with the Buddha to not pass away soon and that he should live for a *kappa* or beyond a *kappa*, for the benefit of gods and men. At this the Buddha told bhikkhu Ananda that he (Ananda) had missed the correct opportunity to make that request to him (D. II, 115–7).

Three months after the demise of the Buddha when elder bhikkhus met at Rajagaha to hold the first Buddhist Council, Bhikkhu Ananda was found fault with, by the Assembly of bhikkhus, for missing that opportunity of requesting the Buddha to live for a *kappa* or beyond a *kappa* (Vin. II, 289).

The word *kappa* comes to prominence again in the *Buddhavamsa* in the description of twenty three Buddhas who preceded, Gotama Buddha, The *Buddhavamsa* description, in the words of the Buddha, runs thus: “Innumerable *kappas* ago there appeared in the world...
four Buddhas by name Taṅхаṅkara, Medhaṅkara, Saranaṅkara and Dipaṅkara. And all of them appeared during the same *kappa*. After Dipaṅkara appeared Koṅḍaññha and he was the only Buddha during that *kappa*. The gap in *kappas* between Dipaṅkara Buddha and Koṅḍaññha Buddha was innumerable. After Koṅḍaññha Buddha appeared Mangala Buddha and the gap in *kappas* between the two of them, too, was innumerable. Mangala Buddha, Sumana Buddha, Revata Buddha and Sobhita Buddha appeared during a single *kappa*. After Sobhita Buddha appeared Anomadassi Buddha and the time gap in *kappas* between the two of them, too, was innumerable. Anomadassi Buddha, Padunā Buddha and Nārada Buddha appeared during a single *kappa*. After Nārada Buddha appeared Padumuttara Buddha and he was the only Buddha to appear during that *kappa* and the time gap in *kappas* between the two Buddhas was innumerable. Padumuttara Buddha appeared one hundred thousand *kappas* ago. Sumedha Buddha and Sujitā Buddha appeared thirty thousand *kappas* ago. Eighteen hundred *kappas* ago three Buddhas by name Piyaṭassi, Atthadassi and Dhammadassi appeared during a single *kappa*. Ninetyfour *kappas* ago there appeared a Buddha named Siddhattha. Two Buddhas named Tissa and Phussa appeared ninety two *kappas* ago. Ninety-one *kappas* ago Vipassi Buddha appeared. Thirty-one *kappas* ago there appeared two Buddhas named Śīhī and Vessabhū. In this Fortunate (bhadda) *kappa* Buddhas Kakusandha, Koṅgāmanara and Kassapa have already appeared and I am (Gotama) here now as the fourth, and a fifth will appear in the future by name Metteya (BvA. 100–101).

All the *kappas* are very broadly divided into two kinds, namely 'void' (*asūfha*) and 'not void' (*asūfha*). A *kappa* in which Buddhas, Pacceka Buddhas, arāhants and universal monarchs do not appear is called a 'void' *kappa*. A *kappa* in which the above mentioned four great personalities appear is called a 'not void' *kappa*. The *kappas* are again categorized into five according to the appearance of Buddhas during those *kappas*. The five categories are Śāṅkara (substantial *kappa*), Maṇḍakappa (the 'butter' *kappa*), attractive *kappa*), Varakappa (the 'excellent' *kappa*), Śaṅka maṇḍakappa (the 'excellent-butter' *kappa*) and Bhaddakappa (the 'auspicious' *kappa*). In the Śāṅkara only one Buddha appears; in the Maṇḍakappa two Buddhas appear; in the Varakappa three Buddhas appear; in the Śaṅka maṇḍakappa four Buddhas appear; in the Bhaddakappa five Buddhas appear. The life span of human beings is extremely long during some *kappas* and it is very short during some *kappas*. When the life span of human beings is extremely long human beings are not able to truly understand the impermanent nature (anicca), unsatisfactoriness (dukkha) and essencelessness (anatta) of component things. When the life span of human beings is extremely short they are not able to concentrate on such topics long enough to understand them. Therefore Buddhas do not appear during *kappas* in which life span of human beings is extremely long or too short (BvA. 191).

In Buddhism *kappas* are not the creations of an all-powerful Creator God or Brahmā. A *kappa* comes into being depending on causes and conditions and after a very long time it undergoes change and finally disintegrates and after the lapse of an extremely long time there takes place the evolution of another *kappa*. Four stages of a *kappa* are recognised in connection with the disintegration of a *kappa* and evolution of another, and each of these four stages is spread over an in calculable period of time (*asankhaya*). The four stages are (1) *Samvatta* or period during which a *kappa* gradually disintegrates, (2) *Samvattatthāya* the period a disintegrated *kappa* remains in that state, (3) *Vivattta* or the period in which another *kappa* gradually evolves and (4) *Vivatthagāya* or the period the newly evolved *kappa* remains in that state (A. II. 142). Destruction of a *kappa* happens either by water, by fire or by wind. When the destruction is caused by water it spreads up to the Subhakini heaven sphere; when it is caused by fire it spreads up to the Āhassara heaven sphere and when it is caused by wind it spreads up to the Vehapphala heaven sphere (Vis. 414). The destruction of a *kappa* by fire happens when people become excessively vicious and wicked (dosādhika); by water when people become excessively greedy (rāgādhika) and by wind when people are extremely ignorant and foolish (mohādhika). The Sattasuriya Sutta (A. IV, 100–6) describes how a *kappa* is destroyed by fire.

The Buddha has in several similes explained to the disciples that the length of time of a *kappa* cannot be reckoned by saying: "It is so many hundreds of years; it is so many thousands of years; it is so many hundred thousands of years and so on". The first simile is presented thus: "suppose, bhikkhus, there is a solid rock one *yojana* (seven miles) in height, one *yojana* in length and one *yojana* in breadth and a man were to just wipe that rock once every hundred years with a very fine piece of cloth. By this device, that rock would waste away some day, but one cannot exhaust the length of time of a *kappa* by that length of time" (S. II, p. 181). The second simile runs: "suppose bhikkhus, there is an iron box one *yojana* in height, one *yojana* in length and one *yojana* in breadth and filled to the brim with mustard seeds and a man were to remove from it just one mustard seed every one hundred years. By this device the box can be emptied some day, but one cannot exhaust the length of time of a *kappa* by that length of time" (S. II, p. 182). The Buddha in another simile made it clear to his disciples that even as the length of time of a *kappa* is beyond calculation in years, one cannot count and exhaust the number of *kappas* that have gone by to the past. The simile used in

**KALPAVRKSHA**

(Kali, Kappa-rukkha) the wish- Yielding tree, is one of the five trees said to be in heaven. The other such heavenly trees are Manipura, Parijata, Saptaparni, and Haricandana. The concept of Kalpavrksa is not connected with tree-worship widely prevalent in the world. It is generally believed that certain trees are inhabited by divine spirits and that these divine beings grant the wishes of those who propitiate these spirits. These wish-yielding trees are found on earth. But the Kalpavrksa is solely the property of the gods. Unlike these trees the Kalpavrksa is not considered as being inhabited by any spirit. It grants the wishes of gods, by its own inherent power.

Many scholars fail to observe this distinction between the wish-yielding trees on earth and the Kalpavrksa (ex. see V.S. Agrawala, Indian Art, Varanasi, 1965, p. 6). He says that the Kalpavrksa became the arch symbol of the cult of tree-worship or adoration of arboreal deities (rukka-devata-maha). Buddhist literature clearly shows that these are two different beliefs (J. VI, 117; cf. J. IV, 350) and it is difficult to connect the Kalpavrksa with dendrolatry.

The origin of the Kalpavrksa concept is not clear. It may be that the concept developed from a cult of fertility and fecundity. It is possible to surmise that the Kalpavrksa concept is anterior to the belief in tree-worship and that it was by the transference of this latter belief into the realm of gods that the concept of Kalpavrksa arose. The concept of Kalpavrksa also gave rise to the concept of Kalpalata, wish-yielding creeper (cp. Grunwedel, Buddhist Art in India, London, 1901, p. 31).

Both the Kalpavrksa and Kalpalata forms were used as sculptural ornaments of pillars and thrones of kings and gods. The Manasara, Sanskrit work dealing with architecture, describes its uses elaborately (Ch. xiviii).

The miniature tree that appears on the crown of Buddhist kings and chiefains of Sri Lanka seem to symbolise the Kalpavrksa, for they were regarded by the objects as bounteous lords who are prepared to grant their wishes.

---

**KALYAANAMITTA**

a virtuous, benevolent, wholesome or worthy friend who acts as one's mentor or spiritual adviser (PóD). In this respect a person's Kalyananmitta has to be more advanced than him in virtue and self-discipline (silaadhí adhika-Sna., 341).

Buddhism emphasises the necessity of associating with wholesome friends to secure worldly gains as well as to attain spiritual advancement. The Sigalovada Sutta (D. III, p. 187) discussing the importance of associating with good friends to secure success in lay life, enumerates four types of friends who can be classed under Kaliyanamittas or worthy friends. They are: a person who is ready to help one in all circumstances (upákárako-mitto); a person who will not abandon his friend in both prosperity and distress (sámaña sukhadakkho mitto); a person who is ready to give good counsel and direction when the need for such counselling and direction arises (attakhkáyí mitto), a person who is sympathetic to one in dire circumstances (anukampako mitto).

A helpful friend (upákárako mitto) comes to the rescue of a person in four ways, namely: he protects and safeguards his friend when the latter through negligence gets into a dangerous situation (pamattam rakkhati); he protects and safeguards his friend in such a situation (pamattassa sajateyyam rakkhati); he becomes a refuge to his friend when the latter is bewildered and frightened (bhítassa saranam hoti); he gives lavishly to his friend when such need arises (uppannēsu kiccakanuyesu tad digunam bhogam anuppādeti).

A person who is equal in all circumstances helps his friend in four ways, namely: he reveals what is unknown to his friend (guyham asa śicchhati); he keeps the secrets of his friend (guyhabh- asa parigubhati); he does not abandon his friend in distress (papādasu na vijhati); he is ready to defend and safeguard his friend even at the risk to his own life (jivitam pissa atthaya paricattam hoti).

A person who is a good counsellor helps his friend in four ways, namely: he refrains his friend from doing evil (pāpā nivāreti); he persuades his friend to do wholesome deeds (kalyane niveseti); he makes his friend to learn what he has not known (assutam sāveti); he reveals the way to his friend to achieve heavenly bliss after death (sagassa maggam śicchhati).

A sympathetic person helps his friend in four ways, namely: he does not rejoice over his friends misfortune (abhāvenassa na nandati); he rejoices over his friends prosperity (bhāvenassa nandati); he refrains others who speak ill of his friend (avānam bhañamānam nivāreti); and he praises others who speak good of his friend (vaññam bhañamānam pasamsati).
In the Buddhist way of life, for the layman as well as for the bhikkhu, the Buddha is acknowledged as the 'worthy friend-supreme'. Once the Buddha, addressing bhikkhu Ananda who was his constant companion and servitor said: "Ananda, beings who are subject to birth (jāti dhammā satā) take refuge in me, their supreme friend (Kalyāṇamitta) and become free from birth. Likewise beings who are subject to decay (jarā), to disease (vyāḍhi), to death (marana) etc. become free from decay, disease, death etc. by taking refuge in me, their worthy friend supreme' (S. I, 87-88). The Buddha made this clarification to bhikkhu Ananda when the latter expressed his view to the Buddha that more than fifty percent of the success in the noble religious life (brahma-cariya) depended on worthy friendship (kalyāṇamittata). The Buddha emphatically told Bhikkhu Ananda that success in the religious life depended wholesale on worthy friendship (sakalam eva hidam Ananda brahmācariya param dhamma kalyāṇamittata, kalyāṇa-sampavakatā). In the Kalyāṇamittattādī vaggas of the Abhutara Nikāya (A. I, 14-15) the Buddha declares: 'Monks, I do not see any other single factor that conduces to the arising of efficient states of mind (kusala dhammā) and brings about the waning of unwholesome mental states (akusala dhammā) than worthy friendship. Worthy friendship (Kalyāṇamittata) causes the arising of wholesome mental states that are not already arisen in a person and (at the same time) dispels the unwholesome mental states that are already arisen in a person's mind.'

The Visuddhimagga discusses in detail the role played by a Kalyāṇamitta in the process of mind culture (bhāvanā) of a disciple. A bhikkhu who is intent on mind culture has to approach a Kalyāṇamitta who has an expert's knowledge regarding various characters (carita).

When a candidate intent on mind culture approaches such an expert he (the expert) knows what type of subject or object of meditation suits him and will prescribe the most relevant "kammathāna" (object of meditaton). In this regard the Buddha has acknowledged as the kalyāṇamitta supreme, because he was possessed of all the characteristics of a kalyāṇamitta and a subject or object of meditation prescribed by the Buddha to another person yielded the best results. When the Buddha has passed away, any one of the surviving eighty great disciples (āsītīyā mahāsavākānāṁ) would have been the next choice. In the absence of any one of the eighty great disciples, a disciple who has attained arahantship by developing the fourth and fifth ecstacies (jhānas) would be the next choice. Likewise, in the absence of an arahat, a non-returner (anāgāmi); in the absence of a non-returner, a once returner (sakadāgāmi); in the absence of a once returner; a stream entrant (sotāpanna); in the absence of a stream-entrant, an ordinary disciple who is converant with the three divisions of the canon (tipitaka), two divisions of the canon, one division of the canon etc. would be the next choice (Visn. p. 89, 98, 121).

T. Ariyadhamma

KALYĀṆI, the name of an ancient kingdom in Sri Lanka with its capital also by the same name. The kingdom as well as the capital are mentioned in the Dipavamsa, Mahāvamsa, the Pali commentaries and several other ancient and medieval Pali and Sinhalese literary works. References to this kingdom, its rulers and monuments are also found in several inscriptions.

Literary accounts connect the city of Kalyāṇi with a visit of the Buddha in the sixth century B.C. The Dipavamsa (Dpv. II. 42 ff.) and the Mahāvamsa (Mhv. I, 63 ff. II. 53 ff.) assigned to the fourth and fifth centuries respectively, and the Samantakūṭavāṇṇā of the fourteenth century contain accounts of this legend. In these accounts it is said that, at the time of the Buddha's visit to Nāgadipa (q.v.) in Sri Lanka, Kalyāṇi was ruled by a nāgaking named Maniakkhika who happened to be the uncle (mātula) of Mahodara whose abode was in the ocean (Mhv. I. 48) i.e. one of the two nāga kings of Nāgadipa, who were preparing for war against each other. Maniakkhika went to Nāgadipa to join his nephew in the war against his opponent Cūlədara, and there at Nāgadipa he saw the Buddha, heard him preach the dhamma and became a lay disciple of the Buddha. The nāga king Maniakkhika invited the Buddha to visit his kingdom, too. The Buddha accepted this invitation.

Three years later, in the eighth year after the Enlightenment of the Buddha, Maniakkhika is said to have visited the Jetavana-vihāra at Rājagaha and reminded the Buddha of his invitation. The Buddha set out from the Jetavana-vihāra along with five-hundred disciples and arrived at Kalyāṇi on the full-moon day of Vesākha (MhvA. 112). Expecting the arrival of the Buddha, king Maniakkhika made elaborate arrangements to receive him together with the disciples. On the banks of the river Kālāṇi (Kālāṇapadapassamhi, Samantakūṭavāṇṇā, v. 618) he constructed a pavilion of extraordinary beauty which was decked with gems. The Buddha sat on a magnificent throne built in the pavilion. It was at this spot that the Kalyāṇi-cetiya was later erected (Mhv. I.

1. The statement in the 13th century Samantakūṭavāṇṇā (v. 618) that the pavilion was constructed on the banks of the river Kālāṇi casts some doubt on either the authenticity of the popular story or the Samantakūṭavāṇṇā statement.
The Valahassa Jataka (J. II. 127 ff.) indicates that the shore from the Kalyānī river to Nīgadalpa was infested with yakkha. They would assume human form and entice shipwrecked mariners and take them as their husbands and later devour them.

These references to Kalyānī as a habitat of nāgas and yakkhas are probably in relation to the time immediately preceding the Aryanization of Sri Lanka in about the sixth century B.C.

A place named Kalyānī is mentioned again in the chronicles and other literary works in connection with incidents in the 3rd century B.C. The incidents are said to have occurred in the reign of a king named (Kalyānīya) Tissa who ruled at Kalyānī. The Mahāvamsa commentary (Mhv. A. 431) states that (Kalyānīya) Tissa’s younger brother Uttiya was so named after his grand-father Uttiya who in turn was a son of Mutasiva and a younger brother of king Devanampiya Tissa (cir. 250 B.C.) who ruled at Anurādhapura. Thus according to the Mahāvamsa commentary the dynasty of kings at Kalyānī in the 3rd century B.C. was connected to that of Anurādhapura.

King (Kalyānīya) Tissa’s brother Uttiya (var. Uttika) was secretly in love with the queen. When the king discovered this Uttiya fled from the capital and took up residence elsewhere. The district was named Uttika-Desa or Uttiya-Janapada. From his new place of residence Uttiya used to send letters to his brother’s wife through a young man disguised as a monk who would enter the king’s palace for alms along with other monks. Now, there was an elder monk named Kalyānīya who received alms regularly at the palace. One day the young man in disguise entered the palace along with this monk and dropped the letter near the queen. The king read the letter and was furious and thinking that the elder monk had brought it, put him in a cauldron of boiling oil and caused his death. It is said that as a result of this cruel deed the sea overflowed and inundated the land, but the king succeeded in appeasing the gods of the sea by putting his own daughter Devi in a golden vessel and setting it afloat in the sea (Mhv. xxii, 12 ff.; MhvA. 431 f.).

The name ‘Kalanika Tissa’, identifiable with Tissa of Kalyānī has been found in a fragmentary Brāhmi inscription at an ancient site in the south-eastern part of the island (No. 1095 of the Inscription Register of the Archaeological Department). This inscription stabilizes the historicity of this ruler and also suggests that he was connected to the rulers of that part of the island.

No more is heard of Kalyānī as a separate kingdom. Its rulers were perhaps impressed with Kākavānna’s superior resources, and became content, in course of time, to acknowledge the ruler of Mahāgama as their overlord until king Duvvagānasī brought the whole country under

Of the other literary works that refer to the time of King Tissa of Kalyānī the Sihalavathupakaraka, which is assigned to a period earlier than the Mahāvamsa, does not make any reference to the incidents related above. It merely says that having done merit in a previous birth as husband and wife Kākavānna and Vihāradevi were born in the royal families and “grew up together” (ubbo vadhanti ekato) and were married in the prime of their youth. The Sāhassavathupakara, too, which is assigned to a period earlier than the 10th century, contains stories about king Kākavānna Tissa and Vihāradevi, but does not refer to the above incidents. But Rasavāhinī of the 4th century, which is primarily based on Sāhassavathupakara gives even more details than the Mahāvamsa and its commentary regarding this incident. The account differs in certain details from what is given in the Mahāvamsa and its commentary. In this account it is said that the sea at that time was seven gāvutas from Kalyānī, and the sea overflowed up to a distance of just one gāvuta from Kalyānī. The Jina-kālamālī of the early sixteenth century does not deal with the above incident but merely says that Vihāradevi, the daughter of the king of Kalyānī was the chief queen of Kākavānna Tissa, but describing how the Somavatī cetiya came to be established; states that S omadevi who was king Kākavānna Tissa’s sister was given in marriage to prince Abhayā who was the nephew of king Siva of Kalyānī (Kalyānīyaśeva Cakrapaṇaḥ bhāgīneyassas Abhayarājakumārasa agga māhesi ahoṣi). The Dhātu­vamsa also contains a similar account. S. Paranavitana (University of Ceylon, History of Ceylon, Vol. I, p. 147) opines that this king Siva (or Siva) must have been the successor and probably the son of king Tissa of Kalyānī who, according to literary accounts, lost his life by the wrath of the gods, though the sea was calmed by the sacrificing of the king’s daughter to the sea.

2. Kalyānirajino pana Tissasa Uttiyonāma kaniṭṭho ahoṣi. Tesam piṭā Mutasiva raffhā nattā Uttiyavanāmo putvo... (Mhv. A. 431).
3. The Rājāvalīya (ed. B. Gunasekera, Colombo, 1900, p. 24) states that King Yaśilayatiswa, son of Mahāṇiga who was the brother of Devānampiya Tissa, who fled to Rohana ruled at Kalyānī, but other sources state that his capital was at Mahāgama in Rohana. That king Yaśilaya Tissa ruled at Mahāgama in Rohana, and not at Kalyānī is confirmed epigraphically (cf. JCBRAS, New Series, Vol. VI. Special Number 1959, p. 119).

Literary sources do not say whether the Kalyāṇi of the Nāga king Maniakkhika and Kalyāṇi where shipwrecked merchants were lured by yakkinis and the Kalyāṇi where (Kalyāṇiya) Tissa ruled were identical or different. The author of the Mahāvamsa who deals with these incidents of the sixth century B.C. (Mhv. I, vv. 63 ff.) and later, of the 3rd century B.C. (Mhv. xxii, vv. 12 ff.) makes no differentiation. It could however be inferred from the above accounts that Kalyāṇi of the Nāga king Maniakkhika was on the bank of a river and that Kalyāṇi mentioned in the Vajāhassa Jātaka and Kalyāṇi as the kingdom of Tissa had been close to the sea coast.

Scholars who have studied the literary sources referring to Kalyāṇi are of opinion that all sources refer to one and the same place and that comprised the region now known as Kālaniya, near Colombo. That this was also the popular belief is evident from the paintings of the present vihāra at Kālaniya, which give the details of the visit of the Buddha to Kālani and the incidents connected with the story of the love affair between the brother and the queen of (Kalyāṇiya) Tissa PLATE XV.

Further, it has been pointed out by S. Paranavitana (University of Ceylon, History of Ceylon, Vol. I, Pt. I, p. 221) that numerous inscriptions in Brāhmi script also testify that by the 1st century B.C. the descendants of the pioneer Indo-Aryan colonists had spread beyond the dry zone into Kegalle and Colombo districts of the low country wet zone “the ancient kingdom of Kālani or Kālani”.... Inscriptions of some princes of Kalyāṇi exist at Yatalahena and Lenagala in the Kegalle district (UCR. ix. No. I, p. 20; Clsc. II, 202-204). A 5th century inscription at the site of an ancient vihāra at Diyagama, three miles up the river from Kalutara, mentions the market-town of Kālaniya which C. W. Nicholas (JCBRAS. “New Series, Vol. VI, Special Number, 1959, p. 118) thinks is identical with the present Kālaniya. He also states (loc. cit.) that in early times the area north of the Kalu Ganga belonged to the old division of Kalyāṇidesa, originally the kingdom of Kālaniya.

Thus while there is evidence to believe that the present Kālaniya near Colombo comprised the capital of the ancient kingdom of Kalyāṇi, S. Paranavitana argues that there is ample epigraphical evidence supported by an early literary reference to believe that Kalyāṇi, which was the capital of king (Kalyāṇiya) Tissa, the father of Vihāra Mahādevi, was not located near Colombo but was in the south-eastern region of Ceylon and was thus different from the Kalyāṇi near Colombo.

Paranavitana’s surmise is based on the evidence of the contents of certain cave inscriptions of the 2nd century B.C. at Bovattagala (in the Batticaloa district) and at Koṭādmūhello (var. Koṭādhamūhela, in the Hambantota district) and a statement in the Sihalavatthupa karana (Svu. 129 cited earlier). Bovattagala, about three miles north-west of Kumana and about thirty miles east of Kataragama is the site of an ancient monastery which, later inscriptions at the site indicate, was in a flourishing condition up to the 7th century A.C. (JCBRAS New Series, Vol. VI. Special Number, 1957, p. 21). Koṭādhamūhela or (Koṭādhamūhela) is also the site of an ancient monastery in the Yāla sanctuary (University of Ceylon, History of Ceylon, Vol. I, Pt. I, 147). Of the 2nd century B.C. inscriptions at these two sites mentioned above, fourteen cave inscriptions at the latter site with almost an identical text record the donations of the caves in which they were indited, to the Sangha by a princess named Abi Savera, daughter of Mahātissa (Mahātissa), who was the son of Damaraṇa (Dharmarāja), and that this princess was the wife of Aya Tisa (Prince Tissa) and daughter of Aya Abbaya (Prince Abbaya). These inscriptions make mention of a royal dynasty among whom were ten brothers (dasabhātika). There is also one inscription at the former site which records the donation of a cave by a princess named Abi Anuradi, daughter of Prince Abbaya who was the son of Uti (Uttiya), one of the ten brother kings (dasabhātika) who were the sons of a ruler called Gamanī (University of Ceylon, History of Ceylon, Vol. I, Pt. I, pp. 93, 146, 147). These names of royal personages belong to five generations as follows (i) Gamanī; (ii) his ten sons, of whom one was Raja Uti; (iii) his grandsons, Damaraṇa and Prince Abbaya; (iv) his great-grandsons, the princes Mahātissa and Tisa, and the princess Anuradi; and (v) his great-great-grand-daughter, princess Savera (JCBRAS. New Series, Vol. VI. Special Number, 1959, p. 21). The ten brothers and the other personages mentioned in the inscriptions at the two sites probably belonged to the same dynasty.

Of the personages mentioned in these inscriptions, Paranavitana suggests the possibility of identifying Abi Savera with Vihāramahādevi, her father Mahātissa with (Kalyāṇiya) Tissa and her husband Aya Tisa (Prince Tissa) with Kākavannya Tissa whose father Aya Abbaya (Prince Abbaya) is identifiable with Gothābhaya (University of Ceylon, History of Ceylon, Vol. I, Pt. I. p. 147).
On the name Abi Saveria, Paranavitana (loc. cit.) remarks: "In the name of the princess, 'Abi' is a title, prefixed to the names of several princesses inscriptions of the pre-Christian period, 'Saveria', by normal phonological process, could have assumed the form 'Vahera' in course of time in popular parlance, and the name turned into Pali as 'Vihara' by the chroniclers. ahera' being the form which the Pali word vihara had assumed in Old Sinhalese, the story given in the chronicle at the name of Kākavanna's consort was due to the fact at a vihara was built at the spot where the boat in which she was sent adrift by her father touched land, can easily taken as an instance of folk-etymology."

The fact that these inscriptions, recording the donation coves to religious establishments by Abi Saveria, antifeable with Vihārā-mahā-devi and others who longed to that royal family are located in the southern region of the island has prompted Paranavitana suggest that the kingdom of (Kalyāṇiya) Tissa, the her of Vihārā-mahā-devi "if it was named Kalyāṇi" is different from Kalyāṇi near Colombo, and was aitnded somewhere in the south-eastern part of the island. Fragments of inscription has also been found at ancient site in the south-eastern area of the island, ere the name 'Kalanjika Tissa' itself is found, suggesting this ruler, i.e. the father of Vihārā-mahā-devi was connected with that part of the island (University of Ceylon, History of Ceylon, Vol. I, Pt. I, pp. 147 ff.).

The evidence of these inscriptions is strengthened by statement in the Sihalavatthupakaranā (Sv. p. 129) sady mentioned. This Pali text is assigned to a period later than the Mahāvamsa. After recounting the ritorous deeds of king Kākavaṇṇa Tissa and Vihārā-hā-devi in their previous births, it states that they were in two royal families, grew up together and when they came of age were united in marriage. Commenting his Paranavitana states: "According to this statement, residence of 'Saveria' parents must have been not very from Mahāgāma where Kākavaṇṇa had his abode. If was named Kalyāṇi, it must have been different from raniya near Colombo and located somewhere in the th-eastern part of the island (Inscriptions of Ceylon, I, Department of Archaeology, 1970, p. Lvi)."

A cave inscription at Mihintale (op. cit. p. 2, no. 14) mentions a nun named Saveria, daughter of king Tisagama. There is evidence in the Mahāvamsa (Mhv. 52) that there was a place named Kanagama in hana. Paranavitana (loc. cit.) states that it could be both Kanagama and Kalyāṇi were names of the same place and the nun Saveria mentioned here was the mother of Duṭṭhabhāma, who may have ended her life as a nun which is not improbable in view of the pious nature attributed to her in the chronicles, though the chronicles themselves do not mention it.

Paranavitana (University of Ceylon, History of Ceylon, Vol. I, Pt. I, 145 ff.) tends to identify the ancestors of Abi Saveria with the ruling family of Kṣatriyas of Kataragama whose representatives were present, accordig to the Mahāvamsa (Mhv. xix, 54), at the ceremony of planting the Bodhi tree at Anuradhapura by king Devānampiya Tissa. The Dīvutvamsa (p. 29) mentions that king Gopālābha, father of king Kākavaṇṇa Tissa slew the ten brother-kings of Kataragama. Paranavitana thinks that these ten brother-kings mentioned in the Dīvutvamsa are identical with the ten brother kings mentioned in the Bovattagala inscription, and, they in turn were probably the descendants of those who were present at the ceremony of the planting of the Bodhi tree at Anuradhapura. Thus it is surmised that king (Kalyāṇiya) Tissa belonged to the family of Kṣatriyas of Kataragama and his kingdom was located in the south-eastern region of Ceylon.

Paranavitana (op. cit. pp. 146 f.) states that these Kṣatriyas of Kataragama did not descend from the royal family of Anuradhapura but probably represented the leaders of a stream of immigrants different from that which had established itself in and around Anuradhapura. It appears that when Mahānāga fled from Anuradhapura and established himself at Mahāgāma the two royal families had an cordial relationship until king Gopālābha (i.e. the grandson of Mahānāga) slew the ten brother-kings of Kataragama. But, it appears that there was a marriage between a princess of this line of rulers and Kākavaṇṇa Tissa, the son of Gopālābha, though there could have been minor clashes between the descendants of Kākavaṇṇa Tissa and the representatives of Kataragama Kṣatriyas as indicated by a story in the Dīvutvamsa (p. 39).

Thus, Kalyāṇi of Maniakkhika and Kalyāṇi of Kalyāṇiya Tissa have been considered both as identical and different. Whatever the case may be, the place (or places) by the name Kalyāṇi was important at both these periods, for, in the time of Maniakkhika the place is said to have been hallowed by the visit of the Buddha, and, in the time of Kalyāṇiya Tissa there had been a Buddhist monastery which was the residence of Kalyāṇiya thera. The Ra Jvali (ed. B. Gunasekara, Colombo, 1900, p. 24) states that king Yaṭṭhālaya Tissa built the city of Kalyāṇi (Kulanjana), constructed a vihara and ruled in that city. The Pa Jvali also credits this ruler with the
The Kalyani-vihara has been the residence of eminent monks from early times. As already mentioned, in the reign of king Dutthagamani a theranamed Dhammadutta resided there with five hundred colleagues (Mhv. xxxix, 51). Another theranamed Godatta, too, was a resident here (MA. I, 122). A theranamed Piṇḍapātiya once recited the Brahmajāla-sutta in this monastery, and at the conclusion of the recital the earth trembled (DA. I, 131). Near the vihāra was the village of Kāladīghavāpīgama where monks who lived in the monastery went for alms (SnA. I, 70; AA. I, 13). The dhera Dhammadhānaka Abhayā who probably lived at the beginning of the Christian era (op. E.W. Adikaram, op. cit. pp. 80 ff.) resided at least for sometime at Kalyani when he convinced a young Dhammadhānaka theranamed Dharma, also living at Kalyani that the latter had not till then attained arahantship (MA. IV, 97). Another monk named Mahātiṣa is also mentioned in connection with the Kalyani-vihara (SnA. II. 67; Vism. II. 689). A theranamed Dhaltumana lived in the vicinity of the mouth of the river which was also known as Kalyani. A fisherman gave him alms on three occasions and, as a result of this merit, was born in a happy state (MA. V. 76). E. W. Adikaram (op. cit. p. 113) identifies this place with the present Mutual which, even today, is a chief fishing centre in Colombo. Kalyani is mentioned in the Samyutta commentary (SA. II, 230) where it is said that after the spread of Buddhism in Sri Lanka the country was so full of monasteries that there was one long peal of temple bells from Vānumukha to Ālicchākāla, and from Kalyani to Nāgadīpa. The Vibhaṅga commentary (VībhA. 207) and the Rasavāhinī (Rsv. p. 121) mention Kalyani-cetiya as a place of pilgrimage. In 1425 A.C., during the reign of Parākramabāhu VI (1421–67 A.C.), a number of Burmese, Siamese and Cambodian monks came to Sri Lanka, learnt the scriptures here, received ordination anew at Kālanī from the hands of Vasarananaṃbhāsāmi and Dhammadhānaka theranamed Dhammadhānaka, returned to their own lands and established religious orders modelled on the Saṅgha in Sri Lanka. Subsequently, in the time of king Bhuvanekabahu VI (1470–78 A.C.), the burmese monks form Burma arrived in Sri Lanka to obtain the upasampāda and received their Ordination at a stūpa built on the Kalyani river (University of Ceylon, History of Ceylon, Vol. I, pt. II, pp. 755, 756).

Several Sinhalese literary works of the fourteenth and fifteenth centuries contain descriptive accounts of the sacred city of Kālanī during these two centuries. The fourteenth century Nikāya Sahgrāhaya (ed. W. F. Gunawardhana, Colombo, 1908, p. 25) has preserved this striking picture.
of it: "In this fair island of Lanka, which contains sacred places, such as the city of Kalyani, which is thus described: "With houses, Bo-trees, grand promenades, pavilions, city walls, halls, image houses, relic shrines, and with attractive bazaars and most beautiful gates and porticoes, the city of Kalyani shines glorious. Which (city of Kalyani) is surrounded by a rampart like unto the Cakravīrja rock and contains rows of palatial buildings, white in their mortar and rivalling the Kālīsā rock, of one storey, two storeys, three storeys, five storeys, beautiful with walls, pillars, and flights of stairs ornamented with various frescoes, which city moreover is replete with vihāras, beautiful in their courtyards attached to relic shrines and Bo-trees, and in their image houses, halls, sacred halls, and rows of gates, which city furthermore contains a network of broad streets, and in the two main arteries fed by these, throngs of men of various climes - which city lastly is full of wealth of all sorts - in this fair island of Lanka containing places such as this sacred city of Kalyani.""

The splendour of the city of Kalyani and the vihāra in the days of king Parākramabahu VI (1412-67 A.C.) is recorded in the Pali Vuttamaśālī Sandesā (Colombo, 1923, vv. 59 ff.) and several Sinhala Sandesa poems.

Of the Sinhala Sandesā poems the Salālihīni Sandesā (ed. Dharmārāma, 1925, vv. 53-92) gives the longest account. It tells of the tall mansions set with gems and laga, the main street lit with lamps, houses with porticoes and balconies, the beautiful young women, etc. and then of the vihāra on the right side of the street. There is reference to a huge sedent image of the Buddha in the shrine called the Lakkālikā, a stone image which is described as a creation of Sakka when, in the days of king Kalyaniya Tissa the sea overflowed, the five-storeyed mansion where Māliyadeva theri is said to have preached be Chachakketa Sutta, the milk-white stūpa inside the circular house (vaṭa-da-ge), the recumbent image of the Buddha inside the shrine on the west, the sixty cubit stūpa constructed at the spot where the Buddha preached to the Nagas led by Maniakkhika, the shrine of the Nagas image, the samādhī stūpa, the bodhi-tree, the two ivānka images, the cetiya called the Sivuru-dīgātha (i.e. Civarasthā) constructed at the spot where the Buddha put on his robes after bathing, the statue of the Buddha constructed by the pious at the spot where Kalyaniya Tissa ut the monk to death, and, finally, the mansion of the god Vibhīṣaṇa where beautiful women danced to the accompaniment of music.

The Hamsa Sandesaya (ed. C. E. Godakumbura, 1953, vv. 74-121) describes two vihāras at Kalyani, viz. the Kitsirimevan Kālani vihāra and the Raṇamahavihāra of Kālaniya. At the latter place, it is said are the stūpa built at the spot where the Buddha had his meals with five-hundred monks, two and three storeyed shrines of the Buddha, the bodhi tree, the five storeyed monastery, refectories and the shrine of god Vibhīṣaṇa. The name of Bhuvanekabahu Mahā theri is mentioned as the chief incumbent of the vihāra.

In view of the suggestion brought forward by Paranavitana, as discussed above that the kingdom and capital of king Kalyaniya Tissa was different from Kalyani near Colombo, and was located in the south-eastern region of the island, it is not possible to say definitely, to which of these two places the Pali commentators and the first part of the Mahāvaṇṇa refer, but, that at least from the fourteenth century modern Kālaniya near Colombo had been known as Kalyani in Pali and Kālaniya in Sinhala, and is the place referred to in the literary works and the inscriptions as is quite evident from these references themselves. Towards the latter part of the sixteenth century the monastery went through a dark period of its existence. The Portuguese who were in occupation of Colombo at this time first confiscated the revenues of the Kālani-vihāra, and twenty years later destroyed the vihāra ruthlessly. Paul E. Peiris (Ceylon, The Portuguese Era, Colombo, 1913, Vol. I, pp. 140) recounts the incidents as follows: "With the enthusiasm of the new convert Dharmapāla (in 1555) transferred to the Franciscans the Raja Mahā and Kit Siri Mewān Temples, which face each other across the river at Kālaniya; with the Dājadī Mālikāwa, and the incomes of all the temples in the Island, including the fields, gardens, rents and services which had been dedicated to their use, for the maintenance of the Colleges which they proposed to found in the country. St. Annas in the Orta of Kālaniya, This account clearly indicates that in the 14th century Kalyani near Colombo was a celebrated Buddhist centre in Ceylon.

God Vibhīṣaṇa was a legendary Rākaṭāna prince and was the brother of Rāvaṇa who is said to have ruled in Ceylon long before king Vijaya. In the war between Rana and Ravana Vibhīṣaṇa supported Rama against his brother. Rama is said to have been an incarnation of Viṣṇu. In appreciation of the support given by Vibhīṣaṇa against his brother, Rama made him a god and he (Vibhīṣaṇa) seems to have ruled from Kalyani. After being deified a shrine had been constructed for Vibhīṣaṇa at Kalyani which the Portuguese later destroyed. The present shrine of smaller dimensions was constructed at a later period (cp. Mayūra Sandesaya, 45 ff.).
and St. Bartholomew on the southern bank, at the site of the Pas Mahal Pīya where Bhuvaneka Bahu VII was murdered (in 1551), were the speedy fruits of the new sānas of the king, while the beautiful Daladā Māligāwa gave way to the church of the Holy Saviour, the bell of which still rings out from Kayman’s Gate rousing the citizens of Colombo with the alarm of fire.”

In 1575, the Portuguese captain of Colombo, Diogo de Melo, after capturing Wallala from the forces of king Raja Sinhara I, and defeating his elder brother Mahā Rajjuru Bandāra at Kaduwela, turned on the general Wikramasinha encamped at Kālanīya and succeeded in burning the deserted encampment and destroying the temple, inspite of the resistance of the villagers, who rallied in defence of the sacred shrine, several of them being driven into the river and drowned.

The Dutch who occupied Colombo subsequent to the Portuguese would not allow free worship at Kālanīya but, at the same time they did not wish to antagonize the Sinhalese king at Kandy. With the object of checking Buddhist activities at Kālanīya the Dutch wanted to establish a Christian school there. The Dutch East India Company directed in 1692, that no Buddhist activities at Klīrav-vihiira waiis once more enabled to carry out his desire.

In 1780 A.C. a high priest, supported by Kandyan officials, tried to gain a permanent footing at the Kālanī-vihāra. The Dutch refused to believe the plea of sickness put forward as the reason. The attempt failed.

Evidently with the relaxaton of the attitude of the Dutch toward the end of the eighteenth century the Kālanī-vihāra was once more enabled to secure a renewed lease of life under Dehigaspe Atthadassi Uñānse, a pupil of Vīlūva Piṇḍapātika Saranakāra Sangharaja. In 1780 A.C. a Sannasa was granted by king Kirti Sri Rajasinha of Kandy to Buddharakkhaṭta Uñānse, pupil of Atthadassi implying an understanding between that king and the Dutch that no restrictions were to be imposed on the temple any more.

Under the British the Kālanī-vihāra was permitted further freedom of activity. There was a continued succession of the sīsyaṇusisya-paramparāva, (succession by piliariy descent) and the vihāra, under them steadily assumed a recognised position though the buildings were bereft of the ancient architectural beauty (H.C.P. Bell and A. Mendis Gunasekara Mudaliyar, Kālanī-vihiira and its Inscriptions in Ceylon (Ceylon Antiquary and Literary Register. Vol. I, Pt. III, January 1916, pp. 145 ff.).

The Kālanī-vihāra, as it is now, is reached by a short approach from the main road. Two flights of steps lead to the raised ground of the sacred precincts. On this sacred ground is the stūpa whose shape of the dome is rather unusual. It belongs to the ‘paddy-heap’ type. “Near the stūpa are the modern shrine rooms (piliima-ge), the boma-luwa, the monastery and the Uposatha house.

The modern shrine consists of two lofty, oblong rooms the inner and the outer shrines, and a verandah. In this shrine is a colossal statue of the nāga king Maniakkhiya with two painted figures of nāga princesses on either side. The walls are decorated with delineations of well known Jātakas (eg. Vessantara, Dahamsonda, Mahāśāla, Telapatta, Dhammapāla, Devadhamma etc.), the planetary gods (nava-graha) and the zodiacal signs. There are also representations of kings Yaṭṭhālaya Tissa and Kālanī Tissa, the first seven weeks of the Buddha after his enlightenment, the attack of Māra upon the Buddha, and the sixteen sacred shrines of Sri Lanka. Inside the inner shrine is a recumbent image of the Buddha, two sedent images and the standing images. The twenty-four assurances (suvisi-vivaraṇa) are painted on the wall. There are also figures of the gods Nātha, Viśnu and Skanda-kumāra, and coloured representations of Hanuman, Gana-deviyo, Mahēśvara, Saman and Vibhīṣana (Ceylon Antiquary and Literary Register, I, pp. 145 ff.).

One feature that is new in the subject matter of the paintings at Kālanīya is the entry of Sinhalese history into the panels D. B. Dhanapala (The Story of Sinhalese Painting, Saman Press, Maharagama, Ceylon, 1957, p. 55) observes that when almost all mural paintings were confined to events associated with the Buddha or the Jātakas the Kālanī-vihāra presents a pleasant deviation in this respect. Of the elegance of the paintings at Kālanīya D.B. Dhanapala (loc. cit.) says, “...when the new wing was built the walls were painted with pictures on the old art tradition of Ceylon coming down from Sigiriya and Ajantā. Solius Mendis who had never undergone any technical training in the Western manner has done at Kālanīya a series of pictures that may be considered the best work done in Ceylon after the Polonnaruwa period, if not Sigiriya.

“The Kālanīya frescoes are a throw back in easy but masterful handling of mass composition of the original Ajantā Art, while keeping to the regular rectangular
panels of the Kandyian Art, in the picturisation of a story. Line work has the same robustness and rhythm while delineation of character by a sureness of modelling has been achieved to an amazing degree equalling in craftsmanship to the Sigiriya frescoes or the Bodhisatsva recently discovered at Polonnaruwa”.

H. R. Perera

KALYÂIŅI INSCHRIFTS (1476 A.C.) record the very cordial relationship and co-operation that existed between Ceylonese (now Sri Lankan) Buddhists and Burmese (now Myanmar) Buddhists during the reign of King Dhammaceti of Burma (1472-1492 A.C.)

Dhammaceti was a Buddhist monk who subsequently gave up robes to become king in Burma. Buddhism was at a very low ebb in Burma when Dhammaceti assumed kingship and therefore he decided to restore Buddhism to its former glorious position with the assistance of King Bhuvanesakabhih of Ceylon and the Ceylonese Buddhist monks. So, with the concurrence of the Ceylonese ruler, Dhammaceti despatched a group of novices to Ceylon, to be trained in the pure Theravâda tradition of Buddhism. After undergoing a detailed course of study under elderly erudite theras, the Burmese bhikkhus were conferred the Higher Ordination (Upasampadâ) at an ecclesiastical ceremony conducted in a special pavilion (simâ) put up on the Kâlyânî river, close to Colombo. When the bhikkhus returned to Burma, they were received with much honour and with royal patronage they set up several institutions to train bhikkhus in Burma, following the Ceylonese pattern.

Having given a new lease of life to Buddhist activities in Burma, King Dhammaceti set up the Kâlyânî Inscriptions in Râmañâma to record the series of activities that resulted in the new revival.

The inscriptions were named ‘Kâlyânî Inscriptions’ to commemorate the special Higher Ordination ceremony held on the river Kâlyânî in Ceylon. In these inscriptions Dhammaceti not only gives details of the friendly relationship and co-operation that was built up by his own initiative and endevour, between the two Theravâda Buddhist countries of Burma and Ceylon, but he also gives details of mutual co-operation and suavity that existed between the two nations in the field of Buddhism and its culture, from the time the two countries accepted Buddhism as their main religious teaching. Special reference is made in the Kâlyânî Inscriptions to the visit to Ceylon of Utpâràjiva Mahàthera of Burma during the reign of Narapatisithu (1173-1210 A.C.). It was during this period that a group of elderly monks from Ceylon went to Burma on the invitation of the Burmese Buddhists and established there the institution of Sihala Saṅgha (the Fraternity of Ceylonese Monks – 1181 A.C.).

The Kâlyânî inscriptions further mention about Chaṭaṭa, the Talaing monk from Burma who, too, went to Ceylon with four other monks to master the Ceylonese Buddhist Tradition. Chaṭaṭa received his Higher Ordination in Ceylon and returned to Burma in 1181 A.C. Among the four monks who accompanied Chaṭaṭa to Ceylon was the son of the King of Cambodia, by name Shin Tâmalinda. This had happened during the reign of King Parâkramabhih the Great of Ceylon (Kaanîal Hazra, History of Theravâda Buddhism in South-East Asia, Munishiran Manoharlal Publishers Pvt. Ltd. New Delhi, 1982, pp. 8, 58, 65, 92, 107-10).

T. Arlyadhanna

KALYÂNIVAMSA NIKÂYA, SRÎ – a Buddhist sect that came into being in the Southern Province in Sri Lanka in the year 1810 A.C., headed by Kataluve Gunaratatissa Thera. Kataluve Gunaratatissa Thera who was conferred the Higher Ordination (Upasampadâ) by the Siamese sect (Siyam nikâya) earlier, was not very happy about the constitution of the sima in which the Higher Ordination ceremony was held and he decided to go to Myanmar (Burma) to receive the Higher Ordination anew from the Saṅgha (community of bhikkhus) of the Theravâda tradition in that country. Accompanied by seven novices (samaṇeras) and three lay benefactors (dâyaka), Gunaratatissa Thera set sail to Myanmar in the year 1807 A.C. The King of Myanmar received the delegation with honour and respect and provided all facilities for Gunaratatissa Thera and the novices to be conferred the upasampadâ by the Myanmar Theravâda fraternity at the Kâlyânî sima in the city of Hamsavatî.

Having received the upasampadâ and having spent sometime with the bhikkhus of Hamsavatî, Gunaratatissa Thera and the members of his delegation returned to Sri Lanka and founded the Sri Kâlyânivamsa Nikâya in the year 1810 A.C. with Gunaratatissa Thera himself as its first Mahânyâyaka (supreme head). From the inception of this Nikâya, Sailâmbîrâma in Dodanduwa has remained as its head quarters. At present there are about one hundred and sixty monasteries, most of them in the Southern Province of Sri Lanka, with about four hundred resident bhikkhus in them, affiliated to this Buddhist sect. From the inception of the sect and up to date (1996) there have been twenty mahâ theras functioning as Mahânyâyaka from time to time. They are:

1. Kataluve Gunaratatissa (1810-1832 A.C.)
2. Baṭanpole Kålyânavatissa (1832-1841 A.C.)
3. Koggala-Dhammasâra (1841-1855 A.C.)
4. Mirisse Dhammānanda (1855–1877 A.C.)
5. Udugalpiṭhe Sirisumana (1877–1884 A.C.)
6. Dodanduwe Piyaratanatissa (1884–1908 A.C.)
7. Alutgama Slakkhandha (1908–1925 A.C.)
8. Gintotā Medhanākara (1925–1940 A.C.)
10. Polwatte Buddhaddattha
12. Dodanduwe Dhammāsara
14. Harumalādoda Sīri Ariyawamsa
15. Devinuvara Amarasiri
17. Baṭapole Anomadassī
c18. Keraminiye Jinānanda
19. Koggala Sirivisuddhi
20. Dōdampahala Candasi (From 31st March 1996)

Most of the mahā theras who held the position of Mahānāyaka of this sect were erudite scholars in the fields of Sanskrit, Pali, Buddhist Philosophy and Sinhalese Literature and Language and some of them had achieved distinction in several other fields, too. Dodanduwe Piyaratanatissa Mahānāyaka Thera was an educationist and a pioneer in the Buddhist schools movement in the latter half of the 19th century. He founded the first Buddhist school near Sailabimbārama in Dodanduwa and prepared text books for use in Buddhist schools. He was in association with Colonel H.S. Olcott even before the latter came to Sri Lanka to help Buddhists to start schools for Buddhist children.

Dodanduwe Slakkhandha Mahānāyaka Thera was a reputed Pali and Sanskrit scholar who was consulted by eminent foreign scholars such as Minayefī, Rhyś Davids, Paul Carus, Satiscandra Vidyābhūsana and many others. He was the author of several authoritative treatises on Pali, Sanskrit and Buddhism.

Telwatte Medhā Sīri Ariyawamsa Mahānāyaka Thera was not only an expert exponent of Buddhadhamma but was also a reputed scholar and much sought after teacher of classical Sanskrit works and Sanskrit grammar, who critically edited with explanatory notes several classical Sanskrit works.

Keraminiye Jinānanda Mahānāyaka Thera who was a pupil of Telwatte Ariyawamsa Mahānāyaka Thera was another erudite scholar of classical Sanskrit works and Sanskrit grammar. His contribution to learning in this field, too, is remarkable and invaluable.

Polwatte Buddhaddattha Mahānāyaka Thera was an internationally reputed authority on Pali, Buddhism and Buddhist literature and Philosophy. He was associated with the Pali Text Society of London and assisted that society in many of its Tripitaka text editions and their English translations. The Pālibhāṣavataranaya in the Sinhala medium and the New Pali Course in the English medium compiled by Buddhaddattha Mahānāyaka Thera, several decades ago, are still the most widely used and popular guide books for the study of Pali in schools as well as in Universities. The Tripitaka Śuciya, compiled by the Mahā Thera is a popular 'key' to the study of the Pali Tripitaka Texts. He had the rare distinction of being selected as a member of the official delegation of erudite bhikkhus from Sri Lanka to the sixth Buddhist convolution (Chaṭṭha Saṅgīyāṇa) held in Myanmar in 1956 A.C. in connection with the Buddha Jayanti. At the conclusion of this Buddhist convolution Buddhaddattha Mahānāyaka Thera was conferred the most prestigious religious-academic title — Aggamanhāpanḍita — by the government of Myanmar.

Dambagassārē Sumedhanākara Mahānāyaka Thera is reputed as the fearless and energetic bhikkhu who spent many years in the wilds of the Eastern Province in Sri Lanka to trace the whereabouts of the ancient Seruva Mahāgala Cāitya. Having traced the ruins of this important caitya the Mahā Thera set up the Seruva Development Society to help him in the restoration work and within a reasonable length of time restored the Cāitya to its former glory. He did not stop at that. He persuaded the government of Sri Lanka to open up settlements in the dense forest around the caitya to make the whole area suitable for human habitation.

Baṭapola Anomadassī Mahānāyaka Thera was a scholar-cum-freedom campaigner and social worker. He was an active participant in the freedom campaign of Sri Lanka in the early part of the twentieth century and worked hand in glove with Marxist leaders to win for workers and farmers their rights and in these campaigns he had to undergo great hardship and sometimes imprisonment.

Dōdampahala Candasi Mahā Thera, the present Mahānāyaka (1996 A.C.) is an expert meditation master (kammathānācariya) and has several ārānya senānas (forest monasteries) functioning under his direction and supervision. They are: Gotama Tapovanaya in Mulleriyawa, Kaludiyapokunā Arahanta Tapovanaya in Mihintale, Abhayabhūmi Tapovanaya in Kegalle and Deviyāṅgakanda Tapovanaya in Padaviya. In these forest monasteries live many bhikkhus devoted to regular meditation and learning. Each bhikkhu is provided with a small hut (kuti) with basic facilities. There is an organisation of lay supporters (dāyaka) called Mātīsamātā Samitiya to look after the management of the above mentioned forest monasteries and Candasi Mahānāyaka Thera functions as its patron and guide. Candasi Mahānāyaka Thera is also the patron and Director of the Kumārakāsya Home for Destitute Children at the
KĀMA

Gotama Tapovanaya and Kumārakāśyapa Vocational Training Institute at Kataragama—both institutes being run by the Mātikamātha Samithya.

Kurunduwatte Ratanaśānta

KĀMA. In Buddhist Pali literature the term kāma is used in two different but related senses. They are: (a) objects of sense gratification (b) desire for sense gratification. The evidently early secular usage of the term to mean 'objects of sense gratification' is witnessed in the Kāmasutta of the Aṭṭhaka-vagga of the Sutta-nipāta. In the same context these objects are specifically mentioned, as land (khettaṁ vatthum), gold (hirāñham), cattle and horses (gavāssam), slaves (dāsaporīsam), women (thiyō), kinsmen (bandhī) etc. (Sn. vv. 768, 769).

In relation to the senses which thrive on them, these objects in themselves, have an alluring, enticin
g sense to man to the external world; whereas the former is designated beautiful things there are in the world they are not mistaken for worldly pleasures (kāmasiltta, kīma pāramajjatī). These beings in kīma yaminassā (kāma), etc.) even before the responsive of the senses which thrive on them, these objects are given up, sense gratification, and such ones are described as white-clay lay-devotees, the holymen (mama ye upāsakā māma sīvakā gīthi odātavasanaṁ brahmaññaṁ; loc. cit.).

The sphere in which these twofold aspect of kāma, i.e. vattthu-kīma and kīsa-kīma, operate is called the sensualous-realm (kīma-bhava, kīma-dhātu, kīmaloka, kāmāvacara). From this it is apparent that kīma operate in intra-human spheres, too. In fact the Peta vattthu and its commentary contain references to this. For example, the stock epithet sabbakāmāsamiddhīmis often met with in these texts is used to describe these beings in intra-human spheres all whose wishes are fulfilled (Pv I, p. 10, PvA. p. 461). However, the better known division of kāma, in accordance with their sphere of operation, are worldly pleasure (mānasaka-kāma) and divine pleasures (dībbaka-kāma). The popular religious belief is that enjoyment of the pleasures of senses is obtained as a reward for virtuous living and good deeds performed either in this existence or in previous ones. Some, specially the brahmins, seem to have believed that even renunciation of household life was aimed at the attainment of divine-pleasures (M. II, 75), which to them was the attainment of the transcendental goal. Buddhists also accepted that divine-pleasures are superior to worldly-pleasures (M. I, p. 505; S. V, p. 409) evidently in the sense that they are rarified and less contaminating, as it becomes adequately clear from the reference in the Samyutta Nikāya.

Besides this general application of the term in the above given meanings there is to be found in Buddhist literature occurrences of this term, in certain contexts, with its meaning limited to the sphere of sex gratification. This is the meaning assigned to the term in the traditional interpretation of the third of the five-precepts (pācāsālī A. V, p. 264, cf. Sn. v. 1041) in the phrase kāmesu mīcchācāra, meaning 'impropriety in the gratification of sex-desires'.

Viewed in relation to the goal i.e. Nibbāna and attainment thereof kāma undoubtedly is an obstacle. But considering from a purely worldly point of view enjoyment of sensual pleasures (kāmassāda) is a necessary constitution of day to day life. In Buddhist literature laymen are described as those enjoying sensual pleasures (gīth-kāmabhogi: Vin. I, pp. 203, 287; A. IV, p. 281). Accepting this position as a fact of life in the household the Buddhist lay society evolved for itself a code of morals and ethics by means of which the layman's life may, while still being in the process of enjoying kāma, be gradually elevated in course of time for the attainment of the transcendental goal. This, in effect, is the role of sīlā in Buddhism. This is where sāmvara or restraint, in the enjoyment of worldly pleasures, plays its vital role. Thus, the precepts primarily meant for the lay folk call upon them to refrain from excessive indulgence in such forms of enjoyment. And this can appear to have been answered by many whom the Buddhist texts describe as white-clay lay-devotees who are given to sense gratification (upāsakā gīthi odātavasanaṁ kāmabhogi: M. I, p. 491). The texts refer to a still another category of layfolk who appear to have taken a further positive step towards the gradual giving-up sense gratification, and such ones are described as white-clay lay-devotees, the holymen (ye upāsakā māma sīvakā gīthi odātavasanaṁ brahmaññaṁ; loc. cit.).

But in spite of such apparent concessions granted to lay-folk, it is very clear that, as pointed out before, when considered in relation to the goal, kāma is certainly an impediment (antarāyikā dhammā: M. I, p. 130; MA. II, p. 103) that has to be got rid of by all those who seek to attain the goal. The Buddha explicitly describes desire for...
the gratification of sense-desire (kāma-vitakka) as being not conducive to the attainment of Nibbāna (anibbānasamvattanikā: M. I, p. 115). Hence, from this angle kāma is utterly denounced in Buddhism.

Viewing from this angle it is pointed out that kāma offers little enjoyment (appassāda) and causes much pain (bahu dukkhā) and anxiety (bahūpāyāsā: M. I, pp. 91, 130; cf. Dhp. v. 186). Kāma generates not only sorrow, but also fear (Dhp. v. 215). In the Dvedhāvitakka Sutta (M. I, p. 115) the Buddha points out that kāma is harmful to oneself (atthyābādha), to others parabyābādha), and both to oneself and to others (ubhayabyābādha), destructive of knowledge (pahūti-nirodhi) associated with distress (vighatapakkhi) and also not conducive. To Nibbāna (anibbānasamvattanikā). Though appearing as attractive (cītra), sweet (madhura) and charming (manorama: Sn. v. 50) all sensual-pleasures are mean, impermanent (anica), causing pain (dukkha) and subject to change (viperināmadhamma: A. II, p. 177). Similarly they are mean, false, empty, illusory and are mere foolish babble (M. II, p. 261).

Looking upon the objects of sense gratification as kāma, the Buddhist texts assert that to the extent these objects serve the eye, the ear, the nose etc. are pleasant, attractive, alluring and enticing and produce states of comfort and joy (sukham somanassam) men derive pleasure out of these (kāmānaṃ assādo) even in a limited way (appassāda kāmā vuttā bhagavata...). But the Buddhist texts hasten to point out the ill-effects that almost inheres in this very process of enjoying the pleasures these kāma provide. In a calculated relative estimation they say that the grief that comes in the wake of these pleasures (kāmānaṃ ādina) out-weight the enjoyment. This is what is held against the proneness to the enjoyment of the pleasures that the senses appear to provide. The very basic competitive struggle for existence and consequent quarrels and disputes, wars and strife, attacks and offensives, crimes and punishments, are all part of the process of pursuing pleasure at various levels, personal or institutive, national or international. These are the worldly manifestations of the ill-effects of the pursuit of kāma on the social and domestic planes. Further to this the Buddhist texts deal also with the ill-effects on the religio-ethical side which result from the pursuit of the pleasures of kāma. The unethical behaviour which is prompted by the greed for kāma (duccarita i.e., transgression in thought, word and deed) has also its corroding effect on the life of the individual in the sāṃsāric process. It degenerates his state of life (M. I, p. 87), determining his destiny even in the life-after.

Buddhist texts also contain numerous similes illustrative of the empty, harmful and beguiling nature of kāma. Thus, kāma is compared to a skeleton (aṭṭhikakhaṁ), lump of flesh (mamsapesi), torch of grass (tiṇukka), pit of glowing ambers (abhāra kāsā) and so on (M. I, pp. 130; 364; cf. A. III, p. 310; IV, p. 289). Illustrating further the obstructive nature of kāma it is pointed out in Buddhist texts that kāma is one of the four modes of clinging (upādāna: D. III, p. 230), one of the ten fetters (sanyojana: A. III, p. 373), one of the three longings (esāṇā: D. III, p. 216). Above all, it is often referred to as a defiling influx (kāmāsāsa: Vin. III, p. 5). Sensual thoughts (kāmaviṭṭhaka, kāmanahkappa) are described as unwholesome things (akusalā dhammā: Nett. p. 18; Vbh. p. 256). If one were to sum-up what kāma is, according to Buddhism, it could be categorically called a painful thing (dukkhadhamsa: S. IV, p. 188).

Despite its most harmful nature, one finds kāma as being extremely difficult to give up (Sn. v. 772). This is because the natural inclination of individuals is to swim with the current (anusotāgāmi), as the Buddhist texts put it, and pursue relentlessly the gratification of sense-desires, even though this gratification is shown to be vile (mūlha), worldly (puthujjana) and ignoble (anariya: M. I, 454). The ignorant worldlings being unguarded with regard to the six gateways of contact (phassa-yatana) gets intoxicated with the five constituents of sensual pleasures (S. IV, p. 196; cf. A. III, p. 410). How one gets intoxicated and subjected to what one perceives is clearly explained in the Madhupindika Sutta (M. I, p. 113 f.). Therein it is explained how with the arising of feeling the whole process of sense-perception takes a very subjective tone and how one begins to perceive what one feels, reflect on what one perceives, and get obsessed with what one reflects, until ultimately one becomes subject to an objective order of things, thus becoming completely enslaved to kāma. Under such circumstances even when faced with painful objects one does not stop at developing a feeling of repugnance towards them, but instead goes still further and develop a liking for pleasant things. This is generally so for, one obsessed with craving for pleasure, sees no freedom from painful feeling save from enjoyment of sensual pleasures (S. IV, p. 208). This craving for gratification of sense-desires gradually eats one up and burns one up (M. I, p. 504; cf. D. II, p. 308; S. I, p. 31).

Now, questions arise as to whether it is possible to dissociate (visayāyoga) oneself from being engaged with the pursuit of the gratification of sense-desires (kāma-yoga: A. II, p. 10 f.) and whether in fact there is any freedom (nissaranā) from this enslavement to kāma. In Buddhism both these questions are answered very clearly in the affirmative. It is explicitly stated that there is dissociation from engrossment to the gratification of sense-desires and there is also freedom from enslavement to kāma (ibid.).

Moderation with regard to gratification of sense-desires, the advice offered by the Buddha to lay householders, in itself is not sufficient either to bring about
complete dissociation from enjoyment of sensual pleasures or to effect one's freedom from enslavement to objects of senses. Renouncing the life in the household and entering the Order (pabbajjā) will undoubtedly provide a better atmosphere to achieve dissociation and freedom from kāma (M. III, p. 33). In fact both these modes namely, moderation and entering the Order, would be positive progressive steps in the process leading to dissociation and freedom from kāma. These steps would enable one to abandon the tendency to swim with the current i.e. to follow one's base inclinations, and turn out to be one who swims against the current (patisotagāmi: A. II, p. 5) or as the Dhhammapada puts it, one who swims upwards the stream (uddhasotagāmi: Dhp. v. 218). However, these are only preliminary steps in the process culminating in the total abandonment of all desire for the gratification of both worldly and heavenly pleasures (nekkhamma: It. p. 94). Life in the Order enforces upon oneself higher precepts which induce one to train to control one's sense-doors (indriya-samvara, indriyesu guttavāra) more effectively. The practice of meditation which is a necessary constituent of life in the Order helps to bring about tranquillity of mind leading to sense-control. Yet none of these devices suffices in themselves to eradicate totally the craving for the gratification of sense desires. This has to be accomplished through insight ((vipassana), through the comprehension of the true nature of kāma (kāmānāma pariḥsānā). It is in order to help one to attain this comprehension that the Buddha teaches about the arising of, passing away of, enjoyment of, evil consequences of and finally freedom from kāma (M. I, p. 502 ff.). When there is full comprehension of kāma as they come to have the nature (yatābabbhūta) i.e. their true nature as impermanent, painful, providing little enjoyment and much anxiety and so on (M. I, pp. 91, 310; A. II, 177; Dhp. vv. 277–79) one becomes able to utterly eradicate craving for gratification of sense-desires, for how could one who has seen suffering (dukkha) and wherefrom it arises, incline towards gratification of sense-desires (S. I, p. 177; cf. Nett. p. 61).

One who has gained comprehension of all objects of sensual-enjoyment (kāmabhogesu paṇḍito – It. p. 94), in the above said manner, could through introspection examine oneself and see whether objects of sense-desires yet assail his mind and whether his mind when confronted with them eagerly leaps at them. If by this self-analysis one finds that objects do not assail one's mind, that one's mind does not leap and cling to them, then one can rest content and assured that one's mind is free from all craving for gratification of sense-desires and free from all painful and burning defiling influxes (cf. M. III, p. 114; A. III, p. 245). Such an one, freed from all craving for the gratification of sense-desires, will consider the things seen just as the seen (dittte diṭṭhamattā), the things heard just as the heard (sute sutamattam), the things sensed just as the sensed (mute mutamattam) and things cognized just as the cognized (vinītāte vinītātattamattam). And this indeed is the end of suffering (anto dukkhasa Ud. p. 8, cf. Nett. p. 24).

KĀMA-BHAVA, plane of sense-pleasures, the sphere or the realm where existence is characterised by consciousness of sense-pleasures (kāmasaṅñā); it indicates both the spiritual nature of consciousness and the plane where that consciousness obtains. Spiritually, it represents the lowest of the three qualitatively different types of mundane consciousness, the other two being the consciousness of fine matter (rūpa-saṅñā), and the consciousness of immateriality (arūpa-saṅñā). Spatially Kāmabhava represents the lowest of the three planes of temporal existence in the division of the cosmos, the other two being the fine-material plane (rūpa-bhava) and the immaterial plane (arūpa-bhava D. III, 215, 275; S. II, 3; 1V. 258; A. III, 444). It is therefore possible to look upon this threefold division as indicating the gradations of the mental development in the Buddhist process of religious uplift. In this scheme, Kāma-bhava would indicate the level of existence which is totally pleasure-conscious.

The second member of the compounds i.e., bhava meaning becoming, as in kāma-bhava etc. is sometimes replaced by dhātu 'element', bhūmi 'sphere' or loka 'world', with no significant difference in connotation. Thus, we find terms like: kāmadhātu (D. III, 215), Kāmabhūmi (Ps. I, 83) and Kāma-loka (Saddhammapāya, JPTS. 1887, Stz. 233, 261) in place of kāma-bhava etc. Also we find a third word, avacara, meaning 'moving in', being introduced in between the two members of the compound with the result that we get terms like Kāmavacara-bhūmi etc. (Ps. I, 83 f.).

Kāma-bhava refers to that plane of existence in which consciousness of beings is conditioned, pervaded and governed primarily, by desire for sense-pleasures (Ps. I, 296). In spite of the fact that these beings have the potentiality to rise spiritually above kāma-level, they are possessed of unwholesome mental states such as the five mental hindrances to spiritual progress (nivaraṇa) and the five mental fetters (samyojana) that bind sentient beings to the lower plane of temporal existence known as orambhāga which is none other than kāma-bhava itself. And that is the characteristic feature of kāma-bhava.

It is one of the seven stations of consciousness of the mind (vinītānāthaitti, D. II, 68) and also the nine 'abodes' of beings (sattāvāsa, D. III, 263); and the beings there are
KĀMACCHANDA

described as having diverse bodies (nānatta-kāyā) and diverse consciousness (nānatta-saṁññā; ibid.).

The state of life in this place is sometime referred to as the gross personality (olārika-attrapātri̇ba) because it has gross material form (rūpi), made of the four great elements – cātummahābhūtika and partaking of solid food (kabali̇kārāhārabhakkha D. I, 34, 195).

Life with such a personality and such state of consciousness obtains only in a part of the cosmos which, as already stated, is known also as orambhāga; and this comprises all four apāyas of the world of human beings and the six lower devalokas (Ps. I, 83; DA. I, 987; PsA. I, 296 f.). See RUPA-BHAVA, ARUPA-BHAVA and COSMOLOGY.

Upali Karunaratne

KĀMACCHANDA, variously translated as excitement of sensual pleasure (PED.), sensuous desire (Buddhist Dictionary), will to sensual desire (The Guide, p. 27), lust for sense-desires (The Path of Purification, p. 658), generally connotes the desire for sense gratification, the defiling subjective attitude of man towards objects of sense gratification. It is a defilement of the mind (cetaso nirodho), and hence, occupies a prominent place in all enumerations of hindrances to mental culture and spiritual growth. Thus, it heads the list of five hindrances (kilesa) that cripple the mind and weaken wisdom (DhsA. pp. 92, 94, 97). Similarly, quite often, it is enumerated as the first item in the list of ten fetters (nīlomanīya, q.v.), that bind man to the samsāric process continued existence.

The term kāmacchandā is a compound made up of the terms kāma (q.v.) and chanda (q.v.). The term kāma is different but related meanings; objects of sense (saṁsārahārā-kāma), desire for sense gratification (kilesa), etc. The term chanda primarily connotes will or desire (cetassana; Vism. p. 466). The same source also says that the function of chanda is scanning for an object, this function is described as the extending of one's mind and (cetassana) in the apprehension of an object (cetassana, cit.). Thus chanda represents a particular form of the process of perception at which the observer feels it, mentally at the object that is perceived. Though primarily the term chanda is unattached, it acquires a definite moral colouring, good or bad, depending on the concept or activity with which it is associated. Thus, when combined with kāmacchanda virtuous desire or desire for good, it receives an ethically good colouring while when combined with kāma, it receives an ethically bad colouring. Hence the PED. (s.v. chanda) says that the combination kāmacchanda is only an enlarged term of kāma.

The term kāmacchanda is given in exegetical works as a synonym for kilesakāma (Nd. I, p. 2). The Majjhima-Atthakathā (II, p. 287) while equating it with the term kilesakāma says that it is desire (chanda) because it causes desire (chandakaranava sena chando). That in such contexts the term chanda connotes an ethically bad sense is clearly pointed out elsewhere by Buddhaghosa. Thus, in the Atthasālīni (DhsA. p. 370 cf. NdA. SHB. p. 11) he says that in this particular context it is not mere will or desire to do, nor even desire for the good but it is so called desire for sense gratification (kāmasamkhāto chando).

An interesting definition of the term kāmacchanda is found in the Samyutta-Atthakathā (III, p. 263) wherein the term is defined as attachment (rāga) pertaining to the five propensities of sense pleasure. Herein apparently the term rāga is regarded as a synonym for chanda. It is also interesting to note, in this context that there are instances both in the canonical, and non-canonical literature where the two terms kāmacchanda and kāmarāga are regarded as synonymous. For example, when enumerating the lists of five hindrances these two terms are used as synonyms (S.V. 92, 94, 96, 127). The term kāmarāga is frequently found in the list of ten sanyojanas but occasionally the term kāmacchanda is used in its place (Nett. pp. 14, 15). In the list of synonyms for kilesakāma and chanda these two terms occur amidst numerous other terms. These synonymous terms are kāmacchanda, kāmarāga, kāma-nandi, kāmaṇṭhā, kāmasneha, kāmaparijāha, kāma-muccha, kāmaṭṭhosāna, kāmogha, kāmaṭṭhosāna, kāma-yoga, kāmacchandanivarana (Nd. I, pp. 2, 4, 52, DhsA. p. 370).

An examination of these terms makes it clear that all of them are not exact synonyms but terms close in meaning (DhsA. p. 370). It is also seen that of these numerous terms only the three terms kāmacchanda, kāmarāga, and kāmaṇṭhā are of frequent use in a regular technical sense.

Now, as shown above, though the two terms kāmacchanda and kāmarāga are considered as being interchangeable, the two terms chanda and rāga when taken separately in their ethically bad meanings seem to convey allied but somewhat different nuances of meaning connoting two different stages of desire of varying intensity. In this connection it is relevant to note that chanda is at times defined as weak-attachment (dubbalaraṇa) and rāga as an intensified form of chanda (NdA. SHB. p. 11). The term chanda as defined in the Visuddhimagga (p. 466) also suggests that it represents an initial stage of desire. Buddhist Sanskrit tradition also speaks of a similar
difference between chanda and rāga. The former is defined as desire for things to be acquired and the latter as attachment to things already in possession (see Mdhv. p. 52).

If chanda and rāga connote two different stages of desire, the question of the two terms kāmacchanda and kāmarāga connoting two different stages of desire for sense gratification has to be considered. As pointed out before, in canonical literature these two terms are used in interchangeable meaning and as such there is no evidence of any specific attempt to lay emphasis on the slight differences in the nuances of their meanings. This is generally so even in commentarial literature. Though the difference in the shades of meaning of chanda and rāga are pointed out, the two compounds are generally regarded as synonymous.

Not only chanda and rāga, even such terms as tanhā and upādāna when combined with kāma as kāmatanhā and kāmupādāna are considered as conveying a meaning quite similar to that conveyed by the terms kāmacchanda and kāmarāga. Buddhaghosa while pointing out that kāmupādāna represents a more intense stage of tanhā generally, considers all four terms to be synonyms (Visn. p. 569). He also cites an interesting traditional definition of tanhā (craving) as the aspiring (patthana) to an object that one has not yet reached, which is compared to a thief's stretching out his hand in the dark and upādāna (clinging) as the grasping of an object one has reached, like the thief clinging to his object. According to this definition it is seen that tanhā is more like chanda and upādāna is more like rāga. This similarity of meaning becomes further evident when this definition is compared with the Buddhist Sanskrit definition of chanda and rāga referred to above. Thus it is seen that while in the final analysis kāmacchanda might be taken as representing an initial stage of desire weaker in strength than that stage of desire represented by the kāmarāga, for general purposes of expression and enumeration of the list of mental defilements Buddhist literature considers them to be synonyms. In passing, reference also should be made to the term chandarāga (q.v.) which conveys a meaning very similar to that conveyed by kāmacchanda (S. I, p. 163).

As pointed out earlier kāmacchanda connotes the defiling subjective attitude of man towards the objects of sense gratification. What is the cause of this subjective attitude? According to the Buddha's teaching it is the unwise attention (ayoniso manasikāra) directed towards objects of sense desire that causes kāmacchanda (S. V, pp. 84f.; 93, 103). Due to unwise attention one's view gets blurred and perverted and hence one fails to see things in their correct perspective (yaṭṭhābhūta). Thus one considers things that are impermanent as permanent, painful as pleasant, unchangeable, non-substantial as being with substance, unpleasant as pleasant (S. V, pp. 64, 103 MA. I, p. 281). Viewing so one becomes prone to consider only the alluring features (subhanimitta) of things, which are of temporary nature, as constituting the true nature of all objects of sense desire. Hence the texts cite unwise attention to the alluring features (subhanimitta) of things as the food for the arising of kāmacchanda that has not yet arisen and for the increase and growth of kāmacchanda that has already arisen (S. V, pp. 64, 103) Therefore it is said that when this food is fully consumed the fetter which binds one to the continuo us saṃsāric existence will remain no more (S. lI, pp. 90, 99 Nett. p. 83). To comprehend this one should employ wise-attention (yoniso manasikāra) and view the arising and passing of all things. When so viewed, desire for sense gratification will no longer remain (S. IV, p. 188 f. cf. MA I, p. 432, also MA. I, p. 282). See further KĀMA.

KAMAKURĀ, a city in Kanagawa prefecture situated about 45 km southwest of Tokyo. Its historical importance dates back to the twelfth century A.C. In 1180 A.C. Minamoto no Yoritomo organised forces in Echizen province (now part of Shizukawa prefecture) against the Taira clan which had gained political control in Kyoto. The Minamoto finally emerged victorious at the decisive battle of Danhura in 1185 A.C., paving the way for the first military government in Japan. The imperial court later gave official recognition to the military rule of Minamoto no Yoritomo in 1192 A.C. by conferring on him the title of Sei Tai Shogun ("Barbarian-subduing generalissimo"), popularly abridged as "shogun"). The military government established by him, thus, came to be known as the shogunate. Historians generally consider the year 1185 A.C. to be the beginning of the Kamakura period which ends with the collapse of the Shogunate in 1333 A.C.

As a result of civil wars, fires and natural calamities recurring at sporadic intervals for a considerable period of time prior to the establishment of the Kamakura Shogunate, people in Japan realized that the age of mappo (degeneration of the dharma), a period in which none could be enlightened, was in force. The mappo period, according to the tradition, is believed to have commenced from 1052 A.C. Under these circumstances, Buddhism had to change itself to meet the needs of the day. There were, broadly speaking, three currents of Buddhist thought in the Kamakura period. All of them are the reaction of the continued thought of mappo. The most popular belief among the masses was a thought of rebirth in the Pure Land by placing firm faith in the might of the Amita or Amida Buddha. The major schools of this thought are Jodo and Jodo-Shin (q.v.) sects of Buddhism. The second type of Buddhist thought which received immense support mainly from the Samurai or Warrior...
class was Zen (q.v.) Buddhism. The third type places emphasis on the revaluation of the true spirit of the Hokekyo (Saddharmapundarika Sutra). This school came to be known as the Nichiren (q.v.) sect of Buddhism which was named after its founder Nichiren (1222–1282 A.C.).

Kamakura is the site of numerous Buddhist temples. It is also famous for a seated Buddha image popularly called the Daibutsu (q.v. great Buddha) measuring 11.5 metres or 37.7 feet in height, the second largest among such statues in Japan.

Tochikhi Endo

KAMALA-SILA (8th century A.C.), also called Kamala-śila, was a professor of Tantras at the University of Nalanda whence he was invited by the Tibetan king to visit that country. While there, he vindicated the ideas of Padmasambhava and Santarakshita and defeated a Chinese monk who professed opposite views. By expelling this Chinese monk from Tibet, Kamala-śila left the way open for the complete Indianization of that country through Buddhism.

Kamala-śila was a follower of Sāntarakṣita, the well-known Mañjyuśrī teacher, to the kārikas (memorial verses) of whose Tattva-saṃgraha he wrote a commentary (pañjikā). The kārikas and the commentary are printed together in the GOS volume XXX and XXXI, published in 1926.

According to S.C. Vidyābhūsana, (A History of Indian Logic, Calcutta University, 1921, pp. 327–8) Kamalaśīla was the author of another work called Nyāyabindu-pūrva-pakṣasamkṣipta, which is available in Tibetan and is a summary of criticisms of the Nyāyabindu of Dharmakīrti.

Some thirty works of the Tibetan Tripitaka are attributed to Kamalaśīla: (Taisho: See under Kamalaśīla).

A. G. S. Karlyawasam

KĀMASUKHALLIKĀNUYOGA, 'persuit of sensual gratifications'; 'self-indulgence'; 'attachment to worldly enjoyment'; 'practice of enjoying excessive pleasures of the senses as the be all and end all of human living'.

The Pali compound kāmasukhālikānuyoga is made up of several words kāmasukha (pleasures of the senses) + allikā (attachment to) + anuyoga (practice of) which as a compound gives the above shades of meaning.

In the first discourse (S. V, 420–24) delivered to the five ascetics (pañcavaggiya) with whom the Buddha aspirant Siddhartha Gotama practised six years of rigorous asceticism, the Buddha declares that two extreme practices - the practice of excessive sensual enjoyment (kāmasukhālikānuyoga) and the practice of tormenting the body by severe forms of asceticism (attañilamathānuyoga q.v.) have to be given up by one who has forsaken worldly happiness (pabbajita) in order to achieve spiritual perfection.

From the point of view of Buddhism the above statement made by the Buddha, addressing the five ascetics, is very significant. Prior to leaving household life the Buddha, as Prince Siddhartha Gotama led a very luxurious life with all material comforts a man could imagine of. As the son of a wealthy feudal Indian Rāja, Siddhartha Gotama was provided with all luxuries of life. He lived in three magnificent palaces, built for him by his anxious father, to suit the three seasons. He was always surrounded by beautiful young ladies, musicians, dancers and attendants. He was provided with the choicest of food and clothing. At the age of sixteen years he married a beautiful and affluent princess and lived in luxury till he was twenty nine years old. It was while living this life of affluence and luxury that realisation dawned in him, through personal experience, that mental peace and enduring happiness did not result from that type of extravagant and luxurient living. With this realisation Siddhartha Gotama decided to bid farewell to that kind of life-style and adopt its opposite, namely the practice of tormenting the body by denying to it even the basic physical needs. He left behind all his worldly belongings and left the palace in secret and joined a band of five ascetics who were practicing severe forms of asceticism in a thick jungle in Uruvela (J. I, 67 ff.). For six years he practised asceticism in the company of the five ascetics. In practising rigid forms of asceticism he went to their extreme with undaunted courage and determination.

At the end of the six year period realisation came upon him that mental peace and happiness cannot be achieved by the practising of rigid forms of asceticism. So he gave up practising that type of asceticism, cleansed and refreshed himself by bathing in the river close by, draped himself in simple and clean robes and took in sufficient food to regain his lost physical strength.

At this stage the five ascetics deserted Siddhartha Gotama in disgust saying that Gotama had given up his exertion and reverted to his former life style of luxury and extravagance.

Gotama withdrew to a serene environment on the bank of the river Nerañjña and sat cross-legged in the shade of a pipal tree and meditating strenuously and continuously, he developed insight into the true nature of things and attained Enlightenment (bodhi).
KAMMA

When the Buddha went to convey to his erstwhile companions about the truth he had realised they were reluctant to listen to him, for they thought that the Buddha had gone off the tract. But later the Buddha was able to convince them about his attainment.

It is in the discourse delivered to these five ascetics (Dhammacakkappavattana Sutta) that the Buddha spoke about the futility of following the two extremes of self-indulgence (kāmasukhilīkānyoga) and self-mortification (attaśikamathānayo). The Buddha decries self-indulgence as lowly (hino), crude (gamma), 'the way with the masses' (pithujiyākiko), ignoble (anariyo) and leading to degeneration (anathaṣasambhito). Having decried self-indulgence as a practice that debases man, the Buddha rejects its opposite, too - practice of self-torture or extreme forms of asceticism - with equal emphasis as painful (dukkho), ignoble (anariyo) and conducive to degeneration (anathaṣasambhito). Having rejected the two extremes the Buddha recommends to the five ascetics the middle-path (majhima patipada) and describes the middle-path as something that gives rise to clear vision (cakkhakaraṇi) to wisdom (śānakaraṇi), to pacification (upasamāya), to Enlightenment (sambodhāya) to emancipation (nibbāna).

KĀMĀVACARA. See KĀMABHAVA

KAMMA (Skt. karma): The doctrine of karma represents the Indian theory of moral responsibility. Even though it is part of the traditional Brāhmaṇical system of thought from the earliest period, the Brāhmaṇical search for a permanent and eternal reality culminating in the conceptions of self (ātman) and moral ideal (brahman) overshadowed their reflections on the importance of the human individual's karmic responsibility. The eternal self as the inner controller (antaryāmin) was accorded the most significant position in philosophical discourse so much so that reflections on the psychological personality received a secondary place. The concept of self turned out to be a notion that is not so much different from the concept of a Supreme Being in a theistic system. Indeed the self assumed its latter position in the later Brahmanical literature, especially the Bhagavadgītā. For this reason the problem of individual human responsibility did not emerge as an important philosophical issue.

The Materialists and the Ājīvkikas, both part of the ascetic (samaṇa) tradition, were hostile not only to the metaphysical conception of a self of the Brahmanical schools but also to any notion of a self that implies a conscious human person who could be held responsible for his/her behaviour. While the Materialists believed in strict physical determinism, the Ājīvkikas proposed a theory of strict biological determinism (D. I, p. 55 f.). Both traditions denied the validity of human effort and free-will, the latter admitting the possibility of ultimate freedom determined solely by biological factors, a theory that came to be popularly designated "purity through the evolution of the life-process" (samsārasuddhi: D. I, p. 52 f.). Both came to be referred to as "non-action-theory" (akammavāda) or "non-activity-theory" (akīryavāda) i.e., theories denying moral responsibility (M. I, p. 405; A. I, p. 286). This leaves Jainism and Buddhism as the two major schools that grappled with the philosophical problem of accounting for moral responsibility while admitting the reality of the human psychophysical personality. Hence their views can be characterized as "action-theory" (kammavāda), "activity-theory" (kīryavāda) and "effort-theory" (viriyavāda: A. I, p. 287). Yet, when it came to the detailed elaboration of these two theories, they differed from one another rather extensively.

Mahāvīra, the leader of the Jains, was closely associated with the Ājīvika teacher, Makkhali Gosūla. This association has left its imprint on Mahāvīra's doctrine of "activity" (kīrya). In fact Ājīvika teachers like Pūrṇa Kassapa showed greater sympathy for Mahāvīra's doctrine of karma while condemning the Buddha's views on the same issue. 2

There can be no doubt that Mahāvīra subscribed to a doctrine of karma. However, the question is: How did he conceive of karma? Mahāvīra had no difficulty in adopting the principle of certainty in regard to human knowledge and understanding, for he was the first Indian philosopher to claim omniscience, which also prompted him to claim objectivity to his theories. Laying claim to both certainty and objectivity in describing karma, Mahāvīra could not simply get involved in an empirical analysis of human psychology in order to justify the validity of free-

1. See B. M. Barua, Pre-Buddhistic Indian Philosophy.
2. Kassapa's theory of six species of human beings (abhijñā) is evidence for this. The six species are (1) black (kaṇha), that is, those who are engaged in cruel occupations such as killing animals; (2) blue (nila), those monks who live with a sense of insecurity and who endorse a theory of human action or activity (kammavāda, kīryavāda); (3) red (lohiya), representing the Jains who wear one robe; (4) yellow (halidā), the white- clad lay persons as well as naked ascetics; (5) white (sukka), male and female Ājīvikas, and (6) pure white (paramasukka A. I, III, pp. 383-384). If the Jaina and Buddhist theories of karma were identical there was no need for a senior contemporary of Mahāvīra and Buddha like Kassapa to distinguish between the monks (bhikkhu) who upheld a theory of moral responsibility (kammavāda, kīryavāda) and the Jains.
will. The theory of biological determinism would have sublated any psychological theory that is not equally objective. He needed a theory of psychology and morality that can lay claim to objectivity so that it can be compatible with biological determinism. His ingenuity lies in his formulating a doctrine of action (kiriya) that met such requirements without simply returning to the Upaniṣadic notions of ātman and brahma. Thus the conception of action (kiriya) emerges as the central conception in Jainism.

Action (kiriya), according to Mahāvira, is threefold: bodily, verbal and mental. The most important feature of this theory of action is that all three forms, bodily, verbal and mental were accorded equal status without at the same time concerning himself with the psychological springs of action as emphasized by the Buddha. Empirical psychology has more often been a spoiler of the purity of philosophical discourse. Clarity and precision can attain in the study of physical phenomena are not easily achieved in the analysis and explanation of human psychology. Therefore, Mahāvira opted for a more physicalistic explanation of action rather than a psychological analysis. Here, instead of a theory of intentionality, we meet with, what may be called in modern philosophy, an action theory of mind. Action dictates what the so-called mind is rather than the mind determining what action is.

It is for this reason that Mahāvira believed that any bodily action, whether intentional or unintentional, will produce consequences for which the agent of action is responsible. In ignoring the intentionality of human action Mahāvira was able to give a more systematic and precisely formulated account of the relationship between action and consequence as well as action and responsibility. Arguing against the Buddhists, a disciple of Mahāvira says:

If a savage puts a man on a spit and roasts him, mistaking him for a fragment of the granary; or a baby, mistaking him for a gourd, he will not be guilty of murder!... If anybody thrusts a spike through a man or a baby, mistaking him for a fragment of the granary, puts him on the fire and roasts him, that will be a meal fit for the Buddhas to breakfast upon.... Well -controlled men cannot accept your denial of guilt incurred by [unintentional] doing harm to living beings... It is impossible to mistake a fragment of the granary for a man; only an unworthy man can say it.

According to this assertion, the responsibility for an action follows irrespective of whether it is performed with or without intention, with or without knowledge. Thus Mahāvira is able to link up an action with its consequence without having to face the dilemma where the same action will appear to have two different consequences. A good action is invariably associated with good consequences, never evil ones. Similarly, an evil action will always be associated with evil results, never good ones. The relationship between action and consequence is never conditional, but always absolute.

By explaining action (kiriya) in this manner, Mahāvira was prepared to contrast it with biological determinism. Because it is human action, it is internal to the person, whereas biological determinism is external. Action explains free-will, for every action is willed. It is free because it is not part of biological determinism. This is the sense in which Mahāvira's statement that "There are things that are determined and things that are not determined (niyānīiyayāṁ saṁtaṁ)" can be understood.

The Jaina conception of freedom from karma as described in the early discourses is compatible with their doctrine of karma outlined above. Questioned about the purpose of the extreme forms of self-mortification practised by the Jains, one Jaina disciple responded as follows:

Your reverence, Nītaputta the Jain is all-knowing, all-seeing; he claims all embracing knowledge and vision saying: "Whether I am walking or standing still or asleep or awake, knowledge and vision is permanently and continuously before me." He speaks thus: "If there is, Jains, an evil deed that was formerly done by you, wear it away by this severe austerity. That which is the non-doing of an evil deed in the future is from a restrained body, from a restrained speech, from a restrained mind here and now. Thus by burning up, by making an end of former deeds, by the non-doing of new deeds, there is no flowing in the future. From there being no flowing in the future is the cessation of deeds; from the cessation of deeds is the cessation of suffering; from the cessation of suffering is the cessation of feeling; from the cessation of feeling all suffering will...

KAMMA

be destroyed." And because this is appealing to us, is pleasing to us, we are delighted by it.6

A detailed analysis of the deterministic character of the above theory of karma (generally referred to in the Buddhist texts as pubbekatahetu),7 its epistemological foundation as well as the nature of freedom, namely, the elimination of feeling, need not detain us here since our focus is on the Buddhist theory. What is important is that the Buddhist criticisms of the epistemological foundation of the theory of karma highlight the basic problems involved in any theory of karma. The Buddhist criticism is embodied in the five questions:

1. Do you, reverend Jains, know: "We ourselves existed in the past and not that we did not"?
2. Do you, reverend Jains, know: "We ourselves performed the evil actions in the past, not that we did not"?
3. Do you, reverend Jains, know: "We performed such and such evil deeds"?
4. Do you, reverend Jains, know: "So much suffering has been worn away, so much suffering has to be worn away when so much of suffering has been worn away, all suffering will be worn away"?
5. Do you, reverend Jains, know the abandoning of wholesome phenomena and the promotion of wholesome phenomena in this very life?8

The first question is about the philosophical problem of personal identity, a question of paramount importance in any discussion of moral responsibility. The second involves the relationship between the agent and the action. The third refers to the agent and the specific nature of actions, i.e., whether the actions performed are good or bad and how these actions relate to the agent of the actions. The fourth involves the connection between action and consequence, namely, suffering. The second, third and fourth are therefore questions that relate to psychology. The fifth pertains to the broader issues relating to karma and ethics. Since these questions were raised by the Buddhists, and since the Jains did not have answers for them, it is appropriate to ask for the Buddhist answers on the basis of which one can have a clear understanding of the Buddhist doctrine of karma. In fact, answers to the questions would involve an examination of the philosophical, psychological and moral content of the doctrine of karma.

The importance attached to the dispositions in the Buddhist doctrine cannot be over estimated. The term for dispositions, namely, sankhāra is etymologically and semantically related to the term kamma, and literally means "putting together" or "co-ordinating". The process of "putting together" is a conscious human activity and it explains not only how a human person maintains his personal identity but also why he is responsible for his conscious (but not unconscious) behaviour. Thus the philosophical problems of personal identity and moral responsibility are resolved without recourse to metaphysical assumptions.

Human dispositions, in addition to playing a role in maintaining personal identity also have their impact on the world of human experience. In other words, the process of "putting together" works not only in the context of the individual but also in the objective world,

10. S. III. 87
whether it be the physical environment or the social, political and religious institutions. There cannot be much controversy regarding the manner in which social, political and religious ideas as well as institutions come to be influenced by human dispositions and behaviour. For the Buddha, even the physical environment does not escape the influence of dispositions. It is not something absolutely independent of human activity. Thus we come across instances where the Buddha would describe the material possessions of a universal monarch as dispositions (sankhāra).¹¹

The Buddha referred to three processes functioning in the world. They are “becoming” (bhava), “dispositional conditioning” (sankhāra) and “dependent arising” (paticcasamuppāda). Hence the three characteristics of existence, “the become” (bhūta), “the dispositionally conditioned” (sankhāta) and “the dependently arisen” (paticcasamuppanna).¹² The last is the most general characteristic which defines the nature of existence both human and non-human. Indeed, the Buddha never admitted anything, event or phenomenon that is not dependently arisen (appaticcasamuppanna).¹³ The two other characteristics, “the become” and “the dispositionaly conditioned”, both involve human dispositions. The difference between them is that the former events are conditioned by various factors one of which is disposition, while the latter is almost wholly conditioned by dispositions. The implication is that part of the human world is dominated by human dispositions and is produced by human effort, that is, human action (kamma), while the entirety of human experience is dependently arisen. This explains the distinction between the dispositionally conditioned (sankhāra) and the dispositionally unconditioned (asaṅkhāta), the latter according to the Buddha’s analysis represents the waning of greed, hatred, and confusion or the attainment of freedom (nibbāna) which is also defined as the waning of karma (kammakkhaya).¹⁵

Most importantly, theories about the self (atta) and the world (loka) are themselves influenced by dispositions.¹⁶ Hence the Buddha’s admonition against holding on to any view as being absolute,¹⁷ and his insistence that a theory be adopted as long as it is fruitful (atthasambhita), the fruitful

Thus, the self and the objective world as well as theories about them are not the creations either of a metaphysical self, as recognized by the Brahmical tradition, or of purely external forces, as assumed by the heterodox schools. They are the result of a play of conditions (paccaya) one of which is human disposition (sankhāra) or action (kamma).

**Karma as a Psychological Concept**

The search for pure objectivity in explaining karma, it was pointed out, compelled the Jains to formulate a rather deterministic theory of kīrīya. Renouncing such an enterprise, the Buddha was to embark on a project which was the first of its kind in the world, namely, a detailed analysis of human psychology. While admitting three forms of behaviour, bodily (kāya), verbal (voc), and mental (mano), the Buddha was interested in uncovering the psychological springs of such behaviour, for in doing so it could be possible to understand the relationship between karma and its agent and avoid any form of determinism like that advocated by the Jains. A step in this direction was taken when karma was identified with motivation or volition (cetanā).¹⁸ Following the principle of dependent arising (paticcasamuppāda) the Buddha defined the cause of karma or volition as sense contact (phassa) which is an indispensable ground of sense experience.¹⁹ By relating volition or karma to sense contact and hence to sense experience, a further relationship is set up, i.e., between volition and disposition. The reason for this is that on occasions of sense experience (q.v., Empiricism) all the sensory stimuli available to the perceiver cannot be absorbed in order to gain an absolutely complete picture of the object. Instead, because of the limitations of the faculty (indriya) as well as consciousness (viññāna) which are both unable to deal with what may be called the “sensible muchness,” ²⁰ a human person is compelled to “put together” the object depending upon his interests. This “putting together” is sankhāra. By relating volition to sense contact the Buddha spoke of six categories of volition (cha cetanākāra) associated with the six sense objects, material form (rūpa), sound (sadda), smell (gandha), taste (rasa), touch (phoṭṭhabba), and concepts

KAMMA

(ddhamma) and referred to them all as sahkhāra. In other words, the motivation for a bodily, verbal or mental act need not be traced back to a metaphysical self, as in the Upanisads, or to an ungrounded “conscience” or an entirely metaphysical “will”, as in the case of transcendental idealism of Kant in the modern world. Instead, it can be traced back to sense experience itself which continues to nourish human knowledge and understanding. Furthermore, by presenting the theory of karma in this manner, the Buddha can uphold the view that a person’s karma affects not only the outside world but also his personality. Thus, each time a person performs a motivated evil action it can generate evil dispositions or if he performs a motivated good action it can generate good dispositions both of which, as pointed out earlier, will condition or process his personality. It is in this sense a person becomes an inheritor of his own karma.

The Buddhist conception of personal identity has already been explained. That conception allows room for the recognition of the efficacy of past actions in moulding the life of an individual. The past actions may not be the past actions of the present life only. When personal identity and continuity are not based primarily upon the physical personality, and if dispositions (sahkhāra) and consciousness (viññāna) are recognised as playing a vital role in maintaining such identity and continuity, the idea that a person’s actions from a previous life can influence the present life is not too far fetched. According to Buddhist texts dispositions and consciousness are closely linked and sometimes they are together referred to as “becoming” (bhava). Thus the process of becoming can be continuous even where there is a discontinuity in the physical personality. Since consciousness functions in the wake of memory (sati), the most important evidence for the survival of the human personality is memory (pubbecanivāsanussati). However, since the survival of dispositions and consciousness (including memory), sometimes referred to as gandhabba, do not take place automatically but is dependent upon various other conditions, the Buddha was not willing to dogmatize on the idea that all human beings who die are invariably reborn, whereas in the Brahmical tradition death is inevitably followed by rebirth. Since the Buddha’s doctrine of rebirth is not deterministic as its Brahmical counterpart, and predicting survival with any certainty is not possible, in order to strengthen the idea he adopted the pragmatic moral argument that if one were to believe in rebirth and perform good karma one cannot be a loser. (This form of argument was used by Blaise Pascal to justify the belief in God, and came to be popularly known as “Pascal’s Wager.”)

The recognition that karma is only one of the important factors that process a human life also enabled the Buddha to consistently uphold the view that one type of action can be replaced by another without advocating non-action or the expiation for past actions by the practice of penances as the Jains proposed.

The psychological analysis of karma coupled with a theory of motivation enabled the Buddha to account for differences in results or consequences of karma without accepting a deterministic one to one relation. Thus there are three types of karma distinguished by the way in which they produce consequences: those that produce consequences immediately or in the present life (dīṭṭhī eva dhamme), in the next life (upapajjē) or in another life (apare vā pariyāye). In addition, there could be a karma that does not produce any consequences or whose consequence is barely evident because of mitigating circumstances or conditions. The discourse on the “effect of salt” (loṇaphala) represents the best illustration of this non-absolutistic character of the Buddhist doctrine, a character elaborated in great detail in the two discourses: Mahākammavibhaṅga and Cūlakammavibhaṅga.

Karma as a Theory of Morals
Karma, it was pointed out, is one that affects oneself as well as others. A good or wholesome (kusala) karma would be one that is beneficial to oneself and others, and a bad or unwholesome (akusala) karma one that is inimical to oneself and others. It was this understanding of karma that served as the foundation of the ultimate moral principle in Buddhism, namely, the happiness of oneself and others or, negatively stated, the avoidance of suffering

for oneself and others. In presenting karma and the moral life in this manner Buddhism was underscoring the importance of the human person without subordinating him to any Supreme Being, and ultimate reality, a physical or natural law or even a moral law. The Buddhist doctrine of karma seems to endorse the idea that "man is not made for law; law is made for man." It emphasizes the importance of the human individual without encouraging individualism or egoism. Possessive individualism that has dominated Western philosophy since Thomas Hobbes has no place in the Buddhist doctrine. The Buddha's middle path in the sphere of morality therefore avoids self-indulgence, which results from self-negation.

The specific character of the doctrine of karma, which is part of the middle path or the noble eightfold path, cannot be comprehended unless it is placed in the above background. Right living, right action, right speech, right livelihood, right effort, right mindfulness, right concentration, are important constituents of a path intended to bring about both individual wellbeing and social welfare. This will give a utilitarian colouring to the Buddha's doctrine of karma. However, there is a significant difference. For the utilitarians the goodness or badness of an action is determined by the quantity of happiness or pain produced by such actions which compels them to recognize a majority-minority distinction where minority interests may be sacrificed for the sake of the majority. The Buddhist doctrine makes no such distinction because it extends compassion for all beings.

Once karma is evaluated as good or bad the notions of "ought" and "ought not" (karāṇyāṃ, akarāṇyāṃ) are immediately introduced. It should be clear that this notion of "ought" is also different from the conception of "duty" proposed by the absolutist thinkers, both classical and modern. For example, the classical Indian absolutists, namely, the Hindus, assumed that duty (svadharma) is based upon the inalienable rights and duties associated with the caste-system, while the modern absolutist views duty as what ought to be done without reference to anything else. It is an unconditional ought. In contrast to this, if there were to be a conception of duty in Buddhism, that duty is dependent upon the welfare of the individual and society.

One of the more cumbersome problems faced by moral philosophers throughout the centuries is the manner in which the efficacy of human action and the possibility of human freedom can be upheld in the context of theories of physical and natural determinism, the latter possessing an enormous gravitational pull toward certainty and objectivity. A brief reference to the Materialist and Ajivika theories of determinism was made earlier. Even though the Ajivikas, while denying human effort and moral life, recognized freedom, that freedom is predetermined.

The more sophisticated rationalist thinkers of the modern world faced with similar theories of determinism tried to resolve this problem by following a different line of reasoning. They recognized that the physical world falls within the nomological net, hence the possibility of predictability in terms of physical laws. Yet, for them, morality and freedom are not meaningless. They were enthusiastic about preserving the usefulness of morals and the dignity of freedom. In contrast to the physical world, they characterized freedom as being anomalous. Hence, the attainment of freedom requires an enormous "will" that can pierce through the nomological net.

The Buddhist conception of morality and freedom did not involve such a dichotomy, hence did not require such strained justification. The foregoing analysis underscored the fact that karma is not a purely ethical concept but also part of ontology that defines a human person, the world of experience as well as theories about them. As such there was no need to look upon morality and freedom as anomalous. Instead, freedom becomes the more natural or nomological way (dhamma) in the world where evil and unharmful tendencies (pāpakā akusala dhamma) replaced by wholesome tendencies (kusala dhamma). It is for this sense that the Buddha spoke of the greed (lobha), hatred (dosa) and confusion (moha), as well as absence of greed (alobha), absence of hatred (adosa) and absence of confusion (amoha) as the conditions for the arising of karma, the former representing a person in bondage and the latter the freed one. As an advocate of non-doing of evil actions the Buddha was an akiriyavādin, and as one promoting good deeds he was a kiriyaśāvādin. The simile of the lotus (punḍarika) that springs and grows in the murky water but rises up to remain unsmeared by that water best illustrates the status of the freed person. The avoidance of evil karma and the cultivation of good karma are inalienable parts of his behaviour.

---

30 This is Donald Davidson's interpretation of Kant; see his essay: "Mental Events," in Readings in Philosophical Psychology. ed. Ned Block. Cambridge, Mass.: Harvard University Press, 1980, pp. 107-119
Finally, a problem that requires examination is karma and moral responsibility. Statements such as "Neither in the sky nor in the middle of the ocean nor having entered into a cleft of the mountains is there a place visible on earth remaining where a person might be released from his evil deeds," are not uncommon in the early discourses. There is a tendency to interpret such statements as implying the indestructibility and permanence of karma and hence equivalent to the deterministic view proposed by the Jains. However, isolated statements such as the above can have a regulative effect of preventing evil rather than being constitutive statements. Similar statements, whenever made in the latter sense, are always qualified in order to emphasize the idea of conditionality.

In addition to the evidence from the discourses examined earlier, two of the prominent disciples of a later date have clarified this position. For example, Nāgārjuna spoke of the indestructible (avipraṇāsa) karma, comparing it to a promissory note.40 Performing an action or falling into debt, according to him, is like signing a promissory note. It means not that the promissory note is indestructible but that so long as it is not redeemed the borrower is responsible. Even that responsibility is made conditional upon time (kāla) and harmony of conditions (sāmagrī), two conditions on which he wrote two chapters that follow the one on karma. Two centuries later Vasubandhu compiled a whole treatise called Karmasiddhiprakarana ("Treatise on the establishment of karma") the thesis of which is summarised in one verse: "Karmas do not perish even after hundreds of millions of aeons. Reaching the earth remaining where a person might be released from..."

The above is not the only way karma has been understood in the Buddhist tradition. Indeed there are different interpretations. The more popular treatises like Vimānavaṭṭhū and Petavattthū included in the Khuddakanikāya tend to give the impression that the karma and its fruit are invariably connected and that the character of the former solely determines that nature of the latter, an idea that came to be designated kammasarikkhathā.42 In addition, the Viśānavadins, especially of the Lankāvatāra school, tended to look upon the world as being "devoid of action and activity (karma-kriya-rahita) because of the non-existence of all dharmas" (asatītvat sarvadharmānām).43

David J. Kalupahana

Kamma (Skt. karma): In the language of early Buddhism and the Theravāda, kamma basically means action. It is used to refer to actions both ethically qualifiable and otherwise. In its a-ethical sense, the term is used to denote any kind of action or behaviour. However what is meant by kamma as one of the key concepts in Buddhism is ethically qualifiable action. Such an action is always accompanied with Cetasā or intention which is either good (kusala) or bad (akusala). It is according to the nature of the intention involved that an action may be qualified as either good or bad. The first two stanzas of the Dhammapada highlight, in the following words, the intimate connection between kamma and the mental factor which determines the nature of it and the vipāka or the result which is determined by the kamma: "Mind is forerunner of (all) states. Mind is chief; mind-made are they. If one speaks or acts with wicked mind, because of that, suffering follows one... If one speaks or acts with pure mind, because of that, happiness follows one..." Thus what is meant by kamma in Buddhism is one's behaviour and its psychological foundations. A study of this concept will show that it is one of the most fundamental concepts in the teaching of the Buddha.

The origin of the concept of kamma may be traced back to the Vedic religion. By the time of the Buddha, it was very much a standard view in Indian religion, particularly in Brāhmaṇa and Śramaṇa traditions. Therefore the Buddhist view of kamma needs to be understood in its historical and philosophical contexts. The belief in kamma and its result being a very important and an almost universal aspect of Indian religions, the Buddha himself was particular in distinguishing his position from that of others. In the first place the Buddha dissociated himself from the view which denied ethical action and its result (akiriya-vādā). What is rejected by this dissociation is the annihilationist view (ucchedavādā) which the Buddha identified as one of the two extreme forms of life. The Sandaksutta of the Majjhimanikāya (M. I, p. 513) makes this point. On the other hand, in accepting kamma he did not identify himself with the group of Ātmavādins who believed in a soul which was believed to be the doer of the kamma and the experiencer of its result. What is rejected by the recognition of this distinction is the eternalist view (sassatavādā) associated with the belief in a soul. The 'middle' position of the Buddha becomes clear in the dialogue he had with the ascetic Acela Kassapa. The Buddha answered in the folders: 39. Dhp. 127 40. M.K. 17-14; see also David J. Kalupahana, Nāgārjuna. The Philosophy of the Middle Way, Albany: State University of New York Press, 1986, pp. 249-250). 41. For a translation of this treatise into English from the Tibetan, see Stefan Anacker, Seven Works of Vasubandhu, Delhi: Motilal Banarsidass, 1984, pp. 93 ff. 42. See DhsA 247 43. Lakkāvatāra (Nanjib ed.) p. 20
negative to all the following questions put forth by him: Is suffering wrought by oneself? Is suffering wrought by another? Is suffering wrought by both oneself and another? Has suffering arisen by chance? Is suffering non-existent? Is it the case that Gotama does not know suffering? Having done so, the Buddha explained the reasons behind his denial:

"One and the same person both acts and experiences (the results) this, Kassapa, which you called at first 'suffering is self-wrought' amounts to the eternalist theory. 'One acts, another experiences (the result)' - this, Kassapa, which to one smitten by the feeling occurs as 'suffering caused by another' amounts to the annihilationist theory... the Tathāgata, not approaching either extreme, teaches the Norm by a middle (way)..." (Kindred Sayings II. PTS. pp. 15–16).

Strict determinism with regard to kamma too has been rejected by the Buddha. The Mahāvīra's view of the Anuguttaranikāya (also Vibhanga p. 367), which classifies the three views rejected by the Buddha, lists the view that one's all pleasurable and painful experiences are due to his past kamma (sabbām pubbekatahe tu) as one of them. According to the Devadhasasutta of the Majjhimanikāya (M. II. pp. 214–228) Nāṇathā Nāṭhaputta, the Jaina leader, held this view. It seems that Jains believed that liberation results from the extinction of all past kamas, and for this purpose they tortured their body. In commenting on their practice the Buddha remarked that, if people experience happiness and unhappiness purely due to their past kamma, the Jains must indeed have done evil kamas in their past lives for they undergo extensive suffering in this life (sace bhikkhave sattā pubbekatahetu sukhabudhham patisamvedenti, addhā bhikkhave Nigaṇṭhā pubbe dukkatakamakārino yaṃ etarahi evarūpā dukkhaṁ tippā kaṭukā vedānaṁ vediyanti p. 222). Thus the Buddha distinguishes his position from that of others. While upholding the doctrine of no-soul-ness (anatta) Buddhism accepts kamma and its result as realities of life.

The most significant distinction in the Buddhist view of kamma is that it has been defined in terms of cetanā or intention. Its significance has been underscored by the Buddha when he said the following: "O, monks, I say that intention (cetanā) is kamma" (cetanāham bhikkhave kammam vadāmi A. III, p. 415). The reason for this identification of intention with kamma, as revealed in the subsequent portion of the statement, is that having intended, one performs actions by body, speech or mind. As is clear from this, kamma by way of its 'doors' of performance may be divided into three, namely, physical, verbal and mental (kāya, vacch, mano kamma). By whichever means the action is performed, what makes a particular action a kamma is its intention. In the Abhidhamma, cetanā has been identified as one of the seven universal aspects of any consciousness (sabbācittasādhāraṇa cetāsika). According to this, all conscious actions, including those that are not overtly ethical, has to be understood as kamma. This leads us to some intricate problems of the nature of cetanā with which the Buddhist scholastic traditions have struggled extensively. For the present purpose it would suffice to say that what the original discourses meant by cetanā is basically the intention which is ethically qualifiable.

The analysis of kamma as kusala and akusala is part and parcel of Buddhist soteriology. Equally, the analysis of kamma into puññha and pāpa occupies a key position in the eschatology of Buddhism. According to the Sammādīthisutta of the Majjhimanikāya (M. I, pp. 46 ff.) ethically qualifiable actions, kusala or akusala, are enumerated as ten. It has been further shown that it is the root (mūla) which makes a particular action kusala or akusala. There are three unskilful roots (kusalamūla), namely, greed, hatred and delusion. There are ten unskilful actions which result from them. They are: killing, stealing and sexual misconduct which are physical actions; lying, slanderous speech, harsh speech and gossip which are verbal actions; and covetousness, wrath and wrong view which are mental actions. The opposite is skilful roots (kusalamūla) and skilful actions. The skilful roots are non-greed, non-hatred and non-confusion. The skilful actions are restraint from killing, stealing and sexual misconduct which are physical; restraint from lying, slanderous speech, harsh speech and gossip which are verbal actions, and non-covetousness, non-wrath and right views which are mental actions. Although cetanā or intention plays a crucial role in determining the kusala or akusala nature of an action physical, verbal or mental the mere cetanā alone would not qualify an action to be complete. In the commentarial tradition, the term kamma-patha (course of kamma) has been used to underscore this matter. The term itself goes back to discourses (eg. S. II. p. 168; A. V. 57, 268) and has been used to refer to the ten kusala or akusala kamas. In the Atthasarīni (pp. 89–90) Buddhaghosa makes a distinction between kamma and kammapiṭaka in the following manner: with regard to the physical and verbal doors, mere activity without producing the desired result will not be kammapiṭaka; but in so far it is an akusala, it will be only a physical misbehaviour (kāya ducarita) not a physical akusala kamma. With regard to the mental door, mere proneness (mano dārā saṃuddārā patvā...) to the killing motive will not be a kammapiṭaka; only the arising of the thought of killing will make it so. This shows that the presence of cetanā is a necessary condition without which a kamma cannot come into being; but cetanā alone is not a sufficient condition for kusala or akusala kamma to result for the actual action has to take place for the karmic action to be deemed complete. For instance, kammā karoti kāya (vāca, mano) dārā samuddārā patvā...
one performs kamma with body, speech or mind’ (A. III, p. 415).

In analysing actions into kusala and akusala the emphasis is laid on the ethico-psychological character of the action. For example a kusala action whether physical, verbal or mental, signifies a state of mind which is ‘undefiled’ (asathkilița) by defilements (kilesa). The akusala represents the opposite. These two aspects have a direct bearing on the path to nirvana. However, the analysis of actions into puñña (meritorious) and papa (evil) underscores more the experiential aspect of kamma which is more relevant to the life after death (eschatology). For example, the selfsame actions that were described under kusala and akusala will mean ‘happiness-producing’ and ‘unhappiness producing’ when described as puñña-kamma and papa-kamma. The significance of the (two groups of actions has something to do with the ultimate goal and the ‘relative’ goal of the Buddhist religious life, a distinction which is not usually made, nevertheless, one quite obvious in the practice. The eradication of akusala by means of the development of kusala helps one attain nirvana which is the ultimate goal of Buddhism. However, for the ordinary people who are not able to shed their worldly ties all at once the goal is not nirvana but rather the ‘plane of pleasurable existence’ (sugatim saggam lokam). The means for this end is accumulating as much puñña as possible and abstaining from all kinds of papa. The distinction between kusala and akusala and puñña and papa is that the former liberates one from the samsāric existence whereas the latter would keep one within it. Puñña makes one’s existence within the ‘realm of the Māra’ (maraḍheyya) agreeable and pleasing (sukho puññassā uccayo – accumulation of puñña [causes] happiness); papa makes it sorrowful (dukkho pápassā uccayo – accumulation of papa [causes] suffering). However both puñña and papa are similar in their act of prolonging one’s samsāric existence.

In the discourses, there are various accounts of kamma presented on the basis of its kusala and akusala or puñña and papa character. The Rāhułovādasutta of the Majjhima Nikāya (M. I, 416ff.) begins with an admonition to the effect that one must thoroughly reflect before one performs a kamma with one’s body, speech or mind (pasca vekkhitavā pasca vekkhitavā kiyena kammaṃ kātabbam…). Subsequently the discourse characterises the nature of the kusala kamma according to three criteria, namely, that an action should not be for the harm of oneself, the other, or both. While such a kamma is kusala its opposite is said to be akusala. This shows that, in determining the kamma, not only the intention (cetanā) but also the outcome of it, too, is taken into consideration. This idea is affirmed by the following two statements of the Dhammapada (vv. 67, 68). “That deed is not well done which, being done, one afterward repents, and the fruit whereof one reaps weeping, with tearful face; that deed is well done which, being done, or afterwards repents not, and the fruit whereof one reaps with joy and pleasure.”

Along with the idea of kamma occurs the idea of vipāka or the result of kamma (which literally means ripening of the kamma). Buddhism teaches that kamma produces results which correspond to its good or bad character. Thus good kamas produce good results and bad kamas produce bad results. The phenomenon of kamma producing corresponding results has been explained in the teaching of the Buddha as an aspect of the general causal process operative in nature. There is no agent, human or divine, who is responsible for the process. It is a known fact that Buddhism denies the concept of God as the first cause of the universe or the creator of it. Being such a non-theistic system Buddhism explains the process of kamma and its result by appealing to a rational understanding of causation. This idea is highlighted in the fivefold classification of ‘laws of nature’ or niyama dhammas, (which occurs in the commentarial literature: Atthasālinī p. 272) namely, law of seasons (utuniyāma), law of seeds (bijaniyāma), law of kamma (kammaniyāma), law of nature (dhammaniyāma) and law of mind (cittaniyāma). The idea conveyed by this classification is that in all the above-mentioned fields there are no agents responsible for the activation of those phenomena but that they all come under the principle of causality (paticcasamuppāda). The idea of causality is that when all the necessary causes and conditions meet the corresponding effect is produced. The correspondence between kamma and its result has also been explained according to this principle.

In the Kukkura vātisutta of the Majjhima Nikāya (also in the Aṭṭhakottikāya-catukkānāpiṭaka) the Buddha highlights this mutual correspondence by the following classification of kamma: a kamma which is (i) dark with a dark result, (ii) fair with fair result, (iii) dark and fair with dark and fair result, (iv) neither dark nor fair with neither dark nor fair result (see below for more discussion). This analysis shows that the nature of the vipāka is determined by the nature of the kamma. The selfsame idea is brought forth beautifully in the following well-known statement: yādissam vacate bijanā tādissam harate phalam – kalayaṇākāri kalayaṇāma pāpakāri ca pāpakam (Saṃyuttanikāya I, p. 277): one reaps what one sows; the doer of good receives good and the doer of evil receives evil. In the subsequent commentarial literature, the concept of kammaśārikkhatā or ‘correspondence of kamma’ (to its vipāka), was developed to highlight this phenomenon. The Atthasālinī (p. 272) describes the kammaniyāma (law of kamma) referring to ‘kammaśārikkhatā’: kammaśārikkhatāvipākavaseneva kammaniyāmo nāma hoti.
The correspondence between kamma and its vipāka does not necessarily imply that one's future birth is determined exclusively by the nature of the kamma performed by that person in his or her previous existence. This fact has been explained by the Buddha in the Mahākammavibhāṅgasutta of the Majjhimanikāya (M. III, 207). In this discourse, the Buddha classifies into four categories people who are reborn due to their kamma: (i) those who engaged in ten akusalas has consequently born in woeful existence, (ii) those who engaged in ten akusalas but born in pleasurable existence, (iii) those who engaged in ten kusalas and consequentlty born in pleasurable existence, and (iv) those who engaged in ten kusalas but born in woeful existence. It is clear, according to this classification that one's next birth does not necessarily reflect one's predominant behavior in his or her past life. In some exceptional cases, the predominant kamma may produce results immediately, subsequently or indefinitely (...diṭṭheva dhamme vipākam paṭisamvedetī upapajjām vā apare vā pariyaṭey) though it has been superseded by a kamma of the opposite nature.

The intimate connection between kamma and its result has been emphasized in the teaching quite often. In the Dhammapada (v. 127) the following statement occurs: "neither in the sky, nor in mid-ocean, nor in entering a mountain cave, is found that place on earth, where abiding one may escape from (the consequences of) an evil deed". In the Dasadharmasutta, which refers to ten factors that must be constantly reflected on by monks, kamma and its result has been mentioned in the following emphatic and definitive words: "I myself am responsible for my deed, I am the heir to my deed, the womb of my deed, the kinsman of my deed, I am he to whom my deed comes home. Whatever deed I shall do, be it good or bad, of that shall I be the heir" (Kindred Sayings V. p. 62). These statements undoubtedly sound deterministic. The reason for this emphatic and near-deterministic character of the statements need to be understood contextually: the admonition to those who have renounced their household life was meant to stress their soteriological goal; in the case of ordinary disciples, it was to underscore the keen interest Buddhism takes in their morality. A case in point is that the doer of any of five kmmas which are considered most heinous, namely, killing one's mother, father, an arahant, or wounding the Buddha and causing a split among the community of monks, are described as āpāyikā nariyikā parikuppā atekicchā. These five kmmas are called ānantariya in the sense that they bear result definitely in the next birth. The concept of obstructive kamma- kamma ṭvarana or the view that kamma becomes an obstruction for liberation in that very life (A. II, p. 436) articulates this inevitability of the result of the kamma. However it is only with regard to certain type of very powerful kmmas. For example, if a person commits one of the five ‘immediately resulting’ (bad) kmmas or if that person is extremely dull (dūppañho hoti bālo elamugo) this state of affairs obstructs his ability to attain nirvāṇa within that particular birth. However this does not mean that he is obstructed for ever. Once he pays for his bad kmma, no longer becomes an obstacle. However the fact that Buddhism does not accept a strict determinism of this kind is shown by the following statement made with reference to Thera Āngulimāla who became an arahant overcoming all his bad kmmas: "Whoever by good deeds covers the evil done, such a one illumines this world like the moon freed from clouds" (Dhammapada v. 127).

Although the exact mechanism of kamma is unpredictable, Buddhism has no doubt about the fact that kamma is responsible for one's birth in a particular existence and the (desirable or undesirable) quality of life one acquires at one's birth. According to the Cūkakammavibhāṅgasutta (M. III, 202) the youth named Subha asks the following question from the Buddha:

Master, Gotama, what is the reason, what is the condition, why inferiority and superiority are met with among human beings, among mankind? For one meets with short lived and long-lived men, sick and healthy men, ugly and handsome men, insignificant and influential men, poor and rich men, low-born and high-born men, stupid and wise men.

To this, the Buddha answered in the following manner: Student, beings are owners of kamma, heirs of kamma, they have kamma as their progenitor, kamma as their kin, kamma as their homing-place. It is kamma that differentiate beings according to inferiority and superiority.

The intimate connection between kamma and rebirth has been explained in the Sāleyyakasutta of the Majjhimanikāya according to which those who do good are born in a pleasurable existence and those who do bad are born in woeful states. Nevertheless this general view need not be understood as identifying kamma as the sole reason behind one's present existence. Given the Buddhist assumption that one can change one's kamma for better or for worse, what this statement could mean is, that it is basically kamma that determines one's birth (into a certain social condition with certain physical and mental make-up). However the manner in which one subsequently moulds one's life depends largely on one's behaviour.

Kamma in General in Ethical and Non-ethical Sense
The fact that the Buddhist tradition has understood the course of one's life as not strictly determined by kamma's shown by the enumeration of a set of factors which are said to influence the vipāka in both a negative and positive manner. The Manorathapūranī (II, p. 218 ff.), the commentary to the Aṅguttaranikāya refers to this classification as one belonging to the Abhidharma
KAMMA

tradition. According to it, there are four factors, namely, the birth (gati), physical appearance (upadhi), time of the birth (kala), and behaviour (payoga) which may act as advantage (sampatti) or disadvantage (vipatti) with regard to both kusala and akusala results. For example, by being advanced in either of the four factors, one's bad results may disappear or by being disadvantaged one's good results may disappear. In the like manner by being advanced one's good results may appear and by being disadvantaged one's bad results may appear. This sixteen-fold analysis shows that a vipaka of a kamma may undergo changes due to these extra-karmic factors. It further shows that the relation between kamma and its vipaka is not always inevitable.

Discourses of ten classify kamma according to its result. For example, the following classification which classifies kamma according to the place in which one has experienced the vipaka is available in the Anguttara-nikaya (III. p. 98): kamma to be experienced in the 'hell' (nirayavedaneya), to be experienced among the animals (tiraccanavatana), to be experienced in the realm of hungry ghosts (pettivissayavedaneya), in the human world (manusalokavedaneya) and in the divine world (devalokavedaniya). In the same nikaya, kamma has been classified into three according to the time of its fruition: (i) (kamma to be resulted) in this very life (dittheva dhamme), (ii) in the next life (upapajje), and (iii) any time subsequently (apare v pariya). However these classifications and analyses received more elaborate treatment in the hand of commentators and subsequent abhidhamma scholars. A broad category the commentators have employed in analysing the result of kamma is paasisandhi vipaka or 'relinking-result' which signifies the birth producing aspect of kammavipaka and pavatti vipaka or 'course-result' which signifies the results other than effecting birth. The Servistvada classification of kamma into ayur-vipaka-karma or the kamma that determines the length of life (ayur) and bhoga-vipaka-karma or the kamma that produces results other than ayur, which occurs in the Vibhassasasta seems to be identical with this. In all the subsequent commentarial analyses of the Theravada we see that this classification has been taken for granted.

The Anguttaranikaya Atthakathaa (II. pp. 210-218) classifies kamma into three broader categories and eleven sub-categories:

(A) Kammagas according to their time of fruition: (i) immediately effective kamma (ditthadhamma vedaniya), (ii) subsequently effective kamma (upapajja vedaniya), (iii) indefinitely effective kamma (aparapariya vedaniya).

According to the commentary, in a thought-process, of the seven javanas (active phase of cognitive process), the first is immediately effective; the last is subsequently effective, and the rest of the five in-between javanas are indefinitely effective. The commentary gives two examples for kusala and akusala results that had produced immediate results, but it does not provide any specific clue to identify them. The subsequently effective kamma are more definite; for the kusala, it is eight attainments (atthasamapatti) and for akusala, it is five heaven kammagas known as anantariya kamma.

(B) Kammagas according to their nature: (i) weighty kamma (yaggaruka), (ii) habitual kamma (yabbahula), (iii) dealt proximate (yadASSana), and (iv) reserve (katattaa), producing results, particularly at birth, the weight kamma (for kusala, a 'sublime' - mahaggata kamma for akusala, one of the five anantariya kammagas dominate over others. In the absence of such kamma habitual kamma or death-proximate kamma dominate. In the absence of any of those three, a reser kamma may produce results.

(C) Kammagas according to their functions: (i) product kamma (janaka), (ii) supportive kamma (upatthambha), (iii) obstructive kamma (upapilaka), and (iv) destructive kamma (upaghata). These four apply to both kusala and akusala. Productive kamma's major function is to give birth. According to the commentator's standard view, its sole function is to give birth. However according to another view, it could produce results in the course of existence (pavatti vipaka). The other three both in kusala and akusala, affect the kammagas in the course of existence in supporting, obstructing and destroying the kammagas.

In the Abhidhammatthasangaha (Ch. V. Vithimmuttasangaha vihavibhaga) what is called a defunct kamma (ahusita) has been added to the sub-categories which were included under the category (A). Although the commentary (Manorathapiran) does not identify it as a separate category of kamma, it nevertheless accepts it. According to the commentary, a kamma could become defunct due to non-availability of opportunity to produce results. For instance, all the existing kammas of an arahant which are indefinitely effective can be defunct at his death (parinibbana). Immediately effective and subsequently effective kammagas of any person could be defunct if they fail to produce results at due occasions.

The Abhidhammatthasangaha further divides kamma into another category, namely, by place of its ripening: (i) unwholesome kamma (akusala), (ii) sense-sphere whole some kamma (kamaavacara kusala), (iii) fine-material sphere wholesome (rupavacara kusa), and (iv) immaterial-sphere wholesome (arupavacara kusala). The unwholesome kammagas are available only in the sense sphere. Of the eighty nine thoughts (citta) recognized in the Abhidhamma, fifty four belong to the sense sphere, and twelve of them are unwholesome. Of the rest eight are kusala and twenty three are vipaka and eleven are functiona. (kiriya), the two last categories being neither kusala nor akusala. Of the thoughts belonging to fine material,
KAMMA

immortal and transcendent spheres thirteen (5+4+4) are kusala and another thirteen are vipaka and eight are functional. Except two functional cittas that are operative in the process of sense perception all the other functional cittas are available only for the arahants. Functional cittas do not have any roots either kusala or akusala in him. Therefore they do not produce any result. In the case of an arahant, there is no question about his not having unwholesome roots (lobha, dosa and moha) in him. But because he had wholesome roots (alobha, adosa and amoha) one may wonder as to what happens to kammas produced by them. Since he has eradicated the craving for existence without any residue, wholesome roots in him, too, are incapable of producing results; they merely perform the action. This tallies well with the early Buddhist explanation of nibbana as the extinction of kamma—[kammakkhaya] (infra).

The Abguttaranikāya Atthakathā refers to another classification which analyses kamma and its vipaka according to time of its performance and presence or absence of its results. The classification, which is traced to the Patisambhidāmagga by the commentary, is as follows: (i) past kamma with past result (ahosikamma ahosikammavipaka), (ii) past kamma without past result (ahosikamma nāhosikammavipaka), (iii) past kamma with present result (ahosikamma aththikammavipaka), (iv) past kamma with absent result (ahosikamma naththikammavipaka), (v) past kamma with future result (ahosikamma bhavissatikammavipaka), (vi) past kamma without future result (ahosikamma bhavissatikammavipaka), (vii) present kamma with present result (aththikamma aththikammavipaka), (viii) present kamma with absent result (aththikamma naththikammavipaka), (ix) present kamma with future result (aththikamma bhavissatikammavipaka), (x) present kamma without future result (aththikamma bhavissatikammavipaka), (xi) future kamma with future result (bhavissatikamma bhavissatikammavipaka), and (xii) future kamma without future result (bhavissatikamma nabhavissatikammavipaka).

The analyses of this sort testify to the great depth the tradition was willing to go in order to understand the complex relation between kamma and its result.

A theoretically more advanced stage in the Buddhist understanding of kammaj is shown by its inclusion among the twenty four conditions (paccaya) enumerated in the Paṭṭhāna. The Abhidhamma idea of twenty four conditions marks a sophistication of the early Buddhist idea of causation. It is an effort by the Buddhists to understand the mechanism of causation more precisely and more fully. In this process they seem to have recognized the great efficacy attributed to kamma in the early Buddhist discourses. As a result they have included kamma as one of the conditions. However in the early discourses, the efficacy of kamma has been recognized as a phenomenon applicable to life in a broad and unspecified manner. The Abhidhamma tradition is more specific in identifying the phenomena that are conditioned by kamma (kamma-samuttithānarūpa), namely, the first five sense organs, two faculties of sex and the physical basis of mental activity (hadayavatthu) and phenomena related to them. These are in fact the vipāka of the kamma (kamma as cetanā or intention which is a universal aspect of all forms of consciousness conditions all mental states and if these mental states give rise to matter (cittasamuttithānarūpa) they also need to be considered as conditioned by kamma; however this simultaneous conditioning has not been thought to be applicable in this context for kamma and its results are not simultaneous).

The above mentioned analyses of the later scholastics bear evidence to the keen interest they have shown in understanding the nature of kamma and its vipāka inspite of the fact that the Buddha has included the result of kamma among the four matters that cannot be thought and must not be thought (for) they result in madness and frustration (kammavipāko bhikkhave acinteyyo na cintetabbo yam cintento ummādassā vighātassa bhāgiassa A. II. p. 80). This injunction cannot mean that the mere thought of these matters will drive the thinker mad; but could be understood as indicating the extremely vast and complicated character of the subject. For example, one could simplistically imagine that one's overt behaviour foretells one's plight in the next birth; nevertheless this forecast may be completely misguided for in producing results kamma is influenced by many factors. For example, in the Mahākammavibhaṅgasutta of the Majjhimanikāya (M. III, 202) the results of kamma are shown to be characterized by four situations, two among which go against the usual pattern, namely, (i) evil-doer: who is born in a woeful state; (ii) evil-doer who is born in a pleasurable state; (iii) doer of good who is born in a woeful state; and (iv) doer of good who is born in a pleasurable state. This should indicate the complex nature of the vipāka process of kamma. Therefore by the above admonition the Buddha could well be reminding us of an inherent limitation in human cognitive capacity. However according to the commentary which interprets two key terms acinteyyo nācintetabbo as '(those) not proper to be thought' (cintetum na yuttāni) and 'that must not be thought due to the fact that they are not proper to be thought' (acinteyyatāyeva na cintetabbāni) the injunction of the Buddha is based on ethical considerations (Manorathapūrajī III. p. 108). However, acinteyya may more appropriately be interpreted as indicating to an epistemological limitation of the human mind. The second (na cintetabbo) may be understood as an ethical injunction. Therefore the statement has to be understood as indicating an inherent limitation of the human mind and as providing a piece of religious advice motivated by pragmatic considerations.
Beside the classificatory treatment of kamma and its vipāka, Theravāda scholasticism was also conscious of the problems of a more theoretical character. For example, the problem of explaining the consecutive occurrence of kusala and akusala which are incompatible with each other; the problem of explaining, in the face of the theory of momentariness (kaṇṇavaṇḍa), The continuance of kamma and vipāka through samsāra, and the problem of explaining the continuity of a being (individual) with karmic potentialities without believing in an ātma which was popularly understood as the doer and the experient of the kamma were outstanding. These were the key issues that occupied not only the Theravādins but also many other Buddhist scholastics. As for the first problem, the Theravādins came up with the view that kusala or akusala thought processes never follow each other without an intervention of a citta which is neither kusala nor akusala. According to the Theravāda view, at the end of every thought process there occurs a bhavaha which is a resultant citta and hence neither kusala nor akusala. The invention of bhavaha by the Theravādins is mainly due to various difficulties they encountered in explaining the exact mechanism of kamma. Here they use it in order to overcome this difficulty of explaining the apparent co-existence of kusala and akusala. Vaibhāsikas tried to solve the problem by postulating two citta viprayukta samskāras, namely, prāpti and aprāpti which are neither purely mental nor purely physical. Prāpti basically signifies a force which effects the connection of a dharma (mental phenomenon) with a thought process (santana). Aprāpti is its opposite. These forces cause, respectively, a particular collection of elements to come together and prevent a certain collection of elements from coming together. For example, if an akusala citta follows a kusala citta, the latter is made possible by the prāpti of the kusala elements and the aprāpti of the akusala elements. The Sautrāntikas rejected both these solutions and came up with the theory of bija or seed: they said that there are three kinds of seed, namely, kusala bija, akusala bija and avyākyta bija. According to them, these bijas are not destroyed, but exist in one's mind, not as a kind of separate dharmas but as powers. They arise whenever there is an occasion. It is this selfsame difficulty that the Vijñānavādins tried to address by postulating ālaya vijñāna or the store-house consciousness which they claimed to contain, among other things, the seeds of kamma.

To provide a sufficient explanation for the continual existence of kamma and its vipāka without accepting an ātma (soul) was the other major challenge faced by the Buddhist scholastics. The answer to this problem is connected with the theory of momentariness which in turn created difficulties for the karma theorists. Other Indian systems such as Brāhmaṇism and Jainism did not have to face the problem of explaining the continuity of the individual for they believed in a permanent soul which transmigrates from existence to existence without any change. The early Buddhist teaching demonstrated the unreality of a permanent soul through its doctrine of three signata (tulakkhana) of which impermanence is the foundation. The later Buddhist scholastics developed the idea of impermanence to a highly sophisticated theory of momentariness according to which both mind and matter are momentary, and there is no room for the existence of anything unchanging and permanent. However, the problem for the kamma theorist was to explain how could persist through samsāra if there is no ātma and the human mind had such a short duration of life.

Responding to this challenge the Theravādins made use of their newly discovered notion of bhavanga which they believed to be the basic stream of thought that go unbroken through samsāra. They also claimed that it is the bhavanga that contains the kammass and the vipākass. In this manner, for the Theravādins, it was bhavanga, not ātma, that effects the continuity of the person along with his or her karmic potentialities. Sautrāntikas in their effort to be more faithful to the sūtras (original discourses) rejected the idea of existence (sthitī) of phenomena, but accepted only arising (utpādā) and cessation (bhāgā) of them. Nevertheless, in the effort to resolve the problem of kamma they had to accept the theory of bija (seed). As for the Vaibhāsikas, in order to solve the problem, they developed the idea of avijñapti or unmanifested or latent energy. They claimed that whenever one performs a kamma by means of body, speech, in addition to the visible action (which is called viññapti) an invisible action (avijñapti) is produced by and lies within the individual in the form of an energy. This latent element, according to them, that produce future vipāka. Subsequently they developed the idea of avijñapti to account for the continuity of such mental states as such as a vow to observe precepts or to become bhikkhu and so on. The concept of sarvāstivādā or this view that all dhammas exist during all three phases of time (sarvan sarvādi asti) is the overall philosophical expression of this view. An idea of a similar type of an underlying force was recognized by the Mahāsāṃghika by the name of upacaya (accumulation) and by the Sammitiyas by the name of avipranāsa (indestructible). The Theravādins, however, do not seem to have felt the need for such a phenomenon.

As we may notice from the foregoing, the keen interest that has been shown on this subject by the Buddhist tradition testifies to its significance in their religious life. At the popular level of religion we can understand how kamma and its result may have directed the ordinary man into an ethical path. However, the deeper significance of the phenomenon lies in its direct bearing on the samsāra predicament for which Buddhism is meant to provide a solution. Samsāra or continuous existence is caused by
The path leading to the cessation of kamma is the Noble Eightfold Path.

For understanding this aspect of kamma, the following fourfold classification of it (referred to earlier), namely, dark kamma with dark kammavipaka, fair kamma with fair kammavipaka, both dark and fair kamma with both dark and fair kammavipaka, and neither dark nor fair kamma with neither dark nor fair kammavipaka is helpful. The first three represent bad, good and mixed kamas and their results respectively. The fourth which goes beyond these categories represent the kind of practice which leads to the cessation of kamma (kammam, kammakkhayaya sabhavati). The purpose of the fourth category which does not really go beyond these categories represent the kind of practice which leads to the cessation of kamma (kammam, kammakkhayaya sabhavati). The purpose of the fourth category which does not really represent the kamma process that prolongs the samsāra is to highlight the very soteriological significance of kamma.

An understanding of kamma is a necessary aspect of the attainment of arahanthhood. According to discourses, the realization of nirvāṇa occurs with the realization of 'threefold knowledge' (tivijjā), namely, the knowledge of one's past existence (Pubbennivāsānussatiññāna), the knowledge of the death and the birth of beings (Cutūpa-pātāññāna) and the knowledge of the destruction of influxes (Āsavakkhayaññāna). In the course of the first two knowledges the noble disciple comes to know, respectively, how oneself has been wandering in samsāra as a result of one's own past kamma and how other beings pass away and are reborn as a result of their own kamma (yathā kammupage satte... D. I. p. 83). At this level of higher knowledge (abhiññā), kamma is no longer a conjecture but a part of empirical reality, for he has seen it through his super-knowledge (abhiññā). With the attainment of arahanthhood, since one has cut off all one's attachments to existence one does not accumulate kamma which causes rebirth.

The mental state of such a person has been described as putha pāpa pāhina (Dhammapada 39) one who has given up both putha and pāpa. His behaviour at this stage may properly be described as kusala or wholesome which technically means actions marked by the absence of attachment, hatred and delusion (alobha, adosa and amoha). In this context it is illuminating to see that nirvāṇa has been described as the extinction of attachment, hatred and delusion (rāgakhayo dosakkhayo mohakkhayo nibbanam) which is nothing but kusala. This particular point has been underscored in the Bahitikasutta of the Majjhimanikāya (M. II, p. 115) in which the arahant has been characterized as 'one who has abandoned all akusala and one who is endowed with kusala' (sabbākusaladhammapahino kho mahārāja tatāgato kusaladhhammasamānāgato).

Asanga Tillekeratne

KAMMAPATTHA, 'course of action', 'path of action'. In Buddhist texts the two terms kamma and kammaphatha are sometimes used alternatively to designate two groups of actions, each consisting of ten items. The two groups of actions are: (1) ten wholesome courses of actions (dasa kusala kamma, dasakusala kammaphatha) and (2) ten unwholesome courses of actions (dasa akusala kamma, dasa akusala kammaphatha). The ten courses of wholesome actions are (1) Refraining from killing, (2) Refraining from stealing, (3) Refraining from wrongful gratification of the senses, (4) Refraining from uttering falsehood, (5) Refraining from slanderous speech, (6) Refraining from harsh speech, (7) Refraining from frivolous speech, (8) Refraining from covetousness, (9) Refraining from harbouring hatred and (10) Refraining from harbouring false views. The first three of these ten courses of actions are bodily actions (kāyika kamma), the next four are verbal actions vācika kamma and the last three are mental actions (mānasika kamma). The Buddha declares that a person can completely put an end to suffering in samsāra in this present existence itself by observing these ten courses of wholesome actions diligently (A. V. 57), and that the heavens, the human sphere and other good bournes (sugati) become meaningful because of these ten wholesome courses of actions (A. V., 268). They are also called 'the ten virtues' (dasa síla).

The ten courses of unwholesome actions are (1) Killing, (2) Stealing, (3) Wrongful gratification of the senses, (4) Uttering falsehood, (5) Uttering slanderous speech, (6) Uttering harsh speech, (7) Uttering frivolous speech, (8) Harbouring covetousness, (9) Harbouring hatred and (10) Harbouring false views. As in the case of

KAMMAPACCAYA. See PACCAYA

KAMMACARIYĀ. See KAMMAVĀCA

KAMMAPATTHA.
the ten courses of wholesome actions the first three courses of unwholesome actions are bodily actions, the next four are verbal actions and the last three mental actions. When beings become inclined to pursue these ten courses of unwholesome actions their suffering in samsāra increases and they become prone to rebirth in the animal realm, the sphere of pretas, in hell and in other lowly states of existence.

D. Saddhasena

KAMMATTHĀNA, literally means profession or occupation (A. V, 83-4) such as agriculture and trade (M. II, 197-8). Even household life and the life of a mendicant are described as professions (ibid). The two words kamma and thāna constituting this term literally mean work and place respectively, although they are found to be used in a variety of meanings, both literal and ecdhical. Thus kammatthāna literally means place of work. But in the Pali commentaries and pakaraṇa the word is used in its developed sense as a technical term which refers to topics, both subjects and objects, on which one may work and concentrate one's mind. Thus kammatthāna is a working-ground for meditation; it may, therefore, be rendered as "topics of meditation". We find this word rendered as "the instruments of meditation" (PED. p. 193), "the stations of exercise" The Expositor, p. 224), "the stations of religious exercises" (Compendium of Philosophy, p. 202) and "subjects of mental training" (BD. p. 70).

The number of topics of meditation is given as 38 in the 4thhasālim (Dhs A I, 168), but its author, Buddhagosa, refers the reader to his earlier work, the Visudhimagga, or a complete account. In the Visudhimagga we find a list of 40 topics of meditation which consist of ten kasīpa en asubha, ten anussati, four brahmavihāra, four āruppa, ne saññā and one dhātuvatvaatthāna (Vism. p. 89). The vimuttimagga has a list of 38 (The Path of Freedom, p. 3) where the first two of the four āruppa are left out, namely, ākkāsānaññācayatana and viññānaññācayatana, which he author seems to have considered identical with the first two kasīpa, namely, ākkāsa-kasīpa and viññāna-asīna (ibid. p. 130). As the Visudhimagga has succeeded the earlier work Vimuttimagga, the number of topics of meditation has been accepted as 40 by later writers such as Buddhaddatta (Abhvt. pp. 90-92) and unruddha (Abhs. p. 41).

All these forty together with more topics are to be found, scattered in several places of the Pali canon. They are not specifically designated as kammatthāna. It is in the Pali commentaries that the name kammatthāna is sed in the sense of topics of meditation, and, further-

more, it was Buddhagosa who selected forty from among them, named them kammatthāna and explained them in detail. About two fifth, i.e., nine chapters (iii-xi) of the entire book Visudhimagga are devoted to an exhaustive description of kammatthāna (Vism. pp. 68-313).

While some of the forty topics of meditation are well known and are of popular appeal to Buddhists, some others are not so; e.g. popular topics of meditation such as satipatthāna have not found a place in Buddhagosa's treatment of kammatthāna. It might, therefore, be useful to examine both sources from which Buddhagosa drew material for his treatment of kammatthāna and the nature of his scheme, i.e., the place it occupies in the Buddhist scheme of emancipation.

Of the forty topics the ten kasīpa are very popular; they occur at D. III, 268, 290; M. II, 14-15; A. I, 41; V, 46 and at Ps. I, 49, 95 etc.

We do not find ten asubha given in one place in the suttas, although the term asubha-saññā occurs in a number of places (e.g., D. III, 253, 289, 291 etc.). We find six of them given in three places. There is a list of three, uddhumātaka, vinīlaka and vipubbaka at A. I, 140; a list of five, the first two of the above three plus aṭṭhika, pulavaka, and viccchuddaka at (A. I, 42, S. V, 129-31; and all six of them at A. III, 17. A complete list of ten asubha is found for the first time at Ps. I, 49, 95 and at Dhs. p. 55. The list may have been made complete in collaboration with the nine charnel ground meditations (nava sīvathikā) which are given in the 14th uttas as nine of the fourteen items of kāyāpītāpasāna, the first of the fourfold application of mindfulness (sati, p. 1.9). As far as the anussati are concerned, only the first, six, namely, Buddha, Dhamma, Sāttha, Sañña, Cāga and devatā, seem to have been originally accepted as anussati meditation, because only these six are found in the early suttas (D. III, 250, 280). This list is found repeated in several works of the Sutta-piṭaka (e.g. A. III, 284, 312; Ps. I, 48). The last four, namely, maraṇanussati, kāyagatāsati, Aṇāpanasati and upaśāmānussati, may have been added later, for in the first place, two of them, viz., kāyagatāsati and ānāpānasati, do not go by the name of anussati but as sati; secondly kāyagatāsati, according to M. III, 89 ff. 198 is identical with the first of the four applications of mindfulness (sati, p. 1.9), namely kāyānupasāna (D. II, 291 ff.; M. I, 58 ff.) which includes ānāpānasati also; and finally a complete list of ten anussati-meditations is however found at A. I, 42 and Ps. I, 95.

It is interesting to note that Buddhagosa has here split the first of the four applications of mindfulness (kāyānupasāna) into a number of separate topics of meditation: e.g. ānāpānasati, dhamu-manasikāra as catudhātuva-
The four brahmavihāras, also known as appamāṇā, are well known topics of meditation found in the suttas (D. III, 223–4 etc.). The same is true of the four āruppa meditations (D. III, 224).

Buddhaghosa has singled out one saṁfiśa—meditation (eka saṁfiśa), i.e., āhāre paṭikkūla-saṁfiśa—meditation given in lists at D. III, 289, 291; A. I, 41, 42; V. 105, 106 etc. He has likewise selected catudhātu-vavatthāna from among the fourteen items of kāyānupassanā (D. II, 294; M. III, 91).

The texts give a number of other topics of meditation under the common names of saṁfiśa and anuvaṇā. Some of these topics occur in lists from which Buddhaghosa has drawn material for his collection of forty kammadhāna. The saṁfiśa—meditation such as aniccasaṁfiśa, dukkha-saṁfiśa, anatta-saṁfiśa, paññāna-saṁfiśa, virāga-saṁfiśa and nirodha-saṁfiśa, (D. III, 289–91; A. I, 41 etc.) are not included in Buddhaghosa’s list of forty kammadhānas. The following anuvaṇā—meditations are also left out: aniccānupassanā, dukkhatupassanā, anattānupassanā, nibbānānupassanā, virāgānupassanā, nirodhanupassanā, paññissaggānupassanā, (Ps. I, 10, 96 etc.), khāyānupassanā, vayānupassanā, vipāramānupassanā, animitṭānupassanā, appaṇihitānupassanā, and suññatānupassanā (Ps. I, 20).

Even the well known fourfold application of mindfulness (satipaṭṭhāna), except for some items of kāyānupassanā, does not find a place in Buddhaghosa’s scheme of kammadhāna; the last three applications of mindfulness, namely, vedanānupassanā, cittānupassanā, and dhammānupassanā are not at all included in that scheme.

The reason for this omission is not far to seek.

Buddhaghosa in his Visuddhimagga explains the path to freedom in three successive stages called the threefold training (tiissosikkhā), namely, morality (sīla), concentration (samādhi) and wisdom (paññā). He carefully selected all those topics of meditation which produce concentration of the mind and called them kammadhāna. As their practice produces concentration, they are also called ‘tranquility’ meditations (samatha-bhāvanā) or samatha-kammadhāna. There is also another kind of meditation designated as ‘insight—meditation’ (vipassanā-bhāvanā) which produces wisdom. This latter kind of meditation is not classed as kammadhāna in the Visuddhimagga. Saṁfiśa—meditations such as aniccasaṁfiśa, anuvaṇā—meditations such as aniccānupassanā and also the last three of the four applications of mindfulness, as they produce insight, do not find a place in Buddhaghosa’s scheme of kammadhāna.

But, Anuruddha has treated all the meditations, concentration and insight, as kammadhāna in his Abhidhammatthasahagatae (pp. 41–6). After giving the forty kammadhāna of the Visuddhimagga under the name of samatha-kammadhāna (ibid. p. 41), he goes on enumerating other topics of meditation under the name of vipassanā-kammadhāna which consists of contemplation on the three characteristics of existence (tilakkhaṇa), namely, impermanence (anicca), suffering (dukkha) and unsustantiality (anatta); the tenfold insight-knowledge (dasa-vipassanā—fīna) and the threefold emancipation (vimokkhā: Abh. 43–4). These latter kinds of meditation are on a higher level than the former as they produce the wisdom which is essential for emancipation.

There are certain basic requirements to be accomplished by one who wishes to practise meditation. The most important among them is purity of morality (silavisuddhi), which is brought about by a fourfold purification called catu-pārisuddhi-sīla, namely, restraint with regard to the monks’ disciplinary code (pātimokkhā-samvara-sīla), restraint of the senses (indriya-samvara-sīla), purity with regard to one’s livelihood (ājīvapārisuddhi-sīla) and morality with regard to the four requisites (paccayavissālī-sīla).

One whose morality is pure should first go to a monk who is competent to instruct one on the practice of meditation. The instructor who is a noble friend (kaḷyāṇamitta) is called “the giver of the topics of meditation” (kammadhāna-dāyaka: Vism. 79).

After carefully studying all aspects of meditation, the beginner should go to a place suitable for meditation; to the forest (araṇīḍa), the foot of a tree (rūkkhamiḷa) or to an empty house (suhīgāra: D. II, 291 etc.). The chief concern is that the place must be calm and quiet, free from disturbance and interruption.

The person must also be physically fit to practise meditation; he must be free from ailments (ābādhā: Vism. 73) and be in good health. Buddhaghosa enumerates ten impediments to concentration, namely, a dwelling (āvāsa), a family (kula), gain (lāba), company (gaṇa), work such as repairs to buildings (kamma), travel (addhāna), kin (bāti), affliction (ābādhā), books (gantha) and supernatural worldly powers (iddhi: Vism. 79 ff.).

It is also of primary importance that the beginner should, with the help of the instructor, select a topic which is the most suitable for his temperament (cariyā). There are six types of men classified on the basis of their temperament. Buddhaghosa explains these temperaments in detail and assigns the kammadhāna that suit the different temperaments of men.

Now the beginner is well qualified to practise his meditation. He must sit cross-legged, his spine kept erect
KAMMAṬṭHĀNA

. II, 291). Being mindful he starts contemplating on the ic. The practice of these meditations, according to nuḍḍhimaṇḍa, forms the means by which the full concentration and absorption of the mind is achieved. These eight attainments (saṁañña), namely, the mental sorption of the material sphere in four stages, (ūpāvāsara-jaññā) and the non-material sphere in four stages (ūpāvacara-jaññā) are their final result. But, in the Pali commentaries, the practice of these meditations is placed higher than that, as leading to the attainment of hantship, (yāva-arahattam kammaṭṭhānaṃ kathesi: p.A. I, 8, 96; kammaṭṭhāna anuyuttā ni cārissave hattam pāpumā: I, III, 36). The apparent discrepancy is: to the fact, as was stated above, that Buddhaghosa included under kammaṭṭhāna those topics of meditation which produce concentration alone. It should be mentioned in this context that Anuruddha's treatment of kammaṭṭhāna (Kattha: 41-6), unlike that of Buddhaghosa, y agrees with the Pali commentarial tradition; he placed the two kinds of meditation topics, concentration and insight, in his scheme of kammaṭṭhāna.

It is also important to emphasise the fact that in the oldist scheme of emancipation concentration of the id (saṁādhi) does not stop at that; it is a means to an which is emancipation (vīmutta, nībbāṇa). Saṁādhi vitally leads to insight (paññā) by which emancipation is realised. On attaining concentration of mind the monk contemplates on existence as dependent and thereby impermanent. What is impermanent is suffering and substantial. These are the three characteristics of existence the realisation of which amounts to the attainment of insight.

The occurrence of the phrase ca introduce the four truths" as the topic of meditation at P.A. p. 98 is interesting because it does not occur in any of the narrations of kammaṭṭhānas in the texts, both in the mentors and in the treatises. It is in fact not a rate topic of meditation, but, primarily, contemplation on existence as suffering (dukka), the first truth, the nition of which leads to the realisation of the other three (S. V, 437; Ps. I, 119; II, 107). Any of the forty kaths which are derived from existence, i.e., five aggregates (pañcakkhandhā), may be contemplated on kha. Existence is miserable (varkha) because it is permanent. Impermanence is the basic conclusion ed at on realising the law of conditionality (pañcika- upādāna). By its very nature the whole existence is wend. The four noble truths (caṭṭāri ariya saccāni) nothing but an elaboration, on an ethical basis, of the conditionality. See BHĀVANĀ, MEDITATION.

Upali Karunaratne

KAMMAVĀCĀ (Skt. Karmavākyā) are formulœ or texts of Official Acts that are read at the ecclesiastical formal meetings of bhikkhus where matters of vital importance to the Order of bhikkhus (bhikkhu saṅgha) are discussed and decisions taken. The Pali English Dictionary (PED) says that there are eleven such officially recognised kammavācā, but it does not give any further details about them. Reading of kammavācā, at formal gatherings of bhikkhus is popularly followed by bhikkhus in Sri Lanka, Myanmar and Thailand and they have these kammavācā, culled from the Vinaya texts and printed in separate booklets. The present writer has seen a booklet printed in the Sinhala script containing thirty one of these kammavācā. The text is in the Pali language, and they are as follows: (1) Upasampadā kammavācā (The text of the Official Act for the conferment of the Higher Ordination); (2) Kathinakkammavācā (The text of the Official Act for the holding of the kathinacereomy); (3) Kathinuddhāra-kammavācā (The text of the Official Act to withdraw privileges of the kathina cloth); (4) Saṁāna-samāvasasimāsamādhanakammavācā (The text of the Official Act for the removal of boundary limits of those bhikkhusliving together); (5) Saṁānasamāvasasimāsammutikamma‍vācā (The text of the Official Act for the Agreement of boundary limits of those living together); (6) Avippavāsamāvasasimāsammutikammavācā (The text of the Official Act for the agreement of boundary limits of those who live afar); (7) Upasathāgārasammutikamma‍vācā (The text of the Official Act pertaining to the agreement of the hall where patimokkhā is to be recited); (8) Upasathāgārasamāsana-kammavācā (The text of the Official Act to decide the discontinuance of a particular monastery as an upasathāgāra); (9) Thera-sammuti-kammavācā (The text of the Official Act to agree upon the seniority of theras); (10) Nāmasammuti-kammavācā (The text of the Official Act to agree upon a name); (11) Nissayamutta-sammuti-kammavācā (The text of the Official Act to agree upon relaxation of the requisites); (12) Kāppiya-bhūmisammuti-kammavācā (The text of the Official Act to agree on a suitable storehouse); (13) Kuṅvantviholakānasammuti-kammavācā (The text of the Official Act to search and agree upon a site for a hut); (14) Gītappatthakākamā kālakathabhiṅkhu patta-civa- dāna-kammavācā (The text of the Official Act to bestow the bowl and robes of a dead monk to those who attended on him); (15) Saṃagga- karana-kammavācā (The text of the Official Act regarding settlement of disputes); (16) Paṭāraṇasahagakaharaṇa-kammavācā (The text of the Official Act to sanction the use of an abridged form of vassa termination ceremony); (17) Paṭīva-sadāna-kammavācā (The text of the Official Act to allow a period of probation); (18) Mānattāna-kammavācā (The text of the Official Act to decide the maximum combined probation); (20) Suddhānta-kamma- vācā (The text of the Official Act regarding the ending of
KAMMAVĀCA

125

KANAUJ

the purificatory period); (21) (Parisuddhiuposatha-

kammavāca (The text of the Official Act pertaining to the

holding of the uposatha for purification); (22) Adhīṭhānuposatha

kammavāca (The text of the Official Act regarding resolution

to hold uposatha); (23) Āpatārocana-kammavāca (The text of the Official Act to formally declare an

offence committed); (24) Cīvarādhīthiha-kammavāca (The text of the Official Act to agree on the proper type of

robe to wear); (25) Parikārācālađhīthiha-kammavāca (The text of the Official Act to agree on other requisite
clothes); (26) Cīvaravikappana-kammavāca (The text of the Official Act pertaining to the apportioning of robes);

(27) Vikappitačvaram sānikassā punādānam-kammavāca (The text of the Official Act to formally return the

apportioned robe to its owner); (28) Paccuddharaṇa-

kammavāca (The text of the Official Act read at the

wiping out of the kathina cloth); (29) Vassītipānāyika-
kammavāca (The text of the Official Act read at the
ceremony to commence the vassa retreat); (30) Vassīka-
sātikādhīthiha-kammavāca (The text of the Official Act read at the ceremonial meeting to decide about the

kathina-cloth); (31) (Pavāraṇa-kammavāca (The text of the Official Act read at the ceremony to conclude the

vassa retreat).

When the bhikkhus meet formally regarding a parti-
cular sañghakamma a competent senior bhikkhu, with a

good voice, who can pronounce words distinctly, plays
the role of leader of the ceremony and he is designated as

kammācariya. For instance, in the upasampadā sañgha-

kamma (ceremonial meeting of bhikkhus to confer Higher Ordination) the leader of the ceremony presents
the candidate for Higher Ordination to the assembly of

bhikkhus saying thus: May the bhikkhus listen to me. I
desire that the monk Nāga be conferred the Higher
Ordination. If it is allright by the bhikkhus, I shall examine Nāga: 'Listen to me Nāga, this is the time for you
to tell the truth. I shall question you in the presence of the

assembled bhikkhus regarding some matters. If you have
them you ha, I admit them; if you do not have them
you have to sa, do. Do not keep mum or waver. I shall
now question you regarding the following diseases. Do you
suffer from leprosy? Do you have abscesses? Do you
suffer from consumption and epilepsy? Are you a human
being? Are you a male? Are you a free men? Are you free
from debt? Have you been a king's soldier? Have you
obtained the consent of your parents? Are you now
twenty years old? Have you a bowl and robes? What is
your name? Who is your preceptor?

These questions have to be repeated three times by the

kammācariya in that assembly of bhikkhus and after
ensuring that the candidate is free and clean, he is

presented to the assembly of bhikkhus for the conferment

of the Higher Ordination.

The kammavāca, for the dedication of the kathina-
cloth is as follows: 'Honoured sirs, let the Order listen to
me. This material for Kathina-cloth has accrued to the
Order. If it seems right to the Order, the Order should
give this material for kathina-cloth to the monk so and so
for making kathina-cloth. This is the motion (hatti).
Honoured sirs, let the Order listen to me. This material
for kathina-cloth has accrued to the Order. The Order is
giving this material for kathina-cloth to the monk so and so
for making kathina-cloth is pleasing to the Venerable ones,
let them be silent. He to whom it is not pleasing should
speak. This material for kathina-cloth is given by the
Order to the monk so and so for making kathina-cloth. It
is pleasing to the order, therefore, they are silent. Thus do

I understand this (SBB. Vol. 14, pp. 353-4).

T. Arlyadhamma

KAMMAVATTA, the round of action. Dependent origi-
nation (paticcasamuppāda) comprises of three rounds or

stages (te-bhūmakā-vaṭṭa); kammaṭṭha being the first of

them. See VAṬṬA.

KANAUJ, the capital of Harśavardhana (q.v.), who was

the last Buddhist emperor who united the whole of

Northern India reminiscent of Asoka (q.v.), the Maurya

Emperor who preceded him by several centuries.

Kanauj is the present name of the town where once
stood the great city popularly known as Kanyakubja in

historical times, according to literary evidences. It has
both been referred to as the kingdom and the capital of

Harśavardhana, who had enhanced its glory by selecting
it as his imperial capital.

It is not difficult to identify Kanauj or Kanyakubja of
medieval times with the city Kannakujia mentioned in
early Buddhist texts. This identification was considered
as acceptable by several authorities on the grounds of site
location and phonetic resemblance of the name as well.

Kanauj lies on the west bank of the Kālinadī, about six
miles above its confluence with the Ganges, in the present
Uttar Pradesh. Before Emperor Harśavardhana trans-
ferred his capital to this place, Kanauj had been the
capital of the Maukhari kings who had matrimonial
alliances with the family of Harśavardhana (R.C. Majum-
der, H. C. Raychandhuri and K. Datta, An Advanced
History of India, London, 1961, pp. 151 ff.).
Taking Hsuan-tsang’s estimate of 667 miles as approximately correct, the probable limits of the kingdom of Kanauj must have included all the country between airabad and Tannd on the river Gogra and Etawah and sahabd on the Jumna, which could give a circuit of not 600 miles (S. Beal Si-yu-ki, Chinese Accounts of India, Indian Edition, Calcutta, 1958, Vol. II, p. 232; Cunningham’s Ancient Geography of India, edited by S. Sastri, Calcutta, 1924, p. 431).

Cunningham surveyed the area for remains of archaeological interest and observed that the existing remains of city are few and unimportant (Cunningham’s Ancient Geography, loc. cit.). This estimate was not unusual in case of a city that was subject to visissitudes of various political upheavals of North India which proved disastrous to monuments of both religious and cultural importance, especially after the pillaging conquests of the Seljuk Turks from the North-west. History bears evidence of the destructive hand of the conqueror that spelled doom to the many religious centres in India since the days of Mohammad of Gazi (eleventh century A.C.).

Then he approached Kanauj, the historian relates that some one there a city which raised its head to the skies, and in strength and structure might justly boast to have equaled (Briggs Parishta, I, 57; Cunningham’s Ancient Geography loc. cit.) Just one century-earlier or in 915 A.C. Kanauj is mentioned by Masudi as the capital of kings of India and about 900 A.C. Abu Zaid on the sovereignty of Ibn Wahab calls, “Kadiya a great city in the dom of Gozar,” (Cunningham’s Ancient Geography, cit.).

The most graphic account of Kanauj was however given in the seventh century A.C. by Hsuan-Tsang stayed there as the guest of Emperor Harısavarhana witnessed two great Buddhist synods convened by emperor himself (S. Beal, op. cit. Vol. I, p. 25). Kanauj is mentioned by Ptolemy, about 140 A.C. as ‘Kanogiksa’ (voyiza).

The Chinese monk related the legendary history of Kanauj and how the city was so named ‘Kanyakubja’ after the curse by a certain rśi on the hundred daughters of the king of the country, who all had become hump-backed.

Hsuan-Tsang relates the legendary history of Kanauj and how the city was so named ‘Kanyakubja’ after the curse by a certain rśi on the hundred daughters of the king of the country, who all had become hump-backed.

The Chinese monk had noticed that there were several hundred saṅghārāmas with about 10,000 monks who were devoted to the study of both Mahāyāna and Hinayāna. He had also witnessed the great quinquennial assembly at Kanauj, as Mahāmokṣaṇaparīd held by Harṣavardhana.

Hsuan-tsang’s description of the political history of Kanauj is well substantiated by other authorities. He gives details of the lengthy war Harṣavardhana had to wage before bringing final peace to his empire. It was in these campaigns that he conquered the territories as far as Kashmir in the North-west, and the Gangetic plain in the East.

Having elaborated on the glories of Imperial Kanauj and its emperor, Hsuan-tsang describes the great religious assembly held in Kanauj which was specially convened in his honour.

On the instructions of Harṣavardhana, twenty kings of his subject territories had participated at the great assembly with Śrāvakas and Brāhmaṇas, the most distinguished of their country and with magistrates and generals. The emperor had constructed on the west side of the river a great saṅghārāma, and on the east of this a precious tower about 100 feet in height, in the middle he had placed a golden statue of the Buddha of the same height as the emperor himself. On the road leading up to the saṅghārāma he had set up decorated pavilions, and platforms where musicians were stationed. For the emperor a mobile palace was constructed. A grand procession was held daily in which a golden statue of the Buddha was carried on the back of a gorgeously caparisoned elephant followed by hundred other elephants. The emperor and his principal royal ally, the king of Kama-rūpa (in Assam) riding on two elephants and followed by an escort of five hundred war elephants flanked the Buddha statue and went on scattering pearls, and golden flowers in honour of the Buddha, Dhamma and Saṅgha.

After the conclusion of the great assembly Hsuan-tsang was greatly honoured by the emperor who provided...
him with all facilities to carry his books and images and gave him expenses for his journey back to China. (S. Beal, op. cit., p. 242; A. Aiyappan, P. K. Srinivasan, Story of Buddhism with Special Reference to South India, Madras, 1960, pp. 37 ff.)

Hsuan-tsang had seen a stūpa built by Asoka to the north-west of Kanauj. By the side of this stūpa were traces where the four past Buddhas are said to have sat and walked for exercise. There was another little stūpa containing the Buddha’s hair and nail relics, and a ‘preacher’s seat’ (dharmāsana).†

On the south side of the city and by the side of the Ganges river there were three saṅghārāmas all within the same enclosure, seen by Hsuan-tsang. In this Saṅghārāma compound, there stood the great temple of the Buddha’s Tooth Relic.† Not far from the Tooth-Relic temple there were several other monasteries and temples enshrining valuable images of the Buddha and other relics.

A temple of the Sun god (Śūrya) and god Mahēśvara† too have been mentioned by the pilgrim within close proximity to the Buddhist temples, thereby showing the religious tolerance of the Buddhist monarch Harsa­vardhana (S. Beal, op. cit. p. 245).

The imperial splendour of Kanauj, that Harsavarman did so much to augment was hardly dimmed in succeeding ages, and rulers of the remotest corners of India counted it their proudest boast to have “captured Mahodaya Sri”, i.e. Kanauj (R.C. Majumdar, H.C. Raychandhuri and K. Datta, op. cit., p. 160).

After Harsavarman there was no powerful hand to unite the whole of Madhyadesa under one authority and win for Kanauj that proud position which was once held by Harsa.

Efforts of a few rulers like Yasovarman were frustrated by the warlike potentates beyond the limits of the Madhyadesa to whom the acquisition of the Imperial city of Harsa was the goal of political ambition. After a brief period of independence, Kanauj finally fell before the invading Muslim armies.

A. D. T. E. Perera

KANDARAKA SUTTA, the first sutta of the first of the five divisions (gahapati vagga) of the middle fifty discourses (majjhima paṭāsaka) of the Majjhima Nikāya, (M. 1. pp. 339-349), was preached by the Buddha to Pessa (the son of an elephant-trainer) and Kandaraka (a wandering ascetic) when he was once staying near Campā on the bank of Gargarā lotus pond, with a large following of bhikkhus. Kandaraka observing the well-disciplined and silent bhikkhus praised the Buddha for the clever manner he trains his disciples. The Buddha, acknowledging the compliment of Kandaraka, said that many in that congregation of bhikkhus are Arahatas who have achieved the goal of their religious life and the rest are trainees (sekka) whose minds are well directed on the four stations of mindfulness (cattāro satipaṭṭhānā). When the Buddha spoke thus, Pessa said: Wonderful, Sire, is the way the Buddha has understood clearly what is harmful to human beings and what is beneficial to them. The world of humans is a massive thicket (gahapati līggs) whereas the world of animals is simple and open (uttāna). Human beings say one thing and do another and harbour a thought quite different to what they say and do. In such a state of affairs it is extremely wonderful that the Buddha has clearly understood what is beneficial to them and what is harmful to them. Approving what Pessa said the Buddha declared: “There are four categories of human beings in the world, Pessa. They are (1) those who torment themselves (2) those who torment others (3) those who torment themselves and others and (4) those who neither torment themselves nor torment others”.

When Pessa left, the Buddha addressed the bhikkhus and further explained to them about the four categories of human beings thus: People like the naked ascetics, who torment themselves by practising severe forms of asceticism, belong to the first category of human beings; those who engage in other types of cruel occupations belong to the second category of human beings; those brahmins and kṣatriyas who undergo various penances and at the same time causes the death of many heads of cattle, grown up and young, and causes the destruction of many valuable trees and plants for sacrifices belong to the third category of human beings; those who listen to Tathāgata’s dhamma and renounce the worldly life to become homeless bhikkhus to live the dhamma and thereafter achieves various stages of spiritual develop-

2. Cunningham says, of Kanauj, “In comparing Hsuan-tsang’s description of ancient Kanauj with the existing remains of the city, I am obliged to confess with regret that I have not been able to identify even one solitary site with any certainty; so completely has almost every trace of the early occupation been obliterated by the Musalmans. (Cunningham’s Ancient Geography, op. cit., p. 434).
3. The Tooth Relic referred to in this temple was brought from Kashmir by Harśavarman after his northern campaign. The description of the Tooth-Relic temple at Kanauj and the ceremonies connected therewith, as given by Hsuan-tsang strikes a close similarity to the temple ceremonies of the Tooth-Relic Shrine in Kandy, Sri Lanka today.
4. This could be of either the Hindu God Śiva or the Mahayana Bodhisattva Avalokiteśvara.
KANDY, the modern name of the last capital of the Sinhalese kings of Sri Lanka, renowned for its Temple of the Tooth (q.v. Dalada Mâligâva) where the Tooth Relic of the Buddha is deposited and also for the annual Daladâ-perahãra, the pageant connected with the same relic. The city is located in the central highlands 72 miles from Colombo, and is a centre of scenic beauty and great attraction on account of its mild climate and religious and cultural interest. PLATE XVI.

The city came into prominence in mediaeval times, and as then known as Senkadagala (Pali Senkhâpàsa) and Sirivardhanapura (Pali Sirivânâhapura). Tradition as it that it was founded by a king named Vijavikrama Mâha. xcii, 7, also known as Senâammata Vikramabâhu University of Ceylon, History of Ceylon, Vol. I, Pt. II, p. 30-1), on a site originally occupied by a hermit named ekhanda. Another tradition says that the city was named Senkadagala because the queen of its founder ore the name Senkhanda (A. D. P. Karunatilaka, ekhâadalâpurâ itibâsaya, Kandy Printers, 1955, p. 4).

The modern name is an adaptation of the Sinhalese ord kanda meaning 'highland' in the Phrase kanda-uda-ssastra, 'The five countries of the Highlands', ferring to the Kandyian kingdom, but now refers to its capital.

For some time before the emergence of the city of senkadagala into prominence the neighbouring city of ampotha was the capital of the Sinhalese kingdom of central Sri Lanka. It was in about 1540 A.C. that the capital was transferred to Senkadagala which was also called Maha Nuwara.

The Kandyian kingdom did not have a peaceful existence. From the time of its inception it had to struggle against rival Sinhalese kings of the low-country kingdoms on the one hand and the European invaders on the other. In their efforts to withstand the invasions of the Sinhalese kings of the low-country kingdoms, Vikrama-hu and his successor Karaliyade Bandâra, sought the assistance of the Portuguese who were at this time in cuspation of the region around Colombo, but nevertheless, King Râjasinha I of Sthâwaka annexed the Kandyian territories to his kingdom in 1582 and possessed them till his death in 1592.

In 1592 Konappu Bandâra, the son of a petty chieftain came king of Kandy under the name Vimaladharmasûrya I and legitimised his right to the throne by marrying the daughter of King Karaliyade Bandâra. He showed great zeal for Buddhism by erecting religious edifices and above all, by setting up a Daladâ Mâligâva within his palace complex. He revived old customs and held the religious festivals like the perahera. Vimaladharmasûrya even procured monks from abroad to restore the higher ordination.

When Vimaladharmasûrya's brother Senarat succeeded him to the throne of Kandy in 1605 A.C. his kingdom was attacked by the Portuguese and the king made a treaty with the Dutch who had arrived in Batticaloa at this time. Later, in 1617 Senarat had to make peace with the Portuguese and allow Roman Catholic friars to come to his realms and build churches. Senarat's son Râjasinha II who succeeded him in 1635 also favoured Christianity and permitted Christian priests to live and build churches in his dominions.

From 1687 until 1706 A.C. Râjasinha's son Vimaladharmasûrya II ruled in Kandy. He erected a three-storied Dalada Mâligâva and restored the Upasampadâ ordination by obtaining monks from Siam. After his death his son Sri Vilrapârkrama Narendrasinha became king. He was, incidentally, the last Sinhalese king of Sri Lanka for, the four kings who succeeded him belonged to the Nâyakkâr clan from South India.

Vimaladharmasûrya II's queen was a Tamil of the Nâyakkâr clan in South India and Narendrasinha was her son. Narendrasinha himself married a princess from South India and died without an heir. As a result his queen's brother, following the traditional custom prevalent among the Nâyakkârs, succeeded him to the throne under the name of Sri Vîjaya Râjasinha, thus ending the royal line of Sinhalese kings and giving rise to a new dynasty of Nâyakkâr kings from South India. Sri Vîjaya with his queen professed Buddhism and repaired and erected temples in order top lacate the subjects. He also celebrated the religious and social festivals and made efforts to procure monks from Siam to restore the Upasampadâ (Higher Ordination).

Sri Vîjaya Râjasinha was succeeded in 1747 A.C. by his brother-in-law Kirti Sri Râjasinha. His reign is noted for the religious and literary revival in Ceylon. He erected several Buddhist monasteries and, at the request of Vâlîvita Saranâkkâra Thera sent an embassy to Siam in 1750 A.C., in Dutch vessels, to procure monks for the restoration of the Upasampadâ. The embassy returned in 1751 A.C. with some Siamese monks led by Upali Thera and ambassadors. Saranâkkâra and others were given higher ordination and thus began the Siamese Nikâya of Sri Lanka. Saranâkkâra Thera was also made the Sangharâja and under his direction religion and education flourished. He was the author of many religious works.
The shrines like the Nātha Devala and the Nallike Devale were the products of the Nayakas and represented the insignia of the gods and majesty at the Dālādā Perahera and the Sīrī Vijaya. Kīrti Sīri directed that the Daladā and other Buddhist temples be endowed with a puri of honour in the perahera. Kīrti Sīri Jayasiṃha died in the Yava-deva temple set up by his brother Rājādhi Rājaviṣaya during the inevitable struggle for succession between the ruler and the Sinhalese king who captured Ceylon. In 1798 A.C., the king was deposed by Pilima Tālava, the father of the present Perāla. The Sīrī Wickrama Rājasiṃha, who took the name Sīrī Wickrama Rājasiṃha, fled from his capital and deposed to the throne a prince named Kīrti Sīri, who took the name Sīrī Wickrama Rājasiṃha, and annexed Kandy to their territory, thus bringing the whole Island under British Rule. The Kandy Kingdom was annexed on March 2nd 1815 at a convention held in the great Audience Hall and agreed upon between the British officials and the Sinhalese chiefs and remained a British possession until February 4th 1947, when Sīrī Lanka gained Independence.

This is then the history of Kandy in brief, both as a kingdom and city. The city of Kandy, it is noteworthy, picturesque as it is, has preserved several monuments of Buddhist interest belonging to the period described above. Of prime importance among them are the Daladā Māligāva or the Temple of the Tooth where the sacred Tooth of the Buddha brought to Sīrī Lanka from Kailāṅga in South India in the reign of King Kīrti Sīri Meghavanna (303–31 A.C.) is deposited. The temple, magnificent in its appearance with its beautiful pattini-puwa, i.e. the octagon, on the right of the main entrance, is protected by a very ornamental stone wall and a moat. The shrine where the Tooth Relic is deposited is itself concealed by other buildings within the enclosure. Two imposing festivals are connected with this temple, one, the exposition of the Tooth Relic, and the other, the Daladā Perahera (q.v.) a pageant held annually in August.

In the grounds adjoining the Temple of the Tooth is the Audience Hall, a historic building associated with the ceremonial of the Kandy court which served as the Supreme Court of Kandy till recent times. Its wooden architectural features are noteworthy. The hall is said to have been begun in 1784 by King Rājādhi Rājasiṃha.

In the same locality is an old building said to have been a part of the palace of the queens, but now used as a museum for treasures of Kandy art and craftsmanship.

All these buildings including the Temple of the Tooth fell within the complex of the old palace of the Kandyans

Kandy, is a walled enclosure of temple buildings. Here are found the Nātha Devala, a dāgāba, several Bodhi-maluva and several halls. In the Hall mentioned above is said to be deposited the Bowl of the Prophet. The temple building is the oldest building in Kandy entirely of stone. In architecture the hall of the temple is remarkable as it is the only building in Kandy built entirely of stone. In architecture it differs from the other religious edifices of Kandy in the manner, externally a Hindu shrine. This temple was the earliest historical building now in the city. The city seems to have enjoyed a certain amount of fame as an abode of this deity even before the capital of the later Sinhalese Kings. In the Nātha Devala that an important ceremony of the Sinhalese kings was the unveiling of the image of god Sūrya. This ceremony was performed in the Nātha Devala during the New Year celebration. During this time one thousand small pots were filled with flowers and medicinal plants and were sent to be distributed among the streets.

The Audience Hall is a building in the style of the Kandy Devala along the southern side of the palace and the Daladā Māligāva and the Palana Devala are built in the Kandy style. The most striking features are the carved pillars and beams of wood and the sloping roofs with a peculiar type of tiles. This style of architecture is quite prominently seen in the Audience Hall and certain sections of the Temple of the Tooth. The
The Asgiriya Vihara is reached by crossing the Matale railway line at the north end of Dahadi Vidiya and proceeding about half a mile leading to its buildings. At Asgiriya there are two and the new lightly elevated site on the borders of the lake, about a third of a mile from the Queen's Hotel. Its chief building of significance, namely the Gaflgiirima, GalaQuva-vih'illa and the Degaldo ruwa-vih'illa, belonging were built in Kandy. The Malwatte Vihara is situated on the island of SaJsette or Saiatsastlii, at the head of the Bombay harbour. In this group are about 109 separate caves, mostly small however, and architecturally unimportant. These caves are excavated 'in one large bubble of a hill', situated in the midst of an immense tract of forest country.

The style of most of these caves is certainly primitive. One small cave, a monk's abode consists of a very narrow porch, without pillars, a room with a stone bench along the walls, and a cell to the left. It has an inscription of Yajña Sri Sātakarṇi of the Andrabhṛtya race. This and many others have been assigned to the period from the 2nd to the 4th century A.C. Caves of the more ornate type contain sculptures showing Mahāyāna influence, and some have inscriptions which can be dated as late as the middle of the 9th century A.C.

Among the Kānhēri caves the first one met on the way up the hill is the great Caitya-cave, the most important one in the whole series. On the jamb of the entrance to its verandah is an inscription of Yañja Sri Sātakarni or Gautaminiputra II. According to inscriptional evidence it was excavated in 180 A.C. This cave is 86½ feet long and 39 feet 10 inches wide from wall to wall, and has 34 pillars round the nave of the caitya. Only 17 of them have bases and capitals. Others are plain, octagonal shafts. The caitya too is a very plain one, nearly 16 ft. in diameter. Its capital and all the woodwork of the arched roof are destroyed. At the end of the verandah of the Caitya-hall are two colossal figures of the Buddha, about 23 ft. high. These appear to be considerably later than the cave itself. In this verandah is also an inscription containing the name of Buddhaghosa, in letters belonging to about the sixth century A.C.

In front of the verandah is a courtyard on each side of which is an attached pillar. On the top of the pillar on the west side are four lions and on the other are three fat squatting figures. On the left side of the court are also two rooms, one entered through the other. The outer one has a good deal of sculpture in it. On the left of the court is also a small circular cell containing a solid caitya. On the right is a long cave which once contained three caityas. On the rock surrounding the caityas are sculptures of the Buddha, probably of a later date. To the south of the last of the above caves is another caitya-cave, but quite unfinished and of a much later style of architecture, probably of about the 9th or 10th century A.C.

The caitya-hall at Kānhēri is said to mark the end of the Hinayāna epoch in India as far as its rock architecture is concerned. This caitya-hall is described as a decadant copy of that at Karli, but only two-thirds its size. The cave was probably never completed, but it was in use by the Hinayāna Sangha for some time. Subsequently it fell into disuse for several centuries. With the revival of the Buddhist religion in its Mahāyāna form from about the

KĀNHĒRI, site of a group of Buddhist rock-temples in the island of Salsette or Saṭasasthi, at the head of the

---
5th century A.C. it was again taken over and occupied by monks. It was at this stage that its exterior was made suitable for theistic ritual then prevailing, by means of additional sculpture. Some of these sculptures are now its most striking features. At each end of the vestibule there is a colossal statue of the Buddha over 25 ft. high. The interior of the caitya-hall remains as originally designed. The impression conveyed by this caitya-hall is, that, while the architectural technique shows signs of deterioration, the sculptural embellishments have maintained their quality.

The Kānhēri caitya-hall is rather bare and obviously unfinished. But it provides some useful information as to the disposition of the exterior of caitya-halls. In front of the exterior at Kānhēri is a well-defined courtyard, contained within a dwarf wall, and entered by a flight of steps. This wall is decorated with a rail-pattern in bas-relief with figures of door-keepers on either side. The whole scheme forms an attractive frontal approach. Within the fore-courtyard, on each side are the octagonal lion-pillars (simha-stambha) attached to the rock. Beyond these lion-pillars is the outer facade with three openings and a range of five windows.

To the north-east of the great caitya-cave is another cave known as the Mahārājā or Darbār Cave. This is the largest of this class in the group and the most interesting after the caitya-cave. It has several cells like in a vihāra, but it appears to be a dharmaśālā or an assembly-hall.

There are two inscriptions in this cave, assigned to the 9th century A.C. The pillars of the verandah are plain octagons without base or capital.

Several smaller caves in the vicinity can be assigned to the 9th or 10th century A.C. These generally contain a verandah, a hall and a cell with a caitya or some sculptures, a stone bench or a bed.

Some way further up is a vihāra with a large, advanced porch supported by pillars. On the back wall are remains of paintings of Buddhas. In the large recesses to the right of the porch is a seated figure of the Buddha, and on his left is Padmapāṇi or Sahasrabhū Lokiteśvara.

On the hill to the north is a temple in ruins and near it the remains of several stūpas. On the south side is a range of about nineteen caves, the largest of which is a beautiful vihāra-cave with cells in the side walls. The walls of the verandah, sides and back of the hall of this cave are covered with sculptured figures of Buddha in different attitude and accompanied by female figures indicating that it is a work of the Mahāyāna school.

Behind these is another range of caves remarkable for the profusion of their sculptures, consisting chiefly of Buddhas with attendants, caitya etc. These are also works of the Mahāyāna school.

Most of the caves in Kānhēri are each furnished with its own cistern. All over the hill, steps are cut on the surface of the rock from one set of caves to another.

The caves and other ruins at Kānhēri betoken the existence at some period of a large community of monks there.

KANIŚKA, the great Kuśāna king of India, a renowned patron of Buddhism. His name is spelt as Kaniśka in inscriptions. On coins it appears, in Greek script, as Kanērki, or in the genitive Kanerkō which some scholars read as Kanēshki and Kanēshkōu. Kānpīr tradition gives the variant Kanīṣhka which become Kanīṭa in Chinese. Alberuni refers to him as Kanik.¹

There are different theories regarding the nationality of Kaniśka. It is widely accepted that he is of Yuch-chi origin. It is said that during the 2nd century B.C. the Yuch-chi, a Mongoloid nomadic tribe of Central Asia, was forced out of their pasture lands by their more powerful neighbours, the Hiung-nu. Being thus driven out they migrated westwards and in the course of their migration conquered the Wu-sun tribe and settled down in the basin of the Ilī river. Here they were divided into two branches of which the minor branch (Siao-yueh-chi) deflected southwards and settled down along the Tibetan border while the major branch (Ta-yueh-chi) proceeded forwards, defeated the Sakas and settled down in the conquered territory. From there they were again expelled by the son of the dead Wu-sun chieftain. Resuming their march, they finally occupied Bactria and Sogdiana and by about the 1st century B.C. gave up their nomadic habits and adopted a more settled life. Here they were divided into five groups of whom the Kuśānas (Kuei-shuang) overpowered the rest and united the whole tribe under Kadphises I (i.e., Kujiula Kadphises) who captured some regions of North West India. He was succeeded by his son Kadphises II (i.e., Wima Kadphises) who annexed further Indian territory. Kaniśka, whose connection with Kadphises II is not known,² is said to have succeeded

¹ ERE. VII, p. 652
² Kaniśka was the son of Kadphises II, (JRORS. V, p. 511; VI, pp. 12-22)
him\(^3\) Sten Konow and Fleet consider that Kaniska belonged to a separate clan of the Kuśāṇa which originated from Khotan.\(^4\) B.N. Puri\(^5\) says that the Kuśāṇa and the Yueh-chi are two different racial groups and that the former is of Iranian-Saka stock while the latter is of Mongoloid origin.

There is no consensus among scholars regarding the date of Kaniska. The earliest and the latest dates assigned to his accession are 5 B.C. and 278 A.C. \(^7\) S. Levi suggested 5 B.C.; Fleet who places it in 58 B.C. also considers him to be the founder of the Vikrama Samvat.\(^8\) According to Professor Van Lohuizen de Leeuw Kaniska acceded to the throne between 71-86 A.C.\(^9\) Cunningham places him in 80 A.C.\(^10\) Ferguson, Oldenberg, Rapson, Thomas, Banerji, Jayaswal, and later, even Marshall and Levi place Kaniska in 78 A.C. and some of them regard him also as the founder of the Saṅka era.\(^11\) Vincent Smith, Sten Konow favours one of the dates 120 or 128-29 A.C.\(^12\) Ghirshman suggests the date 144 A.C. which is endorsed by Benjamin Rowland and B.N. Puri.\(^13\) The date put forward by R.C. Majumdar is 248 A.C.\(^14\) D.R. Bhandarkar first suggested 278 A.C. but later adopted 128 A.C.\(^15\)

Of these numerous dates the most widely accepted is 78 A.C. although some modern scholars like Benjamin Rowland and B.N. Puri prefer the date 144 on the ground that the latest archaeological discoveries made at Begram in Afghanistan by Ghirshman add more weight to it.

The view put forward by Fleet, and supported by R. Otto Franke and J. Kennedy, that Kaniska preceeded the two Kadphises, is no longer held as valid.\(^16\) The excavation done at Taxila has shown that the coins of the Kaniska group of the Kuśāṇa kings were found in the upper (i.e. later) strata of earth while those of the Kadphises group were in the lower (i.e., earlier) strata. The connection between Kadphises II and Kaniska is not known. However, the evidence provided by the coin-finds in which the coins of Kadphises II and Kaniska were found together proves that they were close to each other in time. It is plausible to hold that Kaniska succeeded Kadphises II after a short interregnum.\(^16\)

It is quite certain that Kaniska succeeded to a fairly large kingdom of Kadphises II. He expanded this kingdom by annexing more territory both in India and in Central Asia. Inscriptions of Kaniska found at Kosam (Allahabad),\(^7\) Sarnath,\(^10\) Mathura,\(^10\) Sui-vihar (Bhavalpur),\(^20\) Zeda (Und),\(^21\) Manikiala (Rawalpindi)\(^22\) and his coins, found in Bihar and Pataniputra, suggest that he ruled over a vast Indian territory. Chinese and Tibetan tradition record that he conquered Sāketa and Magadha and carried off the eminent Buddhist scholar Asvaghosa.\(^24\) He also conquered Kaśmir, Punjab and Sind.

Kaniṣka

Kāśmir, he erected numerous monuments and founded a city called Kaniṣkapura, now represented by the village Kanishpur. Outside India his rule extended to Afghanistan, Bactria, Kāshāvar, Khotan and Yarkand.

Vincent Smith argued that Kaniṣka seems to have cherished a marked preference for a state he had his capital at Purusapura, the modern Peshawar, which lay in the main route from Afghanistan to the Indus plain.

Kaniṣka was a renowned warrior. His most daring followers were his conquest of Kashgar, Yarkand and Kāshāvar, which were dependencies of China. Kādphises II failed to have tried to accomplish this feat without Kaniṣka, consequently had to pay tribute to China.

Kaniṣka not only freed his kingdom from this obligation, but also took away hostages from a dependency of China. Some scholars are of opinion that on a previous occasion, Kaniṣka, too, tasted defeat at the hands of the prince general Pan-chao.25

Kaniṣka treated his hostages with utmost consideration, providing them with places of residence suitable to their rank. These hostages are said to have resided in the Sanskrit monastery probably situated in the hills of Kāshāvar (modern Kāfhristan) and in monasteries at Khotan and Eastern Punjab (Cinabhuṭi).26

Buddhist tradition describes Kaniṣka as a great patron of Buddhism comparable to Asoka. Legends about his patronage closely resemble those of Asoka, and it is probable that these legends were based on stories detailing Asoka’s conversion. Tradition represents Kaniṣka, before his conversion to Buddhism, as one who had no faith either in right or wrong and as a person who did not pay his attention to Buddhism. It is also said that the immediate cause of his conversion was the deep remorse he felt over the bloodshed in his numerous wars.27 Though this tradition is based on facts it could be anticipated that it was built up by the Buddhists making Kaniṣka emulate Asoka and show the ennobling influence of Buddhism on him.

Epigraphical and numismatic records do not provide clear testimony regarding his conversion and religion. Vincent Smith surmises28 that his coins show that his conversion to Buddhism did not take place until he had been on the throne for some time. The finest and presumably the earliest coins bear legends, Greek in both script and language, with images of the sun and moon under the names Helios and Selene (spelt Saṁśe on the coins). On later issues, the Greek script is retained but the language is Khotanese, while the reverse of the coins represents gods worshipped by Greeks, Persians and Indians.29 The coins that bear the images of Śākyamuni are considered to be the latest. Some Indian scholars think that if numismatic evidence proves anything, it is only his eclecticism, or that his coins only depict the various forms of faith prevailing in his vast empire.30 Despite attempts to adduce evidence to prove that he was not a Buddhist, the testimony provided by the numerous monuments he has built, as well as his association with the Buddhist Council held during his reign show that, even if he was not a Buddhist, he was more bent towards Buddhism than towards any other religion. An inscription found on a relic-casket, too, is taken by some scholars as evidence to establish that he favoured the Sarvāstivāda school of Buddhism.31

Tradition records that Kaniṣka studied Buddhism in his leisure hours under the guidance of Pārśva. Tradition also states that he carried off Āśvaghoṣa from Pātali-putra.32 Even if this story is not accepted it is plausible to hold that Kaniṣka and Āśvaghoṣa were contemporaries and that these two were associates.

Two eminent Buddhist scholars Vāsumitra and Nāgarjuna, too, are said to be his contemporaries.33 Buddhism at that time was a force to reckon with, and despite the possibility that Kaniṣka was doing his best to consolidate his vast empire, he adopted Buddhism to keep abreast of the trends prevalent at the time.

According to the Buddhist tradition the greatest service rendered to Buddhism by Kaniṣka is his convening

25. Much weight cannot be attached to the tradition which says that there was a son of the Hun Emperor among the hostages. He may have adopted the titles, Mahārāja, Rajātirāja and Devapurata after these successful campaigns.

26. R. S. Tripathi, op. cit. p. 255: The Age of Imperial Unity. 142 f.: but cp. Vincent Smith, (op. cit. p. 269, who regards this as an event connected with Kādphises II.

30. Some of the deities represented are Ōesho (Śiva), Ōado (Persian Vādo; Indian Vāta), Atsho (Persian Atash) Sun-god Miilo, Summerian Mother-goddess Nana and others.

31. B. H. Puri, op. cit. p. 136; R. S. Tripathi, op. cit. p. 228

33. There are different traditions regarding this.

34. Besides them he had a chaplain called Saṅgharakṣa, a minister called Mūthara; Caraka an eminent physician, too, is said to have been a member in Kaniṣka’s court.
KANISKA

The Buddhist Council during his reign. There are different accounts of this council. The best known is that Hsuan-tsang, Paramârtha in his Life of Vasubandhu gives another version which, though generally considered be the same as that of Hsuan-tsang, contains different form. Târânta also records an account, which, though confused, contains important information. It is, therefore, present, to extract facts from these legendary accounts which are confused and often discrepant.

It is said that Kaniśka, greatly puzzled by the conflicting teachings found in different schools, suggested to râja to summon a council of eminent monks to obtain authoritative disposition of the doctrine. There was no difference of opinion among them as to the venue of council and they finally decided to hold it at the râJayâvâna-vihâra in Kâsîmîr. Vasumitra was elected sâdhu with Âsvaghosa as the Vice-president. The members, five hundred in all composed 100,000 stanzas Upadesa Śāstra explanatory of the canonical sutras, 1,000 stanzas of Vinaya-vibhâṣâ-śāstra explanatory of vinaya and 100,000 of Abhidharma-vibhâṣâ-śāstra explanatory of Abhidharma. Kâniśka is said to have sed these treatises to be written on copper plates and lost them in stone boxes which he deposited in a specially constructed for that purpose.

It is not possible to form a clear idea about the work accomplished at the Council. Some scholars think that chief business of the Council was to collect canonicals, and to prepare commentaries of different schools of Buddhism.

The reliquary enshrined in the Kaniśka-câitya is also worthy of note. The object is a round phrûsya, made of an amalgam of precious metals. The lower hand of the drum consists of representation in relief of garland-bearing erotes and Kuśâna sovereign, identified by scholars as Kâniśka, between the divinities of the sun and moon; on the side of the lid is a flock of geese (hamsa). To the top of the cover are fastened three standing statuettes of the Buddha, flanked by Indra and Brahmâ. The most interesting feature of the object is the Greek name of the maker, agesilaus, the overseer of works at the Kâniśka-câitya. The inscription found on the reliquary also states that it was made "for acceptance of the teachers of the Sarvâstivâdin school" and this is cited as evidence to prove that Kaniśka was an adherent of this school of Buddhism.

Whatever the tradition is there is no reasonable ground to hold that Kaniśka was responsible for the rise and rapid spread of Mahâyânaism and that the Council held during his reign was a Mahâyâna Buddhist Council. It is plausible to hold that he was more bent towards Sarvâstivâda teachings and this is established by the inscription on the relic-casket.

Of the numerous stūpas he is said to have built, the most famous is the one at Shah-jî-kî-Dheri near Peshâwar. From the accounts of the Chinese travellers of the fifth and seventh centuries it appears that it was one of the wonders at the time. This stûpa is said to have been 130 metres in height, resting upon a stone substructure 50 metres high, topped by an iron mast 10 metres high with gilded metal discs. It is assumed that the original form of the stûpa as it appeared in the days of Kaniśka, looked quite different from the form that could be reconstructed from the ruins. It is also believed that it was rebuilt many times.

Vatters op. cit. pp. 270 f.

Quoted by C. Elliot, op. cit. p. 78, n. 4

Here is yet another tradition which gives the venue of the council as Jalandhara.

The Buddhist tradition of Ceylon does not recognize this council.
KANIŠKA

During Kaniška’s reign his empire was enriched through trade carried on with countries outside India, specially with Rome and Asia Minor, and as such he had the necessary resources to patronise the arts. Many scholars believe that Gandhāra art attained its peak during his reign.45 Tradition which credits Kaniška with having built many stūpas, also seems to support this contention. According to Benjamin Rowland “The Art of Gandhāra is, properly speaking, the official art of the Kushān emperor Kaniška and his successors” (see also, GANDHĀRA).

Like Asoka, Kaniška also helped missionary activities. It was during his reign that Buddhism spread and became firmly established in central and eastern Asia. There are no records of any missionaries sent by him. But it is accepted that under his patronage Buddhism greatly flourished and spread throughout his vast empire. One writer has observed that “there was ceaseless missionary activity throughout his vast empire which extended from Madhyadesa in India to Central Asia. A truly integrated Asian culture came into existence at this time...”44 Vincent Smith45 observes that the legend regarding his death possibly may be founded on fact.

A statue of Kaniška was discovered by Tokitila, in the village of Māt. In this headless statue the king is represented with his right hand resting on a mace and the left clamping the hilt of the sword. He is dressed in a tunic reaching down to the knees, and held round the loins by a girdle. He wears heavy boots with straps round the ankles. Though headless, an inscription found on it proves conclusively that it represents Kaniška.46

KANJIN

(KANJIN) (687 A.C. – 763 A.C.), also referred to as Kanshin or Ganjin, was a Chinese monk (Chien-Chen) from Yangchou who came to Japan in 754 A.C. and founded the Ritsu (vinaya) school of Buddhism.

It appears that ever since the inception of the Buddhist Order in Japan Japanese monks seem to have been somewhat lax in disciplinary matters. To remedy this shortcoming emperor Shomu tried to invite an able teacher from China. For this purpose he in 738 A.C. sent out the two monks Eiei and Fusho to China. These two met Kanjin and invited him to Japan. But as the reigning Chinese emperor was not favourably disposed towards Buddhism Kanjin could not obtain imperial sanction for this journey. However, Kanjin being determined to make the trip secretly made several unsuccessful attempts to sail to Japan. It is said that on the fifth attempt he lost his sight. Yet, undaunted he tried once more and successfully reached Japan in April 754 A.C. He is said to have been accompanied by fourteen monks, three nuns and twenty-four lay male disciples. Kanjin and his followers are said to have brought along with them a number of vinaya commentaries and important texts of the Tendai School.

On his arrival in Japan Kanjin was ceremonially received by Shomu and a special monastery, called Toshodaiji was built for his residence. At Kanjin’s request a special Ordination Hall (kaidan), the first of its kind in Japan, was built in the precincts of the Todaiji temple in Nara.

The establishment of the kaidan at Todaiji in Nara is a significant event in the history of Japanese Buddhism. At the first ordination ceremony itself over four hundred are said to have taken part. Since the kaidan was at Nara all who wished to obtain ordination had to go there. Official permission was not granted to establish any kaidan outside Nara, and hence, schools of Buddhism that

KANGUR. Tibetan Buddhist literature, which made up of translations into the Tibetan Sanskrit Buddhist texts and Buddhist literature, consists broadly of two major works: Kangyur and the Tanjur (q.v.). These two are the equivalent of the Chinese Tripitaka. This section contains miscellaneous sūtras that cannot be generally categorised under subjects, as well as important Mahāyāna sūtras as the Lalitavistara (q.v.), Lāhāvatāra sūtra (q.v.), and Saddharmapundarīka sūtra (q.v.). This section contains 270 works and of them about 90 are identical with works in the Ching division of the Chinese Tripitaka. It also contains several sūtras translated from the Pali, and many treatises on such subjects as grammar, philosophy, and many treatises on such subjects as astronomy and grammar. The commentary to the basic rules (of the vinaya) is ācārya Buddhaghosa’s (5th Century A.C.) commentary on the text of the Pātimokkha, which contains both in the Sutta Vibhaṅga and the Mahāvīra-kāla (pali) Vinaya Pitaka. Mātikā is the basic text of the Pātimokkha, and as an independent text even though the practical needs of the Order for the recital of the pātimokkha at the uposathakamma as demand it. It is now treated as an independent text. The Kkhw deals with both the bhikkhu and bhikkhunipātipāmakka.

In the prologue to the work it is stated, that it was written at the request of a therī named Sona (Kkhv. p. I). The work is remarkable for the restraint and mature judgement that characterise Buddhaghosa’s style. While commenting on the precepts of the Pātimokkha, he has incidentally brought in much new information throwing light on the later development of the monastic life of the Buddhists (Law, R.C., A History of Pali Literature, Vol. 2, p. 409).

In the colophon which contains a summary, a kind of uddāna of the contents, Buddhaghosa declares most emphatically that there is not even a single word in the book which is not in conformity with the canon or the

KĀṆKHĀVITARĀṆAṆA VISUDDHI

KAKHAVITARANAVISUDDHI, like other forms of visuddhi, is not an end in itself; it is only the means to the attainment of the next higher purity, called the magga-magga-ñāpadasanassa-visuddhi (Kakhavitarana-avisuddhi yāvadeva magga-magga-ñāpadasanassa-avisuddhā) which, together with other six purities, constitutes the means to the final goal, i.e., the attainment of absolute freedom (anupādā parinibbāna: M. 1, 149 ff.). See VISUDDHI.

Upali Karunaratne

KANNON (var. Kannon) is the name by which Avalokiteśvara (= Kuan-yin q.v.) is generally known in Japan. There are, however, numerous forms of Kannon, both as male and female, divinities which are distinguished from one another by prefixing descriptive epithets e.g. She Kannon, Ju-ichi men Kannon, Koyasu Kannon etc.

Worship of Kannon may be co-eval with the introduction of Buddhism to Japan. However, the tradition is that Kannon worship was introduced during the reign of Suiko (593-628 A.C.). Even if this is accepted, the gap between the date of introduction of Buddhism and the date of introduction of Kannon-worship cannot be anything more than half a century. Ever since his introduction, Kannon as the personification of compassion, almost a god of mercy, has remained the most popular of all bodhisattvas in the Japanese Buddhist pantheon. All Japanese Buddhists hold Kannon in high esteem.

A legend concerning the introduction of Kannon-worship to Japan says that in the ninth month of Suiko's reign the ruler of Shiraki (a region in Korea) sent an ambassador of good-will to the Japanese court with a statue of Avalokitesvara as a gift. Shotoku, who was the prince-regent at the time, reverentially accepted the gift and ordered Hata-no-Kawakatsu to build a shrine for it. Shotoku is said to have become such a devotee of Kannon that he, when faced with grave problems connected with the affairs of state, used to shut himself up in one of these shrines particularly in the Yumedono or the Hall of Dreams (or Visions) in the Horyu-ji and pray to Kannon for guidance and help, and also meditates to gain peace of mind.

This particular statue of Kannon enshrined in the Yumedono, and hence called Yumedono Kannon or sometimes referred to as Guze Kannon, is considered by some to be a creation of Shotoku himself. Whoever the sculptor was, it undoubtedly is a masterpiece of the early Asuka period. The statue which is 197 cms. in height is of camphor-wood and covered with gold leaf. It stands erect on a double petalled lotus pedestal, though when seen in...
KANNON

: it appears to be somewhat curved. It holds with its hands the precious gem, perhaps the wish-granting-gem (amuradhana), in front of its chest. It wears a crown of thirteen and it is also adorned with a pointed, oval halo decorated with patterns of woodbine and garlands. Somewhat the over-tall and slender Bodhisattva, Amogha-vajra, came to Japan and brought along with him the prototype Avalokitesvara and Kuan-yin, appearing in numerous forms adapted to suit the function he is expected to perform. Though all the 108 forms prevalent in Nepal and India are not found in Japan there are at least seven forms which have gained considerate popularity among the Japanese Buddhists. They are: She Kannon, Ju-ichimen Kannon, Senju Kannon, Puku-Kenjaku Kannon, Bato Kannon, Nyoi-rin Kannon and Jun-tei Kannon.

Out of these seven the Tendai sect excluded the Jun-tei Kannon while the Shingon omits the Puku-Kenjaku form. A group of thirty-three (or sometimes even thirty-four) is made up of these seven. This group first came into being somewhere in the 8th century. Thirty three shrines in Kyoto and the neighbouring provinces were assigned to these forms. The monk Tokudo is considered to be the first person to have gone on pilgrimage to these shrines. Subsequently this practice fell into disuse until revived and reestablished by the Emperor Kava-ran in the 10th century. Even at present, pilgrimages to these shrines form a part of the popular religion. Popularity gained by these shrines is seen from the establishment of similar sets of shrines in other provinces.

She Kannon: This is the simplest of all forms of Kannon, and appears to have been modelled on the Indian prototype Padmapani Avalokitesvara. Though details differ from period to period and from artist to artist, this form is, in general, represented as a graceful slim, youthful figure. The ears are usually long and lobed and the eyes are generally half-closed (vitraka and varada are the two mudras generally displayed by his hands. Often he is made to hold a lotus (padma) in his hand, and hence his Sanskrit epithet Padmapani. In many representations the hair is drawn up in a mitre-shaped usnisa. The normal attire is that of an Indian prince. But sometimes he may appear without any ornaments. Some statues of She Kannon, as the one in the To-in-do of Yakushi-ji, display influence of the Chinese T'ang style which is derived from the Indian Gupta style. There are some statues which, according to Alice Getty (op. cit. p. 92), resemble more closely the Tibetan type than any of the other Japanese forms.

Ju-ishimen Kannon: The chief feature that distinguishes this form from Sho Kannon is the eleven heads,
whence the Sanskrit name Ekādasamukha (eleven-headed). In Japanese statues these heads, which are represented in miniature size, appear in the form of a crown. The arrangement of these heads is usually in two rows of three each with a row of five heads in between. The head of Amitābha usually protrudes from the ushnīṣa. Ju-ichi-men Kannon usually had two arms and generally holds a vase with a lotus flower in the left hand while the right may be in varada-mudrā or may hold a rosary or a staff. There are some beautiful statues of this Kannon belonging to the early Heian period. One such is the 100 cm. high sandal-wood statue in the main hall of Hokke-ji. There are two other specimens, one in the Horyu-ji and the other in the Kogen-ji (= Togan-ji).

Sen-Ju Kannon: This is the thousand-armed form of Kannon. He too, often wears the crown of eleven heads or sometimes a high crown without heads. Occasionally he is represented as wearing a low crown with a standing figure in the centre. His thousand arms are outstretched except for two pairs of which one pair, held at the breast is clasped together in the posture of worship while the other, brought together near the naval, is made to hold a bowl of ambrosia. The other pair of outstretched hands is made to carry various symbols.

Puku-Kenjaku Kannon (var Puku-Kansaku Kannon = Skt. Āmoghapāśa): This is another form of Kannon and he is generally represented as having three eyes and six arms. Though he was not held in high esteem by the Shingon sect at one time; at present a more prominent position is assigned to him.

A typical representation of Puku-Kenjaku Kannon, is the one found in the Hokke-do of Todai-ji at Nara. This is said to belong to the Tempyo era. In this he is represented as having one head, three eyes and six arms and stands on a lotus-pedestal. He wears an elaborately designed crown. The halo around him is simple but elegant. The two hands in front of the hump in the posture of worship (namaskāra-mudrā). With the remaining hands he holds numerous symbols. There is another wooden statue of Puku-Kenjaku Kannon in the nan-en-do of the Kokulu-ji at Nara. This is said to have been made by Kokei in 1189 A.C. Here Puku-Kenjaku Kannon is represented as being seated cross-legged on a lotus pedestal. He has one head and six arms. The two main hands are in the namaskāra-mudrā, while the other hands are made to hold symbols, such as the staff. Though he wears an elaborately designed crown the upper-part of his body is bare. Besides these well-known forms he is sometimes presented as three-faced, each face with three eyes, and as having eight or sometimes eighteen arms. In some representations he is made to wear the eleven-sided crown which is normally worn by Ju-ichi-men Kannon; (see AMOGHAPĀSA).

Ba-to Kannon (= Sanskrit Hayagrīva): He is modelled on the Tibetan Hayagrīva. Though hideous in appearance, he is merciful by nature and is regarded as the patron-god of horse-dealers. Perhaps this is why Ba-to Kannon is more popular in northern Japan where horses are raised. The Japanese artists seem to have modified the original Tibetan representation which had a human body terminating in a horse's head by giving the human body a human head surmounted by a small horse's head.

Ba-to Kannon is usually represented as being seated with legs locked on a lotus-pedestal. Sometimes, the right-knee is raised in the attitude of royal-ease (mahārajāliśa) he may have one or three heads, the extra two heads being on either side of the central head. In his forehead is a third eye. He usually has eight arms and they carry symbols similar to those held by the Tibetan representation of Hayagrīva.

There is an eleventh century painting of Ba-to Kannon now preserved in the Museum of Fine Arts, Boston. In this the triple-headed, eight-armed hideous looking figure is painted in deep red. The horse's head is visible above the crown.

Nyo-i-rin Kannon (= Sanskrit, Cintāmanīcakra Avalokiteśvara): There are various representations of this Kannon of which the most common are those that were prevalent before and during the Nara period in which he is in a half cross-legged posture, and the one adopted after the Heian period is the one in which he is seated with the right knee raised and the left leg bent and resting horizontally (hanka shiyu). In this image in the latter posture he is usually represented as having six arms. The cheek is made to rest on his right hand, presenting a somewhat pensive mood. The mudras he adopt may vary from figure to figure, the most common one being the varada-mudrā displayed by his main left hand. With the other hands he holds his usual symbols, the wish-granting gem, the wheel, the lotus bud and the rosary. In paintings Nyo-i-rin Kannon is often represented as being seated on a rock sited by the sea or at the water's edge. The Japanese refer to such representation as Suigetsu Kannon, Kannon reflected in the waters like the moon.

The wooden statue in the Kanshin-ji in Osaka is a clear illustration of Nyo-i-rin Kannon in this pose. This hanka shiyu pose adopted by Nyo-i-rin Kannon has led to a confusion between Nyo-i-rin Kannon and Miroku (Maitreya) who is also represented in a somewhat similar pose, but with two arms and less paraphenalia.

Jun-tel Kannon (Sanskrit, carda): This is the only feminised form of Kannon among the group of seven referred to above. She is presented in various forms as two-armed, four-armed, six-armed, eight-armed and so on. Some are of opinion that, she is modelled on Durga,
KANNON

sort of Siva. But she has a vague resemblance to as well; She is occasionally presented as a hideous she usually appears in a benevolent form. She third eye and carries symbols in her The usual mudra adopted is the padma-mudrā enga-no-in. She is represented as being either standing on a lotus-pedestal. Often she wears a and is dressed in flowing draperies. There is a Kannon statue made of wood, and belonging to part of the 10th century enshrined in the Shrin mi-ji in Nara. It is a benevolent form with fourteen arms, with out the third eye.

KANNON: Besides the seven forms described above another female form popularly known as Koyasu is the Kannon of easy delivery. It is not quite when this form was first introduced to Japan however, enough evidence to believe that she was added at least from the eighth century. The landmark of the introduction of Koyasu Kannon (to Japan traces its beginnings to the reign of (710-760 A.D.). It is said that Komyo, who was lid, prayed to the Shinto goddess Amaterasu for ternity. One night she is said to have dreamt of itesvara, and when she awoke she found a small the bodhisattva lying beside her. It is said that in her easy delivery, enshrined this image in the (Temple of Easy Delivery) in Kyoto. The belief that this temple was founded by Komyo who dedicated it to Koyasu Kannon. The legend is that the empress caused the statue to be made after her own image.

One accounts the legendary account or not, it is at that soon after the introduction of the belief in Kannon, it became popular all over Japan, through the itinerant monks (roku-bu) who, in the lands, were known as "Haritii." In 1896, per (Haritii, la Mirode-Demons, Bulletin de l' France de l'Extre-Moi, Vol. XVII, 1917), portable altars on their backs in which were small images of Koyasu Kannon.

Koyasu Kannon is undoubtedly the Japanese version of the Chinese Sūng-ts'ui Kuan-yin who is modelled after See also Kuan-yin). After the Tendai sect first entered Japan the worship of Haritii (= Kishi the demonical form of Haritii) the way was for the rapid spread of her benevolent aspect in the Koyasu Kannon.

3. The Jun-te Kannon and Koyasu Kannon are numerous other female forms of Kannon. Juzu (a Japanese manual of Buddhist divinities) a group of thirty-three feminised forms. All these splay effeminate characteristics and are represented wearing flowing draperies and elaborate head-Several of these forms suggest, either by their names or by some distinctive features they display, their connection to either Kuan-yin or the legendary Chinese primes Miao-sha.

Of these forms the most well known is the Byaku-i Kannon the white-robed Kannon which was perhaps first brought to Japan from China in the 15th century.

KANTHAKA: The horse on which Prince Siddhartha (bodhisattva) fled from the palace to renounce worldly life at the age of twenty-nine. Kantakha was a majestic horse, pure white in colour like a clean conch-shell and well-built. It was eighteen cubits long from neck to tail and proportionately broad. When Kantakha was saddled for the journey he neighed loud for joy on realising the importance of the bodhisattva's impending renunciation and the gods muffled the sound of the neighing so that no one would be awakened. Seating the bodhisattva on its back, with Channa in attendance, Kantaka started for the journey, but the place gates were thoroughly locked. Knowing its own prowess Kantaka was ready to leap over the high protective ramparts, but gods slowly opened the main gate without disturbing the sleeping security personnel and Kantaka sped through the gate, in leaps and bounds. Having gone out of the boundaries of Kapilavatthu, the bodhisattva stopped the horse and turned back to have a departing look at the city. Kantaka darted through a distance of thirty leagues and by dawn reached the river Anoma, and in one leap crossed over to the further shore. The Bodhisattva alighted from the horse, removed all his princely ornaments and handed them to Channa requesting him to return to the palace with Kantaka. On hearing the Bodhisattva's words Kantaka was deeply sad-stricken and died then and there, and was reborn as Kantaka devaputta in the Tāvatimsa heaven. (J. I. 62-5; Mhvu. II, 159, 165, 189; VbhA. 34 ff.; s.v. DPPN.).

KAPILAVATTHU (Var. Kapilavastu), an ancient city near the Himalaya Mountain in the sub-continent of
India, the capital of the country of Sakyas (q.v.) in the Kosala Mahajanapada (Sn. vv. 422, 423). A legendary account attributes the founding of Kapilavatthu to the sons of a king named Okkāka, on the site of the hermitage of a sage by name Kapila.

In a former birth the bodhisatta was a sage named Kapila. During this time several sons of King Okkāka were banished from the kingdom and they withdrew to a thick forest where they happened to meet sage Kapila. Kapila was versed in the science of bhūmiicāla and was therefore acquainted with the qualities associated with various sites. Kapila advised the princes to found a settlement on the site of his hermitage as he foresaw that in the distant future that settlement would come to fame as the capital of Jambudīpa. The princes followed the sage’s advice and named that settlement Kapilavatthu (DA. 1, 259-60).

The bodhisatta in his penultimate birth in saṃsāra, as a deity in the Tustita Devaloka, reflected regarding the most suitable country for him to be born next and he decided to be born in Kapilavatthu, a country in the Majjhadesa in Jambudīpa, where former Buddhas were born (J. I, 49).

During the sixth century B.C. Suddodhana was king of Sakyas with Kapilavatthu as the capital city. Mahāmāyā-devi was the queen of Suddodhana and the bodhisatta was born to them as son and was named prince Siddhattha.

In the city of Kapilavatthu prince Siddhattha grew up amidst great luxury. King Suddodhana built for his son, three magnificent palaces Ramya, Suramya and Subha to suit the different seasons. At the age of sixteen Siddhattha married princess Yasodhara, the daughter of Suppabuddha, another Sākyan chief and lived in Kapilavatthu until the day he renounced worldly life at the age of twenty-nine. Security arrangements were strong in Kapilavatthu with a high wall round the city and with a strong iron gate, but prince Siddhattha, riding on his favourite horse Kanthaka, with Channa in attendance, had no difficulty in leaving the city of Kapilavatthu unobserved by his people, as the gods opened the gates for him to leave the city. Having reached the river Anomā which was thirty leagues (yojana) away from Kapilavatthu, prince Siddhattha handed over all his royal garments and ornaments to Channa and requested him to go back to Kapilavatthu with the horse Kanthaka (J. I, 64). He then proceeded to the village Jātayupāla, which was seven leagues from Kapilavatthu.

At year after attaining Enlightenment the Buddha, with a following of twenty thousand monks, went from Jātayupāla to Kapilavatthu to visit his ancestral home. Having reached Kapilavatthu the Buddha, with his alms bowl in hand; went from house to house in the city to collect alms food. Horrified by this sight Suddodhana went up to the Buddha and requested him not to bring disgrace to him and his family by begging for food from house to house. The Buddha explained to Suddodhana that he was only following a custom followed by all Buddhas and Suddodhana became a stream-entrant (sotāpanna).

Suddodhana invited the Buddha to visit the palace the following day, and after the meal there the Buddha preached to many women of the palace with the exception of Yasodharā who did not come to see him. Buddha visited Yasodharā, subsequently, in her dwelling and preached to her. Several days later Nanda, half brother of Siddhattha Gotama, and Rahula, Siddhattha Gotama’s son, were ordained. It is also said that during this visit of Buddha to Kapilavatthu eighty thousand Sākyas joined the Buddhist Order (J. V, 87 ff.).

The Buddha visited Kapilavatthu several times, subsequently and two of them are considered specially significant. Once the Sākyans of Kapilavatthu were at loggerheads with Kolians regarding the sharing of water of River Robhini. The dispute developed to such an extent that the two parties assembled their armies on either side of the river, to fight one another. The Buddha made his appearance between the two belligerent parties in the nick of time, preached to them and convinced them of the folly of destroying human lives for the sake of a little water and thus brought about a peaceful settlement of the problem (J. V. 412 ff.).

The second visit of significance of the Buddha to Kapilavatthu was when Vīḍūrda, a prince from the adjoining kingdom, came to invade Kapilavatthu to avenge the Sākyans for an insult done to him. The Buddha twice intervened in time and prevented Vīḍūrda, from massacring the Sākyans, but on a third occasion Vīḍūrda over-ran Kapilavatthu and killed many Sākyans (J. IV, 152). Buddha did not visit Kapilavatthu after this incident. The massacre of the Sākyans and the destruction of their city must have taken place towards the end of the Buddha’s life, for no more is recorded in literary sources about Kapilavatthu after this incident.

Vincent A. Smith (ERE, Vol. VII, p. 660) writing about Kapilavatthu says that after the destruction of the city by Vīḍūrda, Kapilavatthu passed almost out of existence, and it is certain that the first authentic record of the site at the beginning of the 5th century A.C. represents the town and its neighbourhood as a wilderness nearly uninhabited.

In the third century B.C. Emperor Asoka, under the guidance of his preceptor Upagupta, is said to have visited the sites associated with the life of the Buddha.
Karli, a rock-cut Buddhist shrine in western India marks a turning point in the evolution of rock-cut Caityagrha architecture. Karli along with Bedsa have assigned to the final phase of development of hilt rock-cut shrines in western India belonging to the Vinayana tradition in contradistinction to the later stacited rock-cut sanctuaries founded by the patrons of the Ajanta Buddhism at such places like Ajanta, etc.

Caityagrha at Karli like other western Indian cut caitya halls and vihāras of Buddhists, is situated between Western Ghats.

The original name of the site by which the sanctuary was named was ‘Veturaka’ (Vaturaka) and several donatory lithic records discovered at the Arch. survey of Western India Vol. IV. p. 101).

Records also prove that the early benefactors of this site include the royalty of the Saka Satrapas as well as ātavāhanas. These records again bear evidence on oigraphic grounds that the Karli monastic establishment was in existence during the early centuries of the AD era. Although the sanctuary would have had antecedent beginnings, its development in subsequent centuries culminated in the creation of one of the elaborate massive rock-cut Buddhist Caityaghras.

The hall which is the garbha (naos) proper is entered through a vestibule (antarālaya), with a massive facade. Two titanic monoliths (one has completely disappeared now) with adorsed lions on their abaci had once stood in front of vestibule. It is believed that the lions had borne a stone wheel (the dharmacakra) originally. Hindus who have appropriated the Karli site in the past few centuries have built a fane for the goddess Durga on the very place where once stood the great lichic column on the left side of the Caityagrha. This Durgālaya has reduced the original grandeur of the Buddhist shrine as it appeared from the outside.

These massive pillars surmounted with adorsed lions on a companion portal reminds one of the huge lichic columns erected by Asoka at various sites in his empire to commemorate Buddhist events. The erection of such massive pillars in front of a temple could be traced back to very early times.

Behind the two lion columns was the vestibule to the hall, the front wall of which was formed by a rock-cut screen having a triple entrance below and pillared clerestorey above (S. Dutt, Buddhist Monks and Monasteries in India, London 1962, p. I, 8). On the space between these upper and lower openings, corresponding in some respects to a triform, numerous mortice holes may be seen for the attachment of a (minstrel's) gallery of wood which extended right across the front. The wooden addition has completely perished but it was an important feature in the design of the facade and would improve its effect. Access to this hanging gallery was obtained by means of a stairway at the back of a lion column on the left side. Passing through this, one enters the highly decorated vestibule which lays open the great Bo leaf shaped (often called horse-shoe shaped) archway entrance to the inner shrine (naos).

It is the inside of the Caityagrha that still emanates the mesmeric captivation it had produced on the votaries who had gathered when the site was a place of lively pilgrimage more than a millennium ago. It is this part of the shrine that still calls for the admiration of the visitor both the layman and antiquary.

The terraced tiers of the walls of the vestibule provide an imaginary storied building with innumerable windows and doorways with the usual horse-shoe archway like tympanum. The doorway proper to the Caityagrha (naos), too, is of similar design and is flanked on either side by sculptured figures of donor couples, probably those of the very patrons who commissioned the construction of the major part of the shrine. The two side aisles,
too, have been provided with an arched doorway each, which though similar in design to the main entrance, yet is smaller than it. The sculptures in the verandah or vestibule (antarālaya) provide tableaux vivants of original non-religious relievo carvings of the early Hinayāna phase.

The panel of elephant frieze in the first tier (A. K. Coomaraswamy, Art of India and Indonesia, Pl. X. fig. 35) which has its counterpart at the later Hindu shrine, the famous Kailāśa at Ellora is reminiscent of an architectural device adopted in ancient Sri Lanka.

The interior consists of a nave and an apse or semi-dome round which the aisle is carried. The general dimensions of the interior are 124 ft. 3 inches from the entrance to the back-wall, by 45 ft. 6 inches in width. The height of the shrine is only 46 ft. from the floor to the apex. Fifteen pillars on each side separated the nave from the aisles. These pillars are quite erect in position unlike those at Bhaja or Kondane which show an inward rake, a sign of closeness to wooden prototypes, hence also of greater antiquity. Thus the Karli interior provides evidence of another step forward in rock-cut architecture of the Buddhists.

These pillars on either side of the nave (30 in all) are shown as the octagonal shafts that stand on an ornamental base in the form of a pot. The shafts are crowned by a companionom capital on which kneel two elephants each bearing two figures, generally a man and a woman, but sometimes two females, all well executed. The male and female riders on elephant back wear resplendent head dresses and are loaded with a wealth of jewellery. On the reverse side of these groups, within the side aisles, they are also richly carved, but here the horses take the place of the elephants, the horses having originally been decked with metal trappings and the elephants provided with silver or ivory tusks. The seven pillars at the apsidal end behind the stūpa are plain octagonal shafts without either base or capital. The sculptures on the capitals supply the place usually occupied by frieze and cornice in early Greek architecture. Above this spreading abacus of sculptured figures springs the roof, semicircular in general section.

The arched vault of the roof is defined by the narrow projecting ribs or wind-braces, not carved out of the rock, but fashioned out of separate pieces of wood attached to the surface by means of plugs or socketed into grooves. These braces are wide flat planks with a curved outline approximating its shape of an inverted ships hull. At the apsidal end they converge to a centre as do the ribs of a Gothic vault.

Burgess and Fergusson observe that the type of roof is not a copy of the masonry arch, but of some of timber construction which we cannot now very well understand. Under the semi-dome of the apse stand the object of worship in the shrine, that is the stūpa which is of plain, yet dignified, composition. The drum is composed of two tiers in diminishing order similar to the pradakṣināpatha of the early Sinhalese stūpa architecture.

The hemispherical dome is plain and elegantly simple similar to that at Beda, Bhaja and Kondane. The stūpa is surmounted by a massive harmika or finial decorated with a rail pattern in low relief resembling an inverted pyramid and high up over the whole stands the large wooden chattra carved in the pattern of a lotus in full bloom. The petrified remains of soot on the chattra and on the drum of the stūpa is proof of offering incense and lamps by the votaries. The device adopted through rock-cut architecture to illuminate the interior is the sun window (often referred to as the caitya window or the house-shoe window). The interior owes much of its appearance to the position and the treatment of this feature which alone controls the dim rays of sunlight that are filtered through the wooden ribs of this mullioned window to be further distributed into the various parts inside, the nave, aisle and the apse, thus producing a lively effect on the elegantly carved figure sculptures of the abaci. The Karli complex also is endowed with several simple rock-cut chambers of modest design with cells that have been used primarily as the living quarters of the resident monks.

The Hinayāna phase of rock-cut architecture seems to have come to an end with the great effort at Karli, despite the fact that monastic cells for the still increasing communities of monks continued to be added at such sites like Karli, although no more caityagrāhas were excavated for some time.

KARLI 143 KARMĀVARĀNA

KARMA. See KAMMA

KARMĀVARĀNA (obstruction due to past karma (Mbh. 845, 1383; Sikṣ. 68). The term āvarana in this compound word is used very often in a sense synonymous with the term niṇavaṇa which is a technical term used in Buddhist ethical teachings to mean a mental hindrance to the development and purification of the individual. The standard set of five such hindrances known as pañca-nīvaraṇa is well-known in Buddhist ethics (See NīVARANA).
It seems that the two terms āvarana and nivaraṇa were indiscriminately used as synonyms in this sense at the early stages (e.g. D I, 246; S V, 93 ff.; Nd II, section 379; Vv, BST. p. 238 etc.) and gradually the term nivaraṇa itself established as the general technical term.

In addition to the sense understood in this five-fold group, the term āvarana has been used in a somewhat different semantic nuance in a similar three-fold combination as kammāvarana, kilesāvarana and viplākāvarana. This three-fold combination occurs in several places in the Buddhist writings (Vibh. p. 341; Vism. p. 177; AA I, p. 413) it is better and convenient to treat the three as together as a group.

Thus at Vibh. p. 341, in an explanation of the term ābha meaning those who cannot make the grade in the highest spiritual development owing to intellectual dullness, it is said that such beings who are troubled by these three āvaranas cannot enter the path of deliverance because they are devoid of confidence (addha) have no wish for betterment (accanda) and dull-witted (dutta), thereby disqualifying themselves to "enter the immutable rightness of good states" (bhabhā nityamokkā miti kusselasu dharmasu uyyattam. loc. cit.)

He shows that the use of the term āvarana in this text is deeper in meaning than the use of nivaraṇa in five-fold group mentioned above.

It is doctrinally important that the Anguttara commentaries (AA III, p. 413) explains the term kammāvarana as arcmic obstruction to spiritual development of those have committed the five heinous crimes (pañca satiya kammamāni). This refers to the five-fold group of crimes consisting of patricide, matricide, killing of an animal, wounding a Buddha and causing a schism in the order of bhikkhus (from its pāthas to deliverance in any one of these three ways).

The Milinda pañha (Miln. pp. 152–154) informs us that those who are subject to the āvaranas of kamma and kilesa are faithless and hence no safety-rune (paritta) would afford protection to them.

A. G. S. Kariyawasam

KARUṆĀ is one of the four qualities of character significant of a human being who has attained enfranchisement of heart (cetovimutti) in the four sentiments, viz. mettā, karuṇā, muditā, and upekkhā. The four sentiments are collectively designated as brahmavihāra (q.v.). Mettā is loving kindness or unbounded friendship, i.e. the ability of a person to consider all beings as friends and love them, without selfish motives, indiscriminately and wish for the welfare and happiness of all. Mettā is defined as 'the desire of bringing (to one's fellow men) that which is welfare and good' (hitasukha-UPANAYANAM KAMAṬA). When one has in him unbounded friendship for all beings, he naturally becomes moved when he sees beings in adverse circumstances. Karuṇā is thus defined as 'pity and sympathy that arises in good' human beings when they see others in adverse circumstances (para-dukkhe sati sādhūna mādayakampanaṁ karoti karuṇā). It is defined in another context as 'the desire of removing bane and sorrow from one's fellow men' (ahita-dukkha apanaṇaṁ kāmaṭa). Thus we see that karuṇā is a direct result of mettā.

Mettā and Karuṇā can arise in a person when he has dispelled the two roots of evil (akusala mūla) namely, selfish desire (rāga) and hatred (dosa), which are the outcome of ignorance (moha), the third root cause of evil.

The Buddha as well as arahants (the perfected beings) have in them these two sublime qualities and the Buddha has been described as the 'leader possessed of great compassion' (mahākāruṇika nātho - PVa. p. 1; VVa. p. 1). It is said that the Buddha gave up the opportunity he had of putting an end to samsāric ills by becoming an arahant at the feet of Dīpankara Buddha and resolved to fulfill the perfections (pāramī) in samsāra so that he could become a Buddha to save many others from samsāric ills (J I, 15). The Buddha during his forty-five years of missionary service, each day in the very early hours in the morning, entered into a trance called mahākāruṇa samāpatti (PVa. 61) to see who deserved his special attention that day and it is said that the Buddha travelled long distances to help out such people.

The concept of karuṇā was dominant among the members of the Buddhist Order of bhikkhus from its very
inception. As soon as the Buddha gathered around him sixty disciples, he sent them in all directions requesting them to deliver to the people the sublime message of the Buddha so that they (the people) may tread the path of deliverance (ariya-āthāhāgika magga) to minimise their suffering and increase happiness in this life, as well as to ensure complete emancipation from samsāric ills. Working for the welfare and happiness of beings (paratthacariyā) has been part and parcel of the life of a bhikkhu and it is seen that even several centuries after the demise of the Buddha arahants of the calibre of Mahinda and Sanghamittā coming all the way from India to Sri Lanka to educate and guide the Sri Lankan people in the path to liberation.

As time passed by and with the emergence of Mahāyāna, Mahāyānists considered the goal of arahantship too selfcentred and narrow as, they thought, disciples worked only for their individual emancipation with no concern for the great mass of suffering beings. Mahāyāna put forth the twin concepts of bodhisattvavas and bodhicitta to counter this trend. All beings, according to Mahāyāna, are endowed with the potentiality of developing themselves to be Buddhas and hence the goal of all disciples should be to become Buddhas and not arahants. The thought to become a Buddha has to be well implanted and nurtured in all human beings and human beings should dedicate themselves, as potential Buddhas (bodhisattvas), to work for the emancipation of as many beings as possible. Thus we see in Mahāyāna texts like the Mahāvyutpatti lists of many past Buddhas as well as bodhisattvas. In the Mahāyāna the bodhisattvas are a class of beings who have dedicated themselves through karunā for the services of other beings and in this regard they are ever ready to make any personal sacrifice and are ready to undergo any hardship or suffering in order to relieve another being from agony and distress. A good example that can be cited in this regard is the vā议会parivarta of the Swarṇabhāsottama Sūtra, where it is graphically described how a bodhisatta made sacrifice of his own-self to a hungry tigress in order to save that tigress and her starving cubs from imminent death.

The concept of karunā has been developed to its extreme in the personality of the bodhisatta Avalokiteśvara (q.v.) who has postponed attaining Buddhahood indefinitely in order to remain in samsāra to save beings from samsāric ills (Ency. Bsm. Vol. II, pp. 407 f.).

W. G. Weeraratne

KASINA, a Pali term derived, from the Sanskrit kṛṣṇa means 'all', 'entirety', 'whole' or 'complete'. While this literal meaning is preserved (sakalatthena kasiṇam, kasia is so called in the sense of entirety: DA. III, 1047; MA. III, 260; Vism. 121), the word kasia along with its Sanskrit equivalent kṛṣṇa is exclusively used in Buddhist literature (D. III, 268, 290; M. II, 14–15; Ps. 1, 6, 49, 95, 143, 149; J. I, 313, III, 519, 89 ff; Abhs. 41; Abhiv. 4, 90, 95; Mvyut. p. 26; Gvyu. 523; Divy. 180 etc.) in its applied meaning which refers to objects used in meditation as aids to produce and develop concentration of mind (samādhi) and thereby attain absorption (jhāna). It is a name for one of the seven groups of objects of meditation called 'working grounds for meditation' or topics of meditation (kammathāhāna q.v.).

There are three lists of such aids or kasia given in Buddhist texts. The one that can be considered the earliest occurs in the suttas (D. III, 268, 290; M. II, 14–15). This list is reproduced in the Patisambhidamaga (1, 6, 95), the Nettippakaranā (89), and the Mahāvyutpatti (BB. XIII, p. 26). It consists of the following ten kasia: the four gross elements, (mahabhūta) namely, earth (patavī), water (āpo), fire (tejo), and air (vāyo); four of colour, namely, blue (nīla), yellow (piṭa), red (lohitā) and white (odāta) plus space (ākāsa) and consciousness (viśñāna). The second list, to be found in the Abhidhamma, has only the first eight kasia of the above list; the last two ākāsa and viśñāna, are omitted there (Dhs. 202, 203). This list is found reproduced also in the Patisambhidamaga (pp. 49, 143–4; 149–50). The third list which could be considered the youngest is found in the Visuddhimagga (p. 89) and consists of ten kasia. The first eight kasia of this list are the same as those of the first two lists already given; but, in place of ākāsa and viśñāna of the sutta lists, we find here āloka and paricchinnākāsa as the ninth and tenth kasia. The Abhidhammatthasangaha which follows the Visuddhimagga has ākāsa as the ninth and āloka as the tenth (Abhs. 41).

In all the three lists unanimity prevails with regard to the first eight kasia. While one list omits the last two, another list introduces a new kasia under the name of āloka; ākāsa of the sutta list and paricchinnākāsa of the Visuddhimagga list being one and the same.

Thus, there are eleven kasia in all; four of the gross elements, four of colour, ākāsa, āloka and viśñāna. The Path of Freedom, in fact, gives these eleven kasia and explains them in detail (pp. 63–130). But in the commentary to the suttas where viśñāna occurs as a kasia it is said viśñāna in viśñānakāsa is the consciousness produced in the process of meditation on ākāsakāsa (DA. III, 1048, MA. III, 261). If, in the light of this commentarial explanation, viśñānakāsa is not counted as a separate one but only as a stage in the development of the ākāsakāsa, then the number of kasia remains ten; the first eight kasia plus āloka and ākāsa. And this is the list which Buddhaghosa gives and explains in great detail.
There are certain principles that guide one in the practice of meditation. These principles, which involve mental and physical environment, apply to kasina practices, and the attainment of absorption are hived (Vism. 314 ff.).

There are certain principles that guide one in the act of meditation. These principles, which involve mental and physical environment, apply to kasina practices as well. Having attended to the preliminary preparation of the mind, the monk who intends practising kasina chooses a time of day that is most suitable for the pose, a time when he may not be interrupted, a time when it is quiet, a time when the process of digestion is completed, when he is in good health and has no physical ailments, and the body is in comfort, and the weather is either too hot or too cold, and when there are no storms lightening. He also chooses a place which is suitable for his meditation, a place which is free from interruptions that is the barking of dogs, irritation of flies or any other irritation likely to interfere with his concentration mind. He then assumes a position which is most suitable for the practice of meditation. He sits erect, with legs crossed, the arms crossed on his lap. The spine is quite upright and the head is not moved in any extension, but is kept with the eyes gazing in one particular direction necessary for the particular kind of concentration chosen (Vism. pp. 96 ff.)

is of prime importance that a beginner should select object of meditation suitable for his temperament (iyā or carita). The four colour kasina are suitable for e of malevolent temperament (dosa-carita); the other are suitable for all (Vism. pp. 92–3; Abhs. p. 41; vt. p. 90).

the earth-device (pathavi-kasina), a disk one span four inches in diameter moulded of earth or clay h is not of any of the four colours, blue, yellow, red white is placed upon a low frame. This is called samādala. Seated at a suitable distance, the monk fix his eyes upon the disk and concentrate his mind. The idea of the element of earth, Inwardly repeating me, i.e., earth (pathavi). He must, at the same time, with the dangers in sense-desires and arouse longing for escape from sense-desires, and for the renunciation of all suffering. He should arouse joy of happiness by recollecting on the special qualities of the Buddha, the Dhamma and the Sangha (Vism. 100–101). In the fire-device (tejo-kasina) the object thus contemplated on is a bowl or vessel full of water; in the fire device (vāyo-kasina) fire seen through a hole made in a rush mat, or a place of leather or a cloth placed at a suitable distance between the fire and himself; and in the air-device (vāyo-kasina), some visible object like tops of trees and ends of hair being moved to and fro by the wind, or wind itself strikes a part of his body after entering by a window or some other opening.

The object (kasina-mandala), thus selected and meditated upon, is termed 'the mark for preparation' or 'the preparatory image' (parikamma-nimittā). The beginner must continue to contemplate on it until it is depicted to the mind as an exact copy of the original with all its flaws and is represented to the mind as a vivid reality, as if it were seen by the eye. Now he perceives it even when his eyes are closed. This mental reflex is termed 'the mark for upholding' or 'the acquired image' (uggaha-nimitta).

The concentration of thought practised on these two classes of marks (nimitta), percept and image, is termed preliminary concentration (parikammassamādhi). By this preliminary concentration the image is divested of its reality and its flaws, and becomes a sublimated copy. This after-image which can no longer be depicted as a concrete individual object, is now termed 'the mark for equivalent', or 'the counter-image' (patibhāga-nimitta).

On realisation of this last class of nimitta, the five hindrances to progress (nivarana) are inhibited where-upon the preliminary concentration develops into 'intermediate' or 'neighbourhood' concentration (upacārasamādhi).

While still perceiving in the concentration on the subject, i.e., the mark-equivalent (patibhāga-nimitta), one finally reaches the full concentration of the mind
which is termed absorption (jhāna; Vism. 96 ff.), which is fourfold. The manner in which this fourfold absorption of the mind is attained, and also the nature of these attainments are described in great detail in the Visuddhimagga (pp. 121–37. In all these attainments, the object (ārammana) used as an aid to achieve concentration of the mind is one of the ten kasiṇa.

Buddhaghosa as an exponent of Abhidhamma (Ābhidhammika), explains this attainment of mental absorption in terms of a thought-process (citta-viṭṭhi). He takes a thought-process consisting of six or seven thought-moments (eittakkhaṇa) the first of which is the arrest of the sub-consciousness (bhavangupaccheda). It is followed by the next moment which is termed representational cognition ( mano-dvārāvajjana). The next four or five moments are those of apprehension (javana), the last of which transcends the sensuous sphere (kāmāvacara-bhūmi) and reaches the material sphere (rūpāvacara-bhūmi). Then he identifies the moments of apprehension with the stages of the attainment of absorption. The first moment of apprehension is the stage of preparation (parikamma); the second, the stage of the intermediate (upacāra); the third the stage of adaptation (anuloma) the fourth, the stage of maturation (gotrabhi) and the fifth moment is the stage of full concentration of mind (appanā). The persons who are quick to attain super-knowledge (khippābhīṣṭā) by-pass the first moment of apprehension i.e., the stage of preparation (parikamma) and start with the second moment, i.e., the stage of the intermediate (upacāra), and attain full concentration in the fourth moment (Vism. 111–12).

The last of the fourfold mental absorptions is termed the fourth absorption (catuttha-jhāna) which forms the basis for the attainment of super-knowledge (abhīṣṭā). In other words, the contemplation of kasiṇa leads one finally to the attainment of super-knowledge (M. II, 13–15).

The Visuddhimagga (pp. 314 ff.) deals in detail with the methods by which super-knowledge is produced. In order for one to produce super-knowledge, it says that one has to develop and tame one's mind in fourteen ways. These fourteen ways involve contemplation on the first eight kasiṇa, the attainment of the fourfold mental absorption of the material sphere and of the fourfold immaterial absorption in those kasiṇa from beginning to end and from end to beginning and mastery over kasiṇa and jhāna.

Possessed of this skill and mastery, one is able to practise any of the first eight kasiṇa and attain any of the eight jhāna. He is able to produce mental absorption in these eight kasiṇa (1) starting with the pathavi-kasiṇa and ending in odātaka-kasiṇa (kasiṇānuloma); (2) starting with odāta-kasiṇa and ending in pathavi-kasiṇa (kasiṇapatiloma); (3) in both ways (kasiṇa-anupatiloma). He is also able to attain the eightfold mental absorption; (4) from beginning to end, i.e., from the first absorption to the last (jhanānuloma); (5) from the last to the first (jhanāpatiloma) and (6) in both ways (jhāna-anupatiloma). He is again able (7) to attain the eightfold mental absorption separately in different kasiṇa (jhanukkantika), (8) to attain one kind of mental absorption in all kasiṇa (kasiṇukkantika) and (9) to attain the eightfold absorption in all the eight kasiṇa (jhanākasiṇukkantika). (10) The attainment of the first absorption and then gradually other kinds of absorption in individual kasiṇa is called āghasahāntika, (11) the attainment of one kind of absorption in all kasiṇa is ārammanasahāntika. (12) the attainment of the first absorption in pathavi-kasiṇa, the second in āpo-kasiṇa and so on up to the attainment of the last absorption in odāta-kasiṇa is āghārammanasahāntika. (13) the defining of only the factors of mental absorption by defining the first absorption as five-factor ed etc. is called definition of factors (āghava-vattāna); (14) likewise, the defining of only the object as this is the pathavi-kasiṇa etc. is called the definition of object (ārammana vavattāna: Vism. 312–15).

The description of the fourteen ways, rather tedious though it may be, points out the important place the kasiṇa occupy in the scheme of spiritual attainments in Buddhism. The skill in and the mastery over the practice of kasiṇa are essential for the attainment of mental absorption (samādhi) which is the second of the threefold spiritual training (tissosikkhā) advocated by the Buddha. This mental absorption is equally essential for the attainment of super-knowledge (abhīṣṭā) which is the final result of wisdom (paññā) produced by the Buddhist scheme of salvation.

Upali Karunaratna

KASHMIR, has an important place in the history of the spread and development of Buddhism. This 5000 ft. high valley in the Northern tip of India has aptly been called 'the cradle of Sanskrit Buddhism', for it was here that Sarvāstivāda, a Hinayāna school using Sanskritized texts saw its development and florescence. And it was from Kashmir and the adjoining territories of Gandhāra and Udyāna (Swat Valley) that this school of Buddhism spread to Central Asia, China and Tibet.
KASHMIR

Buddhism came to Kashmir is not exactly a fact; it is stated, that at the time of the period after his death, and the country would have distinguished as a home of Buddhist monks. The introduction of the faith into the Valley is, however, ascribed to Emperor Asoka. According to the ruler of the country is thought of as his religious adviser, and the said Buddhists sent to various regions "border districts". A group led by Madhantika was dedicated to the Kāshmīra-Gandhāra region.

KASHMIR

The present Kāshmir is still stated to have been given over to the Nāgas. The king of Nāgas, Ariyāna (q.v.) destroyed the ripened crops of the territory by a hailstorm when Madhantika arrived. But on him of his miraculous powers, the pious monk was least affected by the storm. This made the Nāga furious and he increased the fury of the storm. But Madhantika remained unaffected as before. Convinced Ariyāna of the monk's superiority and he, with his followers, submitted to his (Madhantika) listened to his discourses. This was followed by the rite of the new faith by the Nāga Worshippers.

Somewhat similar version occurs in the Vinayapītaka e Mūlasarvāstivāda, and the traditions derive it. These latter, embodied in the Chinese pilgrim Hsuan-tsong's Itinerary (Walters, op. cit. p. 365) and the scribes of the Tibetan scholars, Bu-ston and Tārānātha state that in Kashmir the monk settled on the bank of the inhabited by the Nāgas, that his presence was at presented by them, but that they ultimately submitted count of his supernatural powers.

The name of the monk given in these is Madhantika or Madhantika and he is stated to have been a disciple of Cārap. In fact, it seems, that at the time of his death, Vaisālī, Ananda instructed Madhantika to go to Kashmir for the propagation of Buddhism.

The similarity of the versions in the Mahāvamsa and Vinaya of the Mūlasarvāstivāda seems to indicate that Madhantika and Madhantika are one and the same person who has been assigned to different periods in two quarters. Or it may be that Madhantika, the emperor of Asoka was, on his ordination, named a former monk (this was often done) and his story associated with the latter also. Clearly, it is impossible to say Madhantika with such a long life that he could contemporaneous of both Ananda and Asoka.

Madhantika's association with Ananda, Buddha's cousin and immediate disciple, points to the prevalence of the faith in Kashmir even before the time of Asoka. Strong evidence to this effect is available in Kālhiṇa's Rajatarangini (1, vv. 91–94). In this chronicle of Kashmir Buddhism is mentioned as prevailing in the valley in the time of the Kāshmiri king Surendra who ruled some time before the Mauryan Emperor. Besides, Kāshmiri-Gandhāra is reckoned as one of the sixteen mahājanapada of the past occurring in Pali texts.

Surendra, who was the first patron of the faith in the valley, appears to have been a Buddhist himself. Kālhiṇa describes him as 'possessed of priceless greatness' and 'far removed from sinfulness'. The Kāshmiri historian specifically mentions the erection of two vihāras by the king, one of them in the valley to the north of Sṛṇāgar and the other beyond the Zojila near the country of the Dards.

Confirmation of the prevalence of Buddhism in the valley before the time of Asoka is available from other sources also. Hsuan-tsang records that when, early in the reign of Asoka, a number of monks fled from Magadhā on account of differences with the emperor, they took refuge in Kāshmir (Walters, op. cit. p. 267). They were the Sarvāstivādins. Clearly there must have been in Kāshmir at that time monks who were ready to welcome the Magadhan monks in the time of their difficulty.

Even if Buddhism had been prevalent in Kāshmir before asoka, yet there is no gain saying the fact that the faith spread widely during this ruler's time. This was due to the large-scale influx of monks into the valley in his time and the patronage extended to them by the emperor later in his reign when he was much more favourably inclined towards the Sarvāstivādins.

The flight of the Sarvāstivādins, according to Hsuan-tsang, deeply distressed the emperor, who sent messengers and later went personally to Kāshmir to persuade them to return. But they refused to go back. Thereupon he built 500 monasteries for them and gave up all Kashmir for the benefit of the Buddhist Saṅgha (ibid).

That Asoka visited Kāshmir personally is also given in Kālhiṇa's narrative. The historian clearly mentions the founding of a number of Buddhist and brahmanical shrines by the emperor. The Buddhist monuments were erected in the Kāshmiri capital of Kāshmir-Sṛṇāgar (corresponding to present-day Pandretthan on the outskirts of Sṛṇāgar to its south-east) and at Vaitastatra and Suskatala. The caitya built by him in the Dharmā-

* Legend is also referred to by Bu-ston (Obermiller) and Tārānātha (Schiefner).

**Facts:** The Kāshmiri version of the Mūlasarvāstivāda version, first translated into French by M.J. Przyluski, is given in Indian Serpent (Teleng, 1923) pp. 235–35.
ranyavihāra in Vitastattra town near the source of the Vitasta (Jhelum) is stated to have been so high that the eye could not compass the extent of its height (Kalhana, op. cit. vv. 102 f.).

Over half a century ago, a life-size image of the Buddha was unearthed at Hukalitar, a village about eighteen miles from Srinagar which city corresponds, to the ancient Suskalettra.\(^3\) During his stay in Kashmir in the seventh century A.C. Hsuan-tsang noticed four Asokan stūpas, of wonderful height and great magnificence, each of which contained relics of the Buddha's body (Walters, op. cit. p. 261).

Buddhism suffered a temporary setback in Kashmir in the time of Asoka's successors in the valley, Jalauka and Damodara. Jalauka, whom Kalhana represents as Asoka's son, was a staunch follower of brahmanism. He was not at first favourably disposed towards the Buddhist faith, and once at the instigation of some wicked councillors had a vihāra demolished because the noise of the temple bells had disturbed his sleep. But later he relented and had a vihāra at Kṛtyāśrama (Kalhana v. 147) built at a short distance from Baramulla. Damodara, his son, who was also a follower of Brahmanism fell a victim to the wrath of certain mendicant Brahmans.

For two or three centuries after Damodara, nothing has some to light so far about the history of Kashmir. During this period north-west India was once again under the rule of foreigners, including the Greeks (s.v. Indo-Greeks). But whether Kashmir was included in the domain of the Indo-Greek king, Menandar, is difficult to say. The Milindapañha, the Pali record of his discussions with Nāgasena, has little light to throw on this.

Kashmir, was, however, definitely included in the empire of the Kushānas. It was in fact, in their time that the valley emerged as a very prominent seat of Buddhist philosophical studies. According to Hsuan-tsang, the fourth Buddhist Council convoked by Kaniska, was held in Kashmir (Walters, op. cit. p. 270). Tibetan writers, including Buson (p. 97) and Tāranātha (ed. Schiefner, p. 60) also mention Kashmir as the venue of this Council. The celebrated Indian monk, Paramārtha (499-569 A.C.), in his biography of Vasubandhu (T'oung Pao, v. pp. 276-281) also confirms that the Council was held in Kashmir. According to both Hsuan-tsang and Tāranātha, the Council was held at the suggestion of Parsva, a leading Buddhist monk of the time. Its object was to clear the confusion in the king's mind about the different interpretations of the tenets of the faith by the various sects into which the Sangha had divided itself by then. The Council sat for a number of months and attempted to reconcile the conflicting interpretations of the different sects and settle once again the Vinaya, the Sūtra and the Abhidharma texts. Hsuan-tsang says that the Council finally settled these texts the Sarvāstivādin Tripiṭaka and also prepared commentaries on them. The commentaries known as Upadeśastra, the Vinaya-vibhāṣā-sāstras and the Abhidharma-vibhāṣā-sāstras, contained 100,000 stanzas each (Walters, op. cit. p. 271). According to the Chinese pilgrim, the Council was presided over by Vasumitra, an eminent monk hailing from central India. But Paramārtha says that six hundred years after the Buddha's parinirvāna, Kātyāyanaputra, with the help of five hundred arhats and five hundred bodhisattvas, arranged the Sarvāstivādin Abhidharma texts into eight sections and after checking them with the sayings of the Buddha, compiled the Jñānaprasthāna-sūtra, comprising 50,000 verses. He then had a commentary, Vibhāṣā, written upon it. This commentary was put into literary Sanskrit by the poet laureat, Āśvaghoṣa, who was invited to Kashmir for the purpose.

Paramārtha adds that Kātyāyanaputra stopped the monks of Kashmir from letting the Vibhāṣā on the Jñānaprasthāna go out of Kashmir lest it should be misrepresented by outsiders. Hsuan-tsang, with greater probability, ascribes a similar interdiction to Kaniska, may be at the instance of Kātyāyanaputra. He adds that the treatises drawn up at the Council were engraved on copper plates on orders of the king, who had them placed in stone boxes over which was erected a stūpa.

The Vibhāṣās drawn up at the Kashmir Council acquired such high renown that the Sarvāstivādins came to be known also as Vaibhāṣikas and because of their association with Kashmir the teachers who drew them up were sometimes called Kāsmīrīs.

According to Hsuan-tsang, Kaniska was in Kashmir when the Council was held and built a monastery for the use of the monks attending it. He says that at the conclusion of the pious labours of the Council, when the king left the valley by its western gate, "he turned towards the east, fell on his knees and again bestowed all this kingdom on the sangha".

Kashmir's native historian, Kalhana does not refer to the holding of the Buddhist Council in Kashmir. But he testifies to the great influence which the Buddhists commanded in the valley in the time of Huska, Juska and Kaniska. This last appears to be a successor of the real emperor who convened the Council. Kalhana records that Huska, Juska and Kaniska covered in palaces (Hukalitar) and other places with monasteries, viharas and similar edifices. He specifically mentions the found

KASHMIR

of four cities by them. The sites of three of these, Jaksapura, Jusakapura and Kanishkapur can still be visited in the villages of Uskur, Zakur and Kanispore. Buddhism enjoyed such great popularity in the valley in its time and in the time of Abhimanyu who followed, Kashmir was then, in the words of Kalhana, “for the most part, an appanage of the Buddhists who had incurred lustrum by renunciation.” The greatest of these Buddhists was the illustrious Nāgājuna, whom Kalhana tribes (I, v. 173) as “the sole supreme ruler of the 1.” (ekō Muniyāvara) This accords well with the view that Kaniska had made a gift of Kashmir to the Sangha. Nāgājuna resided, in Kashmir, at Harwan, the ancient lārhadwāna which has given its present name to the city. Sadarhadwāna (which in Sanskrit, means “the ve of six saints” appears to have got its name because he residence there of six ‘arhants’ including Pārśva, Ānanda and Asvaghosa. This, coupled with the covery there some years ago of the remains of a number of Buddhist monuments raises a strong presumption in favour of regarding it as the venue of the Fourth Buddhist Council.

Buddhism witnessed its maximum popularity in shmir when Nagarjuna lived there in the time of the Kushānas and Abhimanyu. This was partly due to the patronage but mainly because under Nagarjuna’s dance, the Buddhist defeated in dispute all the Hindu Brahmins in the land (ibid., vv. 177-178). As a matter of fact, the faith became so widespread that the ditional brahmanical rites and customs fell into disuse. But that was not for long. Soon a succession of severe storms led to the death and departure of large numbers of Buddhist bhikṣus. The excessive snowfalls that shmir had in those years were ascribed by the Brahmāns to the wrath of the Nāga deities on account of the ppage of the customary offerings to them by the people. And when weather conditions improved, the same development was ascribed by the Brahmans to a kind intercession of the Nāgas. The result was a setback to the Buddhist influence and the revival of the customary practices and offerings.

Very little is known about the condition of Buddhism ring the time of the next four of five rulers. But in the time of Nara or Kinnara who came after them, the faith suffered a major blow. The wicked king who did not care for Brahmins either, had a large number of vihāras stroyned in return for the wrong-doing of one single sin (ibid. v. 199).

After Nara Kashmir was for a long time, under Hindu rulers. But there is no mention of any severity to Buddhism in their time. On the contrary, Kashmir continued to be a seat of Buddhist learning. In fact it was during those times that savants like Kumāraṇāva and Vasubandhu visited the valley for studies and eminent Kashmiri monks like Buddhayāsas, Vimalakṣaṇa, Guna- varman and others visited other countries for the propagation of the faith.

The last of these native Hindu rulers, Samdhimaṇi or Sandhiman, was compelled to abdicate on account of the disaffection of the people, worked up by the wicked Hun ruler Mihrakula who, defeated elsewhere, had taken refuge in Kashmir and had been granted a jagir by the king.

Hsuan-tsang described Mihrakula as a great persecutor of Buddhists and destroyer of Buddhist monasteries in Gandhāra and other regions. But Kalhana, who confirms this king’s wickedness and calls him a ‘killer of three crores’ has not represented him as hostile to the Buddhists alone. T. W. Rhys Davids gives plausible reasons for this: he was a persecutor as such, ‘adding that, in fact, his ministers were Buddhists. His cruel actions were merely those of a fierce invader JPTs 1896, p. 87).

At the close of the dark chapter of Mihrakula’s rule, the Kashmir throne once again passed into the hands of a pious Buddhist. He was Meghavāhana, a scion of an old ruling dynasty which had been displaced to make way for a foreigner nearly two centuries earlier. Meghavāhana, who had been living in exile at the Gandhāra court was a staunch Buddhist, and at the time of his coronation itself he issued a proclamation prohibiting the slaughter of animals throughout his kingdom (Kalhana III, v. 5). The prohibition did not make any exception even in the case of brahmanical sacrifices. In fact, the king was so keen about the practice of non-violence that Kalhana represents him as having undertaken a digvijaya (universal conquest) to impose on all his prohibition of slaughter. In the course of this ‘universal conquest’ he is represented by the Kashmiri historian as having subdued king Vihñana of Sri Lanka (ibid., vv. 73-75). But this exaggerated claim does not find corroboration in the Ceylonese annals or elsewhere.

During Meghavāhana’s time, Kashmir again witnessed the erection of a large number of Buddhist foundations. The king himself founded a city, created an agrahāra, (endowment in favour of some shrine) and built a number of vihāras. Vihāras named after themselves were built by his five queens also. The best known of these was the lofty Amrtabhavana near Vicharnag to the north of Srinagar. This vihāra which was built by the principal Queen Amrtraprabhā, a princess from Assam, was meant for the use of bhikṣus from the plains. Her teacher who hailed from Ladakh founded a stūpa.
Meghavāhana was described as a mine of precious virtues (Gunaratākara) by Kalhāna. To avoid hardship caused to butchers, fisherman and others by his prohibition of killing, he gave generous monetary assistance and set them up in other professions.

After Meghavāhana we do not come across any ruler of Kashmir who was a Buddhist. But the faith continued to be professed and patronised, even by important personages. This is clear from the fact that a number of Buddhist sacred buildings were put up in their time. The best known of these was the massive Jayendravihāra, put up by the maternal uncle of Pravarasena who ruled towards the latter part of the sixth century A.C. Another magnificent vihāra, known as Morokabhavana was erected by the king's minister, Moroka. Both the Jayendra-vihāra and the Morokabhavana were in the new city of Pravarapura (modern Srinagar) which the king founded and to which he transferred the capital from the Asokan capital, Srinagar, nearly three miles away. Hsuan-tsang had resided in the Jayendravihāra (which seems to have been in the vicinity of today's Jama Masjid).

Buddhism in Kashmir witnessed a fresh efflorescence in the time of the Karkotas (600 to 855 A.C.). Though not Buddhists themselves, the Karkota rulers extended their patronage to the faith in rich measure. Hsuan-tsang's visit to Kashmir is usually placed in the time of the first Karkota ruler Durlabhavardhana, whose Queen, Anaṅgalekha put up a vihāra. The king also patronised the faith. This becomes clear from his treatment of the Chinese pilgrim. Besides honouring him with a great personal welcome and introducing him to the Buddhist and other celebrities in the land, he lodged him in the palace and placed twenty scribes at his disposal to copy the texts in which the visiting scholar might feel interested. He was also given five attendants to minister to his personal needs.

Hsuan-tsang remained in Kashmir for two years from May 631 to April 633 A.C. Though he complains that 'at the present time this kingdom is not much given to the faith', yet he found a large number of monasteries in existence. In addition to the four Asokan stupas already mentioned, he places the number of monasteries at over a hundred (Walters, op. cit. p. 261). In these lived 5000 monks. This compares favourably with the number of monks in the other territories where the faith prevailed at that time.

One of the expeditions he carried a colossal image of the Buddha (Brhadbudha) from the eastern regions to Kashmir (Kalhāna, IV, V, 299) a considerable feat in those early days of slow movement and primitive transport. The northern territories which the king raided included Ladakh, Gilgit, Kamboja (eastern Afghanistan) and Turkistan on the upper Oxus. From there he got both riches and a number of talented persons who were appointed to high places. Many of them must have been Buddhists. His chief minister, Cankuna, who hailed from the land of the Tukharas, was an ardent Buddhist. The treasures which Lalitāditya got from his expeditions abroad were utilised in the foundation of new towns and the erection of sacred buildings. These included a number of vihāras and caityas also. Some of the most magnificent buildings ever built in Kashmir were put up by him in his new capital Paribhasapura near the confluence of the Vitasia (Jhelum) and its principal tributary Sindh, about a dozen miles from Srinagar. These included a large vihāra and caitya. The vihāra, known as Rājavihāra (ibid. v. 200), comprised a large quadrangle and a number of lofty chapels. It was well endowed. The caitya contained the colossal image of the Buddha which the king had brought from Magadha. This was later replaced by another massive copper one weighing several hundred maunds, when the one brought from outside was given to Cankuna to be placed in his vihāra. Cankuna's vihāra was at a little distance from the Rājavihāra and contained a huge stūpa also. It was embellished with a number of golden images of the Buddha. Buddhist structures were erected not only in Paribhasapura. The king put up another huge vihāra with a stūpa in the ancient town of Huskapura, probably at the site of an earlier vihāra which had formed Hsuan-tsang's resting place during his first night in the valley. Cankuna also erected a magnificent vihāra in the old capital. This was known as Cankunavihāra. Cankuna's brother-in-law, Isāmacandra who was the king's physician, also built a vihāra with a number of golden images of the Buddha. Kayya, a tributary rājā of Lata (south and central Gujarat) also founded a vihāra, which was a marvellous according to Kalhāna. Kayyavivāra was the residence of the celebrated bhikṣu Sarva Jivamitra which the Kashmir historian compares to the Jina (the Buddha).

Lalitāditya's grandson Jayapokha (731-782 A.C.) who was also a powerful ruler, tried to revive the traditions of his grandfather. He founded a new capital Jayapura at some distance from Paribhasapura on the left bank of the Vitasta. Inside the town, he installed a number of sacred images, including those of the Buddha. In Srinagar also this ruler, who was not a Buddhist, put up three colossal images of the Buddha.

There was a considerable increase in the number of Buddhists and monasteries in Kashmir in the time of the
I estimated the languages allocated to many temples and shrines. Now the best known is the city of the shrine of Sambhota, a minister of Tibet's first great ruler, on-btsan-sgam-po.

Buddhism lost its ascendancy in Kashmir with the fall of the rule of the Karakotas. After Jayapida we do not come across any notable Buddhist foundations till we meet Didda (about 1000 A.D.) a clever, crafty queen who did not scruple to sacrifice ever her offspring so that she might herself occupy the throne. Her tyrannical husband Ksemaugupta burnt the magnificent Jayendra-vihara and seized the thirty-six villages belonging to it (Kalhana, vi, vv. 171–175). In order to atone somewhat for her own and her husband's misdeeds, Didda made four religious foundations and restored some of the ruined buildings. It is likely that she rebuilt the Jayendra-vihara also. She is specifically known to have erected two viharas one in Poonch and the other in Srinagar. The latter, known as Diddarnath, has left its name in a caitly in Srinagar. During this period also, Kashmir continued to be a seat of Buddhist learning. This is clear from the fact that Didda's viharas were meant to house both the Krishnaite and outside monks. Among the outsiders who visited Kashmir about this time, the best known is a celebrated Tibetan scholar Rin-chen-zang-po.

Most of the rulers who followed Didda are not known to have achieved any pre-eminence. Some of them did not situate to lay their hands on the property of even religious foundations. Thus Kalasa (1063–89 A.C.) misappropriated the villages allotted to many temples and appropriated the bronze images of a number of Buddhist shrines. His son Harsa (1089–1101 A.C.) was even worse than his father. He appropriated the images of both the Hindu and Buddhist shrines. Of the four images spared, two were Buddhist. One of these was in Srinagar and the other in Pahâaspura. These were spared at the request specifically of the Sramanas Kusalas and the king's vourite singer, Kanaka, Kalhana's uncle.

The last notable Hindu ruler of Kashmir during whose reign Buddhist monuments were repaired or rebuilt was Jayasimha (1328–1354 A.C.) (Kalhana viii, vv. 2391–441). His wife Ratnadeyi built a vihara, Vaikuntha-vihara, in her town of Ratnapura. Bhutta, the minister, erected a number of viharas in Bhûtepore, the town named after him. Sussala, the wife of another minister, built afresh the Cankunavihara, of which nothing but the name had remained. Viharas were also put up by the other ministers to perpetuate the memory of their dead wives.

Jayasimha's successors were as worthless as some of his predecessors, and Hindu rule in Kashmir came to an end in 1339 A.C. when Shahmira, an astute adventurer from outside, dispossessed the last Hindu ruler, queen Kotadevi, from the throne of Kashmir.

But Buddhism as a separate religion had passed its meridian before the advent of Muslim rule. This was because of a powerful swing in favour of Saivism in the ninth century A.C. But Kashmir Saivism was itself strongly influenced by Buddhist doctrines.

The two faiths existed side by side. There was rivalry between them at times but not active hostility or attempts at coercion or forcible conversion. On the contrary, there generally existed a spirit of toleration and respect for each other's beliefs. Asoka, for example, is known to have erected two brahminical temples at Bybhar (Kalhana, i, v. 106), 28 miles from Srinagar. The Brahmins, for their part, found a place for the Buddha in their sacred pantheon when the traditional mode of worship was revived in the time of Abhimaguna. Thus we find the worship of the Buddha enjoined upon the Hindus of Kashmir in the Nirmanapuranam, which lists the pilgrimages etc., in ancient Kashmir. According to this sacred text produced in the time of Abhimanyu, worship to the Śākyamuni was to be offered on his birthday Vaisākha Pūrṇimā. On this day, the Buddha's image was to be worshipped in caityas and temples and gifts of food, clothes, cows and books etc. were to be made to the Buddhists.

The process of the two faiths coming nearer to each other was greatly strengthened with the rise of the Mahāyāna and Tāntrism. Like the Hindus, the Buddhists now had gods and goddesses. This led to the growth of many common traits and practices. The result was that early in the ninth century when there was a resurgence of Saivism there was not much outward difference between the followers of the two faiths. The same household often contained followers of both faiths. Inside monasteries and temples also, Hindu sādhus and Buddhist śramaṇas lived side by side. That was why after the time of the Karakotas, kings, queens and their nobles erected a large number of māthās or convents without assigning them exclusively to the followers of any one particular faith.

During the time of the first four Muslim rulers, Hindus and Buddhists were free to pursue their respective faiths. Janaraja, a contemporary Kashmiri historian has...
recorded how Shahmira's grandson, Shahab-ud-Din (1354–1373 A.C.) severely admonished one of his ministers, when the latter suggested that the metal from the image of Bhadra Buddha be used for coinage (Ganhar, op. cit. p. 144). But this large-hearted tolerance was not to last long. The non-Muslim faiths in the valley received a severe blow in the time of the fifth Muslim ruler Sikander (1389–1413 A.C.) and his son and successor Ali Shah (1413 – 1420 A.C.). According to Jonaraga "the king (Sikandar) took delight day and night in breaking the sacred images. There was no city, no town, no village, no wood, where the temples of the gods were left unbroken." Not only that, both Sikandar and his son forced the non-Muslims to renounce their faith and embrace Islam. Many succumbed and abjured their ancestral faiths, but there were many others who became martyrs to them.

The persecution of Sikandar and Ali left few Hindus, and fewer Buddhists living in Kashmir. And the suffering undergone in common knit those that remained or returned in the time of Sultan Zain-ul-Abidin (1420–70 A.C.; he followed Ali) so close together that the distinction between the followers of the two faiths was practically wiped out. But Buddhism was by no means dead in Kashmir valley. This becomes clear from a perusal of the record of events in the time of Zain-ul-Abidin and some of his immediate successors.

Zain-ul-Abidin, popularly known as Bad Shah (Great king) is perhaps the noblest ruler in the long history of Kashmir. He did much to heal the wounds inflicted on the non-Muslims in the time of his two predecessors. His chief minister was a Buddhist named Tilakacarya. The Sultan had two viharas erected on opposite banks of the Vitasva. There is mention of the erection of viharas in the time of Zain-ul-Abidin's grandson Hassan shah (1472–1484 A.C.). But after that we come across no mention of Buddhists or viharas in the history of Kashmir, till we come to the present century.

Early in the thirties of this century there was a revival of interest in Kashmir's Buddhist heritage. An organisation known as the Kashmir Raj Bodhi Sabha was set up at Srinagar with the twofold object of propagating the Dharma known as the Kashmir Raj Bodhi Sabha was set up at Srinagar with the twofold object of propagating the Dharma and taking the Buddhists of Ladakh socially; politically and educationally.

The patron of the organisation, which did good work in drawing attention to the plight of the Buddhists of Ladakh and succeeded in securing some valuable concessions for them. A three-acre plot of land for the construction of a vihara in Srinagar was also given to the Sabha on lease for a period of forty years on a nominal rent of Rs. 12 per annum (Ganbar, op. cit. p. 219). But a vihara yet remains to be built in the capital of Kashmir, which was once a fountain-head of Buddhist learning and a land of viharas and caityas.

J. N. Ganhar

KASSAPA, the twenty fourth Buddha who preceded Gautama Buddha and the third Buddha of the present world period called 'the Bhaddakappa' (the 'Fortunate' world period). He was born in Benares, of brahmin parents, Brahmadatta and Dhanavali, belonging to the Kassapagotta (Kassapa clan). He was twenty ratanas (approximately sixty feet according to PED.) in height, and his life-span was twenty thousand years. For two thousand years he lived in the household, in three magnificent palaces named Hamasava (Hamsa), Yasavā (Yasa) and Sirinanda (BuvA. p. 94; BuvA. p. 217). Sunandā was his wife by whom he begot a son named Vijitasena. Being confronted with four signs (nimitta) he renounced worldly life and attained Buddhahood after a week's sustained striving (padhāna). He was served with a meal of milk rice by his wife just before attaining Enlightenment and grass for his seat was provided by a farm boy named Soma. He attained Enlightenment at the foot of a Nigrodha (banyan) tree. The first sermon Kassapa Buddha preached was at Isipatana, to a great multitude of bhikkhus who renounced the world along with him. He performed the twin-miracle at the foot of an asana tree outside Sundaranagara. Among his most famous conversions was that of a demon (yakka) named Naradeva. His chief disciples were Tissa and Bhāradvāja among monks, and Anulā and Uruvelā among nuns, his constant attendant being SABBAMITTA. Pre-eminent of his patrons were Sumangala and Ghaṭikāra among males and Vijitasenā and Bhaddhā among females. He passed away in the Setavya pleasure in the city of Kāśi, and a stūpa, one league in height, was built over his bodily remains.

During the time of Kassapa Buddha, the bodhisatta (Gautama Buddha in a past birth in samsāra) was a brahmin youth named Jotipāla who, afterwards, coming under the influence of Ghaṭikāra, became a monk. This Ghaṭikāra was later born in the Brahmaloka and visited Gotama Buddha and the latter reminded Ghaṭikāra of their past friendship. (s.v. DPPN).

KASSAPA SIHANĀDA SUTTA is the eighth sutta of the Dīgha Nikāya (D. I, pp. 161–177). This sutta records a
conversation that took place between the Buddha and the naked ascetic (acalaka) Kassapa at the Kaññakathālā Deer Park in Ujuññā.

Kassapa, in conversation with the Buddha, reports to the latter that there is wide-spread talk among religious groups that the Buddha disparages all penances or ascetic practices (Samañgo Gotamo sabbam tapañ garahati) as well as those who resort to such practices and poses a question to the Buddha whether such talk represents the Buddha's true position. Disclaiming such an attitude the Buddha tells Kassapa that through his Divine Eye (dibba-cakkhu) he sees some ascetics who resort to severe ascetic practices, after death, being reborn in good states (sugati) in heavenly realms (saggaloka) whereas some who resort to the same practices, after death, being reborn in woeful states (duggati), in the purgatories. Further, the Buddha tells Kassapa that there are intelligent recluses (samañhas) and brahmins who are experienced and clever at argumentation, going about debating with other religious groups and that some of the views they express tally with his own views. In the course of the conversation the Buddha recounts the different ascetic practices and religious vows prevalent among religious groups at that time, such as going about naked, eating one's own excreta and drinking one's own urine, living in thickets, refraining from eating decent meals, denying to the body its basic needs and care, going about in the postures and behaving like cows and dogs. The Buddha tells Kassapa further that such practices can be resorted to even by immature village folks and that such practices do not conduce to spiritual development. The Buddha, next, in a challenging tone (sihanāda - roar of a lion) claims that the Path he had discovered—the Noble Eightfold Path—is the only means (ekāyano maggo) for the spiritual perfection of man and that he and his disciples have attained perfection by diligently treading that path.

At the end of the conversation Kassapa becomes convinced about the futility of his own religious beliefs and becomes a disciple of the Buddha, and striving diligently, before long attains arahantship.

W. G. Weeraratne

KĀSYAPA MĀTAṆGA, an Indian Buddhist monk of the 6th century A.C. who lived in Central India. He was later accompanied to China by a Chinese mission during the reign of the emperor Ming-Ti of the Han dynasty.

KĀSYAPĪYA, name of a school of early Buddhism, considered as an offshoot of Sthaviras, and had arisen shortly after the break away of the Sarvāstivādins from the paññā body. They are usually placed in the end of the third century after the parinirvāṇa of the Buddha and are said to have originated in the north-western regions of India.

Vasumitra identifies this school with the Suvarṣakas. Both names are derived by Paramārtha and K'uei-chi from the names of sage (tsi) Kāsyapa and a brahmin Suvarṣa.

Kharoshti inscriptions indicate their presence in the third century A.C. in Takṣasila and Bedār and towards the middle of the fifth century in Paśau Dheri near Peshawar. But, in the seventh century, Hsuán-tsang and subsequently I-tings found their descendants gone over to Mahāyāna doctrines in Uddiyana and, outside India, in Kharacher and Khotan.

According to certain texts (Sāriputraparipṛcchā: Choli-fu-wen-ching, Taisho, No. 1465, p. 900 c; and the Ta-pi-kiēu-san-tsien-wei-yi, Taisho, No. 1470, p. 926 a) they dressed in purplish red robes.

Historical records agree in assigning to A.C. 67 the first official introduction of Buddhism into China. The emperor Ming-Ti who was stimulated by a dream, sent an expedition to India in search of the golden man of whom he had dreamt. When the mission returned they brought back with them, not only the Buddhist scriptures but also two Indian Buddhist monks named, Kāsyapa Mātaṅga and Dharmarakṣa. Both these monks stayed in Loyang, the capital of the dynasty, in the White Horse monastery. This monastery was so called because the foreign monks rode on white horses or used them for carrying books.

According to Chinese annals these early Buddhist missionaries preached the sanctity of all animal life, metempsychosis, meditation, asceticism and karma. These two Buddhist monks began a long series of translations which assumed gigantic proportions in the following centuries. To Kāsyapa Mātaṅga is ascribed a collection of extracts known as the Sūtra of Forty-two sections which is still popular in China. This work adheres closely to the teaching of the Pali Tripiṭaka and shows hardly any traces of Mahāyāna Buddhism (Charles Eliot, Hinduism and Buddhism, London 1921, Vol. II, p. 71; Vol. III, pp. 244, 248).

In Memoriam

We record with sorrow the sudden demise of the Venerable Tâmbiliyana Akâyadhamma Thera who was serving on the Editorial staff of the Encyclopaedia of Buddhism for nearly four years. A keen student of Pali, Buddha Dhamma and Archaeology, he had obtained both the M.A. and the M.Sc degree from recognised universities in Sri Lanka.

The Venerable Thera compiled several articles to the Encyclopaedia of Buddhism some of which have already been published in Fascicle 1 of Volume VI, and the present Fascicle, too, carries several of his articles.

KĀŚ’YAPIYA

Of their literature only a short treatise on discipline is known, a Prātimokṣa Sūtra (Kiai'-t'o-kiai-ching: Taisho, No. 1460; Nanjio, No 1180) by Gautama Prajñā-ruci. It would appear that they had a Vinaya Piṭaka of their own, while their doctrines were close to those of the Dharma-guptakas. The Vinaya-mātrkā, which is usually ascribed to the Haimavatas (because of frequent references to the Himālaya), may have been a text of the Kāśyapiyas, for its authors had a canon very similar to that of the Dharma-guptakas. Their Sūtra-piṭaka is practically identical with that of the Dharma-guptakas, and as regards the Abhidharma-Piṭaka it is very probable that the Kāśyapiyas borrowed the Sāriputrabhidharmāśāstra from the Dharma-guptakas. The few doctrines on which the two schools disagree are found only in post-canonical works.

The five main theories peculiar to the Kāśyapiyas are:

1. Past karma which has not borne fruit yet exists; the rest of the past does not exist. This is their fundamental thesis which made it necessary for them to establish themselves as an independent school. It is a compromise formula between opinions of the Sarvāstivādins, Mahīśāsakas and Vibhajyavādins. Drawing a comparison from plant-life they say that as long as the shoot does not appear the seed is there, but as soon as the shoot appears, the seed does not exist any more.

2. In abandoning (prahāṇa) there is perfect knowledge (parijñā) and without perfect knowledge there is no abandoning. This version agrees with the three Tibetan translations of Vasumitra, Bhavya and Vinitadeva and also with the Chinese translations of Vasumitra by Saṅghabhūti and others of the former Ts'in dynasty. However, the Chinese translations of Vasumitra by Paramārtha and by Hsuan-tsang give a very different and probably mistaken version. According to the Kāśyapiyas, the comprehensive knowledge of a defilement or passion is a necessary condition for deliverance thereof.

3. Whatever is composite (samskṛta) has a cause (hetu) in the past and nothing that is composite has a cause in the future. This total rejection of a final cause, i.e., a goal or purpose being the cause of an action, is evidently a rejection of the theses of the Sautrāntikas and the Sarvāstivādins, maintaining that future actions can be the cause of retribution (vipākahetu) and even the efficient or productive cause (kāraṇahetu). K’uei-chi, comment-

ing on this view, says that the Kāśyapiyas denied even that the present could be an efficient cause in respect of the future.

4. The actions (karma) of learners (śākṣa) on the Path bear fruit (vipākaphala). This proposition was aimed at the contradictory views of certain schools, which could lead to an interpretation that the achievements of adepts (aśākṣa, i.e., arhat) are the result of earlier practice.

5. All composite elements (samskṛta) are instantly destroyed (kaṇṭika-niruddha).

Vasumitra and Bhavya mention that their other propositions greatly resemble those of the Dharmaguptakas.

H. G. A. van Zeist

KATĀRAGAMA. see KĀCARAGĀMA

KATHĀVATTHU is one of the seven books belonging to the Abhidhamma Piṭaka of the Theravāda tradition. Although the book is believed to have been added to the canon last, in the traditional listing of the Abhidhamma books it is placed as the fifth. The traditional Theravāda belief is that the Abhidhamma Piṭaka, in its extant form, was preached by the Buddha himself. In the commentary to the Dhammasaṅgani, Buddhaghosa says that the Abhidhamma was preached by the Buddha to the inhabitants of the Tavatimsa heaven where his mother was born following her death, immediately after the birth of the future Buddha. This theory of the inception (nidāna) of the Abhidhamma is meant to attribute the general authorship of the Piṭaka to the Buddha. However, in the case of the Kvu. one has to take into consideration the following two points: (1) Kvu. is the only Theravāda Abhidhamma book for which the tradition acknowledges a separate author, namely, the great elder Moggaliputta Tissa. (2) Its subject matter is a critique of the so called wrong views adopted by later Buddhist sects that emerged several centuries after the parinibbāna of the Buddha. In this connection, the commentary (viz. Pañcappakaranat thakathā) has the following explanation to make:

After he [the Buddha] had taught them the Dhammasaṅgani, the Vibhaṅga, the Dhammakathā and the Puggala-paññatti, he thought: when in the future the turn for setting forth the Kathāvatthu shall arrive, my disciple, the greatly wise Elder, Tissa, the son of Moggali will purge the blemishes
that have arisen in the Religion, and calling a third council, will, seated in the midst of the Order, divide this compilation into thousand sections...... he drew up, with respect to courses to be adopted in all the discourses, a list of heads in a text uncompleted by just one section for recitation.

This saves the situation by attributing the authorship of the main themes of debates recorded in the book to the Buddha and by leaving the detailed authorship to Moggaliputta Tissa.

The historical background of the Kvu is the division of the sangha into many different schools. According to the commentary to the Kvu, one hundred years after the parinibbāna of the Buddha, a group of monks called Vajjiputtaka proposed laxity of rules. The orthodox monks got together and decided that the proposed relaxation of rules was not warranted by the original Vinaya of the Buddha. The group who did not accept this decision broke away from the original group and formed a new sect called 'Mahāsaṅghika' or 'those who belonged to the great community'. The traditional group came to be known as Theravādins' i.e. 'those who follow the doctrine of the Elders'. Subsequently, about two centuries after the parinibbāna of the Buddha, there sprang five sects from the Mahāsaṅghikas, namely, Ekabhārīka, Gokulika, Paṭīrattivāda, Bāhulika and Cetiyavāda. From Theravāda arose eleven sects, namely, Mahīśāsaka, Sābatthivāda, Kasapiya, Sānkṛantika, Sutta-vāda, Dhammaggutika, Vajjiputtaka, Dhammuttariya, Cāḷāgārika, Bhadrayānīka and Saṁmitīya. During the reign of Emperor Asoka, who showed great concern for the sāsana, there were many who entered it for the sole purpose of living an easy life. As a result, the sāsana had become corrupted. The third council was convened by Asoka in order to remedy this situation. In this council, the entire three Piṭakas were recited and the Kathāvatthu was compiled by the convenor of the council, Moggaliputta Tissa Mahā Thera in order to repudiate the wrong views held by the nikāyas other than the Theravādins. This Theravāda version of the story and the very historicity of the third council have been questioned by certain historians. Moreover, it has been shown that some of the sects mentioned in the book belong to a post Asoka period. Nevertheless, the historicity of the book and its author is generally accepted.

Structure of the Book: The Kvu. deals with 219 doctrinal interpretations held by various Buddhist schools1. They have been arranged under 23 chapters. Scholars who have studied the book have noticed that there is no method or an order in presenting these controversies either by subject matter or by the sects to which these views have been attributed. The book itself does not refer to any of these nikāyas by name. That information is provided by the commentary written by Buddhaghosa.

The issues that have been debated cover a wide spectrum of doctrinal matters ranging from the most significant, to not so significant. Among the issues debated, there are four which stand out by virtue of the impact they made on the subsequent evolution of Buddhist philosophy and the monastic tradition. They are: whether the 'person' obtains in a real and ultimate sense (upalabbhāti puggalo sacchikattha paramaññha?); whether anything exists (sabbam attīhi?); whether the nature of the Buddha is transcendent and 'whether an arahant could lose his arahantship' (parihāyati arahā arahhatā); and many other issues in connection with the nature and the ability of the arahant. The first three issues represent personalism, realism and transcendentalism respectively in the Buddhist philosophical tradition. The skeptical queries and questions on the arahant seem to represent a conscious effort to discredit the arahantship as the ultimate religious ideal in Buddhism and it is this trend which culminated in Mahāyāna Buddhism which is more aptly called the 'Bodhisatvatāyāna'.

The book begins with the question 'whether the person is known in a real and ultimate sense' (upalabbhāti puggalo sacchikattha paramaññha?). The personalist view which is well known in the history of Buddhism is attributed to Saṁmitīyas by the commentator. The question has been dealt with extensively. In contrast to the treatment of the other questions, this is the longest, which runs into 69 pages of the PTS edition.

The question regarding the alleged non-existence of the Buddha in the world of mankind indicates the transcendentalist trend surfaced in the Buddhist tradition which ultimately led to the arising of Mahāyāna Buddhism in which the Buddha is considered wholly as transcendent. The questions such as did the Buddha

1. By taking the questions: 'whether five sense organs are something visible? and 'whether bodily action is something visible? together with the question: 'whether earth element is something visible? sometimes the issues are counted as 217.
visit earth by proxy only? (XVIII:1) and did he preach by proxy only? (XVIII:1) further testify to this trend. Many other questions relating to the nature of the Buddha show that the concept of Buddha was a fertile ground for the emergence of many unorthodox views. Among the other issues debated on the nature of the Buddha are: everyday use of conventions by the Buddha (II:10); his powers (III:1.2); possibility of enlightenment through enlightenment (IV:4); his physical marks (IV:7); whether a gift to him could bring blessing (XVII:10); whether or not he feels pity (XVIII:3); was everything of him fragrant? (XVIII:4); could he work wonders against nature (XXI:4); how do Buddhists mutually differ (XXI:5); and whether or not they pervade the permanent? (XXI:6).

Hand in hand with the tendency to establish the transcendence of the Buddha there seems to have been another tendency growing among the Buddhist schools. It is to downgrade the nature of the arahant and other noble persons (ariya puggala) who have realized any one of the other three stages of sainthood. The question: whether an arahant falls away from arahanthood? (parihāyati arabhā arahatta?) (chapter I: (section 2) and many other issues related to the nature of the arahant indicate the later Buddhist developments which ended in almost completely discrediting the high character attributed to the arahant in the earlier tradition. Among many other issues on the arahant which were debated: Can Māras defile him? (II:2); the nature of his knowledge and its limits? (II:2; IV:10; XXII:1); can he doubt? (II:3); ‘can others excell him?’ (II:4) ‘difference between arahant and layman’ (IV:1); ‘can he inherit arahantship?’ (IV:2; XXII:5); his common humanity’ (IV:3); indifference to sensations’ (IV:5) ‘his attainment as the final step (IV:10); as adept (V:2); does karma affect him? (VII:11); whether or not he accumulates any more merit (XVII:2.3) his untimely death (XVII 2); his consciousness at death’ (XXII:2.3); bogus arahants’ (XXII:2); whether or not his emancipation is complete’ (XXI:3; XXII:1). The overall flavour of the questions is the wide-spread skepticism regarding the exalted nature of the arahant as recognised in the Theravada tradition. It is this trend that served as the background to the Bodhisattva doctrine which gradually emerged in the Mahāyāna tradition.

The question: ‘does everything exist’? (Sabbañ attai?) represents the fundamental doctrine of the Sabbatthiñā or the realist school of Buddhism. In the debate over this question the key issue was whether or not past, present and future are real.

Among the other subjects debated are: the pathuịjana or average person, gods, the Order of the Saṅgha, sāsana (dispensation), individual (Puggala), cosmology, the unconditioned or Nibbāna and a number of ethical issues among which the doctrine of karma occupies an important place. With the exception of the above-mentioned issues, most of the questions dealt with arise from statements dealing with ethics, psychology and cosmology. And some of them are not matters of great significance. They usually arise from the misunderstanding of the statements of the Buddha. The Venerable Nyānatiloka observes:

A great deal of those speculations relate, indeed, to very minor matters, and are often merely one-sided, or misleading, statements; and nearly all of them can be traced back to wrong or inaccurate understanding or the indiscriminate use of technical terms, or of utterances occurring in the Canon (Guide Through the Abhidhamma Pīṭaka. Fourth Edition. 1983 p.61).

The Method: The purpose of the Kvu as we noticed earlier, is to repudiate the views held by the sectarian groups. In order to do so, the book follows two methods: The first is what may be called the logical method which is implemented through such means as analysing concepts, determining their limits and drawing their logical implications. The second is to appeal to the authority of the statements of the Buddha in order to show whether a particular view is in conformity or not with the word of the Master. Since a large number of issues arise from misunderstanding of the text, both parties of the debate refer to the statements of the Buddha in order to support their own case.

The manner of presentation of the issues is dialogical. The discussions run in the form of dialogues between the Therāvādin (saka-vādi) and the opponent (para-vādi) who may belong to one among many rival schools. The dialogue seems to follow a well-developed mode of debate which is based on mutually agreed upon canons of logical reasoning and categories of exegesis. Among the issues debated, the first is presented in great detail; the others are presented in varying degrees of length. In order to give the reader an idea of the complexity and the richness of the method of the Kvu, we will summarize its key elements.

The alleged reality of the ‘puggala’ (individual) has been examined under eighteen aspects. They are: (1) sense of realness (sacchikattha); (2) illustration with
other realities (suddhika sansandana); (3) illustration by way of analogy (opamma sansandana); (4) illustration by the fourfold method (catukkanaya sansandana); (5) associated characteristics (lakkhana yutti kathā); (6) clarification of terms (vacana sodhana); (7) inquiry by way of conventions (paññattānuyoga); (8) inquiry by way of birth, departure and re-linking (gati cuti patissandhi anuyoga) (9) inquiry by way of dependent conventions (upādīya paññattānuyoga); (10) inquiry by way of human action (purisakārānuyoga); (11) inquiry by way of super knowledge (abhītānuyoga); (12) inquiry by way of kinship (nātaka anuyoga); (13) inquiry by way of birth (jāti anuyoga); (14) inquiry by way of practice (patipatti anuyoga); (15) inquiry by way of approach (upapatti anuyoga); (16) inquiry by way of realization (paññivedha anuyoga); (17) inquiry by way of the noble fraternity (sanghānuyoga); (18) inquiry by way of the true own character (sacchikāthasabhāvānuyoga).

Of the above-mentioned eighteen aspects the first is treated from four different perspectives, namely, the abstract sense of reality (suddha sacchikattha), locative perspective of reality (okāsa sacchikattha), temporal perspective of reality (kāla sacchikattha) and aspect perspective of reality (avayava sacchikattha). Each of the four perspectives is treated in two ways, namely, the fivefold confrontation of the paravādin (opponent) by the sakavādin (the Theravādin) (anuloma paccanika pañcaka) and the fivefold confrontation of the Theravādin by the paravādin (paccanika anuloma pañcaka). The first comprises the following five aspects: (i) the fivefold affirmative presentation (anuloma pañcaka); the fourfold rebuttal (patikamma catukka); the fourfold refutation (niggaha catukka); the fourfold application (upanayana catukka) and the fourfold conclusion (nigamana catukka). The other pentad too has its corresponding five aspects. The sense of reality treated according to the four aspects, namely, abstract sense, location, time, and aspects, within each structure of the above mentioned two pentads constitute eight refutations. The eight are the following: (1) suddha sacchikattha anuloma-pañcaka, patikamma-catukka, niggaha-catukka, upanayana-catukka and nigamana-catukka; (2) suddha sacchikattha patiloma-pañcaka... (3) okassa sacchikattha anuloma pañcaka ... (4) okāsa sacchikattha patiloma-pañcaka" (5) kāla sacchikattha anuloma-pañcaka ...... (6) kāla sacchikattha patiloma-pañcaka... (7) avayava sacchikattha anuloma-pañcaka... and (8) avayava sacchikattha patiloma-pañcaka... Of these eight only the first two categories of abstract sense of reality have been described fully. Everything else has been treated in what is popularly known as 'peyyālā' (abbreviated method).

It is the implicit belief that the method applied in the abstract sense of reality, is applicable to all the questions of the entire Ku. However, the text does not apply the same categories, aspects and sub-divisions, in dealing with the seventeen themes adopted in examining the alleged reality of the individual. Nor does the Ku. apply those categories in dealing with the other 216 doctrinal controversies. There is little doubt that the guidelines delineated here testify to a rich and complex tradition of exegesis, interpretation and debate. As to the remaining questions, a selected number of aspects have been used depending on their relative significance. In some questions, eg. 'Does the arahant fall back from his arahanthood' and 'Does everything exist', the initial presentation of the basic subject matter from the perspective of time and space and as referring to all instances has been called 'canons of debate' (vāda yuttī), which is followed by a long discussion. (The PTS edition does not have this). This is, however, limited to a very few discussions.

What remains universal in the treatment of all issues is the dialogical method containing the essence of logical reasoning. The dialogues show that the participants were well aware of some of the basic rules of logic. For example, the very first dialogue of Ku. runs as follows:

**Theravādin:** Is 'the person' known in the sense of real and ultimate sense?

**Paravādin:** Yes

**Th.** Is the person known in the same way as a real and ultimate fact is known?

**P.** Nay, that cannot truly be said.

**Th.** Acknowledge your refutation: (i) If the person be known in the sense of a real and ultimate fact, then indeed, good sir, you should also say, the person is known in the same way as [any other] real and ultimate fact [is known]. (ii) That which you say here is wrong, namely, (1) that we ought to say 'the person is known in the sense of real and ultimate fact' but (2) we ought not to say, the person is known in the same way as [any other] real and ultimate fact [is known]. (iii) If the latter statement (2) cannot be admitted, then indeed the former statement (1) should not be admitted. (iv) In affirming the former statement (1), while (v) denying the latter (2) you are wrong.
This dialogue may be re-stated using \( p \) and \( q \) for two basic propositions involved in the debate:

- Is \( p \) true?
  - Yes.
- Is \( q \) true?
  - It is not true.

Acknowledging the defeat (for if \( p \) is true then \( q \) is true; \( p \rightarrow q \))

- The assertion that \( p \) is true but not \( q \) is false.
- If \( q \) is not true, then \( p \) is not true. (Early Buddhist Theory of Knowledge. K.N. Jayatilleke. George Allen and Unwin Ltd. London. 1963 p.413)

What is clear in the dialogue is that both the proponent and the opponent were familiar with what is known in modern logic as the rule of implication.

Similarly, the following dialogue (with \( p \) and \( q \) attributed to the main propositions) shows that the debaters were aware of what in modern logic is called the rule of contraposition:

- \( P \): \( p \) not true?
- \( Th \): Yes
- \( P \): \( q \) not true?
- \( Th \): It is not the case that it is not true.

- \( P \) (1) Acknowledge the rejoinder: if \( \neg p \) is true, \( \neg q \) is true.
- \( P \) (2) The assertion that \( \neg p \) is true but not \( \neg q \) is false.
- \( P \) (3) if \( \neg q \) is not true, then \( \neg p \) is not true.

The general mode of the dialogue consists of the following: asking a question (\( puccha \)); its acknowledgement by the opponent either by affirming or denying it (\( patiina\)); challenge by the proponent (\( anuyoga \)) and its rejection by the opponent (\( patikkhepa \)). Sometimes refutation (\( niggaha \)) by the questioner follows the rejection. This simple method has been followed consistently throughout the text with regard to the interpretation of various statements of both the Buddha and authoritative disciples of the Buddha. The awareness of the limits and the logical boundaries of the concepts is the hallmark of these debates. A good case in point is the section called 'the clarification of terms (\( vacana sodhana \)).' The following excerpt makes it clear.

Theravadin: Is 'the person' known and conversely, is that which is known the person?
Paravadin: The person is known. Conversely, of

that which is known some is person, some is not person.

\( Th \): Do you admit this with respect to the subject also: of that which is person, is some known and some not known?
\( P \): Nay, that cannot truly be said.....

\( Th \): Does 'person' mean a reality and conversely?
\( P \): 'Person' is a reality. Conversely, reality means in part person, in part not person.

\( Th \): Do you admit this with respect to the subject also: that person means in part reality in part non-reality?
\( P \): Nay, that cannot truly be said.....

The entire debate in this section seems to have centered around the limits and the extent of the two key concepts, namely, 'person' and 'reality'. In order to show that there is no unchanging reality behind concepts Moggaliputta-tissa produces the following two sets of concepts: (1) pot of oil, pot of honey, pot of molasses, pot of milk and pot of water; (II) pan of water, bag of water, pool of water; the idea is that either the container, in the case of the first group or the contained in the case of the second group can be varied depending on circumstances and that there is no permanent identity behind seemingly permanent concepts. The next two examples, 'nicca-bhatta' and 'dhuma-bhatta' show that what is referred to is not 'permanent'; (nicca) or 'everlasting' (dhuma) meal or broth but 'regular meal' and 'thick broth'. This stresses the fact that words do not have fixed meanings but only reference. Moggaliputta-tissa's last move is to show that the entire view of the existence of an unchanging person is based on a wrong philosophy of language.

The Kyu represents a very advanced and developed art of debate in which the basic canons of logic which are universally accepted are seen to be emerging. Some modern critics have been hesitant to believe that these ancient Indian debaters possessed a knowledge of sophisticated logical principles. As K.N. Jayatilleke correctly observes, in a situation such as this "one has to rely on the factual evidence.....and not on hypothetical possibilities of what can or cannot exist' (ibid. p.415).

In the Theravada Buddhist canonical literature the Kyu is significant both historically and philosophically. Historically it reports the viewpoints of various Buddhist traditions contributing thereby to our understanding of not only the vast and variegated traditions of Buddhism but also the Indian religion in general.
Philosophically it contains the arguments adduced by both opponents and proponents for certain very important religious and philosophical positions. In addition to these two aspects, kvu’s value as a basic treatise on Buddhist hermeneutics is immense. It also provides valuable information regarding the development of both the art of debate and the logical reasoning in the context of the Indian religion.

KATHINA. Kathina in Pali means hard, firm, stiff, etc. As a technical term in Buddhism the word kathina denotes a cotton cloth offered to the bhikkhus annually after the conclusion of the ‘Rainy Retreat’ (Vassavāsa q.v.) by the lay supporters, for the purpose of making robes. This practice started quite early in the sāsana with the approval from the Buddha himself. The Buddha, addressing a group of bhikkhus at Jetavana, granted permission for the dedication of kathina cloth to the bhikkhus who had successfully completed their rainy retreat (anujānāmi bhikkhave vassanā vuttānam bhikkhūnaṁ kathinaṁ attharitum - Vin. 1.254). The laity when they make an offering to a single bhikkhu or a group of bhikkhus, dedicate the offering to the whole congregation, but in practice the bhikkhus living in a particular monastery make use of that offering. So in the case of the kathina too, the offering is made to the bhikkhus living in a particular monastery.

The bhikkhus living in a monastery where the kathina cloth is offered, discuss and decide among them as to whom the cloth is to be given. Normally the selection is made considering the state of the robes of the bhikkhus in the temple. If the robes of a bhikkhu who has observed the rainy retreat are very old and torn out, the first preference is given to him. If there are several bhikkhus having only old and torn robes, priority is given to the eldest of them all, provided he has enough assistants to help him to make the robe the same day. If he does not have the necessary assistants and if a younger bhikkhu is able to prepare the robe the same day with the assistance of his helpers, preference is given to the latter. But normally the younger bhikkhu invite the eldest in the temple to accept the cloth promising him their help to make the robe.

The Buddha has specifically mentioned that only the bhikkhus who observe rainy retreat are entitled to receive the kathina cloth (Vin. 1-255). A bhikkhu who has spent the rainy retreat in one vihāra is not entitled to receive the kathina cloth offered at another vihāra (Aññasmim vihāre vutthavassāpīna labhanti).

Further a bhikkhu who has not kept the rainy retreat properly or a bhikkhu who has taken upon himself to observe the rainy retreat a month later than the accepted date is also not entitled to receive the kathina cloth from the laity.

The kathina cloth can be offered by gods or human beings. Apart from laymen a bhikkhu, a novice or a bhikkhuni also can make offerings of kathina cloth to the bhikkhus.

If the person offering the kathina cloth to the bhikkhus is ignorant of the formal procedure to be followed, he should ask a senior bhikkhu about it. Normally a cloth which is enough to make one robe out of the three robes should be offered to the bhikkhus before dawn saying: kathina civaram saṅghassa dema (I offer this kathina cloth to the congregation of
KNATHAVATTHU

Offering of the kathina cīvara is reckoned as one of the eight great acts that yield to the donor the highest benefits (mahākusala kamma).

The bhikkhu who accepts the kathina cīvara becomes entitled to enjoy five privileges, namely:

1. He is entitled to go in the village from the date of the kathina cīvara pūjā up to the full moon day of medin without informing the other bhikkhus of the temple (anāmantacāra)

2. During the period mentioned above, he is free from fault even if he leaves one of the three robes that he should normally take with him (asamādāna cīvara).

3. He is entitled to request his donors for meals and enjoy it with four or more bhikkhus (gāvabhojana).

4. He can make use of any number of robes without prior determination and assignment (yavadattha-cīvara).

5. He is also entitled to receive other robes that are offered to the mahāsaṅgha up to the end of hemanta season (cīvarauppāda - Vin. 1, 254).

Offering of kathina cīvara to the bhikkhus is a traditional and long standing religious ceremony among Buddhists of Sri Lanka. The lay supporters who invite the bhikkhus to observe the 'rainy retreat' in the temple in the village have to feed the bhikkhus and look into their other needs for three months. During the rainy retreat they plan the kathina ceremony. One Dāyaka (generally the chief dāyaka) collects money for robes from others and assign people to prepare several dishes etc., for the alms giving on the kathina cīvara pūjā day. Normally an all-night pirit ceremony is held the day before the kathina ceremony. While the bhikkhus chant pirit some lay supporters leave the temple after mid night to the place where the kathina perahera (procession) starts from. Carrying burning torches and accompanied by tom-tom beaters the procession goes round the village carrying the kathina cloth respectfully on the head of a dāyaka. The procession reaches the temple at dawn and the cīvara is ceremonially offered to the saṅgha. At the conclusion of the ceremony, the bhikkhus who gather in the temple for the ceremony are offered their breakfast by the dāyakas. In the evening the same day the dāyakas congregate in the

Benefits of offering the kathina robe: The Buddha himself has mentioned about the great importance of offering the kathina cīvara (kathinānīsamāsa). Even as the mountain Mahāmeru cannot be moved by the strongest wind, the merit that accrues to the donor of a kathina robe is great and firm. The Nāgitāpadāna too describes the great benefits of offering a kathina robe. Nāgita Thera was a rich man in Bandhumati during the time of Vipassi Buddha. He invited Vipassi Buddha and the bhikkhus to observe vassa and bestowed on the Buddha and the bhikkhus the kathina cīvara and meals and made a fervent hope for arahantship. As a result of this offering he was never born in woeful states since that time and was born in heavenly worlds for 18 kalpas. He was king of gods (Sakka) 34 times and was 'universal monarch' 84 times. He was born only as a god or a human being. And as a human being he was born only as a khattiya or a brāhmana. In his last birth as a human being he entered the order of monks in the dispensation of Gautama Buddha and attained Arahantsip.

KATHAVATTHU
temple to listen to a sermon delivered by a resident monk who comes clad in the newly prepared kathina cīvara. In this sermon, which lasts for about one hour, the merit and benefits that accrue to the bhikkhus who observe the rainy retreat and the merit that accrues to the dāyakas who support the bhikkhus during this three month period is vividly described.

D. Saddhasena

KATHMANDU (ver. Kāthmāṇḍū). Kāth (Hindi), Kāṣṭha (skt.) mean 'wood' and 'māṇḍu' mean 'Pavilion'. The city is so named after an elaborately carved wooden structure extant even to this day in the centre of the ancient quarter of the city, and once used as a shrine. Kathmandu is the capital of the kingdom of Nepal, towards the west side of the valley at the junction of the Bāghmapri and Viṣṇumapī rivers. It has been known by many names, the earliest of them Maṇju Pātan, 'city of Maṇju' after the great Mahāyāna Bodhisattva Maṇjuśrī, Yindesi and Kāntipūr. According to Nepalese tradition the city was founded by Gunakāmadeva in 724 A.C., and its present name Kathmandu was given by Laksminarasinghamallam in 1595 A.C.

Kathmandu was the capital of Ratnamalla and his successors from 1480 until 1768, then of the Gurkha kings and their hereditary prime ministers, the Rāna. The palace in the Durbar Square (known as 'Hanuman Dhok'), is an immense complex built around 40 or 50 courtyards and most of the palace buildings were erected under Pratāpamalla (1639-89) and Pṛthvī Nārāyana Śāh (1770). In the old town to the south of the palace are the Gāla Bahāl-a Buddhist monastery founded by Sankaradeva in the seventh century, other Buddhist monasteries founded by Thakuri kings and Pratāpamalla, the great Buddhist sanctuary Matsyendranātha from the period of Yaksamalla (1428-80) and the image of Vajrayogini (Tāntic) in the Śānku temple built by Sūryamalla in the 18th century.

Kirkpatrick who visited the city in 1793 suggests that the name of the city is derived from its numerous, unique and attractive wooden temples (W. Kirkpatrick, An Account of the Kingdom of Nepal, London 1811, p. 159). Besides the wooden structures, Kathmandu contains several large scale temples constructed in brick with one or more sloping roofs with pinnacles at the top. There are, also, a few superior roofs which are splendidly gilt, producing a picturesque effect.

In the new town, to the south east of the old town, is located the Mahānkāl (Mahākāla) temple of great antiquity. Although Hindus regard it as dedicated to their supreme deity Śiva, its Buddhist origin cannot be doubted as the chief icon of the shrine represents in its forehead a small dhyaṇi Buddha carving, a common feature in Mahāyāna Bodhisattva images (H. A. Oldfield, Sketches from Nepal, London, 1880, vol. I, p. 110). Today this temple has become a place of worship used both by Buddhists and Hindus.

While the Hindu temples in the city are located near some of the main thoroughfares, the Buddhist shrines are built in squares or quadrangles in the parts of the city exclusively inhabited by the Buddhist Newars. One such important shrine is the temple of Ādibuddha', known also as Buddhamaṇḍal. The older part of this temple was enclosed within the roots of a sacred banyan-tree when noticed in the previous century.

The most important Buddhist monument in the city is the famous Svaṃabhūnāth stūpa. It consists of a solid hemispherical structure of earth and brick, about 60 ft. in diameter and 30 ft. in height, supporting a lofty conical spike, the top of which is crowned by a richly carved pinnacle of gilt copper (op. cit. vol. II, p. 224).

A. D. T. E. Perera

KATIKĀVATA. Katikāvata (pl.) literally mean: 'Codes of Conduct for the saṅgha agreed upon by common consent'. The term can be derived from Pali katikā + vatta. katikā generally means 'agreement arrived at after discussion'. S. Peranavitana (Epigraphia Zeylanica, Vol. II p. 267-273) observes: 'The word (katikā) appears to be formed by the addition of the feminine or diminutive form of the suffix ka after the verbal form kata, and therefore would signify 'an act'. Originally it seems to have been the term by which a decision of an assembly, whether political or ecclesiastical, was technically known. The decisions of the village councils in Malabar are referred to in inscriptions by the cognate term kacca (Skt. kṛtya. In the early Pali writings, the word denotes 'agreement', 'contract' or 'pact'. (EZ. Vol. II, p. 267, n. 3). PED however, seems to suggest katikā > katikā by de-aspiration.

In Pali literature, the two words katikāvata and katikā seem to have been used with almost identical meaning, e.g. (a) amhākaṇṭ katikāvattāṃ bhinditvā
Although it is possible to make a distinction in the meaning, one finds the two words being used in identical meaning, as far as ecclesiastical agreements are concerned, as evident from the following examples:

(i) me katikā mahasongurakka yutu (EZ. Vol. I, No. 20, p. 25) 

Katikāvat relating to vihāras: During the latter part of the Anuradhapura period, i.e. 9th and 10th centuries, quite a number of litthic records have been set up laying down codes of conduct or disciplinary regulations for the guidance of the saṅgha and others associated with an individual vihāra or a group of vihāras. These contain all the characteristics of a katikāvata in spite of the fact that their jurisdiction had been limited to the stipulated vihāra or vihāras. Hence the name vihāra katikavata. However it must be noted that these records had been called by other names as well. The following extracts indicate that terms katikā, sirīt, vatsirīt vāvāsthā were used in an identical sense: (i) me katikā mahasongurā rākka yutu EZ. Vol. 2, Vessagiri slab No. 1, Line 25), (ii) me nakay abadi avasaṣme sirīt tābavīhu (EZ. Vol. 1, no. 4, slab inscription of Kassapa IV, line 14), (iii) sasapak dasavā tabāvā vatsiriit (EZ. vol. 1, no. 15, slab inscription of Udā Mahayā, lines 24-25), (iv) me vāvāsthā pahanā; me vāvāsthā tabanuladā (EZ. Vol. 1, no.2, Vessagiri Slab no. 2, lines 31 and 37).

It is also of interest to note that the first use of the word 'katikāvata' found in a Sinhala record other than an inscription was in sikhavalandaviniśa (p. 87), a work belonging to the late Anuradhapura period. According to the context, in giving accommodation to an elderly bhikkhu from another vihāra, the resident bhikkhu was expected to inquire about the katikāvata respected in that vihāra. This is further proof of the existence of vihāra katikavata.

The following are the main lithic records that come under this category:

(i) Abhayagiri (erroneously called Jetavanārāma Sanskrit inscription, 9th c. (EZ Vol. I No. 1).
(ii) Slab inscription of Kassapa V, 10th c. (EZ. Vol. I, No. 4).
(iii) Vessagiriya Slab, Inscription, Slab No.1, 10th c., also called Viraṅkūrārāma Inscription (EZ Vol. I No. 2).
(iv) Vessagiriya Slab Inscription, Slab no. 2 10th c. (EZ Vol. I, no. 2).
All but the last of the above records belong to the late Anuradhapura period. Further, all these *katikāvata* of the late Anuradhapura period were promulgated in respect of the Abhayagiri Vihāra. Obviously these regulations were necessary because of the laxity in discipline on the part of certain individuals. Perhaps the *Sikavatandaviniśa*, the compendium of Vinaya rules, fulfilled the same function for the Mahāvihāra. Towards the latter half of the Anuradhapura period, the Abhayagiri fraternity seems to have overshadowed their rivals, the Theravādins, in numbers, wealth and power.

Of the *vihāra katikāvata* the Mihintale tablets seem to be the longest and the most comprehensive. An examination of the contents shows that the regulations were laid down mainly in respect of "the great community of monks living in this vihāra (me vēhera vasana mahabikṣuṃ hiriyapati) the employees (kāmiyana) and the serfs (dasnata)." The other category of persons for whom these *katikāvata* contain regulations as shown in other records were the royal officers (*rajkol samdarwan*). Further, these records enumerate the respective duties (*kaṭayutu*) and the receipts and disbursements (*labanu diṭeyutu*). The first 9 lines of the Mihintale record serve as an introduction. This gives information about the king under whose patronage the regulations were promulgated, the participants, the objectives etc. Lines 9 to 20 consist of 9 regulations in respect of the community of monks. They were expected to lead an exemplary life without seeking personal gain. This section ends with the injunction.

"Monks who infringe these regulations shall not live in the Vihaśra". Lines 20-59 deal with regulations in respect of Vihaśra officials. This document has a comprehensive record of the names of Vihaśra officials and their duties. Rules regarding the preservation of Vihaśra treasures, disbursement of income etc. have been accurately dealt with. The regulations in the second slab deal with the emoluments to those performing assigned duties. No service whatsoever was exacted without payment either in money or in kind or in the shape of grants of land. Employees who did not conform to the regulations were to be discontinued.

The other *vihāra katikāvata* mentioned above contain much the same regulations though none of these records are as comprehensive as the Mihintale Tablets. Some of the regulations given in the Abhayagiri Sanskrit inscription are indicative of the nature of violations prevalent at the time. Those bhikkhus who possessed even an inch of the soil of this country, those who led improper lives and those who supported women were debarred from dwelling in the Vihaśra. Bhikkhus who sent betel leaves and other gifts to the royal household either for the sake of gain or out of respect, too, were similarly debarred.

These records often stipulate that bhikkhus and laymen who transgress the regulations laid down should not reside within the precincts of the Vihaśra. Certain other records like the Vessagiriya slab No. 1 make an injunction to the effect that the monks should observe these rules: *me katikā mahasangun rākkayutu*. The Caludiya pokuna record of the 15th century is in very few further by way of conveying a threat: "should any person, whether he be monk or employee of the monastery or officer of the royal household transgress these regulations, may he not be able to see the Maitreya Buddha".

The Pāpiliyāna record of the 15th century is interesting as a code of regulations pertaining to a vihāra in that it gives a full account of the lands donated to the Vihaśra and their administration. The regulation prohibiting "bhikkhus who have committed a pārajikā offence" to live in the precincts of the Vihaśra, is noteworthy. No other *katikāvata* contains such a regulation, for it is taken for granted that a bhikkhu who commits a pārajikā offence is no more a bhikkhu. However, we are reminded of the regulation in the Abhayagiri Sanskrit inscription prohibiting bhikkhus "who lead improper lives or those who support women" to live in the Vihaśra premises.

We are also not sure if this Pāpiliyāna record could qualify itself to be considered a real *katikāvata*. According to its introduction the king himself had used his authority in formulating the regulations. In doing so he had merely consulted the chiefs of the different *gaṇa* or 'chapters', (*gaṇa detu tān da pīj ivissi*). Moreover the document does not mention the word *katikāvata*. It has been called *dharmānugata vyavasthā*
regulations in accordance with the Dhamma.

Katikāvat pertaining to the sāsana, i.e. sāsana katikāvat: The following records belong to this category:

i. Mahā Parākramabāhu Katikāvata of Parākramabahu I, also called Galvihāra Katikāvata, 12th c.

ii. Dambadēni Katikāvata of Parākramabāhu II, 13th c.

iii. Kirti Śri Rajasinha Katikāvata, 18th c.

iv. Rajādhīrājaśīha Katikāvata, 18th c.

The Mahāparākramabāhu Katikāvata is also called the Galvihāra Katikāvata because it has been inscribed on the rock face at the Galvihara chiselled smooth for the purpose. The other records have been preserved mostly in ola leaf manuscripts.

Two other records, namely, the Polonnaruva Hātadāge, inside wall inscription of Kirti Nīśaṅka amalla, and that of Parākramabāhu VI of Kotte lay down regulations to be followed by the Saṅgha, but they do not conform to the requirement of a katikāvata for the regulations seem to have been laid down by the kings themselves. The Nikāyasangrāhaya and the Dambadēni Katikāvata speak of a katikāvata promulgated under the auspices of Vijayabahu III of Polonnaruva; but such a record is not available today.

The Mahā Parākramabāhu Katikāvata, being the first of its kind, had served as the model for all the succeeding ones. In fact these katikāvatas had copied its historical introduction word for word and added a brief history of the sāsana up to the reign of the king concerned.

The historical introduction of this katikāvata gives a brief account of the sāsana up to the time of Parākramabāhu I and the reasons that called for a katikāvata. Just as much as Moggaliputta Tissa Thera presided over the third Council, Mahā-kāśyapa Thera of Udumbaragiri (Dimbulāgala) was invited to preside at the assembly. The unification of the three Nikāyas was one of the greatest achievements of Mahākāśyapa and Parākramabahu I. The second part of the document (lines 18-51) consists of 27 regulations. Most of these regulations seem to aim at bringing about a well disciplined bhikkhu community that can win the respect of the laity.

The intention of the king and the elders, who formulated the regulations to be observed by the entire community of bhikkhus, was clear. It was: “To make the sāsana endure for five thousand years, in order that those of negligent conduct may not find an opening (for transgression).” These expectations, however, were not fulfilled, for, within less than a hundred years Parākramabāhu II of Dambadeniya (1236-1270 A.C.) had to undertake a similar task and issue another code of regulations, viz. the Dambadēni Katikāvata. The Council that formulated this code of regulations was headed by Aranyaka Medhākara Mahāśāma. Elders of both aranyavāsī (forest dwelling) and grāmavāsī (village dwelling) fraternities participated in this Council. It is stated that the king “had come to know of the non-observance and ill-observance (of rules of conduct) by those in the sāsana who led heedless lives, thereby, contributing to the downfall of the sāsana.” This was obviously the reason which led the king to have taken the initiative to promulgate this katikāvata. There are nearly a hundred regulations incorporated here as opposed to the twenty seven in the previous Galvihāra document.

It is interesting to note that the Dambadēni Katikāvata gives the title of Aranyaka Medhākara as Mahāśāma, the Elder who presided over the council.

The title of the Elder who presided over the Polonnaruva Council was Mahāthera. This leads one to conclude that the office of Mahāśāma was instituted sometime between the two katikāvatas. In fact, the Dambadēni Katikāvata mentions two Mahāśāmas, one for the Grāmavāsī fraternity and the other for the Aranyavāsī fraternity. It further states that “no bhikkhus other than these two should be appointed Mahāśāmas, for a plurality of leadership, certainly, leads to the destruction of the sāsana.” Composing slokas for laymen was prohibited to the bhikkhus. So was learning and teaching of poetry, and drama. These subjects have been branded as desppicable arts (garhitā vidyā). The Elders who sat in the Council would have thought that indulgence in those arts would be an impediment to the holy life of a bhikkhu. However, these regulations were meant to be observed by the bhikkhus and not by laymen.

Yet another interesting regulation in the Dambadēni Katikāvata has fixed the number of bhikkhus required to perform certain disciplinary functions (vinayakamma). A vinayakamma which earlier could be performed in the presence of four bhikkhus now required eight. At least ten bhikkhus were required...
for a vinayakamma which could have been performed by five earlier. The reason for doubling the number of bhikkhus with higher ordination (upasampadā) may be that due allowance had to be made for those of lax morals, for, according to the vinaya, such vinayakamma are valid only when they are performed in the presence of virtuous monks.

The Dambadeni Katikāvata, for the first time, fixes the minimum age for ordination as 12 years for the grūmavāśa and 14 years for the vanavāsa. Here, one is reminded of an injunction in a vihāra katikāvata (viz. the slab inscription of Kassapa V) not to ordain young lads (unu povā) although no age limit was fixed. The Dambadeni Katikāvata contains another regulation that had a bearing on the social life of not only the saṅgha but the whole country, i.e. the requirement to enquire into birth and clan (jāti gotra vicārā) among other things before giving ordination and prohibiting entry into the order to certain caste groups. Further, certain key posts such as the Ayatana (chief of the institution) could be held only by those born in the villages of either saṅgamu or gaṇavāsī. By the time of the Dambadeni Katikāvata caste distinctions played a key role not only in entering the order but also in holding high positions in the saṅgha. This caste requirement seems to have been further clarified and strengthened subsequently, for Kirti Sīrī Rājasimha of Kandy (1747-1780 A.C.) is said to have issued another injunction in the following terms: "superseding the injunction of the Buddha I impose a royal injunction - to those who do servitude to others, to those who perform lower and cruel deeds and to their offspring, to those who belong to low castes and births, ordination in the Buddha saṅsana should not be given from now on". However, such an injunction has not been included in the main katikāvata of Kirti Sīrī Rājasimha.

The Kirti Sīrī Rājasimha katikāvata was established on the advice of Vālīvita Sīrī Sarapāli kara Thera. This record includes the Dambadeni Katikāvata in its entirety with a continuation of a brief history of the saṅsana up to Kirti Sīrī Rājasimha. Twelve other regulations have been added with a view to dissuading the bhikkhus from resorting to personal gain. One regulation prohibits the acceptance of gold and silver. Writing of books, other than those on the dhamma for the singular purpose of acquiring merit, was prohibited too.

This Katikāvata too, does not seem to have been successful in preventing the decadence of the saṅgha. Rājādhīrājasimha who succeeded Kirti Sīrī had to get another katikāvata formulated in his seventh regnal year. Deviating from the earlier practice of copying the introduction of the preceding katikāvata here we find only a brief summary of the usual introduction. The regulations, too, were confined to 14, all of which attempt to rectify the abuses as evident from the following: "A bhikkhu should not go to manors of officials with lawsuits connected with anyone, whether relatives or not.

"Those despicable sciences such as the exorcism of yakkhas, divination by light-reading, detecting thieves by means of mantras, divination by means of signs and omens, should neither be studied nor practised". Engaging in such activities as trade and agriculture was also prohibited to bhikkhus.

Thus we see that both the vihāra and the saṅsana katikāvata have been promulgated by rulers and the relevant codes of conduct formulated on the advice of the mahāsaṅgha, from time to time, with the best intention of arresting the deterioration of the way of life of the bhikkhus. Similarly, there were also regulations against various abuses by the lay members associated with the saṅsana. Those documents were expected to be read at the congregations of monks from time to time as stipulated. This seems to be the function of "saṅsena vata kiyana vathimiyan" (The Elder who reads/recites the codes in the Sangsen Monastery) mentioned in the Puliyankulama record of Uda Mahāyā. 'Vata' here refers to the katikāvata of the vihāra. The Dambadeni Katikāvata and the Kirti Sīrī Rājasimha Katikāvata categorically state that they should be read by all on every poya day.

Apart from the katikāvata discussed above, with the establishment of different nikāyas in comparatively recent times the necessity had arisen to formulate regulations for the respective nikāyas. At present there are three main nikāyas namely, Siyam, Amarapura, and Rāmaṇa. These nikāyas in turn have further subdivisions. The Siyam Nikāya has had two main fraternities called Malvatu and Asgiri almost from its inception and later developed further subgroups. The Amarapura Nikāya has the largest number of subgroups. All of them have their own rules and regulations called katikāvata. The following are some of the historical katikāvata that belong to different nikāyas of the present day:

1. Sāsanābhivṛdhivardhana Katikāvata established in
1795. This had been formulated by the Kāraka-Saṅgha Sabhā of the Asgiri fraternity of the Siyam-Nikāya.

1828 - Galgiriyave Dhammarakkhita Sumāṅgala Mahānāyaka - Anunāyaka Katikāvata of 1828 - participated in commercial transactions with countries in the west in the coastal belt of the Meditaranean sea and with countries in the East up to China. Reference is also made in several texts to many festivals, dances and ritual offerings made to various deities by the people of Kāveripattana. The main annual festival held was the festival of god Indra. According to the Tamil text Paṭṭiippuṭṭu, one of the many items imported into this city from Sri Lanka was rice. Milindaṇaṭha mentions this city as Kolapattana.

According to Buddhadatta, the Pali commentator and compiler of several Pali texts, Kāveripatān was a flourishing Theravāda Buddhist country during his time (3rd century A. C.). Buddhadatta compiled the Vinaya text called Vinayaviniccaya during the reign of king Accyuta Kalabhra. Buddhadatta in his Abhidhammāvatāra. says that there was a great Budhhist monastery in Kāveripattana, with library facilities and erudite bhikkhus, built by Khandadāsa, a minister and that Buddhadatta lived there for sometime. *

T. Ariyadhamma

KĀYA - The term kāya is used in Pali literature to convey several shades of meaning such as ‘group’, ‘heap’, ‘accumulation’, ‘realm’ or ‘sphere’ and ‘collection’. Thus, for example a multitude of people is called mahājanakāya (S. mahājana kāya) a group of chariots as rathakāya and a platoon of soldiers as pattikāya (S. I. 72). An extended meaning of kāya is seen in the classification of the seven, such as ‘a mass of skins’ (cammakāya) ‘a mass of wood’ (dārukāya), ‘a mass of copper’ (lohakāya), ‘a mass of iron’ (ayokāya), ‘a mass of sand’ (valukākāya), ‘a mass of water’ (udakākāya) and ‘a mass of planks’ (phalakakāya) - J. II, 91. Kāya is also used occasionally to mean ‘sphere’, ‘realm’ and ‘world’ as in ‘the sphere of Asuras’ (asurakāya), ‘the realm of the Ábhassara deities’ (abhassarakāya), ‘the world of the Tāvatīṃsa deities’ (tāvatīṃsa kāya).

The word kāya is frequently used in Pali canonical works to denote the physical body of a being, especially the body of a human being. The words sarīra and deha are also used in some contexts as synonyms for kāya in this sense. For instance, a philosophical question raised, by some heretical religiousists in the Buddha’s day, was whether the soul was identical with the physical body (tām jīvam tām sarīram) or whether

---

*This note on Kāveripattana has been based on information given in the Sinhala Encyclopaedia. Volume 7 and B.N. Chaudhury's Buddhist Centres in Ancient India. E-in-c
the soul was one thing and the body was something else (aññam jīvam aññam sarīram-D. I. 157). A person who was in the third of the four stages of spiritual growth (anāgāmi) was referred to in several contexts as one who bore the last physical body (antīma deha dhārīm - S. I, 14, 53; II, 278; Sn. 471). Some Indian religious thinkers in the day of the Buddha taught that the physical bodies of beings (kāya, deha, sarīra) were mere lumps of the indestructible natural elements. Thus Ajita Kesakambali maintained that the physical bodies of beings are made up of the five eternal indestructible elements, namely the element of earth, the element of water, the element of heat the element of wind and the element of space. When a being dies the body (kāya) disintegrates and the five elements revert to their original sources and there is no meaning of actions good or bad. Ajita Kesakambali rejected the idea that a being survives after death and maintained that everything regarding a being ended at death (D. I. 55).

Pakudha Kaccāyana presented the same idea in different words. He spoke of seven groups of elements that go to make up a being, namely, the elements of earth, water, heat, wind, happiness, suffering and the life principle. These seven are not the creation of an external force (akata) and they last for eternity; they are independent and do not obstruct one another. So, there is no killer or one who causes others to kill; there is no hearer or one who causes others to hear; there is no knower or one who makes others to know. When some one takes a sword in his hands and chips off another's head, one does not commit murder, but one only makes a cleavage in the lump made up of the seven indestructible elements. The being does not survive his death and the being who cut off the head of the other thereby commits no sin (D. I, 56).

Buddhism, too, recognises that all beings are made up of material forms (rūpakāya) which have the characteristics of the four elements (mahābhūta), but rejects the view that beings are purely the products of these great elements. All beings possess consciousness (viññāna) which is not a product of the physical body, though the physical body, plays the role of a base for consciousness to function. Consciousness is dependent in origination and is subject to constant change and renewal. Consciousness of a being does not cease to be with the disintegration of the material form (rūpakāya) of a being at death, but continues in samsāra with new material forms, until it becomes inoperative with the realisation of nibbāna by the being.

The human body (kāya) has been considered as a fitting subject of meditation to subdue the three roots of evil (akusala) in human thought, namely greed (lobha), hatred (dosa) and ignorance (moha). For this purpose the trainee (sekha) in meditation is made to analyse the human body from several angles. In the Sāmaññaphala Sutta (D. I, 76) the kāya is described as made up of the four great elements (mahābhūtas), namely, the element of earth (pāṭhāvī), the element of water (āpo), the element of fire (tejo) and the element of wind (vāya). It is further described in the same sutta that the kāya originates from a mother and a father (mātā pettissambhāvo), sustains on material food (odanakummāsa upacayo) and that its very nature is impermanence (anicca). It is subject to erosion, abrasion, dissolution and disintegration. Kāyānāpissanā (q.v. - contemplation on the body) is the first of the four applications of mindfulness. For details regarding meditational analyses on kāya, see KĀYA-GATASATI, KĀYANUPASSANĀ.

W. G. Weeraratne

KĀYAGATASATI, 'mindfulness in regard to the body' is a name for fourteen kinds of meditation having various aspects of the body as its topics. These meditations, treated under six groups, consist of mindfulness with regard to breathing-in and breathing-out (ānāpānasati), and with regard to postures (īryāpātha) full awareness of the activities of the body (sampajāñña), contemplation on repulsiveness of the body (paṭikkulamanasikāra), on the four great elements (dhammanasikārā) and the nine charnel ground meditations (nava-sīvathika: M. III, 89 ff.; 198). This group of fourteen meditations is identical with the first of the fourfold application of mindfulness (satipaṭṭhāna), called contemplation of the body (kāyānāpissanā: D. II, 290 ff.; M. I, 58 ff.)

Thus in the suttas, kāyagatāsati is used synonymously with kāyānupassanā. But, in the Visuddhimagga, kāyagatāsati refers only to one of the fourteen meditations, treated as kāyagatāsati or kāyānupassanā in the suttas, namely, to contemplation on the repulsiveness of the body (paṭikkulamanasikāra: Vism. 198).

Buddhaghosa, who treats all the meditations under two groups, concentration - meditations (samādhi-bhāvanā) and insight-meditations (viññānabhāvanā) describes some of the fourteen meditations, given under kāyagatāsati or kāyānupassanā in the suttas, as insight-meditations, some as concentration meditations and still others as belonging to both. Thus, mindfulness...
with regard to postures, full awareness of the activities of the body and contemplation on the four great elements are purely insight meditations, as their exercise produces insight. The nine channel-ground meditations belong to both, since, on the one hand, they deal with that particular phase of insight which is called contemplation on danger (ādināvānapassanā) and, on the other hand, contemplation on various stages of decomposition of the body, called meditation of foulness (asubha), produces mental concentration. Mindfulness with regard to breathing-in and breathing-out is a separate subject of meditation (kammathāhāna) described as one of the ten recollections (anussati). So, in the Visuddhimagga classification of meditations, contemplation on repulsiveness of the body (patikkāla-manasikāra) alone remains to be treated as ‘mindfulness with regard to the body’ (kāyagatāsati) which refers to contemplation on the thirty-two parts (dvatīṃsākāra) of the body (kāya: Vism. 198).

Buddhaghosa gives a detailed description and explanation of the method of developing concentration on the thirty-two parts of the body, namely, (1) hairs of the head (kesā), (2) hairs of the body (lomā), (3) nails (nakā), (4) teeth (dantā), (5) skin (taco), (6) flesh (mamsan), (7) sinews (nahāru), (8) bones (atthi), (9) marrow (āthimīja), (10) kidney (vakkā), (11) heart (hadyām), (12) liver, (yakanam), (13) diaphragm (kolomakam) (14) spleen (pihakam), (15) lungs (papphāsam), (16) lower intestines (antam), (17) bowels (antagunan), (18) stomach (udariyam), (19) excrement (karisam), (20) brains (matthaluṇgam), (21) bile (pitam), (22) phlegm (semham), (23) pus (pubbo) (24) blood (ichitam), (25) sweat (scio), (26) fat (medo), (27) tears (assu), (28) skin-grease (vasa), (29) saliva (khelo) (30) nasal mucus (sīṅghānikā), (31) oil of the joints (lasikā) and (32) urine (muttan).

The beginner should first contemplate on his own body, from the sole of the foot upward and from the top of the hairs downward, with a skin stretched over it and filled with manifold impurities. He should repeat the words that refer to the thirty-two parts of the body. Buddhaghosa suggests a method by which one may be able to be conversant with the wording of the exercise. He advises the beginner to break the thirty-two parts into six sections, namely, (1) the skin-pentad (taca-paṭicaka) which includes the first five parts; (2) the kidney-pentad (vakkha-paṭicaka) which includes the second five parts; (3) the lung-pentad (papphāsa-paṭicaka) which covers five parts with lungs as the fifth; (4) the brain-matter pentad (matthulūṇga-paṭicaka) including five parts ending with brain matter; (5) the fat-sextet (meda-chakka), including six parts with fat as the sixth; (6) the urine-sextet (mutta-chakka), the last six parts. Then each of these sections could be contemplated upon separately, from the first to the last and from the last to the first. When he repeats the words, the mind will not rush here and there, and the different parts will become distinct and appear like a row of fingers or a row of hedge-poles. As one repeats the exercise in words, one should do it also in mind. The repeating in mind forms the condition for the penetration of the characteristic marks of the parts. One who has thus examined the parts of his own body as to colour, shape, region, locality and limits, and considers them one by one and not too hurriedly, as something loathsome, and continues to contemplate on it, sees all these things very clearly. Then he should direct his attention to the bodies of other beings. When all parts appear distinctly, then all men and animals moving about lose the appearance of living beings and appear like heaps of many different parts. And it looks as if those foods and drinks, being swallowed by them, were being inserted in this heap of parts. While one is repeatedly conceiving the idea: ‘disgusting, disgusting; one attains full concentration of the mind, i.e., the first mental absorption (pāthamajjhāna). In this connection, the appearing of colour, forms etc. of the parts is called acquired - image (uggahanimitta) while the arising of loathsomeness forms the counter-image (paṭibhāgaminitta: Vism.198-220).

Upali Karunaratne

KĀYAKAMMA, 'physical action' or 'action done through the medium of the body'. Regarding the generation of the kammic force as taught in Buddhism, action (kamma) is said to be three-fold, namely bodily or physical action (kāyakamma), verbal action (vacīkamma) and mental action (manokamma). To generate the kammic force by body and speech the mind (mano) too, has to play a role, namely, physical and verbal action has to be accompanied by a thought or volition (cetanā) to generate the kammic force.

Buddhism speaks of ten courses of inefficient or unwholesome actions (akusala kammaphata) and ten courses of efficient or wholesome actions (kusala kammaphatha). Of the ten unwholesome courses of action, three are performed through the medium of the body. They are: killing (pāṇātipāta), stealing (adinnadāna) and sensual misbehaviour (kāmesu
micchācāra). Refraining from killing (paññati-pātīveramanī), refraining from stealing (adinnādānāveramanī), and refraining from wrongful sensual gratification (kāmesu micchācārīveramanī) are the three courses of efficient actions (kusala-kammapathā) performed through the medium of the body. see KAMMA, KAMMAPATHA.

KĀYANUPASSANĀ, contemplation (anupa-sanā) on the body (kāya), one of the four applications of mindfulness (satipatthāna), is a name for the fourteen kinds of meditation having various aspects of the body as its topics. These meditations, treated under six groups, consist of mindfulness with regard to breathing-in and breathing-out (ānāpānasati), and with regard to postures (iriyāpatha), full awareness of the activities of the body (sampajañña), contemplation on loathesomeness of the body (paṭikkūla-manasikāra) and, on the four great elements (dhammanasikāra) and, finally, the nine kinds of charnel-ground meditation (nava-sīvathika) and, on the four primary elements of which the body is composed after death. This is more or less identical with the ten reflections on loathesomeness of the body (asubha). see KĀYAGATĀSATI, SATIPATTHĀNA.

Upali Karunaratne

KĀYASAKKHI (kāyasākṣi: Skt, 'body-witness', a trainee aryan (sekha or saṅkṣa) who, on attaining to the absorptions (jhāna) or deliverances (vimokha) destroys some of the bankers (āsava: M.I, 478; Pug. 14-15, 29; Abhsy. 88); he is one who first comes in contact, in his own person, with absorptions and then realises cessation (niruddha), i.e., nibbāna (Ps. II, 52; Viṣṇ. 566; DA III, 889-90). In this type of individual, it is said, the faculty of concentration (sāmadhi-indriya) is predominant (Ps. II, 52; Viṣṇ. 566).

The Aṅguttara-nikāya gives two kinds of kāyasakkhi, ('body-witness'), firstly the body-witness to one or the other of the first seven of the nine attainments (samāpatti) and, namely, the four jhānas of the material sphere and the first three jhānas of the non-material sphere. They are kāyasakkhi to the extent of their attainments. The other kind, those who have gone beyond these seven attainments, are body-witness to the last jhāna of the non-material sphere and to the attainment called the cessation of sensation and feeling (saṅkhā-vedayita-niruddha), more frequently called the attainment of cessation (niruddha-samāpatti). This latter kind are called kāya-sakkhi in the full sense of the term (A, IV, 451-52; AA. IV, 206). The Sumanāgala-vilāsini gives three kinds of kāyasakkhi, namely, those who realise one or the other of the first three supramundane fruitions (i.e., sotāpanna, sakadāgāmi and anāgāmi) after coming in contact with the absorptions (DA. III, 889-90).

According to the Abhidharmā-samuccaya kāyasākṣi, which is the Sanskrit equivalent of the Pali term kāyasakkhi, is the trainee-arya (sākṣa) who has attained the eight-fold deliverance (āstavimokṣa: Abhsy. 86, 88).

The Abhidharmakośa is more precise in its definition of kāyasākṣi and says that he is an anāgāminī who has realised the cessation of sensation and feel-
ings (sanjña-vedayitanirodha) which is identical with the attainment of nirvana (Abhk. VI, pp. 177, 185).

Since the ārya individuals have been classified in different ways, the kāyasakkhi appears in different lists of āryas. Thus, he is one of seven āryas (D. IV, 105, 254; A. V, 477; A. IV, 10; Abhk. 185 etc.) and one in a list of ten āryas (A. V, 23), and again, one in a list of twelve (Netti. 190), and also one in yet another list of twenty seven āryas (Abhsy. 86).

Upali Karunaratne

KĀYAVIÑÑATTI (Kāyaviññāpti:Sk) bodily expression, or gesture, one of the two modes of intimation, i.e., the two means of communication of one’s thoughts to another, the other mode being vocal expression (vaci-viññān, q.v.). It is a material element rūpadhamma and is defined as the state of bodily tension or excitement on the part of a person who advances or recedes or flexes the gaze or glances around or retracts an arm or stretches it forth (Dhs. 143 ff). It is said to result in response to a thought which is either morally wholesome (kusala) or unwholesome (akusala) or indeterminate (avyākata:Dhs. 143). For this reason it is also described as invariably set up or given rise to by consciousness (cittasamutthāna: ibid. 147). It is called kāyaviññātti because it is the bodily expression or bodily intimation of that morally qualifiable thought in response to which it arises; it makes the thought known (viññātanā); it is the state of having made that thought known viññāpti: Dhs. 143)

It is quite clear from this brief explanation given by the Theravādins that kāyaviññātti is not identical with the movements of the body. It means the bodily tension, the bodily excitement, on the part of a person who moves his body or limbs to convey an idea.

The Sāmmīfīyas and the Vatsīpatīyas adopt a more direct approach. They consider kāyaviññāpti to be bodily movement (Abhk. ch. IV, v.2 f; La Siddhi de Hiuan Tsang, tr. Poussin, p. 48). The Karmasiddhiprakarana says that the movement is that of the body (kāya), and it is this movement that is recognised as the viññāpti, because it makes manifest or expresses that thought in response to which it arises. It is included in the sphere of the visible (rūpāyatana), because it is the movement of the body, of matter, that is visible. Hence it is the opinion of the Sāmmīfīyas and the Vatsīpatīyas that kāyaviññāpti is apprehended by the organ of sight (Le Traite de La Demonstration de L’Acte, Karmasid dhīprakaraṇa, tr. by E. Lamotte, IV, p. 214, n.22).

The Vaibhāṣikas object to this interpretation on the ground that there is no movement in an ultimate sense. All elements of existence (dharma) are momentary. Wherever they come into existence, there itself they cease to exist (Sphuṭārtha abhidharma-kosa-vyākhya, p. 33). Motion is not something that exists in reality, but is a name given to the appearance of momentary elements in adjacent locations (Abhk. ch. IV, v.v. 2ff). If somebody retracted his arm or stretched it forth, in an ultimate sense, it is incorrect to say that his arm had moved. What actually happened was that the series of momentary elements that constituted what was called the arm arose in adjacent locations in a certain direction. Only the place of the arising of elements had changed; not a single element had moved.

To identify kāyaviññāpti with bodily movements is, therefore, to deprive it of its position as a real dharma. To deprive it of its position as a real dharma is to undermine the very foundation of the avijñapti-rūpa, in the defence of which, the Vaibhāṣikas, time and again, joined issue with the Sautrāntikas.

Hence, according to the Vaibhāṣikas, kāyaviññāpti is not the movement of the body, but is such and such figure (samsthāna) of the body, given rise to, or conditioned by, a volitional thought (cetanā). This kāyaviññāpti-samsthāna is something that is visible (ibid. v. 2. ff). It can be apprehended independently of the colour of the body (Sphuṭārtha.... p. 26.).

Thus, although the Vatsīpatīya-Sammiṭiyas and the Vaibhāṣikas differ in answering what exactly constitutes kāya-viññāpti, both agree that it comes under the sphere of the visible (rūpāyatana); it can be apprehended by the organ of sight.

Viewed against this background, the kāyaviññātti (Sk. kāyaviññāpti) of the Theravādins (Dhs.p. 179) raises one important problem. It was not identified by the Theravādins with the bodily movements, nor was it taken by them as something that is apprehended by the organ of sight. Its inclusion in the category of mind-objects under the heading dhammāyatana-pariyāpattanā (ibid.) shows that it cannot be known by any of the senses other than the mind (māna). It is known through a process of inference. In which way, then, does it function as a mode of self-expression? This is a question about which the Dhammasaṅgani is practically silent.

It may be noted here that in the Dhammasaṅgani
account reference is made not only to the state of bodily tension or excitement which is kāyaviṇṇatti, but also to bodily movements such as retracting an arm or stretching it forth. This is an indication to the fact, although bodily movements are not kāyaviṇṇatti, yet they have a close connection with it; they too have a part to play in the expression of thought.

What this close connection is would be clear if a correspondence could be established between the kāyaviṇṇatti of the Dhammasaṅgani and that of the Dārśāntikas as given in the Vijñaptimātra-siddhi, according to which there is a certain rūpa which is neither colour nor figure, but is the cause of bodily movements (La Siddhī. p. 48). What this certain rūpa is not explained here in more definite terms. In the Karnasiddhi-prakarana (pp. 219 ff) of Vasubandhu an almost identical, if not the same, theory is attributed to the Sauryodayikas. According to this theory bodily movements are due to the air-element (vāyu-dhātu), given rise to by a certain variety of consciousness. And it is this air-element which is recognized as the kāyaviṇṇāpīti.

Kāyaviṇṇāpīti, according to these two accounts, is the course of bodily movements. From this it may be concluded that the Dārśāntikas do not seem to have overlooked the contention of the Vātsiputraśis, namely, that kāyaviṇṇāpīti occurs only when there is some kind of movement of the body, and not otherwise (Abhik. Ch. IV, v. 2f).

It may then be asked why the designation, kāyaviṇṇāpīti, is given to the course of bodily movements themselves? For, according to this explanation, the significance of kāyaviṇṇāpīti as a mode of expression is rather indirect. But, like the Vaibhāṣikas, they, too, were committed to the theory of the denial of motion. For, although they speak of movements, they do not recognize them in an absolute sense. Strictly speaking, there is no movement of a thing from one locus in space to another (deśantarasaikrānti), but only the appearance of momentary elements in adjacent locations (deśāntarotpattai, Karnasiddhiprakarana, pp. 219-20). It seems very probable, therefore, that it was with a view to retaining its reality that kāyaviṇṇāpīti was sought to be identified with the course of bodily movements.

It is clear that there is some similarity between the kāyaviṇṇātī of the Therāvādins and that of the Dārśāntikas and the Sauryodayikas.

The former, too, is neither colour nor figure, for its exclusion from rūpiyatana and its inclusion in dharmāyatana precludes its being identified with either. This similarity goes still further. One of the terms used in the Dhammasaṅgani in defining kāyaviṇṇātī is thumbitatta, tension or distortion. This term is used in the same text also in defining the air-element (Dhs. p. 177). It may be noted here that the Sauryodayikas have identified kāyaviṇṇātī with the air-element.

Does this mean that the kāyaviṇṇātī of the Therāvādins, like that of the Sauryodayikas, is the air-element? Two of the seventeen material elements listed in the Dhammasaṅgani under the heading cittasamuttāna, i.e., arising in response to, or conditioned by, consciousness are vāyo-dhātu, the air-element, and kāyaviṇṇātī (Dhs. p. 147). If the two are identical they would not be mentioned separately and counted as two items. On the other hand, if the kāyaviṇṇātī were different from, or if it had no connection with, vāyo-dhātu, it would not be explained as tension of the body. The relation between the two seems to be one of identity as well as difference.

Kāyaviṇṇātī is a condition for the occurrence of bodily movements. It is through bodily movements, which are conditioned by kāyaviṇṇātī, that a particular thought is expressed or intimated. The thought is known by inference after the apprehension of the colour of the body which is in movement (ibid. 273-75; Viṣṇ. A. 451).

In recognizing kāyaviṇṇātī as a condition for the occurrence of bodily movements, the Therāvādins are in general agreement with the Dārśāntikas and the Sauryodayikas. However, there is this significant difference to be noted. According to the Sauryodayikas kāyaviṇṇāpīti is the air-element whereas, according to the Therāvādins, it is an alteration of the mode of the air-element.

Kāyaviṇṇātī seems to have been so called by the Therāvādins because of two reasons: In the first place, it makes manifest or expresses that particular thought in response to which it arises. This manifestation or expression is a certain tension or excitement of the body. It is not something that is visible (Abhidhamma-uttavikāsini, p. 275), but it is the physical representation of a mental event. In this sense it is that which makes known, i.e. viññāpana.
Elsewhere in the Dhammasaṅgani it is stated that the kāyaviṇṇātī is co-existent with the thought (citta-saṅkhārā) in response to which it arises, and follows the pattern of the thought (cittinupariṇātī) in response to which it arises (Dhs.p. 148) The implied reason is that since it is the physical manifestation or representation of a thought, its duration, too, should be equal to the duration of that particular thought. And since it is brought about by being conditioned by that thought which it make manifest, it, too, follows the pattern of that particular thought.

It should be noted in this connection that, in the view of the Theravādins, the duration of a material element is longer than that of a mental element (S. II, 280; Kva. 620 ff). Accordingly, although the consciousness-born air-element and its concomitants cannot be described as co-existent with the thought, because, to describe them so is to admit that their duration is equal to that of the thought-moment. But kāyaviṇṇātī, has to be co-existent with the thought. This explains why the designation, kāyaviṇṇātī, is given, not to the air-element and its concomitants, but to their alteration of mode.

It appears contradictory to recognize kāyaviṇṇātī as a material element while describing it as co-existent with thought. It should be noted here that what is called kāyaviṇṇātī is not a material element in its usual sense (see viṇṇātī-rūpa). It is not something which is distinct and separate from the air-element and its concomitants. It signifies only a particular situation or position, i.e., alteration of mode, of the latter. It is a name given to the latter when they are in a particular position. Apart from the air-element and its concomitants, of which it is an alteration of mode, there is no separate material element called kāyaviṇṇātī. In other words, kāyaviṇṇātī is a name given to the air element and its concomitants when they function as the bodily expression of a thought. Stated otherwise, the air-element and its concomitants are called kāyaviṇṇātī as long as that particular thought in response to which they arise, exists, because it is during this time that they make manifest or represent that thought and function as a condition for the occurrence of bodily movements and thereby make known that thought.

However, the air-element and its concomitants do not cease to exist concurrently with the cessation of that particular thought in response to which they arise; but their position and function as kāyaviṇṇātī do.

Thus it is clear that kāyaviṇṇātī is not a material element, distinct and separate from the air-element and its concomitants, signifying as it does only an alteration of mode of the latter.

However, in the Dhammasaṅgani not only the air-element and its concomitants, but also kāyaviṇṇātī are described as given rise to by thought (citta-saṅkhārā): “The situation which gives the impression that the latter has an arising separate from that of the former. Nevertheless, the fact that kāyaviṇṇātī is described as co-existent with thought, although no material element can be so described, suggests that thereby the Dhammasaṅgani does not mean that it is a separate material element. The logic that seems to have guided it in taking such a step could be that, since the air-element and its concomitants are citta-saṅkhārā, given rise to by consciousness, their aṅkāra vikāra, alteration of mode, i.e. kāyaviṇṇātī, too, is citta-saṅkhārā. See Viṇṇātīrūpa and Viṇṇātī.

Upali Karunaratne

KEGON (Ti-lum Tsung in Chinese), one of the Chinese Buddhist sects based on the doctrine of the Daśabhūmika-sūtra-sāstra of Vasubandhu which is a commentary on the Daśabhūmika-sūtra, a section of the Avatamsaka-sūtra.

The translation of the Daśabhūmikasūtra-sāstra: The preface by T'ui-kuang to the Chinese version speaks of the translation of this text as follows: In the first year of the Yung-p'ing era (508 A.C.), the emperor gave the mandate to Bodhiruci from northern India, Ratnamati from central India and to more than ten other scholars to translate this text. They were well versed in Buddhism and investigated the doctrine of this text completely. They finished the work of translation of this text in the early summer of the fourth year of the said era (511 A.C.)

So, the Chinese version gives the translators' names as Bodhiruci and others. But the Li-tai-sa-pa-chi (Taishō, No. 2034) and the Hsiù-kao-seng-chuan (Taishō, No. 2060) mention the divergence of opinion among the translators. According to the Hsiù-kao-sêng-chuan (Taishō, Vol. 50, p. 429), Bodhiruci, Ratnamati and Buddha-sânta translated the text separately and later someone else collated them into one text.

It is doubtful whether there were three translations, but it is believed that this sect was divided into two
sub-sects because of the differences in interpretation between Bodhiruci and Ratnamati. It is believed that the fundamental idea of Bodhiruci is based on the concept of ālaya-vijñāna, when Ratnamati's standpoint is based on that of the pure mind, the tathāgatagarbha.

**Hsiang-chou nan - Tao P'ai:** 'Hsiang' is the name of a country (Chou) in northern China. Then, the capital was in Hsiang county. 'Nan-tao' means southern way. So, this is the sub-sect (P'ai) which flourished in the southern part of the Hsiang county. And the other sub-sect was the Hsiang-chou Pei-tae P'ai which flourished in the northern part of the Hsiang county.

The *Hsü-kao-sêng-chuan* (Taishō, Vol. 50, p. 482) states a scholar's opinion of the origin of sub-sects as follows: Ratnamati taught the doctrine to three disciples. To Tao Ting, the Dharma of the mind was transferred. And the Dharma and Vinaya were taught to Hui-kuang alone. Bodhiruci taught the doctrine of Tao-ch'ung only, who taught it to four monks including Lao-i. Hui-kuang, who stayed at the southern part of the Hsiang county, taught the doctrine to ten disciples including (Tao) p'ing and (Sêng) fan.

This view is believed widely. The Nan tao P'ai or the southern sub-sect inherited the doctrine of Ratnamati which was promuligated by Hui-kuang.

---

The lineage of the Nan-tao P'ai (southern-sub-sect)

Hui-kuang (468-537 A.C.) was ordained under Buddhas'anta and participated in the work of the translation of the *Daśabhūmika-sūtra-sāstra*. Later, he commented on the *Daśabhūmikasūtra-sāstra*, *Avataṇ-saka-sūtra*, *Mahāparinirvānasūtra*, *Vimalakīrtinirdeśa*, *Bodhisattvacaryā-nirdesa*, *Śrīmālā-sīhanāda-sūtra* etc. He wrote the commentary on the *Dharmaguptaka-vinaya*, too. He was appointed by the emperor as the administrator of the Buddhist *Saṅgha*. He is called the founder of the Daśabhūmika sect and the restorer of the Dharmaguptaka-vinaya sect.
Fa-shang (495-580) was the most eminent disciple of Hui-kuang. He lectured on the Saddharma-punḍarīka-sūtra at the age of fifteen. Then, he became a disciple of Hui-kuang. The emperor Wen-isuan received the precepts from him. According to the imperial mandate, he stayed at the Ting-kuo temple in the capital. He founded the Ho-shui temple at Hsi-shan. He lectured and commented on the Daśabhūmikasūtra-sāstra, Bodhisattvacaryā-nirdesa, Laṅkāvatāra-sūtra, Mahāparinirvāṇa Sūtra, etc. He wrote the Fa-hsing-lun (A treatise on the Buddha nature) and the Ta-ch'êng-i-chang (An outline of the doctrine of Mahāyāna Buddhism).

Seng-fan studied the doctrine of the Nirvāṇa sect, then, became a scholar of the Daśabhūmika sect. He stayed at the Ta-chuch temple in the capital and lectured on the Avatāṃsaka sūtra, Daśabhūmikasūtra-sāstrā, Bodhisattvacaryā-nirdesa, Vimalakīrti-nirdesa, Śūrañcā-la-simhanāda-sūtra, etc., and wrote commentaries on them.

Sōng-ta studied the Daśabhūmikasūtra-sāstrā under Ratnamati at first, and later under Hui-kuang. He was very much admired by the emperor Wu (464-549) of the Liang dynasty. He stayed at the Hung-ku and the Ting-kuan temples and lectured on the Avatāṃsaka-sūtra, Daśabhūmikasūtra-sāstrā and Bodhisattvacaryā-nirdesa.

An-lin (507-583) studied the Daśabhūmikasūtra-sāstrā under Hui-kuang. He lectured on the Dharmaguptaka-vinaya as well as on many Mahāyāna sūtras and sūstras.

Fa-ts'ün, Jung-chih and Hui-ytian were eminent disciples of Fa-shang. Fa-ts'ün was formerly a scholar of Taoism. During the Tien-pae era (550-559 A. C.) he was converted to Buddhism and became a disciple of Fa-shang. Later, he was appointed to the karmādāna of the Ho-shui temple.

Jung-chih lectured many times on the Mahāparinirvāṇa-sūtra and Daśabhūmikasūtra-sāstrā and was believed to have always had about five hundred disciples.

Hui-yüan (523-592) is famous as a scholar on the history of Chinese Buddhism. He stayed at the Ching-ying temple. He wrote the commentaries on the Daśabhūmikasūtra-sāstrā, Bodhisattvacaryā-nirdesa, Avatāṃsaka-sūtra, Mahāparinirvāṇa-sūtra, Vimalakīrti-nirdesa, Śūrañcā-la-simhanāda-sūtra, etc. He wrote the Ta-ch'êng-i-chang (Taisho, No. 1851), which is greatly valued by Buddhist scholars, even today. Among his many disciples, Ling-ts'an, succeeded Hui-yuán as the chief incumbent of the Ching-ying temple. Hui-ch'ien, Chih-hui, Hsiian-chien, Tea-yen, Chih-ni, Pao-an, Sōng-hsin and others lectured on the Daśabhūmikasūtra-Sāstrā and Mahāparinirvāṇa-sūtra.

T'an-ch'ien, a disciple of T'an-tsun, at first studied the doctrine of the Avatāṃsaka-sūtra, Daśabhūmikasūtra-sāstrā, Vimalakīrti-nirdesa, Laṅkāvatāra-sūtra, Bodhisattvacaryā-nirdesa, etc. But when the emperor Wu (543-578 A. C.) of the Chou dynasty, banned Buddhism he escaped to southern China, where he obtained the Mahāyānasamparigraha - sāstrā. T'an-ch'ien is considered as the founder of the Mahāyānasamparigraha sect in southern China.

Ling-yu, a disciple of Tao-p'ing lived in the Ta'tz'u temple and the Yen-k'ung temple and studied the doctrines of the Avatāṃsaka-sūtra, Mahāparinirvāṇa-sūtra, Daśabhūmikasūtra-sāstrā and Vinaya. He commented on the Daśabhūmikasūtra-sāstrā, Bodhisattvacaryā-nirdesa and so on.

Tao-ang, a disciple of Ling-yu, lectured on the Avatāṃsaka-sūtra and the Daśabhūmikasūtra-sāstrā. Ch'ing-yüan, another disciple of Lingyu founded the Chih-hsiang temple at Chung-nan-shan and excelled in the doctrines of the Avatāṃsaka-sūtra, Daśabhūmikasūtra-sāstrā, Bodhisattvacaryā-nirdesa, Mahāparinirvāṇa-sūtra and so on.

Hsiang-chou Pei - Tao P'ai: The southern sub-sector (Nan-tao P'ai) thus flourished but the northern sub-sector seems not to have been so prosperous as the southern sub-sector. Seng-hsin, Fa-ch'î, Tan-li, Lao-i, Ju-kao, Chih-nien and others are mentioned as disciples of Tao-ch'ung. But the careers of many of them are not known.

The lineage of the Pei-tao P'ai (northern sub-sector):
Tao-ch'ung was at first a scholar on Confucianism and had more than one thousand disciples. But later he was converted to Buddhism. Hearing the translation of the *Dasabhumikasūtra-sūtra*, he went to see Bodhiruci under whom he studied the text for three years. Later, he lectured on the *Dasabhumikasūtra-sūtra*. Tao-ch'ung had more than one thousand followers who promulgated the doctrine of this sect.

Chih-nien (534-607) studied at first the *Maluiprajñā-pāramitā-sūtra* under Tao-ch'ang, then the *Dasabhumikasūtra-sūtra* under Tao-ch'ung and Hinayana Buddhism under Hui-sung. When Buddhism was banned by the emperor Wu in 574 A.C., he escaped to Pohai, where he studied further the doctrines of Hinayana Buddhism. He stayed at the K'ai-i temple, and at the Ta-hsing luo temple and wrote the commen tary on the *Abhidharma-hṛdaya-sūtra* in nine facicles and the interpretation of the same work also in nine facicles.

Among Chih-nien's disciples, Hui-hsin is best known. He studied the Hinayana texts under Chih-nin, Vinaya under Hung-li and Fa-li, the *Mahāyānasamparigraha-sūtra* under T'an-ch'ien and Tao-ni, and the *Avatāmśaka-sūtra* under Ling-yu. He and his disciples, too, were excellent exponents of the *Mahāyānasamparigraha-sūtra*. Thus, he and his disciples and thereby the northern sub-sect seem to have been absorbed into the Mahāyāna samparigraha sect.

According to Chih-nien's sub-sect, the teachings which deal with the doctrine of the *Prajñāpāramitā-sūtra* and state that all dharmas have their own natures. This is the elementary teaching of the Hinayana doctrines.

According to Fa-hua-haiien-i-shih-ch'ien (Taisho, Vol. 33 p. 942), the instructors of the southern and the northern sub-sect disputed with each other on the problem of the foundation of all dharmas. From this account, we can recognise that the northern sub-sect was also powerful during the Chou (557-589 A.C.) and the Sui (589-618 A.C.) dynasties. But it is not known who the instructors of the northern sub-sect at this dispute were.

**The Classification of Buddhism:** Buddhist doctrines of several schools, that developed in India, were systematically introduced into China. Thus, Chinese scholars had to classify these doctrines in order to realise why so many doctrines were found in Buddhism and also in order to uphold a particular doctrine as the highest, and what was the real content of the enlightened teaching of the Buddha. It is interesting to note that in these classifications it is always the sect to which the classifier belonged that is given as the highest or true doctrine to attain enlightenment.

In this sect also, many kinds of classifications were attempted. Two classifications are known as those of Hui-kuang. According to Fa-tsang, Hui-kuang classified Buddhism into three divisions, namely, 1. Chien-chiao (gradual teaching), 2. Tun-chiao (Immediate teaching), and 3. Yuan-chiao (complete teaching). In the first division the Buddha taught the doctrines of impermanence and then of permanence or emptiness at first and then non-emptiness. In this way, the Buddha taught the profound teachings after the elementary teachings meant for immature people. The second division is the teachings that include all profound teachings; for instance, the teaching in which both emptiness and non-emptiness are included simultaneously. These teachings were preached to the matured people. The complete teaching, the third division, is the ultimate fruit, the enlightenment itself of the Buddha.

According to Chi-i, Hui-kuang believed in a classification of four divisions.

1. Yin-yuan (causality: *Abhidharmakośa-sūtra*, etc.), the teachings which deal with the doctrine of the *Prajñāpāramitā-sūtra* and state that all dharmas have their own natures. This is the elementary teaching of the Hinayana doctrines.

2. Chia-ming (temporality: *Satyasiddhi-sūtra*), the profound teaching of the Hinayana Buddhism. The doctrine of the *satyasiddhi-sūtra* which clarifies that all dharmas are temporal.

3. K'uang-hsiang (negation: *Mahāprajñāpāramitā-sūtra*, *Mādhyamaka-kārikā*, *Dvīdāsūtra*, *Śānta-sūtra* etc.), the doctrine, according to which all dharmas are empty like a phantom. This is the elementary teaching of the Mahāyana doctrines.
I. Illusion consciousness: because the nature is avidyā.
2. Activity-c.: because, due to avidyā, evil thoughts occur.
3. Progress-c.: because, due to the activity-consciousness, phenomena are recognized.
4. Representation-c.: because phenomena are represented.
5. Knowledge-c.: because, this is the knowledge to differentiate pure dharmas from impure dharmas.
6. Continuity-c.: because, this consciousness clings to objects and preserves the results of deeds, good and bad.
7. Erroneous-c.: because, all the six mentioned above are not pure.
8. Clinging-c.: because, this consciousness clings to the self.

In the same way, the eighth consciousness, ālaya-vijñāna, can be expressed by eight terms, too.

1. Store-consciousness: because, this consciousness is tathāgata-garbha.
2. Divine-c.: because, this produces the activities common to Buddhas.

4. Ch'ang (eternity; Mahāparinirvāṇa-sūtra, Avatamsaka-sūtra, etc.), the doctrine that phenomena occur depending on the reality, i.e., the tathāgatagarbha. In other words, tathatā become phenomenal in birth and death. This is the ultimate doctrine of Buddhism.

This classification became the basis of Tan-yin's fourfold classification and An-lin's sixfold classification.

Tan-yin, a disciple of Hui-kuang, made the sixfold classification of Buddhism. The first four are the same as those of Tan-yin; the fifth is Ch'ang (eternity) and the sixth is Yuan (completeness.) The Avatamsaka-sūtra is involved in the sixth division.

An-lin, also a disciple of Hui-kuang, made the sixfold classification of Buddhism. The first four are the same as those of Tan-yin; the fifth is Ch'ang (eternity) and the sixth is Yuan (completeness.) The Avatamsaka-sūtra is involved in the sixth division.

Thus, the typical classification followed by the southern sub-sect was Hui-kuang's fourfold classification. Against it, the typical classification believed by the northern sub-sect was the fivefold one. The Fa-hua-ch'eng-hsian-i (Taisho, Vol. 33. p. 801) refers the fivefold classification of Tzu-kuei as follows: "A certain monk made the fivefold teachings. The first four are the same as those mentioned above (Hui-kuang's classification). After those, the Avatamsaka-sūtra is called the teaching of Fa-ch'ieh (dharmadhātu). This was believed by Tzu-kuei". Details of the life of Tzu-kuei are not known but this fivefold classification is believed to have been that of the northern sub-sect.

Chi-tsang of the San-lun sect records the threefold classification of the Dasa'hūmika sect, namely, 1. Li-hsiang (establishment of phenomena: Hinayāna), 2. She-hsiang (negation of Phenomena: Prajñāpāramitā-sūtra etc.) 3. Chen-shih (reality: Avatamsaka-sūtra, etc.). It is not known whose classification this is. Hui-yuan had his own fourfold classification.

The Consciousness Theory. In the Dasabhūmika-sūtra-sūtra, there occur terms such as Ālaya-vijñāna, Ādāna-vijñāna, and Avidyā based on the interpretation of these words, the consciousness theory developed in this sect.

Typically saying, the southern sub-sect had the consciousness theory that the eighth consciousness was

Hui-yuan of the southern sub-sect refers to the consciousness theory in his work, Ta-ch' eng-i-chang (Taisho, Vol. 44 p. 524 f.) as follows: There are eight kinds of consciousness. The first six are the consciousness of eye, of ear, of nose, of tongue, of body and of will. These are named according to the sense organs. But last two are fundamental. The seventh consciousness, ādāna-vijñāna, is avidyā in its character. The eighth consciousness, ālaya-vijñāna, is translated into Chinese as wu-mo-shih (inexhaustible consciousness) which means the consciousness not to be exhausted in the successive births and deaths. This is identified with the buddhatā of the Mahāparinirvāṇa-sūtra and with the tathāgatagarbha of the Lankavātara-sūtra.

Hui-yuan states that the ādāna-vijñāna can be explained in eight terms, too, according to its contents.

1. Illusion consciousness: because the nature is avidyā.
2. Activity-c.: because, due to avidyā, evil thoughts occur.
3. Progress-c.: because, due to the activity-consciousness, phenomena are recognized.
4. Representation-c.: because phenomena are represented.
5. Knowledge-c.: because, this is the knowledge to differentiate pure dharmas from impure dharmas.
6. Continuity-c.: because, this consciousness clings to objects and preserves the results of deeds, good and bad.
7. Erroneous-c.: because, all the six mentioned above are not pure.
8. Clinging-c.: because, this consciousness clings to the self.

In the same way, the eighth consciousness, ālaya-vijñāna, can be expressed by eight terms, too.

1. Store-consciousness: because, this consciousness is tathāgata-garbha.
2. Divine-c.: because, this produces the activities common to Buddhas.
3. Supreme-c. : because this is extraordinarily fine.
4. Pure-c. : because in the nature of this consciousness there is no defilement.
5. Real-c. : because this consciousness is detached from all defilements.
6. Thusness-c : because, in this consciousness there is no point either to be denied or to be established.
7. House-c because, all phenomena depend on this consciousness
8. Fundamental-c. because, this consciousness is the foundation of illusion.

Here, we can see Hui-yüan's standpoint that the tathātā or tathāgatagarbha is equal with ālaya-vijñāna.

According to Chi-i, monks of the Daśabhūmika sect believed that the ālaya-vijñāna is the real, eternal and pure consciousness (Taisho, Vol. 33 p. 744). Chi-tsang also states that instructors of the earlier Daśabhūmika sect believed the seventh consciousness to be illusory and the eighth consciousness to be real (Taisho, Vol. 42. p. 104). In another work also, Chi-tsang mentions that according to the Daśabhūmika sect the eighth consciousness is the buddhātā (Taisho, Vol. 34 p. 380). Thus, Hui-yuan's theory is believed to be most typical for the Daśabhūmika sect.

The doctrines of the Mahāyānasamāparigraha sect believed in a nirūta consciousness, too, namely, amalaviññāna which was pure. But the Daśabhūmika sect did not recognise the ninth consciousness, Hence there were disputes between the two sects about the consciousness theory.

The Decline. In 563 A.C., Paramārtha translated the Mahāyānasamāparigrahas'astra, based on which the Mahāyānasamāparigraha sect (She-lun Tsang) was established and prospered in southern China, when the Daśabhūmika sect flourished in northern China. But after the prohibition of Buddhism by emperor Wu in northern China, the Mahāyānasamāparigraha sect was introduced into northern China. Both sects influenced each other. However, the Daśabhūmika sect declined gradually.

Many monks of the Daśabhūmika sect joined the Mahāyānasamāparigraha sect. Hui-hsin of the northern sub-sect studied the Mahāyānasamāparigrahas'astra under Tan-ch'ien and Tao-ni. His disciples, Ling-tan, Sheng-chao, Tao-chieh received the doctrine of the Mahāyānasamāparigraha-s'astra from Hui-hsin. Thus, the northern sub-sect seems to have been absorbed into the Mahāyānasamāparigraha sect at the time of Hui-hsin. Not only the northern sub-sect, but many monks of the northern sub-sect also became members of the Mahāyānasamāparigraha sect. T'an-ch'ien, Chingsung, Fa-k'an and their disciples constituted the Mahāyānasamāparigraha sect. Although Hui-yuan and his disciples and the group of Ling-yu, Ling-pien and Chincheng remained in the Daśabhūmika sect, later the followers of Hui-yuan also became members of the Mahāyānasamāparigraha sect.

In the history of Chinese Buddhism, this period is called 'the period of investigation' by some modern scholars. Thus, the word 'sect' indicates the monks of the same learning rather than of the same belief. Therefore, when another or superior text of the similar doctrine was introduced, changing of sects would not have been so difficult. Both sects, the Daśabhūmika and the Mahāyānasamāparigraha, were overwhelmed by the Vijñapti-vāda sect which had been introduced into China by Hsuan-tsan. So, both sects disappeared in the T'ang dynasty (618-907 A.C.).

During the Sui (589-618 A.C.) and the T'ang dynasties, many so-called Chinese sects were established. The Avatāmsaka sect, one of these Chinese sects, received great influence from the Daśabhūmika sect. The Daśabhūmika-sūtra is a section of the Avatāmsaka-sūtra. Although the lineage of the patriarchs of the Avatāmsaka sect consists of Tu-shun (Fa-shun 557-640 A.C.), Chih-yen (602-668), Fa-tsang (643-712) and so on, the line of the learning of this sect is Hui-kuang, T'ao-p'ing, Ling-yu, Ch'ing-yuan, Chih-cheng, Chih-yen, Fa-tsang and so on.

KETUMĀLĀ. Ananda Coomaraswamy, Y. Krishan and several other scholars present interesting interpretations about the features in the Buddha head in Buddhist iconography.1 Krishan has pointed out that in the ancient Gandhāra Buddha images as well as in Mathurā Buddha images there was no evidence of the exist-

---

1. Krishan, Y. "The Hair on the Buddha's Head and Uṣṇīṣa", East and West, new series, Vol. 16, Nos. 3-4, (September-November) 1960, pp. 275-283
ence of a feature depicting a projecting from the summit of the head of the Buddha image. Reference could be made to the head of an image of a bhikkhu living in the Śunga period (2nd century B.C. to 1st century B.C.). Even in Sri Lanka there was no evidence of an abnormal projection on the head of a Buddha image. However there is evidence of the existence of a symbolic projection in the Sarvāstivāda tradition as discussed in the Lalitavistara. It was the belief among the Sarvāstivādins that there was pūrva-buddhānupasmityasāngagānārasāmi (the radiance of knowledge to recall lives of previous Buddhas) from which a radiance rose upwards from a spot below the usūpīṣa in the skull. The sculptors of Mathurā used a symbol similar to the shell of a snail in appearance as a device to depict this feature. The Kātra image is an example (PL, XIX). The Kātra image depicts a bodhisattva as inscribed in the seat of the image. Buddha images were sculptured in the form of bodhisattva images owing to the belief prevalent at the time that the Buddha had not permitted the making of Buddha images. The Kātra image has its head shaven.

According to Theravāda Buddhist texts, on the day of the renunciation, the bodhisattva cut his hair leaving two inches, which remained for the rest of his life attached to his head turned clockwise. According to the Vinaya a monk is permitted to retain his hair up to a length of two inches. If it grows beyond this length it has to be cut. If this advice is followed, shaving off the hair is not necessary. But, according to the Vinaya a monk should cut his hair once in two months. If the head is not shaved hair will grow to about four inches. Hence cutting of hair once in two months was not enough. If the head is shaved it is likely that the growth in two months would be about two inches. It could easily be surmised that the Buddha and the bhikkhus shaved their heads and did not shave again till the hair grew to two inches. The accounts to the contrary, especially the account occurring in the Nidānakathā could have been a later development after the Buddha sculptures came into being. If it was not so it is more plausible that the Nidānakathā account of the Buddha’s hair developed to conform to mahapurisa lakṣaṇa as discussed in Mahāpaṭanā, Lakkhaṇa and the Brahmāyu Suttas of the Sutta Piṭaka. Therefore the theory advanced by Ananda Coomaraswamy and a few other scholars that the Buddha retained sufficient hair on the head to form a knot on the top and shaved the rest cannot be accepted as it goes against all textual data.

In some Gandhāra Buddha images a crest of hair is depicted on the head close to the forehead (PL.XX). Such images do not possess locks of hair turned clockwise. Short wavy hair is evident in them. The Gandhāra sculptors would have implied a form of the radiance of the Buddha by this device. It could be interpreted to mean the concept of pūrva-buddhānupasmityasāngagānārasāmi of Sarvāstivādins.

In postcanonical Pali literature available in the form of commentaries of the period after 3rd century B.C. and in the Pali chronicles, a feature described as ketumāla has been added on to the Buddha images. By the 12th cent. A.C. the Sri Lanka literary tradition has recorded ketumāla as the eightieth of the eighty minor marks (asātyanuvyaśājana). In the second half of the 5th century A.C. it is recorded that King, Dhatuesa added a new feature called the raṃśicūlāmani (crest jewel of radiance) to the old Buddha images. This is also referred to as niḷacūḷāmani (blue crest jewel) in the same source. In the 9th century A.C. it is referred to as raṃśipuṇja. It is called siraspaṭa at present. All these terms are synonymous with the original term ketumāla and was intended to symbolize a form of radiance-emanating from the head of the Buddha. The term niḷacūḷāmani may have been designed to convey the colour of the hair (niḷa in the

present text denotes the colour black). In the Buddha images this feature has been depicted by inserting a blue gem into the ketumālā. However in certain bronze Buddha images even red coloured gems have been used to obtain this radiance. This apparently is due to a lack of understanding of the proper concept conveyed by the ketumālā and the features associated with it. In certain Japanese Buddha images there is a symbol to depict the cūḷāmaṇī which is located between the crown of the head and the topmost forehead. In the Buddha images sculptured during the later Mathurā Amarāvati and Gandhāra Schools is to be seen a projection suggestive of a fleshy and boney protuberance. This feature is found in the Buddha images belonging to the Abhayagiri and Jetavana monasteries in Sri Lanka. Ketumālā was the term used to denote this feature in Sri Lanka.

Altogether four terms have been used in Sri Lankan iconography to suggest the radiance of the Buddha. They are byāmappābbhā (halo), ketumālā, the radiance issued forth from the bottom of the uṣṇīṣa rāmsījāla (nimbus) and sarīrappābbhā (radiance of the body identified with six colours).

Ketumālā, although depicted in different forms in Buddha images in different countries, had one concept in common, viz to represent the rays of the Buddha confined to this spot in the Buddha’s body.

The definition of the concept of uṣṇīṣa appears to contradict the above interpretation of ketumālā. This term appearing as uṇhīṣa-sīsa in Pali and uṇṣīṣa-sīraskhā in Buddhist Sanskrit is considered one of the thirty two major marks of the Buddha. This concept is common to all Buddhist traditions. However, it is noteworthy that this feature is not considered in early Buddhist sculptures to mean the radiance of the Buddha or to indicate an abnormal protuberance on the top of the Buddha’s head. In a Chinese translation of the Lalitavistara and in the Mahāyāna canons of art, this feature described as a protuberance on the summit of the Buddha’s head is called uṣṇīṣa which indicated uṣṇīṣa-sīraskatā.12 This was an incorrect interpretation of the symbol which indicated the radiance from the Buddha’s head. Buddhaghosa’s interpretation of this term uṇhīṣa-sīsa in the early part of the 5th century A.C. can be accepted as the most appropriate explanation. According to him uṇhīṣa-sīsa was a term used to mean the round head and the fully formed forehead.13 Up to the second half of the 5th century A.C. the Buddha images sculptured in Sri Lanka conformed to the standards set out by Buddhaghosa. In fact this was the standard maintained by the artists belonging to the Mahāvihāra tradition even up to the present day in Sri Lanka. The bump-like formation on the top of the head of the Buddha images belonging to Abhayagiri and Jetavana Schools of art was considered as ketumālā as already discussed. Buddhaghosa’s interpretation was not his personal view but was the view accepted by the Mahāvihāra from ancient times.

The symbol used to indicate the rays of the Buddha emanating from his head is shown as a part of the head. Two representative examples would be Kārā Bodhisattva image belonging to the Mathurā style in India and Mānıkdena Buddha image from Sri Lanka (PL. XXI). In these two images the symbol used for the purpose was in the shape of the shell of a snail. This feature in the Menikdēra statue has gone through substantial changes due to wear and tear but has retained its conical shape. Three other images with similar features were unearthed during excavations of the sand terrace of the Abhayagiri stūpa in Anuradhapura. There has been a difference in the evolution of these images during later times. In the Buddha images of the Mathurā and Gandhāra style this symbol is shown in the form of a bun projecting from the top of the head. In the Buddha images of the Abhayagiri-vihāra in the 8th Century A.C. this feature is shown artistically in a stylised fashion. The bronze Buddha image found at Badulla, presently kept in the National Museum, Colombo, shows the Buddha rays in the same style (PL. XXII).

Flame like ketumālā was in use from the latter part of the Anuradhapura period. The oldest available examples are the Buddha images found at Veheragala (PL. XXIII). The number of flames has increased from one to six. It has not been a development that has taken place along with the passage of time, but according to the preference of the sculptors. While the statue of the 8th Century A.C. contains twelve flames a statue of the 12th century A.C. has only three flames. Apart from this, the style of the flame, too, has undergone change. At the beginning it was a projection from the top of the head, but later it was a flat object. Ketumālā in the shape of flames have, in most instances, been made

KETUMĀLĀ

separately and affixed to the top of the head (PL. XXIV).

During the Kandy period it appears in the shape of a hand with fingers shown upright. Traditional artists (sittara=artists) have shown it as a lotus bud in the present day. The flame symbol is shown inconspicuously.

On examination of the ketumālā found is Sri Lanka it is possible to understand the formation of the flame-like ketumālā. The focal point of the ketumālā was the gem affixed to it. The radiance was indicated by the flames. Both the gem and the flames represented the rays. The gem is not found in many of the large Buddhist images. There is literary and archaeological evidence regarding the affixing of gems to the eyes and to the ketumālā of Buddha images. There was the possibility of these precious gems being removed by vandals and therefore the practice of affixing gems to the ketumālā seems to have been abandoned in later times.

Ketumālā was a common feature in the Buddha images belonging to all schools of Buddhist art in Sri Lanka as is proved by the Buddha images belonging to the Mahāvihāra, the Abhayagiri and the Jetavana. In the images belonging to the Mahāvihāra, there is no evidence of the existence of a projection from the top of the Buddha head. Instead a flame-like ketumālā had been used. In the Buddhist images of Abhayagiri and Jetavana schools the ketumālā has been indicated in the form of a projection from the top of the head. In addition there is evidence to prove that Abhayagiri-vāsins had fixed the ketumālā on the projection on top of the head. The perforation on the projections appearing on top of the Buddha head, as is evident in the Toluvila image (PL. XXV) presently kept in the National Museum in Colombo and the Pankuliyā Buddha image available with the remains of the shrine to the north-east of the Abhayagiri vihāra, are undoubtedly meant to fix the siraspata in the flame-like appearance.

Ketumālā as a feature is not found among the eighty minor signs in other Buddhist traditions. If this was not a feature of Sri Lankan origin, it could have been a symbol introduced to Sri Lanka by the Vibhājā-vādins of India who became dominant in this country.

Ketumālā has been found in many of the Buddha images discovered in South India, but those Indian images belong to a period much later than the Sri Lankan Buddha images with the ketumālā. Several such bronze images discovered at Nāgāpaṭṭanam are preserved in the National museum in Colombo and these can be regarded as South Indian sculptures based on the Sri Lankan style.

The Buddhists of Thailand became aware of the ketumālā through the Pali commentaries and through the religious links they had with Sri Lankan Buddhists. As a result of this influence the ketumālā became a popular feature in Thai Buddha images, too. Myanmar (Burma) showed a special inclination to the ketumālā of the category falling within rāṇsīpūṇa.

It is said that Indian princes wore a cūḷāmanī on their heads. Prince Siddhartha, son of Suddhodana, too, wore this gem, and he had to cut his hair along with the cūḷāmanī when he renounced the world. The phrase moliyā saddhiṃ cūlam............śindhi14 is interpreted, in the Jataka Āṭuva gātīpadaya of the twelfth, thirteenth century to mean the cūḷāmanī used to adorn the lock of hair. Cūla is also interpreted to mean the knot of hair. Having arranged the hair on the top of the head, royal princes used to tie it with a ribbon; but at ordination this hair was cut and removed.15 This feature is not at all relevant to the Buddha image. The term cūḷāmanī occurring in the chronicles should be interpreted to mean a gem on the head and not as a gem associated with the hair; for it could find a place on the head without hair. In effect this usage has nothing other than the application of the meaning associated with the hair and the gem to give a new interpretation in the present context. This type of usage is common in language. The term silūmiṇa derived from cūḷāmanī is used to indicate the gem placed on top of the spiral summit of a dāgāba. There is no connection whatsoever with hair in that context. The cūḷāmanī worn by a king on his head is an ornament. In the case of the Buddha it is symbolic of the rays of the Buddha and hence the cūḷāmanī on the head of the Buddha is called ransicūḷāmanī. Therefore the cūḷāmanī associated with the Buddha image should not be confused with a moli of a royal prince. The symbol on the top of the Buddha image signifying the rays of the Buddha is the ransicūḷāmanī which is also called ketumālā.

15. Jatakaṭṭhakathā, HSB., Colombo. 1929, p. 25.
During the past one hundred years the attention of Indologists had been drawn to the feature on the top of the Buddha image and this had been a subject of indepth discussion. In these discussions sufficient attention had not been drawn to the ketumālässā, resulting in serious omissions in the conclusions so far arrived at. As shown in this article the projection from the top of the Buddha’s head shown in the ancient Buddha images was nothing other than a device to express the rays of the Buddha and was never meant to be an usnīsa. The rays of the Buddha associated with this symbol have been interpreted by the Vibbhajjavādins and Saṟvāstivādins in two different ways. The Vibbhajjavādins interpreted it to mean rays from the head, specially emanating from the hair. It was taken as one of the minor signs of the Buddha. However, according to the Saṟvāstivādins it was the rays which rises from the bottom of the usnīsa called pūrabuddhā nusmṛtya saṅgāṇinārasmi. But they did not consider this as an item among the astīyanuvyañjana i.e. the eighty minor signs.

KHALUPACCHĀBHATTIKĀNGA: KHALUPACCHĀBHATTIKĀNGA, the seventh of the thirteen Dhutāṅga practices adopted by some bhikkhus to discipline themselves. See DHUTĀNGA

KHAṆA (Skt. kṣaṇa)

Introductory: The Pali term khaṇa is originally used in the suttas in its literal sense of a moment, a very small fraction of time, without any technical importance attached to it (tena khaṇena tena mukhtittena: Vin. I, 12; III, 119). It has also been used synonymously with the term anicca, meaning ‘impermanence’. It is said that ‘life is momentary’ (khaṇikam jīvitam: Nd. I, 44, 119) instead of saying that life is impermanent (Jīvitam aniccam). Impermanence, as understood by Buddhists, means the momentary (khaṇika) nature of all phenomena. The essential nature of all phenomena is appearance (uppaḍa or samudaya) and disappearance (vaya or nirodha) as is evident from such phrases as: "Whatever is of the nature of origin is also of the nature of cessation"¹ and "All phenomena are, indeed, impermanent, they are of the nature of appearance and disappearance."²

The term khaṇa, together with its Sanskrit equivalent kṣaṇa, acquired technical importance when the doctrine of impermanence (anicca) came to be elaborated and interpreted in the different schools in their attempt to provide it a logical and metaphysical basis. This became necessary especially in view of the criticism levelled by non-Buddhist schools of philosophy and religion against the Buddha doctrine of impermanence which, at the beginning, was purely empirical. Buddhists themselves differed in its interpretation and this explains the existence of divergent views in this regard among different schools.

In the process, the original term anicca, meaning impermanence, was replaced by the term khaṇa or kṣaṇa (moment) or by kṣaṇikatva (momentariness or instantaneousness). The whole concept of impermanence or momentariness underwent a complete overhaul when logic took the place of Abhidharma, there by giving rise to a fully-fledged theory of moments. The theory of moments, thus developed in the schools, may therefore be considered as the logical extension of the doctrine of impermanence.

The germs of the theory: It is very difficult to determine definitely the epoch when the theory of moments was framed. The germs of the theory are, however, to be found in the Pali canon itself, rather as a doctrine of momentariness than as a theory of moments. In a sutta in the An’guttara Nikāya, the Buddha is represented as saying that there is nothing in the world that changes so quickly (lahuparivatta) as does the mind (A. I, 10; cp. S. II, 94). Also a verse in the Niddesa, quoted probably from a then existing redaction of the canon, says that life and personality, pleasure and pain, exist only the duration of one moment of thought (Nd. I, 177-188).

By the time of the third Buddhist Council (third century B.C.) divergent views on a multitude of topics had already emerged among the Buddhists and we find the doctrine of momentariness being discussed as a common subject among them, only with certain technical variations.

Some of the old schools held the view that all phenomena, all elements of existence, exist only the duration of one thought-moment (eka-cittakkhaṇikā sabbe dhammā: Kvu. xxii, 8). According to Buddhaghosa, it was the Pubbaseliyas and Aparaseliyas, two of the intermediary schools that did not last long, who held that

¹ Yān kiṁcīsamudayadharmam sabbān tān nirodhayadharmam Vin. I, 16.
² Aniccā vata saṁkhaṇā uppādāvayadharmINO: S. IV, 14; V. 30; A. I, 286, 296; II, 248
Another debate recorded in the same text centred around the question as to whether a single unit of consciousness lasts a whole day. This view is attributed to the Andhakas, another intermediary school, and is rejected by the Theravādins as a heresy (KvuA. II, 7).

Except for the Andhakas, all other schools agreed that the elements of mind (citta and caitta-dharma) are momentary in their existence. This view, as we saw, finds support from the early sutta’s themselves (A. i, 10, S. II, 94). As to whether the elements of matter (rupa-dharma), too, are as momentary as the elements of mind, we find difference of opinion among the schools. While all the schools, except the Andhakas, recognised the momentary duration of mental elements, some of them assigned a relative permanence to material elements. There were other schools who objected to introducing any such distinction, and held that both mental and material elements are equally momentary in their existence.

A difference between the two categories of elements, as regards their duration, is recognised and upheld by the Theravādins. They held that the mind changes and breaks up quicker than matter. A number of controversies recorded in the Kāṭhavatthu suggest very clearly that the Theravādins had no hesitation in recognising the momentariness of mental elements (Kvu. pp. 204-208). On the other hand they do not seem to have denied the relative permanence of matter in general. In point of fact, the thesis of the Purvāsālīya and Aparāsālīya that the duration of a material thing is equal to the duration of a thought-moment, is rejected by the Theravādins as untenable (Kvu. pp. 620 ff; KvuA. p. 196).

It was not the Theravādins alone who upheld this tradition. Vasumitra records that, in the view of the Mahasanghikas, the material sense-organs and the primary elements evolve (pariṇama) whereas consciousness and mental concomitants do not evolve. This statement has been interpreted to mean that while material elements endure for a longer time, mental elements perish every moment (ksāna-bhaṅgura). Yasomitra notes that in the opinion of the Āryasammitiyas, matter is of longer duration whereas consciousness and mental concomitants are characterised by instantaneous being (Abbhvy. p. 179). A similar view is attributed to the Vatsiputriyas: Some saṅkāras exist for some time while others perish at every moment (Masuda, A.M. II, p. 54).

On the other hand, many other schools, notably the Sarvāstivāda, the Mahāsāsāka, the Purvāsālīya and the Aparāsālīya (Purvāsālīya and Aparāsālīya of the KvuA. xxii, 8) disapproved of this distinction. In their view, not only mental but also material elements are of instantaneous being (Masuda, A.M. II, p. 54, n.2; Bareau, les Secte Bouddhique Du Petit Vehicule, pp. 103, 105, 144, 186).

The Development of the Theory: The interpretation of the characteristics of that which is conditioned (saṅkhata lakkhaṇa, sanskṛta-lakṣaṇa) played a very important role in the development of the theory of moments. When the Aṅguttara Nikāyā refers to these characteristics, namely origination (uppāda), cessation (vāya) and becoming otherwise of that which is existing (jīvita aṅaññathata: A. I, 152) which is apparently a development of the original idea of appearance and disappearance (uppāda-vāya or samudaya-nirodha: S. IV, 14; V. 30; A. I, 286, 296; II, 248; Vin. I, 16, etc.), the purpose is to show the impermanence of all elements, both mental and material. But, when doctrine of impermanence, which in the Nikāyas was described in simple and general terms, came to be explained more systematically and with greater precision, attempts were also made to reinterpret the three characteristics. The most interesting outcome of this reinterpretation is the development, at the hands of the scholiasts, of the theory of moments.

The Vaibhāṣikas School: The Vaihbāṣikas (the Sarvāstivādins) interpreted “the becoming otherwise of that which exists” (jīvita aṅaññathata, sthityāññathata) as decay (jaratā) and postulated another term sthiti meaning duration, thus increasing the number of sanskṛta-lakṣaṇa to four, namely, birth or origination (jīti or utpāda), duration (sthiti), decay (jaratā) and impermanence or destruction (anityatā or nāsa: Abhidharmadiśa with Vibhasāprobhāvritti, ed. P.S. Jaini, Patna, 1959, pp. 103 ff). All elements of existence, mental as well as material, characterised by these four features are called saṅskṛta-dharma.

The Vaihbāṣikas explain the momentary nature of elements (dharmas) in the following manner: Every element appearing in phenomenal existence is affected...
simultaneously by the four characteristics of what is conditioned. The four characteristics are forces which are neither mental nor material (rupacittaviprayuktasaṅskhāras or simply (viprayuktasaṅskhāra). They always appear together and simultaneously; they affect every element at every moment of its existence. They are the most universal forces, the characteristic features or the manifesting forces of phenomenal existence. Since they are considered as elements, they are in need of secondary forces (anulakṣaṇa or upalakṣaṇa) in order to display their efficiency. It was also maintained that these four forces and the secondary potencies affecting them in their turn were as real as the elements (dharma) they characterize (dravyatāh sānti, L'Abhidharmakosa de Vasubandhu, Louis de Le Valle Poussin, Paris, 1926, ii, 46).

The elements of existence are momentary appearances momentary flashings into the phenomenal world. They are disconnected in space, not being linked together by any pervading substance; they are also disconnected in time, in duration, since they last only one single moment (kṣaṇa). They disappear as soon as they appear, in order to be followed the next moment by another momentary element. Thus a moment (kṣaṇa) becomes a synonym of an element (dharma): two moments, therefore, represent two different elements. An element becomes something like a point in space-time. Disappearance is the very essence of existence. What does not disappear does not exist.

Against this theory of elements which are simultaneously originating, existing and disappearing (utpāda-sthiti-bhaṅga: Lank. 42, 3), a very natural objection was raised by the Buddhists themselves that production (utpāda) and destruction (bhaṅga or nāsa) could not be simultaneous (bhaṅga or nāsa) could not be simultaneous (Mdhv.p. 545 ff). On the other hand, it was impossible to allow an element more than one single moment's duration, since two moments constituted two elements.

The Vaibhāṣikas met the objection by pointing to the difference between an element in itself, its real nature (svabhāva) and its efficiency moment, its function or manifestation (lakṣaṇa: Abh. V. 26, Abhidharmadīpa with Viibhashaprabhāvrtti pp. 259-60). The elements or forces may be opposed to each other; yet their effect may result in some single real fact. They cite the case of three assassins who have resolved to kill a man hiding in some dark recess: One of them pulls him out (utpāda) of his hideout place; the other seizes him (sthiti) and the third stabs him (bhaṅga), all acting simultaneously. The victim appears only to disappear. The reality moment (kṣaṇa) is the moment of action, of its being achieved. "We call a moment", the Vaibhāṣikas maintain, "the point when an action is fully achieved" (L'Abhidharmakosa de Vasubandhu, ii, 46). Thus the kṣaṇa is the moment the four forces, (Jāti, etc.) accomplish their operation.

A significant consequence of this theory of moments is the denial of motion. A really existing object, according to this theory, cannot move, because the object disappears as soon as it appears; there is no time for it to move. Hence in keeping with the theory of the momentariness of being (kṣaṇa-vāda), motion (gati), too, is given a different interpretation: Motion is not the movement of an object from one locus in space to another (desāntara-gamana), but the appearance of different elements in adjacent locations (desāntarotpatti: Abh. V. p. 33). For, in the case of momentary elements, whenever appearance takes place, there itself takes place disappearance. The classic example given in this connection is the light of a lamp. The so-called light of the lamp is nothing but a common designation given to an uninterrupted production of a series of flashing points. When the production changes place, one says that the light has changed. But, in reality, other flames have appeared in another place (ibid).

The theory of moments, as described above, gives rise to the problem of continuity and identity. If the elements are discrete and momentary, how can we account for the continuity of the stream of elements? This involves a number of problems which are of a more fundamental character: the problem of the identity of the elements in a single individual stream of life, the problem of memory, of moral responsibility and of rebirth. If these difficulties could not be explained satisfactorily, the whole ethical foundation of the Buddhist doctrine of karma and prāṇayasaṃuipāda is bound to collapse.

The Vaibhāṣikas attempted to solve this problem with the help of the two theories of dharma-svabhāva, and prāṇi; it is svabhāva and the prāṇi that maintain the continuity of elements. Svabhāva means own (sva)
being (bhāva) which exists always, in past, present and future. Although it is not eternal (nitya), since eternity means absence of change, it represents the potentiality have of the appearance of elements into phenomenal life. The potentialities exist for ever. Prāpti is a special force, another, viprayakta sainikāra, which holds the elements combined. It operates only within the limits of a single stream and not beyond. This stream of elements (dharma or kṣaṇa-saṅtāna), which is kept together by the force of prāpti, is not limited to the present life, but has its roots in past existences and its continuation in future ones.

Sautrāntika School: The Sautrāntikas took a more simple view of the whole question. They pointed out that the four characteristics of the conditioned (sainiktrā-lakṣaṇa) considered to be real by the Vaibhāṣikas, were mere characteristics, mere designations, with no objective reality (Abhikkh. ch. ii, v. 46) and argued that the recognition of the secondary forces (anu- or upa-lakṣaṇa) would lead to infinite regress (anavasthā: ibid). The four characteristics refer, not to a single momentary element but to a series of them (saṅtāna: ibid.). It is the series or the stream itself that is called subsistence (sthitī); its origination is called birth (jāti); its cessatation is called destruction (vyaya); the difference in its preceding and succeeding moments is what is called the change of the thing that exists (sthityānyathāvata). In their opinion duration (sthitī) and decay (jāra) cannot be applied to a momentary element, because whatever that originates had no time to subsist or decay, but to perish.

This school which accepted the reality of moments, i.e., the discrete and momentary elements, but refused to accept the reality of any of the viprayukta-saṁskāras, explained the inherent problems of continuity and identity of the moments and the attendant problems such as memory, moral responsibility and rebirth by postulating a theory of seeds (bijā: q.v.), in place of the theory of prāpti advanced by the Vaibhāṣikas. After defining bijā as nāma-rūpa (q.v.), i.e., the complex of the five aggregates (khandaḥ, q.v.) capable of producing fruit either immediately or mediatly, by means of a special kind of evolutionary process (parināma-visēṣa) of the stream (saṅtāna) of moments, the Sautrāntikas argued that the seeds of kusala and akusala (or anusaya: q.v.), accumulated in a stream, determine the character of the latter (Abhikkh). ch. ii, vv. 35-36, Abhā. pp. 147f).

Personality, according to this school, is a success-

sion of moments, each moment handing over its force to the next before breaking up itself. The individual is, therefore, nothing over and above a series of moments (kṣaṇa-saṅtāna).

We saw that the germs of the theory of moments are traceable in the early suttas themselves which do not belong to any particular school of Buddhism. These germs are also to be found in the Abhidhammapitaka of the Theravādins which was compiled in India and was brought to Sri Lanka by Mahinda Thera in the third century B.C. In both, it appears as a doctrine of momentariness, and not as a theory of moments. As a theory, it appears for the first time in the writings of Buddhaghosa who compiled commentaries on the texts of the Pali canon, in the fifth century A.C.

The fact that the theory was new to both the canon and the commentarial tradition preserved at Mahavihara in Anuradhapura is amply illustrated by a statement made by Buddhaghosa himself. While explaining the present (paccuppavanna) as threefold, namely, the continued present (saṅtati-paccuppavanna), the enduring present (addhā-paccuppavanna) and the momentary present (kaṇa-paccuppavanna: Vism. 364; DhsA. 420). He says: "Here the continued present finds mention in the commentaries (attakathā), the enduring present in the suttas; hence some say that the thought existing in the momentary present becomes the object of telepathic insight (ceto-pāriya-nāṇa: DhsA. 421). Thus those who upheld the theory of moments are referred to as 'some' (keci) thereby implying that it did not belong to the commentarial tradition maintained at Mahavihara.

It is also very significant that the examples quoted by Buddhaghosa to illustrate the rapidity with which moments succeed one another are examples rather popular in the texts belonging to the Sarvastivadins (Vism. 388).

Although in his works we do not come across a fully developed theory of moments as we find in the later Abhidhamma manuals like the Abhidhammatthasangaha of Anuruddha, yet Buddhaghosa accepts three moments or phases of an element, namely, the nascent (uppīḍa), the static (thiṭī) and the cessant (bhāṅga: Vism. 241, 400, VbhA. 7).

The most striking fact about the Theravada theory as found in Buddhaghosa's commentaries is that momentariness is explained in a way which is quite
different from that of the Vaibhaṣikas: Each element of existence (dhamma), according to this theory, has three moments, namely, the moment of origination (uppāda), of subsistence (thiti) and of cessation (bhanga). These three moments do not correspond to three different dhhammas; nor do they act simultaneously on a single dhamma, as is the case with the Vaibhaṣika theory. On the contrary, they represent three phases (avaṭṭhā) of one momentary dhamma; a dhamma arises in the first moment, subsists in the second moment and perishes in the third moment (Vism. 241, 526, VbhA. 7-8, 25-29). This view of Buddhaghosa is upheld also by Anuruddha in his Abhidhammattha-sāṅgaha (pp. 16-17.)

The three moments, according to Theravada, are not separate elements having different natures, but three phases of a single dhamma. Thitī is said to represent jarā and jarā is interpreted to mean not the loss of nature (svabhāva), not a qualitative change, but only the loss of novelty (navabhāva). It is like new paddy becoming old (Vism. 380; Abhvit. 71). This interpretation of jarā seems to approach the theory of evolution (parināmavāda) according to which the essence, the substance, remains the same while its modes undergo change.\(^5\)

Sumangala, the author of the Abhidhammattha-vikāsini, a subcommentary on Abhidhammāvatāra and of the Abhidhammattha-vibhāvinī, a sub-commentary on Abhidhammattha-sāṅgaha takes notice of the whole problem that stems from the recognition and definition of jaratā and attempts to re-interprete it. His interpretation, it may be mentioned, really amounts to it's denial: Novelty (navabhāva), according to him, is only a figurative expression for the moment of birth (uppādakkhaṇa), so called because of its chronological priority in relation to the moment of subsistence (thitikkhaṇa). The loss of novelty is nothing but the lapse of uppādakkhaṇa; and the immediate lapse of uppādakkhaṇa means the succession of thitikkhaṇa (Abhidhammatthavikāsini, ed. D. Paññasāra and P. Wimaladhamma, Colombo, p. 284; Y. Karunadasa Buddhist Analysis of Matter: ch. V).

According to Buddhaghosa and Buddhadatta, the static moment (thitikkhaṇa) is also called decay (jaratā), because at this moment, an element undergoes a change, although it does not lose its complete identity. According to Sumangala, although thitikkhaṇa is called jaratā, the latter term is not to be understood as decay or as implying any idea of change, modification or transformation of an element. Thus, according to the former, thitikkhaṇa is really jaratā (decay, change) but according to the latter, thitikkhaṇa is thiti (duration) in the true sense of the term.

This new interpretation successfully eliminates the problem stemming from the earlier definition of jaratā, but upsets the correspondence between the three moments (khaṇa) and the three characteristics (sāṅkhatalakkhaṇa). According to the earlier account the static moment (thitikkhaṇa) represented the third characteristic, i.e., thitassa aṅṇathatta. Since thitikkhaṇa was interpreted as jaratā, one cannot say that some justice was not done to the idea of change, conveyed by the phrase (thitassa aṅṇathatta). But in the later account, thitikkhaṇa is not understood as jaratā, although it is figuratively called so. The third characteristic, thitassa aṅṇathatta, thus remains unrepresented in Sumangala's scheme by any of the three moments. Anyway, Sumangala did not deny the thitikkhaṇa of a momentary element.

It will be interesting in this connection to know that there was in Ceylon a school of thought (or at least one teacher) that denied the existence of a static moment. Both Sariputta and Sumangala, who accept the traditional view of the three moments, refer to the school, only to refute it. Sariputta does not refer to the name of the teacher or the school advocating the theory, but merely says that it was held by "some teacher or teachers" (samahara ācarya keke: Sinhala; Abhidhamma rthaśaṅgraha-Purāṇa-Sonnaya, ed. W. Somaloka, Colombo, 1960, pp. 92, 101f). But Sumangala in his Abhidhammatthavikāsini (p. 304) openly states that it was Ananda who denied the existence of a static moment (thitikkhaṇa; cp. Abhidhammatthavibhāvinī, pp. 77, 117f).\(^6\)

This Ananda is none other than the author of the Abhidhammāmatālītikā, a sub-commentary on Buddh-
According to Ananda, who was a native of India, element (dhamma) has only two phases (khaya): origination (uppanā) and the other cessation (nāṅga). Duration is recognized as applying, not to a single element, but only to a series of them. This is called (pabandhaññhitii i.e., the series itself as subsistence. This statement is interpreted as pabbaparama, i.e., the difference between the preceding and the succeeding elements that constitute a series.

However, Ananda attributes this theory to the resident of Abhayagiri monastery of Anuradhapura.

But on the question of elements (dhamma) taken in relation to moments (khaya), the Theravādins of Sri Lanka totally differed from the two Indian schools referred to above. The Indian schools held that the characteristics of phenomena (saïskṛta lakṣaṇa) act simultaneously on an element, and that the moments (kaśaṇa) are identical with elements (dhamma) both in space and in time. Two moments, therefore, constitute two elements. The school in Sri Lanka, on the contrary, thought that the moments do not constitute separate elements, but are phases of separate single elements.

A difference to be noticed between the Sarvāstivāda and the Theravāda, as has already been mentioned, is the difference as regards durational length of mental elements and the material elements. The former thought that they are of equal duration whereas the latter were of the opinion that material elements last longer than the mental elements. This difference has been brought to its logical conclusion in the Theravāda Abhidhamma where the phenomenon of perception is discussed.

The Vibhaṅga-thakathā, in introducing the theory of moments, says that it is peculiar to Abhidhamma and not to the Sutta-pitaka. Matter (rūpa) is classified as past, present and future in the Sutta-pitaka in accordance with the division and future in the Sutta-pitaka in accordance with the division of life into birth and death (bhavena paricchinnā): All matter before birth is regarded as belonging to the past, and all matter after death is classified as future, while matter between birth and death is termed present matter. In the Abhidhamma, this division is made on the basis of moments (khaya paricchinnā): Matter has three moments, a moment of birth, a moment of duration and a moment of death (uppanā, thiti and bhaṅga). All matter that has passed over these three moments or rather phases is termed past matter; all matter that has not yet reached these three phases is future matter while matter that is in the process of passing through these three phases of existence is present matter (VbhA. p. 7; cp. Vism. 400).

The existence of matter, thus broken up into moments, is computed in relation to the duration of consciousness which, too, is existing in moments. In accordance with the greater speed of the motion of thought in relation to that of matter, the Theravāda Abhidhammikas make the calculation that sixteen moments of thought arise and cease to exist during the life-time of a single moment of matter. The moment (or point-instant) of matter which arises at the same time as a moment of thought dies simultaneously with the seventeenth moment of the process of thought.

In describing the arising of consciousness at the birth of a child and his first awareness of the external world, Buddhaghosa says: at birth, there arises a single moment of anoetic consciousness which is termed rebirth-consciousness (pañicandhi-viññāna or citta). This moment of consciousness is followed by several other consecutive moments of sub-consciousness or life continuum (bhavaṅga). Each of these moments of consciousness has its own three phases of origin, du-

---

10. Vibhaṅga, pp. 25 f.
ration and cessation, (uppādu, thiti and bhaṅga). And, simultaneously with each phase there comes into being a point-instant of matter. Since each point-instant of matter lasts as long as sixteen moments of thought, it will be seen, how the point-instant of matter that arises at the nascent phase of the first moment of sub-consciousness will perish at the nascent phase of the seventeenth moment of sub-consciousness, and so on. Thus, the individual consciousness becomes attuned with the vibrating matter in the outside world, and perception is set up (VbhA. 26, 27).

Buddhaghosa also says that the three phases of a moment of thought (cittakkhaṇa) are of the same duration, while in the point-instant of matter, the nascent and the evanescent phases are short and the static is long. It is the point-instant of matter in its static phase that continues to remain while seventeen thought moments arise and die (Vism. 526).

The Visuddhimagga and Abhidhamma-commentaries belonging to about the same period mention the relative speed of vibration of thought and matter; but they do not explicitly analyse a process of thought into a succession of moments. Anuruddha in his Abhidhammattha-Saṅgala, however, describes in detail with the help of the theory of moments, how attunement of mental vibration with the vibrating matter gives rise to perception.

In the Visuddhimagga, consciousness is described as consisting of fourteen modes: (1) birth-consciousness (paṭisandhi-viññāṇa), (2) subconsciousness of life continuum (bhavaṅga), (3) attention (āvajjana), (4) visual consciousness (dassana), (5) auditory consciousness (savaṇa), (6) olfactory consciousness (ghāyana) (7) gustatory consciousness (śāyana), (8) tactile consciousness (phusana) (9) assimilation (sampāticchana), (10) discrimination (sāntiṇa), (11) determination (vathapana), (12) cognition (javana), (13) registration (tadārammaṇa) and (14) death consciousness (cūti: Vism. 387). This classification refers to the various forms in which consciousness may express itself. The functions that would be common to each kind of sensory activity, if taken separately, would be those of (1) attending (no. 3), (2) assimilating (no. 9), (3) discriminating (no. 10), (4) determining (no. 11), (5) cognising (no. 12) and (6) registering (no. 13). If we add to these six the appropriate sensory stimulation, the number of stages would total up to seven.

In the Abhidhammatthasaṅgaha, the theory is elaborated further and the computation is done on the basis of moments. The actual conscious part of the process of perception consists of the same stages, but to these are added three other functions which take place at the beginning of each process of sense-perception. To each stage is assigned a definite number of moments so that the entire process takes place within the period of seventeen moments (Abhs. pp. 16ff).

Why the thought process (citta-viññā) is said to consist of seventeen moments and not sixteen is explained by Anuruddha by maintaining that the lifeterm of matter is equivalent to seventeen moments of thought (Abhs. 16). Sumangala discusses the problem and alludes to the existence of differences of opinion on the question. He states that some hold the view that the duration of matter is equal to sixteen thought-moments; and that at the very moment of its birth, matter causes a disturbance in the sub-consciousness of the individual. This standpoint is refuted on the authority of Aṭṭhakaṭṭha according to which, says Sumangala, the point-instant of matter which comes into existence simultaneously with the first moment of consciousness at rebirth perishes together with the seventeenth moment of the same thought series. The point-instant of matter, however, which arises at the static phase of the thought-moment springing up at rebirth perishes at the nascent phase of the eighteenth moment of the thought-series. According to this calculation, he says, matter must be regarded as lasting for seventeen moments. He points out that when one refers to sixteen moments, one takes into account only those moments that are actually necessary for the maintenance of the flow of thought. One moment must be added to the end of the series to account for the force exerted by matter in coming into the avenue of thought (Abhidhammatthavibhaviṇīti p. 58).

The process of perception in the Abhidhammatthasaṅgaha begins with (1) the vibration of the sub-consciousness (bhavaṅga-calaṇa) for two moments in the second moment of which (2) the sub-consciousness is cut off (bhavaṅga-upaccheda). The succeeding moments are those of (3) attention, (4) sensation (viññāṇa), (5) assimilation, (6) discrimination, (7) determination, (8-14) seven moments of cognition, and (15-16) two moments of registration. The number is made up to seventeen by adding one moment of thought at the beginning of the perceptive process. This thought-moment occurs before the material object makes an impression on the sense organ (Abhs. pp. 16ff).
Mādhymaka-school: The Madhyamaka Śūnyavāda school denies the reality of the supposed point-instants (kṣaṇa) of existence. Against the theory of moments advocated by the Sarvāstivādins, the Mādhymakas appeal to common sense: “Who is the man of sense,” they question, “who will believe that a real thing can appear (utpāda), exist (sthiti) and disappear (bhāṅga) at the same moment? Chandrakīrti quotes Nagarjuna and other authorities, scriptures (sūtras) and treatises (sāstras) in support of this stand-point (Mādhv. pp. 116, note 1; pp. 173, 281, 343). This denial, however, has no special bearing upon the theory of moments, since that school declares every separate object and every notion to be dialectical, relative and illusive.

Yogācāra-school: The Yogācāra-Vijñānavāda school of Asanga and Vasubandhu accepts the theory of moments in its details, but suggests a kind of consciousness called Alayavijñāna in which the seeds of good and evil are deposited. It is this Alaya-vijñāna that maintains the continuity, etc. of the individual stream of moments or elements. This school advocates a theory of reality according to which ‘things exist’ on three different levels; namely, imaginative (parikalpita), contingent or relative (paratantra) and absolute (parinīspanna). The first refers to concepts like ātma which is false; the second refers to the elements and the third to the absolute reality called tathaāti. It is to the second level of reality (paratantra) that the theory of moments is applicable (see Triśvabhāvanirdesā).

Logical School: Now we come to the final stage in the development of the theory of moments. This stage is represented by the logical school of Buddhism founded by Dīnagā and developed by Dharmakīrti, Śantarākṣita and Kamalāśīla, to mention only a few. This school, known as the Sautrāntika-Vijñānavāda or Sautrāntikayoga, elevated the moments to the position of things in themselves, of ultimate realities (paramārtha-sat) which are unique (svadaksana) and are devoid of thought constructions (kalpanāpādhyāyam). The moments (kṣaṇa) are unique (svadaksana); the series (kṣaṇa-saṅtāna) is general (sāmāneyadaksana). What appears as duration or continuity, like the flame of a lamp, is a series of discrete-moments. The notion of continuity is nothing but the result of the thought construction; it is the act of the imaginative mind; there is nothing real in the series, only the moments are real.

All that appears as objects, without exception, are nothing but strings of momentary events. Their character of being instantaneous, of being split into discrete moments, pervades every thing. These discrete moments or elements disappear as soon as they appear; their essence is to disappear as soon as they appear; without leaving any trace behind (nirvanavānirodhadharmatā: Tatvasaṅgraha-panjikā p. 131).

A critical examination of the supposed stability of existence reveals that there is no other ultimate reality than separate instantaneous bits of existence. Not only the so-called eternal entities, be it God or the Upanisads or be it matter of the Sāṅkhya are unreal, because they are assumed to be enduring and eternal, but even the simple stability of empirical objects is something constructed by our imagination. Ultimate reality is instantaneous. (ibid. pp. 151 ff).

The capacity of being the object of a purposive action (arthakriyākārītva) is the essential feature of establishing reality. But a thing cannot be the object of a purposive action and cannot be efficient otherwise than by its last moment. When a seed, for instance, is turned into a sprout, this is done by the last moment of the seed, not by those moments when it lay placidly in the granary (ibid. 140 f). The kṣaṇa is the moment when an action is accomplished (kriyāparisamāpti-laksana eva eso naḥ kṣaṇāḥ: Abhhbh. ii, 460).

But an action, in this sense, is never finished; every moment is necessarily followed by a next moment. The break in that moment which constitutes the essence of reality is nothing but the appearance of an outstanding or dissimilar moment (vijñāya-kṣaṇa-utpāda). It is outstanding for our practical requirements, because it is natural for us to disregard the uninterrupted change of moments and to take notice of it only when it becomes a new quality, i.e., sufficient to impress a new attitude on our mind; in other words, only when the change is in quality and not in quantity. The identity of the foregoing moments in the existence of a thing.

11. Vasubandhu, before being converted to the Vijñānavāda of the Yogācāra school founded by his brother Asanga was a Sautrāntika, and composed the Abhidharma-kosā and its Bhāṣya to refute the Sarvāstivāda views from the point of view of a Sautrāntika.

12. Alayavijñāna first occurs in the Lankāvataṭa Sūtra (pp. 221-222), a Mahāyāna text, and the Yogācāra school primarily bases itself on this text.
consists simply in disregarding their difference (bheda-agrāha). Break in this identity is not a break in their motion; it always is something imagined, it is an integration of moments whose difference we are not able to notice.

The essence of reality is motion (calabhāva) which means change; it is momentary (kṣāṇīka) and therefore impermanent (anitīya). Reality indeed is kinetic; the world is a cinema. Causality, i.e. the interdependence of moments following one another evokes the illusion of stability or duration; but the moments are, so to speak, force or energies (saṅskāra) flashing into existence without any real enduring substance in or underlying them, and also without intervals or with infinitesimally small intervals (Tattvasaṅgraha, p. 138; Tattvasaṅghrapaṇijīka, pp. 117, 131, 137).

Thus, in Buddhism, unlike in the Sāṅkhya system the motion representing the world process is discontinuous, although compact: The flashes of energy follow one another and produce the illusion of stabilised phenomena. The universe is then a staccato movement. This may be called saṅskāravāda.

This theory of universal momentariness implies that (1) every duration in time consists of point-instants following one another; (2) every extension in space consists also of point-instants arising in contiguity and simultaneously and (3) every motion consists of these point-instants arising in contiguity and in succession. There is, therefore, no time, no space and no motion, over and above the point-instants of which these imagined entities are constructed by mind.

Reality, as we have seen, is efficiency (arthakriyā kārīva). One real thing cannot exist at the same time in many places, neither can the same reality be real at different times. If a thing is present in one place, it cannot at the same time be present in another place. To be present in another place means not to be present in the former place. Thus, to reside in many places means to be and, at the same time, not to be present in a given place.

According to the realists, empirical things have a limited real duration. They are produced by the creative power of Nature or by the will of God. These created real entities reside or inhere in their cause. Thus, there is a real thing simultaneously residing in a multitude of places. This is impossible. Either is the created unity a fiction and real are only the parts, or the parts are fictions and real is only the ultimate whole. For the Buddhists, the parts (dharmaś) alone are real; the whole (dharma) is a fiction; for, if it were a reality, it would be a reality residing at once in many places, i.e., reality at once residing and not residing in a given place.

Similarly, if a thing exists at moment A, it cannot also exist at moment E; for, to exist really at the moment A means not to have any real existence at the moment E, or at any other moment. If we admit that the same thing continues to exist at the moment E, this would only mean that it at once really exists and does not exist at the moment A. If a thing could have real duration through several moments, it would represent a real unity existing at once at different times. Either is the enduring unity a fiction and real are only the moments, or the moments are fiction and real is only duration. For the Buddhists, the moments (kṣaṇa) alone are real, duration is a fiction, for, if it were a reality, it would be a reality existing at different times at once; i.e. existing and at the same time not existing (Nyāyavārttikā-tatparya-śikā p. 92).

Thus the ultimate reality for the Buddhists is timeless, spaceless and motionless. It is timeless not in the sense of an eternal being; motionless not in the sense of an all-embracing motionless whole; but it is timeless, spaceless and motionless in the sense of having no duration, no extension and no movement. It is a point instant, the moment of an action's efficiency.

Efficiency which is the index to real existence means change. What is absolutely changeless is absolutely inefficient and what is absolutely inefficient does not exist. Unexistent and motionless are convertible terms, since there is no other means to prove one's existence than to produce some effect. If something exists without any effect at all, its existence is not real. Whatsoever does not change does not exist.

Thus existing means efficient. Is this efficiency perdurable or is it momentary? If it is perdurable then all the moments the object is supposed to last must

---

13. In the Sāṅkhya system, the world process is a continuous motion. The phenomena are nothing but waves or fluctuations standing out upon a background of an eternal, all pervading, undifferentiated matter with which they are identical. The Universe represents a legato movement. This may be called the purināmavāda.
participate in the production of the effect. But this is impossible. The preceding moments cannot overlap the last moment in order to participate in the production of the effect. Perdurable means static and static means non-efficient, i.e., not producing at the time any effect; thus inefficient means non-existing. Every real object is efficient in producing the next following moment of its duration. The object must therefore, produce its effect at once, or it will never produce it. There is nothing intermediate between being static and not being static. To be static means to be motionless and eternally unchanging, as the cosmic ether was supposed to be by some. Not to be static means to move and to change every moment. Things cannot stop, and after taking rest, begin to move again, as the naive realism of common life and realistic philosophy assume. There is motion always going on in living reality, but of this motion we notice only some special moment which we stabilise in imagination.

The same thing which is characterised as existent can also be characterised as efficient and as changing. The terms: existence, efficiency and change are connected by what is called existential identity (tadāmya), that is to say, they can be without contradiction applied to one and the same point of reality, to a real face. There are other characteristics which are connected with them by the same time of existential identity. "Whatsoever has an origin is always changing" (Nyāyabindu, ed. Stcherbatsky, B.B., ch. iii, section 12); "Whatsoever is produced by causes is impermanent" (ibid. ii, 13); "Whatsoever is variable in dependence on a variation of its causes, is subject to change" (ibid. iii, 15); and "Whatsoever is produced by a conscious effort is impermanent" (ibid).

All these characteristics, although they may have a different extension, are called existentially identical, because they may without contradiction be applied to one and the same reality. A jar which is produced by the effort of the potter. for instance, may be characterised as variable, as a product, as having an origin, as changing, as efficient and existent.

These things are also subject to annihilation. There are two kinds of annihilation: empirical annihilation called destruction (pradhvāṃsā) and a transcendental annihilation called evanescence (vināśa) or impermanence (anītya or kṣaṇika: Tattvasaṅgraha-Pañjikā, pp. 137, 156). The first is the annihilation of a jar by a stroke of the hammer. The second is the destruction of the jar by time, an imperceptible, infinitely graduated, constant deterioration or impermanence which is the very essence of reality. S'antaraksita, therefore, says: "Reality itself is called annihilation, viz., that ultimate reality which has the duration of a moment (yohihbāvak kṣaṇasthāyā vināśa itiitiyate: Tattvasaṅgraha, p. 137). This annihilation is not produced by a cause (ahetuka: Tattvasaṅgraha-Pañjikā, pp. 133, 138), like the stroke of a hammer; it arises by itself (Tattvasaṅgraha, p. 132, Nyāyakanikā p. 131). Since it belongs to the essence of reality, reality is impermanent (Tattvasaṅgraha Pañjikā, p. 138). The fact that the annihilation of a thing always follows upon its previous existence does not apply to such reality. This reality is dynamic, in its essence; it is indivisible; it cannot be divided in parts so that non-existence should follow upon existence. Its evanescence arises simultaneously with its production; otherwise evanescence arises simultaneously with its production; otherwise evanescence would not belong to the very essence of reality (ibid). Existence and non-existence are thus different names given to the same thing, just as 'donkey' and 'ass' are different names given to the same animal (Tattvasaṅgraha, p. 139).

The moments, are necessarily discrete; every moment, i.e., every momentary thing, is annihilated as soon as it appears, because it does not survive in the next moment. There is in every next moment not the slightest bit left of what has been existent in the previous moment. If something of the preceding moment would survive in the following moment, this would mean eternity, because it would survive in the third and the following moments, too. In this sense, everything represents its own annihilation. Existence itself is constant annihilation.

What then is change? Change means that a moment, an element of existence, is replaced by another. Since there is a change in every moment, the 'thing' will be at every moment replaced by another. The change does not represent something different from the thing changing. The phrase: "The change of a thing" is a perverse expression (Tattvasaṅgraha pañjikā, p. 141). In the ultimate sense, there is another thing at every consecutive moment.

Existence is not something added to the existing thing; it is this thing itself. Annihilation, evanescence or change are not something real in super-addition to the thing changing or destroyed; they are the thing itself. Similarly, motion is nothing additional to the thing; it is the thing itself. There is no motion because of
annihilation *(na gatir nasat: Abhik. iv. 1)*. Things do not move; they have no time to move; they disappear as soon as they appear. Momentary things cannot displace themselves because they disappear at that very place where they have appeared *(tasya ksankasya janmado'saeva cyuteh, nasat, desantaraprāpi asambhāvāt; Tatvasaṅgraha-paṭijīka, p. 232)*. The motion is as unreal as the so called stability is. The so called stability is the stability of one moment only *(eka-ksaṇa-sthiti)*, and the so called motion is nothing over and above the consecution of these moments, arising without interruption in close contiguity, the one after the other, and thus producing the illusion of movement. The movement is like a row of lamps sending flashes, one after the other, and thus producing the illusion of a moving light. Motion consists of series of immobilities. The light of a lamp is a common metaphorical designation for an uninterrupted production of a series of flashing flames. When this production changes its place, we say that the light has moved, but in reality other flames have appeared in other contiguous places.

Thus, the theory that the sensible point instants alone constitute the ultimate reality reduces the reality to 'the this', 'the now', 'the here' and converts all the rest of our knowledge into imaginative and relative differentiation based on these point-instants. The instantaneous being is the ultimately real thing. The only thing in the universe which is a non-construction, a non-fiction, is the sensible point-instant; it is the real base of all constructions. It is true that it is a reality which cannot be represented in a sensuous image *(ksanaṃya prāpayitum asākyayāt: Nyāyabinduśikā, ed. Stcherbatsky, BB. p. 12)* but this is just because it is not a thought-construction *(Śrṇvikalpaṃ jñanam: ibid.)*. The absolutely unique point-instant of reality, as it cannot be represented, can also not be named otherwise than by a pronoun: "this", "now etc. *(Tatva Saṅgraha-paṭijīka, p. 276)*

Consequently, it is not a name; ultimate reality is unutterable. What is utterable is always more or less a thought-construction.

Upali Karunaratne.

**KHANDHA**

**Introductory:** The analysis of man and universe is a feature common to all systems of Indian religion and philosophy. Each system had its own theory of reality and explained it in relation to the origin and existence of man and universe.

The early *Upanisād* which may be considered pre-Buddhistic had analysed the material side of existence into five elements *(dhatū), namely, earth *(prthīvi)*, water *(āp)*, fire *(tejas)*, wind *(vāyu)* and ether *(ākāsa)*, and considered them to be the diversification of the ultimate reality, called Brahman, the Absolute *(Brhadāraṇyaka Upaniṣād, 1.VI.1)*. The diversification consists also in the emergence of organic bodies including those of human beings *(Chāndogya Upaniṣād)*. They explained the psychological side of man by introducing into every human being a soul which they considered an appearance of the Brahman the Absolute. The individual soul is, therefore, identical with Brahman *(ibid.)*.

The relationship between the soul and the organic bodies is dealt with in what is called the doctrine of sheaths *(koṣa)*. There are three basic sheaths which provide a cover for the individual soul. The first is the sheath made of food *(annamaya koṣa)*, i.e., the body which, being the material covering of the soul, is the outermost of the sheaths; it stands for the physical side of the individual and is renewed at every birth. The second is the sheath of vitality *(prāṇamaya koṣa)* which represents the organic or vital side of the individual; it is the principle of unconscious activity such as those in dreams. The third is the sheath of consciousness *(manomaya koṣa)* which represents the conscious activity of the individual which he performs through his sense-organs. These three together form a sort of empirical home for the soul *(Taittirīya Upaniṣād, ii.i.5)*. All these koṣas find their support in Brahman.

The true nature of man, therefore, is the ātman whereas that of the objective world is Brahman. The fusion of these two apparently different but in reality identical conceptions into one is the central aim of *Upaniṣādic* teaching, and is represented in sayings like "That Thou Art" or "I am Brahman" or by the equation "Brahman is Atman". The individual as well as the objective world is the manifestation of the same reality and both are, therefore, basically one. There is, in other words, no break between nature and man, or between either of them and Brahman.

Side by side with this atman-doctrine of the Upanisads which advocated the reality of the one Absolute, the Brahman, there were the materialist doctrines of different types which also had their own analy-
sis of the whole of existence. Some materialists like Ajita Kesakambali analysed man and the universe into four elements, namely, earth (pathavī), water (āpo), fire (tejo) and wind (vāyo). Others like Pakudha Kaccāyana advocated a doctrine of seven bodies (kāya), namely, earth (pathavikāya), water (āpokāya), fire (tejo-kāya), wind (vāyo-kāya), pleasure (sukha), pain (dakkha) and life (jīva: D. I. 56). The materialists were of the view that those elements or bodies alone were real and all other things, man included, were composed of them. The materialist analysis was aimed at denying the existence of any permanent entity, like the itman that underlies the elements and beings.

The Buddha, too, had made an analysis of man and the universe, but its purpose was entirely different from that of the itmanvādīns and the materialists. He aimed, by his analysis, at proving that there is nothing permanent and real underlying not only man and the universe but also the elements that constitute them, without, at the same time, falling into the extreme of nihilism.

With this end in view the Buddha made a three-fold analysis. The theme of the present essay, khandha, forms one such analysis, the other two being dhamma and āyatana. It is not only the individual that is unreal, he says, even the khandha dhātu and āyatana that constitute man and the universe are unreal, There is nothing permanent and substantial underlying man or the factors (khandha, āyatana, dhātu) into which he can be analysed.

These three modes of analysis, as the commentators observe, are due to the difference in disposition and inclination of individuals as well as to their spiritual faculties which are on different levels of development.

There are those individuals whose spiritual faculties are sharp (tikṣṇendriya) but are inclined to the view that the synthesis of all psychological factors constitute the soul; to them the skhandha analysis is preached as the most suited, because here the emphasis is on analysing the mind and mental states which constitute four khandha. When they grasp the khandha analysis they will be able to understand the analysis into āyatana and dhātu.

There are also those whose spiritual faculties are very weak (mīrdhvinendriya) and who hold that the synthesis of both mind and matter constitutes the soul; to them the analysis into eighteen elements is the most suited, because here the mind as well as matter have been equally analysed.

The third category of individuals have moderately developed faculties (madhvendriya) and consider the synthesis of all material elements to be the soul, to them the analysis into āyatana is preached as the most suited because here the emphasis is on the analysis of matter (Abhidharmadīpa, p.6; Sphutārtha Abhidharmakosavyākhyā, pp. 47-48).

To the last category may also belong the analysis of man into six dhātu where matter is analysed into five elements, namely, earth, water, fire, air and space while the mind is left unanalysed (D. III, 247, M. III, 31, 62, 239f).

All these different analyses are found in the suttas which are considered the words of the Buddha and which do not belong exclusively to any particular school of Buddhism. The followers of the Buddha who continued this analytic tradition further analysed these khandha, āyatana and dhātu into what are called dhamma or dharma which they thought were indivisible ultimates. Although references to dhamma in this sense are numerous in the suttas, we do not find a systematic analysis of them until we come to the Dhammasaṅgīti, the first book of the Pali Abhidhamma Pitaka, where they are analysed and classified on the basis of the good, the bad and the neutral.

When the later Buddhists understood the words of the Buddha in different ways and interpreted them differently giving rise to schools, controversies arose as to the reality or otherwise of those dhamma. The Theravādins, in their Pali commentaries and later works, accepted the reality of the dhamma by virtue of the fact of their 'becoming' (dhammānaṁ bhūtalakkhaṇaṁ) and also by virtue of their bearing their own nature (sabhāvadāhāraṇato dhamma). The Vaibhāsikas who made a distinction between the characteristics (lakṣaṇa) and the nature (svabhāva) of dharma thought that, although their characteristics may change, their nature remains the same during the three periods of time, thus subscribing to the view of the reality of dhamma. The Sautrāntikas questioned the validity of the position taken up by the Vaibhasikas; but it was left to Nāgarjuna, the founder of the Madhyamaka school, to refute, by a method of dialec-
Meaning of the term: The term khandha (Pali) or skandha (Skt) has been used in this context in the sense of a heap, a group or a mass (rāsi), a collection of many things belonging to the same kind (DhsA. p. 141; VbhA. p. 2; Abhk. p. 9; Sphutārtha Abhidharmakosa Vyākhyā, pp. 42 ff.). It may best be rendered by the term 'aggregate' although there are a number of equivalents given by scholars such as 'agglomerations' (BHS. p. 607, Column 2); 'Constituent elements of being' (Sir M. Williams, Sanskrit-English Dictionary, p. 1256, Column 3) and 'groups' (Nyanatiloka, Buddhist Dictionary, p. 76).

There are five such aggregates in which all the physical and psychological phenomena have been summed up. They are (1) the aggregate of matter (rūpakkhandha), (2) the aggregate of feeling (vedanakkhandha), (3) the aggregate of perception (saṃskārakkhandha), (4) the aggregate of synergies (saṅkhīrakkhandha) and (5) the aggregate of consciousness (viññānakkhandha). S. III, 47 etc., Vbh. 1-61; Vism. 375; Abhk. Ch.i; Abhidharmadīpa, ch.i; Abhsv. p. 1). Each of these five constitutes an aggregate as each consists of a number of aspects of the same thing (VbhA. p. 2.) and each of these has its own nature, and does not possess the nature of any of the other four aggregates. Thus they are different from one another (Abhk.p.8).

Definition: The texts give a definition which is applied to all five aggregates. It runs:

"Whatever there is matter (rūpa), whether past, present or future; one's own or external; gross or subtle; lofty or low; far or near; all that is called the aggregate of matter."

Identical words are used with reference to the other four aggregates as well - (S. III, p. 47; Vbh. p. 1 ff; VbhA. p. 2f; Abhsy.p. 15).

There is nothing specific about this definition except that it aims at comprehensiveness. It includes everything that comes under each of the five aggregates, anything, anywhere, any time and in any form.

Rūpakkhandha: This aggregate stands for the totality of matter (sabbān rūpa; S. III. 68). It includes all material elements and qualities that enter into the composition of both living beings and the external world (ibid: Mohavicchedani. p. 116).

The common characteristic of matter as given in the texts is ruppana (S. III, 47, 86 etc.) or rūpana (Abhsy. p. 2) as an allegorical exegesis which generally means vexing or afflicting (explained as ghāṭṭaṇa, dāsana, kappana). It is said that matter is oppressed by the touch of cold and heat, of sun and wind, of hunger and thirst, and of gnats, mosquitoes and snakes (S. III, 86f; Vbh. 1; VbhA. 2; Vism. 375 Abhsy. 2 etc.) It means that when matter is confronted with such contrary forces as cold and heat, it undergoes climatic disturbance.

According to this description even matter seems to have been regarded as a subjective factor when we consider its being afflicted not only by cold and heat and the like, but also by dangers from snakes and the like. The fact that ethical edification was one of the reasons in using the word ruppana or rūpana is fairly obvious. For conveying as it does the idea of grief, affliction or molestation, it is very suggestive of the truth of suffering (dukkha-sacca), one of the cardinal doctrines of Buddhism.

Later scholars have introduced the terms pratīghā (Abhk. V. p. 24) and vyābādha (Abhsv. p. 2) in their definition of matter. These words refer to the fact of extension, i.e., occupation in space, and to the fact of resistance as the fundamental characteristic of matter. Matter is that which covers (sapratigga) or is extended in space. The sapratigga objects cannot occupy the same space simultaneously. The term sapratigga is also reminiscent of the Pali term peṭigha that is used in the Theravāda Abhidhamma as indicative of the sensory reaction between the first five sense-organs and their corresponding sense-objects. These ten items are, therefore, described as matter that resists (rupanī sappatiggha; Dhs. pp. 133 ff).

The totality of matter, however, includes the four primary elements (bhūta-rūpa or mahā-bhūta) and the secondary matter dependent on them (upādā rūpa). The analysis of matter yields a number of material data (rūpa-dhamma), and the number of such data varies with regard to different schools. The Theravadins postulated a list of twenty-eight rūpadhamma whereas the Vaibhāṣikas and the Yogācārins recognised only eleven of them. These material data are the ultimate irreducible factors that constitute the entire physical
world, including that of living beings. Any given material object is analysable into these ultimate factors. Apart from them, no other matter is recognised.

Vedanakkhandha: Vedanā means feeling (Vedētīti vedanā: M. I, 293; Vediyānīti Vedanā S. III 86), derived from contact or sensory reaction between sense-organ and sense-object. It is the experience thus acquired (anubhāva or anubhūti: Abhk. p. 7; Abhidharmadīpa, p. 69; Abhsy. p. 2). One experiences and feels the objects with one's own sense-organs. As there are six sense- organs, feeling derived through them is also sixfold (M. III, 260; S. III, 60; Abhsy. p. 4). These feelings are either blissful (sukha), painful (dukkha) or neutral (upekkhā, adukkhhasukha or ubhaya-vinirmukta: M. I, 293; S. III, 86f. Vism. 383, 390; Vbh 2; VbhA 2; Abhsy. 4). These three kinds of feeling are further analysed into bodily agreeable feeling (sukha), bodily disagreeable feeling (dukkha), mentally agreeable feeling (somanassa) mentally disagreeable feeling (domanassa) and neutral feeling (upekkhā: Vism. 390). The Saṅyutta Nikāya (IV, 124 f.) has an analysis of vedanā into one hundred and eight modes. Because it is not one but has many modes, vedanā is called an aggregate (VbhA. 3).

Vedanā, thus analysed into a number of modes and aspects, on the basis of origin and nature, is in short a psychological factor (cetasika dhamma: M. I, 301) that obtains in the perceptual process, it represents the stage which immediately precedes the actual stage of perception which is termed saṅkha, the next aggregate. It has contact (phassa or sparsa) as its basis (S. III, 101; Vbh. 13; Trims'īkā vijjapatumitratat bhyaśa, V. 3, (included in Vinīś'ikā et Trims'ikā, ed. S. Levi) and craving (taṅha) as its results.

Saṅnakkhandha: Saṅkha has been described as taking up, comprehension (udgāhāna), through the sense organs, of outward appearance or signs (nimitta) of external objects (viśaya, vastu, ālambana or ārammana). The nimitta means colour and shape in the case of visible objects (viśa), tastes such as sweetness and bitterness in the case of objects that can be savoured (rasa), and so on. With other objects (DhsA. p. 110; Abhk. p. 7; Abhsy. p. 2). It constitutes the knowledge of the unity between the external sign (nimitta), name (nāma) and content (artha) of an object (Abhidharmadīpa p. 69). It is the mental act that makes out (saṃjñānti) an object (DhsA. p. 110; Vism. 369; Abhsy. 2.).

Thus saṅkha, like vedanā, is a psychological factor (cetasika dhamma: M. I, 301; caitasika dharma A. dipa, p. 78) which represents the actual perception, the cognition of external objects through sense-organs. It is immediately preceded by vedanā (yan vedeti tan saṅjñāna: M. I. III) and gives rise to vitarka (yan saṅjñāna tān vitakketi: M. I. 112;) saṅkha vitarkayonih, A. dipa. p. 69). And like vedanā, saṅkha, too, has contact (phassa) as its basis (S. III, 101). Since phassa and vedanā are sixfold, saṅkha too, which is intimately connected with them, is sixfold as all these three factors depend, for their arising, on the six sense-organs and their objects (D. II, 309; M. III, 260; S. III, 60; Abhsy. 5). And because it is not one, but has many aspects, saṅkha is described as an aggregate (VbhA. p. 3).

Saṅkhārakkhandha: Saṅkhāra or saṅskāra is the force which drives the mind in the direction of good, bad and the indeterminate (Abhsy. 2,5,6). It has been described as mental action (manaskarma: Abhsy. 6) and is identified with volition (cetanā: S. III, 102; Vbh. 28; VbhA. 5). Since cetanā has been identified with action (Kamma:A. III, 415), saṅkhāra may also be identified with actions. But, a distinction may be made between the force that drives the mind (i.e. cetanā) and the mental actions (kamma) that results from it (cf. Vism. 448f.). Saṅkhāra includes both the force and the forced (cetayīvā kammaṁ karo tī; A. III, 415; cetanā-karma cetayīvė karme ca: Abhsy. 53). The statement that saṅkhāra is that which compounds the conditioned things (saṅkhataṁ abhisānakaroti saṅkhāro: S. III, 87; cf. Vism. 391,448; Abhsy. 2) is clearly indicative of these two aspects, the force and the forced, of saṅkhāra.

The Visuddhimagga description of saṅkhāra amply illustrates this point. It says that the saṅkhāras have the characteristic of compounding (abhisānakharana); their function is to accumulate (āyuhana); they manifest themselves as intervening (vippahāna); and their proximate cause is the remaining three immaterial aggregates (Vism. 391). According to this description, compounding is the characteristic of saṅkhāra; in other words, saṅkhāra is compounding, which is a force. Its action is to accumulate. Accumulate what? Accumulate actions (kamma) which are the forced. Thus, the force as well as the forced, volition (cetanā or cetanākarma) as well as the actions (cetayīvā karma) are both considered as saṅkhāra. Contact (phassa) is the basis of all saṅkhāra (S. III, 102)
The saṅkhāras are, by nature, of three kinds: the saṅkhāras which are good (kusala), those that are bad (akusala) and those that are indeterminate (avyākata; Vism. 391). And by way of arising the saṅkhāras are, like vedanā and saññā, of six kinds since they arise depending on six sense-organs and their objects (S. III, 87; Vbh. 6, 28; Abhy. 5).

These saṅkhāras which are psychological factors (cetasika dhamma: M. I, 301) are enumerated in the texts and we find different lists of them given by different schools. The Theravadins have a list of fifty psychological factors designated as saṅkhāras (Vism. 391 ff; Mhīvaciṭchedanā, 117) while in the Vaibhāṣika list there are sixty saṅkhāras in two main categories, namely forty-six psychological factors (caittas) and fourteen forces which are dissociated from both mind and matter (viprayukta saṅskāras: Abhk. cg. ii, vv. 23 ff; A. dipa. pp., 68 ff). The Yogācara school had increased the number of saṅkhāras to seventy-five, fifty-two caittas and twenty-three viprayukta saṅskāras (Abhṣy. 3 ff).

All these psychological factors and other forces are collectively called the aggregate of synergies (Vism. 383, 391; Abhṣy. 5 ff).

Vedanā and Saññā as separate aggregates. The two aggregates, vedanā and saññā, are psychological factors just as saṅkhāras are (M. I, 301; A. dipa, 78). They could, therefore, have been easily included in the aggregate of synergies (saṅkhārakkhandha) because in the latter are included all other psychological factors. But vedanā and saññā have been singled out and are reckoned as separate aggregates, and what is the reason for doing so?

Yaśomitra raises this relevant question and answers that these two psychological factors are reckoned as separate aggregates on the ground that they constitute the chief psychological factors that make one attached to the pleasures of the senses (kāma) and to views (dṛṣṭi), respectively. Vedanā, being also the enjoyment of sense-objects, makes laymen attached to them, whereas saññā, when it is perverse, makes monks conceive adharma to be dharma, dharma to be adharma, anātma to be ātma and so on, making them attached to those perverse views (S. Abhkh. V. p. 48).

It is during a perceptual process that man is given the alternative to choose one way or the other. Man enjoys freedom to contemplate the objects he perceives, wisely or unwisely. If he is wise in his contemplation (yoniso manasikaroṭi) he is well on his way to freedom; and if he contemplates them unwisely (ayoniso manasikaroṭi) he is in bondage to them. It is in this latter alternative that vedanā and saññā play the important part. Vedanā gives rise to lust (taṇhā) if the object perceived gives him pleasure and it gives rise to anger (dosa) if the object gives him pain. The experience of pleasure and pain is dependent on the manner in which one recognises (saññānaṭī) the objects, and also on the attitude one adopts towards them. If one avoids recognising the objects by their colour or shape and different tastes etc. (na nimittaggāhe), he is not moved by them one way or the other; he does not become attached to them; he becomes one who works out his own salvation.

Thus it is clear that vedanā and saññā are of primary importance; They are more important than any other psychological factor in making one turn one way or the other. And it is because of this importance attached to them that they are reckoned as separate aggregates.

And, moreover, says Yasomitra, vedanā and saññā characterise the two different spheres of existence: the fine-material sphere (rūpadhātu) is characterised by vedanā whereas the first three immaterial planes, namely, ākāsānāṭīcāyatanas, viññānāṭīcāyatanas and ākāsānāṭīcāyatanas are characterised by saññā (Abhk. V. p. 49).

This amply proves that vedanā and saññā are much more important than other psychological factors.

Viññānakkhandha: Viññāna is consciousness which arises always with reference to an object which may be material such as rūpa, sadāla etc. or conceptual such as democracy, freedom and so on, or psychological such as love or hate (M. I, 259 etc.). Thus it is participial in formation and dependent in origination. It is always particular, and is referred to always as eye-consciousness (cakkhuviññāna) and so on. There are two interpretations of viññāna given regarding the exact function it performs in a perceptual process; one referring to the bare awareness of the object and the other to full cognition of it. According to the Madhupinḍika Sutta, it is the bare awareness of the object (M. I, III), an early stage in a perceptual process, followed by contact (phassa) and feeling.
This view was rejected on the ground of its dependent origination (paṭiccasamuppanna). Viśṇāṣa too is subject to change (ibid.); it changes every moment. Even the saṃvattanika viśṇāṣa arises with reference to an object. It cannot arise or exist except with reference to an object.

Two other terms used with reference to viśṇāṣa are citta and mano (S. II, 94). The Theravadins have considered these three terms as synonyms which refer to one and the same thing (Vism. 383). But the Yogācāra Viśṇāṉavādins have interpreted these three terms to mean three different aspects of the viśṇāṉaskandha. By citta they understood the resultant ālayaviśṇāṇa in which all the seeds of past actions are stored with the result that it is perfumed by them. By mano they understood the thinking mind which is associated with the four passions, namely (1) belief in the existence of a soul (ātma drṣṭi), (2) attachment to it (ātma-sneha), (3) the view that ‘I am’ (asmi-māṇa) and (4) ignorance (avidyā); it is also the consciousness that survives the attainment of cessation (nirodha-samāpatti) as well as the sixfold consciousness. And by viśṇāṇa they understood the sixfold consciousness which is empirical consciousness (Abhsy. 11-12).

The Theravādins and the Vaibhāṣikas accepted only the sixfold consciousness which in the dhātu classification constitutes seven elements, i.e., the sixfold consciousness plus the element of mind (manodhātu: Vism. 464).

All these instances of consciousness which, by nature, are threefold, vis., morally good (kusala) morally bad (akusala) and morally indeterminate (avyākata: Vism. 383) are collectively called the aggregate of consciousness (Vism. 383; Abhsy. II).

The precise number of khandhas as five: Buddhaghosa raises the question as to why the precise number of khandhas is five neither more nor less and gives three reasons for analysing existence into five khanāhas.

In the first place, he says, all compounded things (saṃbhū saṅkhata-dhammā) that resemble each other fall into one of these aggregates, for, when the numerous categories of compounded things are grouped together, according to similarity, all instances of matter (riṇa) form one aggregate, feelings (vedana) another aggregate, and so on (Vism. 405).
Secondly, these five include all compounded things. Even the five spiritual aggregates of morality (silakkhandha), concentration (samadhikhandha), wisdom (parãnakkhandha), emancipation (vimuttiikkhandha), and of knowledge and insight into emancipation (vimuttiñññàdassanakkhandha S. I. 99) come under one of these five khandhas, namely the aggregate of synergies (saññkhâraakkhandha: Vism. 405). The Vaibhãšikas hold a different view; they have included the aggregate of morality (silakkhandha) in the aggregate of matter (rupãaskhandha) and the other four spiritual aggregates in that of synergies (saññskârakkhandha: A. dîpa. p. 10; S. Abhk. V. p. 53 on Abhk. v. 27). The point stressed is that all compounded things come under one or the other of these five aggregates. Only the uncompounded element (asamskîrta-dhåtu), i.e., nirvåna, is excluded from the skandhå classification (A. dîpa. p. 10).

The third reason is much more important. It is the five khandhas which constitute the widest limit that provides the basis for the assumption of the existence of a soul (atta) and what pertains to a soul (attaniyå); for, when these five aggregates exist, it is through clinging to them and through interpreting them that the view arises: “This is mine; This am I; This is myself” (S. III, 183ff). There is nothing outside the five aggregates that a man can possibly cling to (Vism. 405). Asanga, too, says that the five aggregates form the basis for the belief in a soul (Abhk. V. p. 1).

The sequence of the khandhas: The question has been raised as to why this particular order of the aggregates has been adopted: Why matter is placed first; feeling second; perception third; synergies fourth, and consciousness fifth?

In explaining this particular order, Buddhaghosa gives as reason for doing so, the different degrees of difficulty or ease with which the different aggregates can be comprehended. He says that to the individuals who have fallen into the belief that there is a soul among the five aggregates owing to their failure or inability to analyse them, the Buddha has first taught the grosser aggregate, i.e., matter being the objective field of the sense-organs. After that he has taught sense-experience (vedana) which feels matter as desirable and undesirable; as pleasurable and painful. Then he taught perception (saññā) which apprehends the aspects of feeling's objective field, since 'one perceives what one feels' (M. III, 293) There after are listed saññkhāras which volitionally compound things by way of perception. And finally, he has taught the aggregate of consciousness because it provides support for and dominates feelings, perceptions and synergies (Dhp. v. i, VismA. 503).

Yasomitra accepts Buddhaghosa’s explanation which is based on the grossness and subtleness of the different aggregates and gives three more reasons for adopting that particular order (S. Abhk. V. p. 48f).

In the first place, he says, this particular order explains the process in which the mind of human beings is defiled. Men and women are attracted to each other because of their physical form made of matter (rupa). Then they become eager to derive pleasure, which is feeling (vedanà), from each other. This eagerness is due to the perversity of sensation (saññjñà) and this perversity is due to passions (kleśa) which are synergies (saññskāra) by which the mind (vijñāna) is defiled (ibid). He illustrates this position by comparing matter to a vessel (bhâjana), feeling to food (bhojana), perception to condiment (vyâñjana), synergies to a cook (pakîr) and the mind to one who partakes of the food (bhokîr: S. AbhkV. p. 48f; cf. Vism. 405).

Their relationship to each other: It is said in the Sånyutta Nikåya that the first four aggregates, namely, matter, feelings, perceptions and synergies, act as a sort of home (oka) for the last aggregate, i.e., the mind, which makes its movements (oka-càrî) in it (S. III, 9f). What this comparison shows is that mind can exist only in relation to the other four aggregates; it cannot exist independently of them (S. III, 54-55).

This clearly points to the fact that the khandha theory in Buddhism is purely psychological and ethical. Even if it is granted that matter can exist independently of the mind, the former comes into our picture only because of the latter (mind), which considers matter to be a part of the individual and to be factors, existing in the form of external objects, connected with the individual. It is in this sense that the mind may be considered as more important.

The first psychological reaction one has when one is confronted with an object, whether material (rupa) or psychological (nåma), is contact (phassa) which is described as the synthesis of the three factors, i.e., the sense-organ, the sense-object and the resultant awareness. Depending on that contact arises feelings (vedanà). One perceives (saññjñâti) what one feels. One investigates (vitakketi) the object one has
perceived. This investigation as whether the object perceived is pleasurable or painful and so on, gives rise to psychological factors such as lust or aversion which are synergies (saṅkhāra). The mind (viññāna) is associated throughout in this process (Vism. 507; cf. M.I, II ff.).

This is a psychological description of the perceptual process. Although ethical considerations-underlie it, since Buddhism is interested only in the processes which are relevant to their ideal of ethical perfection, yet, in fact, it is an actual picture that may be drawn of man and his environment, as it depicts his dealings with the external world. There is no world unless it is perceived by man; or, at least, no meaning can be found in it unless human beings play their part in it. Man's dealings or his relationship with the world is made through his cognition of the world. The khandha-analysis is made on the basis of perception and all the five khandhas can be explained in relation to it; the khandhas are well integrated in this picture, and no khandha, in the Buddhist sense, has any meaning, individually; and the analysis into five loses its meaning when they are divorced from the perceptual process and taken individually. It should be mentioned, at the same time, that the Buddhists were very careful not to introduce metaphysics into their khandha-theory.

Their relation to āyatana and dhātu: The content of the five aggregates may be explained in relation to āyatana and dhātu; the only thing to be remembered being that these two classifications, āyatana and dhātu, embrace both the compounded things (saṅkhata dhamma), i.e., saṃskāra, and the uncompounded element (asaṅkhata-dhātu), i.e., nībbāna, whereas in the khandha-classification, only the compounded things are included. Nībbāna in the āyatana and dhātu-classification comes under dhammāyatana or dhammadhātu.

By aggregate of matter we generally understand the first five sense-organs, and their corresponding sense objects, plus a section of matter that come under dhammāyatana or dhammadhātu. This latter part of matter is described in the suttas as matter which is formless (anidassana) and unresisting (appetiṭhā): D. III, 217; Dhk. p. 1f; Vism. 505). According to the Theravāda School, this part of matter consists of sixteen items which are not matter proper. The Vaibhāṣikas accepted only one item of matter as coming under dhammāyatana or dhammadhātu, and that is called avijñāpī-rūpa; Abhidharmāṁṛta, p. 14; Abhk. ch. i, v. 10; S. AbhkV p. 36). The Sautrantikas took strong exception to its recognition on the part of the Vaibhāṣikas as a real element of existence. They do not seem to have included any item of matter in the dhammāyatana or the dhammadhātu. The Yogacara school, too, recognises a kind of matter to be included in the dhammāyatana (Abhsy. p. 3.)

No substance and quality in the khandhas: The rupakkhandha represents matter in its varied manifestations as primary (bhūta-rūpa) and secondary (bhautika or upādā rūpa). The other four aggregates, generally called nāma-dhamma (Vism. 506), represent mind (citta, mano or viññāna), the fifth aggregate, and the mental factors (cāitta or cetasika). The Abhidharmadīpā recognises this difference between the primary and the secondary matter as well as between mind and mental factors on the ground of their difference as regards their primary and functions. Although in this recognition the rūpadhammas and nāmadhammas are postulated as if they were discrete entities, this does not imply that they have an independent existence. It is simply for the purpose of description that they are so postulated. In actual fact, they always exist in inseparable association with a set of other allied dhammas. Their inter-relationship is explained with reference to the law of causation and conditionality. One does not inhere in another, nor is one a substance of another. In brief, no distinction between substance and quality is introduced into the analysis of existence.

Nature of the khandhas - Impermanent and Unsubstantial: The five aggregates are described in numerous places as compounded things (saṅkhata-dhamma: S. III, 114 etc.). The chief characteristic of things compounded are arising (uppāda), cessation (vaya) and change (jhitassa ariññathatta) A. I, 152; S. III, 38ff). They are therefore, impermanent (anicca) and unsubstantial (anatta) and subject to ill (dukkha: Vin. I. 13f; M. I, 138f). The comparison made of the five aggregates in the Sānyuttā Nikāya clearly brings out their impermanent and unsubstantial nature. Matter (rūpa) is compared to a lump of froth (phēsa-piṇḍa), feelings to a bubble (bubhula), perception to mirage (maricī), synergies to a plantain trunk, and consciousness to a conjuring trick (māyā: S. III, 142). Buddhaghosa, commenting on this comparison, says that a lump of froth cannot stand squeezing; a bubble on water is momentary; mirage causes illusion; a plantain trunk has no core; a conjuring trick is calculated to deceive others (Vism. 505).
The Pañisambhidāmāsa uses a total of forty terms to explain the nature of the khandhas. Thirteen of them emphasise their unreal and impermanent nature. The comparison made in the Bhāra Sutta of the Cāndhavasutta Nikāya (S. III, 25f.) is very significant as it has led to a controversy with regard to the nature of the khandhas. The five aggregates in our sutta are compared to a burden (bhāra), the individual is compared to taking up the burden and cessation of craving to laying down of the burden.

It is the allusion to puggala as the bearer of the burden that created all the trouble as it suggests the existence of a puggala over and above the khandhas, a position very much alien to the spirit of Buddhism. This comparison has led the Vātsiputriyas, an intermediary Buddhist school, to propound the theory of the existence of the individual (pudgalavāda). The other Buddhists take up this theory for criticism, refute it as unwarrented by the context and reject it as heretical.

The position of khandhas at death and birth: If the khandhas are unsubstantial, how do the Buddhists account for such phenomena as survival (punabbhava), identity and moral responsibility. What is the link that connects death and rebirth so that moral responsibility (kammavipāka) finds any meaning?

In the sutta which explain the twelve factors of the causal formula (birth), if not as the emergence of the aggregates (khandhānām pāṭubhavo) and death (marāṇa) as the disintegration of the same (khandhānām bheda): S. II, 3; Ps. II, 72 etc.

If death is the disintegration of the aggregates and birth their emergence, is there any connection between the two? The Upanisads had ātman to account for this phenomena. Buddhists have rejected ātman as well as puggala as mere names. And if there is no connection between death and birth, death amounts to annihilation in which case identity and moral responsibility find no meaning. Buddhism rejects annihilationism (uccchedavāda) as an extreme, and recognises the continuity of the aggregates in the form of a stream (skandhasantāna: A. dīpa, p. 183; Skandhasantarī, ibid. 225; Abh. Ch. iii, v. 18) which in common parlance is known as 'being' (sattva, satta) or individual (Pudgala, puggala: A. dīpa, 255; S. I, 135; Mīn. 28). This stream is also called sansāra (Vism. 463) Buddhism advocates not mere birth, but rebirth or rebecoming (punabbhava) which clearly suggests the continuity and identity of the stream. This resolves the problem of moral responsibility: its possibility without reference to an entity such as ātman.

The acceptance of the continuity of the stream and the moral responsibility on the part of the individual at once demands an explanation of the link that maintains that continuity, the link between death and rebirth. In other words. Is it khandhas themselves or something other and above the khandhas that constitutes that link? Although there is no explicit theory regarding this problem in the suttas, the sporadic statements found in the suttas may be connected and interpreted to give such a theory.

The term viññāṇa occurs several times in the sutta in the sense of a "survivor". In the Ānāmajñāpāya-sutta, this viññāṇa is called the "evolving-consciousness" (sanyavattika-viññāṇa: kāyassa bhedā param maraṇā thānaṃ etam vijjeta yaṃ taṃ sanyavattikan khaññanaṃ assa ānāmajñāpago M. II, 262). This viññāṇa is regarded as continuing up to the sphere of neither-perception-nor-non-perception (nevassaññā-nāsasaññāyatana: ibid. 264). This viññāṇa is no other than the "stream of consciousness" (Viññāṇa-sota) extending into both worlds, this and the next) D. III, 105), also called the stream of becoming (bhavasota: S. I, 15; IV, 128) implying thereby its constant change. In the scholastic period it is termed the rebirth-linking consciousness (pañisanḍhī-viññāṇa) which is a species of bhavanga-citta, (q.v.). And it is clearly this viññāṇa, to which the monk Sāti referred "as the consciousness that fares on and continues", but erred in saying that it did so "without change of identity (tadeva anāññanā)" and also in taking it as an agent and experiencer (vado vedeyyo: M. I, 256.).

The Pāyāsi-Sutta, makes clear reference to this sansāric viññāṇa. With the simile of the conch-shell, viññāṇa is made analogous with purisa (D. II, 338).

In view of such evidence the conclusion is irresistible that viññāṇa in early Buddhism was regarded as the surviving factor at death which, by re-entering "womb after womb" (gabbha gabbham: Sn. v. 278) for repeated conceptions, result in what is generally known as sansāra. The difference between this sansāric viññāṇa and the viññānāmaññanā that was held to be the survivor in the Upanisads, according to the doctrine of re-incarnation is only too clear, for, in the Upanisads, the term ātman expressly denotes a meta-
physical substrate that is permanent and unchanging whereas in early Buddhism the "surviving" viññāna is identical with bhava implying the very opposite nature of impermanence (anicca) and evolution (viparītānāma).

Sometimes the term gandhabba occurs in place of this samāsāric viññāna. According to the Mahāānāhāsa-mkhāya-sutta and the Assalāyana-Sutta, gandhabba is one of the three vital factors that are essential for conception to take place (gabhassā avakkanti: M. 1, 265; II, 157). In the phrase "gandhabbassa avakkanti" the original meaning seems to have been 'decent of the embryonic being', for gabbha means "embryo" as receptacle as well as the "being" inside it. Hence it is that gabbha is said to derive from the six elements (dhammā) of which viññāna is the last and is also the cause of nāma-rūpa, at least in one version of the paṭiccasamuppāda formula (channaṁ bhikkhave dhātunāṁ upādāya gabbhassāvakkanti hoti, okkantiyā sati nāmarūpam: A. I, 176) which is obviously parallel with the usual viññāṇapaccayā nāmarūpam: D. II, 56 etc.). It is also said that if viññāna does not descend into the mother's womb, nāmarūpa would not develop (D. II, 63).

Thus viññāna, sometimes called gandhabba, constitutes the factor most essential for conception to take place. It is no less essential for the continuity of life within the individual; when it, together with āyu and usma, leaves the body, the latter lies motionless like a log of wood (D. II, 338, S. III, 143). In the Abhidhamma terminology it is called bhavaṅga which is the sine qua non of continued existence; at death, this bhavaṅga-citta is called cuti-citta and at birth it is called paṭisandhi-citta. The interval between the cuti-citta and the paṭisandhi-citta is the same that obtains between any two consecutive thought moments, because the preceding moment is cuti-citta, which is immediately followed by paṭisandhi-citta.

Buddhaghosa says that the moment conception takes place all the five khandhas appear simultaneously (VbhA. 21ff). In the Yogācāra school this rebirth-linking consciousness is called the ālaya-viññāna in which, they say, all seeds of the past actions, both good and bad, (sarva-bījakāmy) are stored.

Like any other viññāna, the rebirth linking consciousness, too, arises having an object as its basis. These objects are described as 'What one thinks' (yaṃca ceteti), "what one formulates" (yaṃca pakappeti) or "what lies dormant" (yañ ca anuseti) in the stream of consciousness (S. II, 66).

The three phrases in fact refer to synergies (saṅkhāra) or actions (kamma) which are included in the sphere of the objects of mind (dhammāyatana). In the Abhidhamma terminology these objects re called kamma, kammaṇīmitta and gatiṇīmitta and, it is said that the mind of a dying man has one of these three as its object, and the next moment, i.e., the moment immediately after death (cuti-citta) he is reborn (i.e. with paṭisandhi-citta : Vism. 387 ff, VbhA. 155f). This viññāna is not something different from the five aggregates. It constitutes an aspect or an instance of the aggregate of consciousness (viññāna-khandha).

The foregoing discussion has made it clear that the Buddhist theory of khandha has steered a course which is clear of both eternalism (ātavāda, sassaṭavāda) and nihilism or materialism (uccchedava). Viññāna that is responsible for survival is, by nature, not different from any other viññāna. This surviving viññāna, like any other viññāna or any other conditioned thing for that matter, is dependent in origination; it does not arise without a cause (M. I, 256). It is not a permanent entity like the Upanisadic ātman or nirāśraya-viññāne it is impermanent. The Buddhist theory of khandhas is, therefore, not eternalist. Altho­ught it is not a permanent entity, this viññāna is the factor that is responsible for the survival and "identity" of the stream which, in common parlance, is called the individual or being, thereby making moral responsibility intelligible. So, Buddhism does not fall into the other extreme of nihilism either.

Upali Karunaratne.

KHANDHA-PARINIBBĀNA, 'Utter waning away of the substrata (khandha) of repeated becoming' (punabbhava). The Buddha attained emancipation (nibbāna) with the attainment of Buddha-hood at the age of thirty five years. This attainment is called kilesarāparinibbāna (q.v.) i.e. 'utter waning away of defilements connected with samsāric rebecoming'. The Buddha lived for forty five years after attaining Bud­dhahood and passed away at the age of eighty, and with this the samsāric sojourn of the Buddha came to an end, and this is called the 'utter waning away of the substrata of rebecoming'. The disciples of the Buddha, too, do away with all defilements (kilesa) with the att­tainment of arahantship and continue to live normal lives, till they finally pass away due to exhaustion of
kamma or due to reaching maturity of age, and this is described as their khandhaparinibbāna (utter waning away of the substrata of rebecoming). see KILESAPARINIBBANA, NIBBANA.

T. Ariyadhamma

KHANTI (Skt. Kṣānti) is a very wholesome ingredient in the psychology of a spiritually advanced person, according to Buddhist teachings. The PTS dictionary renders it into English as 'patience', 'forbearance' and 'forgiveness'. Dharmasasagani (Dhs. 1341.) defines kṣānti as: 'forbearance' and 'absence of intolerance', ability to forgive and endure' (harm done to oneself), 'absence of ferocity' 'absence of bluntness' (kṣānti, khamanatā adhivāsanatā acacdikkhān, anasurūpo). Jātaka defines kṣānti as: psychological ability in a person not to become angered when he is reviled, beaten and slandered by others (akkosantesu paharantesu paribhāsantesu akkujjhānaabhāvo-J. III. p. 40). In the Mahāmaṅgala Sutta (Sn. p. 47) kṣānti is extolled as a blessing (maṅgala) to human beings. In the Sanyutta Nikāya (S. 1. p. 226) it is said that the virtue of kṣānti surpasses all other virtues (kṣāntiyā bhīyyo navijjati).

Developing the power of endurance and tolerance (kṣānti) is part and parcel of the training of a disciple of the Buddha and the Buddha emphasised the importance of developing this virtue in several of his discourses. In the Kakacīpama Sutta (M. 1, 122, 29), the Buddha admonished his disciples not to lose control of themselves and allow anger to overpower them, however great a provocation that they may have to encounter. In this sutta the Buddha relates an episode of a rich lady of Savatthi by name Vedeihikā who had a reputation of being gentle (sorata), obedient, humble (nivāta), tranquil (upasānta) and tolerant. Vedeihikā had a slave woman (dāsi) called Kāli who was obedient, clever, active and well disciplined in work. When Vedeihikā’s reputation as a patient, gentle and tolerant lady was thus spreading widely, Kāli thought of testing Vedeihikā’s integrity. So, one day Kāli overslept a little and delayed to perform some of her routine household duties. At this Vedeihikā became a little annoyed and reviled Kāli in harsh and unkind words that day. Kāli overslept the second, third and the fourth day and Vedeihikā’s anger increased day by day. The fifth day when Kāli overslept and neglected to perform her routine duties, Vedeihikā lost control of herself completely and attacked Kāli on the head with a club. Kāli was injured badly and with blood-stained cloths she ran about in the neighbourhood shouting: 'See, the work of this kind and gentle lady, Vedeihikā'. The Buddha, having related this episcopal, admonished the bhikkhus to train themselves not ot lose their temper and utter harsh words or act violently even if someone were to cut them limb by limb with a double-handled saw (kakaca). "On the contrary", the Buddha told the bhikkhus, "you should train yourselves to wish for the welfare and happiness of those who attack you or do harm to you or abuse you".

The prominent place given to the development of this psychological factor in Buddhism is quite evident by its being accommodated as the sixth of the ten perfections (pārami) of a Buddha-aspirant (bodhisatta bodhisattva) in Theravada Buddhism (J. 1, 173; DhpA. I.84) and the third of the six perfections is Mahāyāna Buddhism.

The Bodhisatta who practised kṣānti as a pārami trained himself to bear up all unjury and pain inflicted on him by others and forbore other's misdeeds. He observed and practised this noble quality of patience and endurance to such as an extent that he was not provoked even when his limbs were severed off.

There are several stories in the Jātaka describing how the bodhisatta practised this virtue in former births in samsāra. The Khantivādi Jātaka (J. 1. pp. 39-43) illustrates how the bodhisatta, born as an ascetic, bore up the severe agony and pain that he experienced when the intoxicated king Kalābu got the executioner to cut his (ascetic’s) limbs one by one. King Kalābu was infuriated when the ascetic did not show any signs of anger and pain even when his limbs were brutally severed by the executioner and ordered the executioner to stab the ascetic on his chest. The ascetic breathed his last mindfully and peacefully, wishing the king and the executioner happiness and long-life.

The Mahāsilava Jātaka (J. 1. 261-68) describes how the bodhisatta, born as king Mahāsilava of the powerful and great kingdom of Bārānasi, allowed a petty king of Kosala who came with his small army, to subjugate him unchallenged, because king Mahāsilava did not wish people on his side or the side of the rival king to be killed or injured by going to war. When the rival king took Mahāsilava and his ministers and officials captive, Mahāsilava admonished his ministers and officials not to harbour ill-will and hatred towards the rival king, but to tolerate with loving kindness (mettā), all the wrongs done to them.
The Culladhammapālajātaka (J. III, 177-82) illustrates how the bodhisatta in a past birth as young prince Dhammapāla, aged seven months, bore up the pain and agony caused to him when his wicked father got him mutilated. Dhammapāla maintained balance of mind and died peacefully without harbouring ill-will and hatred to his executioners.

The Chaddantajātaka (J. V. 37-57) describes how the bodhisatta in a past birth, as a majestic white elephant with full-grown beautiful tusks, offered his tusks willingly to the hunter who shot a poisoned arrow and injured him, for the sake of the two tusks. The elephant endured the pain caused to him by the hunter, without any ill-will and hatred to him.

The Saṅkhapālajātaka (J. V. 161-177) records how the bodhisatta, born as a majestic serpent king (nāgarāja) in one of his past births, tolerated the cruel actions of sixteen village brats who wounded him with spikes and dragged him long a path full of thorns and rough stones, thereby causing him a great pain. The serpent king was very strong and possessed psychic powers and he could have destroyed the village brats with a mere glance at them, but without utilising his physical strength, or the psychic powers the serpent king passively endured the severe pain caused by the injuries, without allowing anger and hatred to overpower him.

These and other stories in the Jātaka such as the Mātuposakajātaka (J. IV. 90-95) Campeyyajātaka (J. IV 454-468) and Bhūrijatattajātaka (J. VI. 157-219) illustrate how the bodhisatta practised the perfection of endurance and tolerance (khanti) in several of his past existences in saṃsāra.

There were several instances in the life of the Buddha where he displayed the noble virtue of endurance and tolerance (khanti). Devadatta (q.v.), Siddartha Gautama's estranged cousin and later the Buddha's arch rival, made several attempts to kill the Buddha. Once Devadatta bribed an elephant owner to let loose his intoxicated fierce elephant, Nālāgiri, to confront the Buddha and kill him. The ferocious elephant ran towards the Buddha, but the unflustered Buddha with his thoughts of loving kindness (mettā) controlled the elephant. The elephant knelt before the Buddha by way of salutation and turned back to go (Vin. II, 194f.)

Devadatta on another occasion hurled a massive boulder from a mountain peak to crush the Buddha who was walking on the path underneath the mountain. The boulder missed its target, but a splinter from the boulder hit the Buddha's foot and unjured him. The Buddha, with no grudge and ill-will, bore up the pain with thoughts of loving kindness to the conspirators (Vin. II, 193).

Once a haughty brahmin abused the Buddha calling him an 'out-caste' (vasala). The Buddha was not angered when he was addressed as an out-caste and with his normal composure asked the brahmin whether he knew who an out-caste (vasala) was and what type of social behaviour made one suitable to be called an out-caste. When the brahmin expressed willingness to listen, the Buddha spoke at length giving a socially wholesome ethical interpretation to the words vasala and brāhmaṇa (Sna. pp. 21-25).

Two other episodes in the life of the Buddha, wherein the Buddha's incomparable ability to bear up, endure and tolerate physical or psychological injury caused to him without allowing his mind to corrupt, are the episodes of Ciñcā Mānavikā and Sundarī paribbajikā. In the first episode heretical religious groups, who were envious of the growing popularity of the Buddha and his disciples, once employed a young and beautiful wandering ascetic woman by name Ciñcā to discredit the Buddha and his disciples. Ciñcā let herself be seen going to Jetawanarama monastery where the Buddha lived and spent the night in the heretic's quarters nearby and in the morning men saw her returning from the direction of the vihāra. When questioned she said that she had passed the night with the Buddha. After some months Ciñcā simulated pregnancy by tying a disc of wood around her belly and appearing thus before the Buddha, as he preached to a vast congregation, she charged him with irresponsibility and callousness in that he made no provision for her confinement. The Buddha with his normal composure remained silent and before long the truth was out when the wooden disc that was underneath Ciñcā's clothes fell down injuring her feet. The enraged audience chased Ciñcā out of the monastery gates (DhaA. III, 178; J. IV, 187 f).

In the second episode it is shown how a young wandering ascetic woman (paribbajikā) by name Sundari was utilised by rival heretical groups to discredit and slander the Buddha and his disciples. The heretics persuaded Sundari to hover around in the vicinity of Jetavanarama by night fall, to give the impression to the public that she was a regular visitor to
Jetavanārāma. When some heretics questioned her behaviour she blatantly said that she went to Jetavanārāma to stay the night with the Buddha. When the character assassinating slander had sufficiently spread, the heretics hired several criminals to murder Sundarī and to hide the body in a shrub land close to Jetavanarama. They also spread the news of the mysterious disappearance of Sundarī, implicating the Buddha and his disciples for her disappearance. When Sundarī's decomposing body was discovered several days later, the public around became very hostile and antagonistic to the Buddha and his disciples. The Buddha confined himself to his bed chamber (gandhakuti). When things took such an unpleasant turn Venerable Ananda, in desperation, requested the Buddha to leave Savatthi along with the disciples and go to another distant place. The Buddha pacified Ananda telling him that when a problem arises, one should face it and settle it then and there and admonished the disciples not to get annoyed and harbour ill-will and hatred towards those who reviled them, but to endure and tolerate them with loving kindness.

Several days later the conspiracy of the heretics came to light when the criminals became talkative and boisterous and boasted about the crime, after a drinking party held to celebrate their success (Ud. IV, 8; UdA. 256 ff.; DhpA. III, 474ff.; J. II, 415 f.).

What is remarkable in both episodes is that the Buddha was neither dejected and angered when he was slandered and vilified by the misled people, nor was he elated and jubilant when he was exonerated by the same people later, when the truth was out. He maintained complete equipoise (upekkhā). He was like the Indra's post (indrakhīla) which withstood gales that came from the four directions. (Sn.p.40).

Ability to forbear, endure and tolerate the misdeeds of the people without allowing the mind to be polluted with anger and hatred, is reckoned as one of the ten special virtues of a righteous ruler (J. III, 274). see. PĀRAMITĀ.

T. Ariyadhamma.

KHATTIYA (Sanskrit: Kṣatriya), derived from the word kṣatra, meaning power, is the name by which the ruling or the knightly class in Aryan India was designated. They belonged to the old Aryan nobility who had led the tribes to conquest as well as to those families of the aborigines who had managed to maintain their princely estates in spite of the conquest. Hence they were the ruling and the warrior elements in Indian society and their functions, as in the case of the other castes, became hereditary in course of time.

During the time of the Buddha the khattiyas had not only established themselves as the political leaders of India but also had gained social supremacy over the other castes, with the brahmins occupying the second place. Thus it is seen that whenever the four castes are referred to in the pīṭakas the khattiyas always come first (e.g. S. I. 98; D III, 82; A. II, 86 etc.). The fact that the bodhisatta is said to have surveyed the world prior to taking conception considering the few factors, including the caste recognised as the highest at the time (lokasaṃnata) is also significant in this respect. It is also important that according to the Buddhist tradition at times when the brahmins are the highest caste Buddhhas are born in that caste while when the khattiyas are the highest they are born as khattiyas. It was in keeping with this traditional law that Gautama Buddha selected the khattiya caste, says the Jataka commentary: (J.1, 49). The well-known and oft-quoted Pali stanza runs as:

"The khattiya is the best among the folk
Who put their trust in lineage,
But one in wisdom and virtue clothed
Is best of all among gods and men"

may also be quoted in this respect (D. III, 97; M. I., 338; S.I., 153, II, 284). This stanza gives gives not only the superiority of the khattiyas at the time but also the Buddhist view of caste. The established custom during the Buddha's time was for the Khattiya to look after the administration and the defence of the country by fighting in war and governing in peace whereas the brahman priests with their wide learning were to help them by wise counsel, whenever the rulers needed it. In other words the khattiyas were the political leaders whereas the brahmans were the religious leaders. It may also be mentioned here that some of the more important Khattiya clans, which were specially noted for their well-organised systems of government in Buddhist India, were the Licchavis, Videhas, Mallas and Sakyas the last of which was the clan to which Gautama

1. It is of interest that Sanskrit work Vajrasuci, which is a polemic against the Indian caste system and which is attributed to As'vaghoṣa, deals first with the brahmins and then with the khattiyas as in the case of the later brahmanic works.
Buddha belonged.

The division of labour according to which fighting in war and governing in peace were the responsibilities of the khattiyas while the brahmans looked after the religious matters was not at all a bad arrangement, but in course of time the desire of one class for the supremacy over the other naturally arose and the power struggle between the two groups cropped up intermittently. For instance it is the subjugation of khattiya supremacy in post-Buddhist India that is symbolised by the sixth incarnation (avatāra) of Viśnū as taught by the Hindus. The following observations of Sir Charles Eliot may be quoted in this respect (Hinduism and Buddhism, II. pp. 147-8) : "The sixth avatāra, that of Parasarāma or Rāma with the axe, may contain historical elements. He is represented as a militant Brahman who in the second age of the world exterminated the ksatrīyas, and after reclaiming Malabar from the sea settled it with Brahmans. This legend clearly refers to a struggle for supremacy between the two upper castes, though we may doubt if the triumphs attributed to the priestly champion have any foundation in fact."

Although the khattiyas more or less had occupied the place of both nobility and the ruling class during the Buddha’s time, the wealth and power of the brahmans who came into contact with the Buddha as recorded in the Pali works. It is also important that comparatively only a small percentage of the khattiyas are portrayed as wealthy. They being always the rulers and chieftains were not at all poor but had considerable wealth, power and influence. It may be that those khattiyas who are referred to as specially wealthy as at A. II. 86 (khattiya-mahāsālā) were those who were bent more on the acquisition of wealth and property than on ruling and administering. However, the khattiyas were, in general, synonymous with the ruling class (J. III. 441; M. II. 151-2; A. III. 299). Even in the puruṣa-sūkta of the Ṛgveda (x, 90) where the brahman version of the origin of the four castes is given, the khattiyas are called rājya, the rulers. In the Dhammapada too they are similarly called rājasa (v. 294). As fighters their wealth is said to consist of bow and quiver (M. II. 180). As the defence of the country was a part of the duties of the ruling class it was natural that fighting for the defence of the country was treated as part of its administration. Thus it is seen how the khattiyas are made to be born from the arms of the primordial purusa in the Purusasūkta, symbolising their duty as fighters. Military science is said to be the knowledge of the ruling class in the Chandogya upanisad (vii. 1, 2, 4), and hence called ksatravidyā or the science of the bow (dhanurveda). In this respect it is quite significant that it is only a khattiya who is said to be capable of becoming a world-ruler (cakkavattī: D. III. 61). Teaching and officiating were done by the brahmans and hence the khattiyas generally did not concern themselves much with the sacred lore of the priests other than in exceptional cases. Heroism, vigour, steadiness, resourcefulness, not turning away in battle, generosity and leadership are given as the natural qualities of a khattiya in the Bhagavad-gītā (xviii, v. 43).

It is also important that it was the khattiya who revolted against the brahmanic sacerdotalism of the day and brought about an intellectual and social revolution in India as exemplified by Gautama Buddha himself. The role of the khattiyas as religious and philosophical speculators is also equally significant, especially in Buddhist and pre-Buddhist India where they seem to have more or less initiated the new and unorthodox ways of thinking as shown by the upanisads. They are even said to be the original possessors of the new knowledge. Gautama Buddha and Vardhamāna Mahāvīra, the two most important religious founders of ancient India, were both khattiyas. Their’s was a healthy and natural reaction against the priestcraft of the brahmans. The Aggaṇṭha-sutta which gives quite a logical and a historical account of the origin of the castes (D. III, 93ff) in contrast with the symbolical one given in the Purusa-sūkta, classes the khattiya primarily as an agriculturist or more correctly as a land-owner (khetānaṃ paññī khattiya), while, however, including them in the ruling class designated by the two terms mahaṃsmatata (unanimously elected) and rāja (king). All are collectively referred to as the "circle of khattiyas" (khattiyamanaṇḍala) and hence even as an agriculturist or a landed proprietor the khattiya falls within the ruling class.

2. For a detailed discussion on this point see Paul Deussen, The Philosophy of the Upanisads, T. and T. Clark, Edinburgh, 1906, pp. 17ff.

3. "In the Vedas, the word kṣetrapati, the "owner of a field" is the name of a person possessed of landed property and the name kṣetrapati 'the possessor of power' seems to have been applicable to any party exercising authority of any kind or extent". John Wilson, Indian Caste. Bombay, Edinburg and London. 1877, p. 108.
 KHAYĀNUPASSANĀ

The Pali works refer to a secret formula of the khattiyas (khattiyamaya) handed down traditionally among the khattiyas alone and kept secret from others. This seems to be a formula of admittance, a kind of password, whereby one could be identified as a khattiya with certainty (Miln. 190; DhpA. I, 166; J I VI, 375)

A.G.S. Kariyawasam

KHAYĀNUPASSANĀ, contemplation of consumption or decay, one of the eighteen principal kinds of contemplation by means of which, in the case of the perception of solid compactness (ghanasaññā), one develops insight regarding the transitory nature of phenomena.

As through these eighteen kinds of insight-knowledge the averse ideas and views are overcome, they are also called "ways of over coming by the opposits' (tad-ānga-pañhāna). Thus attachment to the solid, the firm, the permanent is overcome by contemplation of dissolution or waning (Vīsm. 694).

KHINĀSAVA (Skt. Kṣīnāśrava), an adjectival phrase meaning "one whose defiling influxes (āsavā) are destroyed" (khiṅa), is a stock epithet of an arahant (khūnāsava arahanto - S. I, 235). The āsavās that function as mental intoxicants or fermenting agents are generally reckoned to be three-fold, i.e. those of sensuality (kāmāsavā), of becoming (bhāvasava) and ignorance (avijjasava - M. I, pp. 7, 55). Sometimes influx of views (dīṭṭhāsavā) is added as the fourth category (D. II, pp. 81, 84, 91 etc). These constitute all corrupting tendencies, inclinations and obsessions that defile and regenerate the mind, thereby keeping beings tied to the continuous process of rebirth. Therefore, the sole purpose of leading the holy life (brahmacariya) is the destruction of these āsavas, which, in other words, means the attainment of arahantship (S.V, p. 28).

The Sabbāsava Sutta (M. I, p. 6 ff.) categorises the āsavās into seven kinds and enumerates seven modes of getting rid of them, viz. those to be got rid of by insight (dassana), by restraint (sammā), by indulgence (paṭisevani), by forbearance (adhiñvāsanā), by avoidance (parivajjāna), by dispelling (vinodanā) and those to be got rid of by cultivation (bhāvana) of certain virtues. The Āgīrttara nikāya (A. III, p. 83) enumerates five practices such as the reflection on the loathesomeness of the body and constant reflection on death as effective means of destroying āsavas. SaṃyuttaNikāya (S.V, p. 236) cites the cultivation of the five faculties of faith (saddhā), energy (viriya), mindfulness (sati), concentration of mind (samādhī) and insight (paññā) as leading to the destruction of āsavās. The same source (S.V.340) mentions that mindfulness with regard to inbreathing and outbreathing (ānāpānasamādhi) as an effective means of dispensing āsavas. The same source elsewhere (S.V. 434) states that the comprehension of the Four Noble Truths brings about the destruction of āsavas.

It is clear from these and similar other references in the nikāyas that whatever is the way that is cited as leading to the destruction of āsavas the main underl­lying emphasis is on knowing and seeing things in their true nature (yathābhūta), for in the final analysis it is this insight that brings about complete freedom of the mind from āsavas. The Āgīrttara nikāya (A. II, p. 183) explicitly states that the destruction of āsavās is to be experienced (saccikaraṇīya) through insight (paññā). Numerous other suttas such as the Sabbāsava Sutta (M. I, p. 71) stress this point. Explaining the origin and growth of āsavās it is pointed out that it is unwise-reflection (ayonisomanasikāra) that produces āsavas so far not produced and increases the āsavas already produced. Wise reflection (yoniso manasikāra), on the other hand, brings opposite results. It is often pointed out in the texts, that whereas ayonisomanasikāra makes one regard things which are impermanent as permanent, unsatisfactory as satisfactory non-substantial as substantial and unpleasant as pleasant Yonisomanasikāra makes one see the true nature of things. Therefore, it is yonisomanasikāra that leads to the full comprehension of the true nature of things through paññā (S.II, pp. 5, 6, 104).

However, a mere intellectual understanding of the true nature of things as impermanent (anicca), unsatisfactory (dukkha) and non-substantial (anatta) is not capable of dispensing all āsavas from the mind. It is clear that even with the comprehension reached at the stage og the attainment of sotāpatti one is not able to penetrate into the very depth of the nature of things so as to make it possible to burn away the āsavas without any residue (S.II. p. 127; V. p. 205). Even at this stage there lingers that faint notion of "I-less", the feeling that "This I am". As long as this notion remains even in its minutest form, one cannot completely become free from āsavas for, such a one's comprehension of the true nature of things is insufficient to bring about complete inner calm of the mind (ajjhata cetosā-
The fifteen texts are:

01. Khuddakapāṭha (q.v.) - 'Minor Readings'
02. Dhammapada (q.v.) - 'Path of virtuous conduct'
03. Udāna (q.v.) - Verses of uplift'
04. Itivuttaka (q.v.) - Thus said statements'
05. Sutta-nipāta (q.v.) - 'Collection of Suttas' (Woven cadences)
06. Vimāṇavatthu (q.v.) - 'Stories of the Mansions'

14. Buddhavamsa (q.v.) - 'Chronicle of the Buddhas'
15. Cariyā pīṭaka (q.v.) - Basket of conduct'

The word khuddhaka is a derivative from the word khudda, with the addition of the suffix ka. Both terms, khudda and khuddaka mean "small", "mean", "less important", "younger" and "inferior". The Pali Text Society (PTS) of London has translated the texts of the Khuddaka Nikāya into English under the title "Minor Anthologies". The terms "Khuddakāgama" and "Kṣudrakapiṭaka" are used in the Mahāyāna tradition as corresponding to the Pali "Khuddaka Nikāya". However when the nature of the Khuddaka texts is taken into consideration, all the above meanings of the word khudda are inappropriate. The Meaning 'small' may be found inappropriate as the Khuddaka Nikāya consists of large anthologies, too, such as Jātaka, Paṭissambhidā, Niddesa and Apadāna. Texts like Khuddakapāṭha, Petavatthu, Vimāṇavatthu, Cariyāpīṭaka and Buddhavamsa are comparatively small. The word khudda in this context should not be understood as less important' as treatises like Suttanipāta, Dhammapada, Udāna, Itivuttaka, Theragāthā, and Therigāthā cannot be considered as insignificant literary compositions, because they also contain important philosophical teachings of the Buddha. However the Khuddaka Nikāya as a whole is considered traditionally as less important compared with the first four Nikāyas ¹ as it is believed that the first four Nikāyas contain discourses preached by the Buddha, whereas, the texts of the Khuddaka Nikāya are compositions of the disciples.

A.K. Warder says that outside the first four Nikāyas there were a number of texts regarded as of inferior importance, either because they were compositions of followers of the Buddha or because their authenticity was doubtful, and these texts were collected in the Minor Tradition.² Although Warder opines that the texts of the Khuddaka Nikāya are less authentic than the other four Nikāyas, the Theravāda tradition considers

1. Oliver Abeynayaka Textual and Historical Analysis of the Khuddaka Nikāya p.16
Khuddaka Nikāya, too, as an integral part of the Tipitaka.

According to Paramatthajotikā (the commentary on the Khudda kapāṭha) the Khuddaka Nikāya is a collection of numerous units of the Dhamma which are short and variegated, and hence the name of the collection Khuddaka Nikāya.3

The Chinese equivalent for Khuddaka Nikāya is Tsa-Tsang. The definition of the term Tsa-Tsang is said to have been found in an old Chinese text entitled "The relation between the compilation of Tripitaka and Kṣūdraka Piṭaka". There are four definitions in this text, as follows:

I. Its reports differ from one another in act and thought. Therefore it is termed Tsa-Tsang.

II. The causes of the former births of the Buddha, Arahants, the devas, the Brahmā and tirthakas are displayed in it. Therefore it is termed Tsa-Tsang.

III. Stanzas are abundant in it. It explains matters pertaining to the twelve causes (nīdāna) and bases (āyatana) in detail Therefore it is termed Tsa-tsang.

IV. It contains details about the existence of Bodhisatavas. Therefore it is termed Tsa-Tsang.4

**Chronology of the Khuddaka Nikāya**

Although the Theravāda tradition accepts that the five Nikāyas of the Sutta Piṭaka were compiled at the first council, the Khuddaka Nikāya is generally believed to have been developed and compiled during a long period of time, beginning from the Buddha’s day up to about the time of the 3rd Buddhist council.

The earliest account of the first council occurring in the Cullavagga of the Vinaya states that the five Nikāyas were rehearsed at the first council. Budaghosa commenting on the first council says that the five Nikāyas are Dīgha Nikāya, Majjhima Nikāya, Sanyutta Nikāya, Aṅguttara Nikāya and Khuddaka Nikāya. He further says that the Khuddaka Nikāya includes all other sayings of the Buddha that are not included in the first four Nikāyas.6

Sumangalavilāsinī, the commentary on the Dīgha Nikāya, does not mention that a Nikāya named Khuddaka was rehearsed at the first council, but says that after rehearsing the first four Nikāyas the Abhidhamma Piṭaka was rehearsed and it further says that "The Dīghabhāṇakas are of the opinion that after rehearsing the Abhidhamma Piṭaka, the Jātaka, Mahāniddesa, Paṭisambhidā, Suttonipāta, Dhammapada, Udāna, Itivattaka, Vinānavattitu, Petavatthu, Theragāthā, and Therīgāthā were rehearsed and were included in the Abhidhamma Piṭaka (q.v.) having named them as khuddakagantha. The Majjhima bhāṇakas also accept the Khuddakagantha with three more additions, i.e., Apadāna, Buddhavamsa and Cariyāpiṭaka, and include them in the Sutta Piṭaka.7

The Mahāvamsa does not mention about the rehearsal of Nikāyas. It says that the Vinaya and the Dhamma were rehearsed (Mil. ch III. V. 32). The Dīpavamsa reports that the Āgama Piṭaka was rehearsed, at the first council and this Āgama Piṭaka was named ‘Suttas’ by Elders. (Dpv. IV. v. 20) Although Dīpavamsa does not mention about the Nikāyas when reporting the first council, it casually reminds us of the conception of five Nikāyas in its report of the third council (Dpv. V. v 33), saying that the Mahāsāṅghikas destroyed the meaning and doctrine of the five Nikāyas. Rhys Davids refers to inscriptive evidence as proof to the existence of five Nikāyas by the time of the third century B.C. The term Pañca-nekāyika found in an inscription is said to mean "one who knows the five Nikāyas by heart".8

Milindapañha, written in the first century A.C. also mentions about bhikkhus who were well versed in the five Nikāyas. (Mil. p. 22). It mentions also some of the texts of the present Khuddaka Nikāya (op. cit 281 Cariyāpiṭaka, 350-Buddhavamsa, 411, 414 Suttanipāta).

---

4. Oliver Abeynayaka, op cit p. 18 ff
5. Cullavagga p. 287 (etena vā upāyena Pañca-nikāye pucchi)
6. VinA. 1, p. 16
7. DA. 1, p. 15
8. Rhys Davids, T.W. Buddhist India, p. 168
Regarding the emergence of the Khuddaka Nikāya, chronological tables of the Pali canon, one by Rhys Davids and the other by B.C. Law, are noteworthy. Rhys Davids's table includes elements of the Theravāda Tipiṭaka from the time of the Buddha to the time of Asoka. When it comes to the 9th stage in this list all texts of the Khuddaka Nikāya were complete:

1. The simple statements of Buddhist doctrine now found, in identical words, in paragraphs or verses recurring in all the books.
2. Episodes found, in identical words, in two or more of the existing books.
3. The sīlas, the Pārāyana, the Octades, the Pātimokkha.
4. The Dīgha, Majjhima, Aṅguttara, and Saṃyutta, Nikāyas.
5. The Sutta Nipāta, the Thera-and Theri-Gāthās, the Udānas, and the Khuddakapāṭha.
6. The Suttavibhaṅga and the Khuddhakas.
7. The Jātakas and the Dhammapadas.
8. The Niddesa, the Itivuttakas, and the Paṭisambhidā.
9. The Paṭimokkha code completing 227 rules, the Āṭṭhaka group of four or sixteen poems, the Sikkhāpadas.
10. The Āṭṭhakapāṭha; the last of which is the Kathāvattthu and the earliest probably the Puggalapaññatti.9

B.C. Law offers a detailed criticism regarding some suggestions made by Rhys Davids and gives another chronological table of the Pali canon, in which Khuddakapāṭha is the last text to be added to the texts of the Pali canon:

01. The simple statements of Buddhist doctrine now found in identical works in paragraphs or verses recurring in all the books.
02. Episodes found in identical words in two or more of the existing books.
03. The Silas, the Pārāyana group of sixteen poems without the prologue, the Āṭṭhaka group of four or sixteen poems, the Sikkhāpadas.
04. Dīgha, Vol. 1, the Majjhima, the Saṃyutta, the Aṅguttara, and earlier Pātimokkha code of 152 rules.
05. The Dīgha, Vols. 11 and 111, the Thera-therīgātthā, the collection of 500 Jātakas, Suttavibhaṅga, Paṭisambhidāmagga, Puggalapaññatti and the Vihiṅga.

06. The Mahāvagga and the Cullavagga, the Pātimokkha code completing 227 rules, the Vimānavaṭṭatu and Petavaṭṭatu, the Dhammapada and the Kathāvattthu.
07. The Cullaniddesa, the Mahāniddesa, the Udāna, the Itivuttaka, the Suttanipīṭha, the Dhammacakkhā, the Yamaka, and the Paṭiṭhāna.
08. The Bhuddhavamsa, the Cariyāpiṭaka, and the Apadāna.
09. The Parivārapāṭha.
10. The Khuddakapāṭha.10

The above given details supports the view that the Khuddaka Nikāya; whether a Nikāya by that name was rehearsed or not in the First Council, emerged between the period from the day of the Buddha to the time of the third council. When Buddhaghosa visited Sri Lanka in the fifteenth century the Khuddaka Nikāya was complete with all its fifteen texts.

Various lists of the Khuddaka texts: The lists of khuddaka texts forming the Khuddaka Nikāya differ from one another. Some of the lists are as follows:

01. Dīghabhāṇakas' list according to the PTS edition of the Sumangalavilāsini: Jātaka, Mahā-niddesa, Cūla-Niddesa, Paṭisambhidāmagga, Suttanipāta, Dhammapada Udāna, Itivuttaka, Vimānavaṭṭatu, Thera-therīgāṭthā
02. Dīghabhāṇakas' list according to the Sinhalese edition of the Sumangalavilāsini: Jātaka, Niddesa, Paṭisambhidāmagga, Suttanipāta, Dhammapada, Udāna, Itivuttaka, Vimānavaṭṭatu, Petavatthu, Thera-therīgāṭthā
03. Dīghabhāṇakas' list according to the Sarathadāpani: Jātaka, Mahā-Niddesa, Paṭisambhidāmagga, Apadāna, Suttanipāta, Khuddakapāṭha, Dhammapada, Udāna, Itivuttak, Vimānavaṭṭatu, Petavatthu, Theraghāṭhā, Therīgāṭthā
04. Majjhimabhāṇakas, list according to the PTS edition of the Sumangalavilāsini: Jātaka, Mahā-Niddesa, Cūla-Niddesa, Paṭisambhidāmagga, Suttanipāta, Dhammapada, Udāna, Itivuttaka, Vimānavaṭṭatu, Thera-therīgāṭthā, Cariyā piṭaka, Apadāna, Buddhavamsa
05. Majjhimabhāṇakas', list according to the Sinhalese edition of the Sumangalavilāsini: Jātaka, Niddesa, Paṭisambhidāmagga, Suttanipāta, Dhammapada, Udāna, Itivuttaka, Vimānavaṭṭatu, Petavatthu,

06. Majjhimabhaṅkas', list according to the Sāratthadīpani: Jātaka, Mahā-Niddesa, Paṭisambhidāmagga, Apadāna, Suttanipāta, Khuddakapāṭha, Dhammapada, Udāna, Itivuttaka, Viṁśatāthā, Petavatthu, Theragāthā, Therīgāthā, Cariyāpiṭaka, Buddhavamsa.

08. The list given in the Chinese Samantapāśasākā: Dhammapada, Apadāna, Udāna, Itivuttaka, Niṭāpa, Viṁśatāthā, Peta, Thera, Therī, Jātaka, Niddesa, Paṭisambhiddhā, Buddhavamsa, Cariyāpiṭaka.

09. The list found in the Dhamagupta Vinaya: Jātaka, Ityuttaka, Nidāna, Vaipulya, Adbhutadharmā, Avadāna, Upadeśa, Arthavarga, Dhammapada, Pārīyāna, Samcódana, Sthaviragāthā.

13. The Burmese tradition accepts the Suttasaṅgaha, Petakopadesa Nettipakaraṇa and Milindapañha in addition to the works given by Buddhaghosa.

14. The Siamese tradition omits 6-10 as well as the last three of the list of Buddhaghosa whose list was given above.11

Khuddaka Ganthas

We have already noticed that there are several lists of Khuddaka Ganthas or treatises of the Khuddaka Nikāya and a list of fifteen texts presented by the commentator Buddhaghosa is generally accepted as the Khuddaka Nikāya by the Sri Lanka Theravāda tradition. Following is a brief description of each of them.

1. Khuddakapāṭha - "Minor Textual readings". A small book consisting of short (doctrinal) passages (pāṭha) selected from the texts of the Pali Canon, for the use of trainee monks (sīmaṇeras). The nine passages along with their sources are as follows:

   I. Saranattaya - 'The three Refuges' (Vin.1,22)
   II. Dasasiikkhāpada - 'The ten Precepts' - (Vin.1, 83-4 Vbh 285ff)
   III. Dvattimāsākāra - The Thirty two fold Aspect - (Ps 1, 6-7; cf D 11, 293; M.1, 57; 111. 90 etc.)
   IV. Kumāra Pañha - 'The Boy's questions' - (cf A.V. 50 ff; 55ff)
   V. Māṇgalasutta - 'The Good-omen Discourse' (Sn. vv 258-69)
   VI. Ratanasutta - "The Jewel discourse"-(Sn. vv 222-38)
   VII. Tirokuḍhasutta - The without The walls Discourse (Pv., p.4-5)
   VIII. Nidhikaṇḍasutta - 'The Treasure-store Discourse'
   IX. Mettasutta - The Loving kindness Discourse (Sn. vv 143-52)

Khuddakapāṭha is said to have been compiled in Sri Lanka, extracting it's contents from earlier works.12 Paramatthajotikā or Khuddakapāṭha Aṭṭhakathā by Buddhaghosa is the commentary on Khuddakapāṭha.

2. Dhammapada 'Path of Virtuous conduct' is an anthology of 423 verses culled from canonical texts, arranged under 26 chapters.

3. Udāna 'Verses of Uplift' is a collection of 80 discourses containing solemn utterences of the Buddha in verse form along with descriptions of the occasions in which these utterences were made. The eighty discourses are arranged under eight chapters (Vagga).

4. Itivuttaka 'Thus said statements', consists of 112 discourses treated under four sections (niṭāta). Each sutta begins with the statement: 'Thus said the Buddha' (vuttaṃ hetam bhagavatā) and hence the name of the text.

5. Sutta Niṭāta 'Woven Cadences' or 'Collection of Discourses (suttas)' contains discourses of the Buddha in a mixture of verse and prose arranged

11. Oliver Abenayaka op cit p. 38-40
12. The Minor Readings (khuddakapāṭha) PTS. Translator's introduction (Translated by Bhikkhu Nanamoli)
under five chapters (vagga).

6. *Vimānavaṭṭhu* 'Stories of the mansions' contains eighty five episodes of deities living in magnificent mansions (vimāna). Ven. Mahā Moggallāna, ven. Vaṭṭīsa and several other elders meet deities on many occasions and being questioned by them as to what good kamma resulted in their present splendour, the deities relate the good acts performed by them in past lives as human beings.

7. *Petavatthu* 'The stories of the Departed' contains fifty one episodes of the Departed Ones (peta) arranged under four chapters (vagga). In answer to the Buddha as well as to other elder monks like Mahāmoggallāna the petas relate their misdeeds in their past lives that has resulted in their present misery. The episodes are presented entirely in verse.

8. *Therāgāthā* 'Verses of (male) Elders' contains episodes of 264 elders (bhikkhus) related by each of them after attaining arahantship. These episodes reveal the agonising experiences these elders underwent as laymen and the great change that came upon them after they entered the order of monks and attained Arahantship. The episodes are presented entirely in verse.

9. *Therīgāthā* 'Verses of female Elders' contains episodes of 73 female Elders related by each of them after attaining Arahantship. In these episodes the theris reveal the miserable lives led by them as lay women and the peace of mind and happiness they enjoyed as members of the Order of bhikkhus.

10. *Jātaka* 'Birth Stories', contains 547 stories relating to past lives of the Bodhisattva. The stories are entirely in verse.

11. *Niddesa* 'Expositions', a commentarial work on a section of the *Sutta Nikāya*. The first part of this commentary which is called Mahā Niddesa comments on the *Ajṭhacakavagga* of the *Sutta Nikāya* and the second part called Cūla Niddesa comments on the *Pārāyana Vagga* and the third sutta, namely Khaggavisāṇa sutta, of the *Uragavagga*.

12. *Paṭisambhidāmagga* 'Path of Discrimination or 'Path of Analysis', a treatise explaining analytically and systematically thirty doctrinal topics, organised under three chapters.

13. *Apadāna* 'Stories of Arahants', contains mainly stories of past lives of Arahants, male and female who lived during the time of the Buddha. Five hundred and fifty nine episodes are about male Arahants while forty are about female Arahants. There are two short chapters at the commencement of the treatise dealing with Buddhas and Paccekabuddhas. The entire treatise is in verse.

14. *Buddhavamsa* 'Chronicle of the Buddhas' deals with the biographies of twenty four, Buddhas who preceded Gotama Buddha, and ends with the biography of Gotama Buddha. The treatise is in verse.

15. *Cariyāpiṭaka* 'Basket of Conduct' is a collection of past birth stories of the Buddha illustrative of seven out of ten perfections (pāramis) of the Bodhisattva. The stories given in verse form have their parallels in the *Jātaka* collection.

Ruwan Bandara Adhikari

**KHUDDAKAPĀTHA**, The Minor Reading, is the first and the shortest of the fifteen texts of the *Khuṭṭakā Nikāya* (q.v). *Khuddakapāṭha* contains the following nine extracts (pātha) from canonical texts.

1. *Saraṇattaya* - 'The Three Refuges'
2. *Dasasikkhāpada* - 'The Ten Precepts'
3. *Dvattimāsikārā* - 'The Thirty. two Aspects'
4. *Kumārapāṇī* - 'The Boy's Questions'
5. *Maṅgalasutta* - 'The Good-Omen Discourse'
7. *Tirokuṇḍhasutta* - 'The Across-The-Wall Discourse'
8. *Nidhikhaṇḍasutta* - 'The Treasure-store Discourse'
9. *Mettasutta* - 'The Loving kindness Discourse'

B.C. Law holds the view that the *Khuddakapāṭha* derived its name from the first four passages which are shorter in comparison with the remaining ones. This text is supposed to have been used as a handbook for the novices or sāmanera. Most passages in it are of interest to the training novices. According to the tradition prevailing even today the novices should be acquainted with teachings such as *Saraṇattaya*, *Dasasikkhāpada* and *Dvattimāsikārā*, etc. These sections were selected from older texts such as *Vinaya*.

* The compiler of this article courteously acknowledges utilising material from the following books:
1. Abeynayaka, Oliver. *A Textual and Historical Analysis of the Khuddaka Nikāya*.
2. Rhys Davids, T.W. *Buddhist India*.
The ten questions and the answers to them are:

1. One is what? - All creatures subsist by nutriment.
2. Two is what? - Name and form.
3. Three is what? - Three kinds of feeling.
4. Four is what? - Four Noble Truths.
5. Five is what? - Five categories of grasping.
7. Seven is what? - Seven Enlightenment factors.

3. Dvattisākāra or 'the thirty two constituents'

In this short passage 32 parts constituting the human body are enumerated. This passage, as a whole, is a subject for meditation (kammaññhāna).

4. Kumārapañha or the 'Boy' Question.

In this section a set of ten questions with brief answers are given. According to the commentary (Khāp. 75) the Buddha after testing the knowledge of one of the great disciples named Sopākā by means of this set of ten questions gave him the higher-ordination (Upasampada) as he answered them correctly.

The ten questions and the answers to them are:

1. Pānātipāta veramani sikkhāpadanā samādiyāmi.
2. Adimādaññi veramani sikkhāpadanā samādiyāmi.
3. Abhāmacariya veramani sikkhāpadanā samādiyāmi.
5. Surāmeraya-majjapāmadattāthāna veramani sikkhāpadanā samādiyāmi.
6. Vikālabhajanā veramani sikkhāpadanā samādiyāmi.

I undertake to keep the training precept of abstention from dancing, singing, music, and contortionist shows'.

I undertake to keep the training precept of abstention from using high couches and large couches'.

I undertake to keep the training precept of abstention from accepting gold and silver'.

I undertake to keep the training precept of abstention from eating what the auspicious things are. The sutta

1. A History of Pali Literature Vol. I p. 194
2. Liver Abeynayaka, A Textual and Historical Analysis of the Khuddaka Nikāya, p. 116
contains thirty seven good omens.

6. Ratana Sutta or 'the Jewel Discourse': This was preached at Vesali on the invitation of the Licchavis who begged from the Buddha to rid the city of the threefold dangers which had fallen upon it. Ratana Sutta consisting of seventeen verses is the longest discourse (pātha) of the Khuddakaṇḍa.

7. Tirotukka Sutta, 'the Without the walls discourse', describes how human beings can help their dead relatives who are born among the departed spirits (peta) by transferring to them the merit that accrue from giving alms to the Saṅgha.

8. Nidhikhaṇḍa Sutta, 'the treasure store discourse', is the only one of its kind that cannot be traced else where in the canon. The sutta says that a man buries his treasure in order to use it in time of need, but very often he loses it. Not so is the merit accrued from good deeds.

9. Metta Sutta or 'the loving kindness discourse' which is popularly known as Karaniyametta Sutta contains fifteen qualities that an individual should strive to develop in him in order to attain perfection. The Sutta further says that an individual, having developed those qualities, should then harbour thoughts of loving kindness to all living beings in all directions. Such an individual will not fall into error and being virtuous and endowed with insight he discards attachment to sense-desires.

KILESA (Skt. klesā) literally means impurity, defilement or corruption. Derived from the root klis', kilesa refers to 'things which are defiled' (svaYaṃca kliṣṭatvā: Madhyantaviibhāga-tīkā, p. 239-40; svaYaṃ sankliṣṭatātā, (Vism. 586) and which in turn defile the mind of sentient beings (.....kilesavatthūhi saṅkīlisatati lokasannvīṣo” Ps. I, 130; kilesantī upatāpiṇīti kīsē: PsA. I. 285; Vism. 586; klesāh kliṣyantī: Viśhāṣprabhāvytī, p. 18; kliṣyantīt klesāh: ibid. p. 219 klesāh kliṣyantī satvacittasatantānāni: Mdhvr. p. 334). Asanga says that klesās possess the characteristic of being agitated and stirred and that the mind and body of beings are agitated and stirred by them (Abhsy. p. 43). Thus kilesas, being the defiled mental states which agitate and defile the mind, may be rendered as 'passion' in English.

Passions also cause the defilement of man's actions and birth (karma-janna-saṅkilesā: Madhyantaviibhāga-jīkā p. 239-40); and forms one of the two main causes of continued existence (saṃsāra), the other cause being karmic actions themselves (Mdhvr. p. 451; Netti. p. 113; Vism. p. 591). Of these two causes, i.e. passions and actions, the former occupies the dominant place, for it is only those actions which are dominated by passions that are capable of producing rebirth (ibid.); actions of a person who has put an end to all passions (prahīnaklesā) does not produce rebirth (Viśāṣprabhāvytī-sīdhiḥ; ed. s. Levi, Paris, 1925, pp. 38-9).

In Pali literature passions have been identified with what constitutes the truth of the origination of suffering (samudaya-sacca: Vbh. p. 120; Netti. p. 191 the second of the four noble truths. Asanga adds actions (karma) and says that the samudayasacca consists of passions as well as passion-dominated actions (Abhsy. p. 43).

Craving (ṛṣṇā), one of the passions, has been cited in the sūtras as the cause of suffering because it is the basic passion which is mainly instrumental in bringing about rebirth and suffering (ibid).

Thus, passions become a hindrance to the attainment of emancipation (mokṣaprāpter āvarenaṃ: Viśāṣprabhāvytī-sīdhiḥ, p. 15), because the mind which is defiled with passions is neither soft, nor pliant, nor gleaming, nor perfectly composed for the destruction of the cankers (āsava: S. V., 92-3).

We find in Pali literature the terms kilesa and saṅkilesa, being used with reference to passions. the term upakilesa denoting 'impurity' is found more frequently than the other two terms in the early Nikāyas. But, as we come to the later works of the Pali Sutta Piṭaka such as the Nīdesa and the Paṭisambhidāmagga and to the texts of the Abhidhāna-ma Piṭaka, and, still later, to the Pali commentaries, we find upakilesa and saṅkilesa being relegated to the background and their place being occupied by kilesa. The term kilesa has thus become the standard term for passions in the scholastic works of Pali literature.

The well-known three roots of evil (akusala-māla), namely, lust, greed or craving (rāga, lobha or taṇhā), hatred (dosa) and delusion (mohā or avijjā) are spoken of as kilesa (Vin. III, 93; Dhs. p. 181). These three are called upakilesa in the Mājjhima Nīkāya (I, 191).
The Netippakarana (p. 86) gives two of them, tanhā and avijjā, also under upakkilesa. According to these contexts, passions are the roots of evil. This is in complete agreement with the Abhidharmakośa which expressly says that passions are the roots of evil (Abh. p. 147). They are like roots or seeds which produce as well as sustain evil volitions (akusala-cetanā) which find expression in the form of evil actions (akusalakamma).

The Niddesa (I, p. 433f.), after explaining kilesa as duccarita, gives rāga, dosa, mohā as well as all evil formative forces (sabba-akusala-abhisaiṅkhāra) as examples of kilesa (see also Vbh. p. 44). The inclusion of akusala-abhisaiṅkhāra in kilesa is very significant. The term akusala-abhisaiṅkhāra is synonymous with apuṇṇābhisaiṅkhāra, and they refer to evil mental states (akusala-cetasika). The Theravāda Abhidhamma has a list of fourteen akusala-cetasika, namely, delusion (mohā), lack of moral shame (ahirika), lack of moral dread (anottappa), restlessness (uddhacca), greed (lobha), speculative views (diṭṭhi), conceit (māna), hatred (dosa), jealousy (issa), avarice (macchariya) scruples (kukkucca), torpor (ṭhīna), langour (middha) and sceptical doubts (vicikicchā): Abhs. p. 6. These fourteen include the three roots of evil, mohā, lobha and dosa and according to the Niddesa (I, 433-4) and the Vibhaṅga (p.44), the remaining eleven akusala-cetasika, too, should be considered kilesa. But, the standard list of kilesa in the Theravāda consists of only ten; three roots of evil plus seven of the remaining akusala-cetasika, namely māna, diṭṭhi, vicikicchā, thīna, uddhacca, ahirika and anottappa (Ps. I, 130; Diḥ 1548; Vbh. 341; Vism. 683; the eight kilesas given in the Vibhaṅga, p. 385, are the first eight of the above ten). Why the remaining four akusala-cetasika, viz., issā, macchariya, middha and kukkucca, are not considered kilesa, is not stated in the texts, The Dhammasaṅgani (p. 216-17) only says that all akusalas are not kilesa, that only ten of them are kilesa which are also called saṅkilesa-khadhamma because they demote the mind. Akusalas other than the above ten are not classed as kilesa.

In the classification of the five mental hindrances (nīvaraṇa), middha is coupled with thīna and considered as one hindrance; so is kukkucca with uddhacca. Even if, on this basis, we include middha and kukkucca in thīna and uddhacca respectively of the kilesa classification, the question remains as to why issā and macchariya are left out. They, too, define the mind as, say, ahirika or anottappa do. It should be mentioned here that issā and macchariya occur as two of the seventeen kilesas given in the Paṭisambhidāmagga (II, 102) and also as two of the sixteen upakkilesas given in the Majjhimanākāya (I, 36ff). All this shows a certain flexibility in early Theravada not only in the use of terms like kilesa, upakkilesa and saṅkilesa, but also in the classification of kilesa and upakkilesa.

In Buddhist Sanskrit literature which represents a number of later schools of Buddhism, we find a systematic classification of passions, and as a result, the two terms, klesa and sāṅklesa, refer to two distinct categories of passions. In these texts, the passions are classified into two groups, primary or basic passions (klesa or miḍaklesa) and secondary or derived passions (upaklesa): this classification is entirely based on the nature of the passions. All klesas, according to these texts, are also upaklesas but all upaklesas are not klesas (Abhk. p.147; Abhsy. p. 47). The difference, as the Abhidharmakośa puts it, is that the klesas are the roots of evil while the upaklesas are not, the latter refers to secondary passions which arise from basic passions.

There are six basic passions, namely, lust (rāga), hatred (pratigha), delusion (mohā or avidyā), conceit (māna) dogmatic views (drsti) and doubts (vimatī or vicikitsā. Abhk. ch. V, Vihāṇīpatimatratāsiddhi, p. 28; Abhsy. p. 43). Dogmatic views are of five kinds, namely, belief in a personality (satkāyadrsti), extremist views (antagrahadrsti), wrong views (mithyadṛsti), clinging to views (drṣṭiparāmasa) and to rites and rituals (silvrataprāmasa). If the five kinds of views are taken as separate passions, the number will be ten. All Buddhist Sanskrit texts agree on these passions
which are six or ten in number.

We may compare with advantage the two lists of passions given in the Pali and the Sanskrit texts.

It appears from the above that the first six passions in both lists are identical; rāga 'lustful attachment' and lobha 'covetousness' refer to the same passion, so do dosa 'malice' and pratigha, 'hatred'. The last four of the Pali list have not found a place in the Sanskrit list.

The six passions in the Sanskrit list which are identical with the first six of the Pali list are the basic passions. All other passions arise from them. This is in complete agreement with the classification of passions into seven latent tendencies (anusāya or anusaya), a classification of kilesa made from a different standpoint. In fact, the two terms klesa and anusaya, are used synonymously (Vism. 586; Abh. ch. V. Abhsy. 44), with the exception that the two latent tendencies, namely, sensuous greed (kāmarāga) and lust for continued existence (bhavarāga) are considered one in the kilesa/klesa classification, under rāga.

</tbody>
</table>

The anusaya are passions that lie dormant in an individual's stream of consciousness (citta-santāna) which in the Theravāda is called bhavaṅgacitta and in the Yogācāra school, the āliyavipākāna. This stream of consciousness exists from time unknown (S. II, 178) and continues to exist until an individual attains parinibbāna. The anusaya that lie dormant in it exist until the individual attains arahantship or the eighth stage (bhūmi) of a Mahāyāna Bodhisattva. Thus it is quite clear that the anusaya are basic passions.

The inclusion of thīna, uddhacca, ahirika and anottappa in the Theravāda list of ten passions is due to the fact that the Theravadins do not distinguish between basic passions (mūla-klesā) and secondary passions (upaklesā). These four passions in fact have found their place among secondary passions enumerated by the Yogācāra school (Vijjāaptimatrātāsiddhi, ed. by S. Levi, 1925; p. 29-30). But an exception may be made with regard to uddhacca which, in addition to the six basic passions, is regarded as one of the ten fetters (saṃyojana) enumerated in the Pali texts.

The first three fetters in the above list represent the first passion while the eighth and the ninth fetters represent the sixth passion. Others are identical except the tenth fetter which is not found among the six basic passions, but is given as one of the ten passions enumerated by the Theravadins.

Thus a distinction may be made with regard to the ten passions of the Theravadins on the basis of their nature. The first six passions are the most radical ones which are otherwise described as anusaya. Uddhacca may be considered second in importance, for it is one of the fetters. The remaining three, thīna, ahirika and anottappa, may be considered secondary ones.

Although the two terms, kilesa and upakkilesa are used indiscriminately in the Pali literature, an examination of passions given in the Majjhima-nikāya (1, 3ff) as upakkilesa will help us to make a distinction between kilesa and upakkilesa, namely, 1. greed and covetousness (abhijjhā-visamalobha), 2. malevolence (vyāpāda), 3. anger (kodha), 4. treachery (upanāha), 5. hypocrisy (makkha), 6. spite (palāsa), 7. jealousy (issā), 8. envy (macchariya), 9. deceit (maññā), 10. trick-
Moha or avijjā, the most radical of all passions, is conspicuous by its absence from the list. Except perhaps for abhijjhā-visamalobha, vyāpāda and māna which may be considered as lobha, dosa and māna respectively which are basic passions, all others are secondary passions derived from one or the other of the basic passions. Kūtha, and upanāha, for instance, are passions derived from dosa; so are atimāna and mada which are different intensifications of māna. If, on the other hand, the three passions, abhijjhā-visamalobha, vyāpāda and māna, are intensified states of lobha, dosa and māna, all the sixteen may be considered secondary passions.

There is also a list of seventeen passions called kilesa in the Pāṭisambhidāmagga (II, 107); most of these seventeen correspond to the sixteen upakkilesa discussed above; a comparison of the two lists, therefore, may be made with advantage.

**Upakkilesa, M. I, 36-7**

1. abhijjhā-visamalobha
2. vyāpāda
3. kūtha
4. upanāha
5. makkha
6. palāsa
7. issā
8. macchariya
9. māyā
10. sāttheyya
11. thambha
12. sārambha
13. māna
14. atimāna
15. mada
16. pamāda
17.

**Kilesa, Ps. II, 107**

1. rāga
2. dosa
3. kūtha
4. upanāha
5. makkha
6. palāsa
7. issā
8. macchariya
9. māyā
10. sāttheyya
11. thambha
12. sārambha
13. māna
14. atimāna
15. mada
16. mohā

In the Pāṭisambhidāmagga list we find the three roots of evil rāga (1), dosa (2), and mohā (17), the first two are represented in the Majjhima nikāya list by Abhijjhāvisamalobha and vyāpāda respectively. Mohā is absent in that list. All the remaining passions in both lists are identical. They are called kilesa in the Pāṭisambhidāmagga, and upakkilesa in the Majjhima nikāya.

Of the sixteen passions mentioned as upakkilesa in the Majjhima, only māna is found as one of the kilesa in the standard list of ten kilesa: if abhijjhā-visamalobha and vyāpāda be identical with lobha and dosa respectively, the number of passions common to the two lists would be three. As far as the seventeen passions mentioned in the Pāṭisambhidāmagga are concerned, we find four of them in the standard list of kilesa: they are rāga or lobha, dosa, mohā, and māna. If we compare these three lists, one of ten kilesas, the second of 17 kilesas, and the third of 16 upakkilesas with the list of akusala-cetasika, we find in addition issā and macchariya as passions common to all three lists; they are not found in the standard list of ten kilesas.

</table>

The remaining eleven passions (upakkilesa; M. I, 36-7; kilesa; Ps. II, 107) are not akusala-cetasikas. They include kūtha, upanāha, makkha, palāsa, māyā, sāttheyya, thambha, sārambha, atimāna, mada and pamāda. These eleven may be considered purely secondary passions. Their origin may be traced in one or the other of the basic passions.

The term upakkilesa is more frequently used with reference to the five mental hindrances, namely, sensuous desire (kāmancchanda), ill-will (vyāpada), torpor and languor (thīnāmidelha), restlessness and scruples (uddhacca-kukkucca) and sceptical doubt (victikicchā; D. II, 49; S.V. 92-3, 108, 115, A. II, 17, III, 16 386; V. 195: Vbh. 256; DhP.A. 162 etc.) In all the lists of passions so far discussed, the term
kāmacchanda is not found; it is identical with kāmarāga, an aspect of rāga, which is found in other lists. We saw vyāpīḍa as one of the sixteen upakkileṣas mentioned in the Majjhima Nikāya (I, 36-7). Uddhacca-kukkuccha is split into two and considered as two separate akusala cetasikas. So is thīnamiddha. Vīcikicchā is both a kilesa and an akusalacetasika. Thus, nīvarana add nothing new to the passions we have seen.

We also find a division of upakkileṣas in the Aṅguttara Nikāya (I, 254) made on the basis of their intensity. It gives three kinds of them: The first is gross ones (oḷārika upakkileṣa) consisting of evil actions performed by deed, word and thought. These may be identified with the tenfold courses of evil action (dasa-akusala-kammapatha). The second group consists of moderately gross ones (majjhima): they include thoughts of lust (kāma-vitakka), thoughts of hatred (vyāpīḍa-vitakka) and malevolent thoughts (vīhiṃsā vitakka). The last group is called subtle (sukuma); which include reflections on one’s relatives (nāti-vitakka), one’s land (janapadavitakka) and on one’s reputation (ana-vanāṭiti-vitakka).

In this connection mention should be made of the existence of a controversy on the three mental evil actions (mano-duccarita) given in the Aṅguttara Nikāya (I, 254) as the third category of oḷārika upakkileṣa. The three mental evil actions are covetousness (abhijjāti), ill-will (vyāpīḍa) and wrong views (micchaddhiṭṭhi). According to the suttas they are purely mental evil actions (mano-kamma), and actions are identical with volitions (cetanā: cetanāhaṃ bhikkhave kannaṃ vadāmi: A III, 415). While the Sāturāntikas adhered to this view that the three mental evil actions are volitions (Sphutārthābhidharmakoṣa -vyākhyā, p. 400), the Vaibhāṣikas who favoured the Abhidharma tradition considered them to be passions (kilesā) that produce evil volitions, and not actions by themselves (Vibhāṣaprabhāvīttī on kārikā 188 of Abhidharmadi.pā).

In Buddhist Sanskrit literature we find a very systematic and detailed treatment of passions, based on the nature of their different categories. Six (or ten) of them are termed basic passions, and others the secondary passions. The Abhidharmakoṣa (ch.V.) gives a list of sixteen secondary passions; ten of them are paryavasthāna and the remaining six are called kilesa-mala.

envy (mātsarya), 3. lack of moral shame (ahriyā), 4. lack of moral dread (anapatrāpya), 5. restlessness (aviddhatya), 6. scruples (kaukrtya), 7. torpor (styeña), 8. langour (middha), 9. anger (krodha) and hypocrincy (mṛukṣa: Abbk. p. 147 f.)

The six kilesa-mala are 1. deceit (māyā) 2. trickery (sāṭhya), 3. complacency (mada), 4. spite (pradāśa), 5. treachery (upanātha) and 6. violence (vīhiṃsā: Abbk. p. 148).

The Vījñaptimātratāsiddhi (ed., S. Levi, 1925, 29-30) adds 8 more secondary passions to the Abhidharmakoṣa list of sixteen which are given above, and calls all the twenty four upakkileṣas. The eight are 1. indolence (pramāda), 2. reflection (vitarka), 3. investigation (vicāra), 4. lack of faith (asrādhyā), 5. lethargy (kauśīya), 6. forgetfulness (muṣita-smṛti), 7. perplexity (vīkṣepa), and 8. lack of awareness (asamprajanya).

Of these twenty-four secondary passions, abhiyā, anapatrāpya, styāna and aviddhatya are considered kilesa in the Pali texts, and are included in the standard Pali list of ten kilesa. Ten of the upakkileṣa, namely, 1. krodha, 2. upanātha 3. mṛukṣa, 4. pradāśa, 5. irṣyā, 6. mātsarya, 7. māyā, 8. satyā, 9. mada and 10. pramāda have their parallels among the sixteen upakkileṣa of the Majjhima Nikāya (I, 36-37) a majority of which correspond to seventeen kilesa listed in the Pātisambhidāmagga (II, 107). The remaining ten upakkileṣa, namely, 1. mādha, 2. kaukrtya, 3. vitarka, 4. vicāra, 5. asārdhyā, 6. kauśīya, 7. muṣita-smṛti, 8. vīkṣepa, 9. asamprajanya and vīhiṃsā, though they occur fairly frequently in the Pali texts, are not described in them as either kilesa or upakkileṣa. Two of them, mādha and kaukrtya are, however, found in the Pali texts associated with two nīvaranās, namely, thīna-middha and uddhacca-kukkuccha.

Now, we may compare the four lists of secondary passions found in the Majjhima Nikāya (I, 36-37), the Pātisambhidāmagga (II, 107), the Abhidharmakoṣa ch. V and the Vījñaptimātratāsiddhi pp. 29-30)

Upakkileṣa Kilesa Paryavasthāna Upakkileṣa

The ten paryavasthāna are 1. jealousy (irṣyā), 2.
As Buddhism deals mainly with psychological phenomena on an ethical basis, analysis, classification and synthesis of these phenomena occupy a very important place in Buddhist texts, both Pali and Sanskrit. This method of treatment is predominant especially in the Abhidharma texts where we find them analysed and classified from a variety of standpoints. Those psychological phenomena which this analysis and classification yield are described and named on the basis of the particular functions they perform or particular aspects and intensities in which they appear at a given moment. This is true also of psychological phenomena which are considered evil. Passions (klesa and upaklesa) constitute one of many appearances they make. This may be elaborated by examining various synonyms for passions; and we find no less than thirty-four synonyms for klesa being used in the texts. The Pali texts have the following synonyms: fetters (1. sanyojana), passions (2. kilesa), wrongness (3. micchatta), worldly traits (4. lokadhamma), avarice (5. macchariya), perversions (6. vipallasa), ties (7. gantha), evil courses (8. agati), cankers (9. asava), floods (10. ogha), bonds (11. yoga), hindrances (12. nivara), seizing (13. parinassa); clippings (14. upadana), inherent tendencies (15. anusaya), stains (16. mada), unprofitable courses of action (17. akusala kammapha), unprofitable thought arisings (18. akusala cittuppada), obstructions (19. avarana), bonds (20. bandhana), passions (21. upakilesa) and outbursts of the inherent tendencies (pariyutthana: Vism. 586; Dh.s. 189). The Sanskrit texts give the following: fetters (1. sanyojana), ties (2. grantha), floods (3. ogha), bonds (4. yoga), clippings (5. upadana), inherent tendencies (6. anusaya), cankers (7. asrava), hindrances (8. nivara), stains (9. mala), bonds (10. bandhana), secondary passions (11. upaklesa), outbursts of inherent tendencies (12. paryavasthana), obstruction (13. kila), confusion (14. ngaha), dart (15. salla), worldly possession (16. kiicana), misdeed (17. duscarita), doer (18. vidhata), burning (19. paridaka), tribulation (20. upayasa), struggle (21. rana), fever (22. jvara) and fetters (23. vibandha). See Vibhaasaprabhavrtti, p. 219-20; Abhy. p. 44.

It would appear that some of the synonyms are common to both Pali and Sanskrit texts. The terms like sanyojana, kilesa/klesa, asava, asrava, nivara, anusaya/anussaya, pariyutthana/paryavasthana ogha and upadana are very popular and are widely used in the texts.

All these refer to the same passions in their different manifestations, they indicate different intensities of, and different functions performed by them, in different environments (Abhsy. p. 44).

They are called sanyojana because they tie beings to samsara: they are called anusaya when they lie dormant and pariyutthana when they burst out. They are again called asrava because their flow exists from avici to bhavagga, and ogha when they overflow and flood (Vibhaasaprabhavrtti, p. 219-20; Netti, 113-117).

The other terms may also be explained in like manner (for details, see under individual topics).

The explanation of passions in terms of different intensities and functions brings us to the question of the manner in which they arise in the mind. The answer to this question involves the more fundamental question of the nature of mind from the point of view of its defilement and purification.

It is said in the texts that the mind is luminous by nature (pabhassara; A. I. 10; prakrtiprabhavara: Lanka. 221-22; Suraid ch. XIII, v. 19) but is defiled by adventitious passions (aghaktehi upakilesesui upakkiliitham; aghantaklesakilista: ibid). The Manorathaparuja explains the term pabhassara as lustrous (pañcara) and pure (parisuddha: AA. I. 60). The Lach. kaavatasastra gives a similar explanation (prakrtiparisuddha: Lanka. 221-22).

Now, the question is as to when this pure mind...
exists and when it is defiled. The Theravadins explain this question by identifying this pure mind with what is called bhavaṅga-citta (AA. I, 60) The Yogācāra school identifies it with ālayavijñāna (Lank. 221-22).

Bhavaṅga is the mind in its dormant state, free from all thought processes; the state in which the mind is not in the process of cognition. It is therefore called viṭṭhimutta as against viṭṭhīcitta which is in the process of cognition. It is also the state of mind in which people die and are reborn. The Kathāvāthu calls it the natural mind (pakatīcitta: Kuṭ. 615). It is the foundation or condition (aṅga) of existence (bhava) having the nature of a stream; thus it is called (bhavasota or viṇṇānasota), the stream of consciousness. In short, it is the life principle by which might be explained the faculty of memory, survival and identity of the individual through innumerable lives in continued existence (bhava or saṁsāra). It also exists at the beginning of every thought-process, and every thought process ends in it.

The concept of ālayavijñāna, when considered from the point of view of its defilement, is similar in some extent to the concept of bhavaṅga-citta. Both become defiled owing to adventitious passions. Both are possessed of good and evil tendencies lying dormant in them (sarvabijāka: Abh. sy. 11-12; Viññāptimātratāsiddhi, 18, 22).

All beings, at their birth, inherit those tendencies which are the result of every moral or immoral action (karma, kamma) performed in their previous lives.

This may be explained in terms of the formula of causality (paṭicca-samuppāda). The third link in this formula, namely, viññāna or vijnāna, represents the rebirth of an individual. This vijnāna, which is called bhavaṅgacitta or ālayavijñāna, is conditioned by formative forces (saṅkhāra or saṃskāra), the second link. The saṃskāras, although conditioned by delusion (avidyā or avijjā) consist of both good and evil forces created by past ethical acts. By saṃskāras, it is said, the mind is impregnated with acts (karma-vāsanā: Madhyantavidbhāgaṭīka, 35-44). In other words the formative forces leave their impressions on the stream of consciousness; and the good impressions are called the roots or seed of good (kusalamūla or kuśaladhammanibjā) and the evil ones, the roots of evil (akusalamūla) or evil tendencies (anus'aya). These tendencies continue to exist in the stream of consciousness until an individual attains emancipation, arahantship or the eighth stage (bhūmi) of a Mahāyāna bodhisattva. In other words, the mind of an individual continues to be defiled until he attains emancipation, when purity of mind is realised. Purity of mind and emancipation are synonymous. It would appear from the foregoing discussion that what is meant by lustful and pure mind (pabhassara, prakīrtipariśuddha) is not a state of mind which is absolutely pure, nor the pure mind which is synonymous with emancipation. It may be explained as pure only in the sense, and to the extent, that it is not disturbed or influenced by external stimuli. In this undisturbed mind, which is called bhavaṅga or ālaya, there exist both good and evil tendencies in their dormant state until conditions arise favourable for their operation. These conditions obtain in the process of sense-perception; the process is named viṭṭhīcitta as against viṭṭhimutta or bhavaṅgacitta and pravṛtti-vijñāna as against ālayavijñāna (Madhyantavidbhāgaṭīka, 36). It is in terms of this process that the statement that the lustrous mind becomes defiled by adventitious passions (A. I, 10; Lank. 221-22) may be explained.

The moment a person starts carrying on normal activities of life he starts perceiving the external world with his senses; and, the first reaction on his part would be reflecting on objects he is perceiving. Reflection leads him to grasp the major and minor attributes (nimitta, anuvyanjana: D. I, 70 etc.) of the objects. This is called indulging in sense-objects (manopavicāra: M. II, 216f; A. I, 176), initial application of thought (vītiśakka: AA. II, 278, vikalpa: Mdhv. 350; vitarka, saṅkalpa: ibid. 451) or constructive idea- tion (parikalpa: Viññāptimātratāsiddhi 40; Madhyantavidbhāgaṭīka, 44). This initial activity, on the one hand, is due to what is called pāpāṇca or pāpāṇca, a kind of mental obsession (D. II, 277; M. I, 111-13; A. II, 161-62; Netti. 38; Lank. 38; Mdhv. 350).

An ordinary man being unable to understand the real nature of things, is liable to take a perverted view of them (vipallāsa: Netti. 115; Mdhv. 452). He does not see that the objects he is cognizing are liable to change and are impermanent (anicca). Being influenced by those tendencies he considers them to be either agreeable (subha) or as disagreeable (asubha: Netti. 115), depending on the outward appearance of objects, on their major and minor attributes. If he finds one to be agreeable he develops a liking towards it, and this results in the arising of lust (rāga). If an object be disagreeable and repulsive he begins to hate it, and this results in the arising of hatred (dosa, dveṣa:
It would be now clear that the arising of passions is primarily due to unwise contemplation (avyādoṣa manasikāra: Abh. 43) of the external world. Unwise contemplation leads one to take a perverse view of it (vipallāsa Netti. 115; vipāryāśa: Mdhrv. 452). Unwise contemplation and the resultant perversions are manifestations of delusion (āvidyā, moha). Thus, at the bottom of all this is āvidyā which may be described as the most radical of all passions.

The Abhidharmakosa in its description of the arising of ten passions takes delusion (moha, āvidyā) as the starting point. It explains that because of delusion (moha) doubts (vicikitsā) arise as to what is dukkhasatyā and what is adukkhasatyā. Doubts give rise to the wrong views (mithyā-drśti) that existence is not dukkha. Because of this wrong view arises the belief in a personality (satkāyadrśti). Personality belief produces the extremist view (anīgraha-drśti) that the so-called personality is eternal. This gives rise to the belief in the efficacy of rites and rituals (śīlavatā-parāmarṣa) in purifying that personality. This leads to speculative views and dogmas (drśti-parāmarśa). When a person is dogmatic he naturally has attachment (rāga) to his own views, has pride (māna) in them and hatred (dveśa) of others' views: Abh. 141f.

The Nettippakarana gives a process of the arising of passions which is different only in its approach. It traces their origin in perversions (vipallāsa) on account of which man clings (upādāna) to sensuality (kāma), to continued existence (bhava), to views (dīthi) and to belief in a soul (attavāda). Clinging to them makes him bound (yoga) by them. Being bound to them he becomes perfumed (gandha) with greed (abhijjha), ill-will (vyāpāda) etc. Perfuming results in the flow (āsava) of passions such as sensuality (kāma), continued existence (bhava), views (dīthi) and delusion (āvidyā). The excessive flow of these passions is called the flood (ogha: Netti. 115-6). The terms upādāna, yoga, gandha, āsava and ogha used in this description refer to the same passions in their varied manifestations; they are sometime used as synonyms.

Thus the mind of a person becomes defiled in his dealings with the external world, i.e., in the process of sense-perception. But, this defiling does not mean the defilement of a pure mind. The mind of a person is already defiled when he is reborn, as it is possessed not only of good, but of evil tendencies (anusaya) as well.

These latent tendencies, which persist in the stream of consciousness till it reaches emancipation, become active (pariyutthāna, paryavasthāna) when there arise conditions suitable for their operation. This implies that when the passions are not operating they always remain in a dormant state. If they always persist in the mind then the latter is always defiled, for the good (kusala) can neither co-exist nor cooperate with evil (akusala). Consequently, there will be no kusala as long as the latent passions are not removed, and they will not be removed without a kusala-citta.

Different solutions are put forward by different schools to this problem. The Theravadins and the Vaibhāṣikas denied the existence of anusayas apart from pariyutthāna (MA. III, 144; cf. Sphutartha Abhidharmakosa-vyakhya, p. 442). According to them there is no such thing as purely latent passions; and a mind is akusala only when passions are in operation. The Vātsaliṇīyas maintained a difference between the anusāya and paryavasthāna. But they said that the anusāya are citta-viprayukta-saṅskāra and hence could co-exist with kusala-dharma. But, paryavasthāna are citta samprayukta-saṅskāra phenomena and therefore cannot operate with kusala-dharma. They include the anusāya in prāpti, a viprayukta-saṅskāra of the Vaibhāṣika list of dharmas. The Sautrāntikas maintained that the anusāya as well as the kusala-elements co-exist side by side in the form of subtle seeds (bhūja), but only one of them operates at one time. When the anusāya operate the mind is akusala. When the seeds of kusala operate the mind is kusala (Sphutartha Abhidharmakosa-vyakhya, p. 442). The Yogācāra school solved the problem by making a distinction between two aspects of the mind, i.e., the mind in its passive state called the alaya-vijñāna and the mind in its active state called the pravṛtti-vijñāna. They maintain that the seeds, both the good and the defiled (kusala and akusala) exist simultaneously in the alayavijñāna, but not in the pravṛtti-vijñāna, Madhyāntavibhāga (fīkā, p. 36).

In this connection mention may be made of the person referred to in the texts as one whose roots of good are destroyed (samucchinnakausalamūla: Mdhrv. (452-53). The Madhyantavibhāga (pp. 38-39) is right in tracing the arising of passions in the seventh proposition of the formula of causation that craving (tanha, trṣṇā) arises conditioned by feelings (vedanā) derived from experiencing (upabhogā) an object of the senses.

The terms upādāna, yoga, gandha, āsava and ogha used in this description refer to the same passions in their varied manifestations; they are sometime used as synonyms.
Vibhāṣāprabhāvṛtti on p. 199 of the Abhidharmadīpa), who is possessed with entirely black evil states (samannāgata ekantakāleke akusalehi dharmehi) and for whom there is no emergence from worldly existence (A. III, 406, Pug. 7.1; PugA. 7.1).

The relevant sūtra from the Ariyuttaranākāya (A. III, 404-9) deals with the operation of the roots of good and evil (kusala-mūla and akusala-mūla) in six kinds of persons. One of them is endowed with good as well as evil states (kusala-dhamma and akusala dhamma.

Course of time completely annihilated akusala dharmas. When a person, on account of, say holding a grave wrong view becomes samucchina kusala mūla, he destroys only his prayogika kusala mūla; his innate kusala mūla remains in the form of bija intact in his santati from which arise new kusala-dharma under favourable circumstances (Abhk. II, v. 36; Sphūṭārtha. p. 147). This Sautrāntika view is similar to the Yogacāra view, according to which only the imminent liberation of a samucchina-kusalamūla is denied (Śūtra. Vol. I, p. 12). This suggests that he may attain nirvāṇa in the distant future. This would mean that such a person, according to the Yogacarins is not completely devoid of kusalamūla.

The Sautrāntikas also accept this sūtra, but maintain that it refers not to the theory of bija, but to their theory of prāpti. When, therefore, the sūtra says that a person is endowed (samannāgata) with both kusala and akusala dhamma (Sphūṭārtha: pp. 188-9) it means that he has the prāpti of these dharmas, since samannāgata and prāpti are synonyms (Vibhāṣāprabhāvṛtti on kārika 129 of the Abhidharmadīpa). A person cannot be endowed with kusāla and akusāla dharmas in one and the same moment because these two are samprayuktā dharmanas. But their prāpti being viprayukta can co-exist and thus cause the rise of kusāla and akusāla dharma in favourable circumstances.

In support of this contention they quote the following passage from the same sūtra. A person is endowed with kusala as well as akusala dhamma. His kusala dhammas disappear. But there is in him the kusala-mūla not destroyed. Even this kusalamūla is in course of time completely annihilated (A. III, 406), whereupon he comes to be designated as a samucchinnakusalamūla (Vibhāṣāprabhāvṛtti on kārikā 199).

Here arises a problem regarding the rise of a new kusala-citta in the santati of such a person. The Theravadins came to the conclusion that such a person who is possessed of entirely black states is incapable of producing a kusala citta and will never emerge from worldly existence (Pug. 7.1, PugA. 7.1). The Vaibhāṣikas solved it by postulating the theory of prāpti. The Sautrāntikas attempted to solve the problem by making a distinction between two kinds of kusāla-dharma namely, (1) innate kusāla dharma which do not presuppose any effort (ayatnabhāvī) but are always present in any given condition (upapattibhāvika) and (2) the kusāla-dharma which are obtained only by effort (prāyogika). The former are never completely annihilated. When a person, on account of, say holding a grave wrong view becomes samucchina kusala mūla, he destroys only his prayogika kusala mūla; his innate kusala mūla remains in the form of bija intact in his santati from which arise new kusala-dharma under favourable circumstances.

Now, to conclude, let us see briefly how these passions are eradicated. As passions are the primary cause of continued existence, they have to be got rid of, if one were to attain emancipation.

All passions are divided into two categories from the point of view of their eradication, namely, the intellectual passions and the emotional passions. The former are due to errors of judgement or want of discrimination; the latter are produced by the habits, the emotional nature of beings.

The intellectual passions are removable through realisation of the truth (dassanā pahātabbā; Dhs. 220; Abhk V, v. 51; darsanāpahātavya; Abhsy. p. 52). According to the Pali tradition they include personality-view (sakkāya-dīthī), doubts (vicikicchā) and clinging to rites and rituals (silabbataparāmāsa; Dhs. 220; Sn. v. 231). of these three, which are better known as sanyojana, only vicikicchā is found in the Pali list of passions. Sakkāyadīthī is represented in the list by dīthī whereas silabbataparāmāsa is the result of dīthī. All other passions are those which are eradicable through meditation (bhāvanāpahātābbā; Dhs. 220).
There are three stages in which the passions are eradicated; they are three of the four stages of the transcendental path. Thus, on the path of stream-entry (sotāpatti-magga) views and doubts are eradicated; on the path of non-returner (anāgāmi-magga) hatred is destroyed. All the other passions are destroyed on attainment to arahantship (arahattamagga: DhsA. 387). Nibbāna is called emancipation (vinutti) because it is free from all passions (ibid. 409).

KILESA - PARINIBBĀNA

The Buddha attained kilesa parinibbāna with the attainment of bodhi at the age of thirty-five years, but he lived up to the ripe age of eighty years, performing a sublime social and religious service, moving among people from all walks of life. His activities were not motivated by greed (lobha) hatred (dosa) and ignorance (moha), for, with the attainment of emancipation he had completely destroyed greed hatred and ignorance, which are the motivating forces that generate defilements (kilesa).

The disciples of the Buddha who tread the noble Eightfold Path, too, reach this attainment in four stages. The four stages are: (1) stage of stream-entry (sotāpatti-q.v.), (2) stage of once-returner (sakadāgāmi-q.v.), (3) stage of non-returner (anāgāmi-q.v.) and (4) stage of the fully emancipated being (arahant-q.v.).

The relationship of a person who has attained kilesa parinibbāna with society is likened to the position of a fully blossomed lotus in a pond. The lotus bud has its origin in mud but grows above water and blossoms forth as a beautiful lotus that pleases all who see it. Likewise, the disciple of the Buddha lives in society receiving all nourishment from society and regains to live in society. Just as the lotus that grew in mud in the pond is now untouched by water, the spiritually perfected being, too, lives in society quite detached from normal activities in society. He is now described as 'In the world, but not of the world" (A. II. 39).

Upali Karunaratne

KIRIVEHERA (1)

The four stages are:

1. The stage of non-returner (arahant-q.v.), stage of once-returner (sakadāgāmi-q.v.),
2. When such a person dies his saṃsāra process comes to an end. This stage is described as anupadhisesa nibbāna or khanda-parinibbāna that is, emancipation with no rebirth producing substratum remaining.
3. The stage of stream-entry (sotāpatti-magga) views and doubts are eradicated; on the path of non-returner (anāgāmi-magga) hatred is destroyed. All the other passions are destroyed on attainment to arahantship (arahattamagga: DhsA. 387). Nibbāna is called emancipation (vinutti) because it is free from all passions (ibid. 409).

T. Ariyadhamma

KIRIVEHERA (1). On the foothills of the lower Uva lies Kataragama, along the banks of Kapkanduru Oya (which is at present called Mānik Gānga), within the district of Monarāgala.

The Dhātuvānsa states that the Buddha, on his third and last visit to Śri Lanka, sat with five hundred arahats on the spot where the stūpa at Kataragama was to come up. Mahāghoṣa who had come there to pay his devotions to the Buddha was asked by the Buddha to protect the place. Thereafter the Buddha proceeded to Tissamahārāma and sat on the spot of the stūpa to sanctify it. Tradition has it that the stūpa at Kataragama stands on one of the sixteen spots hallowed by the visit of the Buddha. The relevant vandana-gāthā (stanza uttered at times of worship) has the following two lines at its conclusion:

Jetavanāṃ Sela-caityaṃ tatthā Kājaragāmakaṃ
eke ca ṣaṣṭhaṃ daññāṃ ahaṃ vandāmi sabbadā
defilements'. A disciple of the Buddha who has reached the summum bonum of his religious carrier, here and now (dīttheva dhamme), is described as one who has completely destroyed all defilements (kilesa) in him. This stage of attainment is also described as sopadhisesa nibbāna (emancipation with the life substratum remaining). One who has reached this stage of spiritual attainment continues to live as a human being till death comes upon him in the course of time due to exhaustion of kamma or due to maturity of age. When such a person dies his samsāric process comes to an end. This stage is described as anupadhisesa nibbāna or khanda-parinibbāna that is, emancipation with no rebirth producing substratum remaining.

The disciples of the Buddha who tread the noble Eightfold Path, too, reach this attainment in four stages. The four stages are: (1) stage of stream-entry (sotāpatti-q.v.), (2) stage of once-returner (sakadāgāmi-q.v.), (3) stage of non-returner (anāgāmi-q.v.) and (4) stage of the fully emancipated being (arahant-q.v.).

The relationship of a person who has attained kilesa parinibbāna with society is likened to the position of a fully blossomed lotus in a pond. The lotus bud has its origin in mud it beneath the water in pond. Having its roots in the mud it grows through the water and reaches the top of water, it grows above water and blossoms forth as a beautiful lotus that pleases all who see it. Likewise, the disciple of the Buddha lives in society receiving all nourishment from society and reaches maturity of spiritual growth while being in society, and regains to live in society. Just as the lotus that grew in mud in the pond is now untouched by water, the spiritually perfected being, too, lives in society quite detached from normal activities in society. He is now described as 'In the world, but not of the world" (A. II. 39).

The Buddha attained kilesa parinibbāna with the attainment of bodhi at the age of thirty-five years, but he lived up to the ripe age of eighty years, performing a sublime social and religious service, moving among people from all walks of life. His activities were not motivated by greed (lobha) hatred (dosa) and ignorance (moha), for, with the attainment of emancipation he had completely destroyed greed hatred and ignorance, which are the motivating forces that generate defilements (kilesa).

The disciples of the Buddha who tread the noble Eightfold Path, too, reach this attainment in four stages. The four stages are: (1) stage of stream-entry (sotāpatti-q.v.), (2) stage of once-returner (sakadāgāmi-q.v.), (3) stage of non-returner (anāgāmi-q.v.) and (4) stage of the fully emancipated being (arahant-q.v.).

Tradition also has it that the sword which was made use of to cut off the hair of the Bodhisattva at the time of the Great Renunciation was deposited (some time afterwards) in the Kirivehera at Kataragama.
Kataragama (about the 3rd Cent. B.C.). The Mahāvamsa calls them khattiyā Kājaragame (Ch. 19, v. 53). King Devanampiyatissa’s brother Mahānāga (who had taken up his abode at Rohana) had a grand-son called Goṭhabhaya. The ten-brother-kings of Kataragama were put to death by Goṭhabhaya and in order to expiate this foul deed, Goṭhabhaya built a number of stūpas, including the one at Cittalapabbata, to the east of Kataragama. A sapling from the Bo Tree at Anuradhapura had already been planted there and it is likely that one of the stūpas built by Goṭhabhaya was at Kataragama.

The Kirivehera at Kataragama is named in the chronicles of Sri Lanka as Maṅgala-mahā-cetiya. In an epigraphical record from the site it is called Magul-mahā-sāya, the central edifice of the Raja-mahā-vihāra, the Royal monastery of Kataragama. It is not possible to say exactly why it is called Kirivehera at the present day. The term Kirivehera may be translated as ‘milky white stūpa’. It is very likely that it appeared as a glistering white mass of bricks or a stūpa of milky white colour, at the time of its last restoration.

Renovations to the cetiya under the supervision of the Archaeological Department, commenced about the year 1960 and continued for nearly five years. The Restoration Society, with the assistance of bhikkhus (who were incumbents of the shrine), were keen to restore it, in the form in which it was first built. The last restoration had been effected about the year 1912. The result of this renovation was the building of three pesāvas, according to the usual pattern of stūpas of the present day. The restoration plan was to conserve as much of the ancient stūpa that was left and to reconstruct the rest according to the ancient pattern.

The stūpa was only 45 feet high from the platform (mālūwa) to the summit of the hataris-koṭuva (the square structure on the dome) The platform was 200 feet square and the greater portion of it was uneven, and out of proportion to the stūpa. There were flights of steps which were out of proportion to the stūpa, made out of material collected from other buildings. After excavations, the old platform was found to be 130 feet square. There was a parapet wall 35 feet away from the retaining wall of the 130 feet square platform. The lower platform had been filled up with sand at the last restoration. perhaps for purposes of maintaining the older platform. Within the 130 feet square platform was another retaining wall, marking the edge of an older platform which had been 121 feet square. There were flights of steps leading to both platforms. The ground beyond the 200 feet square platform was unevenly filled with earth. There was still another terrace of about 240 feet square which enclosed the last named one (See PL. XII in Fascicle I of Vol. VI).

Excavations revealed that restorations had been effected in six stages. No excavation of the stūpa itself was done, other than the removal of the new three fold pesāvas and a portion of dome built after 1912. The old hataris koṭuva (square structure over the dome) and the kota (pinnacle) were completely gone. A new semblance of a square over the dome had been made, enclosing in it objects of recent date and a flagstaff took the place of the pinnacle. When this new structure was dismantled, deposits including modern Buddha images of Burmese origin were discovered.

At the time of excavation, it was found that this stūpa, at its final stage of construction had only one pesāva although the modern renovators considered it necessary to have three, in accordance with the present day practice. It is not possible to say at the present day whether the stūpa at Tissamahārāma had only one pesāva when it was first built, as in this instance. The removal of modern accretions revealed also the old shape of the stūpa, which was bubbulākāra (bubble shape).

A slab inscription at the site, datable to about the 1st century A.C., states that a monk named Nanda enlarged the stūpa and built the flights of steps at the four entrances. Another fragmentary epigraph of about the 6th century A.C. states that a king named Mahādāimahanā repaired the stūpa which was then known as Maṅgala-maha-cetiya, of the Rajamahavihāra at Kataragama. He set apart certain gifts for repairs to be effected to the stūpa and also for other expenses in connection with the royal monastery. The Cūlavamsa states that King Dappula I (661-664 A.C.) built a monastery (pariveṃa-vihāra) at Kataragama (Ch. 45, v. 45). From this time onwards up to the 18th century, there is hardly any mention of Kataragama as a place of religious worship.

By about the 18th century it is to be noted that Sinhala Sandesa poets had turned their attention to Kataragama. Gods like Upulvan, Vibhīsana and Saman were implored by the earlier poets, but the Message poems of the 18th century and later times were being addressed to the six faced god of Kataragama. Most of
these poets mention Kirivehera. The Kahakurulu-
sandes'aya written during the period 1707-1734 A.C.
calls the stupa at Kataragama by a new name as
Mahavehera, and thus confirms the name given in a
much earlier epigraph. A poet who lived about the year
1860 A.C., instructs his emissary to go to Kataragama,
to worship the stūpa first, secondly pay homage to the
Bo-tree, thirdly enter the temple of the Buddha and
lastly to go to the abode of the deity.

The Buddhist devotee, when he visits any temple
at the present day, follows this practice of worship in
the order stated i.e. the stūpa (sārīrika-dhātu), bo-tree
(pāribhogika-dhātu), the image house (uddesika-
dhātu) and finally the devele (chapel) of the deity.

The Archaeological Department restored the stūpa,
in the shape and size as it was reconstructed for the
last time (before 1912 A.C.). According to evidence
available elsewhere, details were added. Missing mem-
bers such as the pinnacle were put up in a manner as
much as it was possible to conjecture. Same type of
material and methods of construction as in the ancient
work were employed. There were bricks of 56 differ-
ent shapes used in the ancient works and some of these
had to be newly turned out to replace the missing ones.
Wherever the ancient structure was in a good state of
preservation, it was strengthened and allowed to stand.

The results of the excavation and subsequent res-
This page was last revised on 98/06/11.

Nandasena Mudiyanse

KIRIVEHERA (2). Enumerating the building activi-
ties of Parakramabahu I (1153-1186 A.C.), the
Culavamsa states: "He caused to be built within
Āḷāhana Parivena premises, many pāsādas, the
Subhadda-cetiya and the Rupavati-cetiya and besides
that a charming image house of storeys....." (chapter
78, v. 51) The larger of the two cetiyas mentioned above is
popularly called Kirivehera. During the Polonnaruwa
period, the architectural forms which had been obso-
lete for some time were revived. Therefore the archi-
tecture of this period was a continuation of earlier
works that had prevailed in this Island (before the 8th
century).

The type of stūpa which prevailed in the 8th and
10th centuries was one with an elongated dome. There
were mouldings at the base (instead of pesāvas-basal
terraces). The stūpa rose from a square platform. A
good example of this type of stūpa is the Indikātuṣṭya
at Mihintale. Instead of this type of building, the ar-
chitects of Parakramabahu I followed the design of the
colossal stūpas of the ancient period with the super-
structure as it had evolved before the 8th century.

Among the Polonnaruwa examples, the best pre-
served is the Kirivehera. It is the largest monument of
this type in the Āḷāhana Parivena group of buildings.
It is possible that it is Subhadda-cetiya which finds
mention in the Culavamsa. It is not possible to say
why it is called Kirivehera at the present day. Like its
namesake at Kataragama, it might have appeared as a
milky white mass of brick masonry when viewed from
a distance and the general appellation Kirivehera came
into vogue, once its old name got forgotten with the
lapse of time. (PL. XXVI)

The Kirivehera has a diameter of 88 feet at the
ground level and 70 feet at the base of the drum. It
measures 80 feet in height from the ground to the point
at which the upper part of the spire had fallen off. Like
the stūpas of the early Anuradhapura period, the monu-
ment has a bubble shaped dome rising from a base of
three receding terraces. The dome is surmounted by
the cubical hatarās-koṭuva, the faces of which have
the railings ornamentation. The cylindrical drum above
the hatarās-koṭuva was adorned with figures of deis-
ties and the kot-kārilla is moulded in order to appear
like a chaṭrāvali.

Around the base of the stūpa are four vāhalkaḍas
(frontispieces). On either side of each vāhalkaḍa is a
shrine of comparatively small character. Altogether
there are eight such shrines around the stupa. They appear to have contained images of the Buddha. Each shrine consists of a single cell entered through a stone doorway and is built with its rear end abutting the lowest terrace of the stupa. Excepting the doorway, the shrine is completely of brick construction with roofs of corbelled vaults. The exterior of the walls is decorated with mouldings and pilasters in the style which was prevailing in the Polonnaruwa period. Similar shrines are available around the base of Rankot-vehera (which is also a stupa lying close by). These are probably contemporaneous with the original foundation of the monuments.

Nandasena Mudiyanse.

KISĀGOTAMI, a female disciple of the Buddha. Gotami was her name, but subsequently she was called Kisa-Gotami, because of her leanness. The episode of this theri is popular among the Buddhists, because of her going in search of a remedy to revive her dead son, during her lay life.

There was a financier (seṭṭhi) in Śāvatthī who possessed a fortune of forty crores. All of a sudden his entire fortune turned into charcoal. The financier, overwhelmed with grief refused to take his meals and with his going in search of a remedy to revive her dead son, during her lay life.

When said thus, you must say: 'where is any yellow gold?' Your customer will say: 'There it is'. Then say: 'Let me have it'. Your customer will bring you a handful of charcoal. Take it, and it will turn into yellow gold.

"Now, if that exceptional customer happen to be a maiden, marry her to your son and endow your wealth to her. If that customer happen to be a young man, get him married to a young daughter of yours and endow your property to him. There after you should live on what is given to you by the son-in-law or the daughter-in-law".

The financier acted as directed by his friend and Kisa-Gotami, the exceptional young lady who confronted him at the shop, became his daughter-in-law. When she touched the charcoal of the financier at his residence, it again turned to be gold.

Kisa-Gotami was from a poor family and therefore she was disdainfully treated by the members of the financier's family, except by her husband. But soon after she gave birth to a baby son, she came to be loved by the entire household (Ap. II, v. 712). This boy died when he was just old enough to run about. The poor mother who had no experience of a death earlier, carried the corpse on her hip thinking that the child was ill, and searching for a remedy. People laughed at her until an intelligent person, realising the frenzy of the inexperienced young mother, directed her to the Buddha. When the woman came to the Buddha with the corpse and pleaded with him to give her a remedy for the son, he realised the psychological state of the woman and thought that the blunt truth that death is certain to all who are born, should be driven in to her in an expedient manner. So he said: "Sister, reviving the young boy is simple if you can bring to me a handful of mustard seeds from a house where no death had occurred earlier. The impatient mother ran from house to house to collect the mustard seeds, but, on inquiry she was told by the house-holders that many deaths had taken place in their houses in the recent and distant past. Kisa-Gotami ultimately realised that her beloved young son was dead, and placing the corpse in the charnel ground, she went back to the Buddha and begged of him to give her ordination as a bhikkhuṇī. As a new recruit to the Bhikkhuni Order Kisa-Gotami lived the dhamma zealously and within a short time attained arahantship (DhpA. II, 270-275).

Kisi-Gotami theri discarded comfortable clothes and
adhered to the habit of using very coarse and simple robes. In the EtadaggaVagga of the Aṅguttara Nikāya (A. I, 25) the Buddha declared her the fore-most bhikkhuṇī with regard to wearing of coarse robes (etadaggaṇ bhikkhave mama saṅkānaṁ bhikkhuṇīnaṁ lākhaṇīvara dharānaṁ yadidam Kīṣagotami). Apadāna (Ap. II, vv. 693-730) in this connection relates the episode of a former birth of Kīṣagotami theri in the time of former Buddha Padumuttara. Kīṣagotami was born in a clansman's family in the city of Hansavatī in the time of the former Buddha Padumuttara. Kīṣagotami was a cousin of six notorious bhikkhus, Bhikkhuṇī, Bhikkhadāsikā, Dhammā, Sudhammā and Sanghadāsikā. Apadāna identifies these seven sisters with Khema, Upalavannā, Paṭācārā, Bhaddhā Kuṇḍalakesi, Kīṣagotami, Dhammadinnā and Viśākhā who were preeminent disciples and supporters of Buddha Gotama.

Samyutta Nikāya (I, 129) records a dialogue that took place between Kīṣagotami and Māra the Evil One, in Andhavāna where the former was resting in the shade of a tree after her mid-day meal. Māra approaches Kīṣagotami to frighten her and disturb her mental peace, but Kīṣagotami was able to withstand Māra's temptation resolutely.

Pali literature makes reference to three other women by the name of Kīṣagotami. One of them was a cousin (pitucchadhiti) of prince Siddhartha, who uttered the nibbutapada (cooling or appeasing words) to prince Siddhartha when he was once returning in his chariot to his palace. Prince Siddhartha was pleased on hearing the word nibbuta, which to him meant delivery and sent his necklace of pearls to Kīṣagotami as a mark of appreciation (DhpA 1, p. 70; J. 1, pp. 60-61). The same episode occurs in the Mahāvastu (Vol II, p. 152 in J.J. John's translation, PTS 1976) where the name of the lady is given as Mrīgī. Kīṣagotami was also the name of the wife of former Buddha Phussa during his lay life (Buv. p. 75, v 16). Former Buddha Tissa had a prominent female supporter by the name of Kīṣagotami (Buv. p. 72, v. 23).

Ruwan Bandara Adhikari

KIṬAGIRI SUTTA, "The discourse delivered at Kīṭagiri", is the seventieth (70) discourse of the collection of middle-length discourses' (Majjhima Nikāya) of the Buddhist canon (M. 1, pp. 473-481).

The Buddha, during a tour in Kāsi with a large following of bhikkhus, addressed the bhikkhus and told them about the benefits of not eating a meal in the night. He told them: "I, monks do not eat a meal in the night. Not eating a meal at night, I, monkā, am aware of good health (appābādhaṁ) and of being without illness (appāṭanākataṁ) and of buoyancy (alahūthānāṁ) and strength (balāṁ) and living in comfort (phāsuvihārānāṁ)". The Buddha, having told the bhikkhus about his personal experience of happiness and comfort derived from avoiding a meal in the night, admonished the bhikkhus, too, to avoid taking meals in the night and at all odd hours of the day, for their own happiness and comfort.

Assaji and Punabbasuka, two bhikkhus belonging to a group of six notorious bhikkhus (chabbhaagiyā) who were at that time living at Kīṭagiri, laughed at the Buddha's admonition, saying: "We eat at all odd times of the day, in the morning, in the forenoon, at noon, in the afternoon and in the night and we, too, are aware of good health and of being without illness and we, too, are not lacking in happiness and comfort. So, why should we give up something we enjoy here and now in expectation of imaginary future happiness".

When this irresponsible talk of Assaji and Punabbasuka was reported to the Buddha, he summoned them to his presence and having rebuked them for their irresponsible talk, told them that whatever advice he (the Buddha) gave to the bhikkhus was well thought out and was based on personal knowledge and experience.

Addressing the congregation of monks, the Buddha further said: "I, monks, do not say of all monks that there is something to be done through diligence; yet, I, monks, do not say of all monks that there is not
something to be done through diligence. Monks, those monks who are perfected ones, canker-waned, who have lived the life, done what there was to be done, laid down the burden, who have attained their own goal, the fetters of becoming utterly destroyed, who are freed by right profound knowledge, of monks such as these I do not say, monks, that there is something to be done through diligence, What is the reason for this? It has already been done by these through diligence, these could not become negligent (abhā bankruptcy). But, monks, those monks who are learners, not attained to perfection, but who live striving for the incomparable security from the bonds, of such as these I say, monks, that there is something to be done through diligence."

The Buddha, next, enumerated seven (types of) persons existing in the world, namely, (1) The one who is freed both ways (ubhatobhāgavinimutta); (2) The one who is freed by means of intuitive knowledge (paññāvinimutta); (3) The one who is a mental realiser (kāyasakhi); (4) The one won to view (dīthippatta); (5) The one freed by faith (saddhvinnimutta); (6) The striver after dhamma (dhammānusāri); (7) The striver after faith (sadhānusāri). "Of these seven types of individuals", the Buddha declared, "two types, namely, the one who is freed both ways and the one freed by means of intuitive wisdom have already completed their training, and hence they do not need any further guiding. But the other five types are partially freed and hence they have to strive further with diligence to achieve their goal."

The Buddha concluded the sermon by saying that the attainment of profound knowledge (aññarādhana) does not happen at the very commencement of the training (ādikena), and that it comes, through gradual training (anupubbasikkha) and a gradual course of action (anupubbakiriya).

KLES'AVARANA, from kles'ā+vārana is a technical term used in Buddhist Sanskrit to mean "the obscuration caused by defelements". The term is usually used along with jñeyavāraṇa meaning "the obscuration caused by the knowable". see JÑEYĀVARANA.

A.G.S. Kariyawasam

KOBO DAISHI (774 A.C.-835 A.C.) the posthumous title of Kukai, the founder of the Shingon school of Japanese Buddhism.

Kobo Daishi, a junior contemporary of Dengyo Daishi is, perhaps, the most celebrated of the religious teachers of Japan. His countrymen, who hold him in reverential affection, consider him to be the hero of numerous legends, the reputed author of a large number of books, a miracle-worker, painter, sculptor, a pious saint and above all a compassionate teacher. His followers even go to the extent of considering him as an incarnation of Vairocana, and amid, this resulted in attributing to him such a large amount of works and accomplishments which no ordinary single person could possibly have executed in one life-time.

Kobo Daishi, son of a provincial noble, was born in 774 A.C. at Zentsuji not far from the town of Kotohiro in Shikoku, where a temple erected in his honour still stands. For sometime he learnt Chinese from an uncle of his, and subsequently the parents, who groomed him for an official career sent him to the higher educational institution in Nara. There he became interested in Confucianism which he studied diligently. Later on he shifted his interest to Taoism and studied it by himself. Not being satisfied with these subjects he went from temple to temple and studied Buddhism. At the beginning he accepted the Sanron teachings and mastered it. At the age of twenty one years he was ordained at Todaiji in Nara. Subsequently his attitude towards Sanron seems to have undergone some change and this is very apparent from his first work called San'yo-shiki which he is said to have written at the age of twenty four years.

This work written in the form of a dialogue among three people representing the three religions namely, Confucianism, Taoism and Buddhism, attempts at a comparative evaluation of these teachings. The sole aim of the book is to reconcile these teachings and present them as a syncretic doctrine. This tendency to syncretise reflects a distinct feature of his personality, and probably, it is this same tendency that later led him to advocate the novel doctrine known as Ryobu-Shinto - a syncretic religion consisting of Buddhist and Shinto teachings.

In 804 A.C. he, along with Dengyo Daishi (q.v.), went to China and landed at Fou-chou. From there he went to Ch'ang-An and studied the Chenyen (Jap. Shingon) doctrine from Hui-Kuo, the celebrated high-
priest of the Chi'ing-Lung temple. In the meantime he studied also Sanskrit under the guidance of Prajña.

When he returned to Japan after about three years he was well received by the Emperor. He is said to have brought along with him a large number of religious texts and a wealth of information regarding esoteric practices. Fortunately for Kobo Daishi the Emperor himself was inclined to favour esoteric teachings and as such the Shingon teachings advocated by Kobo Daishi had a greater appeal to him. Thus, Kobo Daishi was able to overshadow Dengyo Daishi, and in fact, the latter was forced to learn certain esoteric practices from the former.

Kobo Daishi introduced the kwanjo (abhiseka) ceremony which he administered on Dengyo Daishi and the Emperor. Being of sober temperament and conciliatory disposition he avoided conflicts and always strove to win the goodwill of the followers of all Buddhist sects as well as of the followers of Shintoism. For sometime he collaborated with Dengyo Daishi and helped him in his activities. But gradually their relationship became strained. However, he avoided competition and instead busied himself with his religious activities. He engaged himself with the construction of the monastery complex at Koyasan in the province of Kii, of which the first temple called Kongobuji was built under his personal supervision.

It is after Dengyo Daishi's death that Kobo Daishi really came to the forefront. In 823 A.C. one year after Dengyo Daishi's death he was appointed the high-priest of the Toji monastery, the state temple, which became the headquarters of the Shingon school. Subsequently he was appointed the chief priest of the Nai-dojo, a shrine within the Imperial palace, and this undoubtedly enhanced his position, and also brought the emperor into closer association with the Shingon school. The Shingon school spread very rapidly for Kobo Daishi catered to the needs of the average follower by providing rites and rituals which were supposed to be effective in fulfilling one's mundane wishes. Thus, if one wanted power, fame, wealth or any such worldly gain Shingon Buddhism provided appropriate rites and rituals to obtain it. These features as well as Kobo Daishi's personality immensely helped the rapid spread of Shingon Buddhism.

When Kobo Daishi died in 835 A.C. in Koyasan his teachings were well established, even relegating Tendai Buddhism to a secondary position. Owing to the popular features in Shingon teachings Kobo Daishi came closer to the hearts of the masses. Many of his exploits are celebrated in popular religious ballads called Namudaiishi. In 921 A.C. Emperor Daigo honoured this celebrated monk by posthumously conferring the honorific title Kobo Daishi, meaning 'the Propagator of the Law'.

S.K. Nanayakkara

KODO KYODAN, a Buddhist sect in Japan.

The founders and establishment: Kodo San (mt. Kodo) formerly was a secluded hill covered with tall, green pine trees. The founder of the Kodo Kyodan sect Rev. Shodo Okano, selected this hill as a site for their spiritual mission. On the morning of February 28, 1949, while construction work was in progress, a stone statue of a holy priest and a box containing the ashes of a saint were excavated atop the hill. On the back of the stone figure was found written: "On this spot, Nittei Shonin completed reciting the Siddharmapuvadikara Sutra, September 28, 1668." Presumably, Nittei Shonin lived in a hermitage on this hill some 327 years ago. Being associated with this holy place, Rev. Shodo Okano became convinced that time was ripe to reveal the teachings of the Siddharmapuvadikara, the Lotus Sutra- the religion of Truth, and established Kodo Kyodan on this holy place wherefrom rolls on the Eternal Wheel of Dharma. From here, and attempt is being made to vitalize Buddhism for our age, and diffusing it to the rest of the world. Having realized the urgent necessity for the propagation of this doctrine for laymen and householders, the late founder, President Shodo Okano, along with his wife, the Venerable Kimiko Okano, dedicated their lives in fervent missionary zeal to the dissemination of Buddhism for the sake of humanity in general and Kodo Kyodan in particular. As a result of their untiring devotion and selfless sacrifice for the cause of Buddhism they were honoured with the title a Archbishop of the Tendai sect of Buddhism in Japan. He is the first President of Kodo Kyodan as well as the director of all Japan Buddhist Federation, and the Japan Religious Federation. The late Venerable Kimiko Okano was the first lady known to be conferred the title of Archbishop in Japan. She was an Advisor and founder of the All Japan Buddhist Women's Federation, who showed keen interest in the spiritual and secular welfare activities of the Kodo women members. In 1956, she was invited to attend the Buddha Jayanthi Celebrations held in Sri Lanka as a representative of Japan. In January 1967, both late

KODO KYODAN

Women's Federation, who showed keen interest in the spiritual and secular welfare activities of the Kodo women members. In 1956, she was invited to attend the Buddha Jayanthi Celebrations held in Sri Lanka as a representative of Japan. In January 1967, both late
leaders were invited by the Buddhist Association, to visit Sri Lanka and India as their honoured guests. In this tour they paid homage at many sacred Buddhist shrines in Nepal, Sri Lanka and India.

On the 8th of August 1955, their only son Rev. Shokan Okano received his monkhood at Mount Hiei, Enryakuji temple in Kyoto. In 1975, Rev. Shokan Okano was formally pronounced President and empowered as the spiritual leader of Kodo San, in succession to the late founder Venerable Shodo Okano. Presently, together with vice-president Mrs. Rinko Okano, both are leading the Kodo Kyodan Organization. Dr. Shojun Okano, the eldest of the three sons, is also the vice-president of the Order.

Structure of the Headquarters: The headquarters of Kodo Kyodan, an orthodox religious order ideally suited for humanity and society of modern times, is devoted to the practice and realization of the Buddha and Bodhisattva activities for the spiritual integration and upliftment of all sentient beings through the teachings of "The Ripe Lotus Sutra". It stands on a hill overlooking the international port of Yokohama, on one side, and the sacred Mount Fuji on the other. The beautiful modern temple is composed of a vast compound, surrounded by flowers and greenery all the year round. This sacred mountain is constantly thronged by Japanese and foreign visitors and worshippers. This place is also a sanctuary for people who are seeking peace of mind.

The precious relics of S'akyamuni Buddha, which came from India into China, were brought by the Tendai saint Master Dengyo-Daishi along with the Saddharma-puññaratika Sūtra. An "Eternal Light" kindled by Dengyo-Daishi has been kept burning uninterruptedly for nearly 1,200 years in the Enryaku-ji temple in Kyoto. The saint lit this inextinguishable light with the prayer, "May this light of the Dharma continue to shine forever, brightening every sphere of society, even unto the time of the next Buddha!". A distinctive feature of Kodo San is that it is the only religious organisation which has enshrined both Buddha Relics and the Eternal Light sanctifying the precincts with its pure vibrations. This "Eternal Light" has been transmitted to Kodo San by the Tendai headquarters as a mark of their invaluable contribution to society, both at home and abroad, to the cause of Buddhism and to international peace.

An octagonal temple, Daikoku-ten, enshrines "Mahākāla" the God of Fortune and Prosperity, who has deigned to come down from M. Hiei of his own will and be placed here at Kodo San, opening its doors to the happiness and prosperity of all in the vicinity. Special purification rites are performed three times a year for sanctifying the Daikoku-ten.

As a symbol to the memory of both late Archbishops their ashes are enshrined in a Kojun-do temple beside the Buddha Relics Tower, where daily worship is performed and food prepared with devotion is offered each day throughout the year. A Kodo temple Kindergarten run for children, was established by the late founders.

At one end of the temple compound stands a tower containing the Bell of Peace, giving solace to all. Each day starts with a routine morning worship of prayer and chanting as the members congregate in the Main Sanctuary hall. Here the followers openly confess their spiritual and secular experiences for the benefit of all. On Sundays, other functions include spiritual discourses and counselling given by the residents.

Activities: A monthly publication of the Kodo newspaper, an English edition of the Kodo News, sale of religious literature, and radio-broadcasting service on Buddhism, are some of the publicity activities undertaken by Kodo San. Various inter-cultural meetings and religious seminars are regular features of the temple, including international and friendly inter-religious exchanges.

In addition to the regular propaganda activities, important annual events are held with an aim to foster human friendship and harmony. On January 1st, Buddhist prayer services are conducted for the Peace of the World, and New Year Resolutions are announced. A mid-winter retreat in the headquarters, lasting for a month is observed in February each year for the Kodo members and followers.

To celebrate the birthday of S'akyamuni Buddha, a grand flower festival is held on a large scale in April. A prayer ceremony is conducted to commemorate the day of "Nirvāna" - the Buddha's highest attainment of immortality. A thanksgiving memorial service dedicated to the late Presidents and their spiritual heritage, signifying the sanctity of parental love or "filial piety", is solemnly observed in June each year. In honour of the Buddha relics, a prayer ceremony with chant-
ing is held in August when the sacred relics in the pa-
goda are open for public worship once a year. "Ohigan" is a Japanese Buddhist spring and autumnal equinox festival where services are conducted, while the "Uraboron Service" is observed in July, for the repose of the soul of ancestors, and a summer Bon-festival is held on the temple ground.

Organization: Kodo San has four other branch temples, with a retreat and training centre located in different parts of Japan. Among the members are several initiated branch leaders, who discharge their individual duties. They are organized respectively into Kodo Men's, Women's, and Youth Associations along with Boy & Girl Scouts, where they play an active role as sub-organizations of Kodo San. The Kodo Men's Association, organized by married men and adults play a vital role in promoting the headquarters' major functions, in addition to reinforcing the Kodo Women's Association, the Youth Association, and the Kodo Boy & Girl Scouts. A team of Kodo men from each branch volunteer in rotation to patrol and keep night duty for the protection of temple property. They also conduct regular meetings several times a year. Speech Contests based on their experience of a Buddhist life, Summer Buddhist Training, etc. are also being held.

The Kodo Women's Association plays an equally important part in discharging its respective duties. Apart from exerting a good influence as Buddhist mothers in raising the youth and backing the Children's organization, its members play an active role in propagating the teachings of the temple, social welfare work and extending the Maitri heart for the relief of victims of natural disaster. The Kodo Women's Association hold cultural and educational seminars, charity bazaars, etc., and a general meeting in October presided over by its Vice-President Rinko Okano.

The Kodo Youth Association play an important role in the organisation of Kodo annual events. Its members participate in Youth Speech Contests based on the Buddhist way of life, summer Buddhist training, etc.

The Kodo Boys & Girls Scouts are divided into eight sub-groups, their motto being "Together with Lord Buddha". They are trained to cultivate rich religious sentiments of Buddhism imbued with the spirit of parental love and reverence to mould them as sound and wholesome citizens. This Children's organization is well known for its playing of drums, flute & brass, which they study and practice every Sunday.

A "Maitri Centre" at the Kodo San headquarters was formed in the year 1986, just 50 years after its foundation, by the present Presidents, Reverend and Mrs. Shokan Okano, both of whom are the presiding chairpersons, as an earnest appeal to the younger generation to cultivate universal love and tolerance of the Buddha, and a true spirit of "Maitri" for peace, prosperity and stability of society and the world. Continuous Maitri activities are carried out at various levels in the affiliated branch temples too. 'Maitri' is a Sanskrit word which means 'genuine feelings of sympathy, understanding and good-will to all.' The five 'Maitri' precepts encourage everyone to practise these five golden rules.

- Realize that your existence is part of Nature
- Accept the responsibility for your family
- Share grief and joy with others
- Sympathize with all living creatures
- Use your talents for the benefit of others

Main Teachings of Kodo Kyodan: Peace, prosperity and integration of society and mankind, beginning with filial piety in a vertical line and extended as compassion to all humanity is the ideal of Kodo San. Therefore, Kodo San can be called Japan's Gridhrakūta mountain, as summed up in the Sādhārmapuṇḍarīka Śūtra. While the Tendai school of Buddhism places prime emphasis on the intellectual aspect of Buddhism, the Nichiren school emphasizes the faith and devotional aspect through invocation-chanting of the holy name. Since the Sādhārmapuṇḍarīka Śūtra embraces both theory and devotional practice, Kodo San can be regarded as an orthodox Sādhārmapuṇḍarīka organization. Buddhism is considered one of the most rational religions. In today's world of science and rationalism, a full comprehension of the theory & doctrines of Buddhism, together with devoted practice for highest realization, are the fundamental teachings of Kodo San. The profound doctrine and theories of Truth, brought down into easy access for our practical implementation in daily life, is the essence of the "Harmony in Theory and Practice" principle, of Kodo San.

Main Teachings of Kodo Kyodan:

1. Accept the responsibility for your family
2. Share grief and joy with others
3. Sympathize with all living creatures
4. Use your talents for the benefit of others

Māpalagama Vipulasāra
Toshiichi Endo

KOLAṆKOLA - The general meaning of this Pali term is 'going from one good family to another' (kulato...
KULAM GACCHAṬI KOLAIKOLO-PUGA. P. 196). In a special sense the term is used in Buddhist terminology to mean a person who attains the fruit of the first stage of sainthood (sotāpattiymphala) by destroying the first three of the ten fetters (sāmaya jhana), namely, belief in a soul (sakkāyadiṭṭhi), doubt regarding the Buddha the Dhamma and the sangha (vīcikicca) and belief in the efficacy of ceremony and rituals (silabbuta parāmīṣa).

A person who destroys the above named three fetters and if he dies before attaining the other higher stages of spiritual attainment, will not be reborn in the lower states of existence in samsāra, but will be reborn only in the human and the heavenly states and in those two realms, too, he will be reborn not more than seven times, (sattakkuttuparame. Pug. p. 16; na te bhavaṇā atthamanā adiyanti. Sn. v. 230). A person who attains the fruit of stream entry (sotāpattiyaphala) in this existence, but fails to proceed further in the ladder, may attain sainthood (arahatta) in his next existence and such a person is called a 'One Seader' (ekabhiṇa - Pug. p. 16). A person who attains the first stage of sainthood (sotāpattiymphala) and fails to proceed further in that existence itself, but attains the state of sainthood after being reborn twice or thrice in good states in samsāra is designated as a kolaikkola (ave va tiṇī va kulāni sandhāvittyā sāmascaritā dukkhassantaṃ karoti-Pug. p. 15). Visuddhimagga describes a kolaikkola as a person who attains the fruit of stream entry with medium insight (majjhimaṭṭha vipassanā-Vism. p. 109).

KONĀGAMANA

(Skt. Kaṇakamuni, Koṇākamuni or Kaṇakaparvata)-the twenty-third of the twenty four Buddhas who preceded Gautama Buddha, and the second of the five Buddhas of the present world period called Bhaddakappā (the fortunate world period - BUV. p. 101). He was born in the Subhagavati park in Sobhāvati, the capital of King Sobha. His parents were brahmin Yaṇñādatta and Uttarā. On the day of his birth a shower of gold fell all over the sub-continent of India and hence his name Kaṇakāgamaṇa, meaning 'coming of gold' (BuvA. p. 258). Subsequently the name was changed to Koṇāgamaṇa. He lived in the household for three thousand years, in three luxurious palaces, Tusita, Santusita, and Santuttha. His wife was Rucigatta from whom he begot a son Satthavāha (D. II, p. 7; Buv. p. 89).

Koṇāgamaṇa left the world on an elephant and practised austerities for six months, at the end of which period he was given milk-porridge by the daughter of the brahmin Aggisoma and grass for his seat by Tinduka, a corn-field guardian (Yavapāla). He attained Enlightenment under an Udunbara tree.

When Koṇāgamaṇa Buddha preached his first sermon in the Dear Park (Migadāya) near Sudassana-city, at the foot of a Mahāsāla tree, thirty thousand beings became convinced of the dhamma. When he performed miracles and defeated false doctrines of heretics another twenty hundred thousand beings became convinced. When he proclaimed the seven (abhidhamma) texts while spending his first rainy-retreat, ten hundred thousand beings became convinced of the dhamma. He had a single congregation of thirty thousand monks, all of whom were arahants.

Koṇāgamaṇa Buddha's two chief male disciples were Bhīyya and Uttarā. His constant attendant was Sothiḍa. His two chief female disciples were Samuddā and Uttarā. Ugga and Somadeva were his two chief male supporters and Sivala and Sāmā were his two chief female supporters.

Koṇāgamaṇa Buddha was thirty cubits (hattha) tall and his life-span was thirty thousand years. He passed away at the Pabbatārāma monastery and his bodily relics were distributed among many peoples.

During the time of Koṇāgamaṇa Buddha, Gautama Buddha was a wealthy land-lord by name Pabbata. Pabbata went to see Koṇāgamaṇa Buddha and having listened to his unique Dhamma, treated the Buddha and the congregation of monks lavishly. Koṇāgamaṇa Buddha predicted that Pabbata will become a Buddha in this Bhaddakappā itself (Buv. p. 89-90; BuvA. 260).

Sri Lankan chronicles record that Koṇāgamaṇa Buddha visited Sri Lanka to relieve the Sri Lankan people who were undergoing much hardship and suffering, at that time, due to a long lasting severe drought. Sri Lanka was known as Varadīpa at that time. Koṇāgamaṇa, along with thirty thousand bhikku, sprang up into the air and alighted on the Sumanakūta mountain (in Varadīpa) and instantaneously rains fell and the drought disappeared. Next, Koṇāgamaṇa Buddha, through his Buddha-power caused himself to be seen by all the people of Varadīpa and they rushed and gathered at the foot of mount Sumanakūta to pay the Buddha obeisance. From Sumanakūta the Buddha went to Mahānomamaha (presently Mahāmeghavana in Anuradhapura where stands the Sri Mahā Bodhi) and preached to a multitude of people, and thirty thousand
of them gained the path and fruition of the Dhamma (maggapahala). In the Mahānômava the Buddha went to the site of the present Sri Maha Bodhi and sat in meditation there and entered into an ecstacy. Having arisen from the ecstacy the Buddha thought: "Let Bhikkhuṇi Kantakāṇandā come over to Varadīpa, to Mahānômava, accompanied by other bhikkhuṇis and bringing with her the southern branch of my Udumbarobodhi tree." Knowing the Buddha’s wish bhikkhuṇi Kantakāṇandā accompanied by five hundred bhikkhuṇis, brought the southern branch of Koṇāgamana Buddha’s Udumbarobodhi tree. Koṇāgamana Buddha handed over the bodhi branch to king Samiddhi of Varadīpa to be planted in the Mahānômavāna.

Having thus won over many thousands of people in Varadīpa to his Dhamma, Koṇāgamana Buddha, along with many bhikkhus, went back to Jambudīpa, leaving behind in Varadīpa the bhikkhuṇis headed by Kantakāṇandā and thousand bhikkhus headed by Mahāsumba, to look after the spiritual welfare of the new converts. The Buddha also left behind with people his body-belt (Kāyabandhanam) as a relic to be honoured (Mhv. ch. 15, vv. 91-124).

In the Nigali Sagar Pillar inscription of Aśoka it is recorded that Emperor Aśoka enlarged to double its original size a stūpa built in honour of the former Buddha Koṇāgamana (Guruge, A.W.P. Aśoka, a definitive biography, Sri Lanka Government Press, Colombo 1993, p. 310). In the accounts of the Chinese Travellers Fa-hien and Hiouen-thsang, too, reference is made to a monument put up at the place of birth of Buddha Koṇāga-mana (Guruge, A.W.P. Koṇāga-mana Buddha, being 66 feet 6 inches from the line of the front pillars to the extremity of the apse, 26 ft. 8 inches wide and 28 ft. 5 inches high to the crown of the arch; the nave in front of the stūpa is 49 ft. in length by 14 ft. 8 inches in width surrounded by thirty

By a comparative study of the rock-cut Buddhist sanctuaries in India scholars have dated Kondāne group of caves to two centuries before the Christian era and assigned them to the earliest phase of Buddhist rock-cut architecture, which they termed the ‘Hinayāna period’, to distinguish it from the later Mahāyāna phase commencing with the Christian era.

This group of caves, hidden in a ravine in the western ghats and buried in jungle terrain, about 10 miles north-west of the more famous group of Kārle caves at the base of the old hill fort of Rajmache, was first brought to notice, more than a century ago, by an Indian scholar named Vishnu Sastri and soon after visited by the then collector of Thana, Mr Law.1 It has been noticed that much damage had been caused by rain water that trickles down over the face of the rock above the caves during the greater part of the year, before proper conservation of the caves was started by the authorities of the Indian Archaeological Department. The decay that had effaced the original appearance of the caves due to seepage of water for several centuries was so great that it was found difficult for trained men like Burgess and Fergusson in the previous century to determine whether they or the caves of Bhaja were the earliest.2 However on a comparative study of the architectural features of those remains of the Kondāne caves scholars were able to determine their great antiquity.

The Kondāne group consists of an apsidal caitya-cave and a vihāra with cells and a few more smaller rock-hewn residential chambers. The caitya-cave: The plan and dimensions of the Kondāne-caitya-cave3 differ but little from those of the Bhaja caitya-cave, being 66 feet 6 inches from the line of the front pillars to the extremity of the apse, 26 ft. 8 inches wide and 28 ft. 5 inches high to the crown of the arch; the nave in front of the stūpa is 49 ft. in length by 14 ft. 8 inches in width surrounded by thirty

---

3. Burgess used the word ‘caitya’ to denote a rock-cut cave having a stūpa at the apse. This common error in terminology by the early antiquaries on Oriental art has been followed by present day writers too. The term appropriate is caitya-ghora. Paranavitana has pointed out this error and made a detailed analysis of the correct usage (see S. Paranavitana, The Stūpa in Ceylon Colombo 1946, pp. 89 ff.).
pillars, and the rock-cut stūpa is 9ft. 6 inches in diameter, with a capital like that at Bhāja, of about double the usual height, and representing two coffers one above the other, carved on the sides with the Buddhist rail pattern.

The thirty columns that surrounded the cave, as well as one of the two irregular columns that once ornamented the front have rotted away and positions only of most of them can now be ascertained. Between these two latter pillars a wooden screen or front originally filled the opening to a height of about 10 or 12 ft. in which were the door ways leading to the interior, and it was fixed to them as seems to have been the case with all the earlier caves excepting those at such places as Karle and Bedsa where these screens are carved in the rock instead of being erected of more perishable material. The pillars behind the stūpa and six others near the front on the right side have disappeared entirely. On the upper portion of one column on the left is a symbol or device somewhat resembling a stūpa with a rude canopy over it.

The barrel-vaulted roof has had wooden rafters as at Karle and elsewhere, but no traces of them are found toaday, and the only remains of the woodwork is a portion of a lattice screen in the front arch. The facade bears a strong family likeness to that at Bhaja. On the left side of the facade is a fragment of sculpture in high relief, part of the head of a single figure about twice life size. The features are destroyed, but the details of the headdress show the most careful attention paid to detail. Over the left shoulder of the figure is an inscription in one line in early Brahmi script which reads, 'Kanhasa antevasinā Bālakena katam', which Dr. Kern translates as "made by Bālaka the pupil of Kanha".

Over the figure at the level of the ogee of the great arch in the facade is a broad projecting belt of sculpture: the lower portion of it is carved with the rail pattern; the central portion is divided into seven niches, filled alternately, three with a lattice pattern and five human figures-one male in the first, a male and female in each of the third and fifth, and a male with a bow and two females in the seventh. Over these is a band with the representations of the ends of the beams or bars projecting through it, and then four fillets each projecting over the one below, and the upper half of the last serrated. The corresponding belt of carving on the right side of the facade is much damaged by the falling away of the rock at the end next to the arch. Above this is a horse-shoe window pattern merely of decorative value and over which projects out a balcony, which too serves no other purpose than decorative as it is of solid stone. This balcony too is two-tiered, the lower tier with smaller horse-shoe window patterns, two on each face of the three faces of the balcony, and the second tier with a larger horse-shoe window.

The same pattern of a false balcony is followed in the corresponding carvings on the right side which is much decayed and is presently beyond recognition in the lower portion. The absence of elaborate sculptural decoration points to its archaicism and the great antiquity of the Kondane caitya-cave.
The Vihāra: A little to the north-east is a vihāra (monks' residence) the front of the verandah of which is totally destroyed except the left end. This verandah is 55ft. 8 inches wide and 18ft. long, with the unique number of five octagonal pillars and two antae (see, plan and section in J. Fergusson & J. Burgess, op. cit pl. VIII, figs 1 & 2). At the end of this verandah is a raised recess and under a horse-shoe arch is a bas-relief representation of a small stūpa. The hall is 23ft. wide 29ft. deep, and 8ft. 3 inches high in its inside measurements with 15 pillars arranged about 3ft. apart and 3 1/2 ft. from the side and back walls but more across the front. The upper portion of these pillars is square, but about 1 1/2 ft. from the top they are octagonal. The bases of all are gone, but they also were probably square, the roof is panelled in imitation of a structural hall with beams, 19 inches by 8 inches thick 3 1/2 ft. apart, running across through the heads of the pillars, and the spaces in between divided by smaller false rafters 5 inches broad by 2 inches thick. There are three wide doors into the hall, though the greater part of the front wall is broken down and on each side are six cells totalling eighteen with the monk's bed hewn out of the rock in it, and the first on each side with two beds.

Over the doors of fourteen of these cells are carved horse-shoe arches connected by a string course projecting 6 or 7 inches and carved with a rail pattern.

There is another small vihāra with nine cells, much ruined, especially in front and a row of nine cells, at the back of what now looks like a natural hollow under the cliff. Beyond them is a small abandoned tank, and a little way further two more cells under a deep ledge of over-hanging rock, and lastly, a small cistern.

A marked feature for the archaism and the great antiquity of the Kondane caves is the absence of elaborate sculptural decoration which was the rule in later examples.

Out of the entire series of 'Hinayāna' Caitya-halls, Kondane being one of the oldest specimens yields much information as it records in a striking manner the methods and expedients of the sculptor and the carpenter as well. Although not of more architectural importance as the later caves of the Mahāyāna period, still the Kondane caves are significant in many aspects. The architectural significance lies in the fact that they are fascimiles in the rock of structural buildings devised to meet a similar demand and which undoubtedly existed in considerable numbers as at Sanchi, Saranath, Sirkap, Kalawun, Nagarjunikonda (H. Saskar, Studies in Early Buddhist Architecture of India, Delhi 1966, pp. 35f). Their planning and treatment generally throw considerable light on the system which prevailed in the early monastic establishments of the Buddhists and reveal the manner in which the practical requirements of the Saṅgha were provided for.

The dating of the Kondane caves within the first two centuries before the Christian era invariably connects these caves with the art and architectural trend in India that followed the great efflorescence in the Maurya period. This was the period 10 of the Sunga and early Andhra-Satavahanas who inspired the great art traditions of their Imperial predecessor, 11 and were responsible for the remarkable stone-architecture of the first-two centuries before and after the Christian era. With the fall of the Andhra-Satavahana royal house in the Deccan, the cultural activities begun by them too went to gradual decay, as the internecine warfare between the pettyrulers to establish themselves in this part of India was in no way favourable towards art and cultural activites. This was the period of total neglect of these early rock-cut cave sites. A renewal of cultural activities was however begun with the installation of powerful dynasties in the south. However, after the beginning of the present era, in the first few centuries, the religious activities of the Buddhists, were directed towards a new trend, that was Mahayanism. The Mahāyāna period resulted in a great cultural and artistic revival all over India. The southern dynasties, of whom the most powerful Chālukyas, Rāstrakutas, Pallawas gave further impetus to stone architecture both in structural and rock-cut forms. This trend was enhanced in no small measure by the powerful Guptas.

The construction of new caves like those at Ajanta and Ellora mark the developed forms of the new 10. The Sañci torana carvings, the Bharhut, Bodhgaya bas-reliefs and alto-relieves and the marble slabs from Amaravati and Jaggayapeta have generally been assigned to this period. 11. A mixture of west Asia tic art techniques and styles was seen in Maurya art. The facade of the earliest rock-cut sanctuaries has often been compared with the facade of the tomb of Darius at Nakshi-i- Rustam near Persepolis (P. Brown op. cit. p. 19; M. Wheeler, Splendours of the East London 1965, p. 44, photo 1).
Mahāyana period. Although the architectural pattern and technique of the early Hinayana caves, were still not abandoned, the emphasis was on elaborate ornamentation both in sculpture and painting. The simple plain celled rock-out vihāra gave way to the elegant multi-storied monastic palaces. The Kondane caves mark the boundary of the Hinayana period of Buddhist rock-cut architecture.

KOṆṆĀṆṆĀ, the second of the twenty-four Buddhas who preceded Gotama Buddha. Koṇḍañña was born in Rammavafi, his father being king Sunanda and mother Sūjātā. Koṇḍañña belonged to the Koṇḍañnagotta (gotta-clan). As a Buddha aspirant (bodhsaīṭṭa) he practised perfections (paramīs) for six-teen thousand asankheyyas and one hundred thousand aeons (kappas) in sāṁsāra before his last birth as Koṇḍañña. He was eighty-eight cubits in height and he enjoyed a life-span of one hundred thousand years.

Koṇḍañña spent a house-hold life of ten thousand years living in the lap of luxury in three magnificent palaces by name Ruci, Sūruci and Subha. His chief queen was Rucidevi by whom he begot a son named Vijitasena.

Koṇḍañña renounced the royal household in a chariot and practised austerities for ten months. At the end of the ten-month period he was served a meal of milk-rice by Yosodharā, daughter of a merchant in the village named Sunanda, and grass for his seat was provided by the Ājivaka Sunanda. He attained Enlightenment (bodhi) under a Sālakalyāṇī tree, and his first sermon was preached to one hundred thousand crores of people, in the Devavana near Amaraṇa. When he preached his second sermon ninety thousand crores of people became his followers. When he preached the dhamma refuting the teachings of heretics another eighty thousand crores of people became converted. He held three pātimokkha assemblies of his disciples, the first attended by hundred thousand crores and led by Subhadra, one of his two chief disciples; the second attended by thousand crores and led by Vijitasena, his son who was an arahant bhikkhu by that time, and the third attended by ninety crores and led by Udena, a prince who had joined the order of monks of Koṇḍañña Buddha.

Bhadda and Subhadda were his two chief male disciples and Anuruddha was his chief attendant. Tissa and Upatissā were his two chief female disciples. Sona and Upasana were his two chief male supporters and Nandā and Sirimā were his two chief female supporters.

Gautama Buddha in his past sāṁsāric sojourn was a king by name Vījitāvī, during the time of Koṇḍañña Buddha. On the invitation of Vījitāvī, Koṇḍañña Bud­dha and his disciples spent three months as honoured guests of Vījitāvī, in the vicinity of the royal palace. Vījitāvī was greatly pleased in the dhamma and renounced his kingship to become a monk. Being very zealous, Vījitāvī mastered the Tipitaka (the canon) in no time and developed the eight spiritual attainments (sāṁpatti) and after death he was born in the Brahma world. Koṇḍañña Buddha predicted that Vījitāvī will become a Buddha by name Gotama, in the very distant future.

Koṇḍañña Buddha passed away at Candavati and the stūpa erected over his relics was seven leagues in height (Bu̧v. pp. 26-28; Bu̧v.A. pp. 132-141; J1. pp 30-34).

Ruwan Bandara Adhikari

KOREA*. Buddhism was introduced to the Korean peninsula from China. The transmission took place in the era of the Korean Three Kingdoms, around fourth century A.C. and the Goguryo Kingdom became the first of them to accept Buddhism.

Buddhism was introduced to Goguryo in the second year of King Sosurin in 372 A.C. King Bugyun of neighbouring Junjin situated in the northern part of

* The E-in-C thankfully acknowledges the kind assistance of Mr. T. B. Ratnayake in the organisation of this article
China, sent a delegation of monks and diplomats carrying with them statues of the Buddha and Buddhist scriptures as well. King Sosurin gladly accepted the foreign gifts as well as a Chinese monk called Sundo.

While Buddhism was transmitted to Goguryo by land, it was by sea that the Baekje kingdom received Buddhism from an Indian monk named Marananta of Dongin from the same Chinese kingdom which transmitted Buddhism to Goguryo. It is recorded that King Chimryn (384 A.C.) heartily welcomed Marananta and accommodated him in his palace, paying him high respect. The king's positive attitude towards a foreign monk implies that Baekje was already under the Chinese cultural influence which was spreading at that time. Even though the record does not show that he brought with him Buddhist scriptures and statues it can well be assumed that he did, as ten Baekje monks were ordained and a monastery was built the year following his arrival.

The Shilla kingdom was the last to accept Buddhism mainly due to its geographical location. Shilla was not only insensitive to the cultural influx from Goguryo and Baekje but also hostile towards its influence, actually by killing Buddhist monks entering from neighbouring kingdoms. It was as the result of sacrifices of Goguryo monks such as Jungbang, Myulga, Mukhoja and Ahdo that Buddhism was officially accepted in Shilla in the fourteenth year of the reign of king Bubhung (527 A.C.).

A Martyr called Ichadon, king Bubhung's cousin, was chiefly instrumental in influencing the king to accept Buddhism.

Besides the three kingdoms mentioned above, a tiny kingdom called Garak located at the southern end of the Korean peninsula has a record concerning the introduction of Buddhism by sea and directly from India.

As Buddhism was totally unheard of at that time, it remained unrecognised until the second year of King Jilgi (452 A.C.) who built Hogye and Wanghu temples in memory of the Indian Queen.

Unlike the major Three Kingdoms which accepted Buddhism indirectly from China, this small kingdom of Garak is outstanding, since Buddhism was introduced to it from India by way of the sea.

Therefore, the introduction of Buddhist culture into Korea can be categorized in terms of Chinese and Indian even though no official historical documents have been found to corroborate the legend concerning the Garak Kingdom.

In general, prior to the introduction of Buddhist Culture, no definite Korean culture had been established except some shamanist practices and nature worship. This foreign religion, Buddhism, became well mixed with the ancient Korean culture and created a new pattern of Korean culture.

Buddhism in the Three Kingdoms:

1. Goguryo: Historical documents concerning Buddhism in Goguryo are very rare and accordingly very difficult to delve into. The following will explain firstly its Buddhist internal influences and secondly its Buddhist overseas activities.

1. Internal Influences: The Chinese monk Ahdo came to Goguryo in the second year of King Sosurim (372 A.C), two years after the arrival of monk Sundo from Junjin. Two Buddhist monasteries, Sungmunsan and Ibulansa, were built for monks Sundo and Ahdo. These were the first temples built in Korea.

An Edict was promulgated in the last year of king Gogukyang saying 'seek good fortune by worshipping Buddhist dhammas', and nine monasteries were built in the following year, being the second year of king Gwanggaeto (392 A.C.).

In the earlier stages of the propagation of Buddhism, people in Goguryo regarded Buddhism as a religion in which certain secular merits or good fortunes could be gained, as is shown in king Gogukyang's edict.

The Goguryo kingdom also went far to bring Buddhism to maturity as a national culture during the period of one of Goguryo's great kings, namely, Gwanggaeto. He had built nine monasteries in Pyeongyang (the second capital of Goguryo) and from this it can be well presumed that numerous monasteries could have been built all over his country.

The Goguryo kingdom endeavoured to raise Buddhism to a nationwide culture and to promote its growth by sending monks to China for training and education.
However, the rising trend of Buddhist propagation went downhill as Taoism which was introduced by the king Youngra (618-642 A.C.) began to spread. Taoism was not popular in its early days until in the second year of Goguryo's last king Bojang (643 A.C.) when he began to sponsor Taoism in preference to Buddhism.

Yeongaesomun, the powerful lord of Goguryo at that time, had influenced king Bojang in such extreme measure as to expel Buddhist monks from monasteries and to install Taoist monks in their place.

King Bojang did not pay attention to the plea of a Buddhist monk named Boduk that Goguryo would be endangered if he kept on persecuting Buddhism which by then had become a cornerstone of Goguryo's culture and ideology. The monk Boduk, at last, left Goguryo for a province in the south called Wansan (in Baekje kingdom), and the Goguryo kingdom fell into the hands of Shilla in the 27th year of king Bojang (688 A.C.).

The fate of Goguryo was somewhat proportional to the influence of Buddhism that it was most powerful in the days of king Gwanggaeto and was ruined in the reign of king Bojang. However, the national character of the marvellous Buddhist culture in Goguryo can be well conjectured through the numerous remains such as mural paintings, tombs and statues of Buddha.

2. Overseas Activities: The overseas activities of Goguryo monks can be broadly categorised as: activities in China and activities in Japan.

2.1. Activities in China: Numerous Goguryo monks headed for China seeking after Buddhist teachings; many of them underwent training and returned to Goguryo.

However, one Goguryo monk stands out particularly in that he taught Chinese monks and established a Buddhist sect called Samron (Sanlun, in Chinese pronunciation). He was Master Seungang, born in Yodong, Goguryo, who entered China in the latter part of king Jansoo's reign (413-419 A.C.). He studied Samron philosophy in the northern part of China and taught and instructed the Chinese monk Juhyo to write "The Theories of Samron Philosophy in the Chodangsa temple of Jongsan in the era of the Song Dynasty (420-479 A.C.)."

The Samron sect gained much popularity in the eras of Je (479-502 A.C.) and Yang (502-557 A.C.) during the time Master Seungang stayed in the Seoha monastery in Subsan. On account of this he was often referred to among Chinese monks as either Master Subsan or Master Nang. His sect became so popular that even emperor Muje of Yang ordered ten noble Chinese monks to be trained under Seungang. One of the ten Chinese monks thus trained, monk Seungjeon, succeeded Seungang to the position he held in the Samron sect.

Samron philosophy in China had been treated together with Seongshiron without doctrinal differentiation or scholarly researches until Master Seungang separated Seongshiron from Samron philosophy laying down the theoretical foundation for the Samron sect. The Chinese monk Giljang (549-623 A.C.) in the Su dynasty finally brought the establishment of the Samron sect, to completion, which is based on Seungang's founding works.

Master Seungang was the first Korean to teach Chinese monks and his influence in Chinese academic circles was substantial. No records concerning the death of Seungang are currently extant.

2.2 Activities in Japan: Hyegwan, who went to Japan in the eighth year of King Yongrue, became the founder of the Japanese Samron sect and also served as a National Master in the Japanese royal court. Besides the Goguryo monks mentioned above, the activities of numerous other Goguryo monks, no doubt, contributed to the development of Japanese culture and Japan sent its monks to study in Goguryo. The Japanese monk Hangseon was one of them.

II. Baekje

1. Internal Affairs: The Indian monk Maramanta, who entered Baekje in the first year of king Chiroyu (384 A.C.), built a monastery in Hansan (then the capital) and trained ten Baekje monks in the following year (385 A.C.). In the first year of King Aoshir (392 A.C.), the king promulgated the movement "Seek good fortune by having faith in Buddhist teachings", as happened in Goguryo.

In the 4th year of King Seong (526 A.C.) the monk Gyeomik translated Buddhist sūtras which he had brought from India. In the 19th year of King Seong a diplomat was sent to India soliciting deeper meanings of the Nirvāṇa sūtra and also requesting for Buddhist painters and technicians.
During the reign of King Mu (600-641 A.C.), Mireuksa Temple was built by the wishes of King Mu’s queen, the daughter of the Shilla King Jinpyeong.

Korea’s biggest and the oldest stone stūpa is still standing in current Ikseon of Cheonbuk province, reminding us of a legend that the king and the queen, on their way to a mountain, witnessed a statue of Maitreya (Mireuk) arising from a pond. The Mireuksa Temple was built on that spot. A legend is still current about the romance of King Mu and Princess Seonhwa in "The Records of the Three Kingdoms".

The present Sooduksa temple in Duksan in Choongnam province is where the Monk Hyehyun used to study the Lotus Sūtra and Samron philosophy.

Buddhist culture in Baekje must have been in full-bloom as is recorded in a Chinese document, "The Book of the Chu Dynasty".

The foregoing historical data truly indicate the enthusiastic attitude of Baekje shown towards the reception of a foreign Buddhist culture. Baekje’s enthusiasm is evident also from its efforts to receive Buddhism direct from India rather than through the indirect route via China.

Besides, Baekje’s effort to make Buddhist culture a national sentiment is shown from King Bub’s edict prohibiting the hunting implements. However, the ardent efforts of the kings of the Baekje lineage to establish Buddhist culture were suddenly interrupted during the reign of Baekje’s last king, king Euija. It is peculiar that no Buddhist cultural activities were recorded during his reign, quite unlike in the reign of his predecessors.

After all, the sudden decline of Buddhist activities in his reign may also account for the fall of the kingdom itself as in the case of Goguryo. Historical records concerning Baekje’s Buddhist culture are, nonetheless, more abundant than those of Goguryo.

2. Overseas Activities:

2.1 Activities in China: In the era of the Three Kingdoms, the foreign country that could provide training for Korean monks was, no doubt, China. However, no outstanding Baekje monks were historically recorded for their activities in China except Master Gyemik who studied in India. He went to India by sea and mastered Sanskrit in five years and Vinaya as well, studying in the Sangana temple located in central India. He accompanied the Indian monk Baudaladasmjjang and brought back original Sanskrit Abhidharma texts along with five Vinaya texts, in the 4th year of king Seong (526 A.C.). He stayed in the Heungryunsa Temple and translated the Sanskrit sūtras into seventy-two books of Vinaya sūtras in Chinese, in which twenty-eight outstanding Baekje monks participated. Among the seventy-two books he translated Vinaya sūtras, thirty-six books consisting of commentaries were also composed by monks Damuk and Hyein.

The above mentioned commentaries and Vinaya sūtras were dedicated with the king’s hand-written preface to a monastery and Master Gyemik became the founder of the Vinaya School in Baekje.

The fervour of Buddhist culture among Baekje people is well represented in the activities of Master Gyemik who went to India, a country far away to travel, when Buddhism was still unknown even in Shilla (Shilla accepted Buddhism in 527 A.C.).

2.2 Activities in Japan: Japan is indebted to Baekje in many respects and most particularly to the transmission of Buddhism. Two years after King Seong first transmitted Buddhism to Japan, which was the 32nd year of King Seong (554 A.C.), numerous, monks including Damhye and Doshim went to Japan to join a missionary tour.

In the 24th year of King Wideok (557 A.C.), Masters of each respective Tripitaka, Seon (Zen) Masters, bhikṣunis, Tantrists, Buddhist craftsmen and temple architects were delegated to Japan.

In the 30th year of King Wideok, Master Illa was dispatched on the request of a Japanese king and he was honoured and worshiped as a saint by the famous Japanese prince, Šhyotoku. In the 35th year (588 A.C.) relics of the Buddha, roof-tile technicians and painters were dispatched. In the 3rd year of King Mu (602 A.C.), the monk Gwanreuk, an outstanding scholar in Samron philosophy and medicine, transmitted astronomy, geography, calendars and various occult sciences to Japan. He later became the head of the Buddhist Saṅgha in Japan, thus contributing much to the development of Japanese culture. The monk Dojang composed sixteen books of Seongsihron in Japan and Bhikṣunì Bubmyong was famous for her healing power while reading Vimalakīrti-Sūtra.
As described above, Japan's cultural improvements were largely influenced by the activities of Baekje people, both Buddhist and non-Buddhist.

III. Shilla: In this article Shilla will be treated under two eras; (1) the pre-unified period and (11) the unified period. Let us look into Shilla of the pre-unified period-the period of Three kingdoms.

1. Dawn of Buddhist Culture: Buddhism was officially recognised in Shilla in the 14th year of King Bubheung (527 A.C.) and no outstanding Buddhism related cultural activities were recorded save the king's edict 'not to kill' animals, building of Heungryunsa Temple in his 22nd year (535 A.C.) and a legend that the king, along with his queen, joined the Saṅgha.

It was not until King Jinheung that the real phase of Buddhist activities began to unfold during his reign of 37 years (540 A.C. to 576 A.C.). In his 5th year (544 A.C.), the building of the Heungryunsa temple was completed and he permitted his subjects to join the Buddhist Saṅgha. In his 10th year (549 A.C.), the Shilla monk Gakduk brought a relic of the Buddha along with a diplomat form Yang in China. In his 11th year (550 A.C.), the monk Anjang was appointed as head of the national library. In his 12th year (551 A.C.) the Goguryo monk Hyeryang was appointed as a National Master and awarded the control of the Buddhist Order, the Saṅgha. Hyeryang also initiated Buddhist ceremonies such as Baekgojwa Mass Lecture and Palgwanhe Meeting to pray for the defence of the country.

In his 25th year (565 A.C.), the Chinese diplomat Yusa from Jin and monk Myongwan brought 1700 book of sūtras. In his 26th year (566 A.C.), Howangryongsa temple which was under construction for 14 years, Giwonsa temple and Shiljesa temple were completed. In his 33rd year (572 A.C.), a seven-day long Buddhist ceremony was conducted in memory of soldiers who died in action.

In his 35th year (574 A.C.), a sixty foot Buddha statue made of steel was erected in the Hwangryongsa temple, one of Shilla's three national treasures. A legend says that the steel was delivered from India during the reign of the Indian emperor Asoka.

In his 37th year (576 A.C.), the monk Anhong accompanied the Indian monk Vimala on his way from China and gifted a relic of Buddha and sūtras to the king. In his last year (576 A.C.), the king renounced the throne and joined the Buddhist Order along with his queen who took the Buddhist name Babun.

Among his many activities, the establishment of Hwarangdo is the most celebrated. Hwarangdo was an organisation composed of chosen Shilla youth with the intent of building a prosperous and strong Shilla under the ideology of the coming Maitreya and the ruler of the Cakravarti concept as depicted in Buddhism.

Shilla kings of successive generations contributed to the illustrious development of Buddhist culture by following the example of King Jinheung.

2. Activities of Shilla monks: Along with the enthusiasm of the kings, numerous outstanding monks played important roles in bringing Buddhist culture to maturity. Master Wongwang (579-632 A.C.) went to China in the 11th year of King Jindeung (589 A.C.) to delve more deeply into Buddhism. He became renowned in China and returned to Shilla in 600 A.C. His accomplishments can be viewed in the following three aspects:

(1) He gave lectures on Mahāyāna sūtras and gained much respect from people and the king as well.

(11) He showed by example that Buddhism can be applied to needs of a country by writing a letter requesting troops from China, in the 30th year of King Jindeung (608 A.C.) upon the king's order. His rationale in writing such a letter was not so much the intention of destroying the other country, but rather that it was an obligation of a subject of Shilla to simply follow the orders of the king. That Buddhism should be flexible in accorded with the times and circumstances and that Buddhists are also obliged to the call of their country, were his view of nation and religion as well. Master Wongwang, in this respect, is regarded hitherto as a forerunner in asserting the 'Buddhist Concept of national defence' peculiar to Korea which has been active right through the tumultuous Korean history.

(111) He declared five mundane disciplinary rules for secular folk to observe: (a) Be loyal to your Lord; (b) Cultivate filial affection; (c) Be trustful to your friend; (d) Be fearless in the battlefield and (e) Be selective in killing. The five disciplinary rules indicate that the genuine meaning of Buddhism lies in purifying and leading the society and not necessarily following the sūtras and vinaya to the letter.
He maintained, therefore, that the methodology of instruction can be varied depending upon the nation, society and each individual.

2.2 Master Jajang: Master Jajang was active during the reign of queen Seonduk (632-647 A.C.). He came from the Jingol class and he devoted all his efforts only to the practice of Buddhism, rejecting even the queen’s order to serve in the royal court.

He went to China during the Tang Dynasty (636 A.C.) and became renowned in Tang, China even being received by the Chinese Emperor Taijong. He taught Chinese Buddhists rather than learning from them, during his stay in China.

He brought with him Buddhist bowls, robes and 400 boxes of sūtras when he returned from China in the 12th year of queen Seonduk (643 A.C.).

Two major types of Buddhist activities were conducted by Master Jajang, one for religious promotion and the other for the defence of the country. Firstly, the promotional activities were mainly concerned with building monasteries like Tongdosa in Yangsan, Sudasa in Mt. Odai and Seoknamsa in Mt. Taebak. Secondly, the Buddhist role in the defence of the country is well depicted in the construction of the nine-storeyed stūpa in Hwangryongsa Temple, a magnificent stūpa built on Master Jajang’s suggestion spanning two years of construction (645 A.C.). The stūpa was 225 feet tall and the illustrious architect was invited from Baekje along with 200 Shilla architects.

The nine-storyed stūpa was not different from any other in that it contained relics of the Buddha and was worshipped. However, it was different, in that, it was also serving the defence of the country, resulting in Shilla’s triumph in unifying the Three Kingdoms. This stūpa and the Buddha statue, along with the Royal Belt of king Jinpyeong, were regarded as Shilla’s three national treasures.

2.3 Activities for common good: Buddhist culture was crowned with royal patronage along with the activities of illustrious monks such as Masters Wongwang and Jajang. However, the prosperity was enjoyed only within the high circles of Shilla and Buddhism was still something foreign among the majority of common people in general. Some Shilla monks, who were conscious of the original Buddhist spirit, devoted themselves to serve the poor, the uneducated and the ignorant. Among them were monks Hyesook, Hyegong and Daean.

Monk Hyesook (in the reign of king Jinpyeong), a former member of the Hwarang youth organisation, retired early and spent most of his time spreading Buddhist doctrines in remote rural areas.

Monk Hyegong, mostly active in the era of queen Seonduk, was from a humble class and had a reputation as a prodigy. On joining the Buddhist Order he left the comparatively easy life of the Buddhist monk and went into the market streets in humble clothes spreading Buddhist doctrines among the drunkards, the destitutes and the ruffians. His knowledge of Buddhist philosophy was so deep that even Wonhyo used to consult him major works. Many legends still survive concerning his miraculous activities.

Monk Daean is classified as a man belonging to the pre-unified Shilla period, even though he was active at the same period as the great Master Wonhyo. His name Daean was given to him by the common people in the market place because he used to shout “Daean! Daean” (literally meaning great comfort while beating his wooden drum propagating religion among the low class people.

These pioneering activities by the above mentioned monks also contributed to the spread of Buddhism all over Shilla, thereby unifying people under one ideology.

Unified Shilla: Shilla, the most disadvantaged kingdom in many respects, particularly its geographic situation, turned out to be the most powerful kingdom since king Bubheung’s admission of Buddhism and king Junheung’s successive patronage.

Shilla defeated neighbouring Baekje in the reign of king Muyeoul and finally Goguryo in the reign of king Munmu, thereby unifying the three Kingdoms under one Korean sovereignty. The unification also involved the process of merging the best of Buddhist culture from Baekje and Goguryo, thus forming a single national culture. Therefore, the Buddhist culture in the unified Shilla period is that genuinely inherent in the Three kingdoms with harmonious integration of all existing elements of different Buddhist cultures.

Decline of the Buddhist Order: The prosperity of Unified Shilla was at its zenith starting from King
Munmu to king Gyeongdyk, not only in terms of national power, but also in terms of Buddhist culture. However Buddhist culture began to ebb from its yet glorious peak during the reign of king Hyegong. The Shilla Buddhist activities were hardly noticed as the Buddhist Order itself began to fall apart due to the chaotic political environment starting from the reign of king Hyegong. Most of the rightful Buddhist Masters sought refuge in the deep forests or went abroad, resulting in the decline of the whole Buddhist Order.

Transmission of Chinese Seon: Seon Buddhism from China breathed a fresh spirit into the decaying Shilla Buddhist Order with rather shocking mottos. Numerous Shilla monks returned home with the urge to transmit the scriptures. However, even their efforts to plant fresh Seon spirit fell on barren ground along with the efforts to restructure the declining Buddhist society.

Seon had to find its place in the next Dynasty - in Goryo. Unofficial records describe the first introduction of Chinese Seon by Master Bubnang who received the transmission from the fourth Patriarch of Chinese Seon, Master Doshin (580-651 A.C.).

The presence of Seon in unified Shilla, nonetheless, was hardly recognisable despite the efforts of the above Masters and not until Masters Doeni and Hongchub began to propagate Seon of the southern Chinese school, which was founded by the famed sixth Chinese Patriarch Hyeneung, Seon gained a strengthened position.

Buddhism in the Goryo dynasty: In the later chaotic period of unified Shilla, two kingdoms sprang up on the Korean peninsula, forming yet three other kingdoms called Husamgook (Post-Three Kingdoms), Hubaekje (Post-Baekje, 892-936 A.C.) and Taebong (801-918 A.C.) including Shilla.

Wanggun (877-943 A.C.), the first king Goryo, who unified Husamgook, was a subordinate of Gungye the king of Taebong. King Gungye himself had been a monk before he established the Taebong Kingdom. He administered such popular Buddhist ceremonies as Palgwanhwe, named his two sons after Bodhisattvas Chung Gwang and Shin Gwang, called himself a living Maitreya Buddha and lectured on 20 sūtras of his own composition.

King Gyeonhwon of Hubaekje was also a devoted Buddhist. So also was Wanggun who unified the three contending kingdoms. Wanggun was born of a succession of families with very devoted Buddhist background. The famed Master Dosun (809-898 A.C.) had a great influence over him dating from his youth. Wanggun believed that the Goryo Dynasty owed its birth to the power of Buddha dharma and that the national characteristics of Goryo were already based on the spirit of Buddhism.

The Nation and Buddhism: Wanggun rose to the throne in the fifth year of Taebong (the second year of Unified Shilla king Gyeongmyeong, 918 A.C.). He named his kingdom Goryo and his era was known as Chunsoo.

A devoted Buddhist, Wanggun provided more support for the development of Buddhism by building several monasteries and renovating many dilapidated stūpas. He also ordered Palgwanhwe meetings to be held as a yearly national ceremony in his second year on the throne, moved to the new capital Songak upon Master Dosun's advice and built ten magnificent monasteries -Bubwangsa, Jawoonsa, Wangryunsa, Naeseokwonsa, Sannasa, Shinhenngsa, Moonsoosa, Wontongsa and Jijangsa.

In his 4th year (921 A.C.), the Daehungsa temple was built on Mt. Ogwan and Master Yun was invited there. In his 5th year his native house was renovated as a temple called Gwangmyeongsa. Likewise, in subsequent years many other monasteries were built by him in addition to promoting diverse Buddhist religious activities. It is believed that Wanggun had built approximately 500 temples and was involved in a further 3500 projects of Seon temples, stūpas and Buddha statues.

Descendants of Wanggun too, were devoted to the cause of Buddhism and did much to further strengthen the Buddhist position in the kingdom.

Examination system for monks (Seunggwa) and various sects:

1. Examination system for monks: The close ties between the regime and Buddhism had naturally brought forth a state examination system to select qualified monks, which was called Seunggwa, for the first time since the introduction of Buddhism into the era of Three Kingdoms. Until then, an unofficial examination system called Haehwe was prevalent in Goryo,
having been established in the fourth year of the founder king of Goryo, Wanggu (921 A.C.). The monk qualifying examination as an official state system was first implemented in the latter period of the fourth king Gwangjong, together with a state examination system for electing court officials.

In the Seunggwa system applicants for the Buddhist Sangha had to pass a preliminary selection process called Jongseon in each individual sect and this entitled them to sit the state examination called Daeseon. Daeseon as the main and last hurdle to pass, the aspirant had to choose either the Seon sect examination or the Gyo sect examination, the former was held at the Gwangyeongsa temple, and the latter at Wangryoonsa temple.

An entry level title called Daedeok was awarded to successful candidates, leading to higher positions such as Daesa, Joongdaesa and Samjoongdaesa identified for both sects. After one reached the position of Samjoongdaesha, the names of titles begins to differ, depending on either the Seon sect or the Gyo sect, as follows:

A. Ranks in Seon Sect: Daedeok-Daesa-Joongdaesa - Samjoongdaesa - Seonsa - Daeseonsa
B. Ranks in Gyo Sect: Daedeok-Daesa-Joongdaesa - Samjoongdaesa - Soojwa-Seungtong.

As can be seen from the above, Seonsa and Daeseonsa in the Seon sect and Soojwa and Seungtong in Gyo sect were the highest positions a monk could hold, from whom Royal Masters as well as National Masters were appointed for tutoring royal princes, or to serve as high consultants for the king's important offices. This Seunggwa system lasted until the middle period of the Yi Dynasty, with substantial changes thereafter.

**Various Buddhist sects in the Goryo Dynasty:** Various Buddhist sects were actually established, starting from the Goryo Dynasty rather than from the period of Unified Shilla. About eleven sects were present in Goryo, Viz, Hwaum, Jaen, Namsan, Jogye, Chuntae, Bubsun, Yeolhan, Shieung, Shinin, Chongjii and Joongdo. Some scholars note that the Bubsun sect had been transformed into the Joongdo sect and the Yeoulban sect into the Shieung sect, since the name of Bubsun and Youlban disappeared in the latter period of Goryo as well as in the early period of the Yi Dynasty. Besides that, Chuntae had branched into two sects, called Bubsa and Soja, resulting in the total number of sects in Goryo becoming eleven, which were carried over to the Yi Dynasty.

Currently no detailed records are extant about these sects except for Jogyeem Hwaum and Chuntae sects.

Most of the Korean Buddhist sects are continuations of traditional Chinese sects which were actually transmitted into Korea and even the names of sects are identical to those of Chinese, except for a few native Korean sects in the latter period like the Domun and the Shiheung sect.

The characteristics of Buddhist sects in Goryo, other than Domun and Shiheung, can be well indentified, as the names themselves imply, exactly those of Chinese counterparts. Let us look at some of the active sects: Jogye, Hwaum, Jaen and Chuntae.

(1) Jogye, the noted Seon sect, saw its establishment in the early Goryo period as one of the nine Mountain Seon branches stemming from the first introduction of Seon into Korea in the late Unified Shilla period. Seon masters such as Yium (870-936 A.C.) who founded the Mt. Sumi branch among the above nine branches, Yunda (864-945 A.C.), Choongdom (869-940 A.C.), Gyeongbo (869-948 A.C.), Chanyn (869-958 A.C.) and Hyunhun (879-941 A.C.) were contributing to the raising of the Seon spirit in the early Goryo period. However, the Seon sect's popularity began to declining after the establishment of the Chuntae sect until the famed Seon Master Junul (1158-1210 A.C.) opened the golden age of the Jogye Seon sect.

National Master Jinul brought a new phase to Seon by introducing the practice of Junghyegyeolsa along with numerous writings such as Junghyegyeolsamun, Gyeochoshimhakimnun, Soochingyul, Jinshimjikeyol, Wongeonseongbulron and Ganhwagyoleuron. His main conception of Junghye (practising both mind and theoretical training) was upheld by many people resulting in the most popular sect in Goryo.

(2) Hwaum sect bases its founding spirits on the Hwaum Sutra (Garland sūtra) in which its theoretical research had been deeply systematised, dating back to the era of Shilla, leading to the formation of its own school in Goryo. Masters Gwanhye and Heerang substantially influenced Hwaum studies which were separated into two branches during the period of Husamgook (Post Three Kingdoms).
Goryo Dynasty Master Danmun (900-975 A.C.), Gyoonyeo (923-973 A.C.) and Gyeoleun (964-1053 A.C.) were also instrumental in establishing the Hwaum sect, especially Master Gyoonyeo who tried to unify the two separated Hwaum schools.

(3) The Jaeun Sect which is based on Vijñaptimātra theories also produced many outstanding National Masters in its early period, including Junghyun (972-1054 A.C.), Haerin (984-1067 A.C.) and Royal Master Sohyun (1038-1096 A.C.). In the latter period, National Masters Hyeyoung (1228-1254 A.C.), Misu (1240-1327 A.C.) and Haewon (1262-1340 A.C.) were active in the Jaeun sect.

(4) The Chuntae sect owes its establishment in Goryo to National Master Daegak (1055-1101 A.C.) who introduced lectures on Chuntae philosophy in the Gukcheongsa temple in the second year of king Sookjong (1097 A.C.). The Suengseon (the preliminary Monk Qualifying Examination) was carried out to select monk aspirants for the Chuntae sect in the fourth year of king Sookjong and the following final state examination (Daeseon) in his sixth year, thereby forming a Korean version of Chuntae sect. Therefore, the actual founder of Chuntae sect is said to be National Master Daegak, who was originally from the Hwaum sect.

The projects of Tripitaka wooden blocks and catalogues:
The first Tripitaka wooden blocks (Daejanggyeongyeongpan)

The world renowned 'Goryo Tripitakas' were carved twice, firstly during the reign of the eighth king Hyunjong (1010-1031 A.C.) and secondly during the reign of the 23rd king Gojong (1214-1259 A.C.)

The motive behind this great project of carving the huge number of works of the Tripitaka was to defend Goryo from the ceaseless invasions of northern barbarians. A northern barbarian thrive called Gyeran invaded Goryo in the first year of king Hyunjong (1010 A.C.) and the capital Gaeseony fell into the hands of the barbarians, while the king sought refuge in Naju-the southern province on the Korean peninsula. The king was determined to cope with the national disaster by resorting to his pious faith-carving the wooden blocks of the Tripitaka.

The Tripitaka carving project was continued even after the retreat of the northern barbarians, which spanned three reigns of kings, taking a total of forty years to complete.

The whole Tripitaka which comprises 5048 books in 1106 folios was all Carved in wooden blocks and this version of the Tripitaka was later named as the 'Goryogujanggyeong' or 'Chojodaejanggyeong'. This wooden Tripitaka was dedicated in the Buinsa temple of Mt. Palgong and served the purpose of defending the nation and was a focal object in the hearts of the religious Goryo people.

However, these wooden Tripitaka blocks were burnt to ashes by one of the powerful invaders from the north-the Mongolians-in the 19th year of king Gojong (1232 A.C.) along with the afore-mentioned Nine Storey Stūpa of the Hwangrayongsa temple in Gyeongju. The Mongolian invaders targeted the wooden Tripitaka and the Nine storey stūpa as the foremost ones to be destroyed, simply because they were symbolic of national defence.

Buddhist Arts in the Goryo Dynasty: The frequently held Buddhist ceremonial activities resulted in the prosperity of Buddhist arts such as architecture, crafts, sculpture and paintings. One single example is Goryo's founder Wanggun to whom more than 3500 projects such as monasteries, statues and stūpas are attributed and this well indicates the popularity Buddhist arts enjoyed. Here are some examples. In the 21st year of king Moorjong (1076 A.C.), the Heungwangsa temple consisting of about 2800 rooms was completed in twelve years of construction. In the 32nd year (1078 A.C.) at the same temple, a golden stupa was erected. In the 6th year of king Seonjong 1089 A.C.), a thirteen storey golden stūpa was erected and dedicated to Hwoegyeongjun.

Among extant architectural monuments, Muryangsoujeon and Josadang in the Booseoksa temple are the oldest wooden buildings in Korea, built in the latter period of Goryo characterizing their refined touch and free style structure.

As for stūpas, the seven storey stūpa in the Hyunhwasa temple, the twelve storey stūpa made of marble in the Gyeongchunsa temple by an architect from the Won Dynasty, China and the Jigong stūpa in the Hwajangsa temple reflecting Indian influence, are some of the representative works.
As for Buddha statues, 'The Great stone Avalokitesvara Bodhisattva statue in the Gwanchoksa temple of Eunjin comes first. It took 37 years to complete from 969 A.C. to 1006 A.C.

The Amita Buddha statue made of wood in the Booseoksa temple is famous for its mural painting in Josadang.

Buddhism in the Yi (Chosun) dynasty: Buddhism during the entire Yi dynasty fell from the days of roses and winds of the Goryo dynasty into a dark age of fierce oppression at the hands of powerful Confucians who wielded political power in the Yi dynasty court.

The emergence of systematic persecution against Buddhism in the Yi dynasty resulted from the antipathy of Confucians who witnessed various corruptions that the excessive prosperity of Buddhism the Goryo dynasty had brought about as side effects. The Confucians in the latter days of Goryo even appealed to the royal court for the oppression of Buddhism. Therefore, Buddhism lost its ground and could not prosper in this new era of hostile environment. However, Buddhist culture that had already been rooted in every corner of Korean life style could not easily die out, but just managed to maintain at least some of its vitality and legacies.

Persecution of Buddhism and Buddhist Order: The military general of Goryo was the founder of the Yi dynasty. Yi Seong Gye was a loyal Buddhist himself, ironically, and not a persecutor of Buddhism. His deep personal faith in Buddhism could not change the anti-Buddhist trends of his time. However, it was strangely peculiar that most of the Yi dynasty kings and royal families were faithful Buddhists, while following anti-Buddhist policies.

Forced reduction and merger of Buddhist sects: The systematic persecution of Buddhism had been put into action during the reign of the third king Taejong on the instruction of Confucians as follows:

i. To merge various Buddhist sects, to reduce the number of temples, to force monks to leave the brotherhood.
ii. To confiscate lands and slaves owen by monasteries for the use of military funding.
iii. To limit the issuing of passports (into the capital) for monks, to abolish the national and Royal Master system, to ban construction of temples in the royal tombs.

Hundreds of Buddhist monks gathered in Hanyang (the present Seoul) to plead against such extreme measures, but it was of no avail and in February 1406 A.C., monastery-owend lands were confiscated along with the slaves, leaving a handful of monasteries that belonged to each sect. Further, the eleven sects that existed were randomly merged into seven sectors, i.e., eleven sects of Jogye, Chongji Chunhaesooja, Chunhaebusba, Hwaum, Domoon, Jaeun, Joongdo, Shinin, Namsan and Shiheung were reduced to seven sects of Jogye, Chuntae, Hwaum, Jaeun, Joongshin, Chongnam, and Shiheung. In the forced process of random merger, no religious opinions of individual sects were taken into consideration.

The fourth king Sejong also inherited the tradition of Buddhist persecution with even harsher severity that Korean monks appealed to the then Myeong (Ming) Dynasty Chinese Emperor Seongjo who was a devout Buddhist, in the first and the third year of king Sejong (1419 A.C. and 1421 A.C. respectively).

Despite the pressure of the Chinese Emperor, king Sejong forced the merger of the remaining seven Buddhist sects into only two sects in his sixth year (1421 A.C.); Jogye, Chuntae and Chongnam were merged into the Seon sect; Hwaum, Jaeun, Joongshin and Shiheung into the Gyo sect.

During the chaotic reign of tyrant Yeonsangoon, the Heungchunsu temple (the headquarters of the Seon sect) and the Heungduksu temple (the headquarters of the Gyo sect) were devastated leading to the complete collapse of the last two remaining sects, in the reign of king Joongjong.

The principal motive behind these forced mergers and reductions of Buddhist sects was to gain economic advantage. There was a dire need for a new regime to be born both in terms of manpower (slaves and converted monks) and their vast monastery owned property. The further demolishing of innumerable Buddhist cultural treasures, that had been coming down from the era of Three Kingdoms, needs no mention.

The ceaseless plea of eminent masters such as Master Hamheodang (1376-1433 A.C.), to the royal court hardly yielded any redress. He pleaded against unjust persecution of Buddhism through his renowned writings known as 'Hyunjungron' and 'Yoosukjilduiron'.

The Translation of Buddhist sutras into Korean
The Hangul translation project of Buddhist sūtras which were written in Chinese characters was the most important feat the Yi Dynasty Buddhist culture produced during the reign of the seventh king, Sejo. King Sejo was the only one in the Yi Dynasty who positively engaged himself in promoting Buddhism as a state policy.

King Sejo, upon his enthronement, removed many restrictions imposed on monks so that they could freely enter the capital; there were no more limitations in joining the brotherhood; any monk suspected of a criminal offence must be interrogated with the king's approval only; state officials were prohibited to enter monasteries without due reason. The king also legalised the 'Monk Qualifying Examination' and entered it in the State constitution of the Yi Dynasty. With the king's initiative the Wongaksa temple was built in the present Pagoda Park (Jongro Seoul) along with a big Buddha statue, a bell and a multistory stūpa. Many other temples were either renovated or built anew during his reign. However his most important patronage of Buddhism was the publishing of the printed Tripitaka and the Hangul translation of Buddhist sūtras.

Activities of Master Bowoo: Buddhism began to be eclipsed again after King Sejo until the reign of the thirteenth boy king Myeongjong, during which the king's mother Moonjung taehu directed the affairs of state behind the scenes. The king's mother was determined to restore the vitality of Buddhism and entrusted the mission to Master Bowoo, in the 6th year of king Myeongjong (1551 A.C.). Master Bowoo restored the Seon sect in the Bongeunsa temple, the Gyo sect in the Bongsunsa temple and resurrected the Buddhist ordination law as well as monk qualification examination system.

The illustrious Masters of the Yi Dynasty, Seosan and Symyeong, were the products of the restored Buddhist Order of that time. Meanwhile, the Confucian followers, with the connivance of court officials, stood fiercely against the king's mother's Buddhist activities and they charged Master Bowoo with various accusations and Confucian students even demonstrated around the palace. The king's mother, however, did not yield to such pressure groups and kept on promoting Buddhist activities until her death in 1565 A.C. (the 20th year of king Myeongjong). Master Bowoo was exiled to Jejn islands and was murdered there. An even harsher Buddhist persecution started again and the newly restored Buddhist Order (the Seon and Gyo sects), the monk qualifying examination and the monk ordination law were all repealed.

The fifteen years of Buddhist promotional activities by Bowoo and the king's mother left a substantial effect on the religious attitudes of the succeeding royal families and the illustrious Masters who were produced at that time were very active in fighting against the Japanese armies in the period that followed. Master Bowoo's writings have been transmitted up to the present in his 'Collections of Heoeungdang'.

The activities of the Buddhist Militia: The devastated Buddhist community of monks had to scatter into deep forests to hide from severe persecutions by the Confucians. Nonetheless, the Buddhist monks came out of the deep forests to fight against the Japanese armies who invaded Korea in 1592 A.C.

The Korean peninsula almost fell to the Japanese invaders in only a couple of months and the king had to flee to the northern borderline, a result of internal affairs in turmoil with extreme political dissensions and power struggles. At this endangered moment, Master Younggyu from the Gapsa Temple in present Gongju city recruited about six hundred monk soldiers and defeated the Japanese army in the battle of Chungju castle. He died in action in the battle of Geumsan against the outnumbered Japanese army.

Master Younggyu was a student of Master Seosan. Finally Master Seosan was appointed as the Commander-in-chief of the whole Korean military forces at the old age of seventy three. He sent out letters to all the Buddhist monks in the monasteries, asking them to join the military.

Master Seosan recruited about 1500 monks, Master Samyeong (student of Seosan) recruited about 800 monks and master Chuyung about 1000 totalling about five thousand Buddhist monks in all. Master Seosan appointed Samyeong as the commander of the monk army and they defeated the Japanese army in the battle of Pyeongyang in which the Chinese army also participated (1593 A.C.)

Master Chuyung also defeated the Japanese in the battle of Haengju Castle-One of three big battles in that war. This war, called 'Imjin waeran' lasted about seven years and the activities of Master Samyeong were most notable during wartime as well as the post war period.
The activities of the Korean militia were also conspicuous during the invasion of the Manchurians (Ching Dynasty) in the fourteenth year of King Injo, (1636 A.C.). This war called 'Byeongjahoram' ended with the surrender of the Korean king.

Buddhist Culture in the mountains:
The state of the Buddhist Order: Numerous masters produced under Master Seosan and Seonsoo gave an impetus to the crumbling Buddhist spirit. Nevertheless, they could not sustain the new wave of movements due to the lack of any legitimate Buddhist order or sects. Therefore, the Buddhist culture had to be confined to and formulated in the deep mountains.

Two streams of Buddhist groups were most notable in this period; one stream from Master Seosan and the other from Master Seonsoo.

The lineage of Seosan was succeeded by monks such as Eungsang (1572-1645 A.C.), Euishim (1592-1665 A.C.), Doan (1638-1715 A.C.), Jian (1664-1729 A.C.), Sangun (1710-1791 A.C.), Yuil (1720-1799 A.C.) and Euiso (1740-1796 A.C.).

Most of the above Masters were adepts of Hwaum (Avatamsaka) philosophy, except the few who were Seom Masters.

The lineage of Seonsoo (Boohyu) was succeeded, after division into seven branches, by monks Cheonueng '1680 A.C.), Soocho (1590-1668 A.C.) Seongchong (1631-1700 A.C.) and Sooyeon (1651-1719 A.C.).

Among them, Master Cheoneung is regarded as the only Buddhist monk who officially composed 'The Letter of Plea' to the royal court in protest against persecution of Buddhists.

Contemporary Korean Buddhism:
Free entry to the capital city: Korean Buddhism in the late nineteenth century began to show signs of liberation from its long centuries of repression and one of them was the lifting of the proscription that prohibited free entry of monks to Seoul. The proscription was finally lifted in April 1895 A.C.

In the following year (1896 A.C.), some Buddhist meetings were held in Seoul between Korean and Japanese monks. However, all the Korean monks had to be expelled from Seoul once again in 1808 A.C. by a royal order which was cancelled shortly after. Free activities of Buddhist monks in Seoul brought the changes of government policy that had been blindly holding fast against Buddhism.

New movements inside the Buddhist community to unify all monasteries also took place and the newly built Wouheungsas temple at East Gate of Seoul became the headquarters of all Korean monasteries in 1899 A.C.

Thirteen monasteries in each of the thirteen Korean provinces were also designated as local headquarters, for effective administration. Government administrative offices were also established to help administer things relating to monasteries and monks. The Korean government's positive attitude towards Buddhism, however, did not so much render conspicuous results, but only helped raise the social status of monks.

The government administrative offices set up to aid administration of monasteries and the policies for handling Buddhist Affairs did not last long (1904 A.C.) due to the chaotic political situation, and the entire administration of Buddhist Affairs was transferred to each respective local office of the Interior Departement.

In 1906 A.C., a Buddhist research society was founded by Lee-Bo-Dam and Hong-Wol-Cho in the Wonheungsas temple under the influence of the Japanese Jo-Do sect. This Buddhist society also established the Myeongjin Buddhist school in 1906 A.C. at the Wonheungsas temple, the first modern school for Buddhist studies, which later became the present Dongguk University.

In March 1908 A.C., fifty two representative monks held a conference in the Wouheungsas temple to set up a central council and the new Buddhist organisation thus formed was named Wou (circle) sect.

In 1910 A.C., the Gakhwangsa temple was built in Jongro, Seoul, to serve the central committee of Korean Buddhism in place of the Wouheungsas temple. Shortly after the Japanese occupation of Korea in 1910 A.C., Lee Hal Gwaag, the leader of the Korean Buddhist organisation (Won Sect) went to Japan to form an affiliation with the Japanese Soto Sect. A group of Korean monks, with strong nationalistic sentiments, protested against this move and set up their own organisation called the Imje sect with headquarters in
the Bumeosa temple of Pusan. The Japanese authorities closed down the Pusan headquarters in 1911 A.C., under the new temple Legislation ordinance, and the growing trend of modern Korean Buddhism had to face yet another dark period.

Buddhist Sangha under Japanese control: Under the Temple Legislation Ordinance of the Japanese Resident-general, the entire Korean Buddhist Sangha was divided into thirty major monasteries and the contending sects were unified under one system that accepted both the Gyo and the Seon sect. A central office to coordinate the work of the thirty major monasteries was later set up in the Gakhwangsa temple by the abbots of the above monasteries. However, this central office was not strong enough to cater to the needs of the Sangha and a new office was set up in January 1922 A.C. with enhanced authority.

In 1929 A.C., a national Buddhist convention was held to legislate rules and regulations concerning the Sangha and seven high ranking monks were elected to form a consultative committee.

In spite of all these efforts at centralisation, another development took place in 1941 A.C. A new sect, called the Jogye sect, representing the entire Sangha community was set up with Taegosa temple as its headquarters. The Jogye sect was representative of the traditional Seon sect which was introduced to Korea in the Shilla period, inheriting the tradition of the sixth Chinese patriarch Huineng. The Jogye sect was one of the nine mountain Seon schools during the Goryo Dynasty.

The newly formed Jogye sect was officially recognised by the Japanese Resident-General on 23rd April 1941 and Master Hanam was elected as the first patriarch.

With the end of the second world war another development took place in the Korean Buddhist Sangha. All the Japanese-made legislation was discarded and Park Han Yeong was to lead the Sangha under new legislation. See PLS. XXVII-XXXI.

KOSAMBI, the capital of the Vatsas or Vamsas (J. IV, 28; VI, 236). In the time of the Buddha its king was Parantapa, and after him reigned his son Udena (MA. II, 740 f.; DhpA I, 164 f.) Kosambi was evidently a city of great importance at the time of the Buddha for we find Ananda mentioning it as one of the places suitable for the Buddha's parinibbana (D. II., 146, 169). It was also the most important halt for traffic coming to Kosala and Magadha from the south and the west (Vin. I, 272). The city was thirty leagues by river from Benares (AA. I, 170) and the usual route from Rajagaha to Kosambi was up the river (Vin. II, 290), though there seems to have been a land route passing through Anupiya and Kosambi, the halting-places mentioned being Ujjeni, Gonnaddha, Vedisa, Vanasa-vihya, Kosambi, Sāketa, Savatthi, Setavya, Kapilavatthu, Kusinārā, Pāvā, Bhogaragana and Vesālī.

Near Kosambi, by the river, was Udena's spark, the Udakavana, where Ananda and Piṅḍola-Bhāradvajā preached to the women of Udena's court on two different occasions (Vin. II, 290 f.; SnA II, 514; J. IV 375). The Buddha is mentioned as having once stayed in the Simsapavana in Kosambi (S.V., 437). Mahā Kaccāna lived in the woodland near Kosambi after the holding of the First Council (PvA. 141).

Already in the Buddha's time there were four monastic establishments in Kosambi-the Kukkutārāma, the Ghosītarāma, the Pāvārikambavana (all three donated by three of the most eminent citizens of Kosambi, named Kukkuta, Ghosita and Pāvārika respectively), and the Badarikārāma. The Buddha visited Kosambi on several occasions, stopping at one or the other of these residences, and several discourses delivered during these visits are recorded in the texts.

The Buddha spent his ninth rainy season at Kosambi, and it was on his way there that he made a detour to Kammassadamma where Magandiya, daughter of the brāhmin Māgandiya was offered to him in marriage. The circumstances are narrated in connection with the Māgandiya Sutta. Māgandiya took the Buddha's refusal as an insult to herself, and, after her marriage to king Udena, she tried in various ways to take revenge on the Buddha, and also on Udena's wife Sāmāvati, who had been a follower of the Buddha (DhpA. I, 199 ff.; III; 193ff.; IV, 1ff., Ud vii. 10).

A great schism once arose among the monks in Kosambi. Some monks charged one of their colleagues with having committed an offence, but he refused to acknowledge the charge and, being himself learned in the Vinaya, argued his case and pleaded that the charge
be dismissed. The rules were complicated; on the one hand, the monk had broken a rule and was treated as an offender, but on the other, he should not have been so treated if he could not see that he had done wrong. The monk was eventually excommunicated, and this brought about a great dissension. When the matter was reported to the Buddha, he admonished the partisans of both sides and urged them to give up their differences, but they paid no heed. The people of Kosambi were annoyed at the monks’ behaviour as the quarrel developed. The Buddha once more counselled concord, narrating to the monks the story of king Dighiti of Kosala, but his efforts at reconciliation were of no avail, one of the monks actually asking him to leave them to settle their differences without his interference. Being disappointed with them the Buddha left Kosambi, and journeying through Bākalakonakāragāma and the Pācinavamsādāya, retired alone to keep retreat in the Pārileyyaka forest. In the meantime, the monks of both parties repented, partly owing to the pressure exerted by their lay followers in Kosambi, and, coming to the Buddha at Savatthi, they asked his forgiveness and settled their dispute (Vin, I, 337-571; J. III, 486 ff.; DhpA. I, 44 ff; SA. II, 222f.).

The commentaries give two reasons for the name Kosambi. The more favoured (eg. UdA. 248; SnA. 300; MA. I, 535) is that the city was so called because it was founded in or near the site of the hermitage once occupied by the sage Kusumba (var. Kusumba). Another explanation is (eg. MA. I, 539; PsA. 413) that large and stately Margosa trees (Kosambarukkha) grew in great number in and around the city.

During the time of the Vajjiputtaka heresy, when the Vajjiyan monks of Vesali wished to excommunicate Yasa Kakalakapputta, he went to Kosambi, and from there sent messengers to the orthodox monks in the different centers (Vin, II, 298; Mhv iv, 17).

It was at Kosambi that the Buddha promulgated a rule forbidding the use of intoxicants by monks (Vin, II, 307).

Kosambi is mentioned in the Samyutta Nikāya (S. IV, 179) as being situated on the banks of river Uaṅgā (Gaṅgāya nadiyā), ‘fire’. This is either an error, or here the name Gaṅgā refers not to Ganges but to Yamuna. Kosambi is identified with the two villages of Kosam on the Jumna, about ninety miles west of Allahabad (Cunningham, Ancient geography of India.).

The great object of veneration in Kosambi was the celebrated statue of the Buddha in red sandalwood which is said to have been venerated by king Udena while the Buddha was in the Tāvatīṃśa heaven preaching the Abhidhamma to his mother. The statue was placed under a stone dome within the precincts of the palace of Udena which, as described by Hsuan Tsang, was situated in the very middle of Kosambi. This site has been identified with the mass of ruins, where now stands a small Jain temple. The foundations of a large building are found both to the east and the west of the Jain temple but no remains of sculptural or architectural interest have been discovered there.

At a distance of about a quarter mile from there were discovered two sculptured pillars of a Buddhist railing, and the pedestal of a statue inscribed with the well known Buddhist formula beginning with Ye-dharmā hetuprabhava, in characters of the 8th or 9th century. These may have perhaps originally belonged to the vihāra in the palace, which contained the famous sandalwood statue of the Buddha.

In the village of Chote Garhawa, about half a mile to the south-east was discovered a small square pillar, sculptured on three faces with representations of stūpas. Cunningham presumes that this pillar belongs to the stūpa which contained the hair and nail relics of the Buddha, as it was situated inside the southeast corner of the city where the pillar itself was found.

Inside the fort of Kosambi (ie., Kosam) is a large monolithic pillar of Asoka.

To the south-west of Kosambi, about one and a half miles away, Hsuan Tsang describes the existence of a lofty stūpa built by Asoka, 200 feet in height, and a stone cavern of a venomous dragon, in which it was believed the Buddha had left his shadow though Hsuan Tsang candidly says that this shadow was not to be seen during his time (ASIRA. I, 301 ff.).

H.R. Perera

KRIYĀ-TANTRA, the first of the four classes into which the Buddhist tantras are divided. The tantras belonging to this class deal with ritualistic ceremonies to be performed at the building of temples, erection of images of gods etc. Winternitz (A History of Indian Literature, II, pp. 389-90) mentions three extant texts belonging to the Kriyā-tantra class which are Ādikarma-pradīpa, Kriyā-samgraha-paḥjīka and Aṣṭamivrata-
however, as these texts deal also with rituals such as initiation ceremonies, sprinklings, morning and evening devotions etc., which could also fall within the caryā, the second class of tantras, a strict line of division among the four classes cannot be established.

A fact that is very important in respect of this division of Tantric texts is that the two former classes, kriya and caryā, are meant for the neophytes or beginners who are technically called ādikarmika bodhisattvas in Buddhist Sanskrit (cp. Pali: ādikammika). Consequently these two classes of texts, especially the kriya class, enjoin strict disciplinary observances in such matters as sex, food, drink etc. It is only after passing through these lower stages that the practiser is initiated into the higher and advanced mysteries as represented by such texts as the Guhyasamājatantra, which is classified as belonging to the fourth or the highest, class known as Anuttarayoga.

A.G.S. Kariyawasam

Kṛtāvī-bhūmi, the seventh and the last of the stages of a disciple’s progress (srāvaka-bhūmi) occurring in a list recorded in the Sūtasāhasrikā-prajñā-pāramitā (Ssp. pp. 1562-3). Being the last bhūmi as enumerated here, the person who has reached it is said to have obtained arhatship (kṛta: skilled, accomplished: cp. the term kṛta-kṛtya or kṛta-karaṇīya as used to describe arhants). The list occurs in an account wherein the Mahāyāna is compared to ether (ākāsa) the point to be emphasised being that the Mahāyāna is as infinite as the ether. Just as these bhūmis, are not found in the infinite akāsa so are they not found in the Mahāyāna, which too is hence infinite.

Elsewhere in the text (Ssp. p. 1473) kṛtāvī is given as the seventh of ten bodhisattva bhūmis which are made up by adding pratyeka-buddha, bodhisattva and Buddha bhūmis to the seven srāvaka-bhūmis. The seven srāvakabhūmis are also enumerated at Mahāvyutpatti, section 50.

Kṣana see Khaṇa

Kṣemendra - a Kashmiri poet who was a prolific writer in the fields of Buddhist and Hindu cultures. As pointed out by P.L. Vaidya, the editor of Kṣemendra’s Avadānakalpalatū or better known as Bodhisattvāvā dānakapalatū, there is no complete record of the life of Kṣemendra as is usual of many writers of Kṣemendra’s period. Glimpses of information regarding his life can be gathered from what he says about himself at the end of his own works, from his son’s (Someendra’s) preface to his Avadānakalpalatū and from Kalhāna’s Rājaratārangini. P.L. Vaidya opines that the earliest date in Kṣemendra’s works comes out to be 1037 A.C. and the latest 1066 A.C. Kṣemendra was a pupil of Abhinava Gupta at about 1014 A.C. and Kṣemendra may have been born about 990-1000 A.C. P.L. Vaidya opines, too, that Kṣemendra may have died soon after 1066 A.C.

From information supplied by Kṣemendra in his last work Dasāvatārācarita, the frame of his family tree can be conjectured thus.

Narendra
(Protestant of king Jayapīda)
Bhogendra
Sindhu
Prakaśendra
Kṣemendra
Somendra
Cakrapala

P.L. Vaidya categorises Kṣemendra’s works as follows:

(a) Poetical Epitomes : Rāmāyanamañjarī,
Bhāratamañjarī, Brhatkathāmañjarī,
Dasāvatārācarita and Avadānakalpalatū.

(b) Didactic Poems: Kalāvilāsa, Samayamātrkā,
Cālucaryāśūtaka, Sevyasevakopadesa,
KŠUDRAKA-VASTU

Darpadālana, Desopadesā, Narmanālā and Catuvargasamgraha.

(c) Poetics and Metrics: Karikaṇṭhābharaṇa, Aucitayavicāracarvī and Suvtattailaka.

(d) Miscellaneous: Lokaprakāśakoṣa, Nātikalpataru and Vyāsāṣṭaka

Avadānakalpatūṭi of Ksemendra enjoys high reputation in Tibet where it is stated to have been translated in the twelfth century. A.C. Winternitz (History of Indian Literature, Vol. II) opines that it was translated into Tibetan in 1272 A.C. under the auspices of the Mogul emperor Kublai Khān.

W.G. Weeraratne

KŠUDRAKA - VASTU is the Sarvāstivāda Vinaya work corresponding to the Khuddakavattukhandha of the Cullavagga of the Pali Vinaya Pitaka. Although Winternitz (A History of Indian Literature II, p. 239 n.3) implies that the work corresponds to the Pali Cullavagga in its entirety, it seems to be through some oversight as it corresponds only to that section of the Cullavagga designated by the same name (chapter V of the Pali Cullavagga). This fact is clearly explained by Nalinaksha Dutt in his edition of Gilgit Manuscripts (Vol. III, part iii, Introduction-page 2) where he says that in the Sarvāstivāda Vinayavastu he was editing, the leaves dealing with the "Miscellaneous details regarding the daily life of the bhikku" referring to the 5th chapter of the Pali Cullavagga, which is the Pali Khuddakavatthukhandha, are lost.

Therefore its contents cannot be compared with the Pali text.

A.G.S. Kariyawasam

KUAN-YIN, abbreviated form of Kuan-Shih-Yin, the name by which Avalokitesvara is known in China. Less often he is also known as Kuan-tzu-tsai. Kuan-yin is said to reside in the island of Pu-to, and it is possible that it was only after about the 9th century A.C. that this island came to be considered as the residence of Kuan-Yin. See PL. XXXII

The name Kuan-Yin is given different interpretations by scholars. A few such interpretations are as follows: 'Illuminating the sounds of the world,' One who contemplates on the sounds of the world 'Hearer of the prayer of the world,' 'He who bears the cries of men.'

Some scholars are of opinion that the name Kuan-Shih-Yin is a mistranslation of the name Avalokitesvara. They point out that Chinese translaters have confused the term Is'vara (meaning lord) which is the second component of the Sanskrit name Avalokitesvara (= Avalokita + is'vara) with -svara (meaning sound) and used the latter in place of the former. A possible cause for this confusion may be found in the name of another bodhisattva called Gadgades'vara who is somewhat similar in character to Avalokites'vara and whose description appears in the 23rd chapter of Saddharmapuṇḍarīka Sūtra, the chapter which precedes the one devoted to Avalokitesvara. His name is translated into Chinese with the two characters miao (wonderful) and yīn (sound). The term-svara occurring in the name Gadgades'vara may have led the Chinese translators to assume that the second component of the name Avalokites'vara is - svara and not-Is'vara. However, Kuan-tzu-tsai, the lesser known of the two names, and which perhaps, is of later origin is closer in meaning to the Sanskrit original.

There is no consensus among scholars regarding the date of the introduction of Kuan-Yin worship into China. Edkins (p. 382), though he does not give any specific date, says that Kuan-Yin was worshipped in China probably as early as the Han dynasty (206 B.C. - A.C. 220). On the other hand, Johnston points out the difficulty of fixing the exact period of introduction of the Kuan-Yin cult. As the Saddharmapuṇḍarīka Sūtra is the basic text dealing with the Avalokitesvara

1. This is located in one of the groups of hily islands known to Europeans as the Shu-sän archipelago which lies off the north-eastern coast of Che-kiang. The name Pu-to could be a corrupt abbreviation of the Sanskrit form Potalaka which is sited in Sanskrit Buddhist sources as the abode of Avalokitesvara.

2. For different interpretations of this name see Alexander C. Soper, Literary Evidence for Early Buddhist Art in China, (Ascona, Switzerland, 1959) p. 156

4. S. Beal does not regard it as a confusion (JRAS. (NS) II, p. 420 ff.) Minayeff on the other hand support the Chinese usage and puts forward the view that-svara and not Is'vara is the original word (JRAS. 1927, p. 241, ff.).

cult, the date of translation of this text could be considered as providing an important clue to the date of introduction of Kuan-Yin worship into China. The oldest extant Chinese translation of the Saddharma-pundarika Sūtra, known in Chinese as Cheng-Fa-hua-ching, is said to date from 286 A.C. 6 On the other hand, tradition seems to hold that there existed two earlier translations.

This does not, however, mean that the Kuan-Yin cult in China is either coeval with the translation into Chinese of the Saddharma-pundarika Sutra or subsequent to it. On the contrary, it can be reasonably argued that Kuan-Yin worship was known in China prior to this event, and that it is the popularity of this worship that enhanced the necessity of a translation of the Saddharma-pundarika Sūtra. Hence, there is good reason to accept the view put forward by scholars like Alice Getty 7 that Kuan-Yin worship was introduced into China during the Han dynasty towards the end of the 1st century A.C., possibly through the wide prevalence of the cult in Central Asia already by this time.

However, there is no denying of the fact that Kuan-Yin worship became still more popular as a result of the appearance of the translation. It is seen that soon after the completion of the translation it is the chapter dealing with Avalokites'vara that became most popular, and it was often treated as an independent text. By about the 5th century the Kuan-Yin cult had spread far and wide and it reached the zenith of its popularity by about the 6th and 7th centuries by which time Kuan-Yin came to be assigned a place of sanctity in almost every Chinese Buddhist temple.

Avalokites'vara, as presented in the Saddharma-pundarika Sūtra, for example, is the embodiment par-excellence of compassion, and it is this characteristic that appealed most to the Chinese Buddhists from the very beginning. Hence, from the time of introduction Kuan-Yin was worshipped as the most benevolent, compassionate, and merciful bodhisattva. In the eyes of the Chinese Buddhists this quality of compassion seems to have appeared rather like an effeminate characteristic, a mother-like love, and hence arose the tendency, from a fairly early period, to represent Kuan-Yin in a feminised form. This tendency was accelerated by Kuan-Yin's special power of bestowing children on those who invoke his favour for that purpose.8 As the 'giver of children' Kuan-Yin was conceived by the Chinese almost in the form of a goddess. At a subsequent period this feminised form got further established and became widespread owing to a confusion of the characters of Hariti9 and Miao-Shan10 with Kuan-Yin.

Available evidence is insufficient to decide the exact period in which this feminisation of Kuan-Yin took place. De la Vallee Peussin, basing his argument on a Nepalese inscription dated to the 8th century, concludes that 'the Chinese transformation of Avalokita into a woman had probably been already effected in India' (ERE. II p. 260). Sten Konow too, is of the same opinion (JIBORS. XI, p. 1 ff). S. Paranavitana cites evidence that seems to support this contention (CJSc. II, p. 52 ff; cf. also JRAS. 1906, p. 464; 1915, p. 403). In marked contrast to this idea stands the portrayal of Kuan-Yin in strongly masculine character in the paintings of the divinity in Central Asia. Edkins (op. cit. pp. 382, 384) is of opinion that Kuan-Yin was not recognised in female form until the 12th century A.C. and he adds that Kuan-Yin is to be regarded as masculine even at present and that the feminine form is merely a special metamorphosis. It is, in fact, more correct to say that the latter is only a near-feminine form. On the contrary Fenollosa11 points out that there are some Chinese paintings of Kuan-Yin belonging to the 7th and 8th centuries which are markedly feminine. However, he does not hold the view that Kuan-Yin was represented exclusively in this feminised form, for, he admits the presence of other paintings belonging to

---

8. The Sāmp. (chp. xxiv) describes elaborately this special power of Avalokites'vara.
9. Hariti was originally a child devouring demoness who was later transformed into a giver and protector of children. See J.D. Dhiresakera, Hariti and Pañcikī: An early Buddhist legend of Many lands, in Malalasekera Commemoration Volume, (Colombo, 1976) p. 61 ff.
10. Miao-shan is a legendary Chinese princess who by practising meditation and performing meritorious deeds attained Buddhahood. See Wally, Avalokitesvara and the legend of Miao-shan in ArtA tome xxv, ii
the same period representing Kuan-Yin as a male bodhisattva. Johnsten, (op.cit.p. 275) does not agree with Edkins. He says that though it may be true that Kuan-Yin was not generally regarded as a feminised bodhisattva until about the 12th century, there is ample evidence to establish the prevalence of the feminised form of Kuan-Yin at a much earlier date. Regarding Edkins' other observation, Johnston (op.cit. p. 267) says that, in popular Chinese religious lore Kuan-Yin is almost always represented in the feminised form whose full Chinese title is T'a-tzu ta-pei Chin-k'uan-shih-yin tzu-tsang-wang Pu-sa, the all compassionate, self-existent saviour the royal bodhisattva who hears the cries of the world.

A majority of Sinologists accept that in the T'ang dynasty (618-907) there was a form of Avalokitèsvara called Sung-tzu Kuan-Yin who was looked upon as the 'Dispenser of fecundity' (Getty, op.cit. p. 80). Peri12 thinks that originally Sung-tzu Kuan-Yin represented a male form of Avalokitèsvara with a child in his arms, thus symbolising his child bestowing quality. The transition from this male form to the feminised form with flowing robes and prominent effeminate features is regarded as a natural sequence (Getty, loc. cit.)

Alice Getty (op.cit.p. 79) remarks that the earliest representation of Kuan-Yin shows strong Indian influence. The same authority categorized the male form of Kuan-Yin into two main groups. One group consists of the thirty-two metamorphosis called the 'Kuan-Yin, san shih-erh-hsing' on the thirty two images of Kuan-Yin, modelled on the image of Padmapāni with minor variations among each other. The other group called the 'Pa-uan Kuan-Yin' consists of eight guises assumed by him to save the beings from eight kinds of perils. Besides this, there is another form called Chien-shou (thousand armed) or 'ch'ien-yen (thousand-eyed, mainly modelled on the thousand armed Avalokitèsvara form prevalent in Tibet.

According to Getty, the earliest feminine form of Kuan-Yin is the feminised form of Padmapāni. There is another modelled on Hariti, represented as carrying a child in her arms or on the lap. In this form she is usually-represented as wearing flowing drapery cascading from her high-head-dress. The transformation of Hariti into the feminised form of Kuan-Yin was completed by making her adopt the two symbols, the vase and the dove, which are common symbols of Northern Buddha form (Getty, op. cit. p. 81)

There is still another feminised form which appears to have originated from an amalgamation of Kuan-Yin and Miao-shan. In this form Kuan-Yin is represented either as having two arms or many arms. In her many-armed form feminised Kuan-Yin is always represented as seated,13 with the two normal hands in the posture of worship, while the other hands are represented as holding various Buddhist symbols.

Another significant change in the insignia is the substitution of the willow-branch in place of the lotus, which Kuan-Yin carries in a narrow-necked phial (ching-p'ing), and confers blessings on the worshippers, thus promising them endless bliss in the Sukhavati heaven.

In passing it could be mentioned that Kuan-Yin is regarded also as a fish goddess called Ao-Yu Kuan-Yin and in this connection it should be noted that in Nepal, too, Avalokitèsvara is referred to as Matsyendranātha (Lord or the king of fishes). Johnsten (op.cit.p. 289) thinks that this could be a refined and a moralised form of the Syrian fish-goddess called Atargatis.

S.K.Nanayakkara

KUBLAI KHAN (1216-1294) was the youngest of the four sons of Jenghiz Khan, the founder of the Mongal (Yuan) dynasty in China.

Kublai who succeeded his brother Moung in 1259 at the latter's death, continued the war of expansion finally conquering the Sung dynasty and thus completing the conquest of China in 1276.

Kublai Khan appears to have adopted a very tolerant attitude towards the numerous religious faiths prevalent at the time, and there is ample historical evidence to show his special leanings, whatever be the reason for this preferential attitude, towards Buddhism, particularly towards Lamaism. The history of Tibetan Buddhism records the meeting between Kublai Khan and the famous grand lama Phags-pa (1235-80) of the Sa-skya sect who visited China on the invitation of Khan himself. This meeting is singularly important.

12. See N. Peri, "Hariti, la Mee're-de-Demons BEFEO. xvii, 1917. p. 68)
13. In the Thousand - "armed" masculine form Kuan-Yin is always standing.
for it produced far-reaching results that greatly contributed to shape the course of the history of Tibet as well as its history of Buddhism.

Tibetan tradition records how Phags-pa, with his erudition and encyclopaedic knowledge about the history and general affairs, succeeded in winning over Kublai Khan's confidence. Phags-pa was successful in obtaining Kublai Khan's approval and patronage to his proposal to establish his own self (i.e. Phags-pa) as the secular ruler of Tibet. Besides, he successfully persuaded Kublai Khan to agree to exempt all Buddhist Monasteries in Tibet from all kinds of taxation and also to put an end to the practice of using monasteries as garrisons. As the favour shown to Lamaism by Kublai Khan passed all bounds, the lâmâs became wealthy and powerful, finally paving the way for a theocratic rulership in Tibet.

Though it is said that Kublai Khan embraced Lamaism and received initiation into Hevajra doctrine at the hands of Phags-pa and even appointed the latter as the Imperial Tutor (H. Hoffman, The Religion of Tibet, London 1961, p.138), it is not known for certain whether he continued to follow and practise Lamaistic teachings. However, it is clear from contemporary records that Kublai Khan was a great ruler who was intelligent, always desirous of knowledge and who willingly patronised Chinese culture and literature.

S.K. Nanayakkara.

KUDĀ - (var. Kuvā), a site of an early Buddhist rock-sanctuary in western India. Kudā is a small village on the shore of the Rajpurī creek and is about 45 miles to the south of Bombay in the Maharashtra State. Within a 40-mile radius to the north of Kudā lie the more famous Buddhist caves such as Kondâne (q.v.), Kārlī (q.v.), Bhājā (q.v.) Bedsā (q.v.) etc.

Despite the fact that Kuḍā caves are a less ambitious project their close resemblance to the architectural and artistic features of such famous sites as Kārlī leads one to conjecture that the cave site at Kuḍā too was begun during the same period as that of Kārlī, during the first century before the present era.

On the eastern shore of the northern arm of the Rajpurī creek, a low hill sloping down to the north, the caves of Kuḍā are seen to contain altogether 22 in the whole group. These caves were hidden in the jungle for centuries until they were brought to light in 1848 (Journal of the Bombay Branch of the Royal Asiatic Society, Vol. III, pt. II. p. 44). All the caves at Kuḍā, excepting one sole example, are extremely plain adding a feeling of austerity that marks the nature of early Buddhist eremitages. The cave No. VI, is the exception to this general feature of cave architecture at Kuḍā which is necessarily a Caityagrha enshrining within it a miniature stūpa. The other caves may have been meant as monastic cells serving as residential quarters. The pioneer investigators at the site, James Ferguson and James Burgess take the Caityagrha at Kuḍā as the principal cave at the site. The pro-naos has a roof which projects out for about 8 feet and is supported at each end by the fore-part of an elephant. This arrangement of representing fore-parts of elephants is most elaborately used at the more famous cave temple at Kārlī a site which shares many other features of affinity with Kuḍā. Incidentally it should be of importance to investigate the elephantine walls that are found in early Buddhist architecture of Sri Lanka (e.g. Yaṭāla vehera in the south, and Mahāthūpā in Anuradhapura), because such an investigation would help to determine the close cultural links the Buddhists of the two regions had developed during ancient times.

Most of the cells at Kuḍā have stone benches and beds meant for resident eremitages.

The cave No. VI, which is the only one at Kuḍā with sculptures has two principal sculptured panels at the corners on the back of the hall. These panels measure each about 5 ft. by 7 ft. approximately. The panel in the right corner contains sculptured figures of a Mithuna, probably a donor couple, depicted in life-size and with heavy fleshy limbs.

The man wears a turban and large earrings and holds his left hand up. Except for long tubular bracelets his torso is almost bare. His lower garment is held together by a waiśband and a cloth drapes round. The headdress of the female figure is elaborate. Her breasts are heavy and bare; she wears as her lower garment a bejewelled mekhalā (girdle). On her legs are heavy anklelets. A manikin kneels at her left and holds her anklets as if adjusting them. The female rests one hand on the dwarf's head.

Bearing every resemblance to the one discussed above is a corresponding panel in the left corner. Both these sculptured panels have a striking resemblance to similar depictions of donor couples at Kārlī and Kaṅkerī. The resemblance is so striking even in their
minute details, that it would lead one to infer that the craftsmen responsible for these sanctuaries belonged to the same age and the same tradition.

On the right wall of the cave and on the left side of the front of the verandah are carved in low relief Buddha figures on lotus seats. These Buddha images are depicted in different postures. Some in the cross-legged Vajrāsanamudrā, others in the so-called European fashion or Pralambhapāda. In one panel the Buddha in the famous Dharmacakra or preaching attitude is depicted in the manner very much similar to a panel at Kārīfi, the wheel or Dharmacakra below the lotus, three deer on each side, and under them two anthropomorphic nāga-kings holding a pillar on which rests the wheel. The nāga kings are attended by their female consorts and other attendants.

In another sculpture the wheel or deer are wanting, and the worshipping figures are rudely sculpted below the nāgas and over a lotus plant. The sculptures on which the Buddha figure appears are thought to be of later date than the other sculptures at Kuḍā, and could be of the later developed Mahāyāna phase of Buddhist art. (see J. Burgess and J. Fergusson, Cave Temples of India, reprinted 1969, Delhi, pp. 207 ff).

There are partly defaced inscriptions in Brāhmī script, on the right wall and on one of the pillars. In some of these inscriptions are found names like S'ivadatta, S'iva palita, Skanda palita, S'ivabhūta which may be names of donor princes and princesses.

The Buddhist cave temple at Kuḍā represents one of the early attempts in the rock-cut architecture of Theravāda Buddhists of western India. However at a later date these caves have been occupied by the Mahāyānist who introduced advanced forms of Buddhist worship as reflected in the representations on the sculptured panels found.

A significant feature of the caves at Kuḍā is the provision of rock-cut platforms for the monks to sit and sleep. This feature is present in many early caves occupied by early monks in India and Sri Lanka both; a feature illustrative of the austere living conditions preferred by these early eremitic of the Theravāda school.

KUKAI See KOBODAISHI

KUKKUTĀRĀMA A pleasance in Pātaiputra (modern Patna), in India. It was evidently the residence of monks from very early times, probably, for some time of the Buddha himself. The Mahāvagga (Vn. I. 300) mentions the names of several theras who lived there Nilavāsī, Sānavāsī, Gopaka. Bhagu, Phalikasandana. The Samyukta Nikāya (S.V. 15 f; 171 f) records discussions which took place there between Ānanda and Bhadda. It may have been a favourite resort of Ānanda, for we find the householder Dasama of Atthakanagara going there to inquire as to his whereabouts (A.V. 342; M. 1.349). It was also, probably at a later date, the residence of Nārada who converted king Muṇḍa (A. iii. 57 f), and afterwards of Sona, the upajjhāya of Siggava and Candavajji, the teacher of Moggali­puttatisa (Mhv. v 122). Buddhaghosha (MA. 11.571; AA. 11.866), mentions that the Kukkutārāma was made by the setthi Kukkuta, but gives no further particulars. Here there is probably some confusion with the ārama of the same name at Kosambi.

The Chinese monk Hsūn-tsang had visited Kukkutārāma and is said to have displayed his wisdom there (S. Beal, Si-yu-ki, Buddhist Records of the Western World, London, Kegan Paul, Vol. I. bk. I, p. 6).

Hsūn-tsang says that Kukkutārāma was to the southeast of the old city of Pātaiputra and was built by Asoka when he first became a convert to the Buddha's religion. "It was a sort of first fruit and a pattern of majestic construction." Only the foundation of the building was left at the time of Hsūn-tsang's visit (S. Beal, op. cit, Vol. II, bk. VIII, p. 95). It is probable that this account refers to the Asokarama which Asoka built as the first of his Buddhist structures, and that Asokarama was constructed on the site of the old Kukkutārāma. It is significant that Pāli sources recording Asoka's doings make no mention of a Kukkutārāma existing in his time, though Sanskrit Buddhist Divyāvadāna for instance (Divy. ed. Cowel and Neil, Cambridge, pp. 381 ff, 430 ff; Smith's Asoka, p. 183, 193f), makes frequent references to it. If the conjecture made above, namely, that Asokarama replaced Kukkutārāma, be correct, it may have been that the place was known by both names in Asoka's time.

KUMĀRAJĪVA, a great Buddhist scholar who lived in Kashmir in the beginning of the second half of the fourth century A.C. It is said that he hailed from a respectable family of hereditary ministers in a north Indian State (possibly Kashmir) and had renounced his claims to the ancestral office early in life, to become a
KUMARAJIVA

KUMARAKASSAPA

Buddhist monk. Later he went to Kucha where he rose to the position of the royal preceptor and married the king's sister (or near relation) Jiva who had fallen in love with him.

Kumārajīva who was brought to Kashmir by his mother when he was only nine years old, studied Buddhist texts for three years under the well-known scholar Bandhudatta. On their way back from the valley, mother and son spent some time in visiting the well-known Buddhist institutions in Tukharistan and Kashgar. In the latter country, where they stayed for about a year, he was requested by the ruler to remain permanently, but on the pressing invitation of his relative, the king of Kucha, the teen-ager monk and his mother returned to their native place.

Kumārajīva was born around 344 A.C. and was ordained at the age of twenty. On his return from Kashmir an arhat had told his mother that a great future lay in store for her son. This prophesy was proved to be true. At Kucha where he spent the early part of his life, Kumārajīva was the recipient of high honours. He was accorded a personal welcome by the king on his return from Kashmir and other places. A new monastery was specially erected for him. Here he further studied the Sarvāstivāda Vinaya with another distinguished Kashmiri scholar by name Vimalaksha, who had come to Kucha, probably at the invitation of the pious ruler.

About 382 A.C. Kucha was overrun by a Chinese general named Lu Koang and Kucha's ruler was defeated. In those days it was common practice to carry away eminent men of letters in the subjugated territory along with other prisoners of war, and thus Kumārajīva, too, was taken to Kansu in Kansu province. Though at first Kumārajīva was treated disdainfully, his great literary skills once again won for him recognition and thereafter for nearly fifteen years he lived honourably.

During his long stay in Kansu, Kumārajīva's fame spread all over China and he received repeated invitations from Emperor Yao Hin to visit his capital, Changan. Kumārajīva went to Changan in 401 A.C. where he stayed until his death in 413 A.C. While in Changan, he devoted himself to propagating Buddhism, specially the Mahāyāna, among the Chinese people. To spread the faith widely he decided to translate the sacred Buddhist texts into the language of the people, and before his death he had accomplished the stupendous task of translating not less than a hundred Bud-

Kumārajīva was regarded as one of the great translators of Sanskrit texts into Chinese. Some people rank his style of writing as superior to that of Hiuen Tsang. He is even credited with the introduction of a new alphabet into China. Kumārajīva's scholarly labours in the cause of his faith won him the love and admiration of the Chinese people. They regarded him as one of the 'four sons' of Buddhism, and always referred to him as Tungshee or 'one though young in years is mature in the wisdom and virtues of old age.' He had many Chinese disciples. Fa-Hien being one of them. Fa-Hien wrote Fo-ku-ki (Account of the Buddha's country) on the invitation of his guru Kumārajīva.

Kumārajīva's literary output was not accomplished single-handed. From time to time he had the assistance of other distinguished Indian scholars, most of them being Kasmiris. Vimalaksha, Kumārajīva's teacher and Punyatara were two such scholars who assisted Kumārajīva in his stupendous task.

W.G. Weeraratne

KUMARAKASSAPA, an arahant therā who was an early disciple of the Buddha. In the Etadaggavagga of the Aṅguttara Nikāya the Buddha declared him foremost among his male disciples with regard to versatility in preaching (etadagggam bhikkhave mama sāvakānaṃ bhikkhunāṃ cittakathikānaṃ yadidam Kumārakassapo - A. 1, p. 24).
Kumārakassapa’s mother was the daughter of a banker (setthi) of Rājagaha. Having failed to obtain the father’s permission to enter the order of bhikkhus, she agreed to marry a young man, chosen for her by the father, with the hope of obtaining his (the husband’s) permission subsequently to enter the order of bhikkhus. Several months after the marriage the husband reluctantly gave her permission to become a bhikkhunī and she entered the order of bhikkhus, not knowing that she was with child at the time. As time passed by signs of pregnancy appeared on her and the other bhikkhunīs suspected that she had been misbehaving with a paramour even after becoming a bhikkhunī. The matter was first reported to Devadatta who indiscreetly pronounced that the bhikkhunī was at fault. The Buddha referred the matter to a board of inquiry headed by Vīsākhā and after an impartial inquiry the bhikkhunī’s name was cleared of guilt.

When the child was born, he was kept in the nunnery and after sometime the king of Kosala took him into his charge. At the very young age of seven years he was ordained a monk. He was named Kumāra-Kassapa therā because of his royal upbringing and because he was ordained as a bhikkhu at a very young age.

Once when Kumāra-kassapa therā was meditating in Andhavana, an anāgami brahmā who had been Kumara-kassapa’s companion in a past birth, appeared before him and posed fifteen questions to him questions that only the Buddha could answer. The following morning Kumāra-kassapa therā saw the Buddha at the Anāthapiṇḍikārāma in the Jeta’s grove and reported to the Buddha the incidence of his meeting the brahmā and this led to the Buddha’s elucidation of the questions posed to Kumāra-kassapa by the brahmā (Vannikā Sutta- M.1, 142 ff). At the conclusion of the Buddha’s sermon Kumāra-kassapa therā attained arahantship.

Though Kumāra-kassapa therā’s mother entered the order of bhikkhunīs long before Kumāra-kassapa was ordained as a bhikkhu, she could not make much progress on the path as she was very fond of Kumāra-kassapa and was yearning to have him close to her. One day she saw Kumāra-kassapa therā on the streets doing his alms round and rushed to him in great excitement. Kumāra-kassapa therā realised that his mother’s strong love for him was an obstacle on the path of her spiritual development and pretended to be disdainful towards her. This caused acute pain of mind in her and subsequently she became disgusted of life and strove hard and attained arahantship (DhpA. III, 147).

Kumāra-kassapa was a learned brahmin in the time of Padumuttara Buddha and hearing the Buddha ranking a monk fore-most in eloquence, he too wished for such distinction under a future Buddha and with this end in view, he performed many meritorious deeds (Ap. II, 473f).

D. Saddhasena

KUMĀRALĀTA, also called Kumāralabdha or Kumāralābha, is regarded as the founder of the Sautrantika school of Buddhism and to have lived around the second century A.C., as a junior contemporary of Asvaghosa. He is perhaps identical with Kumāralāta, the eighteenth Patriarch of the Chinese lists. A native of Taxila he is referred to several times by Huan-tsang in his Si-yu-ki not only as the founder of the Sautrantika school but also as a sun that shone in the northern direction with the other three suns Asvaghosa, Nāgarjuna and Aryadeva shining in the east, the west and the south respectively. He further says that Kumāralāta was carried off in captivity by a king who reigned somewhere in the east of the Pamirs.

Although Kumāralāta is said to have written several works, only one of his works and even that in fragmentary form found in Turfan, is presently available. This is the Kalpanāmanḍitikā or Kalpanālamkāritā which has been edited by H. Luders in German and published as voulme II of Kleiner Sanskrit-Texte (1926, Leipzig). The book is regarded as a work of merit.

1. Although M. Winternitz (A History of Indian Literature, II, p. 268, nt 3) says that Kumāralabda is only a wrong re-translation of the Chinese name given to Kumāralāta, the reverse seems to be more correct: i.e., that Kumāralāta is a variant reading of the correct Sanskrit form Kumāralabda or Kumāralābha meaning “he who received his youth”. Compare also the fact that his pupil Śrīlabha is also called Śrīlāta.
2. On Yuan Chwang’s Travels in India. Thomas Watters, II, p. 286; See also S. Beal’s translation of the Si-ya-ki, II, pp. 302f.
3. The full title of the publication is ‘Bruchstücke der Kalpanāmanḍitikā des Kumāralāta.
Although it was once believed that this Kalpanāmanḍitikā was identical with the Sāturālaṃkāra attributed to Asvaghosa, this view has subsequently been found to be incorrect. However the Sāturālaṃkāra is regarded as an imitation of the Kalpanā-manḍitikā and attributed to Asvaghosa perhaps because of his fame.

As the Kalpanā-manḍitikā is regarded as the basic work of the Sāturāntikas, Kumaralāta is given the epithet mūla-cārya, the first teacher. Sṛilāta or Sṛilāba and Harivarman, two other Sarvāstivāda teachers, are recorded as the pupils of Kumāralāta, whose Saṟurāntika sect is sometimes more specifically designated as Darṣrāntika or based on dṛṣṭānta or allegories. This agrees with the information provided by K'ovei-ki, a pupil of Hsuan-Tsang, that Kumāralāta was called "master of parables".

A.G.S. Kariyawasam

KUMBHANDA

The term kumbhaṇḍa has been used in Buddhist literature to denote a type of spirit which could be equivalent to a demi-god or a goblin. It has also been used as a personal name. The Mahāvamsa makes mention of a Jain ascetic (nīgāṭha) named Kumbhaṇḍa in its chapter pertaining to the reign of King Paṇḍukabhaya (437-367 B.C.). In the vicinity of Gāmaṇi Tank (probably Karambāva tank of the present Malúvamsa:MH), two other Sarvāstivāda teachers, are recorded as the pupils of Kumāralāta, whose Saṟurāntika sect is sometimes more specifically designated as Darṣrāntika or based on dṛṣṭānta or allegories. There were also ascetics of various heretical sects for whom he built hermitages. The king also built a chapel for the nīgāṭha Kumbhaṇḍa and it was named after him. Says the Mahāvamsa:

Tattheva ca devakulaṃ akāresi mahiṇāpi Kumbhaṇḍassasi nīgāṭhassa tannāmakamahosī tamo (X-99)

Kumbhaṇḍa is also a generalised term used in respect of a class of fairies, genii, and spirits who are grouped with yakkhas, asuras, nāgas and devas. They live in the Southern quarter and Virūḷha is their king.

Dakkhinama ca disam rājā Virūlha tamo pasiṣatā Kumbhaṇḍanām adhiṇapī Mahārājājīyasassī so (Digha Nikāya II, 257)

In the Vidhura Paṇḍita Jātaka Kumbhira is mentioned as one of their chiefs. (.....tanamagahitii tam maniratanan Kumbhiro nāmā yakkho Kumbhaṇḍasaṭasahassa parivāro so pana tena kujhītīva....)

Kumbhaṇḍas had huge stomachs and their genital organs were as big as pots, hence their name (kumbhaṇḍanām'ti te kira devā mahodara honti raḥsasaiṇi pi ca tesam kumbha viya mahantam hoti. Tasmā kumbhaṇḍā ti veccati. Sumanāgalavilāsinī, III, p. 964, PTS.).

A peta (Skt. preta-goblin) called Kumbhaṇḍa is mentioned in the Sutta Nipāta, under the title Āḍāhamā-gāmakū. In this text a story is narrated giving details connected with this goblin and the sinful acts committed by him which brought about his miserable state. When the Elder Mahā Moggallāna was descending from the Vulture's Peak (Gijjhakūṭa) one morning, along with the Elder Lakkhana, he saw a goblin flying through the air (vehāsam gachchantan). His genitals were as large as pots. Even during his travels, he had to place his genitals on his shoulders and while sitting, he had to sit on them. Vultures, crows and hawks (of fierce appearance) would descend on him, peel, peck and tear away his genitals and then he would yell out pitifully. On seeing this goblin, the Elder Mahā Moggallāna smiled. The elder Lakkhana, having seen his colleague smile, asked the reason for it. The reply was that the matter could be discussed in the presence of the Buddha.

The Sārathappakāsinī (commentary to the Sutta Nipāta) gives more details of this extraordinary being, including his previous sinful acts. The Buddha himself had seen this goblin at the Bodhi-maṇḍala (on the day of Enlightenment) but he did not speak about it because no one could pay heed to such a story, dismissing it as incredible. As the Elder Mahā Moggallāna had himself seen the being, it was possible to speak about it without hesitation because of the availability of another witness. This goblin had been an unscrupulous judicial officer (kāṭa-viniccayamacco) in a previous birth (in the city of Rajagaha itself). He was in the habit of taking bribes and disowning the lawful owners (laṅcanā gahetvā kāṭaviniccaya pakata dosan karonto sāmi ke sāmi akāsi). He suffered in hell for a very long time and in his present state was going through the balance period of punishment.

In a Sinhala text named Amāvatura (12th C.) it is said that the four Cātumahārājikā deities named Dhattaraṇṭha, Virūḷha, Virūpakkha and Kuvera had gandhabbas, kumbhaṇḍas, nāgas and yakkhas respectively as their retinues. In another Sinhala text named

5. Winternitz, loc.cit. See also IHQ. Vol.XVI, 1940, pp. 246ff. and also Filliozat L'Inde Classique, II, p. 381
Saddharmaratnakara (15th C), there is a reference to a region named Kumbhāndālinda, situated on a side of Mount Meru, which was being guarded by Kumbhānḍas.

In ancient Sinhala sculpture, too, Kumbhānḍas were represented on the stylobates of architectural monuments between the base mouldings. In relevant descriptions they are also referred to as gaṇas. They are shown as holding the burden of the buildings on their heads, while being seated pot-bellied. At times they are represented as standing on either side of a nāgarāja, as in a guardstone from Tiriyā. In Hindu sculpture, too, they are shown as pot-bellied creatures, posing as attendants of Śiva or Viṣṇu.

Nandasena Mudiyanse.

KUSALA. The term kusala (Skt. kuśala) in Buddhism has a number of shades of meaning varying according to the context in which it is used. Thus, kusala is used to convey the meanings of clever, expert, good, right, skilful, meritorious, profitable, wholesome and so on. However, its special significance as a religious technical term is seen when it is used in Buddhist literature, both Pali and Sanskrit, to imply a moral sense connoting morally good, profitable, efficient or wholesome actions of body, word and thought (i.e. karma) which are conducive to the attainment of the desired goal of nibbāna or release from saṁsāra. Closely tied up with the concept of kusala is its opposite akusala. These twin concepts (kusala-akusala), thus occupy an important place in the Buddhist ethical teachings.

As stated at the outset, kusala and akusala are primarily associated with the idea of karma, the saṁsārīc process and the release there from which is referred to as the attainment of nirvāṇa. The Characteristic of this transcendental state is that it is free from greed (rāga or lobha) hate (dosa) and delusion (moha). By inference these are the factors that prolong the saṁsārīc process of each individual. Thus when these three factors are given as the root causes (miśra) of akusala and their opposites alobha, adosa and amoha as the root causes of kusala, the logical conclusion to be arrived at, is, that in the operative level akusala is whatsoever action that stands contrary to nirvāṇa and thwarts its attainment whereas kusala is whatsoever action that is in conformity with nirvāṇa and conduces to its attainment. This, however, should not be construed to mean that kusala corresponds to nirvāṇa or that it is one of its characteristics. What is meant is that in relation to akusala which stands in direct opposition to nirvāṇa kusala stands on the side of nirvāṇa and functions as an effective means conducive to its attainment.

Just as kusala is basically the absence of greed, hatred and delusion, actions motivated by these states found on non-greed and non-delusion are also deemed in the category of kusala. Hence, it is the presence or the absence of these mental states that determines the ethical quality of any volitional state or in other words the wholesomeness or the unwholesomeness of karma (A. I, pp. 11, 163).

Basically it is this same criterion that is adopted in the Ambalaṭṭhikā Rāhulovida Sutta (M. I, p. 414 ff.) in categorising kusala and akusala. Therein, however, the emphasis is more as personal and social dimensions, taking into account the effect an action has on oneself and on others. This sutta lays down the ethical principle that any action - bodily, verbal or mental - to be categorised as kusala should bring about beneficial effects on oneself and others. An action however beneficial it may be to oneself is not categorised under this group if it happens to be harmful to others. It is also clear from this sutta that this evaluation is not a negative one, for, without stopping at stressing the importance of the performance of acts that are not harmful to oneself and others it proceeds to emphasise the ethical importance of performing acts that are positively beneficial to oneself and others.

At other times the same criterion is adopted with a shift of emphasis to the individual. In this evaluation of kusala-akusala the individual (atta) is taken as the standard. Herein one is asked to compare others with oneself and refrain from doing against others, such acts, that one does not wish to be done to oneself. For example, considering that one does not wish to be subjected to bodily harm one should realize that others, too, detest such acts when done to them and therefore, refrain from doing such harmful acts. Though this criterion has no universal application, it serves to a great extent to differentiate kusala from akusala (M.I, p. 95ff., Sn.v. 705; Dhp. vv. 129, 130).

The twin concepts of kusala-akusala acquire validity and significance in an ethical system only if the individual is free to choose between kusala and akusala. The Buddha says that he speaks of abandoning akusala and accumulating kusala because it is possible to do so, and that when so done it results in hap-
piness and welfare of oneself and others (A. I, p. 58). The Buddha says so because he explicitly accepts the position that the individual has of course within a context of causal conditioning - the freedom of choice between kusala and akusala. Buddhism accepts that the individual bears a certain amount of capacity for personal initiative (ārambha - dhātu), personal action (purisakāra) or individual action (atta-kāra : D. I, p. 53; A. III, pp. 337, 338). Hence these twin concepts become quite valid in the Buddhist ethical system.

Further, according to Buddhism the abandoning of akusala and accumulation of kusala is not only possible but also most desirable, for it conduces to the betterment of an individual’s present condition, sublimation of his character and elevation of his position in society. These beneficial effects conduce to harmony, concord and progress of the society at large. Besides, kusala and akusala are directly instrumental in shaping the future life (M. I, p.135; S. I, p.227; A. III, pp. 40, IV. 247 Sn. v, 398; Dhp. vv. 131, 133).

All these beneficial effects produced by the practice of kusala is to be considered in relation to the attainment of the highest goal nirvāṇa, for in Buddhism kusala is not an end in itself, but only a means to the attainment of the end, for, such acts of kusala finally lead to the cessation of all kammic action (A.I, p. 263. When thus considered, it appears that the practice of kusala is the foundation of śīla which together with samādhi and paññā lead to final ethical perfection and mental deliverance. See ETHICS for more details.

S.K. Nanayakkara

KUŚĀNAS. The Maurya period in Indian history witnessed one of the major phases of the expansion of Buddhism when it made great strides across the Indian subcontinent and was introduced to several foreign lands as well. Whether this achievement was the result of an organized Buddhist missionary activity that drew vigour and impetus from the success of the Theravādin at the Third Council or a deliberate religious campaign organised under royal patronage of the Mauryas, the unmistakable consequence of this new religious fervour shown by the Buddhists was that it soon elevated their religion from its humble origins in a corner of northeastern India to the position of a pan-Indian religious movement. In the next few centuries, Buddhism grew as a major Indian religion winning converts in almost every part of the subcontinent while in several regions outside, it succeeded in achieving the status of the main religion.

The spread of Buddhism over a wider area also resulted in a steady growth of the saṅgha and a large increase in the number of lay followers. With this change the Buddhist communities gradually began to lose cohesion, and local influences too, began to make their mark on the behaviour and attitudes of the saṅgha, thus giving rise to local groups among the community. This tendency had its origins sometimes before the time of Asoka, but it came to the forefront in a significant way only after the time of the Mauryas. What is most important is the fact that it is this development, along with the doctrinal differences, that paved the way for the segmentation of the saṅgha into different schools.

During the time of the Śuṅgas, the successors of the Mauryas, Buddhism appears to have lost the royal patronage it used to enjoy earlier, for according to some Buddhist sources, Puśyamitra the founder of the Śuṅga dynasty was a notorious persecutor of Buddhism. Nevertheless, it is difficult to ascertain the amount of damage that was caused to Buddhism under this persecution, but what is significant is the continued popular support the religion received in the Śuṅga-Kānva period (3rd century B.C. to 1st century B.C.). This is evident not only from the huge and elaborate constructions at places like Sānci and Bharhut, but also from the large number of private donations recorded in inscriptions from many parts of India.

Even if the Buddhists lost royal patronage under the Śuṅgas, soon they found a worthy patron, in Manender the Indo-Greek monarch who ruled over a large kingdom in northwestern India and beyond. The Pali work Milindapañha records that a monk named Nāgasena converted Manender to Buddhism and the king soon became a zealous champion of the faith. The impetus Buddhism thus received under Manender must certainly have opened up new routes to reach areas beyond the Hindukush-Himalaya range. Although Buddhism had been introduced to areas outside the north-western borders of the Maurya empire during the time of Asoka, the most notable expansion of the religion into these areas begins to take place only from about the time of the Indo-Greeks. This expansion also provided access for Buddhism to come into contact with Western ideas and influences. The contacts thus established with the western world and Central Asia reached their heights, particularly under the Kuśānas.
The Kuşānas were a section of the Yueh-chi tribe that originally hailed from eastern Central Asia, their clashes with several other tribes in the region ultimately made them leave their homeland and migrate westward across the Steppes. Sometime before the beginning of the Christian era, the Kuşānas had reached the north-western borders of the Indian subcontinent, thus exposing themselves to Indian socio-cultural influence (for details see KANIŞKA). By this time the political situation in north-western India was undergoing profound and fast changes, with the weakening of the power of the Indo-Greeks who had held sway there for quite sometime. The Indo-Greek kingdoms which were breaking up under pressure from both the S'akas and the Sassanians were no longer in a position to hold on to the terrain adjoining the north-western passes. On the one hand, the S'akas were making several successful inroads into the Indo-Greek territory while on the other, fratricidal struggles among the Indo-Greeks themselves continued unabated.

The political instability that arose out of this situation created the most favourable atmosphere for other parties too, to enter the fray. Presumably, the Sassanians were the first to try their luck and were successful in making some initial political gains both inside and outside India against the Indo-Greeks as well as the S'akas. However, both these groups were soon dislodged by the Kuşānas who quickly established themselves, first in the areas held by the Sassanians and then in areas which were known as the S'aka dominions. Thus, by effectively removing two major contenders, the Kuşānas became the sole inheritors of the vast kingdom previously held by the Indo-Greeks. By the time of their second ruler Vima Kadphises, (1st century A.C.) the Kuşānas had come to own a large empire extending over a vast area on either side of the Hindukush-Himalaya range. During the time of Kaņiška, the third ruler of the dynasty, the Kuşāna empire spread further inside India, perhaps upto Magadha and Orissa, and into many new areas in Central Asia making it one of the largest empires at the time.

The rise of the Kuşānas into prominence in India and in central Asia almost coincided with a significant change that influenced the economy of these two regions. As a result of certain actions taken by rulers of Parthia, the trade-routes that were used in the trade between China and Rome, were affected and the trade had to be re-routed via India. This shift brought a sudden importance to north-western India making it one of the heavily involved regions in the East-West trade. The new political gains made by the Kuşānas in India and outside gave them the virtual control of a large segment of this important trade route and the net-work of its main arteries. These very significant political and economic gains made by the Kuşānas placed them in a highly comfortable position to become great patrons of religion and culture.

Long before the advent of the Kuşānas the areas just north of the Hindukush had come under strong Indian influence, and the arrival of this central Asian tribe in these areas, as in the case of their predecessors, resulted in bringing them too, into contact with the rich Indian culture which they soon embraced and adopted. Of all the Kuşāna kings Kaņiška is singled out for praise by many Buddhist writers as the foremost in patronizing Buddhism. These works contain stories full of fantastic incidents explaining how Kaņiška became a Buddhist. According to them, Kaņiška in the early days of his career was a ruthless ruler who killed thousands in war, but later became an ardent believer in Buddhism. A marked change in Kaņiška's religious beliefs is also hinted in his own coins. His early coin types depict several Greek deities, but later pieces bear Iranian and Indian deities. In his later coin types the Buddha appears in different forms. However, it is important to note that even after he became a Buddhist he continued to respect other religious beliefs which must have been prevalent among some sections of his subjects.

Many contemporary inscriptions and literary sources, particularly of later, times, are useful in understanding the condition of Buddhism in the Kuşāna period. These literary works refer to eighteen schools of Buddhism and to different teachers and their teachings. The epigraphic evidence is specially useful in understanding the regions in which different schools were flourishing. The existence of two important sects, namely, the Sarvastivādins and the Mahāsāṃghikas is attested to by several inscriptions from north India and outside. For instance, the Mathura Lion Pillar inscription of the time of S'oḍaša records the arrival of a dialectician (khaluka) in Mathurā from the Sarvastivādin stronghold of Nagara (in Jalalabad in present Afghanistan) to debate with the Mahāsāṃghikas. Several Kuşāna records from places like Kalwan, Shah-jikiderhi, Zeda and Kurram in the western part of the Kuşāna empire refer to many religious acts involving the Sarvastivādins. Some other records referring to this school have also been discovered in Mathurā, Sāranāth
and Sāvasti. Mathurā appears to have had several Sarvāstivādin establishments in the Kuśāna period, and perhaps it was their main centre in northern India.

The Mahāsāṅghikas had established themselves in several regions in Afghanistan and at Mathurā in India. Kuśāna inscriptions referring to this school have been found at places such as Mathurā, Wardhak and Palikera. The only other school that finds mention in the Kuśāna inscriptions is that of the Dhammaguptakas. It is mentioned in a solitary Brāhmī record coming from Mathurā. The existence of the Mahāsāṅghikas is evident from Mahāvastu which introduces itself as the Vinaya of the Lokottaravādin-Mahāsāṅghikas. It is noteworthy that the two famous Lokottaravādin concepts bhūmi and caryā provided the basis for the growth of the Mahāyāna ideas.

The Yogācāra school which is generally associated with Asaṅga is considered to have taken root in the Kuśāna period. The Yogācāras, like the Lokottaravādins, supported Mahāyāna concepts but at the initial stages they were known as Vijñānavādins. The Mahāsāṅghikas who were closely associated with the Mahāyāna also came to the forefront probably in the Kuśāna period, yet its main proponent Nāgārjuna (q.v.) does not appear to have hailed from the Kuśāna dominion.

Thus, judging by the available evidence, one has to arrive at the conclusion that the Sarvāstivādins were the numerically strongest of all the schools in the Kuśāna kingdom. Such a supposition would not be unwarranted when one considers the dominant position held by the Sarvāstivādins at the fourth Buddhist Council (the third Council according to Tārānātha). According to Paramārtha, a somewhat late authority, an arhat named Kātyāyānīputra who was also an ācārya of the Sarvāstivādin school travelled to Kashmir along with five hundred arhants and five hundred bodhisattvas, collected the abhidhamma of the Sarvāstivādin school and re-arranged it into eight collections. This treatise was known as the Jñānaprasthāna-sūtra, and Paramārtha adds that it was later re-edited by Asvaghosa. Those who participated in the Council spent twelve years in writing the Vibhaṅga works.

However, Hiuen-Tsang's version of the details of the convening of the Council are somewhat different from that of Paramārtha. According to him, king Kaniṣka, after becoming a Buddhist, fell into a state of helplessness and confusion on account of the different and conflicting interpretations given to the teachings of the Buddha by the followers of different traditions. He wanted to restore Buddhism to its past eminence and have the Tripiṭaka explained according to the tenets of various schools. Therefore, he summoned a religious council and only those who were well versed in the Tripitaka and the five branches of learning (pāścicosvidyā) were chosen to take part in the sessions which were held in Kashmir. The monks who assembled there composed one hundred thousand stanzas of the Upadesa-āśāstras, one hundred thousand stanzas of the Vinaya-vibhāsāśāstras and one hundred thousand stanzas of the Abhidharma-vibhāsā-āśāstras. Kaniṣka made these treatises written in copper plates and deposited them in a stūpa. Some authorities differ on the location of the fourth Council; Tārānātha considers Jalandhar as the meeting place while the majority and also the most trustworthy of all the authorities such as Paramārtha mention Kashmir as the venue.

A significant outcome of the fourth Council was the emergence of the Sarvāstivādins as the pre-eminent and the strongest among all the Buddhist sects in the Kuśāna Kingdom. Philosophers of this school took the leadership in the Council and this must certainly have placed them in a most advantageous position over other schools. Some scholars even seem to think that this was actually a council of the Sarvāstivādins rather than one that in which all the schools got together to discuss their different opinions and interpretations of the dhamma.

The fourth Council also marks an important phase in the history of the Buddhist literary tradition. Until that time, the language used by the Buddhists had mainly been Māgadhi Prakrit, but the language used at the proceedings of the fourth Council was Sanskrit. The scriptures composed at the Council were also written down in Sanskrit, and the Sarvāstivādins and the many Mahāyāna schools continued to use Sanskrit in their writings. Nevertheless, it does not mean that Prakrit was completely given up by them. It in fact, continued for sometime to come as a parallel language along with Sanskrit, in Indian Buddhist writings, as is evident from the Buddhist documents assignable to the Kuśāna period or slightly later times, found in Central Asia. These documents had been written in Prakrit using the Kharoṣṭhī script.

The main body of Buddhist literature that begins to develop in Northern India from the Kuśāna period onwards is generally known as the Buddhist Sanskrit
The Kuśāṇa period, especially the reign of Kaniṣka I, (C. 78-103 A.C.) is regarded as yet another important phase in the expansion of Buddhism into areas outside India. During this period, Buddhism was introduced to many areas of Central Asia and also to China, mostly through close political and economic ties the Kuśāṇa rulers were able to maintain with those far off lands. Several archaeological excavations carried out in the Soviet Central Asia have brought to light a large number of Buddhist monuments and documents with clear Kuśāṇa associations. Most of these Central Asian Buddhist centres were situated along the famous Silk-route that connected China with the Roman world, suggesting that the fortunes of Buddhism in those areas rested largely on the condition of trade that passed through the region. Throughout the Kuśāṇa period and several centuries after that, the Buddhist monasteries in Central Asia served not only as institutions propagating Buddhism but also as centres through which Indian cultural influence was disseminated among a mainly non-Indian and pastoral tribal population. Their commitment to Buddhism is amply demonstrated by the large number of Buddhist ruins and monuments found in this semi-arid land. Fragments of several important Sanskrit and Prakrit Buddhist texts written in the time of the Kuśāṇas and later which had long been considered lost, and were found at some Central Asian Buddhist centres, also provide further evidence to the keen interest shown by the people of these areas in Buddhism, who no doubt drew inspiration from their compatriots in India.

KUSINĀRĀ. The capital of the Mallas (q.v.) and the scene of the Buddha's death. At the time of the Buddha's death Kusinārā was a small city. "A branch township with wattle and daub houses in the midst of the jungle", and Ananda Thera, the Buddha's constant attendant was at first dissatisfied that the Buddha should have chosen it for his Parinibbāna. But the Buddha told Ananda that Kusinārā in ancient times was a great city called Kusāvā, the royal city of the Universal King (cakkavattī) Mahā Sudassana (D. II, 146). Between Kusinārā and Pāvā, three gāvutas away from where the Buddha came to Kusinārā on his last Journey from Rājagaha, stopping at various places-lay the stream Kukūtha on the banks of which was Jivaka's Ambavana in Rājagaha; beyond that was the river Hiriṇāvatī and near the city, in a south-westerly direction, lay the Upavattana, the Śāla Grove of the Mallas, which the Buddha made his last resting place. (DA. II, 572 f).

After the Buddha's passing away his body was carried into the city by the northern gate and out of the city by the eastern gate; to the east of the city was Makutābandhana, the shrine of the Mallas, and there the body, was cremated. For seven days those assembled at the ceremony held a festival in honour of the relics. (D. II, 160f).

It is said that the Buddha had three reasons for coming to Kusinārā for his Parinibbāna: (1) Because it was the proper venue for the preaching of the Mahā Sudassana Sutta; (2) because Subhadhassa, his last convert, would visit him there and, after listening to his sermon, would develop meditation and become an arahant while the Buddha was still alive; and (3) because the brahman Dona would be there, after the Buddha's Parinibbāna to solve the problem of the distribution of his relics. (DA. II, 573 f).

As the scene of his death, Kusinārā became one of the four holy places declared by the Buddha to be fit places of pilgrimage for the pious, the other three being Kapilavastu where the Buddha was born, Buddhagāya where the Buddha attained Enlightenment, and Isipatana where the first sermon after attaining Enlightenment was preached (D. II, 140).

Mention is made of other visits paid to Kusinārā by the Buddha, prior to that when his death took place. Thus, once he went there from Āpana and having spent some time at Kusinārā, proceeded to Ātuma. The Mallas of Kusinārā were always great admirers of the Buddha, even though not all of them were his followers, and on the occasion of this visit they decided that any inhabitant of Kusinārā who failed to go and meet the Buddha and escort him to the city, would be fined five hundred pieces of gold. It was on this occasion that Roja the Mallan was converted (Vin. I, 247 f). During some of these visits the Buddha stayed in a wood called Baliharana, and there he preached two of the Kusinārā Suttas (A. I, 274 f; V, 79 f) and the "Kinti" Sutta (M II 238 f). A third Kusinārā Sutta he preached while staying at Upavattana (A. II, 79).

According to a late tradition, one-eighth of the Buddha's relics were deposited in a cairn in Kusinārā and honoured by the Mallas (D. II, 167).

In ancient times Kusinārā was the capital of king Tālissara and twelve of his descendants (Dpv. III, 32). It was also the scene of the death of Phussa Buddha at the Setārāma (Buvā. 1915).

In Hsiian Tsang's day there still existed towers and Sanghārāmas erected to mark the spots connected with the Buddha's last days and obsequies at Kusinārā. According to his account Kusinārā was nineteen yojanas from Vesālī.

To the northern Buddhists the place was also known as Kus'igrāma and Kus'inagāri (Dvy. 152 f, 208).

Kusinārā is identified with the village of Kasia at the junction of the river Rapti and the smaller Gondak in the east of the Gorakpur district in India. A copper plate belonging to the thūpa, erected at the site of the Buddha's death, has been discovered. (s.v. DPPN)

KŪṬADANTA SUTTA, the fifth sutta (discourse) of the Dīgha Nikāya (q.v.-D.1, pp. 127-149). The Buddha preached this discourse to an accomplished brahmin teacher by name Kūṭadanta who was living in the prosperous brahmin village of Khānumata in the country of Magadha. Khānumata, incidentally, was an outright religious grant given to Kūṭadanta by Seniya Bimbisāra, the king of Magadha, in recognition of Kūṭadanta's immense religious learning and his great skill as a debater who was classed among the best religious debaters of the time, such as Anantakāsa, Sonadāṇḍa and Saccaka.

The Buddha, while going on his preaching tour along with a multitude of bhikkhus, came to Khānumata and was residing at Ambalāṭhikā at the
time when Kūtadanta was making preparations to perform a great religious sacrifice according to brahmin tradition, by slaughtering thousands of cattle, goats etc., in order to please gods to win their favour. When the news spread of the arrival of the Buddha in Khānunata, along with a following of bhikkhus, the residents of Khānunata, in large numbers, started to go towards Ambalaṅṭhikā to see the Buddha, and Kūtadanta, too, inspite of the objections of the brahmins who had gathered to partake of the sacrificial oblations and gifts, joined the residents of Khānunata who were going to see the Buddha. Having met the Buddha and having greeted him courteously, Kūtadanta told the Buddha: "I have heard it being said, Sir, that the Buddha is possessed of complete and immaculate knowledge of the three-fold success of sacrifices (tividha yaṁna sampadaṁ) and the sixteen requirements (solasa-parikkhāra) for a properly constituted sacrifice. I have already made arrangements, Sir, to perform a great religious sacrifice (mahā yaṁna) though I have no proper knowledge of the above mentioned matters. It will be very opportune, Sir, if the Buddha will explain them to me so that I can derive the best fruits of this sacrifice". The Buddha said: "In the distant past, O brahmin, there was a king by name Mahā-Vijita who was fabulously rich and powerful. One day he thought: 'I am now the overload of an extensive kingdom and I have immense wealth and power, and therefore I must now perform a great religious sacrifice that can ensure for me great happiness and good health for a longtime. The king conveyed this idea to his chief advisor to get his opinion about it and he said: 'My lord, your kingdom is now in a turbulent state with widespread poverty, thievery and criminal activities. When the condition of the State is such, if the king thinks of imposing more taxes on the people for a great sacrifice, things will go from bad to worst. In such a situation the king might think: 'let me finish with these thieves and criminals by giving them capital punishment or by imprisoning them or by banishing them'. But, O king, the country will not return to normalcy by such harsh punishment, because many others will start to harass the country anew. What the king should do is to provide those who are keen to take to agriculture and dairy farming the wherewithal to engage in such activities; provide monetary assistance and other facilities to those who are inclined towards trade, industries and other commercial activities; provide attractive salaries to those who are interested to serve the state. When the king implements such a sagacious programme, all the countrymen will be profitably employed, thereby earning sufficient income to live comfortably, and the country will become peaceful and harmonious".

Acting on the advice of the chief counsellor (purohita), the king restored peace in the country by implementing a well-thought-out economic programme that ensured profitable employment opportunities for all people in the country. Likewise, king Mahāvijitāvi, heeding the advice of his chief counsellor, published in the kingdom all the details of his intended religious sacrifice and obtained the approval of the four divisions of his subjects. On the advice of the Chief Counsellor, no animal was slaughtered or injured for the sacrifice and no trees were wantonly cut down, and no forced labour was utilised to perform various duties at the sacrifice. Only items like curd, butter, ghee, honey and molasses were used as offerings at this sacrifice.

By utilising the ancient episode of Mahā Vijitāvi, the Buddha expresses to Kūtadanta his strong disapproval of brahmanic sacrifices wherein many innocent animals were slaughtered, much cruelty to slaves and poor people was perpetrated, and wanton destruction was caused to valuable flora and fauna, in addition to wasting invaluable resources of the country. The Buddha also utilises the episode of Mahā vijitāvi to indicate that problems of a society or country do not crop up due to divine wrath, but that they are causal in genesis. The problems of a country, as hinted in the Kūtadanta Sutta, are generated on account of improper planning and managerial incapability of rulers and that they can be satisfactorily solved only by proper planning and skilful implementation of the planned programmes.

Having indicated to Kūtadanta a better type of sacrifice, if he was interested in performing one, the Buddha ends the admonition by telling him that following the path of virtue, culminating in the attainment Arahantship, is very much superior to sacrifices of material things.

W.G. Weeraratne.

Kūtāgarasāla, a monastery complex in the Mahāvana in Vesali in north India which was used by the Buddha and his disciples as a temporary residence, while on missionary tour in that region. Buddhist texts record several Suttas and Jātakas preached by the Buddha while living in this magnificent monastery complex, on many occasions.
The term 'Kūṭāgāra' means 'circular building with an upper storey and a pinnacled roof'. The upper storey of this particular circular building in the Mahāvāna was the living apartment (gandhakūṭi) of the Buddha and below it was the open meeting hall (sālā) with pillars supporting the gandhakūṭi above. There were several other buildings attached to the one described above and these buildings constituted the living apartments and other facilities for the many bhikkhus who accompanied the Buddha in his missionary rounds. On account of the prominence and grandeur of the circular building with the pinnacled roof, the entire monastery complex was popularly designated as the Kūṭāgārāsāla.

The monastery contained a ward for sick monks and the Buddha occasionally visited the sick monks in it, to soothe and console them (S IV. 210).

Many renowned persons at that time visited the Buddha in the Kūṭāgārāsāla, individually and sometimes with their retinues, to pay him homage and listen to his sermons. Occasionally such visitors discussed with the Buddha matters pertaining to good social conduct and intricate doctrinal problems. Licchavi chieftains Mahāli Oṭṭhatthaddha (D. 1. 150 ff.; S.I. 230ff.; S. III. 68), Nandaka (S.V. 389) Sunakkhatta (M. II. 252), Bodhiya (A. II. 190), Sālha (A. II. 200) and Abhaya (A. II. 200) paid visits to the Buddha in the Kūṭāgārāsāla and had lengthy discussions with him. Saccaka, the learned Jaina ascetic leader who was reputed a clever debater, met the Buddha at the Kūṭāgārāsāla and had a debate with the Buddha. But the Buddha could ultimately, convince Saccaka about the futility of following the teachings of Mahāvīra, the Jain leader, after a protracted bout of arguments (M. 1.227ff; 237ff).

The Buddha also preached the following Jātakas to assembled audiences at the Kūṭāgārāsāla during his several visits to Vesali: Sigāla Jātaka (J. II. 5), Telowāda Jataka (J.II.262), Bāhiya Jataka (J. 1. 420) and Ekapanīya Jātaka (J. I. 504).

Mahāpajāpati Gotami, the foster mother of Siddhattha Gotama who was determined to obtain permission from the Buddha to establish the Bhikkhunī Sāsana, travelled from Kapilavatthu to Vesali along with five hundred women who had also renounced worldly life to become bhikkhnis, met the Buddha in the Kūṭāgārāsāla. It is said that the Buddha finally agreed to allow them to become bhikkhnis after a strong plea by Elder Ananda (A.IV.276-7; Vin.II,253-4).

Three months before his passing away the Buddha visited the Kūṭāgārāsāla from where he announced to the assembled bhikkhus his impending death (D.II. 120). This must have been the last visit of the Buddha to the Kūṭāgārāsāla in Vesali.

The Kūṭāgārāsāla in Vesali must have thrived as a popular Buddhist monastic centre up to several centuries after the passing away of the Buddha and this is evident from two references to this centre in the Sri Lankan chronicle Mahāvamsa. One of them (Mhv. 4, 11-12) refers to a group of bhikkhus called the Kūṭāgārāsāla, who played a prominent role in the second Buddhist council, held a hundred years after the passing away of the Buddha. The second (Mhv. 29-33) refers to a large group of bhikkhus from the Kūṭāgārāsāla monastery who came to Sri Lanka in the 1st cent. A.D. to attend the foundation laying ceremony of the Mahāthīpa in Anuradhapura.

KUVERA. (Kubera) of Vaiśāvaya (Vessavarna) is one of the Dīkpālas (Protectors of the Quarters) or Lokapālas (Protectors of the World). He is mentioned as such in Buddhist texts as well as in Hinduism. His special function is the protection of the Northern quarter. In Buddhist cosmology, he is one of the Mahārājas (great kings) who shares the sovereignty of the lowermost heaven (Cāntraparīkṣāya), under the suzerainty of Indra, the king of gods, residing in the heaven immediately above (Tavāvāsena), at the top of Mount Meru. Kuvera, being the ruler of the demi-gods known as yaktras, who are represented as guardians of treasures, came in after some time to be regarded as God of Riches and the Giver of Wealth.

At the time when Sri Lanka was being colonised by a North Indian people, Kubera (Kuvera) appears to have been one of the principal deities worshipped by the average man in India. It is possible to conjecture that he was the favourite deity of the Vaiśyas, the merchants and husbandmen; this was quite natural as the aim of both these is the acquisition of wealth. It was among the merchant classes that early Buddhists found the most enthusiastic supporters. They were also the people who took a leading part in the propagation of Buddhism in India as well as abroad. It is therefore natural to find Kuvera receiving the honour of Buddhist communities. He is represented in the earliest of Buddhist monuments, i.e. at Bharhut, and many representations of him have been found in the Graeco-Bud-
dhrist art of Gandhāra. Icons of Kuvera have been found in almost every country to which Buddhism penetrated.

In some Buddhist countries Kuvera was accorded special recognition. In the ancient Buddhist kingdom of Khotan, for example, Kuvera is supposed to have presided over the foundation of the state and is sometimes even referred to as a Tathāgata, a term which is normally used in respect of Buddha. In the 8th century, he was also called a deva-king, but it is not known whether the term had, in Khotan, the significance which devarāja had in Cambodia. The deities (yakṣas) who received special honour in the various regions of the Buddhist world are enumerated in a Mahāyānist Sanskrit text named Mahānayurī, which was translated into Chinese about the 4th century. "Among the Simhala, the (yakṣa) is the Lord of Wealth (Dhanes'vara i.e. Kuvera), says this text (Simhalesu Dhanes'varah). Pot-belly (Kalasodara) is also the name of a yakṣa who was honoured in Sri Lanka. He was probably identical with Kuvera. King Pandukābhaya (437-367 B.C.) of Sri Lanka, according to the Mahāvamsa, caused the Banyan Tree shrine of Vaisravana (Kuvera) near the western gate of Anuradhapura (Vessavanassa nigrodham...pacchimadvaradishābhāgāe nivesayi) (Ch.x. 90).

The worship of the God of Riches is still prevalent in Sri Lanka. Those who practise demonology (yakaduro), often invoke the dreaded injunctions of King Vesumani, as Kuvera is now known among the Sinhala villagers, in those ceremonies which are designed to counteract the evil effects of his myrmidons, the yakṣas. These ceremonies are undoubtedly reminiscent of beliefs and practices which prevailed long ago and are by no means of recent invention.

The paradise of Kuvera, called Ālaka in Sanskrit and Alakamanda in Pali writings, is believed to be situated on the summit of Mount Kailāśa, one of the highest peaks of the Himālayas, which rose from the northern shore of the sacred Māṇasa, referred to as Anotatta in Pali literature. The pleasure garden in Kuvera's paradise is known as Caitrārata; sometimes it is referred to as Vaibhraja. Kailāśa and Māṇasa are two of the most prominent features of the geography of the Himālaya region. In the Mahāsūlasānasutta of the Dīgha Nikāya there is a description of the residence of the universal king (cakravartin), which is very much similar to that of Kuvera.

Kuvera's citadel is called Visānā. His messengers are Tatolā, Tattolā, Tatotalā, Ojasi, Tejasī, Tatojasī, Sūra, Rāja, Arīthā and Nemi. His lotus lake is called Dharani. His son is called Inda. He has a splendid retinue. He is a follower of the Buddha (i.e. Rajapī ta) and has a residence (i.e. Rajapī sam vessavana Kuvero, upeti dhamman paripecchāmāno. Dhammika Sutta- Sutta Nipāta 379-380). In the Ajānātiya Sutta he is the spokesman and he recited the Ajānātiya rūpa for the protection of the Buddha and his followers (i.e. ugganāhutu bhante bhagavā ājānātiyam rakkham, bhikkhūnam bhikkhuṇīnam upisākānam, upasikānam, goutiyā rakkhāya...).

There were some yakkhas who had no faith in the Buddha or the Dhamma; hence the charm or rune for protection. Vessavana rides in the Nārīvāhana, which is 12 yojanas long, its seat being of coral. His retinue is composed of ten thousand crores of yakkhas. (The preacher's seat in the Lohapāsāda (brazen palace) at Anuradhapura, according to Mahāvamsa, was made in the design of Nārīvāhana. Vessavana is a sotapanna and his life span is said to be 90,000 years. There is mention of a conversation between him and Velukanṭa Nandamātā when he heard her sing the Pārāyana Vagga. He stayed over to listen to it. When Cūlasubaddhā wished to invite the Buddha and the monks to her house in Sāketa, and felt doubtful whether the Buddha would turn up, Vessavana appeared before her and told her that the Buddha would turn up, Vessavana appeared before her and told her that the Buddha would come at her invitation. On another occasion he heard Uttarā Thera preaching to the monk in Dhvajalikā on the Saṅkhēyya Mountain near Mahisavatthu. Sakka having been informed of it, visited Uttarā Thera and had a discussion with him.

Once when Vessavana was travelling through the air, he saw Sambhūta Thera wrap in Samādi. Vessavana descended from his chariot, worshipped the Thera and kept behind two yakkhas with orders to wait until the elder should emerge from his trance. The yakkhas then greeted the Thera in the name of Vessavana and told him they had been left behind to protect him. The elder sent thanks to Vessavana, but informed him through the yakkhas that the Buddha had told his disciples to protect themselves through mindfulness and so further protection was not needed. Vessavana visited Sambhūta on his return and found that the Elder had become an Arahat. Thereafter he went to Sāvatthi and carried the news to the Buddha.

Mention is made of Vessavana's gadāvyuha and his mango tree, the Atulamba. Ālavaka's abode was near that of Vessavana. Bimbisāra, after his death, was
born seven times as one of the ministers (paricāraka) of Vessavana and while on his way with a message from Vessavana to Virulhaka, visited the Buddha and gave him an account of a meeting of the devas which Vessavana had attended and during which Sanaṅkumāra had spoken in praise of the Buddha and his teachings.

Vessavana seems to have been worshipped by those desiring children. Vessavana is mentioned as having been alive in the time of Vipassi Buddha. At the time of the passing away of Vipassi Buddha, there was a great earthquake, which terrified the people but Vessavana appeased and quieted their fears. Vessavana accompanied Sakka when he showed Thera Mogallāna round Vejayantapāsāda. He was Sakka's intimate friend. As Lord of yakṣas, it was in the power of Vessavana to grant to any of them special privileges, such as the right of devou ring anyone entering a particular pond. etc.

Sometimes as in the case of Avaruddhaka, a yaksha had to serve Vessavana for 12 years in order to obtain a particular boon. Vessavana sometimes gets the services of uncivilised human beings (paccantami-lakkhavāsāka). The yakṣas fear him greatly. If he is angry and looks but once, 1000 yakṣas are broken up and scattered, like parched peas, hopping about on a hot plate. This was probably before he became a sotapanna.

Vessavana, like Sakka, was not the name of a particular being, but of the holder of an office. When one Vessavana died, Sakka chose another as his successor. The new king, on his accession, sent word to all yakṣas, asking them to choose their special abode. It was the duty of yakkhinīs to fetch water from Anotatta for Vessavana's use. Each yakkhini served her turn, sometimes for four and sometimes for five months. But at times they died of exhaustion before the end of their term.

Vessavana's wife was Bhuñjati, who like himself was a devoted follower of the Buddha. They had five daughters, Latā, Sajjā, Pavarā, Acchimāti and Sutā. Puṇṇaka was Vessavana's nephew. The pleasures and luxuries enjoyed by Vessavana have become proverbial matters (bhuñjāmi Kāmakāmi rājā Vessavano yathā; Vessavanassā rājaparihāra-sadīsam). An ascetic named Kañcanapatti is mentioned as having been the favourite of Vessavana.

In a former birth, Vessavana was a Brahmin called Kuvera and owned a sugar cane farm where he worked seven mills. The produce of one mill he gave in charity and when his profits increased he gave alms for 20,000 years. After death, he was born as one of the Cātummahārajaka-devas. In literature, the name Kuvera signifies the god of wealth and his city Alakamandā is said to embody all prosperity. He had nine treasures. Kuvera is mentioned in a list of those who reached heaven through generosity.

Vessavana and Kuvera are names which refer to one and the same person. Says the Suttanipāta (Dhammika Sutta, v. 380):

Rājā pi tam Vessavano Kuvero - upeti dhamman ṣ paripucchamāno
tassāpi tvam pucchito brūsi dhiro - so cāpi suvāna pasitārūpo

Another name of Kuvera is Jambhala, according to Northern Buddhists. A copper seated image of this deity is now in the Boston Museum and has been illustrated by Ananda Coomaraswamy. It is about three inches in height and has been assigned to the 8th century. The right hand holds a citron (jambhala) and in the left is a mongoose (nakula) vomiting coins which fall into a pot. Under the right foot is an overturned pot with more coins.

Kuvera's half brother Vibhūṣana was worshipped in Sri Lanka and a shrine of that deity exists even at the present day at Kelaniya (Western Province) as well as at Lankatilaka vihāra (central province). A bas relief representation of Kuvera may be noticed on a stele at the Dakhina thīpā, Anuradhapura. Eight lords of the yakṣas are described briefly in the Dharmadātu vāgīs vara-mañḍala of the Nīispensayogavālī. This text says that the yakṣa king (Kubera) holds the bījapura (citron) and the nakula (mongoose) in the right and left hands respectively. His colour is yellow; he is two armed. He holds also the gada (mace) and the goad.

Jambhala is again described in the Mahāyāna as an emanation from the Dhīyāṇi Buddha Ratnasambhava. There was a division of opinion among the Northern Buddhists as to the sire of Jambhala, the followers of the Akṣobhya cult holding him as originating from Akṣobhya. Ratnasambhava means jewelborn and it is very likely that the sire of Jambhala was Ratnasambhava. Vasudhāra is said to be the consort
of Jambhala and both were known before the Dhyāni Buddhas.

The role of the god of wealth must have been assigned to Ratnasambhava at a late period. According to the Śādanāmaṇḍā, Jambhala could emanate from Akṣobhya or from Ratnasambhava. In the former aspect he is three faced, six armed and shown with his consort. In his aspect as an emanation from Ratnasambhava, he carries the mongoose in his right hand and the citron in the right. When single, Jambhala is of golden complexion and carries the mongoose in the left hand and the citron in the left. This is exactly the position in the bronze sculpture form Sri Lanka in the Coomaraswamy collection in the Boston Museum.

Several images of this deity have been found in India and have been illustrated by B. Bhattachārya in Indian Buddhist Iconography. One of the finest products from the medieval art of Bengal is reproduced as Fig. 177 in the above named work. It is from Vikramapur (East Bengal) and shows the pot-bellied deity in the lalita attitude.

In the Boston Museum example from Sri Lanka there is frank realism, which is its principal artistic interest. In this instance, a fat trader who is awaiting his customers is represented, this deity being worshipped by the Buddhists for material benefit. Compared with the head-dress of Avalokitesvara (as given in his icons), the figure from Boston Museum shows a similarity of arrangement. On grounds of style therefore, Coomaraswamy assigned the 6th or 7th century as its most probable date. He was, however prepared to concede the 8th century as the lowest age limit in view of its resemblance to 'Simhaladvipe Jambalal' of miniature 18" in the Cambridge Ms. 1643. From the vessel which is overturned by the right foot issues a hoard of coins represented by a ribbon-like band. It may at first be suggested that the ribbons represent snakes but, as Coomaraswamy has rightly pointed out, the artist who was a skilled craftsman could certainly have made his snakes more convincing if the intention was such. In some examples of Jambhala from other countries, the attributes of the deity vary. Either a purse or a mongoose or both are sometimes shown. The original idea seems to have been the purse from which riches are poured out. As suggested by Foucher, the mongoose is probably a later development of the purse symbol.

A similar bronze from the Osmund de Silva col-

lection shows Jambhala in the lalita attitude on a podmāsana. There is a plaster cast of this image at the Anuradhapura Museum and it shows similar attributes. The headress is smaller when compared with the former but generally the resemblances between the two are great. It may be of the same age as the Boston Museum example - the lowest age limit being the 8th century.

Another example of this deity is noticeable on the tympanum of the gedaige at Nalanda (in the Central Province of Sri Lanka). In the centre of it sits a deity who has been identified as Kuvera (Vais'rvana) by H. C. P. Bell. His right foot rests on the cornice of the third storey below. The left is crossed in front on a cushion. His right hand with open palm is held in front of his belly. The left hand which holds an attribute rests on his leg. It may be surmised that the attribute is a purse. The upavīta is shown across the chest and stomach, so, too, armlets and a necklace. Above the head is an umbrella (chatra). On either side of the deity is a bracket pilaster, above each of which is a flying vidhyādhara. The right hand of the deity is depicted in varada mudrā. The citron and the mongoose are absent in this instance but the purse is shown. H. C. P. Bell assumed that it could be a closed fan but was doubtful about his identification. From the study of similar examples elsewhere it will be seen that an attribute answering to such a description had to be a purse.

The facial expression is austere and the limbs of the body are elongated. These are characteristic features noticeable in sculptures executed under the patronage of the construction of the Nalanda-gedige. In respect of certain architectural details also the influence of the Pallava school of art and architecture is noticeable in this monument.

As Māhāyāna Buddhism was affected by the absorption of Tantric practices, several Hindu gods and goddesses were given independent forms as Buddhist deities. They were also given sometimes despoiled roles and were depicted as trodden upon by angry Buddhist gods. The Nīs pannayogāvalī and the Dharmadātu-vāgīś vara-manaḍala show how this process of absorption has taken place by assigning them to a Dhyāni Buddha family. Unless the religious practices performed at Nalanda-gedige were of a Tantric character, the presence of some erotic sculptures cannot otherwise be explained.

KYANZITTHA, One of the great Buddhist kings of Burma who ruled from 1984 A.C. until 1112 A.C. His father was king Anawrahta. Kyantzthata was crowned by Shin Arahon who was the Primate. Kyantzitha's capital was Sri Ksetra, now Hmawza.

Kyantzitha succeeded his elder brother Sawlu to the throne after suppressing a Mon rebellion. He had a magnificent coronation ceremony with Brahmanical ritual, built himself a new palace, and erected a series of inscriptions, mostly in the Mon language and began the great age of temple-building at Pagan. All his temples, including the Lovely Amhe temple, are in Mon style. In 1090 A.C. he completed the building of the Ananda Temple at Pagan. In this temple his portrait-image can still be seen. Kyantzitha's inspiration is said to have come from eight Indian Buddhist monks who gave him glowing accounts of the great cave-temple of Ananta in the Udayagiri hills of Orissa. Kyantzitha also completed the Shwezigon Temple of his father's time. He was also the first Burmese king to have restored the Bodhgaya temple in Bihar and this act of his is recorded in an inscription now fixed in the wall of the Mahant's residence at Bodhgaya.

Kyantzitha is also credited with the construction of the interesting temple, Abeyadana at Myinpagan and of some forty smaller pagodas such as the Paye inma at his birthplace, the Shwedinnaung to commemorate his being in a pit, the Minochantha to contain nine relics received from Ceylon and the Pusittok to commemorate the spot where his mother, when brought as a bride to Anawrahta, knelt in homage to the palace.

Kyantzitha, in his zeal and enthusiasm for the new faith exhorted a Cola king, successfully, to accept Budhism. Kyantzitha's construction of Buddhist monuments contributed a great deal in the popularizing of the religion among the ordinary people. What influence Buddhism had on Kyantzitha himself is well depicted in the following extract from his inscription of the Shwezigon Pagoda.

"With loving kindness... shall king Kyantzitha wipe away the tears of those who are parted from their trusted friends... his people shall be unto him as a child to its mother' bosom... he shall soften the hearts of those who intend evil, with wisdom, which is even as a hand, shall king Kyantzitha draw open the bar of the Gate of Heaven, which is made of gold and wrought with gems (Epigraphia Birminica I, PL. II, p. 90).

H. R. Perera

LĀBHA, gain, profit, or more generally, possessions. These consist of the various requirements of life, broadly classified as the four requisites (cattāro paccayā) in Buddhist literature. These are food (piṇḍapāta), clothing (cīvara), shelter (senāsana) and medicinal provisions (gilāna - paccaya). The term lābha thus means the acquisition and receipt of these and other requisites for the maintenance of life. The term āmisa is also sometimes used in this sense as at A. I. 73.

Desire for wealth consisting of these and various other necessities of life is a strong aspect of craving (tanha) propelled by which man battles against himself and society, thereby creating various problems of life. How this desire for lābha operates in the day to day life of man is shown in a ten-fold chain of cause and effect in the Mahāniddāna-sutta (D. II, 58 ff). The ten links given here as successively leading from one to the other are: sensation (vedana), craving (tanha), pursuit (pariyesāna), gain (lābha), business

dhism.
speculation i.e. how to invest the profits (vinicchaya), strong desire for profit (chandarāga), attachment (ajjhesanā) possession (pariggaha), avarice (macchariya) and protecting (ārakkha) leading to various kinds of disputation and quarrelling, slander and lies, blows and wounds, etc.

In this formula the term tanhā is used not in a meta physical, but in the ordinary practical sense and accordingly the commentary (DA. II. 499) explains it as samudācarita tanhā as distinguished from what is called vaṭṭamūla-pārīma-tanhā the craving that is the basis of rebirth as found in the pāṭicca-samuppāda formula.

The meaning of this formula is that people, motivated by the desire to increase their possessions without the corresponding spiritual development, subject themselves to suffering in its various forms. As acquisitions increase problems also correspondingly increase giving rise to various social and economic crises. Conquest of this craving is the achievement of peace which is the condition of the mind that is freed from the desire to possess. It is the kind of conquest that enables man to make use of the necessities of life, without attaching himself to them. It is then that he can "enjoy" wealth without doing harm to himself or to others, for he obtains his material needs from society "like the bee that obtains the pollen of the flower without harming its colour or the smell (yathāpi bhama rupphām vappagandham ahethhayam - paleti rasamādiya-Dhp. 49).

Pursuit of possessions as an end in itself is always an obstacle to the proper progress of man. It never affords satisfaction and consolation. Gain of wealth is one of the good results of a virtuous life, a life of quiet contentment, says the Itivuttaka (p. 67). The proper attitude to gains and possessions is to make use of them discreetly. Otherwise gains mean competition leading to social divisions of various types. This theme is well expressed in the following words occurring in the Sappurisa sutta of the Majjhima Nikāya (III, 39): "When a bad man (asappurisa) acquires the necessities of life such as clothing, food, shelter and medicines, he thinks that while he has received them the other monks have not. In this manner, because of his possessions, he exalts himself and disparages others. That is the nature of the bad man". The danger of comparing oneself competitively with others, leading to jealousy, is brought forth here.

Gain and loss (lābha and alābha), like many other things in life (lokadhamma), are two opposites affected by which people become disturbed and agitated. Remaining calm and unaffected in both situations (anurodhā-virodha-vippahīna) is the ideal expected in Buddhism. While the ignorant ordinary man, thinking gains to be permanent, becomes obsessed by both gain and loss, the learned good man, reflecting them not as permanent, remains unperturbed. By cultivating the latter attitude one can certainly enjoy peace. This is the subject matter of the 5th and 6th suttas of the Āṭṭhaka nipāta of the Ariyuttara Nikāya (A. IV. 156 ff.) A verse in the Suttanipāta, (Sn. 834) has the same theme:

"He traineth not in the hope of gain, nor moved Is he at getting none; no craving stirs His placidness; he hankers not for tastes (Hare's translation).

Longing for individual possessions or the desire for hoarding wealth in the form of both movable and immovable property (lābhakāma) is one of the eight factors that blemishes one's good life and make one unpopular. Hence it is called one of Mara's armies (Sn. 438), and therefore not found in a good man (ibid. 854). Wherever found it is a source of unhappiness (J. III, 516). People, specially businessmen, are out to make big profits in this manner propelled by tanhā (ibid. 1014). But the highest gain for man is good health (ārogāya paramā Lābha: M. I. 508; Dhp 204), which in its strict sense means to be free from the three roots of unskilfulness, namely avarice (lobha), hatred (dosa) and delusion (moha). And those who have achieved this state are described as those who have obtained the highest gain, which is deathlessness (te buddhipattā amaṭama Vigayha laddhā mudhā nibbutti bhūja­māna: Sn. 228). This is the state of genuine lābha in the highest sense, the state free from all bondage (Yogakkhema).

1. Sīlaṃ rakkheyya medhāvi
paṭthayāno tayo sukhē
pasāmaṃsāṃ vittalābhānīca
pecca sagge pamodanaṃ

270
Hellish torments that await the profiteer in business dealings, the black-marketeer, are also described in the following term: in the *Nimi Jataka* (J. VI. 112-3):

"That tongue, see, pierced with a hook, like as a shield Struck with a hundred bars; and who are those Who struggle leaping like fish on land And roaring, drabble spittle......? These men are they who in the market place Haggling and cheapening from thir greed of gain Have practised knavery and thought it hidden Like one that hooks a fish: but for the knave There is no safety, dogged by all his deeds: These cruel creatures beget sin, and they Are lying yonder swallowing the hook."

J.B. Cowell's translation

Thus in business undertakings, it is not the correct kind of reasonable profitmaking, but profiteering that is deprecated.

*Lābha* is given as one of the ten impediments (*dasapali-bodha*) to the practice of higher life (*Vism.* III, 43). The text explains *lābha* as the four requisites (*cattīro paccayā*) and how they become an impediment is explained as follows: "Wherever a meritorious bhikkhu goes people give him a large supply of requisites. By spending his time in giving blessings to them and teaching them, he gets no chance to do the ascetic’s duties. From sunrise till the first watch of the night he never breaks his association with people. Again even at dawn, alms food eaters fond of opulence come and say ‘Venerable Sir, such and such a man lay follower, woman lay follower, friend, friend’s daughter, wants to see you’ and being ready to go he replies ‘Take the bowl and robe, friend’. So he is always on the alert. Thus these requisites are an impediment for him. He should leave his group and wander by himself where he is not known* (Bhikkhu Nanamoli’s translation).

In the *Mūlasarvāstivāda Vinaya* (*MSV.* III, 2, pp. 106ff), the word *lābha* is used specifically in the sense of gifts received by the Buddhist monks, specially by those living the rainy season in a particular temple. Here, some minor rules with regard to eight kinds of gifts are given. These eight kinds of gifts are: I. *Simahṛta-lābha* or gifts received during a single *uposatha* observance within a rainy season, and to be made use of by those monks who received them while spending the retreat; II *Kriyāḥṛta* or gifts received by making arrangements among the bhikkhus themselves that a particular area or a row of houses would be reserved for certain monks to go for their necessities during the period of retreat; III. *Nīṣrayahṛta* or gifts received by a monk who spends the rainy season depending for his necessities on a particular individual; IV *Sanghaprajñāpata* or a gift that is fixed but not specially declared to be a gift; V. *Bhikṣuprajñāpata* - or a gift both fixed and explicitly declared to be a gift; VI. *Vārṣika* or a gift recommended to be offered to a monk who has spent the retreat; VII. *Sammuktī* or a gift which is neither fixed nor explicitly declared as to be given to a particular monk, VIII. *Pratyādesa* or a gift that is offered at one of the four chief *caityas* i.e. at the places where the Tathāgata was born, attained Enlightenment, preached the first sermon and attained parinirvāṇa.

With regard to *lābha* it may also be mentioned here that Arhat Sīvājī was regarded as the foremost among those who received gifts (*lābhinam aggo*) A. I. 24) in the Buddha’s order, and consequently businessmen regard and worship him as their patron saint.

### A. G. S. Kariyawasam

**LABOUR**, toil of body, mind, or more usually of both, when it becomes compulsory and painful: or else it is the physical exertion directed to the supply of the material needs of the individual. In order to obtain the material wants of man he has to exert himself and this exertion, specially when it is physical, is called labour. Although there is no exact equivalent for the English word labour in Pali, the Sanskrit word *s'rama* more or less expresses the meaning intended. the Pali words *parissama. āyāsa or vāyāma* would be somewhat expressive of the idea. Whatever be the linguistics of the term it is clear that labour is a necessary and a natural part of the activity of man. Action of man is labour mostly. And in this sense the question of labour cannot be excluded from any comprehensive system of thought.

In the available Buddhist records there seems to be no special treatment of the problem as a separate subject. But the question is indirectly and impliedly discussed in its general teaching, specially in the fourth Noble Truth consisting of Noble Eightfold Path, which is the pivot around which the practical philosophy of Buddhism revolves. The fourth, fifth and the sixth constituents of the Path consisting of the right kind of business (*sammi-kammanta*), right kind of livelihood (*sammi-ājīva*) and the right kind of exertion (*sammi-vāyāma*) are of special significance in this connection. These three constituents of the Path provide the ethi-
cal basis for man's labour. Hence ethics assumes a significant role in the concept of labour as understood in Buddhism.

Man's occupation, livelihood and exertion should be of the right (samma) kind and not of the wrong (micchā) kind. As the divisions of the Path are for academic purposes, in practice they have to be developed simultaneously and as such they are all kinked together. Therefore the above three aspects of man's activity also have to be treated together when discussed in relation to the practicals of life. The primary activity of man being the fulfilment of his economic needs, right livelihood could in a sense be called right labour, the qualification 'right' meaning that it should be ethically justified (samma). It briefly means that one abstains from making one's living through a profession that brings harm to himself and others. Broadly speaking whatever effort (vāyāma, parissama) is made towards the goal of release from dukkha it should be within the limits of the truths of moral science. Whether the man's efforts are directed towards the worldly ends or the transcendental ends this fact is applicable with equal force.'

In the day to day activity of man, where labour becomes a measure of value owing to its productive capacity, labour problems also involve employer - employee relations. This is an important aspect of the problem in which master - servant relations are involved. The well-known Sigala discourse of the Dīgha Nikāya (Sutta, No. 31) gives the answer to this problem. It is based on the knowledge on both parties of their mutual obligations, which is the basis of peaceful co-operation between any two parties. As regards those of the employer towards the employee it is said that he should see to it that the work assigned is according to the ability and the capacity of the employee: "Adequate wages should be paid to him: medical needs should be provided: Occasional donations or bonuses should be granted. The servant or the employee, in his turn, should be diligent and not lazy: honest and obedient and not cheat his master: he should be earnest in his work" (See Walpolā Rahula, What the Buddha Taught, Gordon-Fraser, pp. 79-80). This sums up the Buddhist attitude towards and the solution for the labour problems in a general way. And if both parties discharge their mutual duties in a general way. And if both parties discharge their mutual duties and obligations well there cannot be much room for exploitation on the part of the employer and various forms of labour violence on the part of the employee.

From an absolute point of view man has to toil and labour to obtain his needs until he gets rid of his burden completely by overcoming the bonds of worldly existence. This kind of absolute freedom is not easy to achieve and only a few have even courage to undertake the hazard. Therefore in the relative existence of ordinary life the above analysis given in the Sigala Sutta holds good for any time or any clime. The labour involved in man's effort towards the achievement of freedom from the bonds of renewed existence is called tapa, vāyāma, padhāna etc. in Buddhism and embraces the ascetic elements contained in the effort of man towards that goal. The six years of laborious effort of prince Siddhartha prior to his Enlightenment is the best example for this. It is only by getting over the burden completely in the absolute sense in the state of freedom from the burden (ohita-bhāra), that one can find true pleasure in all one's work and treat all kinds of work as labours of love. For those who have put an end to the accumulation of fresh kamma. They have attained to the state of freedom from the burden of activity (kammakkhaya) so that they are not involved in or attached to the work they do. Activities of such people are always selfless, because they are free from bonds.

The principle of division of labour is to be inevitably found in any form of human organisation, for otherwise social activity becomes impossible. The ancient Indian caste system is a clear example for this phenomenon and among the community of Buddhist monks there were particular bhikkhus appointed to look after a particular aspect of the work of the community. The posts of those who distributed meals (bhattuddesa), and those who were responsible for the arrangement of the seats and lodgings (senāsana-paññāpakā) could be cited as examples. The appointment of various disciples as the chief in a particular branch of activity (etadagga) by the Buddha (e.g. Kumārakassapa as the best of orators, Moggallāna as the best in the display of psychic powers etc.) too could be treated as a kind of division of labour. See also article on EMPLOYMENT in volume V, Ency, Bsm.

LAITY See GĪḤl

LAKKHAṆA SUTTA, the 30th discourse in the Dīgha Nikāya (D. III, pp. 142-179) is one of several discourses in the Tipitaka dealing with the thirty two
special signs of a Great Man (Mahā-purisa-lakkhaṇa). Several scholars regard the discourse to be a later addition to the Tipiṭaka on the following considerations: Lakkhaṇa Sutta is one of the few discourses that provide no introductory reason (nīḍāṇa) for their deliverance by the Buddha; the discourse also lacks the usual finale seen in discourses preached by the Buddha; the verse sections of the discourse show an exceptionally wide variety of metres which is another pointer to the lateness of the discourse.

The Lakkhaṇa Sutta is presented in three parts. The first part, by way of an introduction to the concept of the 32 signs, says that anyone born with them has only one of two possible careers open to him, namely, if he remains a householder (gīhī) he will become a Universal Monarch (cakkavattī) ruling a vast kingdom righteously, and with justice (See. Cakravartin). But if he renounces the world he will become a Buddha, a Fully Enlightened one, and "draw back the veil of ignorance (mokkajāla) from the world." The implication is that a person born with the 32 signs on his body will rise to the peak of human development spiritually or temporally.

In the second part of the discourse the Buddha enumerates the 32 special signs saying, with regard to each of them, that a man on whose body that particular sign manifests will either become a Universal Monarch (cakkavattī) if he leads lay a life, or a Buddha if he decides to renounce worldly life.

The thirty two signs on the body of a Great Man, as enumerated by the Buddha in the sutta, are as follows:

(1) He hath feet with level tread (suppatiṭhitapādo);
(2) On the soles of his feet, wheels appear thousand spoked, with tyre and hub, in every way complete and well divided (heṭṭhā pādatalesu cakkāni jātāni honti sahasāsrāni sanemikāni sanābhikāni sabbākāra paripūrāni susibhattantarāni);
(3) He has projecting heels (āyata paṭhī);
(4) He has long fingers and toes (āṭhāṅgulī hotī);
(5) His hands and feet are tender (muḍu taḷūna hatthapādo);
(6) His hands and feet resemble a net (jālahattha pādo);
(7) His ankles are not over the heels but midway in the length of the feet (ussaṅkhapādo);
(8) His legs are like an antelope's (enī jaṅgho);
(9) He can touch and rub his knees with either hand while standing and without bending (hitakva vā anonamanto ubbohi pāṇi-ralehi jannukāni parimassati parimajjati);
(10) His male organs are concealed in a sheath (kosohita-vatthā guyho);
(11) His complexion is like bronze, the colour of gold (suvaṅga - vaṅga kaṇicāna sannibhattacto);
(12) His skin is so delicately smooth that no dust cleaves to his body (sukhumaccāvi hotī sukhumatta chavīya rajojallam kāye na upalippti);
(13) In the pores on his body grows single hairs, one to each pore (ekeka-lomo hotī, ekekāni lomāni lomakūpesu jātāni);
(14) The hairs on his body turns upward, every hair of it, blue black in color like eye paint, in little curling rings, curling to the right (uddhagga-lomo hotī, uddhaggāni lomāni jātāni nīlāni anjanavāṇāni kuṇḍalā vaṇānī padakkhiṇāvattakā);
(15) He has a frame extremely straight (brahmujjugatto hotī);
(16) He has the seven convex surfaces (sattussado hotī);
(17) The front half of his body is like a lion's (sihapubbadhakāyō);
(18) There is no furrow between his shoulders (cittataramsas);
(19) His proportions have the symmetry of the banyantree, the length of his body is equal to the compass of his arms, and the compass of his arms, is equal to his height (nigrodha-parimaḷalo hotī, yāvatakavassa kāyo tāvatakavassa vyāmo, yāvatakavassa vyāmo tāvatakavassa kāye);
(20) His bust is equally rounded (samavatta-khandho);
(21) His taste is supremely acute (rasaggasaggī);
(22) His jaws are as a lion's (sihahāṇī);
(23) He has forty teeth (cattāriṣa-danto);
(24) He has regular teeth (samadanto);
(25) He has continuous teeth (avivaradanto);
(26) The eye-teeth are very lustrous (susukkadiṣo);
(27) His tongue is long (pahūta jivho);
(28) He has a divine voice like the karavīka bird's (brahmassaro karavīka bhīṇī);
(29) His eyes are intensely blue (abhīṅtā-netto);
(30) He has eye lashes likes a cow's (gepakhumo hotī);
(31) Between the eye brows appears a hairy mole white and like soft cotton down (unna bhakantare jātā hoti odāta muḍu tūlasannibha).
(32) His head is like a royal turban (urhīsā-siso)

In the third and final part of the sūtta the Buddha describes the karmic causes of each of the signs and the advantages conferred to the person who possesses them. The description is first done in prose, which is attributed to the Buddha himself, and then in verse. It is interesting to note here that the Buddha has given a pure ethical interpretation to the thirty two signs of a Great man, whereas such a conception was not found in the brahmanic texts. For example, the second of the thirty two signs is the marks of tiny wheels on the soles of the feet of a Great man. In a previous life, the person with this sign has dispelled people’s fears and provided them with protection, shelter and the necessities of life, and hence this sign on his body. The advantage enjoyed in the present life by the possessor of this sign is that as a Universal Monarch or as a Buddha he will have many supporters.

Sometimes the causes and advantages mentioned in the prose section differ slightly from the verse. For example, having feet with level tread (suppatīṭhitapāda), the first of the thirty two signs, is, according to the prose, the result of “having been unwavering in good conduct of body, speech and thought, in generosity, self-discipline, observing the fast-day precepts and in honoring parents, ascetics and brahmans and the head of the clan”, but according to the verse it is slightly different.

As for the advantages conferred by such past good deeds, the prose says that as a Universal Monarch he will rule over a prosperous world and that no enemy will obstruct him; if he becomes a Buddha he will meet with no impediment either internally (from greed, hatred and delusion), or externally (from ascetics, gods or māras). The verse section, on the other hand, says that the advantages enjoyed by the Universal Monarch will be that he will defeat all his foes, while as the Buddha he will not be reborn again in saṃsāra.

It should be noted that there is an attempt to find some link or correspondence between the past good deeds and the sign they have given rise to. So, being quick to learn skills and crafts results in having legs like an antelope (enijāṅgha), presumably enabling one to walk quickly. Again in consequence of developing non-violence and being generous at giving away fine cloths and fabric, there results a golden coloured smooth complexion (suvaṇṇanāṇa).

In the Tipiṭaka the thirty two signs are always described as being a part of brahmanical prognostic lore, and scholars generally accept them as being pre-Buddhist. The Buddha adopted existing concepts after giving them a new interpretation to inculcate his own ethical teachings, and the Lakkhaṇa sūtta is a good example of this approach adopted by the Buddha.

The Buddha actually says in the sūtta that religious teachers of other persuasions know about the thirty two signs, but that they are ignorant of the karmic reasons for gaining them; and it is these very good deeds that are emphasised in the Lakkhaṇa sūtta whereas brahmans emphasised the mystical powers of the man who possessed the thirty two signs, the Buddha shifted the emphasis to the ethical behaviour that gave rise to them, and when we look at this behaviour we notice that much of it has a distinctly social overtone. It includes being generous (dāna samvībha), harmlessness (dayāpanna), dispelling people’s fears (abbegutāsa bhayapamudāno), providing them with protection and security (dhammikāca rakkhāvaranaguttim), uniting those who have fallen out (bhīṁanāvā saṇdāta) and desiring the welfare, profit, comfort and freedom from bondage from others.

Such ethical behaviour is very reminiscent of the Perfections (pāramī), which the bodhisatta is supposed to have practised in preparation for Buddhahood, a concept not specifically stated in the early strata of the Tipiṭaka. When we recall the lakkhaṇa sūtta’s assertion that such deeds were practised in the past by one who would later become either a Universal Monarch or a Buddha, one can see here the concept of the Perfections in its germinal stage.

Bellanwila Wimalaratana.

LAKŚMI, or S’RI (Pali: Lakkhī, Sīrī), the Indian goddess of beauty, prosperity and splendour, the goddess of good luck. She symbolises one of the most important and age-old tendencies of the human mind, that of conceiving the good and the beautiful, the prosperous and the lucky, in life in the form of a female divinity. The anthropomorphic form of the goddess does not

1. The sense of S’ri and Lakṣmi in early Indian literature is discussed in detail by H. Oldenberg in his essay “Vedic Words for Beautiful and Beauty and the Vedic sense of the Beautiful” in Rūpam, No. 32, 1927, pp. 98 ff.
find a place among the earlier Vedic literature. It is in a very late hymn of the *Rgveda* (I, 165, Max Muller, *Rgveda*, 2nd edition, Vol. IV, pp. 523 ff.), known as the *Sri-Sūkta*, that she is addressed as a personalised goddess, as the wife of Vis'nu. While the form *Sri* occurs in the early Vedic literature as a word meaning prosperity it is only in the *Satapatha Brāhmaṇa* (xi, 4, 3) that she is referred to as a goddess. The abstract ideas of prosperity, beauty, good luck etc. contained in the form *Sri* and Lākṣmī have been extended to mean a goddess symbolising these ideas.1 Her emergence seems to have taken place along with those of the other gods and goddesses that gradually enlarged the Indian pantheon in post Vedic India. Gods and the goddesses of a lesser extent had their place in Buddhist India and the worship of Lākṣmī cannot be excluded. The *Dīgha Nīkāya* (I, 11) evidently refers to her invocation (*ṣīrī-āhvāyana*) in addition to the numerous references to her in the *Jātakas*. The *Milinda Pañhā* (p. 191) refers to her as *Siri-devatā* treating her worshippers as a separate sect. In the *Siri-kālakaṇḍa Jātaka* (J. III, 257 ff.), Siri, as the goddess of fortune, is depicted as the daughter of Datarātha, the regent of the northern region and hence coming from the *Cātummahārājika* deva-world. In the body of the story she describes herself as "the one presiding over the course of conduct that gives lordship to mankind" (aham mahājanassā issarīyadāyakāya paṭi-padāya īhīta). Kālakaṇḍa, the daughter of Virūpakkha, the regent of the western region, is represented as the opposite character of Siri and hence the "goddess" of misfortune. In the *Sulhūbojana Jātaka* (J.V. 399) Lākṣmī is connected with the east and here she is reproached because she bestows fortune indiscriminately both on the good and the bad. Here is seen, it may be observed, a deviation from the normal concept, according to which moral integrity is the qualification for her favours. The *Dhammapada-sthakathā* (II, p. 17) refers to her as the powerful goddess that gives luck to the kingdom (rajjasiridāyikam mahānubhāvan devatām). In the *Siri-kālakaṇḍa-pañha* of the *Ummagga Jātaka* too (J. VI, 349) Siri and Kalakaṇḍa are treated as the two female divinities representing good luck and ill-luck respectively, who can never live together in harmony. In the *Siri Jātaka* (No. 284)2 Siri is Anāthapindikā's goddess of good-luck who changes her residence from one place to another in order to escape a thief that came to steal her. She finally settles down in the tresses of Anāthapindikā's wife and the thief goes away disappointed. The story is meant to show that the goddess of fortune is not transferable! Lakkhi or *Sri*, it is quite significant, is equalised with wisdom (*paññā*) at J. III, 306. Realisation of truth as gnosis or saving knowledge (*vimutti-īṭaṇa*) is the greatest fortune and hence it is this same idea that later developed into the concept of the goddess Prajñāpāramitā in the Mahāyāna. In the *Tesakura Jātaka* (J. V, 112-3) Siri (here Siri and Lakkhi are treated as two individuals) is made to make the statement that she dwells in a man who is energetic and free from jealousy (uṭṭhānaviriyey pose-ramāhī am anusuyyake) and so goes a well-known Sanskrit adage "Lākṣmī visits only those men who are energetic like lions" (udayoginām purūṣasūraṁ ham upatti Lākṣmī). Conversely a man of opposite character is said to be the dwelling place of Siri's opposite character, Kālakaṇḍa. By being free from jealousy and friendly towards all (sabbesaṁ suhādayo) one can get rid of ill-luck and attract good luck. Victory in battle is also compared to Lakkhi in two places in the *Cūlavamsa* (Ixxii, 101 and Ixxvi, 233). One who does not betray one's friends shall not be deserted by Siri, says a verse occurring in the *Temiya Jātaka*: Sirīyā ajahito hoti-yo mittānam na dūbhetai: (J. VI, 14).

With the development of the personality of Lākṣmī there also inevitably grew a mythology around her. Accordingly she finds her place in the churning of the ocean, which was a task undertaken by the gods (sura) and the titans (asura) for the recovery of the elixir of life (*amṛta*). Out of the many auspicious objects that emerged from the ocean Lākṣmī was one. According to the *Rāmāyaṇa* account (book 1, ch. 45) she appears as the 9th of the ten objects that were recovered, *amṛta* being the 10th object. The other account is found in the *Viṣṇu Purāṇa* (book 1, ch. 9) according to which she is the eighth and the last treasure that emerged. In the *Rāmāyaṇa* account she was a lotus, her special symbol, (hence she is designated Padmā) in her hand whereas in the *Viṣṇu Purāṇa* account she is seated on one.3 The connection of Lākṣmī with water and specially with the lotus, which is a symbol of the waters, is a significant characteristic of this concept.

---

2. Compare also the idea that Venus Aphrodite, the Greek goddess of love, is also sometimes regarded as having sprung from the foam of the sea.
It may also be noted that the myth of the churning of the ocean by the gods and the titans for the recovery of the elixir of life seems to symbolise the same phenomenon as the bodhisatta's struggle against Māra and his hosts (Mārayuddha) which culminated in the realisation of prajñā (prajñā-Pāramitā) and the achievement of immortality by the Buddha. Buddhaghosa, quite in keeping with this view, in fact compares the bodhisatta's realisation of all-seeing knowledge (sabaśnuta-nāṇa) under the bodhi-tree to the churning of the ocean in the following simile occurring in the Manorathapūraṇa (III, 70): Having overcome Māra he purified the three-fold vision during the three watches and churning, with the churning-stick of his knowledge which is capable of thinking in forward and backward order, the ocean of the Law of Dependent Origination, which too is of the double nature of regular and of reverse order, the bodhisatta obtained the all-seeing knowledge, whereupon the ten-thousand world-systems quaked (mārabalaṃ vīdhametvā tūṣu yāmesu tisso vijjā visodhetvā anulomapaṭīlomaṃ paṭīcchasamuppādamahā- samuddaṇ, yamakaṇṇaḥamanthena manthentassa sabaśnuta-nāṇaḥ apatiṇiddhe tadanubhāvena dasahasahṣi lokadhātukampanaṇ).

It was this idea of the perfection of wisdom that gave birth to the goddess Prājñāpāramitā, a more Buddhist form of Lakṣmī, in the developed forms of Buddhism and in Buddhist art. It is also significant in this connection that another form of Lakṣmī, the earth-goddess under the name Vasundhara, has also assumed significance in Buddhist art by her being connected with the Bodhisatta's Mārayuddha when she was called to witness by him.4

Although Heinrich Zimmer, in his Art of Indian Asia (p. 141) makes a distinction between Lakṣmī and Prājñāpāramitā by making the former to symbolise the fulfilment of the earthly wishes of man and the latter that of the transcendental wishes, in the ultimate analysis one cannot see a difference between the two as this so-called transcendental idea is nothing but the realisation that there is no difference between the worldly and the transcendental aspects of life, between samsāra and Nirvāṇa as often emphasised specially in the Mahāyāna works. The fact that the Jātaka commentator also had this idea in mind is shown by Lakṣmī being equalised with prajñā. (J. III, 306). After all, the full realisation of prajñā would be the fulfilment of all the earthly gains as well.

The oldest available representation of a figure (leaving aside the female figures from the Indus Valley) that could be identified as that of Lakṣmī is the one found carved on the northern gateway of the Śānci Stūpa of about the beginning of the Christian era. Here the goddess sits on a fully opened lotus, her favourite symbol: a number of other blossoms rise around her and on two of these guardian elephants (symbolising rain-clouds) stand sprinkling water over the goddess from pots held in their uplifted trunks. This is the well-known Gaja-Lakṣmī or Lakṣmī with the elephants, which became a somewhat common motif in later Indian art. This scene is very often regarded as representing symbolically the nativity of Gautama Buddha. With regard to another representation of Lakṣmī from the Aḍīvarāha cave at Māmālapuram and belonging to the early 7th century A.C., E.B. Havell observes: "Lakṣmī, Mother Nature, true woman and goddess most divine, is represented in the supreme moment when, rising from the waves on her lotus throne she gazes with undisguised repute and wonderment upon the apparition of Vis'nu in all his splendour before her. There is a fine inspiration, a touch of the eternal feminine, in her simple, spontaneous gesture, full of adoration for her divine spouse as she prepares to throw herself upon his breast. The reverential mien of the attendant river goddess at her side is simply and charmingly expressed and the colossal heads of Indra's elephants, rendered with consummate craftsmanship make an imposing canopy for the whole group."5

4. Vasundhara's connection, as the goddess of fertility, with the bodhisatta's Māra-yuddha as depicted in Buddhist art has been discussed in detail by D.C. Gangolley in IHQ. 1943, pp. 1-11. (This article is illustrated).
5. The Ideals of Indian Art. London, 1920, pp. 155-6
As regards the general history of Lakṣmi in Hindu mythology the following account may be useful: "In the Vedas the term Lakṣmi occurs in the sense of auspicious and is also applied to a fortunate woman. In the earlier legends Lakṣmi is the goddess of good fortune and beauty, who issued from the mouth of Prajāpati and was the wife of Āditya. Another legend makes her a daughter of the Mahārṣi Bṛhadṛiṣṭhila who in a fit of rage cursed all celestial beings. Lakṣmi, his daughter being one of them, took refuge in primeval waters, from where she re-appeared during the churning of the ocean in the full bloom of her divine beauty, floating in the dew of a lotus flower.

In all later legends she is spoken as the spouse of Viṣṇu. She is said to have had several rebirths in each one as the spouses of Viṣṇu incarnation. When Viṣṇu came as Rāma, Lakṣmi was Sītā; when he came as Vāmana she was a lotus (Padma); when he came as Parasūrāma she was Dharāṇī; when he came as Kṛṣṇa she was Rukmīṇī, and so on. Lakṣmi is portrayed as a very beautiful goddess with two hands (instead of the four she possesses) in one of which she holds her flower, the lotus. In the seasonal worship of this goddess her images are rarely used. It is customary to heap up rice on a tray, decorate it with cowrie shells and place on the pile a small wooden box with a coin in it, symbolising the goddess of good fortune and prosperity."

A.G.S. Kariyawasam

LALANĀ, along with rasanā and avadhūtī, is a vein in the human body, which, as taught in the physiology of Tantric Buddhism, has a meditative significance in the yogic exercises taught in that branch of Buddhist philosophy.

A philosophical concept that is common to almost all the branches of Indian philosophy is that ultimate reality is non-dual as opposed to the dualistic nature of apparent reality. The experience of this non-duality between the relative and the absolute aspects of existence was the practical aim of Indian religion in general. In Buddhism this philosophical aspect was elaborately developed in the Mahāyāna, specially in the Tantras. The concepts of upāya (means method) and prajñā (wisdom), sūnyatā (void) and karunā (compassion), vajra (diamond), and padma (lotus) etc., were some of the ways in which this relative duality was conceived. Based on the other philosophical tenet that the individual is a replica of the universe, a microcosm, these dual aspects were conceived as being represented in the human body by the two nerves lalanā and rasanā, which are called iḍā and piṅgalā respectively in the Hindu Tantras. Lalanā, on the left side of the body, was conceived as feminine and corresponding with prajñā while rasanā, on the right side was conceived as masculine and corresponding with upāya. In the centre where they unite is avadhūtī (sīsumūna of the Hindu Tantras) symbolising the practical realisation of non-duality in the state of great bliss or mahāsukha or nirvāṇa.

In the complicated symbolism of Tantric Buddhism these two nerves have been given various kinds of names which indicate the different aspects in which the apparent duality was conceived. Some of these names are:- 8 Lalanā; iḍā, candra, sūkṣma, soma, apāna, dhamana, śī, nāda, prajñā, ganga, sūka, ravi, agni, praṇā, rajas, adharma, asthira, prthivī, abheda, acitta, avidyā, tamas, abhāva, prakṛti, śakti, sambhogakāya, grāhaka. Rasanā: piṅgalā, sūrya, ravi, agni, praṇā, camana, kāli, bindu, upāya, yamunā, rakta, pañcā, sūkṣma, retas, dharma, śīhara, pāra, dyau, bheda, citta, vidyā, rajas, bhava, pruṣa, sīva, nirmāṇakāya, grāhā.

Lama Anagarika Goveinda 9 identifies the two psychic forces that flow through these two nerves as lunar (lalanā) and solar (rasanā). However, as the duality of existence could be expressed in so many other ways, one finds it difficult to stick to one pair of symbolism and it is this fact that is proved by the large

---

7. This idea is clearly expressed in the following verse occurring in the Śuddhanandāśī (p. 448) lalanā prajñāsvabhāvenā vāsamāpyena samāsthitā avadhūtī madhyadeśe tu mahāsukhādhārāraṇī
number of symbolic pairs recorded in Tantric works as the above list shows. Lama Givinda summarises (ibid. p. 155) the physiological location of these nerves thus: "According to the tradition of the Saṅkarma-nirūpāna idā (lalanā) and pingalā (rasana) are represented as two spirals starting from the left and the right nostril respectively and moving in opposite directions around s'us'umma nāḍī (avadhihit) which runs like a hollow channel through the centre of the spiral column, meeting idā (lalanā) and pingalā (rasana) in the perineum at the base of the spine".

In the yoga of Tantric Buddhism this physiological symbolism is made use of for meditational and such other spiritual exercises that help one to realise and experience the universality of all consciousness and thereby awaken the dormant forces of the human mind generally designated in 'Tantrism as kunḍalini (‘libido’ as Govinda says: ibid. p. 156). While lalanā and rasana symbolically represent the apparent duality of all mundane experiences, avadhūti represents the state free from this duality, the state of non-duality of peace and harmony. The aim of the yogin is to experience this state of equilibrium. This is the practical purpose of these theories in Buddhist yogic exercises. "The yogin is he who has found the central axis of his being, who has 'opened' the s'us'umna (avadhihit) who has gained direct access to his innermost forces and who has succeeded in establishing direct contact between the extremes of his nature, by connecting the deepest with the highest" observes Lama Govinda (ibid p. 157).

A.G.S. Kariyawasam

LALITAVISTARA, one of the most sacred Mahāyāna texts belonging to the category of Vaipulya Sūtra (lit. discourse of great extent). It is one of the nine dharmas (nava-dharma=nine sacred texts,) of Nepalese Buddhism. The Lalitavistara also calls itself a Mahā-nidāna, and Lalitavistara purāṇa, a title befitting its form and style. The title Lalitavistara (i.e., the detailed narration of the sports (of the Buddha) itself is suggestive of the docetic views found in the work.

The Lalitavistara consists of twenty-seven chapters which narrate the life-story of the Buddha from the time of his sojourning in the Tusișa heaven, in his penultimate birth where he was born as Svetaketu, up to the event of his preaching the first sermon. The text begins with the stereotyped formula, "Thus, have heard (evam mayā rutam); but unlike Pali suttas which open with the corresponding Pali formula (evam me sutam) it does not immediately introduce the main topic of the discourse. The preamble, sketching out a magnificent picture of the Buddha as well as the vast assembly of bodhisattvas, bhikṣus, devas and other beings is characteristic of all Mahāyāna sūtras.

The first chapter called the Nidāna-parivarta is devoted to the preamble. The life-story of the Buddha begins with the second chapter, Samutvādha-parivarta, and this beginning corresponds to the Avidūrenidāna of the Nidanakathā. In this section the Lalitavistara closely corresponds to the tradition recorded in the Nidāna-kathā, varying only in minor differences of details and in extravagance of description. For example the verses of extortation (saṅcodanagaṇāḥ) are found in the Lalita in place of the entreaties of gods of Thusita as given in the Nidānakathā. The third chapter Kulaparīṣūḍḍhaha-parivarta is mainly devoted to the description of the investigations which are normally referred to in the Pali tradition as the Five Great Investigations (pañca-mahā-viśokana). In the Lalita these investigations are enumerated as four in number. Though not enumerated the investigation regarding the mother, too, is described in great detail. Unlike in the Nidānakathā all these events are elaborately presented in the Lalitavistara and it even describes how the gods assisted the bodhisatta in these investigations. Deviating from the known Pali tradition the Lalitavistara describes also how the gods descended to Jambudvīpa and began teaching the brahmans the science of physiognomy so that they may be able to discern the signs in the body of the bodhisatta when he is born among men. In the meantime some other gods appear in Jambudvīpa and inform the Prayekabuddhas that the bohisattva will be born twelve years hence, and this perhaps is in place of the Buddha-halihala (uppror proclaiming the appearance of the Buddha) referred to in the Nidānakathā. Though the Nidānakathā says that the bodhisattva will be born thousand years after the Buddha-halihala, the Lalita reduces the intervening period to twelve years.

Between the two events, namely the Great Investigations and the bodhisattva's conception in Maya's womb, the Lalita recounts many more happenings which are not known to the Pali tradition. The Lalita describes how the bodhisatta, after firmly resolving to depart from Tusiṣa heaven preached to the gods and consoled them. He is even said to have pacified the gods by appointing Maitreya to succeed him. The Lalitavistara gives also an account of the deliberations carried out to find a suitable form for the bodhisattva
to enter the mother’s womb. It was a god named Ugrateja, who had recently departed from Jambudvipa, who suggested the form of an elephant.

The fourth and fifth chapters (Dharmālokamukhaparivarta, Pracalaparivarta) gives details of the past lives of the bodhisattva and describes his preparation for the descent to Jambudvipa. The next chapter, Garbhāvakrāntiparivarta is mainly devoted to describe the bodhisattva’s conception in Māyā’s womb. Though the description of Mayas dream is similar to the one found in the Pali tradition, the events that follow it are presented in an extravagant form, and it is probable that many of these are fabrications of the compiler (s) or redactor (s) of the Lalitavistara. Both Pali and Sanskrit traditions hold that though the bodhisattva took conception in Māyā’s womb he remained there unsullied by the impurities in the mother’s womb. Though the Pali tradition is satisfied with merely stating this, the Lalita venture to explain how this was possible. It says that while being in the mother’s womb the bodhisattva lived in a casket called Ratnavyūha and while being in it he was nourished by some special food offered by Brahmacārya.

The Lalita description of the birth of the bodhisattva is basically the same as in Pali texts, except for some additional details such as the spontaneous appearance of lotuses to receive the foot of the bodhisattva; and, perhaps, such details were included to embellish and sanctify his character. The Lalita redactor’s over enthusiasm for exaggeration and embellishment has resulted in a confusion of the sequence of events. Thus, at one place it says that it was four months after the birth that Suddhodana was able to bring the child to his palace. Elsewhere it is said that it took a week to bring the child to the palace. In the meantime it also upholds the common tradition that Māyā died seven days after the birth of the bodhisattva. Asita’s visit is elaborately dealt with, and this opportunity is taken to insert the list of characteristics of a Great Being (mahā-puruṣa).

The three chapters that follow (vii, Devakuloparayapañnaparivarta viii. Ābharaṇa parivarta ix. Lipāsālsāṃdaraṇa parivarta) are peculiar to the Lalita and are perhaps added to fill in a gap found in the Pali tradition. These additions also enabled the redactor (s) to present the super-human qualities of the bodhisattva in a very extravagant form. For example, the Lalita describes vividly how the statues of various deities spontaneously fell prostrate at the feet of the infant bodhisattva; how the bodhisattva surpassed his teacher in knowledge and proficiency in various arts and sciences.

The tenth chapter (Kṣigrāmaparivarta) narrates the well-known event of the ploughing-ceremony with details not found in the Pali tradition. The Sīlpassandarśana parivarta (xi) is important as it describes how the young bodhisattva selected his bride. The bodhisattva’s act of displaying his kill in the art of war is very ingenuously woven into the narrative. According to the Lalitavistara it was Gopa, daughter of Daṇḍapāṇi, who was selected by the bodhisattva as his wife, and it was in order to dispel the doubts entertained by his prospective father-in-law regarding his proficiency in the art of war that he displayed his skill. The redactor of the Lalita makes much use of this chapter to present graphically the contest that took place between the bodhisattva and Devadatta.

The Saṅcodanaparivarta (13th) is a lengthy one which describes the means adopted by the gods to urge the bodhisattva to get his mind on renunciation, and thus it is apparent that like the Pali tradition the Sanskrit tradition, too, does not speak about the period of the bodhisattva’s life between his marriage and renunciation.

The Lalita describes in great detail the dream dreamt by Gopā and Sudhodana about the impending departure of the bodhisattva. This is, perhaps, a means adopted by the Lalita to magnify the act of renunciation specially by describing the numerous preventive measures taken by Sudhodana. Whole of chapter fourteen (Svapnaparivarta) is devoted to this.

Though there are differences between the two traditions (the Pali and the Sanskrit) with regard to details concerning the renunciation (Abhiṇiṣkramaṇaparivarta) the gist of both is almost similar. In details, of course, the Lalita seems to agree more with the parallel account in the Mahāvastu. Similarities of this sort, perhaps, suggest that the Lalitavistara consists of two ancient traditions, the Pali and Sanskrit, are

1. Though the Lalitavistara consists of old and new traditions in its form as found at present it appears to be the work of a single redactor.

2. The Mahāvastu is said to be a work of the Hinayāna which has assimilated features of Mahāyāna.
often complementary to the other.

For the redactor of the Lalita all events connected with the bodhisattva are worthy of festivals, and, therefore, the bodhisattva’s four visits to the pleasure are made occasions for pompous celebrations. The Lalita redactor rejoices in detailing the part played by the gods in helping the bodhisattva to renunciate. Every opportunity is made use of to insert verses of exhortations and graphic poetic descriptions.

Events that took place between renunciation and the commencement of ascetic practices are summed up in the Bimbisāropasānakramanaparivarta (16th) and as indicated by the title it gives prominence to the bodhisattva’s meeting with king Bimbisāra.

The Lalitavistara deviating from the Jātakapadāṇa-kathā account says that the bodhisattva, before meeting Arāja Kālāpa also met, two brahman women known as Sāki and Padmā and two other sages called Raivata and Rajaka. In describing the severe ascetic practices performed by the bodhisattva the Lalita closely follows the Pali tradition, except for a few addition such as the visit of Māyā from heaven.

As pointed out before the Lalita has often attempted to suggest explanations for events that appear to rouse the curiosity of the readers. In this chapter (17th Duṣkaracaryāparivarta) the Lalitavistara explains that the bodhisattva, though he himself knew the futile nature of severe austere practices, performed them for six years in order to show their uselessness to those who regarded ascetic practices as the sole means of salvation.

The Nairaṅjanaparivāra narrates the offering of rice-gruel by Sujātā. The next two chapters graphically describes the bodhisattva’s march towards the foot of the bodhi-tree (Bodhīmāṇḍapamana parivarta) and the gathering of numerous bodhisattvas from the buddha-fields (buddhakṣetra) and taking position around the bodhimaṇḍa (Bodhī maṇḍapa parivarta). The Lalita devotes a lengthy chapter to describe the battle between the bodhismātrōva and the Māra (Māragharsānaparivarta). This description is more graphic and animated than the parallel descriptions found in Pali sources. It also narrates how Māra, failing to conquer the bodhisattva by use of force, send his daughters to entice him by their coquetry.

The attainment of Buddhahood is described in the 22nd chapter (Abhisambodhanaparivarta) which in content is very close to the Pali tradition. The utterance of joy (udāna) which the Buddha is said to have made is not the usual one cited in Pali sources.

The Saṃstavaparivāra is devoted to present the eulogies uttered by various dieties in praise of the Buddha. This is followed by the enumeration of events that took place during the seven weeks after Enlightenment. The offering of the first meal by Trapaṣa and Bhallika is narrated in the next chapter. The Adhyeṣṭanāparivarta records the invitation made by Brahmā Sikhī requesting the Buddha to preach the doctrine to the world. Being persuaded, the Buddha sets forth to Benares and on his way meets Upaka. The Lalitavistara narrates an interesting incident that took place on the way. When the Buddha came up to the ford of Gangese and requested the ferryman to take him to the other bank the latter demanded the fare. Then to the great astonishment of the ferryman the Buddha crossed the river through the air. Awe-stricken ferryman reported this matter to king Bimbisāra, who ordered that thenceforth all religious recluses should be ferried without any charge of a fare.

In the Dharmaçakrapravartanaparivāra the Lalita narrates very graphically the preaching of the first sermon and all the miraculous events that took place at that time. It even goes to the extent of describing how a bodhisattva named Dharmaçakrapravartin rolled to the presence of the Buddha the great wheel of law (Dharmaçakra), made up of thousand spokes and adorned with all kinds of jewells.

The last chapter (Nigamanaparivarta) is in praise of the Lalitavistara itself. It also enumerates the numerous benefits that accrue to anyone who reads or listens to this text.

From the foregoing account it is apparent that the Lalitavistara consists of episodes which are found in Pali and Sanskrit traditions and also of some episodes not known to either the Pali sources or to Sanskrit texts like the Mahāvastu. In order to explain the existence of different traditions Winternitz puts forward the suggestion that “the Lalita-vistara is a recast of an older Hīnayāna text, the Buddha biography of the Sarvāstivāda school, enlarged and embellished in the spirit of the Mahāyāna. This supposition also explains the character of the text, which is by no means a unified work of one author, but an anonymous compilation, in
LALITAVISTARA

which very early and very recent passages stood side by side. (M. Winternitz, History of Indian Literature II, p. 252-53). This view is accepted almost verbatim by P. Vaidya in his edition of the Lalitavistara (BST. I, Intro. p. X).

Whatever the truth of this suggestion is undoubtedly the Lalitavistara consists of old and new, both Pali and Sanskrit tradition; and, besides, it also abounds in highly exaggerated, improbable elements which are, perhaps, mostly creations of the redactor of the Lalitavistara. It appears that it is in order to impart authority to these new that the narrative is interrupted in the 7th chapter to insert a dialogue between the Buddha and Ananda which calls for faith and belief on the part of the devotees.

Though the character of the text does not permit to conclude that it is a unified work of one author, it does not, however, rule out the possibility that the Lalita, in the form it is known to us, could be the work of one redactor.

Lalitavistara consists of both prose and verse, the latter often being the summarised version of the former. As Winternitz observes some of these metrical passages are beautiful old ballads, perhaps derived from the same ancient sources as some of the suttas in the Suttanipata. Many prose passages, too, belong to the old tradition. Therefore, it is incorrect to conclude that the verse portions constitute the older stratum, while prose portions were added later. P. L. Vaidya is of opinion that the archaic nature of language of the verses is due to the limitations and exigencies imposed by the metre.

The Lalitavistara in its final form, as extent at present, is undoubtedly the result of a conscious effort to present the biography of the Buddha in a poetic form and style. It has many features that bring it close to the category of an epic.

Though it is said that the Lalitavistara was translated into Chinese as early as the 1st century A.C. there is no conclusive proof on this point. Nanjio has two entries under Nos. 159 and 160. According to Nanjio Fo-pen-hing-chig (68 A.C.) a work not extant now, is the earliest translation. But scholars including P.C. Bagchi do not support this supposition. The other one known as Po'ut-yia-ching attributed to Dhamarakṣa (308 A.C.) consists of only eight chapters, and scholars including Winternitz doubt whether this is really a translation of the Sanskrit text.

The Tibetan translation belonging to the 9th century is said to be an accurate translation. Two Mongolian versions are found. One is said to be a translation, of the Tibetan originally compiled by Co's-kyi Od-zen. As the Tibetan original of this is not found it is not possible to check the accuracy of the Mongolian version. This Mongolian version is attributed to Ses-rat-Sein ge. From the Mongolian version it could be adduced that Co's-kyi-Od-zen's Tibetan rendering itself is a condensed form of the Sanskrit text. The other is the Mongolian rendering of the Tibetan text occurring in the Kangyur. This was done by Samdan Sengge of the 17th century. Perhaps the latter used the earlier Mongolian version and this explains the verbatim repetition of Ses-rab Sen-ge's work in that of Sanden Sengge.

Winternitz suggests also that a version slightly different from the Lalitavistara was known to the artists who, from about 850-900 A.C. decorated the famous temple of Barabudur in Java.

The exact date of compilation of the Lalitavistara is not known. Basing their agreements on sculptural representations found in Gandhāra depicting scenes described in the Lalita, scholars assign the work to the 1st or 2nd century A.C.

Though Lalitavistara is an important source book for the study of ancient Buddhism it is not advisable to consider the whole work as providing ancient traditions. Its importance in this respect is very aptly summed up by Winternitz, thus: "It is, however, most informative as regards the development of the Buddha legend from its earliest beginnings, when only the chief events in the life of the great founder of the religion

3. The Lalita gives the following as the udāna Chiinnavartmnapaśāntaramāh sūkṣma āśravā na punah s ravaṇa
Chinnavartmnapaśāntaramāh sūkṣma āśravā na punah s ravaṇa

4. The Mongolian version with an English translation was edited by Nicholas Poppe and published under the title. The Twelve Deeds of the Buddha, (Asiatische Forschungen, Band 23, otto Harrassowitz.)
are adorned with miracles, down to that boundless deification of the Master, in which, from the beginning to the end of his career, he appears mainly as a god above all gods. On this account the work is of immense value from the point of view of the history of religion. From the point of view of history of literature, too, the Lalitavistara is one of the most important works of Buddhist scripture. Though it is not yet an actual Buddha epic, it contains all the germs of such an epic; and it is from the ballads and episodes as preserved in the earliest portions of the Lalitavistara, though probably not from the Lalitavistara itself, that As'vaghoṣa, the greatest poet of the Buddhists, created his magnificent epic Buddha-Carita, life of the Buddha”.

The Sanskrit text Lalitavistara was first edited by Rajendralala Mitra in Bl. in 1877. A better edition was done by S. Lefmann in 1902 and 1908. Rajendralala Mitra translated into English the first fifteen chapters (Bl 1881-1886). Chapters 1-4 were translated into German by Lefman in 1875. A complete French Translation by Ph. Ed. Faunaux is found in the AMG, tomes 6 and 19 (Paris 1884, 1892).

S.K. Nanayakkara

LANGUAGE. The Buddha, as Siddhartha Gautama, was reared in the Brahmanical system of learning, which included the Vedas and its six ancillary sciences, two of which pertain to linguistics. These are etymology (nirukti) and grammar (vyākaraṇa). The former culminated in the treatise called Nirukta compiled by Yāska, two centuries before the Buddha. The latter received its final form in the work of Pāṇini called Aṣṭādhyāya about two centuries after the Buddha. The so-called Sanskrit language, meaning ‘the well-done’ was thus the indefatigable work of Indian linguists during the course of nearly four centuries.

The Buddha was precisely in the midst of its development. Interestingly, what the linguists, immerced in the study of the Sanskrit language have not observed or realized is the fact that this linguistic analysis is not unrelated to the philosophical enterprise of their Brahmanical tradition. While etymology deals with analysis, grammar deals with synthesis. In the arena of philosophical thinking, the Brahmanical conceptions of ātma and brahma presented a curious combination of the two linguistic methods, analysis and synthesis. Considering the Brahmanical interest in reaching the ultimate reality by a process of analysis, one observes the development in the conception of the ultimately real self (ātma), the inexhaustible (anakāra). While being the ultimately irreducible reality, it is also the all-pervading self, the unity of all reality. While ātma represents the ultimate reality in its analytic as well as synthetic aspects, brahma also is intended to achieve both in the sphere of the social life. In its analytic aspect it accounts for the ultimately distinct castes, Brāhmaṇa, Kṣatriya, Vaiśya and Śūdra. In its synthetic aspect it stands for the creative and unifying function of brahma as the social reality. Thus metaphysics and linguistics remained interrelated disciplines.

With the emphasis on etymology and grammar the purification and sophistication of the language began even before the Buddha. With the culmination of these disciplines the flexible and constantly evolving language came to be sublated to a closed system. It is the well-fabricated (saṃskṛta) language, which could not be and was not allowed to be used by the uneducated folk for fear of any corruption creeping into it. However, the ordinary languages or dialects continued to be used by the people.

Having examined every form of human knowledge, the Buddha, whose concern was more the good and the peace for the human person and the human society, discovered no certainty relating to such human knowledge. He also discovered a close relationship between knowledge and language, so much so that he was unwilling to speak of a knowledge or experience transcending language.

However, the Buddha had difficulty of expressing his non-substantialist understanding of the nature of the world of experience in a language that was intended for expressing substantialist metaphysics. So he sat under the bodhi-tree, as tradition has it, enjoying the bliss of emancipation (vimutisukha), but actually reflecting on the manner in which he could express his experience of freedom and how that freedom could be part of the human society at large.
This is when he was compelled to bring back many of the grammatical forms of the earlier non-sophisticated languages like the Vedic, and create new terms that would radically change the very conceptual apparatus. ‘Dependentlv arisen’ (paticcasamuppanna), ‘dependent arising’ (paticcasamuppāda), ‘conditionality’ or ‘this relatedness’ (idappaccayatā), the ‘present’ (paccuppanna) were terms not found in the Indian languages before the Buddha.

Utilizing these terms he brought down the understanding of the nature of the world from the highest pedestal of the logicians and the transcendentalists to the ordinary people who could ‘come and take a look’ (ehipassika). This understanding consists of the manner in which phenomena came to be on the basis of conditions on which they depend. Thus, the understanding is based upon reflection, that is, moving from the experienced effect to the conditions on which that effect depends. Hence the use of the past participle patīcchasamuppanna ‘dependently arisen. This is called the knowledge of phenomena (dhammapa)- This is the most significant in the Buddha’s philosophical language.

On the basis of the repeated experience of such occurrences, the Buddha was willing to stretch them into the future anticipating their recurrence, yet without absolute certainty. This is called inductive knowledge (anwaye nāma) Here, instead of the past participle used to refer to the experienced events the Buddha used the nominal form patīcchasamuppāda ‘dependently arising’, so that it could be descriptive of the past, present as well as the future. Since its formulation, it has remained the central conception in Buddhism.

The relating of the present effect to the past condition could not be achieved by the use of the existing linguistic terms expressive of the past, present and future. ‘In that context’, existence was confined to what is present (vartamāna), both past (atīta) and future (anāgata) being considered non-existent. However, for the Buddha, part of the immediate past could not be separated from the present. Hence his use of the past participle. Therefore, completely abandoning the present participle, vartamāna, to refer to the present, he utilized another past participle paccuppanna ‘arisen depending upon’ to signify the present.

In addition to many other terms he coined, the term idappaccayatā ‘this condition-ness’ used as a synonym for dependent arising expresses the idea of conditionality and avoids any sense of determinism.

This cluster of terms enabled the Buddha to explain causal relations among events, not only without falling into theories of eternalism and nihilism, but also preserve peace among human beings when communicating with each other regarding the nature of reality. Thus, if a certain set of conditions is said to enable a certain effect to come to be, does not actually do so, then it is possible to further examine any other conditions that prevented the occurrence of the particular effect. Such revisionism is the hallmark of a non-rigid and flexible philosophy that prevents dogmatism of any sort.

While constructing new terms to express his insights, he used passive forms, instead of the active as a pedagogical devise to eliminate the belief in a permanent and eternal self (ātman). Thus, the doctrine of no-self or non-substantiality was embodied in the language itself. The early Buddhists were quite aware of the significance of this pedagogical devise that when they wanted to introduce each of the discourses, they inserted the statement evam me sutam, ‘thus has been heard by me’. Unfortunately, those who were unable to realize the sophistication with which the Buddha and his early disciples were using language, translate this phrase with heavy emphasis on the active voice as ‘thus have I heard, at first.

While the Buddha recognized the two terms ‘etymology’ (nirukta) and grammar (vākyarāna) of the pre-Buddhist linguists, he did not utilize them in the same sense. The Pali term nirukta was used with the prefix janapada (country) to refer to language in general. He reserved the term vākyarāna to express the idea of exposition. The term sāmanā (sāmānya), sometimes with the prefix lokī (world) was utilized to refer to ‘generality’ or ‘commonality’ that is grammar, but like the term nirukta it referred to language in general.

For the Buddha, these were not the only functions

5. Ibid.
6. It is derived from sam and root man ‘to think’.
of language. In addition to them, language functions as 'convention' (samanuti) on which there should be agreement among a community of speakers. A community of ten people cannot have ten different languages unless all of them have learnt all those ten languages. Herein is when the person looses its individuality because it needs to conform to the agreed upon convention in order to communicate with others. It is this notion of agreement that gave the impression that a term in a language really does not signify a meaning which is part of experience. The Buddha was not willing to stretch this idea too far, for, according to him, even the objects of experience are not directly apprehended but are put together according to one's interests and choices. The activity of getting together and thinking (samanuti) is not different from the activity of getting together and expressing (sankhâ, the term for conception), and getting together and knowing (saññâ, the term for perception). In this manner, experience as well as language and convention are interrelated.

'Current usage' (vohâra) is of great significance, for very often terms go out of use and new ones evolve. For the Buddha it is what accounts for the so-called 'language drift' Here again, sometimes the term 'world' (loka) is prefixed.

Finally, there is the most significant term for language, namely, paññatti meaning 'expression', a term found for the first time in the Buddha's discourses. It is a nominal term derived from the causative verb directly related to paññâ, and is better understood as the expression of paññâ itself, that is, making the content of paññâ known. In other words, a permanent and eternal self is not an expression (paññatti) and a veridical experience. Indeed, the absence of such a self, which is implied by the term anatta (no-self) and sunûna (empty), as well as the more positive description of experience as the dependently arisen (pâticcasamuppanna) and dependent arising (pâticcasamuppâda) are highlighted by one of the Buddha's later disciples, Nâgarjuna. It can be described as a conception with referential content. It is significant to note that sometimes the Buddha used a pair of terms such as jana-padânaruttâ and sâmarthâ to refer to language, and at times he used all the five terms referred to above when he wanted to speak of language. This means that language is not one single activity but a host of them.

What is more important is the attitude that the Buddha adopted in regard to language. In one of the important discourses on the subject, the Niruttipatha Sutta of the Samyutta Nikâya, the Buddha advises his disciples not to misuse the verbs expressive of the past (ahosi), present (atthi) and future (bhavissati). Thereby he did not mean that these periods referred to by the verbs have absolute demarcations. Experienced time (kâla) unlike the rational, is not absolute or discrete, but related to the fluctuating objects of experience (kâlika).

The second most important attitude of the Buddha toward language is prompted by his concern for the good of the humans and peace among them. This is the gist of the "Discourse on the Analysis of Non-Conflict" (Aranavibhaṅga Sutta). A discourse that has undoubtedly influenced the Vajracchedikâprajñâpâramitâ-Sûtra of a later date. Herein, the Buddha admonishes his disciples about the importance of not taking language as an absolute reality or rejecting it altogether as a meaningless entity. These two attitudes are referred to by the two terms, abhinivesa and atisâra, two linguistic expressions he used not without understanding. The second was the term in the indigenous medical vocabulary implying 'diarrhea'. In that case, the former would mean 'constipation', that is excessive entering, and not leaving. Conceptual constipation and conceptual diarrhea have often led to conflicts in the world. The more enlightened approach recommended by the Buddha to his noble disciples is to look upon languages as an important means of communication, historically and functionally evolved, wherein there is no such evaluation as superior and inferior.

LAŃKĀ See SŘI LAŃKĀ

LAŃKÂTILAKA (1) is a brick built paśimâghara (image house) situated in the ancient city of Polonnaruwa. It was built by Parakramabahu I (1153-1186 A.D.) and

7. Mūlamadhyamakakârikâ 24. 18
forms part of a group of buildings known as the Alahana-parivena. It is the largest among three such image houses. Although it was a vaulted shrine like the Thupārāma (Polonnaruva), it is not so at the present day, as the vaulted parts had come down, when the archaeologist set about restoring it in the early years of the present century. From front to back it had a full length of 124 feet. The greatest breadth was 66 ft., at the square shaped shrine. The north wall still stands to a height of 55ft. The image house, when it was originally built must have measured nearly 100 ft., from the base to the top of the crowning finial.

On the ground plan, there was a cella (garbha, where the standing image of the Buddha was installed), an entresol formed by the opening through the thick wall, a vestibule and the entresol facing the front stairs. This shrine was not meant for large crowds to assemble inside. There had been an upper storey, in the form of timbered galleries, supported on stone pillars in the inner shrine. This made it possible for a full view of the Buddha image which was about 40ft. in height.

The ground plan shows that this image house had followed a model that had become normal for image houses in the Anuradhapura period, which is basically the same as that of Hindu shrines in India. This model is the square cella (garbha-grha) from which projected a bayed vestibule. The space in front is a distinct portico to which a flight of steps at the main entrance leads. There is also a side entrance, through the north wall into the vestibule.

The walls are extraordinarily thick. Internally the cella is 42 ft. square. The vestibule is 32 ft. 6 ins. long and 18 ft. at the broadest point. On either side of the internal passage have been planted stone pillars, square in section, with capitals of a type, familiar in Anuradhapura buildings. On each side are 17 free standing pillars which must have supported an upper storey or gallery of wooden construction. Enough space was left in the centre for a clear view of the image from the front entrance. There appear to have been narrow galleries projecting from the side walls of the vestibule as well. The inner shrine was lighted by narrow mullioned windows. A feature which imparts a majestic appearance to this image house are the two polygonal piers which flank the main entrance. Originally this building must have been about 90 ft. in height. The preserved fragment is 58 ft. in height.

The vault had come down long ago. In order to have an idea as to the nature of its construction, there is a similar shrine of a miniature form, i.e., the Thupārāma (polonnaruva). Relying on it, it may be said that the vault had been constructed on the principles of the true arch. The architects had relied for the stability of the vault, more on the excellence of the mortar in which the bricks were laid, than on sound methods of construction as are in use today. Specially shaped bricks of a fine texture had been used for the vertical moulding at the entrance. The joints between the bricks are so fine as not to allow the insertion of a point of a pen-knife. The ornamental details were finished in fine lime plaster. The shrine was decorated with paintings, both inside as well as outside.

In front of the shrine is a pillared mandapa on a stylobate 36 ft. 6 ins. square, from which bays (measuring each) 18 ft. 6 ins. by 9 ft. were thrown out on all four sides. There are 40 stone pillars on it, chastely carved, on their square portions. The octagonal parts in the middle are left bare.

The two wingstones which flank the flight of steps leading to the shrine, were carved for five risers to be fitted to them, whereas, there are only three in the flight which they now adorn. The architects of Polonnaruva period did not have all the material that they utilised in their structures specially fashioned for their purposes. In their time, there were many edifices of earlier ages that had gone to ruin and they were free to use the materials from such dilapidated buildings in their own activities. The fine sculpture of a person holding a rod, which is seen on the outer face of the balustrade on the left of the flight of steps and the figures of nāgas which adorn the inner face, are therefore not representative of the Polonnaruva period. They date from about the 9th century.

A good deal of plastic art was produced during this period in the medium of stucco. The best examples of this type are the figures inside the miniature shrines in relief decorating the walls of this image house. They represent gods who have come in their vimānas to pay homage to the Buddha. Many of these stucco figures show great skill in modelling the human body in various attitudes and postures and are eminently suited to the purpose which they were meant to subserve. The friezes of dwarfs which are found at the bases and cornices upholding the edifice, characteristically show forth the nature of these beings as presiding over laughter. In depicting the grimaces on their faces and their playful attitudes, the artists have
given free rein to their fancy to the utmost.

This image house is centrally situated within the Alâhana-parivena group. It has been built on the artificial terrace about 2 ft. above ground level. On aesthetic grounds the exterior aspect of this shrine merits consideration. The form of the shrine, when seen by the approaching pilgrim was capable of heightening his religious feelings. The two polygonal shafts flanking the main entrance, with their soaring height, are calculated to direct the minds of the pilgrims upwards and created in them the effects of serenity or pleasure and excitement.

There are traces of wall paintings on the exterior as well as the interior of the image house. The fragment of a painting on the arch at the side entrance contains little more than a very decorative floral design. A part of a human face, still visible, indicates that the artists were well accomplished in drawing various physical types. On a guardstone at the entrance to this image house there is an inscription which settles its identity. It states that Vijayabahu IV (1267-1270) carried out restoration work of this building which was originally built by Parakramabahu I (1153-1186). See PL. XXXIII and XXXIV.

Nandasena Mudiyanse

LAṆKĀTILAKA (2) : Lāṅkātīlaka (of the Central Province in Sri Lanka) has been built on a hill called Panhalgala in Hamḍessa, near Gampola. The date of the building is contemporaneous with Gâdalâdeniya as attested by the rock inscriptions in Sinhala and Tamil engraved on the rock at the spot. The chief minister of the reign of Bhu Vânâkabahu IV (1341-1351), Senā-Laṅkâdhiṅkâra was the author of this beautiful shrine. "It is perched on the top of a lofty rock that rises in the midst of paddy fields. These fields are enclosed on all sides by hills. It does not require any architectural merit, to make picturesque, a white temple surmounting a luxuriant vegetation which surrounds the lower part of the rock in the midst of the tender green of the paddy fields." See PL. XXXV

According to the rock inscriptions, the date of the building is Saka year 1266 (1344 A.D.). The chief architect employed for the purpose was Sthapati-râyar. As the name suggests, he was a person of South Indian origin. As at Gâdalâdeniya the influence of his school of architecture has been considerable and the extent of this influence will be referred to in the sequence. The inscriptions describe the building as one with four storeys but at the present day, only the ground floor and part of the first floor are visible. As the upper storeys collapsed in course of time, it is very likely that reconstruction work was carried out under the patronage of kings who flourished in later times. There is definite evidence to show that later additions had been made but it is not possible to say precisely who was responsible for such renovations or at what time they were executed. The mention in the Cûlavamsa of Parâkramâbâhu VI (1412-1467) carrying out stucco work at Gâdalâdeniya and Lâṅkâtîlaka leads one to the surmise that he was responsible for such reconstruction work as were necessary at the time, but there is no definite evidence to support the assumption.

In the eighteenth year of the reign of Vikramâbâhu III (1356/7-1373), the incumbent of the Lâṅkâtîlaka vihâra, who was of the Mehenâvara family, wrote the Vinuṅkita Sangrahamaya. Therein, its author Lanka Senevirat Piriven Mahâ Stâvira of the Mehenavara-vaṃsa calls himself the fifth munuburu of Lanka Senevirat Mahâ Mantri of the Mehenavara-vaṃsa, the founder of Lâṅkâtîlaka.

There is a valuable collection of metal-images of the Buddha preserved in the temple. The largest of these, a gilt image measuring 2' x 1 1/3" is believed to have been donated to the shrine by Senâ-Lâṅkâdhiṅkâra, its founder. A statuette of a king, believed to be that of Buvane kabahu IV, one foot high, has also been safely preserved in the temple.

The hillock on which the image house has been
built has an uneven surface. Granite and brick have been used in the building unlike in the contemporary monument at Gadalādeniya, which is essentially of stone. The stone rock on which the Laṅkātīlaka is built might have presented a serious obstacle to the architect who found the means of overcoming the difficulty by laying the foundation and levelling it with large blocks of granite. The entrance is reached by ascending a flight of steps flanked by a pair of gajasimhas. This part of the rock is the most uneven—hence the height of the various stereobate at the rear and the front varies greatly. At its highest, the stereobate rises to a height of 10 ft. 3 ins. from ground level, whereas at the rear it is only 4ft 8 ins. (subject to variations at intervals) from ground level.

On ground plan, it is cruciform, and is comparable to the Ananda Temple at Pagan in Mianmar. The sanctuary is square, each side 35 ft. on the exterior. It is enclosed by an outer casing wall which leaves room for circumambulatory purposes along the three sides. On the exterior of each of the three sides at the cella is a niche in which is placed an image of one of the popular deities of the period. On the front are two niches on each side of the entrance. These are called dhévalēs and access to them may be had through five doorways (each 6 ft. 10 ins. x 2 ft. 10 ins.), two on either side of the main entrance, one at the back and the others on the two remaining sides. These are normally kept closed and are not opened except on certain days of the week. The outer face of the enclosing wall has now been plastered with lime. Sixteen elephant heads (5ft. 10 ins. x 2 ft. 6 ins.) on each side of the main entrance, one at the back and the others on the two remaining sides. These are normally kept closed and are not opened except on certain days of the week. The outer face of the enclosing wall has now been plastered with lime. Sixteen elephant heads (5ft. 10 ins. x 2 ft. 6 ins.) on each side of the main entrance, one at the back and the others on the two remaining sides. These are normally kept closed and are not opened except on certain days of the week.

The cruciform plan of the building was the result of constructing a projection from each of the four sides of the garbha-grha. The projection at the face of the shrine is wider in dimensions since it forms the main entrance. At the rear, the porch is obscured on account of the construction of a hall (in recent times) for the accommodation of votaries coming in for prayers at the dhévalē. The two remaining sides and their porches are alike in dimensions as well as in methods of construction. A study of the plans will reveal that there could not be any great difference in dimensions as every side of the building is symmetrical with the opposite side and unless they agree in dimensions the purpose of the plan would have been lost. If there be any differences, they are quite insignificant and occur only at the rear. The left side of the rear porch has been diminished in proportion. The flight of steps leading on to the shrine has a width of 8 ft. 3 ins., and the length of space covered by the gajasimhas measure 6 ft. The height of the building from ground level up to the finial of the sikhara is 60 ft. According to an eighteenth century copper plate (inscription) the height of the building which included four storeys, all of them functional, was 32 cubits (i.e. 80 ft.). Taking into consideration what is now left of the building, this information appears to be reliable. The height of the building from the moonstone up to the cornice, pointing butt at the rear is 96 ft., and the breadth across the shrine measures 78 ft. The circumambulatory path between the inner and outer shells is 4 ft. wide.

Although the garbha measures 35 ft. on each side externally, the internal measurements are much less than may be expected. The garbha is preceded by an antechamber 16 ft x 10 ft with a communicating passage between the two. The rear of the garbha is used for purposes of ascending the upper floor which is now not used. The antechamber opens with an arched doorway 14 ft. 3 ins. wide and 13 ft. 2 1/2 ins. high. The connecting passage contains stucco figures of guardian deities on its walls, a pair on each side.

The main entrance to the shrine is an arched passage, allowing for a makara torana on the exterior wall. It is crowned by the head of a gandharva, 30 ft. above ground level. The terminations at both ends are by means of makara heads with gaping mouths and conventional peacock tails. Under the head of the gandharva is a figure of gaj-laksmi, with two elephants on either side pouring water over her. The conventional peacock tails support sculptures of two deities on either side. Below each makara mukha is a lion supporting the architrave or lintel of the torana. Part of the ground floor and the first storey are now covered by wooden roofs but through the first wooden roof one may discern another makara torana or an archway on the wall of the first storey, partly covered.

The inscription on the rock, as well as the copper plate, mention four storeys but that present only the ground floor and the first storey remain. The ground storey rises to a height of 12 ft. from the ground and then terminates with a battlemented parapet on which rests the first gable wooden pier which abuts against the wall. The wall is then continued upwards and ends with a second battlemented parapet supporting a wooden pier. The continuation of the wall further up-
wards terminates with the third battlemented parapet supporting the four sided sloping roof of the usual Kandyan type having two finials on the crown. The first and second piers are really meant for throwing off rain and are lean-to-roofs against walls on the four sides. The roofing is of recent date and has no connection with the work of the 14th century. The upper half of the monument presents features more in common with those buildings of the late Kandyan times than with any other early period. As it appears, only the ground storey could be assigned to a period earlier than the 15th century. Since it is said in the Cūlavāṃsa that Pārākramabāhu VI was responsible for repairs to the vihāra in the 15th century, it is not possible to date the present edifice with any degree of certainty. It is very likely that the monument fell into ruin and the upper storeys disappeared. Both the inscription and the copper-plate refer to the ceilings of each floor, and the paintings with which they were adorned.

The outer casing wall, which makes room for the circumambulatory path along the dévālēs, shows an interesting curve in its inner face, a semi-vault above the cornice. It has been suggested that the outer shell is no part of the orginal design. One notices that the outer face of the inner wall rises straight and does not curve and the inner face of the outer wall shows the beginnings of a curve about the height of the capitals of the pilasters on the wall of the opposite side. The curve ends abruptly at a height of 18 ft. above ground level against the brackets that crown the pilasters of the inner wall. There are mouldings on the outer face of the inner wall which is proof that the outer casing was no part of the original design. In the original design there may have been only one ante-chamber, the inner one. The present porch is one with the outer wall-hence the first ante-chamber has to be contemporaneous with the outer wall.

As mentioned earlier, the height of the stereobate varies from place to place since the foundation had to be laid on an uneven rock. Above the stereobate the mouldings of the walls conform to one single pattern (cyma recta, fillets, vertical block, torus, vertical block, fascia, vertical block, cyma reversa, vertical block, fillet, cyma recta, vertical block, fascia, a course of vertical blocks one above the other). From the distance, one may notice only a course of three mouldings one above the other and projecting out, with the fascia above mentioned in between. The cruciform plan of the building has made it possible for 16 sides in all. The remarkable absence of a frieze of gaṇas or vyālas or a troupe of dancers between the plinth mouldings or under the eaves is noteworthy, whereas at Gaḷalādeniya, these minor elaborations have been given a prominence, in accordance with the styles of architecture then in vogue.

The capitals of the pilasters have no similarities with those available in other buildings of this period. They form a class by themselves, and if any similarity is to be sought for in South India, they may be compared with those of the Colas. In the capitals of the Pandyas, one notices a small pendant or drooping flower, a motif, which in the Viṣṇuanaṇgara period, went through further developments, as shown by the capitals at Gaḷalādeniya. The capitals of the pilasters at Laṅkātilaka show an early stage of development of the kalasa, which has not yet gone through the rounded process. In order to form the capital, three courses of corbelings have been resorted to and these are then extended horizontally across the wall, so that in a series of mouldings they culminated in a cornice of double flexure, thus marking the beginning of the first storey. It is at a height of 12 ft. from ground level and ornamental devices such as dormer windows, called kudai in Dravidian architecture, are placed at intervals on this horizontal band. The pilasters are continued upwards but horizontal bands project and intervene at intervals. These consist of fillets and vertical blocks placed one above the other. The uppermost continuation of the pilaster terminates with a dormer window, larger than the ones below and crowned by the head of a gāndharva and a floral design underneath. These dormers bear a striking resemblance to the kīrtimukhas on the cupola of the monument at Gaḷalādeniya. A series of vertical blocks and fillets separating them are then continued until the wooden piers and the battlemented parapet on which they rest are reached. As the building rises up, the bulk becomes thinner, in order that, the topmost crown should terminate with a finial. Unfortunately these members of the architectural composition have fallen away and only parts of the storeys now remain.

The plan of the building and the site on which it has been built has made one writer to compare it to a Norwegian church. If there be any resemblance at all, it has to be accounted for as a mere accident, since it is historically impossible for us to trace any intercourse,
cultural or otherwise, between Sri Lanka and the European countries in this period of the island's history. On the other hand, it may be reasonable for us to suppose that the origin of the plan of the building has to be sought for within south East Asia than in any distant European country. Cultural relations between Mianmar and Sri Lanka may be traced from the 11th century. The temple at Pagan in Mianmar (the one called Nāgayon), built towards the end of the 11th century is cruciform in plan, has a central nave and two side aisles. There are projecting porticoes facing the four cardinal points. The walls contain niches, having sculptures relating to the life of the Buddha. A semi pointed barrel vault joins the outer wall to the inner wall and a circumambulatory path is laid between the walls. A battlemented parapet crowns the cornice moldings of the walls. Such in outline is the description of the temple at Pagan.

It may now be of interest to compare the two buildings with the aid of material available. In ground plan, in vaulting, roofing and wall treatment, the two monuments present striking resemblances. The date of the Lānkātilaka is the latter half of the 14th century where as the temple at Pagan is three centuries older. In this period of the history of Sri Lanka, there were cultural links between the two countries. Therefore it is very likely that the Burmese example has inspired the edifice at Lānkātilaka. Originally the shrine consisted of the cela (garbha-grha) and the ante-chamber only. The modification of the original design may have taken place shortly afterwards since we find the devālēs mentioned in the rock inscription as well as in the 18th century copper plate. The modification of the original plan was to combine in one shrine the worship of the Buddha and the cults of the gods of popular Sinhala religion.

There are a few other minor buildings which may be of the same date as the major edifice. Facing the shrine is a hall for drummers - a part of which is now used as a shrine room. The large gilt metal image of the Buddha donated by Senā Lāṅkādhikāra and a few other minor images have been deposited in this shrine room. The building is of recent date but it is very likely that it stands on the foundation on which was erected the maṇḍapa by the wife and children of Senā Lāṅkādhikāra, for depositing a metal image corresponding to his life size. At the back of the edifice is a mura-ge (guard house), dilapidated and unused. A wooden tiled roof now shelters the building and it may possibly date from the foundation of the shrine. It is probably this building which is referred to in the copper plate as "the maga vīsāla on the west eight cubits side". Nearly a hundred yards away from the guard house is another building called the Sinhāsana Maṇḍapaya (12 ft. x 10 ft.) which is renovated but believed to be as old as the shrine itself. It is used only during the perahera season.

At the rear of the shrine is a building of recent date forming an entrance to the devale. It is more a porch, oblong in plan and covered by a wooden roof. The rear wall of the major edifice consisting of a doorway leading to the devale, is joined to this oblong porch which may be termed the ardhamaṇḍapa of the devale. It faces the dilapidated mura-ge on the west and the road leading from the shrine to the villages in the neighbourhood.

To summarise, it may be said that this edifice has been built according to the style that was in vogue during the Polonnaruwa period, modified by Burmese influences. Apart from the base and the doorframes, it is a structure mainly of brick construction. The style of this monument is a continuation and a development of the Sinhala architecture of the Polonnaruwa period, influenced to a great extent by the Burmese example named Nagayon. The modification of the original design to include devales within the shrine was due to an attempt to combine the worship of the Buddha with that of the gods of the popular Sinhals religion. Therefore the Lankatilaka, while being a continuation of the architecture of the Polonnaruwa period, is a modification as well on account of certain Dravidian and Indo-Chinese influences.

In the Lankatilaka rock inscription and the copper plate, there is mention made of "an image of solid bronze installed in the pavilion measuring 28 cubits which was caused to be constructed by Senā Lāṅkādhikāra through his sons and daughters of the household". It is most likely that this reference is to the metal image of the Buddha, now deposited in the hall opposite the entrance to the shrine. In it, the right shoulder is bare, the hair snail like, the siraspatt (ketumālā) comparable to a lyre like instrument, the robe shown with schematic lines indicating folds and a fold of the robe is thrown over the left shoulder to hang down in front. It is depicted in the vajrāsana at-
The principal sedent Buddha image within the shrine room is referred to in the inscription. It says "the lowest storey caused to be made by Sena Lankadhikara and consisting of the images of these Buddhas and gods viz. the principal image in which was deposited a relic image containing two hundred and sixty five relics of the Buddha's body, seated on the diamond throne with the back turned towards the great and illustrious Bo-tree". The copper plate adds further "the sacred Bo-tree adorned with golden leaves...". There is very little evidence of a Bo-tree being depicted behind the image as mentioned in the inscription and the copper plate. A floral and vegetative design below the makara torana perhaps conveys the idea of a Bo-tree. A similar design but more elaborate is seen at Gadaladeniya behind the main image. A comparison of the two images at Gadaladeniya and Lankatilaka might lead one to assume that the better modelled is at Lankatilaka. It is of lesser proportions, more life like and far more convincing as the Master in the attitude of meditation. The whole demeanour is much more pleasing, the standing images numbering two are in the vitarka mudrā, right hand raised, the forefinger bent to touch the thumb to denote explanation of subtle point doctrine. The robes cling to the body and the folds are clearly shown. These two images are not specifically mentioned either in the inscription or in the copper plate. It is not possible to give any satisfactory explanation for the omission although one might, as a guess, point to the restoration work carried out in the reign of Parakramabahu VI.

Images of deities have been installed within the devales at Lankatilaka. These are, Upulvan and his consort, Sumana and his consort, Vibhiṣana and his consort, Gaṇapati and Skanda. The entrance is by a passage by the side of the shrine room of the Buddha. Large niches have been made on the outer walls of the shrine room to place them but in later times a covering wall was constructed with a view to preserving the images from decay. Hence the interior passage through the walls is dark and the sloping wall connecting both at the top increases the darkness.

The images of the deities are mentioned in the Lankatilaka inscription and the copper plate. "(The images of) the god king Kihireli Upulvan, the tutelary deity of Lanka, the god kings Sumana, Vibhiṣana, Gaṇapati, Skandakumāra and also their wives". The copper plate adds further that these were made in the five devales. There are five entrances to the devales - two on either side of the main entrance, two on the north and south and one on the west. The latter is regarded as the main entrance to the devales. As one enters through the doorway to the right of the building, one comes across in the first niche in the wall the image of Gaṇapati (Gaṇesā). The god is with his elephant head, his legs are short the proboscis is of miniature proportions and curved to the left. The right palm bestows protection (abhaya) while the left is in varada mudrā. The inscriptions mentions that the images of the consorts of the gods were caused to be made, but in the devales as they are constituted today, both Gaṇapati and Skanda are without their wives.

Next to Gaṇapati is the niche in which is placed the images of Upulvan and his consort. The inscription and the copper plate refer to him as the tutelary god of Lanka. He stands bestowing protection (abhaya) together with his consort on his right. The old paint has worn away and it has recently been painted dark blue and called that of Viṣṇu as a result of the confusion caused by the identification of Upulvan with Viṣṇu in later times. The head wears a crown and ornaments are shown from head to foot. Except for waist bands and necklaces, the body above the waist is bare. The image of the the consort is of slightly smaller proportions. She is white in colour, wears a makuta on the head and has the upper part of her body above the waist bare except for a few necklaces worn round the neck. The devale next to that of Upulvan is Vibhiṣana's whose image together with Viṣṇu in later times. The head wears a crown and ornaments are shown from head to foot. Except for waist bands and necklaces, the body above the waist is bare. The image of the consort is of slightly smaller proportions. She is white in colour, wears a makuta on the head and has the upper part of her body above the waist bare except for a few necklaces worn round the neck.

The devale next to that of Upulvan is Vibhiṣana's whose image together with that of his consort has been placed there in a niche similar to the others. In literary works, his colour has been compared to the deep blue of the sky. The image at Lankatilaka seems to agree in all respects with that of Upulvan except for the head dress and the mudrā. The left hand bestows abhaya (protection) while the right hand is in the attitude of benediction (varada). The head dress is a makuta but
his consort wears a crown. Her slim waist, prominent breasts, large hips and her self inclining towards her consort portray her as an exceedingly charming female.

The images of the god Saman and his consort are placed in the niche next to that of Vibhīṣaṇa. These images are fairly well preserved and except for repairs carried out with regard to the right hand of the god which had fallen away, the two images retain much of, their original form. Saman is regarded as white in colour and in this image too this colour has been retained. His right and left hands are in the attitude of abhaya and varada mudras respectively. His consort is shown on his right and she has been painted blue in colour. She wears bangles on her arms, her waist is slim and her breasts are quite prominent and upright.

The last but not the least is the image of Skanda, the god of war. He stands alone without a consort although the inscriptions refer to images of consorts of all the deities. This image as well as the ones mentioned earlier have been restored in later times, though it is not possible to say precisely when.

On the side walls of the corridor leading to the shrine room of the Buddha are two images of dvārapālakas or guardians holding by their hands a mace across their shoulders. The manner of their dress is almost similar to the ones noticed in the devāles, an upper garment and a lower garment together with belts and jewellery.

There is a bronze statuette of a king (one foot high), believed in tradition to be that of Buvanikabahu IV, preserved in the Lankatilaka-vihāra. It is most remarkable as an example of plastic work in metal belonging to this period. The head wears a crown and necklaces and ear ornaments are shown. The costume with its elaborate flounces is no doubt a faithful representation of the fashion then in vogue, since it is unlike any other known example of its kind. The hands are held together in oriental fashion of salutation or worship. The facial expression is that of deep devotion.

There are two rock inscriptions at Lankatilaka-vihāra, one in Sinhala and the other in Tamil but both with identical contents. It has been mentioned that the monument was four-storied and that several parties were responsible for the construction of each storey. Both chapters of Buddhist monks, the mudaliyars and the army and Sena Lankadhikāra were responsible for the erection of the fourth, third, second and lowest storeys (ground floor) respectively. Sculptor Rāyar is cited as the head of the master masons. This name suggests that South Indian architects and sculptors were employed for the building purpose.

The gods and goddesses mentioned are Maitri, Lokesvara Nātha, Suyāma, Santuṣita, S'akra, Brahmā, Viṣṇu, Mahēśvara and their consorts and the gods Kihireli Upulvan, Sumana, Vibhīṣaṇa, Gaṇapati, Skanda and their consorts. It is expressly stated that Kihireli Upulvan was the guardian deity of Lanka. The master masons were paid with paddy, gold, siver and clothes to the value of 36,000,000 masakas. The wife and children of Sena Lankadhikāra have to their credit a maṇḍapa of twenty eight cubits for the installation of a solid metal image. For the accommodation of the monks of the two chapters (forest dwelling and village dwelling) two monasteries were caused to be erected. Orchards and flower gardens were also caused to be made.

For the maintenance of the temple, fields and lands were donated. Yālas and amunas are mentioned as extent of land. Gasa-kola (plantations), val-pita (jungle) appertaining to the willage were also donated. Personal donations from Senā Lankadhikāra included gold, silver, bell-metal and copper vessels and furniture, two hundred male and female servants from his palaces and four hundred cattle including buffaloes. For the upkeep of the monastery, the inhabitants of Sri Lanka were asked to pay one fanam annually from each household. Quarter per cent of goods given to or received from merchants coming from the eighteen countries, the nine ports and the carriage departments (madīga) in the inner and outer city, has also been mentioned as income to the vihāra.

The titles mentioned are raja, amātya, āpā, mahapā, sītu, senevirat and mudaliyars. The Sinhala and Tamil army has also been addressed to safeguard the interests of the vihāra. The individuals figuring in the record are Satruvan Patirāja, Jayasimhā Patirāja, (Lord) Divānā and Vase Lānhā (vā) ri Adhikāra. From the names of the dignitaries, mentioned, we find that only four individuals have taken part in this work, (with the exception of Sena Lankadhikāra).

The copper plate at Lankatilaka-vihāra differs in details from the rock inscription. It is incised on four plates, the last being inscribed on one side only. It contains in addition, the sannnasas granted by kings who flourished in later times i.e. Kirtti Sri Rajasimha and
Rājādhirājjasimha. The rock edict is transcribed with variations and additions occurring at times up to the first line of the seventh side. The remaining sannasas are then added up to complete the seventh side.

It should be mentioned that the plates are in letters of the 18th century. It may be that these were copies of the original sannasas granted to the vihāra. In view of this circumstance, the contents of the document should be examined with a certain amount of caution. There are quite a number of architectural details which do not occur in the rock inscription. The base (adhīsthāna), levelled to an area 60x70 cubits in length and breadth, was of granite and to the height of a man. Many hundreds and thousands of bricks were used in the construction of the rest of the shrine. Facing the eastern direction was a porch (bappuva). On the four sides there were moonlight terraces (candrikā-sthala). The height of the building from ground level to the finial of the sikkara (Sinh. kor-kāralla) was thirty two cubits. On the top, at the four corners, there were four (miniature) stūpas, surmounted by golden pinacles. The dāgoba (vimana) on the summit was in the centre and was likewise crowned by a golden pinnacle. It was a chamber constituting a library, wherein was transcribed and deposited the Tripiṭaka. It had doorframes and lintels.

With the aid of these details occurring in the copper plate, it may be possible for an architect to have a conjectural restoration of the shrine as it existed in the 14th century, taking into consideration also, the material available in the rock inscription.

The Lāṅkātīlaka rock inscription of Vikramabahu III (1536/7-1373) is dated the third day of the waxing moon of Unduvap. The purport of the document was to register the grant of the village Pattiyegama in Godaraṭa, including the house sites of the village, forests, serfs and animals to the Lāṅkātīlaka-vihāra for its maintenance. An ādipāda of the reign makes also a donation of the village of Rabbegamuva to the vihāra for its maintenance and mentions the various curses to which disputants of the donation would be subject.

Nandasena Mudiyanse

Lāṅkāvataṭāra Sūtra, 'Discourse about Entering Lanka" is one of the most important sūtras of Mahāyāna Buddhism. It is included among the traditional 'great discourses' (vaipulya sūtra) by Mahāyānists. The sūtra has also been adopted as one of the basic texts of Soto Zen Buddhist tradition in Japan.

The date of the compilation of the sūtra has not been fixed with certainty for want of evidence. The internal evidence suggests that the sūtra represents the idealist development in the Indian Buddhist tradition. However, it is generally believed that the sūtra was compiled during 350-400 A.C. (See Hajime Nakamura Indian Buddhism, Osaka, KUFS Publication, 1980, p. 231). Many who have studied the sūtra are of the opinion that the introductory chapter and the last two chapters were added to the book at a later period. Suzuki who may be regarded as the most authoritative writer on the sūtra in the English language (Studies in the Lāṅkāvataṭāra Sūtra (hereafter Suzuki I), Routeledge & Kegan paul Ltd, London. (1930) 1952 and The Lāṅkāvataṭāra Sutra (hereafter Suzuki II), George Routeledge and Sons, London. 1931) points out that there are records of four Chinese translations of the sūtra, the earliest being about A.C. 420 and the last being about A.C. 704. He further points out that the earliest translation by Gunabhadra does not contain the first and the last two chapters. He surmises that this shorter version is the original Lāṅkāvataṭāra which is believed to have been brought to China from India by Bodhidharma, the legendary founder of Mahāyāna in China. The tradition believes that Bodhidharma transmitted the text to the second patriarch Hui-K' e. According to Suzuki, the sūtra contains all the major tenets of Zen Buddhism. (See Suzuki I. pp 89-236).

Stucture of the sūtra: The sūtra has 10 chapters. They are:

1. Rāvaṇādhyeṣaṇaparivarta (Chapter on Ravana's Request)
2. Śatrīṃśaṭasahasrasarvadharmasamuccaya-parivarta (Chapter on the Collection of all the Dhammas (taken from) Lāṅkāvataṭāra of 36,000 Verses)
3. Anityatāparivarta (Chapter on Impermanence)
4. Abhisamayaparivarta (Chapter on Intuitive Understanding)
5. Tathāgatānityānityaprāsaṅgaparivarta (Chapter on the Deduction of the Permanency and Impermanency)
6. Kṣanikaparivarta (Chapter on Momentariness)
7. Nairmanikaparivarta (Chapter on Transformation)
8. Māya-abhāṣaṇaparivarta (Chapter on Meat-eating)
9. Dhāraṇiparivarta (Chapter on Dhāraṇīs)
10. Sagāthakaṇṭa (Chapter with Verses)

Contents of each chapter:

Chapter 1: The Enlightened one was staying in a castle situated on the peak of Mount Malaya in Lanka. He was surrounded by bhikṣus and bodhisatvas who understood the significance of the objective world as a manifestation of their own mind; they knew how to maintain (various) forms, teachings and disciplinary measures, according to the various mentalities and behaviours of beings; they were thoroughly versed in the five dharmaś, the (three) svabhāvaś, the (eight) vijnānas and the twofold Non-Ātman. The Buddha, following a tradition of the ancient Buddhhas, expresses the intention of explaining the dharmma to the king of Rākoṣasas, Rāvaṇā. Having known the intention of the Buddha Rāvaṇā arrives before the Buddha. The Buddha through his divine power makes Rāvaṇā see that everything in the universe is a creation of one's own mind. Subsequently, aided by Mahāsattva Bodhisatva, upon the approval of the Buddha, Rāvaṇā asks a question from the Buddha on duality. The Buddha says that duality arises from discrimination (e.g. dharma and adharma etc.) which is 'cherished by the philosophers, S'ravakas, Pratyekabuddhas and ignorant people'. The Buddha further says that the highest samādhi which is attained by entering into the womb of Tathāgatahood (tathāgatagarbha) is realized through oneness which is the absence of duality and discrimination.

Chapter 2: The chapter begins with the Bodhisatva Mahāsattva's statement that he will ask one hundred and eight questions from the Buddha. (In actuality, according to Suzuki's translation, there are 151 questions or even more than that in this list.) These questions cover various issues most of which are directly related and some not directly related to the teaching of the Buddha. For example a few questions at the beginning are as follows:

- How can one be cleansed of false intellection? Whence does it arise? How can one perceive errors? Whence do they arise? Whence come lands, transformation, appearance, and philosophers? Wherefore is the state of imagelessness, the gradations, and whence are the sons of the Victorious? Where is the way of emancipation? Who is in bondage? By what is he redeemed? What is the mental state of those who practise the dhyaṇas? Whence is the triple vehicle? (24) (Unless otherwise stated, these numbers refer to the section numbers in Suzuki I. These numbers also correspond to the section numbers in the Sanskrit text edited by P.L. Vaidya). However, there are some other questions the relevance of which to the teaching of the Buddha is not quite clear. For instance: of how many sorts are gāthāś? What is prose? What is metre? of how many sorts is reasoning and exegesis? How many varieties of food and drink are there? Whence does sexual desire originate? Whence are there kings, sovereigns, and provincial rulers? (26)

The above questions have no direct bearing on the teaching although such questions are not unheard of in the Buddhist literature. The manner in which the Buddha deals with these questions suggests that they have been put not in order to obtain answers but for some other purpose, namely, to show that the questions are meaningless since the language itself used to convey the meaning is empty. The Buddha rejects all questions saying that the sentences do not actually make the statements meant to be made by those sentences ('...utpādadāpana anuttāpādadānam, nityāpādam anityāpādam...').

In spite of this treatment of his questions by the Buddha, Mahāmati continues to ask. It is significant to note that the questions asked are in no way different from the rejected questions. In fact, almost all the questions subsequently asked by Mahāmati are from the previous list. This time, the Buddha does not reject the questions, but 'answers' them.

In this longest chapter of the sūtra questions are asked on the following subjects: (numbers in the following summary refer to the numerical order of the question.) (1) in how many ways does the rise, abiding, and the ceasing of the vijnānas take place? (2) the most subtle doctrine which explains the citta, manas, manovijnāna, the five dharmas, the Svabhāvas, and the Lokasanas; (3) examining into the reality of noble wisdom; (4) purification of the outflow which comes from recognising an objective world which is of mind itself; (5) the eternal unthinkable; (6) making an assertion and refuting it; (7) how all things are empty, unborn, non-dual, and have no self-nature; (8) is the tathāgata-garbha same as ego-substance of the other religionists?; (9) perfection of the discipline leading to be a yogin; (10) will-body (11) causation of all things; (12) essence of discrimination as regards words;
Chapter 3: The chapter begins with the Buddha giving a further account of will-body to Mahamati. Subsequently, the following questions which are similar in nature to those in the previous chapter are asked and answered: (21) the five immediacies; (22) the Buddha nature of the Buddhas; 923 the deeper sense of the statement "I am all the Buddhas of the past" and "I have gone through many a birth..." (24) on 'not speaking is the speaking of the Buddha'; (25) being and non-being of all things; (26) characteristic of the realization; (27) what characterises wrong discrimination; (28) Why should not Bodhisatva-Mahasatva grasp meaning from words? What are words? What is meaning from words? What are words? What is meaning; (29) deepseated attachment to the existence of all things and the way of emancipation; (30) if all things are of the nature of false imagination is there neither defelement nor purification; (31) how is transcendental knowledge unobtainable? (32) why Lokayata should not be honoured; (33) what does the term nirvana designate? (34) self-nature of Budhahood; (35) is the Tathagata a non-entity? (36) on external causation (of the Buddha and the other religiousists); (37) on the claim that all composite things are impermanent.

Chapter 4: This short chapter is on a single question asked by Mahamati on (38) the state of perfect tranquillisation.

Chapter 5: This short chapter too discusses one point, namely, (39) whether the Tathagata is permanent or not.

Chapter 6: The chapter discusses the following questions by Mahamati: (40) rising and disappearing of skandha, dhatus and ayatanas; (41) distinguishing aspects of the five dharmas, the (three) svabhavas, the (eight) vijnana and the twofold egoliveness; (42) should the statement 'the Tathagatas of the past, present and future are like the sands of the river Ganga" be taken literally? (43) momentary destruction of all things and their distinctive signs; (44) what are the six paramitas? how are they fulfilled?

Chapter 7: The following questions are asked (together) and answered (together): (45) how was it that the arahants were given assurance by the Buddha on their attainment of supreme enlightenment?; (46) how can all beings attain Tathagatagoodh without realising the truths of parinirvana?; (47) What does it mean that from the night when the Tathagata was awakened to supreme enlightenment until the night when he entered into parinirvana, between these two events the Tathagata has not uttered, has not pronounced a word?; (48) What is the meaning of this that, being always in samadhi, the Tathagatas neither deliberate nor contemplate? (49) how do the Buddhas of transformation being in the state of transformation, executed the works of the Tathagata? (50) how is the succession of momentary destruction explained, which takes place in the vijnana?; (51) what do these statements mean: that Vajrapani is constantly with (the Tathagata) as his personal guard, and that the primary limit is unknown and yet cessation is knowable, and that there are evil ones, their activities and left-over karmas?; (52) how can the Blessed one with the unexhausted karmahindrances attain omniscience?

Chapter 8: This chapter is the Buddha's response to Mahamati's question (53) on meat-eating.

Chapter 9: This short chapter comprises the Lankavatara Mahayana sutra Dharmarati or magical formula based on the sutra (a device characteristic of Mahayana tradition by which usually a lengthy sutra is given in an extremely abbreviated form for the purposes of chanting in order to secure good results).

Chapter 10: This is usually not numbered as a separate chapter, but meant to be a compilation in verse form of all the ideas expressed in the sutra so that memorization is made easy. There are 884 verses in this section which covers not only what was already given in the sutra but many new issues.

The Lankavatara sutra is one of the most important of all Mahayana works. It represents the most advanced stage of the philosophical development of the

The *Sūtra* has a dual purpose, positive and negative. The positive purpose of the *sūtra* is to present the idealist persuasion in Buddhist thought. The negative purpose is to criticise the views that are not in conformity with its own. The *sūtra* is simultaneously engaged in both these activities, and that it is so engaged can be seen very clearly throughout the work, from the beginning to its very end.

We already mentioned the fact that many scholars including Suzuki are of opinion that the first and the last chapters are later additions. There are several theories about the presence of the first chapter. One theory believes that the first chapter with the king of Lanka, Rāvana, as the main interlocutor has been added later in order to give historicity for the *sūtra* (Suzuki (I) p. 16. and Ananda Guruge 'History of the Lankāvātāra-sūtra' in *Buddhist Essays: A miscellany*. London. 1992). Another theory says that the *sūtra* has been compiled hurriedly having Lanka as the venue in order to introduce Mahāyāna Buddhism to Sri Lanka. This theory is heavily dependent on the eighth chapter on meat-eating which is a Hinayāna practice. Whether this chapter is a subsequent addition or not cannot be determined conclusively on available historical or even on internal evidence. There is a possibility that both these theories may be true. However one thing is clear: the internal evidence clearly suggest that the first chapter is quite integral in its content and outlook with the rest of the *sūtra* and it serves as the introduction to the whole *sūtra*. The introductory chapter introduces all the main ideas and trends the reader is bound to come across repeatedly throughout the *sūtra*. Therefore the first chapter, even if it is a later addition, has been constructed so as to integrate with the rest of the *sūtra* quite well.

The only 'non-philosophical' chapter of the *Sūtra* (with the exception of the ninth chapter containing a *dhāraṇī* which is not supposed to have a standard meaning) is the one on meat-eating. However, it is hard to say that these chapters are not integral to the whole *sūtra*, for the *sūtra* not only gives a philosophy but also gives a religion. The discussion on meat eating and the *dhāraṇī* are quite significant in this respect.

The major philosophical and religious views of the *Sūtra* are those of the Vījñānavāda tradition, namely, the five dharmas, three svabhāvas, the eight vījñānas and the twofold non-atman (1); the non-differentiating nature of the ālaya-viśeṣa (17); denial of duality (16); abandonment of discrimination (18), unreality of the external world (20), and the womb of tathāgatahood (tathāgata-garbha) (21). These ideas are introduced and emphasized in the first chapter itself. The above ideas are not presented in a vacuum, but in the context of the views opposed to them. In this respect, the first and foremost target is what the *sūtra* calls *sīvāvakas* or the Hinayāna schools of Buddhism. Almost always, the *sīvāvakas* are grouped together with pratyekabuddhas, the other religiousists or *ūrthakas* (which Suzuki, not very appropriately, translates as 'philosophers') and 'those who are ignorant'. In the first chapter, the Buddha warns Rāvana that he should "not fall into the attainments, conceptions, experiences, views and samādhis of the sīvāvakas..." (10). Subsequently the Buddha praises Rāvana for asking a question on some aspect of meditation which is never tasted by those who practise the meditation of the sīvāvakas..." (14) and refers to the stage of acala in meditation which goes "beyond the samādhi and understanding attained by the sīvāvakas..." (15). In this same discussion, the discrimination of phenomena into dharma and adharma is attributed to other religiousists, sīvāvakas, pratyekabuddhas and the ignorant (18). In this manner, the *sūtra* always presents its views along with the criticism of its opponents of whom the Hinayāna tradition is the foremost.

'Other religiousists' are often referred to along with the rest. However the main contention with them is their theories of causation (section:40). It is said that Rāvana acquired that kind of knowledge which is capable of disposing of the arguments of other religiousists on causation (10-11). Although Lokāyatikas are referred to in several places, it is not clear in what sense the term is used. They have been described as "skilled in varieties of incantations and in the art of eloquence" and "making clever use of words" (173); but subsequently they have been attributed with views usually considered 'metaphysical' and 'unanswered' in the Buddhist tradition (176-177). They have also been attributed with dualism (being and non-

---

3. We are in agreement with Arnold Kunst who says that the Lankāvatara is a highly polemical text: "Some Polemics in the Lākāvātārāsūtra" in *Festschrift for Walpola Rahula*
being etc.) which is usually attributed to 'other religionists' in the sutra. It must be noted that the major philosophical and religious views advocated and the references to the opponents whose views are criticized in the first chapter continue to appear till the end of the Sutra.

The main interlocutor in the Sutra (in fact, the sole interlocutor after the first chapter) Mahāmati, the Bodhisatva appears in the first chapter itself. He is the only one in the assembly who understands the significance of the mysterious smile of the Buddha. Mahāmati's inquiry into the reason behind the Buddha's smile opens the door for the exposition of the philosophy of the sutra, first as responses to Rāvaṇa's questions and subsequently to those of Mahāmati.

The themes discussed from the 2nd to the 7th chapter are of uniform nature in the sense that the responses of the Buddha to those questions represent the Viśālakīśa philosophy. As the (above) summary of the questions show, the subject-matter of the questions is diverse and varied. Nevertheless, the philosophy presented to respond to these questions is the same.

The Viśālakīśa doctrine of 'mind only' (citamatra) and the reality of ālayavijñāna is the central teaching of the sutra. This doctrine is presented against the practice of various forms of discrimination, namely, citta, mano and manovijñāna and subject and object. The following statement articulates the two ideas clearly:

...That Mind in itself has nothing to do with discrimination and causation, discourses of imagination, and terms of qualification (laksyalaksana); that body, property, and abode are objectifications of the ālayavijñāna, which in itself above (the dualism of) subject and object; that the state of imagelessness which is in compliance with the awakening of mind itself, is not affected by such changes as arising, abiding, and destruction (section: 42).

The 'mind-only' doctrine is affirmed throughout the sutra. For example, it occurs in the following sections: 39, 40, 41, 42, 43, 44, 46, 70, 73, 91, 111 (chapter II); 152, 162, 170, 173, 183, 208 (chapter III); 212 (chapter IV); 219 (chapter V); 225, 235 (chapter VI); 243 (chapter VII); 272, 282, 300, 301, 311, 320, 327, 335, 342, 351, 369, 375 (chapter X). The related ideas of (the folly of) false discrimination (129-131, 150, 163, 204, 274 and 306); non-reality of the external world (maya) (320, 334 and 374); and that all phenomena are empty of self-nature (73-74) occur throughout the sutra in support of the main doctrine.

The philosophical and religious context against which the idealist philosophy is presented is primarily the Hinayana philosophy and religion. The references to and criticism of the Hinayana doctrines and practices are many and varied. They are scattered in all chapters except in chapter IX which is a dhāraṇī (magical formula). In the first chapter itself there are several references to Hinayana. The first reference to sīrāvakas occurs in the admonition by the Buddha to Rāvaṇa not to "fall into the attainments, conceptions, experiences, views, and sāmañña of the Sīrāvakas, Pratyekabuddhas and philosophers" (10). Subsequently the discrimination of things as belonging to past, present and future is condemned and the state beyond such discrimination is described as a state "not tasted by those who practise the meditation of the Sīrāvakas, Pratyekabuddhas, and philosophers..." (14). Subsequently sections 15, 18 and 20 contain criticisms of the Hinayana on the same grounds. Chapter II extends the criticism of Hinayana to many other philosophical issues. The workings of the ālayavijñāna is described as a phenomenon "not easy to comprehend (especially) by those who practise the discipline belonging to the Sīrāvakas, Pratyekabuddhas and philosophers" (45). The 'dharma Buddha, which is unconditioned is described as "not belonging to the world of the ignorant, Sīrāvakas, Pratyekabuddhas and philosophers" (57). Subsequently the final realization of the Sīrāvakas is criticised as "no discarding of habit-energy and no escape from imperceivable transformation of death" (58). This downgrading of the Hinayaniic goal reaches its culminating point in the following statement:

... those who, afraid of suffering arising from the discrimination of birth and death, seek for nirvāṇa, do not know that birth-and-death and nirvāṇa are not to be separated the one from the other; and seeing that all things subject to discrimination have no reality, imagine that nirvāṇa consists in the future annihilation of the senses and their fields. They are not aware, Mahāmati, of the fact that nirvāṇa is the ālayavijñāna where a revulsion takes place by self-discrimination. Therefore Mahāmati those who are stupid talk of the trinity of vehicles and not of the state of mind-only where there are no images (61-62).

Sections 63, 69, 71 and 83 contain criticisms of
the Hinayâna doctrines of skandha, dhâtu and âyatana. Sections 72, 97, 103 and 107 and 134 contain similar criticisms of the low nature of the Hinayâna standards. Chapter III continuing a similar line of thought confirms that those who adhere to discrimination of skandha, dhâtu and âyatana are 'doomed to ruin' (147). The section 170 shows the importance of keeping the bodhisattvas and mahâsattvas away from 'those who belong to the vehicles of the s'rávaka...' The chapter IV is a reaffirmation of the 'mind-only' doctrine and downgrading of the Hinayâna nirvâna which is prohibited for the bodhisattvas who have a loftier ideal (212). Chapter V, although it does not directly refer to the s'rávakas, does criticize their practice of discrimination of phenomena into skandha, dhâtu and âyatana and permanency and impermanency. Chapter VI contains a harsher attack on Hinayâna. The section (222) claims that self-realization is not gained by the s'rávakas, pratyekabuddhas and philosophers. Section 226 asserts that the right knowledge constitutes not 'falling back into the stage of the philosophers, s'rávakas and pratyekabuddhas. Section 236 refers to those 'ignorant and simple-minded who are addicted to the doctrine of momentariness' and the next section compares those who delight in nirvâna and those who perform the pāramiśa of charity etc. in order to achieve it with the 'ignorant' (237). Chapter VII describes the S'rávakas as those who have got rid of 'passion-hindrance' (klesâvarana) but not 'knowledge-hindrance' (jñeyâvarana), a result of direct perception of the egolessness of phenomena which is not achieved by the s'rávakas. Chapter VIII is the only chapter which discusses a practically oriented ethical issue, namely, the practice of meat-eating. The entire chapter can be considered a direct attack on the Hinayâna. At the very outset of the chapter the Hinayânists are isolated from the other groups with whom they were combined up to that point for attack, and this fact becomes clear from this statement of Mahâmati: "even those philosophers who hold erroneous doctrines and are addicted to the views of the Lokâyata such as the dualism of being and non-being, nihilism, and eternalism, will prohibit meat-eating..." (244). In this chapter we do not encounter the expositions of usual idealist doctrines, but again the focus is the mahâsattvas and bodhisattvas who must refrain from the kind of food enjoyed by the s'rávakas. In the discussion it is made clear that meat-eating is not approved for anyone, not even for the s'rávakas. The so-called 'meat purified from three ends' (trikotipâris'uddhamâna) of the Hinayânists has been clearly denied (253 and 257). The last chapter which is composed of verses is basically a summary of the ideas presented in the previous eight chapters (chapter IX being only a dhâranî) although it contains some other material which is not directly related to the main trend of the sûtra. The criticism of the Hinayâna continues unabated in this chapter too. The section 295 puts all the doctrines criticised together and affirms their dream-like nature:

Causation, the dhâtus, skandhas, and the self-nature of all things, thought-construction, a personal soul, and mind they are all like a dream, like a hair-net.

The doctrines advanced by the s'rávakas are described as resulting from jealousy. They 'who are deeply intoxicated with the liquor of samâdhi' are compared to an elephant 'who is stuck in deep mud is unable to move about' (322). In the very last section the basic ideas emphasized throughout the sûtra are reiterated:

When the dualism of being and non-being is abandoned, there is neither bothness nor not-bothness; and going beyond s'rávakahood and pratyekabuddhahood, one will even pass over the seventh stage (357).

This discussion shows that the Sûtra has a clearly articulate dual purpose, namely, to promote the idealist trend in Buddhist philosophical thinking and the religion associated with it and to show the invalidity of the philosophy and the religion of Hinayâna.

Many scholars have noticed the Sûtra has a large amount of repetitions.4 However, this aspect of the Sûtra may be defended on the ground that in a work which combines theoretical philosophy with practical religion, repetitions are not only desirable but also helpful, for they serve to keep laying emphasis on the main themes so that the reader gets accustomed to the viewpoint.

The philosophical method followed in the sûtra is similar to the method in the Vajracchedikâ and in

---

4. Suzuki (1) Vaidya, Saddharmâluâkâra sûtram, Mithila Institute 1963; Kalupahana, op. cit
Nāgārjuna, namely, the method of conceptual ‘deconstruction’. The best example of this kind of treatment is the way the Buddha treats the so-called 108 questions that occur at the beginning of the second chapter. As we showed earlier these questions cover a vast range of concepts.

All the questions are dismissed as not capable of conveying the meaning intended. The obvious reason is that both language and the things behind its concepts are empty of any reality. There are other occasions where specifically Buddhist and philosophical concepts are negated, a method which very much resembles that of Nāgārjuna:

And there are no Buddhas, no truths, no fruition, no causal agents, no perversion, no nirvāṇa, no passing away, no birth. And then there are no twelve elements (āṅga), and no duality either, of limit and no-limit; because of the cessation of all notions (that are cherished by the philosophers). I declare (there is) Mind-only.

The difference in application of this method, however, from Nāgārjuna, as indicated in the above quoted statement, is that here all concepts are negated not only to show that they are devoid of any self-nature but also to affirm the view that all such phenomena are mind-made and hence the sole reality is mind, a view which marks the idealistic development over the Śūnyatāvāda.

The negation of the validity of the concepts including those in the 108 questions in the second chapter thus seems to be integral to the philosophical method adopted by the sūtra. In holding this view we are not in agreement with Suzuki who holds the following:

The 108 clauses preached by the Buddhas of the past are a string of negations, negating any notion that happens to come into the mind at the moment, apparently with no system, with no special philosophy in them. These negations are another example of the irrationality of the Laṅkāvatāra (Suzuki I. p. 41).

The negation of the validity of language is an essential aspect of the philosophy of religion in the sūtra. What the sūtra presents as ultimately valid experience is that which transcends the boundaries of language. The following question by Mahāmati and the answer given by the Buddha to the question confirm this:

Mahāmati: Are words themselves the highest reality, or is what is expressed in words the highest reality?

Buddha: Words are not the highest reality, nor is what is expressed in words the highest reality. Why? Because the highest reality is an exalted state of bliss, and as it cannot be entered into by mere statements regarding it, words are not the highest reality. Mahāmati, the highest reality is to be attained by the inner realization of noble wisdom; it is not a state of word-discrimination; therefore, discrimination does not express the highest reality (87).

The denial of the validity of all concepts does not necessarily mean that ‘things in themselves’ are beyond expression. Rather it leads us to the core of the Vijñānavāda philosophy, namely, nothing in phenomena has any reality, but all of them are creations of the mind. What ultimately remains is the mind alone (cittamātra). This understanding shatters the māyā, the cause of the realistic view of phenomena and leads us to the experience of “the highest samādhi, which is gained by entering into the womb of Tathāgatahood, which is the realm of noble wisdom realised in one’s innermost self” (21). The Religion of the Laṅkāvatāra, for which the philosophy is only a means, culminates here.

Asanga Tillekeratne

LAOS.

Introduction: The Lao People’s Democratic Republic is a thinly populated mountainous country land-locked between Thailand, Burma, China, Vietnam and Cambodia with an estimated population of 4.6 million (in 1995). Over half the population in Laos are Buddhist, while the rest comprising more than 60 ethnic groups living on the hills adhere to the traditional beliefs of spirit cults. Buddhism continues to exist alongside animism with no conflict with the wat (temple) compound having a spirit (phi) house for the guardian of the village.

Buddhism was known in the Lao region by the 8th century A. C. from the Mon people who brought Mon civilization and Buddhism, according to Coedes who based his conclusion on inscriptions found in western Lao (‘Documents sur l’histoire politique et religieuse du Laos occidental’, BEFEO, XXV, 1925, pp. 1-202). Paul Levy dated to the 12th century, two Buddha statues found at Luang Prabang with characteristics simi-
lar to those from Lop Buri and Pi Mai (Les traces de l'introduction du Bouddhisme a Luang Prabang, (BEFEO, XL, 1940, pp. 411-423). However, Buddhism as an organised system arrived in Laos only during the reign of Fa Ngum (1353-1373 A.C.) the first ruler to unify the country.

The recorded history of Laos as a state begins with the founding of the kingdom of Lan Zang (present-day Laos) by Fa Ngum in 1353 A.C. This material on the history of Laos is largely drawn from the Chronicles of Lao, Nithan Khun Borom, (translated in Mission Pavie's Etudes diverses II pp. 1-77) and Phongsawadan, (translated in Paul Le Boulanger's Histoire du Laos Francais, pp. 41-51). Phong Savadan Lao written in Lao Language by the 20th century historian Maha Sila Viravong (translated into English as The History of Laos) has been compiled from different versions of Laotian chronicles. Although this material is mixed with legend and ancient lore, historical records of neighbouring countries give ample credence to the historicity of the major events during this period. For example, the inscription of the Sumanakii taparvata of Sukhoodaya in Siam, belonging to the reign of Luthai, while describing the boundaries of his kingdom, refers to Cau Brana Fa Nom (Chao Praya Fa Ngom or Fa-Ngum). From this inscription it is clear that Fa-Ngum was reigning in Laos in the second half of the fourteenth century A.D.

Fa Ngum's father, Phi Fa, heir apparent to the kingdom of Luang Prabang who was driven away along with his son, took refuge with King Jayavarman Paramesvara in Cambodia. When Fa Ngum grew up, the king gave his daughter Keo-Keng-Ya in marriage to him, and put him in command of an army charged with securing his right to the throne of Luang Prabang. (It was just the right time for the Cambodian king who was gradually losing his grip on his hitherto kingdom to sponsor an ally in the conquest of the region. The kingdom of Sukhoodaya had taken most of the Khmer territory in the west; the rising kingdom of Ayuthya had taken Lopburi, Nakorn Nayok and Korat). Fa Ngum in his conquest of Lao territories, united the small Lao states, and in 1353, he declared himself king of an independent Lao state which he named Lan Xang (literally a million elephants) with Muang Swa as the capital (L.P. Briggs, The Ancient Khmer Empire, pp. 254).

When, how and by whom Buddhism was introduced to Laos: Present day Burma, Thailand, Cambodia and Laos all claim that Sovannabhumi (where Sona and Uttara, the envoys of Emperor Asoka arrived in) was located in their own territories. The Laotians claim that the original That Luang in Vientiane, Laos was a stupa erected by Emperor Asoka himself in the 3rd century B.C. But all these claims are probably legendary.

According to the Chronicles of Lao, Queen Keo-Keng-Ya, the wife of Fa Ngum noticed to her displeasure that the people in the Lao kingdom practised the cult of spirits, which included the killing of elephants and buffaloes for sacrifice to the spirits. The queen, as a fervent Buddhist being determined to put an end to the practice of sacrifice, requested her husband to introduce Buddhism into the Lao kingdom, and if not she would ask to return to her father's Khmer kingdom (Maha Sila Viravong, The History of Laos, pp. 36).

The King Fa Ngum then, sent a mission to his father-in-law requesting a mission of Buddhist monks. A delegation of Buddhist monks including the king's own tutor Maha Pasman, together with Maha Tep (Deva) Langka, 20 Buddhist monks and three other experts, Norasing, Norasan Noraray and Noradet arrived in Lao. A famous statue of the Buddha known as Prabang was brought by them together with the Tripitaka. The leader of this Buddhist delegation was Mahathat Langka from Sri Lanka. This information given in Lao chronicles is corroborated by the Wat Keo Prabang, date 1602 A.C. The inscription also gives the names of three Sri Lankan mahatthis who accompanied the Khmer monk Mahâ Pasman to Laos as the elder brother Maha Deva Langka, his younger brother Maha Deva Langka and Maha Deva. Lao chronicles specifically state that it was the Sri Lanka form of Buddhism that was introduced to Laos (Coedes, Ibid, p. 419). It appears thus that Sri Lankan monks were resident in Cambodia during this period, and played an important role in the development and popularisation of Sinhala Buddhism there.

According to a book written in Lao Language during the reign the of King Sai Settathirath in the 16th century, The Story of Prabang, the Buddha statue Prabang referred to above was in the mudra of 'Calm-ting-querrel' and was cast in an alloy of gold, silver.

---

1. King Vijayabahu (1055-1110 A.C.) ruled in Sri Lanka during this time.
and other metals in 874 A.C. by Cullanāgha Thera (or Cunnaka Thera) in Sri Lanka. King Siricantarat (or Srichularaj) of Intapatta (present day Cambodia) sent an embassy to King Supinarat of Lanka Taveep (Sri Lanka) in 1056 A.C.\(^1\), requesting the statue, and the statue was sent as a gift to the Cambodian king.

The introduction of Sinhala Buddhism not only served as a symbol of legitimisation of Fa-Ngum's authority, but also as an important factor for moral unity and consolidation of the Lao state. The statue of Prabang became the symbol for the sovereignty of the Lao state. The statue of Prabang became the symbol for the sovereignty of the Lao kingdom. Its capital city was later named Luang Prabang in honour of the statue, and remains as the cradle of Buddhism to this date. The statue which was protected in Wats Monoram, Visoun and Mai in Luang Prabang, and later taken to the city of Vientiane, was seized by the Siamese and returned to its home in Luang Prabang in the 19th century, and was installed in the Royal Palace. It is now kept in the museum in Luang Prabang, and is the country's most protected national treasure (PL. XXXVI).

**Spread of Buddhism in Laos since its introduction:**

After the reign of Fa-Ngum, his son Samsenthai (1373-1416) who ruled for 43 years consolidated the power, and made a special effort to bring Buddhism closer to the lives of the people by building temples and founding monastic schools for the study of Buddhism. The king appointed Maha Tep Langka and Maha Pasman to the rank of Chief Monks of the kingdom who then resided in the Royal monastery called Wat Keo which was specially constructed for the purpose. The famous Wat Monoram where the Prabang statue was protected was also built by the king. By the end of his reign, the city of Luang Prabang had won recognition as one of the most important centres of Buddhist teaching in the region (Mahā Sīla Viravong, *Ibid*, p. 39).

One of Samsenthai's several successors, King Visoun was another king who contributed a great deal to the spread of Buddhism. In 1503, the King ordered the construction of Wat Visoun Mahāvihāra which was specially built to place the Prabang statue. In 1504, it was completed, and the Prabang statue was installed inside the vihāra in a magnificent ceremony. It was a period of such great scholarship that it saw the translation of *Tripīṭaka* from Pali to the Lao language, as well as the emergence of the rules of poetry known as Visumali which flourished from that time on. King Visoun's son Potisarat's (1520-1550) marriage to two princesses from Chiang Mai and Ayuthya (both in present day Thailand) encouraged the exchange of religious missions between these kingdoms, and this gave rise to an increased promotion of Buddhism. In 1523, King Potisarat sent a mission to Chiang Mai to secure the *Tripīṭaka* and monks, and a team of monks headed by Phra Tep Mongkol, together with sixty copies of the *Tripīṭaka* arrived in Laos. In 1525, the king received his religious education after ordaining in a ceremony in Wat Visoun Mahāvihāra under the chairmanship of the Chief Monk Maha Sichantho with Maha Sumudhakote who received education at Chiang Mai as preceptor. In 1527, the king issued a royal decree ordering the people to give up spirit worship, and built Buddhist shrines on the sites of spirit altars and shrines. He won great fame and respect for this act, not only within his kingdom, but also in the neighbouring ones. The king who spent some time in Chiang Mai brought the statues of the Emerald Buddha\(^2\) and PhraSeekham\(^3\) (Sihinga Buddha image) on his return to Laos (Mahā Sīla Viravong, *Ibid*, p. 49-53).

In later years, Laos saw internal strife, as well as invasion by Annam (part of present day Vietnam) and Ayuthya until the crowing of Sai Setthathirth (1548-1571). In order to guard against attacks by Burma, King Sai Setthathirth made Vientiane the new capital. He entrusted the administration of the city Luang Prabang to the senior monks and left the Prabang statue there for their worship. He took along with him the statues of the Emerald Buddha and PhraSeekham. In 1566, he constructed That Luang (Great Stupa) on the site of the old site of That Luang which is claimed to have been built during Adoka's period and Wat Prakeo, the latter to house the Emerald Buddha which his father brought from Chiang Mai. After the end of his reign, there were periods of instability due to internal dis-

---

2. According to the *Jinakālamāli*, the delegation that received higher ordination from Mahasami Vanaratana in Sri Lanka during the reign of Parakkramabahu VI (1411-66 A.C.) brought this statue from Sri Lanka (*The Sheaf of Garlands of the Epochs of the conquerors*, Translation by N. A. Jayawickrama, pp. 129-131).

3. This Buddha statue, referred to as 'Sihala image' in the *Jinakālamāli* was sculpted in Sri Lanka and was received by King Roca Rama Kamhaeng (1275-1317) as a gift (*Jayawickrama, Ibid., 120, 121). *Jinakālamāli* also mentions that Kuena 1355-a successor of King Mengrai built the 'Great Monastery' in Chiang Mai (*Ibid*, pp xxiii, xxiv)
cord, anarchy and invasions and threats of invasions by Burma and Siam, during which period Buddhism suffered a setback.

It was King Surya Vongsa or Soulinga Vongsa (1639-94) who restored internal stability while making Vientiane a centre of Buddhist scholarship in the region. He encouraged and developed the study of Buddhism which led to an abundance of writers and poets in the country. A Dutch merchant Gerrit van Wystoff who visited Vientiane and was received by the king at the wat That Luang in 1641 has given a vivid account of the city. According to him, the city was replete with beautiful monasteries that attracted pilgrims from far and wide, and that sculpture, architecture, painting, music and dancing flourished (D.G.E. Hall, A History of South-East Asia, pp. 467, 468). In 1670, the king sent a goodwill mission to Ayutthaya to renew his kingdom's friendship and re-established friendly relations with the neighbouring countries. He is known to have introduced just and fair legislation that benefitted all of his citizens, regardless of their social status. This period is regarded as the Golden Age of Laos. The death of Soulinga Vongsa saw the disintegration of the kingdom of Lan Xang, and the consequent decline of Buddhism once again. By 1707, the kingdom was split into two separate states with Luang Prabang and Vientiane as capitals. In 1778, Vientiane was captured by the Siamese. In 1893, the French gained control and ruled Laos as a part of the Union of Indochina together with Vietnam (which included Tonkin, Annam and Cochinchina) and Cambodia. The French attempt to spread Catholicism in Laos did not succeed, partly because the anti-colonialist revolutionary movement had the active support of the Buddhist monks (Nguyen Le Thi, "Buddhism in Lao History", History and Culture in South East Asia: Studies on Laos, pp. 70-75). Political and military involvement in Laos by the French, the Vietnamese, the Japanese and later the Americans brought the country into turmoil and civil war. Although in 1953, the French rule ended with the granting of full sovereignty, the country saw the end of civil unrest only in 1975 when the communist Pathet Lao, after a long struggle, took complete control.

Although there was no attempt for severe destruction of Buddhism and its culture by killing Buddhist monks, demolishing wats and burning Buddhist texts like in Cambodia during the Pol Pot regime, Buddhism suffered a significant set back in Laos after 1975. The abolition of the monarchy which was the guardian of Buddhist heritage and the change of the national emblem from the silhouette of That Luang to the Soviet hammer and sickle and the Vietnamese star represented the ideological change....

Nature of the saṅgha organization, its main divisions and its strength: At present, there is only one sect-Phra Song Lao (Lao Saṅgha). The strict ascetic sect of Thammayut Nikāya which was introduced in the early 1940s from Thailand was banned in 1975. The earlier structure of the saṅgha which was headed by a Saṅgharāja who had a council of five advisors called Chao Rajagana was changed after 1975. Saṅgharāja was replaced by a President or Chief of the Saṅgha (Padhan Song) assisted by four Vice Presidents and 9 advisors. The organisation structure operates at four levels: at the centre, in the provinces, in the districts and in the villages. There are four Commissions (Kammadhikāra) to implement all activities that relate to the saṅgha and Buddhism. 1. Saṅgha administration 2. Saṅgha education 3. Propagation of Buddhism and 4. Social Work (Sādharānapakāra) which includes construction and repair of monasteries, protection of historical sites and monuments and also activities related to traditional medicine and the environment.

All matters related to the saṅgha and their activities come under the Department of Religious Affairs of the Lao National Construction Front.

There were 20,000 monks and novices in 3441 monasteries in Laos before the Lao Revolution in 1975. According to the estimates by the Department of Religious Affairs, the number has now returned almost to the pre-revolution levels with 17,990 monks and novices in 2823 monasteries, (which excludes 618 monasteries destroyed during the Indo-Chinese war that remain unrepaid).

Buddhist education and Buddhist cultural activities in Laos: As in other Buddhist countries in Asia, the monastery was the centre of education, culture, art and architecture in the past. The monastery is still the major educational and cultural institution in rural areas in Laos. Every novice monk receives his initial training in Dhamma Vinaya and the practice of rituals at the monastery.

The formal education of monks is divided into four levels: primary, secondary, senior secondary and tertiary. The primary education consists of 5 years, and secondary education and senior secondary, 3 years each. Their curriculum includes, in addition to
Dhamma Vinaya, Pali, History of Buddhism and English, as well as other subjects taught at Government schools, such as Mathematics, Science etc. Today in Laos, there are 23 centres of primary education, 17 of secondary education and 4 of senior secondary education. At tertiary level, there is one college which was established in 1998, and the course duration is 3 years.

A growing number of young men from the countryside continue to use wats in towns as temporary homes to attend school or go to work. The younger ones who assist in the maintenance of wats while going to school are known as ‘temple boys’

One of the most important Buddhist activities of recent vintage in the country is the National Buddhist Conference held every few years. Beginning with the first such one in 1976, four conferences have been so far held, the most recent one being in April 1998. The 1998 conference has resulted in a massive effort at organizing the structure of the sangha and Buddhist activities at provincial, district and village levels.

Temporary monkhood is common in Laos, as in other parts of South East Asia, traditionally for three months during the vassa season, although much shorter periods of monkhood are now common.

As in other present day Theravāda countries, women have no place in the Buddhist hierarchy. Many older women, leaving household life, shave their heads and dress in white robes and live in huts in monastery complexes and observe eight or ten precepts. The majority of them have left their homes after fulfilling their family obligations of children’s education and marriage of daughters, or when widowed. There are a few who have taken to robes at a younger age. They study and meditate, and only a few perform religious ceremonies for the laity.

Activities related to the preservation and classification, including the compilation of an inventory of Lao palm leaf manuscripts undertaken by the Department of Literature and Mass Culture of the Ministry of Information and Culture are among the most important recent cultural activities in the country. Lao literature was all in palm leaf manuscript form before the introduction of printing in 1957. Many of these manuscripts deal with either Buddhist scriptures or with areas related to Buddhism.

Traditional Buddhist rituals and festivals in Laos:

Festivals in Laos, like in Thailand and Cambodia are generally associated with ‘merit-making’, the word for festival being boun which is derived from Pali-putna. Harmonious fusion of Buddhism with the worship of spirits called phi is amply illustrated in the national festivals that continue to be celebrated to date.

One of the most popular festivals in Laos is a combination of the Buddhist vassa festival and the water festival. Boun Ok Vatsa (vassa festival) and Boun Lay Heua Pay (water festival) are celebrated simultaneously at the end of the vassa three months on the full moon day of October. Houses, public buildings and wats are illuminated for the occasion. On the full moon day, alms and new robes are offered, to the monks, and religious activities take place in all wats. In the evening, rafts filled with lotus shape offerings, lights, candles and flowers and sometimes a bowl of rice are released into the current of the river. Floating offerings made of banana trunks and banana leaf of the past are today replaced by colourful paper. It is usually the children who launch the rafts. The offerings represent the expulsion of evil spirits who have accumulated during the rainy season who are now attracted to the offerings on the rafts (Dawn Ellis & Tom Butcher, Laos, pp. 77, 78).

It is significant that this festival is immediately followed by boat races which celebrate the end of the rainy season and the beginning of agricultural activities. Boat races are a sacred rite to propitiate the spirits of the nāgas resident in the rivers during the dry season who may be wandering around on land during the rainy season. Boats are usually made by the monks and stored during the year in the wats.

Boun That Luang or Boun Maha That (festival of the great stūpa - that means relic) is held on the full moon day of November. In Vientiane, celebrations are held at That Luang shrine while each town celebrates its central stupa which is supposed to contain the relics of the Buddha. The festival begins the day before at Wat Si Muang which is considered to be the centre of the city and to contain the tutelary spirit of the city. (The wat was named Si Muang (Si’s town) after Si who sacrificed herself when the foundation of the wat was being laid.) At moonlight, people go in procession round the wat carrying candle-lit little wats made out of banana leaves. On the following morning, monks from all over Laos who gather at That Luang are offered alms, and in the evening, a candle-lit procession round the that is followed by fireworks.
Descriptions of a few main Buddhist shrines:

That Luang built by King Sai Settathirath in 1566 in Vientiane is venerated as the most sacred shrine in Laos. That Luang is also hailed as the finest example of pure Lao art, and considered one of the great achievements of Buddhist architecture. That Luang contains a central stūpa, which is said to be covered with 1,000 lb. of gold leaf, and 30 small stūpas on the second storey to symbolise the Buddha’s perfections—all stūpas in bulb shape. King Sûrya Vongsa made it a national symbol and remains so to date. In 1873, Black Flag bandits who went in search of treasure destroyed it, and it was reconstructed by M. Fabertaux between 1930 and 1935. It was covered in gold and ceremonially re-inaugurated on the 2,500th anniversary of the Buddha’s birth in 1957. A statue of King Sai Settathirath stands on the square in front of That Luang (PL. XXXVII).

Wat Prakeo is a palace monastery also constructed by King Sai Settathirath in 1566 in Vientiane to house the famous Emerald Buddha, now is Bangkok. This is the second palace monastery which was under the direct control of the king with no resident community of monks. The first was Wat Ho Prabang which was built in the palace grounds in Luang Prabang to house the Prabang Buddha statue. Today Wat Prakeo serves as a museum of a large collection of Laotian Buddhist sculptures.

Wat Xieng Tong which means "the golden city", the former royal shrine was the most influential one in Luang Prabang, and still remains the centre of religious activity. Built in 1560 also by King Sai Settathirath, Wat Xieng Tong epitomises the elegance and grace of Lao Buddhist architecture. In the past, before the advent of roads, with the Mekong river providing the only access to the city through a flight of steps to the monastery complex, this wat had a special significance as the gateway to the city. The most striking feature of this wat is the many-tiered roof which sweeps steeply and gracefully to barely ten feet above the ground. The walls and doors are covered with gold stencils on black and dark red background.

Wat Visoun and That Mak Mo stand on the same compound. Wat Visoun, constructed between 1503 and 1520 by King Vison, is the oldest functioning wat. The original wooden roof had survived until a fire damaged it severely in 1887, and later rebuilt in 1898. Although it was at a later period that it turned into a museum for Buddha images, it remains a place of worship. That Mak Mo was built round the same time as Wat Visoun by Queen Pan Din Xieng, the wife of king Visoun. During its reconstruction in the early 1930s, over 200 votive objects of gold, silver and bronze had been found. That Mak Mo (Giant water melon shrine) being the popular name for That Pathoun has a semi-spherical shape of the Sri Lankan type of stūpa, and one of its kind in Laos. (PL. XXXVII).

Several prominent past Buddhist scholars: Mahâ Sila Viravong was a monk scholar who later continued to contribute as a lay scholar. He had his higher education in Buddhism at Mahâ Mongkut Monks’ College (now Mongkut University) in Thailand in 1923-1928. On his return to Laos, he founded the first formal Buddhist and Pali School for monks in 1930, and wrote the first Pali Grammar book in Lao language. These were significant efforts to restore the monks’ prestige among the Lao people which was being eroded during the French rule. Mahâ Sila Viravong is best known for his book Phong Savadan Lao (History of Laos) which was written in Lao in 1957 and later translated into English and published in 1959 by the Joint Publication Research Service in New York, USA. He has written nearly 40 books on Lao Buddhism, history, culture, language and literature. His contribution to Lao Buddhism as a teacher, researcher, writer and adviser is impressive.

Prea Mahâ Bouakham Voraphej and Mahâ Kou Souvannamedhi are two other well known scholars. The former who completed his higher studies at Prea Suvannabhumi Pali and Buddhist College at Wat Unnalom in Phnom Penh, Cambodia in 1935-1944, had written several books on the Dhamma and Vinaya. Maha Kou Souvannamedhi, after he became a lay person specialised in the Lao constitution and the legal system, and served as a Minister of Justice in the People’s Democratic Republic of Lao.

LAW. It is pertinent to ask the question whether Buddhism which aims at the extinction of suffering (dukkha) has any relation to law and international law? The subject of law and international law in the broader sense does not come within the purview of spiritual matters, but it deals with the temporal aspect of the people. No doubt one of the branches of law is ecclesiastical law, but its significance is rather minimal when compared with other branches of law such as criminal law, civil law, international law, etc.

When speaking of Buddhism there are two branches to be taken into consideration namely, the doctrine (the dhamma) and the discipline (the vinaya). Dhamma or the discipline is generally applicable to both the laity and the Sangha, whereas the vinaya or the discipline is only applicable to the bhikkhus and bhikkhunis, and it serves as a mode of regulating their outward conduct. Broadly speaking vinaya not only regulates or controls the outward conduct of monks, but also controls the mind, which produces outward actions. It is said, that the doctrine regarding release from suffering, which forms so central an idea in the ancient Buddhist faith, belongs to the province of dhamma (Vinaya, Vol. I, p. XIV).

Referring to Vinaya it is said: 'The Vinaya, the discipline, specially that portion of it called Suttavibhaṅga, appoints and decrees a definite standard of outward morality, comprised in courses of training laid down for the proper behaviour of monks and nuns. On the surface Suttavibhaṅga is not much more than an attempt to restrain unsuitable behaviour, but in reality it also arrives, though in many cases by a long process of exclusion at the kind of positive conduct to be pursued by the monk who wishes his life to be externally blameless, so far as his relations with fellow monks, with the Order as a whole, and the laity are concerned." (I.B. Horner, The Book of Discipline, p. IX)

Thus, it manifests that Vinaya or the discipline part of Buddhism, is meant to regulate the outward behaviour or conduct of monks and nuns that would be conducive for their well-being as well as the well-being of the Order and the laity. So far as monks are concerned the Buddha had laid down two hundred and twenty rules of Vinaya or sikkhāpadas. They are: Pārājikā 4, Saṅghādisesa 13, Aniyata 2, Nissaggiya 30, Pācittiya 92, Pāṭīdesanīya 4, Sekhiya 75. According to the Bhaddālī Sutta and the Suttavibhaṅga the Buddha laid down sikkhāpadas only at the appearance of signs of corruption in the Sāsana. The corruption in the monastic organization compelled the Buddha to set up a body of regulations and thereby arrest the decay of the organization. Restrictive legislation had to be introduced for the purpose of maintaining good discipline and furthering the spiritual progress of the disciplines. (Jotiya Dhirasekera, Buddhist Monastic Discipline, pp 50, 51)

Each of the aforesaid Vinaya rules or sikkhāpadas relates to an offence and these sikkhāpadas are arranged according to the gravity of the offence. The four Pārājikā rules apply to four major offences in the Vinaya. These offences are:

(i) Indulgence in sexual intercourse. (Methunam dhammaṁ paṭiseveyya pārājikā hoti)
(ii) Taking by means of theft what has not been given to him (Adinnaṁ theyyasankhātāṁ aḍīyeyya)
(iii) Intentional killing of a human being (Manussaviggaṁ jīvīṁ vorepeyya)
(iv) Lying (false proclamation) about one's spiritual attainments, or supper human attainments (Yopana bhikkhū anabhijānam uttaraṁ manussadhammaṁ attīpaṇāyikāṁ) Vinaya, Vol. II pp. 21, 46, 70, 90

Out of the aforesaid four of fences, the most serious offence is sexual indulgence. Any form of sexual intercourse is totally prohibited for a monk. Therefore
this offence has been placed on top of the list of offences. These four Pārājikā offences are regarded as foremost crimes under the monastic discipline. Once such an offence is committed the offender loses his monastic status as a bhikkhu and he is no more regarded as a member of the Order. It is said that the Pārājikā being grave monastic offences, admits of no remedies or atonements. The penalty for Pārājikā offences being complete ex-communication and loss of monastic status, it is spontaneously brought about by the commission of the crime. The Saṅgha has only to take note of the fact that the offender is no more one of their fold, and that they have no dealings with him: na labhati bhikkhūhi sādēhiṃ samvīsan̄j yathā pure tathā pacchā pārājiko hoti asaṃvāsā Vinaya III,(Jotiya Dhirasekara- Buddhist Monastic Discipline, p.109)

All other offences other than the Pārājikā are remediable, and the offender who submits himself to the specified penalties and punishments imposed on him and behaves himself in accordance with the Vinaya law is considered as being purged of his guilt. In so far as the Saṅghādīṣesa offences are concerned, they require a formal meeting of the Order of the Saṅgha to deal with offenders. Horner says: ‘This type of offences (Saṅghādīṣesa) is next in gravity after the Pārājikās, because it cannot be settled by many people (i.e. many Saṅgha) or by one man (i.e. one bhikkhu). It therefore has to be settled by the Order, which presumably has to be convened for that purpose” (The Book of the Discipline, Vol. I, p.195).

The Vinaya which consists of both the substantial law and the procedural law also deals with kammas or acts of punishments of varying degrees of severity which are recommended for certain shortcomings and reprehensible features in the behaviour of monks. These kammas are:

1. Taṭṭāyīya kamma
2. Nissaya kamma
3. Pabbājanīya kamma
4. Paṭisārāmiya kamma
5. Ukkhepanīya kamma

(Kammakhandhaka of Cullavagga - Vinaya Vol.II).

Apart from the above stated punishments Vinaya has prescribed various other forms of punishments, too. For Saṅghādīṣesa offences, which are thirteen in number and not so serious as Pārājikā offences, two forms of penalties are prescribed. They are the penalty of Māṇatta and the penalty of Parivāsa. The former penalty is imposed on an offender when he has not concealed the offence, but disclosed without delay. In that instance the Saṅgha is called upon to impose on the offender, at his request, the penalty of Māṇatta for six days. (Vinaya, Vol. II, p. 38).

In the case of a Saṅghādīṣesa offence which has been deliberately concealed by the offender, the recommended penalty is Parivāsa (probation) which is imposed for the same number of days up to which the offence has been concealed. Cullavagga states that a monk who commits a Saṅghādīṣesa offence, must go before the Saṅgha and confess to them his error, He should then request the Saṅgha to impose on him the prescribed punishment namely, Parivāsa penalty for the number of days the offence has been concealed. Once the offender has behaved himself under the penalty Parivāsa, the penalty of Māṇatta is imposed on him (Vinaya Vol. II, p. 40). The actual penalty for Saṅghādīṣesa offence is Māṇatta, but when the offender conceals the offence, he has to undergo the penalties of both Parivāsa or probation and Māṇatta.

When both penalties, Māṇatta and Parivāsa have been satisfactorily concluded, the offender should go before the Order and request that he be reinstated by the Act of Abbhāna. (Vinaya Vol. II, p. 39). This reinstatement should be done with the unanimous approval of the Saṅgha, and the quorum required is twenty monks. The deficiency of the quorum by even one monk would render the Act of reinstatement invalid! (Vinaya, Vol. III, p. 186). During the period of serving Māṇatta and Parivāsa penalties, a monk loses his status and some of the rights he enjoyed earlier. With the Act of Abbhāna, his lost status and rights are restored.

Just as much as law provides certain acknowledged principles in the administration of justice, Vinaya, too provides some salient principles couched in Satta Adhikaraṇasamatha in carrying out disciplinary action within the monastic community.

The seven Adhikaraṇasamathas are:

1. Sammukhāvinaya: by a verdict in the presence of the offender
2. Sativinaya: by a verdict of innocence
3. Amāhāvinaya: by a verdict of past insanity
4. Patiṇāṭakarana: the carrying out of penalty on
the acknowledgement of the guilty monk.

5. Ye brushedi sika: by the decision of the majority
6. Tassapāpiyasi kā: by an act of condemnation carried out on a monk for corrupt, shameless and reprehensible behaviour.

7. Tiṇavattharakā: the settlement of offences other than the Pārājikā and Saṅghādisesa offences committed by two groups of monks by means of collective disciplinary measures. Both parties have to meet in the full assembly of the Saṅgha and with their consent breaches of discipline and offences are collectively settled. (Vinaya Volume II, pp 73-104)

Out of the said Adhikāraṇasamathas, the Sammukhāvina yay, the third Adhikāraṇasamatha seeks exemption for offences committed by a monk in a state of un sound mind. A monk who is guilty of committing an offence when he was of unsound mind, should, after regaining his good state of mind confess to the Saṅgha the circumstances under which the offence was committed. Once he establishes that the offence was committed while he was insane, then he is exonerated from the commission of the offence. However those who pretend to be of unsound mind and claiming falsely a lapse of memory, are not absolved from liability. This provision is similar to section 76 of the Penal Code and this Code embraces most of the offences under criminal Law. This section states that nothing is an offence which is done by a person, who at the time of doing it, by reason of unsoundness of mind, is incapable of knowing the nature of the act, or that he is doing what is either wrong or contrary to law.

Trial by Jury which is part of the Criminal Justice System was introduced to the Legal System of Sri Lanka by the Royal Charter of 1810. Section 10 of the Royal Charter declares: "Whereas it is deemed expedient and beneficial that Trial by Jury in criminal cases should be introduced in the British settlements on the Island of Ceylon subject to the modifications as the state of settlements may require......" Sir Alexander Johnstone who came to Ceylon as Chief Justice in the year 1811 lost no time in implementing the directions in the said Charter, and up to date Trial by Jury System in criminal cases prevails. Criminal cases in the nature of murder, attempted murder, and rape are tried before a jury. The unanimous decision or the majority decision of the jury is acceptable.

The Ye brushedi sika Adhikāraṇasamathā in the Vinaya is very much similar to the jury system prevalent in the Criminal Justice System. When it is not possible to settle a monastic dispute within the particular monastery itself the matter is referred to another monastery having a greater number of monks to settle the dispute. When the dispute could not be settled even by the latter monastery, then it has to be referred to the whole Saṅgha for settlement by the decision of the majority. (Vinaya II - p. 92 hight). For the purpose of knowing the decision a voting is recommended. Three forms of voting are recommended. They are secret ballot (gūlhaka), whispering in the ear (sakahnajappaka) and open ballot (vīvatāka). If the righteous monks are in the major-

...
ity even by a single vote, then the voting becomes valid. In case a majority decision is not reached then a fresh vote is allowed to be taken up to a third time with the hope of securing a majority. But if no majority is secured as desired even at the third voting the assembly should then adjourn with the idea of meeting again the next day. This would give time and opportunity to the righteous monks to consider their decision and to arrive at a majority decision on the next day.

Describing the Tassapāṇīyasikī Adhikaraṇasa-matha it is said: "It is not only an act of condemnation carried out on a monk for corrupt and shameless actions, but also carried out on one who deliberately lies and attempts to evade a charge laid upon him. It lays down no specific punishment but it was perhaps used more effectively as a general stigmatisation where by a vociferous offender was prevented from evading persecution with a garrulous defence. The stigmatisation would forthwith arrest such indiscipline." (Jotiya Dhirasekera, Buddhist Monastic Discipline, p 123).

Even under the Criminal Law, an accused against whom a case is instituted in courts having criminal jurisdiction is not allowed to evade prosecution. If he does not appear on summons or having appeared and thereafter fails to appear before court, then the law empowers court to issue a warrant against him in order to arrest him, so that the case could proceed to trial in his presence. He is not given the opportunity to avoid prosecution, but ample opportunity is afforded to defend himself.

The Tiṇṇatthātaka Adhikaraṇasa-matha aims at settling disputes that arise among the Saṅgha and adjudication over breaches of discipline in such a way that the concord of the monks may not be impaired. Parties to the dispute should meet before the full assembly of the Saṅgha and the dispute is settled with the consent of all parties. Even the offences committed in the nature of minor offences are settled and the principle underlying this form of settlement is to maintain cordial relationship and the good will of the contending parties.

The Code of Criminal Procedure Act No. 15 of 1979 makes provision under section 266 for compounding or settlement of some of the offences under the Penal Code. For example causing hurt, grievous hurt on provocaton, assault or use of criminal force could be settled with the consent of both the affected party and the Magistrate. Invariably the settlement is suggested by the accused and the consent of the victim or the complainant as well as the consent of the Magistrate should be obtained. This form of settlement reduces the ill-feelings between the two parties and helps to revive the lost cordiality. Thus it is transparent that the disciplinary rules of Vinaya have much in common with the provisions of law, although the Vinaya rules were promulgated 2500 years ago.

Referring to the five Kammas or acts of punishment, namely Taṭṭjanīya, Nissaya, Pabbājanīya, Paṭisāranīya and Ukkhepanīya, that is, Act of Censure, Act of Sub-ordination, Act of Banishment, Act of Reconciliation and Act of Suspension respectively, it is stated: "A close scrutiny of the details of these kammas show that they give to these Acts the widest scope and unrestricted authority for prosecution and punishment in the interests of the religion and the monastic organization. Development of character and cultivation of the religious life, fitting into the harmonious life of the community, maintaining proper relations with the laymen, all these come within the jurisdiction of these kammas. They also watch over the loyalty to the religion and the Order to which the members belong. Paṭisāranīya Kamma makes special provision to safeguard the interests of the laymen in the hands of the monks. The monks are forbidden to do anything which damages the interests of the laymen" (Jotiya Dhirasekera, Buddhist Monastic Discipline p 120).

The aforesaid statement highlights that these punishments are imposed on the offenders not only for the purpose of reforming them, but in the larger interests of the monastic organization. They also serve to foster and maintain healthy relations between the laity and the clergy. The interests of the whole Order and the lay society have not been ignored but the acts of punishment are directed towards safeguarding the interests of both these institutions, the former consisting of monks and the latter of laymen and laywomen.

One of the major purposes of law is to regulate the conduct of men and women in the society, in the sense, that they should lead their lives in such a manner that they do not violate the rights of others which are guaranteed by law. Violation of human rights recognized by law, whether personal or proprietary rights, may lead to a breach of the peace which greatly hampers the harmony and stability in the society. Thus laws with various sanctions or punishments and with law enforcement agencies contribute much to protect the
rights conferred on the people, thereby paving the way for maintaining peace and harmony in society without which all other developments such as, economic, social, cultural etc, cannot expect to flourish.

Rules of Vinaya, the mode of prosecution and imposition of penalties or punishments on the offenders of the monastic community are all directed for the betterment and guidance of the members of the Buddhist Order of monks whose final aim should be the realization of nibbāna one day. Unless discipline is strictly observed, no substantial progress could be made by the monks in their endeavour to achieve their quality of life in the present, which becomes a stepping-stone to achieve the desired final goal in the near future. A close similarity exists between the law and the rules of Vinaya when they are viewed from the aspect of administration of the affairs of the Buddhist Order and the society at large. Both systems regulate, control, and restrict the conduct of the members of the monastic Order and the society for the well-being of the members themselves and the others, who have a right to live and pursue their legitimate tasks without being interfered unjustly.

For the adjudication of offences under the criminal law, and for civil wrongs under the civil law, courts and tribunals are essential. In Sri Lanka such courts of First-Instance are set up under the Provisions of the Judicature Act. The courts of First Instance are the High Courts, the District Courts, Family Courts (now amalgamated to District Courts), Magistrate's Courts and the Primary Courts. District Courts have exclusive civil jurisdiction, and the Primary Courts have both the civil and criminal jurisdiction. The Magistrates' Courts and the Provincial High Courts have the jurisdiction to hear criminal cases, Further High Courts are also empowered to hear appeals from the Primary Courts and the Magistrates' Courts. The Court of Appeal and the Supreme Court are established to hear appeals from the courts of First Instance. Each country has its own system of courts.

In so far as the Buddhist Order is concerned, there are three ways of adjudication of offences. They are:

(1) Saṅgha Vinicchaya
(2) Gana Vinicchaya
(3) Pudgala Vinicchaya

The adjudication that is done by four monks or more than four monks or the Saṅgha as a whole is known as Saṅgha Vinicchaya.

The adjudication done by two monks, or three monks or as a collective body of monks is called the Gana Vinicchaya.

The adjudication by a single monk is Pudgala Vinicchaya. This is similar to a court presided by a single judge like the Magistrate's Court or the District Court.

The Gana Vinicchaya is similar to the Court of Appeal where two judges sit to hear appeals and at times three judges sit when a case is referred to a fuller bench. Thus it is crystal clear that the Buddha had established a very reasonable system of adjudication which even today is not obsolete.

A person could be made criminally liable for the commission of a crime under criminal law if it is established (a) that a certain event or a state of affairs which is forbidden by criminal law has been caused by his conduct and (b) that this conduct was accompanied by a prescribed state of mind. The event or state of affairs is called the actus reus and the state of mind is known as mens rea. Both these elements must be proved beyond a reasonable doubt by the prosecution. Mens rea is to be found in the mind of the accused at the time of committing the criminal act. Referring to the element of actus reus it is said: That the actus reus includes all the elements in the definition of the crime except those which relate to the accused's state of mind and is not merely an "act" in the ordinary sense of the term. The act must be willed by the accused. "(Smith and Hogan, - Criminal Law, pp 28, 31).

The two basic elements, the 'willed act', and 'the intention' of committing the particular criminal act at the time it is committed, are recognized under the criminal law to make an accused guilty of a criminal offence. Are these two elements present in the Vinaya rules? If one examines the four major rules of Vinaya, namely Pārājikā, it appears that both actus reus and mens rea are included in them. In other words these two ingredients are clearly seen in all the important rules including the Pārājikā rules. For example the third Pārājikā rule states: "Whatever monk should intentionally deprive a human being of life, or furnish any weapon which enables a person to take it and to deprive him of his life with it, he is one who is defeated, and he is not in communion." (Vinaya, II, p. 85)
In the said rule the mental state \((\textit{mens rea})\) or the intention to deprive the life of a human being is present. When a monk intentionally deprives the life of a human being, or kills a person the act becomes a willed act. Thus the element, of \textit{actus reus} is present in this rule. Under this rule if a monk having the intention to deprive the life of a human being provides a weapon to enable that person to take it and deprive him of his life, even then the monk is regarded as one who is defeated or one who has committed the third Pārājikā offence. Here too both the willed act i.e. the act of providing the weapon and the intention to kill are present. It is pointed out in the \textit{Vinaya} that there is no offence if it was unintentional (\textit{anāpatti asiṅcīca-Vinaya, III p 78}). What is known in the criminal law as the "murderous intention" is well embodied in the aforesaid rule of Pārājikā with regard to the killing of a human being.

Not only a complete legal system with its ramifications such as legislature, judiciary and executive are abundantly available in the \textit{Vinaya} exclusively applicable to the Saṅgha, but the institution of Saṅgha could be described as one which is highly democratic. It is said:

"Although the Saṅgha has been designated a system of government formed by the Bhikkhus, for the Bhikkhus, and therefore a democracy, it will be more correct to say that it was a democratic institution set up by the Buddha for the good of its members as well as of mankind so that it may continue to function on a democratic basis after his death. The Buddha says the \textit{Dhamma} or the Buddhist theory of knowledge, reality and ethics as well as the \textit{Vinaya} or the Constitution and Code of law were to function in the role of the Teacher after his death. When a question is raised as to how in the absence of refuge, there could be unity in the Buddhist Community since the Buddha had not appointed a head and a successor to function in his place after his death, a disciple replies that they are not without a refuge for the \textit{Dhamma} was their refuge." (K.N. Jayatilleke, - \textit{The Principles of International Law in Buddhist Doctrine} - p.81)

Thus it is crystal clear that the \textit{Dhamma} and the \textit{Vinaya} for the monks, and the \textit{Dhamma} for the humankind alone could stand as the guide, the benefactor and the protector of all of them though the One who expounded the \textit{Dhamma} and promulgated the \textit{Vinaya} had passed away. It was the wish and the advice of the Buddha for his disciples (monks) to adhere to the \textit{Dhamma} and the \textit{Vinaya} and for the laity to observe the \textit{Dhamma} for their own benefit and in the interest of the entire human society.

So far what has been discussed chiefly is \textit{Vinaya} which comprises of rules of discipline to regulate the lives of monks and the affairs of the monastic Order. We have discussed the similarities of \textit{Vinaya} rules with some of the cardinal principles and concepts of law. The \textit{Dhamma} made known to the world by the Buddha has contributed much to the progress of humankind and even in this modern age of science and technology the \textit{pañcasīla} or the five precepts which come within the domain of \textit{Dhamma}, if truly and properly observed by the laity, the global society would be more civilized and a better place where peace and harmony may reign.

Commenting on the \textit{pañcasīla} it is said: "The concept of \textit{pañcasīla} or the Buddhist norm of reverence and regard for five societal considerations which are indisputably binding on mankind for their successful growth and for the smooth continuance of the human community, is presented to us in the earliest of the Buddhist teachings as contained in Pali literature. A careful study of these references clearly indicates that \textit{pañcasīla} occupies a position which could be declared as being 'universally acclamable'. By using the phrase universally acclamable, we wish to convey the idea that faithful adherence by everyone, everywhere, east or west, north or south, to these virtues which are upheld by the concept of \textit{pañcasīla} contributes, without exception, to the wholesome growth and development of mankind physically, morally and spiritually" (Bhikkhu Dhammavihari-\textit{A Universal Ethic of Good Living} - pp 1,2)

The aforesaid five precepts are:

1. I undertake the training precept to abstain from killing any being that breathes
2. I undertake the training precept to abstain from taking what is not given
3. I undertake the training precept to abstain from sexual misconduct
4. I undertake the training precept to abstain from speaking falsehood
5. I undertake the training precept to abstain from liquor that causes intoxication and heedlessness.

Not only from the point of view of ethics, that the five precepts play a significant role, but they also serve
as moral laws which contribute to the maintenance of peace, harmony and stability in society.

Law is considered as an order of human behaviour. An order means a system of rules. Every rule of law obligates human beings to observe a pattern of behaviour under certain circumstances. Salmond states that law consists of rules which are of broad application and non-optional character, but which are at the same time amenable to formalisation, legislation and adjudication. (Salmond, Jurisprudence, Twelfth Edition, p. 48). Salmond is also of the view that morality or moral laws may apply to every human act, while law, though narrower in scope, extends to a great number of such acts. (Salmond, Jurisprudence, Twelfth Edition, p. 47)

Although moral laws are not the outcome of legislation and they are not subject to adjudication, yet they have a wider application to most of the acts of people irrespective of race, class, creed and religion to which they belong. The moral principles underlying the pañcasīla are capable of bringing immense benefits to the entire human society if people voluntarily adhere to them as a matter of moral duty on their part. Observation of the five precepts has a direct impact on the prevention of some grave crimes, indecent and immoral conduct, all of which would lead to raise the quality of the people in whom the destiny of the society rests.

Pañcasīla provides a culture which would lead to the development and enhancement of goodness of humanity which in turn can contribute to the goodness of the global society. What laws with the elements of enforcement and sanction can do, could be achieved if the five precepts are earnestly and voluntarily observed by individuals for the greater interest of themselves and others living in the society. Just as much as one becomes a law abiding citizen, it is the responsibility of each person to make pañcasīla part and parcel of his life for individual and collective advancement and progress. It is the individual, and nobody else, who could either make his life a success or a failure.

The Dhammapada states an absolute truth. Attāhi attano nātho ko hi nātho paro sīyā. One is one's own Saviour. Who else or where else there be another?

International law has been defined by Lord Russell as the aggregate of the rules to which nations have agreed to conform in their conduct towards one another. Lord Chief Justice Coleridge referred to International law as "the law of nations". That is the collection of usages which civilized states have agreed to observe in their dealings with each other. International law is divided into two kinds, which may be distinguished as the common law of nations and the particular law of nations. The common law is that which prevails universally, or at least generally, among all civilized states, being based on their unanimous or general agreement, express or implied. The particular law is that which is in force solely between two or more states by virtue of an agreement made between them alone, and derogating from the common law. International law exists only between those states which have expressly or impliedly agreed to observe it. Those states (which now include all civilized communities, and some which are yet only imperfectly civilized) are said to constitute the family or society of nations, just as such national society is governed by its own civil law. (Salmond, Jurisprudence, pp 42, 43).

International law has its origins in the Europe of the 16th and 17th centuries. It was the law created to govern the diplomatic, commercial, military and other relations of the society of states who shared a common Christian religious background and which constituted Europe at the time. The international law of co-existence recognized the formal sovereignty and equality of all States and only imposed on them obligations of a negative character which were essentially obligations of abstentions. (Rohana Perera, A. International Law Changing Horizons, pp 9,10)

In the 19th century there were further developments in the international community and non-Christian States like Turkey, and non-European States such as China and Japan became members of this common community who willingly undertook to observe the international law. Gradually this international community of States began to expand and with the dawn of the 20th century the newly independent states of Asia and Africa became partners of this community. This century saw the emergence of the League of Nations and its successor the United Nations. The League of Nations which was open to any State marked the beginning of a new phase in which international law applied to all States whatever their location or character is. With the emergence of the United Nations the international law began to expand rapidly and new principles began to appear which were instrumental to transform the law into international law of co-operation among all the members, making them "Global Commons".
Among the principles of international law, four major principles are conspicuously seen. They are:

(a) Independence of States in the international sphere, and their voluntary subjection to the law.
(b) The agreements solemnly undertaken should be fulfilled.
(c) The existence of a relation between Sovereign Independent States, with the addition of a few other groups, e.g. the League of Nations as long as it existed, and now the United Nations Organisation.
(d) The acceptance by the member States of a common outlook upon the main problems of international intercourse (Keeton-The Elementary Principles of Jurisprudence - pp. 247, 248).

Thus it manifests that international law is not confined to a particular State, but it applies to all sovereign independent States united together, voluntarily bound to observe the common law for their own interests without compulsion. International law which is universally applicable has its aims to promote the welfare of the family of the Commons, governed by such law, and not to interfere with the internal affairs of the member States, unless there is serious interference by one State with another. Even when there is such interference endeavour is made to settle the conflict or dispute through persuasion and negotiation with the aid of the United Nations. Thus co-operation and mutual understanding of each other's viewpoint, and a common outlook of the major problems of the members who have volunteered to accept the international law as their common law are, the other aims of this universal law. In short it could be said that the policy of the international law is, "live and let live" which if strictly followed by all countries of the world, then most of the problems we are confronted with today do not exist.

From the Buddhist point of view is there any relation between Buddhism and international Law? The concept of a World Statesman or the Universal monarch (Cakkavatti) is found in the Buddhist texts explaining his role as one who extends his authority over the entire world without the rod or the sword, and dispensation of justice through the victory of righteousness or Dhamma.

It is said: "The idea is that the World-Statesman sets up a State on the basis of Dhamma, which in the context means a political philosophy and a constitution founded on the principles of righteousness. And just as much as the Buddha sets up an international Sangha, based on Dhamma, its religious philosophy and the Vinaya, the constitution and code of laws, the World Statesman sets up an international order, in which all States have a common political philosophy and constitution" K.N. Jayatilleke- The Principles of International Law in Buddhist Doctrine, p. 539.

How is he going to set up such an international order? He first sets up a model state in his own country. When this is done, the idea proves to be infective and his prestige spreads in the four quarters of the world, a fact which is symbolically expressed by the movement of the "Wheel", the symbol of his political Dhamma and sovereignty, in all four quarters of the world. What is meant is that Nations establish similar States with similar political philosophies and constitutions and acknowledge his leadership. This is the essence of the concept as it appears in the Buddhist texts of both schools of thought. Such a ruler, it is said honours, reveres, faithfully abides by and is led by the righteous political philosophy embodying the ethical principles of the Ten Virtues (dassakusala-kammapatha) and based on the need of the State to work for the good of the people with selflessness, love and understanding, imparting impartial justice and promoting both material and spiritual welfare on the principle of equality of man.

The duties and functions of such a State established by the world-ruler are: First, the necessity to provide "righteous care", ward and protection to all citizens, including the people of all professional classes, religious teachers and the army. This care and protection are to be extended to "birds and beasts" as well. Here 'care' (rakkha) is explained as treating all subjects with forgiveness, tolerance, friendliness, and kindness on the principle that the State which cares for its subjects would safeguard its own interests; 'ward' (avaraṇa) is defined as the insurance of property such as housing, clothing etc, and 'protection' (gutti) as protection against loss and other calamities (upaddava). It comes to mean not only the safeguarding of persons, property and human rights but the institution of welfare services such as care of the aged, the sick etc. The freedom to propagate the faith should not be limited to Buddhist monks, but is extended to all recluses and brahmins.

Secondly, the State has to ensure that there is no crime: "Let not a person in the State act unrighteously."
This according to Buddhist conceptions has to be done both by removing the social causes of crime, mainly inequalities of wealth and unemployment as well as the psychological, by training in values which has to be both theoretical and practical.

Thirdly, the State has to ensure that there is no unemployment or lack of wealth amongst any of its citizens. The State should provide means for the acquisition of wealth by those devoid of wealth, so that there is an abundance of goods in the country and the people can enjoy as much goods as they like.

Fourthly, all State policies must be based on righteous principles and therefore it behoves the State to act in consultation with enlightened religious teachers and philosophers in determining policy (K.N. Jayatilleke - The Principles of International Law in Buddhist Doctrine, p.p 540, 541).

What has been stated above when translated into modern terms, would mean that the State must be an enlightened democratic Welfare State guaranteeing freedom and economic security and promoting righteousness. Since the State has to perform these functions and duties, it follows that the philosophy and constitution, the Dharma-Vinaya of the State must embody these rights. History reveals of a king who adopted the righteous rule based on the principles of a World-Ruler and he was Dharmasoka (Asoka) of India. He was so inspired by the Buddhist ideals of social equality and mercy that he stated in one of his edicts that "it is most desirable that there should be absolute equality for all in all legal proceedings and in the punishment awarded and I have ordered from now the respite of three days to those on whom punishments has already been passed" Wells H.G.- A short History of the World, p. 95). It could be said that Asoka almost symbolized the world -ruler stated in Buddhist texts.

While the World-Ruler is viewed as the ideal ruler, the Buddhist texts use two adjectives among others to describe him as an upholder of righteousness; dhammiko and dhammarājā (S.186,II,16). When the question is asked, "who then is the king of the World-Ruler" (Kopana…..rañño cakkavattissa rāja?) the reply given is that "it is the Dhamma (righteousness)". Thus it is absolutely evident that Dhamma or righteousness is the prime factor that has come to stay in the concept of the World-Ruler. It is in the Dhamma that all virtues lie. Dhamma is capable of imparting justice to all.

Dhamma seeks no barriers of class, creed, caste, sex and other man-made limitations, ethnic, religious, and national differences. It is righteousness that could be applicable undisputably in all countries. It is, for the upliftment of both, material and spiritual aspects of mankind. Its political philosophy is directed towards creating a global society where oppression, discrimination, violence and violation of human rights do not reign. Dispensation of law with the benevolent idea of imparting justice to all is not arbitrarily forced on people, but enforced strictly according to the principles of natural justice.

Thus, righteousness with its manifold qualities of benevolence that can shower upon the entire human-kind has been deeply rooted in the Buddhist concept of the world-ruler. Such a ruler who considers the Dhamma as his king never deviates from the course of Dhamma. All his actions are in accordance with the philosophy of the Dhamma. Laws promulgated have the characteristic of righteousness and they are not meant for one particular country, but for all countries for the weal and welfare of all the people living in every country. This is the form of international law envisaged in Buddhism.

In the context of modern international law, could the Buddhist international law be a guiding factor? In other words whether the Dhamma or righteousness which the World-Ruler makes use of as his base for all his actions, including the dispensation of law throughout the world could be utilized for further enhancement of international law which has gained much recognition in this century? In order to broaden the principles of international law, Dhamma which stands for fair-play, justice, right understanding, right thought, right action, right speech, tolerance, loving kindness, compassion, sympathetic joy, equanimity, recognition of all human rights, and duties, non-violence, humane statecraft and numerous other lofty principles could be adopted. People wherever they live are yearning for a better world order where their legitimate aspirations are reasonably fulfilled. Among other principles of international law, friendly relations and co-operation among States stand prominent. These two lofty principles lead to non-use of force and non-intervention in so far as the affairs of another State is concerned. However, we have seen instances where such force and interference used inspite of the fact that international treaties, charters, agreements, conventions and international law do not permit such unreasonable and highhanded actions. What happens is, the rule of
force and not the rule of law reigns. Under such circumstances legitimate aspirations of peace-loving people are undermined, judgements of value are not forthcoming and masses become thoroughly dissatisfied with the law and the global order.

What then is the solution? Dhamma or righteousness of the conceptual world-ruler shown in Buddhism could provide a reasonable solution for maintaining a world order conducive for the well-being of the global subjects. Right understanding, Right thought and Right Action, the three cardinal principles of Dhamma have the potentiality to transform the entire human society where peace, contentment, prosperity, co-existence and well-being of the people dominate and the Wheel of Dhamma rotates without any form of distinction. It is interesting to note that the Buddhist philosophy of governing the affairs of people is based on the principle that “the wheel of power turns in dependence on the wheel of righteousness (balacakramhi nisraya dhammacakram pravartate).

C. Ananda Grero

LAZINESS or indolence (kusīta: kosajja) is the aversion to work and hence the tendency to spend one's time without engaging in any work by way of sluggishness (pamāda). The general concept of laziness as explained in Buddhism is that it is the mental condition wherein the mind becomes indolent as a result of its being pre-occupied with thoughts of sensuality, of malignity and of cruelty (kāma-vitakka, vyāpāda-vitakkā vhinśa-vitakka, DhpA. III, 409-10; see also Dhp. vs. 112, 230 and DhpA. II, 260). In such a condition the individual does not become active when the occasion demands it and remaining depressed with those evil thoughts he never experiences the path of wisdom (paññāya maggaṃ alaso na vindati: Dhp. v 280). Laziness is a stain on one's personal appearance (malaṃ vannassā kosajjam: ibid. 241).

When these evil thoughts enter the mind of the individual and if he gives into them without giving them up he is classified as a typically lazy person incapable of making any effort towards self realisation. Such a person's mind is full of sloth and drowsiness (tiṇamiddhabahula; It. p. 27) and hence unlively. It is the unwillingness of such an individual to exert himself for the overcoming of the various evil tendencies of the human mind and hence remaining snug and complacent that is called laziness (see Vibh. pp. 369-70 and 371-72). On the other hand if he can give up atāpi ottappi such evil thoughts without succumbing to them he is the characteristically energetic man (cātāpi ottappi sat añ samitam āraddhaviriyo pahitto). Engrossed in evil thoughts the lazy man spends his time unhappily and loses the all-important purpose of his life, the attainment of release, the fulfilment of the highest good (sadaṭṭha S. II. 29) here and now (dīṭṭheva dhamme). The energetic man (āraddhaviriyā) progressively marches towards the goal. The teaching of the Buddha being only for the wise and the energetic, it appeals to such men only who alone can realize the highest ideal taught there. (imasmin hi sāsane nibbāriyassā kusītapuggalassa aggaphalam arahatam nāma na hi: araddhaviriyā ca imaṃ dhammaṃ ārādhenti, J. IV, 131). The path of freedom as taught in Buddhism cannot be followed by the indolent (Vism. IV, section 55). It is only the energetic who achieve furetherance (vuddhi), growth (virūhha) and full development (vepulla) in the Buddha's teaching (A.V. 153; III, 8). Lazy people naturally seek the company of the lazy for it is people of similar nature (dīṭṭu) that flock together (S. II, 159).

As moral evil that leads man to his downfall, laziness is frequently combined with several other evil states of mind, lack of faith (asaddhā), lack of moral shame (ahirika), lack of moral fear (anottappa), little learning (appassuta), folly (duppaṇṭha) are the factors usually combined with laziness (D. III, 252; A. II, 227, 230; III, 7, 127, 183, 433; S. IV, 242 etc.).

A typical example of how the lazy man's mind works is given at D. III, 255, A. IV, 332 and Vibh. 385, where eight occasions of indolence are instanced (atṭha-kusīta-vatthu). 1. A person who has to do some work thinks that he would get tired if he does it and therefore he lies down lazily without putting forth effort to attend to his duties. 2. After doing some work he thinks that as he is tired after work he should lie down and does so. 3. When he has to go on a journey he similarly anticipates tiredness and lies down. 4. Having gone on a journey also he lies down because he is tired. 5. He goes out to obtain his food and when he receives only a little he feels lazy to move further. 6. On the other hand when he obtains enough good food also, he feels lazy after a heavy stomach and lies down as if he has nothing else to do. 7. He feels lazy and lies down even when he has only a very slight ailment. 8. After recovering from such an illness also he thinks that his body is weak and lies down indolently. The Vāraṇa Jātaka (No. 71) also illustrates the evils of laziness.
LAZINESS

The lazy man is always lazy. He feels lazy not only before doing some work but even after. He would not do anything without force or compulsion. He cannot summon courage to continue any useful work. Value of energetic work is always emphasised in Buddhism. Even the last words of the Buddha were his exhortation to strive on with diligence (appamādena sampādeetha). Right kind of effort (samma-vāyāma) is an important aspect of the Noble Eight-fold Path. It is a path of right activity that is taught in Buddhism, the purpose of which is "the attainment of the unattained, understanding of that which is not understood and the realisation of the unrealised (appattassa pattiya, anadhigatassa adhigamāya asacchikatassa sacchikiryiya: D. III 255). The Buddhist way of life is one of constant energy and activity (akusitaavatti: Sn. 68). Whereas right effort leads to the all-important goal of putting forth the requisite amount of energy for the arising of un-arisen good states, laziness not only leads to the arising of un-arisen evil states but also to the deterioration of the good states already arisen. Hence the lazy and indolent man (kūṣītan hīnaviriyā) falls a victim to the Evil One (Māra) like a weak-rooted tree gets uprooted by a strong wind (vāto rukkhāna va dubbalam Dhp. v.8), where as the self-confident and energetic man (saddham āraddhaviiriyā) remains unmoved like a solid rock remains so amidst a storm (vāto selaṇa va pabbatām ibid. v. 8).

This Buddhist way of energetic living does not overlook the important fact that putting forth too much of effort is also dangerous. It is as dangerous as not putting forth the required degree of effort. Both extremes are equally bad whereas too much effort (accāraddhaviriyā) leads to agitation and excitement (uddhacca) resulting from overwork and thence to various other psychological and physiological complications such as nervous breakdowns, too slowness in effort (attiṇaviriyā) leads to indolence (kosajja), the state of log-like lethargy. Therefore one should steer clear of these two extremes and master the method of putting forth the requisite amount of energy (viriyasamātā). This is compared to the strings of a lute which produce the correct sound only when they are evenly tightened (same guye pathītha: A. III. 375). Similarly unless concentration (samādhi) is coupled with energy (viriya) one would feel lazy. Absorption comes when both are evenly balanced (ubhayasamatāya appanā hoti: Viṃ. IV, para 47).

The path of activity as taught in Buddhism should be maintained until the attainment of the goal. One should be careful not to feel complacent when partial revelations in the Path are seen. The journey is to be zealously continued to the end, as shown in the Cūlāvatthupadopama Sutta of the Majjhima Nikāya (Sutta No. 27) by the simile of the elephant’s footprint. The elephant-tracker does not come to the conclusion that the foot-prints he sees are those of the king-elephant until he sees the elephant with his own eyes. However strong may be the circumstantial evidence the final conclusion is made only after seeing it with one’s own eyes. Similarly the Buddhist ideal is realised only when one finally knows and experiences that one has done what has to be done. (katakicca, katarakāniya). It is not the lazy man who can achieve this.

The Appamāda-vagga of the Dhammapada (vv. 21-32) emphasises the value of vigilance (appamāda) as opposed to laziness (pamāda).

A. G. S. Kariyawasam

LICCHAVI - A powerful tribe of India in the itme of the Buddha. They were certainly khattiyaas, for on that ground they claimed a share of the Buddha’s relics (D. II. 165). Their capital was Vesāli, and they formed a part of the Vajjian confederacy, being often, referred to as the Vajjis. Their strength lay in their great unity (DA. II. 519). They were beautiful to look at and wore brilliantly coloured garments, riding in brightly painted carriages (D. II. 96; A. III. 239). The Buddha once compared them to the gods of the heaven Tāvatiṃsa. (D. II. 96).

Though this would seem to indicate that they were prosperous and rich, they do not appear to have lived in luxury and idleness. They are, on the contrary, spoken of as sleeping on straw couches, being strenuous and diligent and zealous in their service. They also practised seven conditions of welfare (aparihāniyadhammā), which the Buddha claimed to have taught them at the Sārandada cetiya. They are (1) They held frequent public meetings of their tribe which they all attended; (2) they met togerther to make their decisions and carried out their undertakings in concord; (3) they upheld tradition and honoured their pledges; (4) they respected and supported their elders; (5) no women or girls were allowed to be taken by force or abduction; (6) they maintained and paid due respect to their places of worship; (7) they supported and fully protected the holy men among them (D. II. 73 f.).
The young men among the Licchavis were evidently fond of archery, for mention is made of large numbers of them roving about in the Mahāvana, with bows and arrows, the strings set, and surrounded by hounds. They were a martial people and fond of sport. On one occasion Mahānāma, a Licchavi Elder, complained to the Buddha that the Licchavi youths were quick tempered, rough and greedy and that they looted and ate the rich sweetmeats sent to the elders by the members of their tribe, and that they slapped the women and the girls of the tribe on their backs (A. III, 76). Violation of chastity was considered a serious offence among the Licchavis, and the assembly would even give its consent to a husband’s request that his unfaithful wife should be murdered (Vin. IV. 225).

Licchavis were devout followers of the Buddha and held him in the highest esteem. Five hundred Licchavis once gave a garment each to Pihāyi, a brahmin, because he recited a verse in praise of the Buddha (A. III, 239). Even careless youngsters, referred to above as wandering about with hounds and bows and arrows, would lay aside their arms when they saw the Buddha seated under a tree, and would surround him with clasped hands, eager to listen to him (A. III, 76). There were numerous shrines in Vesāli itself, several of which are: Cāpāla, Sattambaka, Bahuputta, Gotama, Sārandada and Udena. In the Udāna Aṭṭhakathā (UdA. 322f) Buddhaghosa says that these shrines were originally Yakka Cetiyas, wherever yakkas were worshipped, but that they were later converted into monasteries for the Buddha and the disciples. Vesāli was a stronghold of the Jains, too, according to Buddhist sources themselves. When Saccaka the Nigātha, visited the Buddha at Mahāvana, he was accompanied by five hundred Licchavis, who did not all salute the Buddha as their teacher, but showed him such respect as was due to an honoured guest. (M. I. 229).

The Buddha visited Vesāli at least three times, and is frequently mentioned as staying in the Kūtāgārasālā in the Mahāvana. The first visit was in order to destroy the threefold pestilence of drought, sickness and non-human foes that afflicted the residents of Vesāli. Though the Licchavis were at first inspired by the teachings of their kinsman Nigātha Nāthaputta, they were compelled by circumstances, to invite the Bud­dha and the disciples to visit their capital, and this was during the fifth year after the Enlightenment of the Buddha. As recorded in the Sumanāgala-vilāsini, the commentary on the Dīgha Nikāya, the Licchavis deputised Mahāli, friend of King Bimbisāra in whose capital and with whose patronage the Buddha was spending the rainy season retreat (vassa). When Mahāli informed King Bimbisāra the purpose of his visit to him, the king directed Mahāli to the Buddha. The Buddha considered the benefits the Licchavis would have by his visit to their capital, accepted the invitation. Along with five hundred disciples, the Buddha was conducted from Rājagaha to Vesāli with great pomp and pageantry, and was received by the Licchavis with even greater honour than King Bimbisara had shown him. The Buddha and the bhikkhus toured the afflicted city chanting the Ratanasutta and in no time there was a torrential shower of rain, the drought vanished, and the city came back to normalcy as if by miracle. Subsequently the Buddha preached the Ratanasutta to the people assembled in the Magnificent meeting hall of the Licchavis called the Santhāgārasālā in the heart of Vesāli and many Licchavis were converted.

The Licchavis were greatly admired for their system of government. It was a republic (gāna, saṅgha), all the leading members of which were called Rājā. According to the Mahāvastu (Mh. v. I. 27) there were 68,000 Rājās in Vesāli. They held full and frequent assemblies at which problems affecting either the whole republic or individual members were fully discussed. When the assembly drum was heard, all left other duties and assembled immediately in the Santhāgārasālā (DA. II, 517f). Sometimes, as appears from the story of the conversion of Siha, religion was also discussed at these meetings. The rules of procedure adopted evidently resembled those followed in the upasampadā (Higher Ordination) of a monk. (Vin. I. 58).

Besides the Rājās there were also numerous Uparājās, Senāpatis and bhāndāgārikas (J. III.1). There was an elaborate judicial procedure by which any person charged with an offence was handed over, in turn, to the Vinnacchaya mahāmattas (inquirers), Vohārikas (experts in law), Suttadharas (experts in tradition), the Aṭṭhakulakas (probably a judicial committee), the Senāpati, the Uparāja and finally to the Rājā who would inflict the proper sentence according to the pavenipattiaka (DA. II. 519).

In their political relationships with their neighbours, the Licchavis seem to have been on friendly terms with Bimbisāra, the king of Magadha, and with Pasenadi, King of Kosala. They were friendly also with the Mallas though occasionally there were rivalries between the two tribes.
After the death of Bimbisāra, Ajātasaathu in his desire for the expansion of Magadha, resolved to destroy the Licchavis. In order to discover what the Buddha thought of his chances of success, he sent to him his minister Vassakāra. Buddha predicted that no foe can subdue the Licchavis so long as the Licchavis remained united.

The Pali commentaries (MA. I. p 258; KhīpA) contain a mythical account of the origin of the Licchavis. The queen of Benares gave birth to a lump of flesh, and wishing to avoid disgrace, her ladies in waiting put it in a sealed casket and threw it into Ganges. A deity wrote the King's name on the casket, which was picked up by an ascetic, who tended the embryo until two children, a boy and a girl, emerged from it. The ascetic fed them with milk. Whatever entered the stomachs of the children could be seen as though the stomach were transparent, so that they appeared skinless (nicchavi); some said the skin was thin (linachavi) that the stomach and whatever entered it appeared skinless (nicchavi); some said the skin was thin (linachavi) that the stomach and whatever entered it appeared as though sewn together. From this the children came to be called Licchavi, and as they grew up were brought up by the villagers 'living near the hermitage. The other children disliked them, saying they were to be avoided (vajjita.bba) because of their quarrelsome disposition. When they were sixteen years old the villagers obtained land for them from the king, founded a town, and married them together. Their country came to be called Vajji. They had sixteen pairs of twins, and their city had to be greatly enlarged—hence its name Visālā or Vesālā (s.v. DPPN).

LIVELIHOOD. See AJIVA

LOBHA or greed is one of the three roots of evil (akusalā-mūla or hetu) as taught in Buddhism, the other two members of the trio being hatred (dosa) and delusion (moha). It is their presence or absence that determines the resultant moral (kammic) quality of an action. When present the action is unwholesome (akusalā) and when absent (i.e. as alobha etc.) it is wholesome (kusala). As taught in Buddhist psychological ethics as one of the fourteen unwholesome mental properties (akusalā - cetasika) it is to be found with the eight kinds of consciousness given over to greed (atthasu lobhagacittesu: Abhs. pp. 6, 7). Greed is thus a basic defilement (kilesa) of the human mind, very difficult to eliminate. As a mental state it itself is defiled while defiling the other states associated with it (Vism. XXII, 49). And it is a stain (mala) because it is tainted and stains the other states by its presence like a mixture of oil, lamp-black and mud (ibid. 61).

It has to be mentioned here that in addition to this combination of lobha, dosa and moha there is a more common and an earlier combination wherein rāga (passion) takes the place of lobha. In philosophy and ethics this term rāga (from raj to colour) with its wider connotation than lobha, means excitement, passion etc. or more briefly impassioned excitement. And in this sense it almost always occurs in association with dosa and moha. Thus the idea of covetousness or greed implied in lobha is only an aspect of rāga which includes every kind of impassioned longing. Hence the triad of rāga, dosa, moha is more meaningful than that of lobha, dosa, moha.

Lobha is very much similar to tanhā (which, of course, is the most general term that designates this mental state in Buddhist psychology) and as such even hatred and delusion, the other factors of the trio, can be said to be caused by lobha. It is described as an internal taint (antararamala) that defiles the mind as a cloud covers the sun; or as an enemy (amitta) of the mind as smoke is to the sun; or as an adversary (sapatta) of the mind as snow is to the sun; or as a tormentor (vadhaka) of the mind like dust is to the sun; or as an opponent (acchattika) of the mind like the eclipse (rāhu) to the sun. (See. It. 83-4 and Nd. I. p. 15 and NDA. I. 68).

As long as a person's mind is not freed from lobha his mind is not cleansed and depending on the degree of this lobha his suffering (dukkha) increases. By producing other harmful states (anathajjana) in the mind it prevents the mind from its further development. The greedy person fails to see what is correct and incorrect; he fails to see the truth (amitta) of the mind as smoke is to the sun. (See. It. 83-4 and Nd. I. p. 15 and NDA. I. 68).

In the Visuddhimagga (XIV, 162) lobha is defined as follows: "They are greedy or if it itself is greedy or it is just the mere being greedy: thus it is greed. Greed has the characteristic of grasping an object like spider-lime. Its function is sticking like meat put in a hot pan. It is manifested as not giving up, like the dye of lamp-black. Its proximate cause is seeing enjoyment in things that lead to bondage. Swelling with current of craving, it should be regarded as taking (beings) with it to states of loss, as a swift-flowing river does to the great ocean."

In the Visuddhimagga (XIV, 162) lobha is defined as follows: "They are greedy or if it itself is greedy or it is just the mere being greedy: thus it is greed. Greed has the characteristic of grasping an object like spider-

The Tathāgata with his all-seeing insight has pointed out this and the other two roots of evil for the good of the many, for the welfare of the world. (D. III, 210). Lobha always leads men to decline (hānabhāgiya) whereas its opposite alobha leads to distinction (visesabhāgiya; D III, 275). It is always an obstacle and a veil that blinds man’s vision from the correct doctrines (lobho dhammānaṁ paripāno: S I, 16) for his mind being overcome by greed always hankers after more and more accumulations without knowing that suffering too is always following him.

Lobha may be for material things (e.g. wealth in the form of property) or immaterial things such as fame, praise, leadership, enjoyment etc. Whatever be the object the greater is man’s greed and the more difficult will be his battle in life. A person who had experienced this fact once came to the Buddha and admitting that he was guided by greed wanted to know as to the way in which the voyage of life (yātra) could be managed with less trouble. To This the Buddha’s answer was that by cutting off desire for enjoyment and other varieties of desire grounded on lobha and thereby ridding oneself of craving one could continue the journey of life with ease (S I, 16 = 63). The weight of life becomes unbearable when overcome by lobha (Nd I, 16). By the removal of lobha the weight is removed. And insight is thereby attained (Sn 706) and Mara vanquished (S I, 123)

The fact that lobha leads to other forms of evil need not be emphasised. All the major evil actions in the world, as summarised under the ten-fold evil course, (dasakusala kamma) are rooted in lobha and hence it is responsible for the production of the entire chain of causal action (kamma-nidāna) to which the samsāric individual is inevitably bound; by removing lobha one can escape the process (A V, 261). It is the root cause of all the lawlessness among men (J IV, II), for it is the greedy state of the mind that tempts people to steal other’s property (patthanalakkhāno lobho: tassa adinnādānaṁ padaṭṭhānam: Nett 27). It is also the prime cause of oppression and exploitation of man by man (A I, 201) and hence the cause of social and economic ruin among men (A I, 160). And it was man’s greed for taste that deprived him of the free supply of food afforded by the good earth as described in the Aggaññasutta (D III, 85 ff.) This unwelcome state of the mind can be broken by the development of mindfulness which is a factor of Enlightenment (sati-sambojjhanga: S V, 87). One who practises this factor of Enlightenment is on the way to the conquest of lobha (A I, 64), and that is the sure way to complete freedom (laddhā mudhā nibbutiṁ bhūñjamānaṁ, Sn 228).

The Dhanmasaṅgītī (1059) gives a list of 100 synonyms for lobha, some of which are descriptive epithets rather than synonyms and this list contains almost all the terms that express tapaḥ in its diverse forms as understood in Buddhist psychology. See also ABHIJHĀ

A. G. S. Kariyawasam

LOGIC. The use of logical reasoning is a significant characteristic of the teaching of the Buddha. Apart from it, the development of systematic logic in India owes much to Buddhist logicians. The contribution of Buddhist logic in shaping the nature of Indian logic in general has been widely acknowledged. Therefore the present discussion needs to cover both the historical and the philosophical aspects of the subject. For that purpose the discussion will be organized under three main sub-topics: (i) history of Buddhist logic; (ii) logical reasoning in early discourses; and (iii) the systematic Buddhist logic.

History. According to Satischandra Vidyabhusana (History of the Mediaeval School of Indian Logic, University of Calcutta. 1909) mediaeval Indian logic is primarily Buddhist and Jaina logic. The latter being relatively a minor aspect of overall Indian logic, the middle period of Indian logic is basically Buddhist. Although it is true that systematic Buddhist logic occupies the middle period of Indian logic, the use of logical reasoning goes as far back as the original discourses of the Buddha. It seems that, by the time of the Buddha logical reasoning had become an accepted mode of rational thinking. Literary evidence belonging to the early Buddhist tradition shows that not only logical reasoning was known and practised but also that people were mature enough even to bring it under criticism.

This philosophical maturity we witness in the discourses of the Buddha did not come abruptly. It is believed that the logical tradition of India started with the Nyāya-sūtra of Aksapada Gautama who, according to Vidyabhusana, lived around the 6th century BC. The date is not quite certain. Nevertheless, it may well belong to an era several centuries prior to the common era. As in ancient Greece, in ancient India, too, logical reasoning began with the institution of debate. The
Brhadāranyaka-Upanisad records of philosophical discussions that were held between Janaka, the philosopher king and Vijnavana, the great Vedantic thinker. What originally developed as an aspect in sacrificial act, subsequently, seems to have grown to be an institution of its own. In the Caraka-Samhitā, the great sage Caraka refers to two kinds of debate; namely, debate held among fellow scholars in a friendly atmosphere (sāndhaya sambhāsa) and those held among disputants in a hostile manner (vīghṛya). Caraka divides the latter further into two kinds, namely, jālpā where two parties try to establish their own theses by refuting that of the other, and vītanda where one tries only to refute the other but does not try to establish one's own view. Caraka's analysis seems to be based on the earlier division in the Nyāyasūtra according to which debate (kathā) is threefold, Vāda or friendly debate, and jālpā and vītanda, more or less, understood in the sense described by Caraka (see BK Matilal: Logic Language and Reality: Indian Philosophy and Contemporary Issues. Motilal Banarsidas, Delhi 1985. pp. 1-22. for a comprehensive discussion of debate in the Nyāya tradition).

Buddhist discourses testify to the fact that there was a philosophically mature society by this time. The discourses have references to many Śramaṇas and Brahmins who went on arguing with each other in order to establish that one's own view alone was true and those of others' were false, for they held mutually contradictory views (ānāmā śāhassass uṣa vipaccanika vādā M. I. p. 402). The Brahmājāla sutta of the Dhīghakāyikā records 62 religious and philosophical views which Śramanas and Brahmins were clinging to. The holders of such views maintained that theirs' alone are true and what belong to others are false, and it is said that they did so on the ground of logic (takka ca ditthiśu) pakappayitvā - saccaṃ (musāti dvayadhammam'ātubhi Sn. p. 173). On the role of debates in the development of logical reasoning in India, AK Warder says; In India the main stimulus to the development of logic came from the practice of debating, great public debates in which rival philosophical schools engaged in argument under the chairmanship of an umpire and sought to uphold their doctrines and refute their opponents (Indian Buddhism. Delhi 1991 p. 416).

In the well-known Kalāma sutta the Buddha admonishes Kalāmas not to accept any assertion on the ground of 'takka' (logic) (mā takkahe tu) or 'naya' (method) (mā nayahe tu). We will discuss the precise meaning of these terms later. What is significant to note in the present context is the critical attitude the Buddha held toward logical reasoning. In a well-known remark on the nature of his teaching, the Buddha says that it is 'not grasped by logic' (atakkāvacara). In another much discussed discourse in the Majjhimanikāya, the Cāṇki sutta, the Buddha classifies 'takka' as a means of knowledge which is not totally acceptable. The reason given is that an assertion may be well-argued but false, or ill-argued but true. This shows that the distinction of the validity and the soundness of an argument was well observed by the early Buddhist tradition.

The use of the much discussed four-cornered negation (Catuskoti) is a prominent characteristic in the discourses. The early discourses refer to it as (in) these four positions' (imesu catusu thinesu, S. IV. p. 380). The term 'catuskoti' occurs in the Buddhist Sanskrit literature. It is believed that the scheme was originally used by certain Śramaṇa groups, particularly the skeptical tradition of Sanjaya, and was subsequently borrowed by the Buddhists. However the early Buddhist discourses use it widely. This, again, shows an advanced stage in logical reasoning. Nagarjuna who is believed to have lived in the 2nd century A. C. uses this mode of predication. It is mainly his use of the scheme in the Mālamadhyamakakārikā in order to show the inapplicability of assertions of any form that the system has come to be known as 'negative dialectics'.

There are two works in Pali literature that could belong to a period earlier to Nagarjuna. The Kathavatthuppakorana, one of the seven Abhidhamma treatises of the Theravāda tradition is believed to have been compiled during the time of Emperor Asoka. The authorship is attributed to the great elder called Moggaliputta Tissa. The purpose has been to establish the Theravāda view as against the views held by other Buddhist sects. The style of the composition is dialogical, and the language used is the technical language used in debates. Such terms occur quite frequently. The other work is Milinda Paññāha (or the Nāgasena Bhikṣu Sūtra in the Chinese tradition) which is written in the form of a dialogue between a Greek king called Milinda (Menandros who is believed to have reigned from 155-130 A. C.) and the Buddhist monk called Nāgasena. It is believed that the book belongs to the early 1st century and there are several versions belonging to the Theravāda, Sarvāstivāda and other traditions. What is significant is that the book
represents a very advanced stage of the art of debate. The following conversation that occurs at the very beginning of the discussion proves this point:

(King Milinda said): Revered Nagasena, will you converse with me?

I will converse if you, sire, will converse in the speech of the learned, but if you converse in the speech of kings I will not converse.

How, revered Nagasena, do the learned converse?

When the learned are conversing, sire, there is a turning over and an unravelling of the subject; then there is a refutation and an acknowledgement of a mistake; distinctions and contra-distinctions are drawn; yet, thereby, they are not angered.

It is thus, sire, that the learned converse. And how, revered sire, do kings converse?

When kings are conversing, sire, they approve of some matter and order punishment for anyone who disagrees with that matter, saying, “inflict a punishment on him”.

It is widely accepted that systematic Buddhist logic started with Dinnaga. However, the beginning of the writing of manuals for logical reasoning focussing particularly on the art of debate has a longer history. For instance, in his book Pre-Dinnaga Buddhist Texts on Logic from Chinese Sources (Second edition. Madras. 1981) Tucci includes four works as representing logical treatises prior to Dinnaga: (1) Tarkasāstra (a mere fragment containing a preliminary chapter on the wrong discussion and two other sections on the jātis and on the nighrasthāna’ p. ix. Authorship is uncertain); (2) Upāyavrata, a treatise written to support the teachings of the early schools, with uncertain authorship; AK warder thinks that the book could belong to Bahusrutiyas. (Ibid. 1991. p. 417) (3) Vighravavartani by Nagarjuna. The book is basically a response by Nagarjuna to his opponents, and according to Tucci, contains refutation of the theory of Pramāṇa and the first of its kind that has come down to us and which is strictly related to Nyāya Siutra’ p. xiii. (4) Sātasāstra: the siutra portion has been written by Aryadeva, the pupil of Nagarjuna and the commentary is attributed to Vasubandhu. According to Tucci, it is a polemical work, ‘the scope of which is to establish the exact doctrine of the simya after refuting other views’ (p. xiv). The following account of Upāyavrata by Wader reveals the sophisticated character of the philosophical discussion represented by these works:

This work first offers a justification of debate as a procedure necessary to protect truth (against an opponent who suggests it promotes anger and other harmful principles). It then sets out the eight main topics of debate. The first of these is the ‘examples’ or sense data, data of experience, appealed to by debaters in constructing their arguments. Such an example must be something accepted by everyone. Very important is the seventh topic, ‘illusory middle term’ i.e., fallacies, which include begging the question, equivocation, contradicting experience, undistributed middle term, etc. The method of argument, or demonstration, which is followed (and which was more or less standard at this time for all schools of philosophy in India) is one of five steps, as follows:

1. (To prove) S is P - ‘statement’
2. (We assign the middle term) M, - ‘middle term’
3. (All) M is P as (for example) M1 - ‘example’
4. (Now) S also is M, - ‘application’
5. Therefore it is P. (Q. E. D.) - ‘conclusion’

If, of course, the opponent can adduce a counter example, say M2, which is not P (from experience), then the argument is overthrown, the statement is not established (Ibid. p. 417).

Dinnaga, the first systematic Buddhist logician, is believed to have lived around 400 A. C. He was the pupil of Vasubandhu. The dating of Dinnaga has been vexed with difficulties. It has been particularly so due to the uncertainty of dating his teacher Vasubandhu. For a long time modern Buddhist scholars have been suspicious about the belief that Vasubandhu was an idealist. However today almost all Buddhist scholars accept that there were more than one Vasubandhu. The Yogacāra Vasubandhu who was the brother of Asanga is believed to have lived in the 4th century A. C. Vasubandhu who was the teacher of Dinnaga is believed to have lived in the 5th century A. C. and his pupil Dinnaga too is included between the 5th and the 6th centuries. The traditional belief that Vasubandhu and Dinnaga were idealists has been rejected and scholars today think that both of them who wrote on epistemology and logic were Sautrantikas (see Warder 1991. p. 447 ff. for a detailed discussion on the matter). Vasubandhu has written a critique of Vaibhāṣīka in the form of a commentary on the Abhidhartakosa. Dinnaga has written a commentary on the Bhāṣya of Vasubandhu reaffirming the Sautrāntika position of the former. Among the works attributed to Vasubandhu is Vādavidhāna, apparently a book on the art of debate.
Dinnaga seems to have written a commentary on this book but both appear to be lost according to Warder (ibid. p. 448). It is believed that Dinnaga developed in a systematic manner on the logical and debate-related doctrines articulated by his teacher and produced a fully-fledged epistemology.

Dinnaga has been described as 'the father of medieval logic' by Satischandra Vidyabhusana. A large number of books have been attributed to Dinnaga. In addition to the *Pramāṇa Samuccaya* which is the greatest work of *Dīnṇāga* and unanimously accepted to have been authored by him, *Vidyābhūṣana* attributes several other logical works to him, namely, *Nyāya Pravesā, Hetu-Cakra Harāmarī, Pramāṇa samuccaya Vṛtti* and *Pramāṇa samuccaya Pravesā*. According to Warder:

> 'At least fourteen philosophical works are believed to have been written by Dinnaga, besides which he seems to be the author of some hymns in praise of the Buddha and of a commentary on some hymns by a fellow student. It is remarkable that not one of these works seems now to be available in the original Sanskrit, so thorough were the Turks in their holocaust of Indian libraries. Six of the philosophical works are available in Tibetan translations, one of these in Chinese also, and three further philosophical works in Chinese translations. Fortunately about thirty later Buddhist works on Dinnaga's doctrines are extant in Sanskrit (mostly preserved in Tibet), which include numerous quotations from Dinnaga's works. About forty-five more such works are preserved in Tibetan translations, showing the sustained study of epistemological problems in the Buddhist schools over a period of seven or eight centuries in India, before the great Buddhist universities there were destroyed under the Turkish terror (Ibid. p. 450).'

Of these works, *Hetucakradamaru*, *(Nyāyapraivesā* or) *Nyāyamukha* and *Pramāṇa Samuccaya* are Dinnaga's main philosophical contributions. *Hetucakradamaru* (Drum of the wheel of the middle terms') is a work on logical proof dealing with the validity and invalidity of the middle term in syllogism. *Nyāyamukha* (Introduction to Logic') is a work on proof and refutation. Of *Pramāṇasamuccaya*, it is reported that there are two Tibetan translations, and several scholars (M. Hattori, H. Kitagawa and HN Randle) have collected fragments from various works which quote from Dinnaga and have reconstructed his philosophy. According to Vidyabhushana the book has six chapters: (1) Perception (2) Inference for one's own sake (3) Inference for the sake of others (4) Three characteristics of the middle term (5) Rejection of credible word or verbal testimony and (6) Parts of a syllogism. As suggested by the names of the chapters themselves, in this final grand work more emphasis has been given to epistemological issues.

If Dinnaga is considered the initiator of Buddhist logic, Dharmakirti is the one who brought it to the culmination. It is believed that he lived in the seventh century A. C. According to Warder, he 'took up the doctrine of Dinnaga and in effect completely reworked it, though his main work is presented in the modest guise of a kind of commentary on, or rather a supplement on, the *Pramāṇasamuccaya*. His object was to meet all the criticisms and difficulties that had arisen in the field since Dinnaga's pioneering work. He was so successful that his seven treatises, regarded as a kind of 'canon', were afterwards taken as the basis for the study of the theory of knowledge by most Buddhist logicians, and Dinnaga was comparatively neglected. Certainly, he is one of the world's greatest philosophers in his own right (Ibid. p. 470). Dharmakirti's main work, *Pramāṇavārttikā* has four chapters: (1) Inference for one's own sake (2) means of knowledge (3) Perception and (4) inference for the sake of another. This is not to follow the chapter arrangement of Dinnaga exactly. In addition to this main work Dharmakirti had written six other works. They are (1) *Pramāṇa-viniścaya*, an abridgment of the first work, (2) *Nyāya-bīṇḍu*, a further abridgment of the same work, (3) *Hetuvindu*, a short classification of logical reasoning, (4) *Sambandhaparākṣā*, an examination of the problem of relations, (5) *Codanā-prakarāna*, a treatise on debate, and (6) *Sāntānāntara-siddhi*, a treatise of the reality of other minds. It is believed that the main work *Pramāṇa-vārttikā* is the body of the doctrine of epistemology and the other six are the six feet. As in the case of seven prakaraṇas of the Abhidharma, it is believed that the new study, with its seven works, was thought to become the canon of the new piṭaka. According to Stcherbatsky, 'evidently, Dharmakirti thought that the study of logic and epistemology has to replace the ancient philosophy of early Buddhism' (Buddhist Logic. Vol. I. First Indian Edition. 1993. p. 37).

Ever since Dharmakirti, it is true to say that the entire study of Buddhist logic was focussed on his works, particularly his main work. *Pramāṇa-vārttikā* Dharmakirti himself wrote a commentary only on the
first chapter of his book. The task of writing a commentary on the rest of the three chapters was assigned by him to his pupil Devendrabuddhi. The Tibetan tradition has it that only the third attempt by Devendrabuddhi received the reluctant approval of the teacher. According to Stcherbatsky, there developed three schools of interpretation of Dharmakirti. The philological school of interpretation owes its origin to Devendrabuddhi who was more concerned about knowing the exact meaning of what has been said in the Pramāṇa-vārttika. His pupil Sākyabuddhi and also Prabhābuddhi are included in this school. The origin of one other school which is described as Cashmere school (according to the place it flourished) or philosophic school (according to the character of its interpretation) is attributed to Dharmottara who is highly regarded by the Tibetan tradition and was a kind of a commentator, with a very high capacity, whom Dharmakirti would have wished to have. He did not comment on Pramāṇa-vārttikā itself but wrote commentaries on Pramāṇa-viniścaya and Nyāya-bindu which are summaries of the former. The third school which was founded by Prajnakara Gupta had as its aim the revealing of the total religious significance of Dharmakirti’s logical and epistemological endeavour. This school seems to receive inspiration from the Mahāyāna tradition, and it is an example of how Dharmakirti’s newly articulated knowledge was assimilated into the wider Buddhist tradition. The interpretative tradition that developed around this school is so vast that, according to Stcherbatsky, there developed three sub-schools around it. The Buddhist logical studies in India continued till the 12th century. By this time Buddhism in India was on the decline and during the next two centuries it disappeared completely. However the tradition started flourishing in Tibet, its new-found home.

Once Tibet became the centre of Buddhism, logic and epistemology became a very important branch of its monastic life. According to Stcherbatsky, “the chief works of Dinnaga, the great commentary on Pramāṇa-samuccaya by Jinendrabuddhi, the seven treatises of Dharmakirti, all the seven great commentaries on Pramāṇa-vārttikā (namely, Devendrabuddhi’s commentary, Sakyabuddhi’s commentary, the Tibetan commentary by Rgyal-tshab, Prajñākaragupta’s commentary and three sub-commentaries on him by Ravigupta, Jina and Yamari) the works of Dharmottara and many other Buddhist logicians, all this literature has been preserved in trustworthy Tibetan translations” (Ibid. p. 55). Stcherbatsky says that there are two stages in the logical studies in Tibet, the old phase of logical studies begins with the 12th century (the first independent Tibetan author of logic being Chaba-Choikyl-senge 1109-1169) and ends with Rendepa Zhonnu-Lodoi (1349-1412) the teacher of Tson-kha-pa (1357-1419) from whom the modern phase begins. In the second phase, in addition to the systematic works on logic, every chief monastery developed its own manuals of logic for the use of its students. The tradition of studying logic as an essential aspect in monastic life continues up to date according to Stcherbatsky.

Buddhist logical studies in ancient China and Japan do not seem to be as extensive as those in Tibet. According to Stcherbatsky, Buddhist logical works were introduced to China at two occasions: one is in the 5th century by Paramārtha who translated three works by Wasubandhu, namely, Ji-shih-lun (Tarkasāstra), Fan-chih-lun (Paripṛccha-sāstra?), To-fu-lun (Nigraha-sthāna-sāstra). But this phase of introduction did not make much effect. The second time was by Chinese pilgrim Hsuen Tsang in the 7th century. He brought Nyāya-mukha of Dinnāga and Nyāya-pravesā of Sankara-swamin, and his pupils wrote commentaries on them. One of the pupils of Hsuen Tsang, Kwei-chi wrote six volumes of commentary to Sankara-swamin’s Nyaya-pravesa and this work which is the standard logical text in China is known as the ‘Great Commentary’, “Pramāṇa-samuccaya, the fundamental work of Dinnaga, as well as the seven treatises of Dharmakirti and the enormous literature of commentaries with their division in schools and sub-schools is quite unknown in China and Japan”: says Stcherbatsky (Ibid. p. 54). Logical studies went to Japan in the 7th century. It was the Japanese monk called Dohshoh who studied Buddhist logic under Hsuen Tsang and established a school of logicians called South Hall on returning to his country. Subsequently in the 8th century a monk called Gembo took the Great Commentary and other logical works from China and established another school of logical studies which came to be known as the North Hall. From Tucci’s work referred to earlier, we know that some pre-Dinnaga works of logic were translated into Chinese prior to the introduction of formal logical works. It seems that, in the early periods, logical studies were not a very attractive branch of study in these two countries with otherwise very high Buddhist academic activity.

Modern studies in Buddhist logic owes its origin to a few pioneering scholars who braved through the mass of almost unintelligible and untranslated origi-
nal Tibetan, Chinese and Sanskrit materials and started reconstructing the lost tradition. Satischanda Vidyabhusana who went to Tibet and researched on the Buddhist literature including that of the Buddhist logical studies, is a pioneer in the field. His History of the Mediaeval School of Indian Logic was first published in 1909 by the University of Calcutta and contains a wealth of information though much has been revised by later scholars. Rahula Sankrityayana is another Indian Buddhist scholar who made several trips to Tibet at the turn of the century and brought a large number of manuscripts to India and started editing and publishing them. His publications of Dharmakirti’s works has been commented on by JW de Jong (A Brief History of Buddhist Studies in Europe and America. Varanasi. 1976. p. 73). One of the early European scholars who contributed to the field is Louise de La Valée Poussin (1869-1938) who edited the Tibetan text of the Nyāya-bindu together with Vinitadeva’s commentary (Bibliotheca Indica. Calcutta. 1907-13). Theodore Stcherbatsky published a Russian translation of Dharmakirti’s Nyāya-bindu and in 1909 he published a study of Buddhist logic in Russian. It is an enlarged version of this that appeared in English in two volumes as Buddhist Logic in 1930-32. Giuseppe Tucci’s Pre-Dinnaga Buddhist Texts on Logic from Chinese Sources was published in 1929. Fragments from Dinnaga (Royal Asiatic Society, London. 1926) by HN Randle is an effort to collect and interpret the fragments from Dinnaga’s Pramāṇa-samuccaya which Vidyabhusana had attempted earlier. More recently E. Frauwallner and Hattori Masaki have attempted to reconstruct Dinnaga’s epistemology and logic (see de Jong ibid. p. 73 for bibliographical details). Still there is a large number of ancient books on logic available in Sanskrit, Chinese and Tibetan languages to be edited, translated and interpreted. It is an area where considerable amount of research is being done and needs to be done.

An important aspect of Logic in Buddhism which has attracted the attention of scholars is the so-called tetralemma or the four cornered logic. According to Jayatilleke, St. Schayer has examined it early in the century (see KN Jayatilleke. Early Buddhist Theory of Knowledge, George Allen and Unwin, London 1963 p. 350 for bibliographical details). Richard H Robinson (Philosophy East and West (PEW). January 1957 and Early Madhyamaka in India and China. Delhi. 1967), KN Jayatilleke (the above-mentioned work and PEW 1967), BK Matilal (Logical and Ethical Issues of Indian Religious Beliefs. Calcutta. 1982 and other works) and more recently RD Gunaratne (The Logical Form of Catuṣkoṭi: A New Solution’ in PEW 1980) are some noteworthy scholars who have endeavored to understand the meaning of the four-cornered proposition system available mainly in early Buddhism and Madhyamaka.

Use of Logical Reasoning in the Discourses: At the beginning of this discussion we noticed that the society in India in which Buddhism arose was one with a high philosophical maturity. Inter-religious debates where philosophical and logical reasoning was the norm, were quite a common occurrence during this period. Early discourses of the Pali canon bear evidence to this. The nature of the Buddha’s participation in these events has to be understood carefully. On the one hand, we have clear evidence in the discourses to show that the Buddha did not wish to take part in debates where participants were simply trying to win over others. On the other hand, there are many instances of the Buddha’s getting into situations where he clearly has to prove his point. The examples for the first situation will be such discourses in the Suttanipāta as Duṭṭhadāthaka, Pasūra, Cudavīyāha and Mahāvīyāha. The central message in these discourses is that debates arise due to dogmatism in views and therefore one must give up such tenacious grasp on views which result in unfriendly debates. The sage (muni) has been described as one who does not enter into any controversy that has arisen (vādaśīca jātam muni no upeti’ 780). The proper attitude has been summarized in the following admonition: These disputes arise among recluses and as a result of them there is elation and depression. Seeing this, avoid disputation. There is no value in it other than the praise won thereby” (828). This disapproval of debate where logical reasoning was used in all kind of manner does not necessarily prove that the Buddha did not like logical reasoning itself. However, there is a clear statement made by the Buddha denying that he is one of traditionalists (anussāvika) who base their religious knowledge on the three Vedas or one of the reasoners (tākṣī) or metaphysicians (vimānsī). The Buddha identifies himself with those who profess the basis of a religion after finding a final and ultimate insight in this life by gaining a higher knowledge personally (sayam abhiṅnā śaccikātāvā). According to this admission the teaching of the Buddha is neither one received through the tradition nor one based on mere logical reasoning. It is significant to note that none of the basic teachings of the Buddha, the four noble truths, the three signata etc., which include his insight into human existence is
found through logical reasoning or metaphysical speculation. Why logical reasoning was not recognized as a means of gaining religious knowledge has been explained in the Sandakasutta of the Majjhimanikāya. According to this discourse, takka or logical reasoning does not necessarily guarantee the truth, for it is possible that one’s view is well-reasoned or ill-reasoned and true or false. According to this characterization the following four situations can be obtained: (1) well-reasoned truth, (2) well-reasoned falsehood, (3) ill-reasoned truth, and (1) ill-reasoned falsehood. Because the procedure is liable to error the Buddha has not taken it as a reliable source of religious knowledge. We may connect the well-known epithet ‘atakkavacara’ to this context. In the Ariyapariyesenasutta (of the Majjhimanikāya) the Buddha has described his teaching (‘dhamma’) as something outside the scope of pure reason’. According to the commentary, ‘dhamma’ in this context refers to the four truths, and they are outside the scope of pure reason for they cannot be grasped and penetrated by logical reasoning but can be grasped only by knowledge (atakkavacaro takkena avacaritabbo ogahitabbo na hoti ñāneneva avacaritabbo MA. I. p. 174). What this means is that the realization of the vision of the four noble truths is something that requires more than mere logical reasoning. By ‘ñāna’ the commentator must be referring to the ‘insight knowledge’ (vipaśanaññā) through which the actual realization of truth occurs.

This rejection of logical reasoning as a reliable source for the ultimate knowledge does not mean that it was totally rejected by the Buddha or by the early Buddhist tradition. The message of the Sandakasutta is that it could be either true of false. In so far as it leads to correct conclusions the Buddha does not seem to have rejected logical reasoning. A suggestive example occurs in the Samyuttanikāya where the comments on Ananda: Sādhu sādhu Ananda, yavatakaṁ kho Ananda takkāya pattabbaṁ anuppattāṁ tva yañ (S. I. p. 56): ‘Ananda, it is very good; you have reached as far as you can reach by logical reasoning’. The context of the statement is that a divine being comes to the Buddha and makes a statement. Judging by the content of the statement, Ananda concludes that it must be Anātha Pindika (the foremost lay supporter of the Buddha) who was born as a divine being after his death. As far as Ananda was concerned his conclusion was based on evidence he had. It is this procedure that is referred to as ‘takka’ or logical reasoning, and it has been clearly accepted as a means with a limited validity.

In this connection it is important to note that the Buddha had not shunned discussion with people who came to argue with him on matters of religious importance. In these discussions it is generally true to say that the Buddha was more concerned about establishing his own view than disproving those of others. But whenever it was necessary to show the futility of the meaningless of the others’ views the Buddha was not hesitant to do so. A good example occurs in the Buddha’s discussion with Upali, a lay supporter of Jaina Mahavira (Upālissutta: Majjhimanikāya I. pp. 371-387). In the course of the discussion Upali announces that, in Jaina’s view, physical act is more weighty than mental or verbal acts. The Buddha asks a few simple questions from Upali in answering which he contradicts himself and commits to the position that mental acts are more weighty. At this juncture the Buddha says: what you said earlier does not connect with what you said earlier and vice versa (na kho te sandhiyati purimena vā pacchimām pacchimena vā purimā). The demonstration of this self-contradictory situation is taken as defeating conclusively the opponent’s argument. In the Buddha’s discussion with Ambattha (Ambatthasutta: Dighanikāya I. pp. 87-110) too there is a similar occasion where Ambattha is warned against trying to escape from the logical consequences of his position in the following words: Ayam kho pana te Ambattha sahadhammiko pañho āgacchati, akāmā vyākātabbo. Sace na vyākarissasi, aṭṭhena vā aṭṭham paṭicarissasi, tuññhi vā bhavissasi pakkamissasi vā ettheva te sattadhā muddhā phalisissai (p. 94): ‘Ambattha, I have a fundamental question for you, which you will not like to answer. If you don’t answer, or evade the issue, if you keep silent or go away, your head will split into seven pieces’. (Thus Have I Heard. Maurice Walshe. Wisdom Publication. London. 1987. p. 115).

KN Jayatilleke has noticed that almost all the arguments used in the discourses against the holders of different views is of the form of modus tollens which is to demonstrate that the opponent’s view results in a proposition which is obviously false. In the Cūladukkhakhandhasutta of the Majjhimanikāya (I. pp. 91-95) the Buddha shows to Niganthas that if their practice of undergoing suffering in order to destroy the past karmas is meaningful, those who have entered religious life under Jaina must be those who were born as human beings due to their bad past karmas (evaṁ saṁte āvuso niganthā ye loke luddhā lohitapānino kuriṇaṁ maṇṇaṁ maṇṇasāsena paccājāta te niyāṁyethu pabbajantīti p. 93.) The implication is that since all
those who enter religious life in Jainism cannot be of that character, the practice must be misguided. Among the examples discussed by Jayatilleke, one from the Therigāthā (which also occurs in the Dīghanikāya) is clearer: If water-baptism can free one of evil karma (p) then the fishes, tortoises, frgos etc. .... straight to heaven will go (q) (op. cit. p. 409). Since q is obviously false p is false, too.

The Buddhist discourses refer to instances of 'two pronged questions' (ubhatokotikam paññam) put forth to the Buddha. One such instance occurs in the Abhāyārājakumāra Sutta (M.I.p.392-6). Abhāyarāja's question is as follows: Would the Tathāgata make statements which are displeasing and unpleasant to others (=p)? If yes, then how is he different from the ordinary individual who makes similar statements (=q)? If the Tathāgata would not make statements which are displeasing and unpleasant to others (r), then why has he pronounced about Devadatta that he is doomed to hell(=s)? It is clear that the intention of the questioner is to commit the Buddha either to q (that he is not different from an ordinary person) or to r (which is equal to accepting that he is a liar). The Buddha escapes from the dilemma by admitting p (that he uses unpleasant words) in a qualified sense. The example is illuminating not only for the awareness of a complex logical rule it betrays, but also for the Buddha's refusal to yield to the rigidity of linguistic concepts and the rules of logic themselves.

The above example shows that the early Buddhist tradition did not take logical rules based on strict true-false dichotomy as inviolable and sacrosanct. Nevertheless, the rational thinking which is characterized by clear demonstration of advantages and disadvantages in a given situation has always been upheld. In the Apānānakasutta (M. I. pp. 400-413) the Buddha compares the advantages and the disadvantages of accepting and rejecting survival of life and moral responsibility and demonstrates that it is always more advantageous to accept the two views rather than rejecting them. The argument has been addressed to a group of open-minded people who do not wish to believe in things beyond their immediate perception. The entire argument rests on the assumption that any rational person will like to maximize one's opportunities of happiness.

The instances of use of logical reasoning in the Abhidhamma seem to be more technical than those in the discourses. According to some interpreters, the Kathāvātthu, one of the treatises belonging to the Abhidhamma Pitaka contains even more advanced forms of logical reasoning. The entire book has been presented as a dialogue between the Theravādin and those who held views different from him, namely, those who belonged to Buddhist sects other than the Theravāda. The language used contains certain technical terms used in the professional debates in which logical reasoning was employed. For instance 'niggaha' refutation, 'patikamma' rejoinder are two such terms that occur frequently. More importantly, scholars like KN Jayatilleke have shown that, if the statements in the Kathāvātthu are interpreted as dealing with propositions and not with terms, the author of the book shows that he knew the two theorems of propositional calculus namely, the rule of implication (p→q = -(p. -q) and contraposition (p→q = -q→-p) Jayatilleke. Op. cit. p. 415). More recent scholars like DJ Kalupahana have argued that this way of interpretation is wrong and have suggested that the relevant statements have to be understood as efforts to clarify the relationship between the two key concepts 'sacchikatha' and paramanatha' (truth and reality) (A History of Buddhist Philosophy: Continuities and Discontinuities. University of Hawaii Press, Honolulu. 1992. p. 135).

Apart from the logical reasoning of this nature, early Buddhist literature is quite outstanding in its exercises in conceptual clarification and analysis. Conceptual analysis is a very significant aspect in the teaching of the Buddha. KN Jayatilleke thinks that the Buddha claimed himself to be an analyst and not one who makes categorical statements (op. cit. p. 278). However, as Y. Karunadasa has pointed out, in his analysis Jayatilleke has not noticed a very important limiting term 'ettha' which means 'here' or 'in this context' Thus the statement has to be understood not as the Buddha identifying himself with one who makes analytical statements exclusively but one who makes both kinds of statements depending on the situation. In the same discussion the Buddha admits that he has made both categorical and non-categorical statements. Thus although it is true that the Buddha did not identify himself to be an exclusive analyst, analysis, clarification and classification of concepts has been key characteristics in the discourses of the Buddha. One can find plenty of examples for this in a discourse like Saccavibhaṅgasutta where all the key concepts related to the four noble truths have been analyzed and explained.
Connected with conceptual clarification is the use of definitions which is a very important characteristic in early Buddhist literature. The Buddhist mode of definition does not follow the Brahmanic method of defining concepts or things according to genus and species, for such a definition would go against the idea of non-substantiality which is a fundamental teaching in Buddhism. In early discourses we find definitions which are made by way of basic character (lakkhana) of what is defined. It is in the later commentarial literature that we find a fully worked out theory of definition with four aspects: lakkhana (characteristic), rasa (function), pacchajatthana (antecedent condition) and padatthana (resultant condition). In the early discourses we find definitions which are not obviously etymological or historical. For instance, in the Dhammapada, the three concepts, ‘brāhmaṇa’, ‘samaṇa’ and ‘pabbajita’ have been defined in the following manner: ‘Because he has discarded evil, he is called a brāhmaṇa; because he lives in peace he is called samaṇa; because he gives up the impurities, he is called a pabbajita-recluse (bāhitapāpoto brāmāṇo samacariyā samaṇoti vaccati - pabbājayamattano matam tasmā pabbajjitoti vaccati 388). These are obviously not historical or etymological definitions. The reason behind doing so has to be understood not necessarily as resulting from ‘the absence of a clear conception of definition’ as KN Jayatilleke has suggested (op. cit. p. 297), but as a way of fulfilling a religious requirement. In the case of the Buddha it is clear that he had to use the already available language in order to express his radical religious views. In this endeavor he had to re-define these terms underscoring the new meanings attributed to them. One way the Buddha challenged the existing social, religious and philosophical systems was to question the meanings, which were held in high esteem and believed to be unchanged, attributed to the key concepts. The above example amply demonstrates this. This shows that for early Buddhist discourses, defining terms was not a precise grammatical function but a religious requirement. In a system which has anatta (non-substantialism) at its heart there cannot be one rigid way of defining.

The Buddha’s attitude to language has been aptly summarized in the following statement: Itimā .. loka-sāmaṇā loka-niruttātiyo loka-vocharā loka-paññattiyo yohi tathāgato vocharati aparāmasam: ‘These are general agreements, general ways of speech, general uses and general conventions which the Tathāgata would use without clinging’ (Dīghanikāya I. p. 202). In this very statement several terms (sāmaṇa, niruttātiyo, paññattiyo and vocharā) have been used to refer to language, and a closer look would show that they are not strictly synonymous, nor are they totally different from one another; a collection of more or less overlapping terms carrying the meaning while retaining the complexity of experience. This is a characteristic that can be seen regularly in the early discourses.

Abhidhamma Piṭaka is a good example of conceptual analysis and classification. In this regard the work to be studied is the Yamaka, one of the pakaraṇas (treatises) belonging to the Abhidhamma Piṭaka. The entire Yamaka is constituted by pairs of statements which are meant “to convey to the reader the exact logical boundaries of important concepts in the light of their actual technical usage” (KN Jayatilleke, Op. cit. p. 309). For example the following analysis is intended to clarify the boundaries of the two concepts, ’rupa’ (form) and ’rupakkhandha’ (aggregate of form):

Rupan rupakkhandho? (Is rupa rupakkhandha?)
Pinaya rupan satarupan rupam na rupakkhandho; rupakkhandho rupançevasa rupakkhandho ca: (What is pinaya (attractive) and satarupa (pleasant) is rupa but not rupakkhandha; rupakkhandha is rupa and is also rupakkhandha).
Na rupakkhandho na rupanti? Anantā: What is not rupakkhandha is also not rupa?
Pinaya satarupa na rupakkhandho, rupam. Rupançeça rupakkhandhaça thaptavā avasesā na eva rupam na ca rupakkhandho (Pinaya and satarupa are not rupakkhandha, but rupa. Apart from rupa and rupakkhandha, the rest are neither rupa nor rupakkhandha). (See also Buddhist Analysis of Matter. Y. Karunadasa, Colombo 1967. pp. 4-5 for a penetrative discussion.)

In this manner all the key concepts in the Dhamma have been analyzed in relation to other related concepts. The exercise attests to the existence of a very advanced sense of precision and the limits of the concepts among the early Buddhists.

In discussing the early Buddhist application of logical reasoning one cannot ignore the four-fold predication which later came to be known as ‘catuskoti’ or the four-cornered predication or negation in the later Buddhist tradition. Before we hear much about the systematic development of the Brahmanic logic we come across many Sāmānaya traditions which adopted systems other than the bivalent propositional system. In Buddhist literature, for example, Sañjaya
Belatthiputta, the skeptical philosopher among the famous six contemporaries of the Buddha, has been attributed with a five-fold system of negation: evampi me no=I do not say so; tathā pi me no=I do not say thus, aṁaññathā pi me no=I do not say otherwise; notipi me no=I do not say no; and no notipi me no=I do not say ‘no, no’, KN Jayatilleke has shown that this five-fold negation can be interpreted as negating the four positions adopted in the Catuskoti, namely is, is not, both is and is not and neither is and nor is not (p. ~p, p. ~p, ~(p. ~p). What is significant in this assertion is that it shows that the four-fold predication was initially adopted by Sañjaya and the skeptics and the Buddhists shared this scheme with the skeptics for, in some very important respects, early Buddhism too shares some of the attitudes of the skeptics. On somewhat similar (but not identical) grounds, the Jainas held syādvāda or anekānta-vāda (a system of non-categorical assertions) which is characterized by not making any conclusive assertion. Being sramanas and not holding a dogmatic attitude to truth Buddhists adopted the four-fold predication in making claims. The distinction in the Buddhist system is that it is not relativist as in the case of the Jainas and not inconclusive as the case of the skeptics. Even though the Buddhists used the four-fold predication it is a two-valued system in which only one assertion is true and the other is false. However this is not applicable for claims on certain matters on which we are not in a position to assert any position. In such situations all the four claims may be rejected as not applicable. An example of this sort of claims is the well-known four positions regarding the after-death existence of the liberated person (arahant). They are: does the Tathāgata exist, does not exist, both exist and does not exist and neither exists nor does not exist after death. When these questions were raised the Buddha rejected all the four positions as irrelevant (na upeti). The reason given is the following: since a liberated person is not truly obtained even in this very existence itself, how can he be considered as existing after his death?

After the early Buddhist discourses. It is in Nagarjuna that we find extensive use of catuskoti. The fact that Nagarjuna has used the four-cornered logic in order to negate all the four positions, has given the name ‘negative dialectic’ or ‘four-cornered negation’ to the system. Many have tried to understand Nagarjuna’s use of the system. In particular the rejection of the fourth position has been understood as indicating a rejection of any possibility of verbal expression. For instance, BK Matila has described this fourth one as ‘leap negation that asks us to look beyond’ (Logical and Ethical Issues of Indian Religious Belief, Calcutta, University Calcutta Press. 1982. P. 124). Matilä’s opinion is that the rejection of the forth position is an indication towards what is ineffable in religion. However, judging by the nature of the claims, what seems more plausible is that the forth position was rejected on the ground of the limits of empirical knowledge and the meaningfulness of the concepts used. In fact an examination of Nagarjuna’s use of the catuskoti shows that his application is confined to the kind of themes either that were set aside by the Buddha as unanswered or themes similar to them in nature (for example: at XXII-11 the four positions empty etc. with regard to Tathāgata, at XXII-12 eternal etc. with regard to the peaceful state (nirvāna), at XXV-15, eternal etc. with regard to Nirvana, at XXV-17, 18 again exists etc. on liberated person, at XXV-21 on finite etc. and eternal etc., at XXV-22, 23 finite etc. and eternal etc. rejected on everything and at XXVII-29 again eternal etc. are rejected). Therefore by rejecting all the four positions as not applicable Nagarjuna is not making any new use of of the catuskoti but he simply seems to be following the early Buddhist example. (For a fuller discussion, see Nirvāna and Ineffability: A Study of the Buddhist theory of Reality and Language, Asanga Tilakaratne. Colombo. 1993. pp. 125-134).

Apart from his use of catuskoti Nagarjuna’s most important philosophical as well as religious contribution is to reveal the erroneous character of dividing reality into mutually contradictory (eg. going and not going) or contrary (eg. going and standing still) binary categories and attributing substantiality to them. By showing that these concepts are always other-dependent Nagarjuna also showed that they are empty of sva-bhāva, a concept used by certain later Buddhists to attribute substantiality to reality which is soul-less (anatta).

Systematic Buddhist Logic: Systematic Buddhist logic starts with Dinnaga. In his Pramāṇa Samuccaya (Compendium of the Theory of Knowledge) (PS) Dinnaga discusses the following subjects: perception, inference (for oneself and for other), the middle term (hetu), verbal testimony and syllogism. The main topics discussed by Dinnaga become the content of subsequent logical studies of both Buddhists and others. With Dinnaga the concept of ‘pramāṇa’ or means of knowledge starts occupying the centre of the stage of Indian logic. The logic itself become known as the ‘pramāṇa-sāstra’ or the study of means of knowledge, marking a major shift in emphasis from its earlier subject matter, syllogism, proof and debate.
Perception: Buddhists reject the Brahmanic view of four means of knowledge, namely, perception, inference, analogy and sacred word. Instead, Dinnaga asserts that there are only two means of knowledge, namely, perception and inference. This does not go against Dinnaga's description, in the dedicatory verses, of the Buddha as being pramāṇa himself for he is the very illustration of these two means. Why there are only two means of knowledge is because there are only two objects to known, namely, own (or particular) characteristic (sva-lakṣāṇa) and universal characteristic (sāmānya lakṣāṇa) which are known respectively by perception and inference. According to the Buddhist view, there is nothing else to be known. According to this view, except what is known by perception everything else such as memory, recognition or any attempt to connect perception and inference come under inference. Memory and recognition involve what is already known. Any supposition of a new means to know what is already known will lead to infinite regression.

Dinnaga defines perception as 'that which is free from conceptual thinking, unconnected with name, genus etc. (pratyākṣaṃ kalpanaḥ pūraham nāmajātyādāyasamayatam). In perception, it is held, there cannot be any thinking for it is the pure sensation of a sense datum. The Theravāda definition of viññāna (consciousness) as 'dassana-matta' (mere seeing) seems to correspond to this view. This has been further described by the example 'seeing blue' (nīlam vijānāti) as against 'seeing as blue' ('nīlam iti vijānāti'). In the first instance it is an awareness of mere sense datum, and in the latter, it is to perceive through a mental construction. The idea of this way of defining is to exclude any room for error in the process of perception. Dharmakīrti who commented on Dinnaga refined this definition by adding 'free from error' ('abhṛtāntaṃ') as a characteristic of perception. Dinnaga does not seem to have thought that such a specification is necessary for perception cannot be erroneous by definition.

Perception is four-fold, namely, perception of the (five) senses (indriya-jñāna), perception of mind (mano-vijñāna) being the knowledge of one's internal psychological characteristics, self-consciousness (ātman-samvedanā) being the knowledge of one's own knowledge, and knowledge of one who contemplates (yogi-jñāna), when not interfered by anyone.

Inference: Inference (anumāṇa) is two-fold, namely, inference for oneself (svārtha-anumāṇa) and inference for others (parārtha-anumāṇa). It is believed that this distinction was first made by Dinnaga. It is said that the former is knowledge based (jñānātmaka) and the latter is word-based (s'abdātmaka). The inference for oneself is to infer something through a characteristic or cause (linga or hetu) belonging to that object. For instance, 'that hill has fire' is determined by the presence of smoke which is the characteristic of the reason. The reason has to fulfil three requirements, and these have been described as rules of logical reasoning. They are: The reason must be present in the subject of the conclusion (hill, in this instance) (paksasatva), it must be present in similar instances (sapakṣasatva) and it must be absent from dissimilar instances (asapakṣa-asatva). In order for inference to be complete these requirements need to be fulfilled.

The reason or the characteristic is three-fold, namely, identity (svabhāva), effect (kāya) and non-perception (anupalabdhi). 'Identity' is to infer the presence of an object by observing an inseparable characteristic belonging to the object. An example is: 'This is a tree. Because it is a Mango' (tree). 'Effect' is to infer the presence of an object by observing the presence of its effect; e.g. Here there is fire. Because there is smoke. 'Non-perception' (or 'negative syllogism' as Stcherbatsky puts it) is to infer the absence of something through non-perception or perception of some phenomenon related to it. This has been described by Dharmakīrti as eleven-fold depending on what serves as the reason for the negative judgment.

Inference for the sake of others is to articulate reasons to produce inferential knowledge in others. What is meant by this is to present an inferential argument in the form of a syllogism. Instead of the standard five-member syllogism (of thesis (pratiñā), reason (hetu), example (udāharaṇa), application (upanaya) and conclusion (nigamana), the Buddhists rejected the last two aspects and adopted a syllogism with the first three aspects. Accordingly the syllogism adopted by the Buddhists is of the following form: (1) The hill is fiery. (2) Because it has smoke. (3) All that has smoke is fiery like a kitchen and whatever is not fiery has no smoke like a lake.

The increased awareness of the precision has resulted in an elaborated treatment of logical fallacies ('abhāsa') by Buddhist logicians. As Dinnaga has shown, logical fallacies correspond to the three logical rules mentioned above. The three rules constitute the necessary requirements of correct reasoning. If the first rule is violated the resultant fallacy is called...
'asiddha-hetu-ābhasa' or the fallacy of unreal reason. For instance, in the Buddhist view, any assertion made on 'soul' will suffer from this fallacy, for, it does not exist. Stcherbatsky describes this as the fallacy against reality. The other two fallacies which Stcherbatsky calls 'fallacies against consistency' involve violation of the second and the third rules combined. 'Viruddha-hetu-ābhasa' or the fallacy of contrary reason is to use a reason, which is against the fundamentals of one's own system of belief, to establish one's argument. For instance the following argument of a brahmin suffers from this weakness: The sounds of the Veda are eternal; because they are produced by causes. The third 'anākāṃṭika-hetu-ābhasa' or the fallacy of uncertain reason is to use a reason which cannot be supported by the second and the third rules. For instance, if one tries to establish the eternity of the Veda on the ground that it is audible, it is a characteristic exclusively owned by sound and not shared by all similar or dissimilar cases. Although the treatment of fallacies in the hands of the Buddhist logicians has been an elaborated subject, the above fallacies identified by Dinnaga remain the core.

In the heart of the Buddhist claim that there are only two means of knowledge, namely perception and inference, is the belief that there are only two things to be known, namely, particular and universal characteristics. The distinction between these two knowables is that the former is real, while the latter is not. The same distinction is maintained in the Pali commentaries. While the particular characteristic (variously referred to as 'dhamma', 'salakkhana', 'sakabhāva' and 'sabhāva') is known as a datum of sense perception ('paccakkha-ñāṇa) the universal characteristic ('samañña lakkhana') is known through inference ('anumāna-ñāna). It is also held that while the particular is real the universal is not (see The Dhamma Theory. Y. Karunadasa. Buddhist Publication Society, Kandy. 1996. p. 18). We know that Dinnaga holds that perception of a particular characteristic is devoid of any such concepts as name, species etc. This act of cognition is individual and personal. Knowledge becomes public at the level of inference which has the universal characteristic as its object. The knowledge is made public by means of language. This prompted Buddhist logicians to examine the function of language.

The standard view of language criticized by Dinnaga held that words refer to universals which are real and cognized directly in particulars. In this view, both particular sand universals are real and words directly refer to them. Dinnaga rejected this realist view and came up with a unique theory called 'apoha' or 'anyapoha' (exclusion of other) which says that words do not refer directly to objects but they do only by excluding what is other. For instance the word 'cow' refers to a particular cow by excluding all other animals that are 'non-cow'. The word 'cow' does not refer to all cows that are innumerable; nor does it refer to universal cow-ness. But it refers to a line of differentiation between a particular cow and other cows or other animals. In this view the function of words is exclusion. In other words, a word does not refer to any substance; it simply distinguishes one object from the rest. Knowledge is a result of this act of exclusion of other, and being an indirect form of knowledge, it comes under inference. Here lies the Buddhist reason behind the denial of 'sabda' or word as a separate source of knowledge.

Conclusion: From a historical point of view, systematic Buddhist logic occupies the middle period in Indian logic. It marked a significant shift of emphasis in Indian logical studies by turning what was basically a science of syllogism into an epistemological logic. In the hands of the Buddhist logicians the centre of logical studies shifted to knowledge or the means of knowledge ('pramāṇa'). This shift may be understood as determined by the centrality of knowledge (described by such religious terms as 'paññā and 'pariññā) in the Buddhist path of purification. In the Buddhist system syllogism became only a part of inferential knowledge. This relatively insignificant place received by syllogism in the hands of Buddhist logicians suggests that they were not very concerned about formalization of logic. The emphasis was not on technicality as such but on the establishment of the validity of knowledge.

The religious goal of early Buddhism is to attain purification by getting rid of defilements. The way to achieve this was through knowledge (paññāya c'assa disvā āsavā parikkhāhī honti (M 1 p. 175) 'having discerned through wisdom his cankers are eliminated'). Since wisdom constituted the ultimate means of purification the Buddhist tradition made no secret of the value it placed on it. As we saw earlier, logical reasoning was accepted only in so far as it helped reach knowledge of truth. However it was made clear that mere logicality would not guarantee the truth. This, no doubt, is a critique of logical reasoning and thereby it represents an advanced stage in human thinking. In a similar spirit the Buddhist tradition did not encourage debates motivated by the desire to win over oth-
ers. Nevertheless, it used the institution of debate in order to prove the truthfulness of the teaching, but the motivation was the discovery of truth and not victory. This is shown by the statement (quoted above) the Venerable Nagasena made at the beginning of his long conversation with king Milinda. The rules and attitudes referred to by the Thera are common features of any form of civilized debate. The subsequent Buddhist literature on the art of debate by such illustrious Buddhist teachers as Nagarjuna, Asanga, Vasubandhu, Dinnaga etc. shows clearly that the emphasis was on avoidance of error and discovery of truth but not on victory by any means.

The adoption of the four-cornered system of proposition is an example of the fact that the early Buddhist tradition was not bound by the bi-valent logical system. While the Buddhist system was neither unsure like skepticism and nor relativist like the Jaina system, it still held that certain situations may require us to go beyond the strict 'either-or' dichotomy. Although through the adoption of the bivalent logical system common to all forms of systematic logic the subsequent Buddhist logicians seem to have neglected this original Buddhist position, there is no reason to say that systematic Buddhist logic is a departure from the spirit of the early teaching.

Finally, there is a problem of interpretation to be mentioned even briefly. For a long time there was a belief among the scholars of Buddhism that Vasubandhu and Dinnaga, the pioneers of systematic Buddhist logic, were idealists. However, the contemporary scholarship has favoured the view that there were at least two Vasubandhus and the teacher of Dinnaga is not an idealist but a Sautrantika (a Hinayana school which accepted the validity of the discourses alone). In this manner, the puzzle as to how to understand the logical and epistemological ideas of these teachers in the context of the historically attributed positions to them seems to be gradually being solved. Nevertheless, the debate is far from being over. DJ Kalupahana, a leading interpreter of the Theravada tradition, has recently challenged the traditional interpretation as well as the more recent one and has explained Dinnaga's logical and epistemological theories within the early Buddhist empirical tradition (see his A History of Buddhist Philosophy: Continuities and Discontinuities. Hawai i, 1992. pp. 194-205). If Kalupahana's interpretation of Dinnaga is accepted it involves reconsidering all of his main ideas, including, in particular, his interpretation of perception. This shows, in spite of the considerably vast knowledge we have accumulated over the years on the subject, how tentative our conclusions could be.

Asanga Tilakaratne

LOGICAL POSITIVISM. Logical Positivism is a school of Western philosophy which emerged in the first half of the twentieth century on the background of the earlier positivistic philosophy of empiricists like David Hume and Mach. The term "positivism" usually associated with the philosopher Auguste Comte, was used first to designate a scientific method and its extension to philosophy. Positivism became a great and powerful philosophical movement in the second half of the nineteenth century and the first decades of the twentieth century in all countries of the western world. It attempted to rid philosophy of speculative metaphysics and to base philosophy on the date and methods of the natural sciences. Logical Positivism is the name given to the philosophical ideas put forward by the Vienna Circle. It is a philosophical movement closely linked with British empiricism. The early philosophy of Wittgenstein is believed to have influenced the theories of Logical Positivism. Leading persons associated with the movement are Otto Neurath, Moritz Schlick, R. Carnap and the main exponent of its principles in British philosophy of the twentieth century, A. J. Ayer. Some recent writings on the Philosophy of early Buddhism have proposed that certain insights of the Buddha are comparable with the theories of Logical Positivism. 1 If what they propose is valid the Buddha can be considered as a precursor to important philosophical insights that were popularized by the modern empiricist tradition of Western philosophy that wielded a considerable influence on contemporary philosophical approaches.

Critics of this view seem to contend that this is a modernist attempt to overintellectualize Buddhism which was primarily a religious system governed essentially by ethical concerns. From their point of view the attempt of the former suffers from the defect of being an anachronism.

Despite the fact that Indian thought during the time of the emergence of Buddhism was intermingled with myth there is evidence to the effect that Indian

Logical Positivism in the philosophical thinking of the late nineteenth century and early twenty century West was associated with the strong materialistic outlook which recognized the primacy of the knowledge of the natural sciences. Early Buddhism too, like the recent Western empiricist philosophers, rejected authority and revelation as well as speculative metaphysics and adopted an experiential basis in the search for truth. As a consequence certain statements of the Buddha occurring in epistemological contexts seem to agree in principle with the philosophical notions of the modern empiricists and logical positivists. However, Buddhism lacks the materialist or physicalist bias that is evident in the thinking of contemporary logical positivists, probably because unlike the latter it was more interested in applying a seemingly scientific method of investigation to matters relating to the human mind and human experience. One principal difference that is to be observed in Buddhism is the recognition of the data of super-cognitive experience (abhiññā). Abhiññā is not a means of knowledge which has gained general recognition among contemporary Western Logical Positivists. Early Buddhism conceived of super-cognitive experiences (abhiññā) too as varieties of sense experience.

Logical Positivism in the contemporary West became most well known for its denial of metaphysics and its thesis about the way in which language becomes meaningful. Metaphysical utterances were declared by the Logical Positivists not to be false but to be meaningless. Statements with no empirical content cannot be subjected to empirical verification, and if they are not mere analytic statements which are necessarily true like the statements of logic and mathematics, they should amount to nonsense. Thus Logical Positivists rejected metaphysical statements like “The Absolute is Perfect” or “God is the creator of the universe” as meaningless utterances despite their acceptability as grammatically well-formed sentences. The Buddha too seems to have adopted a similar position regarding the limits of the meaningful use of language.

A statement of the Buddha which can be interpreted in terms of the Logical Positivist theory of meaning occurs in the Sabba Sutta of the Samyutta Nikāya. Here the Buddha poses the question “What is everything?” and gives the reply that everything consists of the six senses (including the mind as the sixth) and their respective data, visible forms, sounds, tastes etc. This is followed by the remark that if anyone were to speak about anything beyond these, the consequence will be the mere utterance of empty words devoid of meaning because it goes beyond all sense experience.

The statement of the Buddha referred to above is consistent with the position he held regarding all issues of a metaphysical nature. For the Logical Positivists, metaphysics is the attempt to demonstrate that there are entities that lie beyond the reach of any possible experience. If no possible experiences can settle the question between too opponents in a metaphysical debate, the question itself is meaningless. Like the Logical Positivists (e.g. Mach and Schlick) the Buddha too distinguished between answerable and unanswerable questions. The Buddha left certain questions of a metaphysical nature unanswered (thapaniya, avyākata) because the questions themselves were lacking in any empirical meaning. In the Pali canonical literature ten such questions are enumerated as follows:

1. Is the world eternal (sassato loko)?
2. Is the world non-eternal (asassato loko)?
3. Is the world finite (antavā loko)?
4. Is the world infinite (anantavā loko)?
5. Are the life principle and the body the same (tām jīvanī tāṃ sarirāṃ)?
6. Are the life principle and body different (aṇāṃ jīvanī aṇāṃ sarirāṃ)?

2. EBT K p. 88f.
7. Does the Tathāgata (the liberated person who has attained the goal of the religious life) exist after death (hoti Tathāgato parammaranā)?
8. Does the Tathāgata not exist after death (na hoti Tathāgato parammaranā)?
9. Does the Tathāgata both exist and not exist after death (hoti ca na ca hoti Tathāgato parammaranā)?
10. Does the Tathāgata neither exist nor not exist after death (neva hoti na na hoti Tathāgato parammaranā)?

The questions themselves imply that they are of a metaphysical nature, and that no possible sense experience can resolve them. The rational metaphysicians of the time of the Buddha took definite positions regarding these questions and enthusiastically debated them with rational and metaphysical arguments. The Buddha states very emphatically that any attempt to answer these questions leads to antinomies of reason. The consequence of rational argument to resolve them, according to the Buddha, will be interminable conflict. K. N. Jayatilleke points out that the Buddha had more than one reason for refusing to answer them, one being the pragmatic reason that they do not conduct to turning away from the infatuation caused by a false sense of delight generated by sensuous objects, to dispassion, to cessation (of the cycle of misery), to tranquillity, to enlightenment, and to ultimate peace. Apart from the pragmatic reason Jayatilleke believes that the Buddha's refusal to answer them was grounded on reasons similar to those that led the Logical Positivists to reject metaphysical questions as meaningless. This position is quite consistent with the position adopted by the Buddha in the Sabba Sutta referred to above.

The reason why these questions cannot be answered is that they are logically meaningless. Jayatilleke also draws attention to the simile of the fire used by the Buddha in the Aggivacchagotta Sutta in explaining his reasons for not answering the four questions raised about the destiny of the Tathagata after death. A fire produced by the supply of fuel such as dry grass and sticks continues to burn as long as all the fuel is consumed. If, after the fire goes out due to consumption of all the fuel, one were to ask in which direction the fire went, the Buddha says that the question itself is meaningless. Jayatilleke shows a likeness with the Buddha even in the simile used by W. Wittgenstein who had a strong influence on the Logical Positivist theory of meaning. Wittgenstein says:

Thus it can come about that we aren't able to rid ourselves of the implications of our symbolism, which seems to admit of a question like "Where does the flame of a candle go to when it's blown out". "Where does the light go to?"

The Buddha, like the Logical Positivists regarded some questions as inappropriate because they are meaningless. Such questions are suggested by the grammar of the language, but give a distorted picture of the nature of reality. In a context in which the Buddha was dealing in his discourses with the nature of Dependent Origination (paticcasamuppāda) the question is raised "Who feeds on the nutrient of consciousness" (ko nu kho viññānāhāran āhāreitti)? The Buddha considers it to be an inappropriate question (na kallo pañho). The questioner assumes that there is a real subject apart from the dependently originating process. The Buddha shows that in the case of the activity of touching (phassa), sensing (vedanā), craving (tanhnā) and clinging (upadāna) the assumption of an ontological subject of the actions is misleading. The Buddha's rejection of the metaphysical notion of an enduring "I" within the factors of personality was at least partly based on the reason that such a notion of an "I" is due to being misled by the grammar of our language. On similar considerations the Logical Positivists argued against certain theories of ethics which suggested that "goodness" is a non-natural property. A. J. Ayer and R. Carnap argued that ethical utterances are devoid of cognitive meaning. According to them the grammatical form of sentences which have a real subject-predicate connection involving the predication of some real property of a given subject, may be seen in other sentences too which have no such real connection. "This flower is red" is different in logical form from "this action is right", although in grammatical form they are similar. Both Ayer and Carnap re-
jected the traditional view that ethical predicates refer to real properties. Ayer suggested that actual moral judgments are expressions of emotion, while Carnap suggested that they are commands in a misleading grammatical form. Although Buddhism agrees with the Logical Positivist objection to metaphysics on the ground that metaphysical assertions are meaningless, Buddhism and Logical Positivism do not seem to agree when it comes to the question of the nature of ethical assertions. Buddhism holds that moral judgments are cognitively meaningful and that one can make true or false statements in morality. We shall come back to this question later in the discussion.

It seems plausible to explain a number of aspects in the Early Buddhist world view in terms of its positivist outlook. Early Buddhism refrained from offering an ultimate explanation for the origin of the material universe. The question regarding origins is answered merely by a description of the cyclic process of evolution and dissolution of world systems. Instead of positing a first beginning for individuated existence the Buddha maintains that samsaric life has no known beginning, that its starting point is not known (anamataggo ayam ... samsāro, pubbā koti na paññāyati). The Buddha rejected the notion of an omniscient and omnipotent creator God on the ground that there is no empirical evidence for the existence of such a God. According to the Buddha, the utterances of Brahmanical teachers who made references to such a creator, turn out on closer examination to be meaningless (appāthiharatatam sampajjati). The doctrine of a permanent, enduring, substantial Self entity which was accepted by many religious and philosophical systems of the Buddha's time was rejected by him on the ground that there was no empirical evidence for it.

The absence in early Buddhism of two of the fundamental dogmas of metaphysical religious systems, namely the dogma of God and that of an immortal soul may be pointed out in support of the claim that its philosophical stance is comparable in this respect with that of Logical Positivism of modern times. However, one might object to this claim on the ground that Buddhist ideas about other realms of existence in the universe inhabited by non-human beings like devas, māras and brahmās, the acceptance of the doctrines of rebirth and Kamma, and of extra-sensory means of knowing (abhītiṇā) involve metaphysics. Such notions played no part in the Logical Positivism of the modern period which was so closely associated with the materialist outlook of modern science. This objection may be answered by maintaining that the notion of experience, which is fundamental to a positivistic philosophy can in principle be extended to include some of the extraordinary cognitive experiences that Buddhism conceives under abhiṇā. Such experience, it may be maintained, could reveal certain facts that are not evident to the ordinary uncultivated sense-faculties. It may be argued that the facts revealed by such means also come within the sphere of observed facts and that they are not founded on mere metaphysical speculation. In fact some researchers have, in recent times, shown an interest in an area of investigation called parapsychological, or experimental findings on the possibility of extra-sensory perception. Reasoning on similar lines, Kalupahana has pointed out that A. J. Ayer, the principal British exponent of the philosophy of Logical Positivism grants the logical possibility of the theory of rebirth.

Another question remains regarding nibbāna, the ultimate goal of Buddhism. Even Jayatilleke who made a persistent attempt to show that early Buddhism was empiricist and that it avoided reaching speculative conclusions regarding any metaphysical principles or unverifiable entities conceded that nibbāna is a transempirical state “which cannot be empirically described and understood but which can be realized and attained.” This is an interpretation of nibbāna that leads to the thesis that it is a transcendent reality which is ineffable. Both Kalupahana and Tilakaratne have rejected the ineffability thesis. References to Nibbāna in the Pali Sutras can be interpreted without the supposition of a transcendent reality. The definition that the Buddha himself repeatedly gives for Nibbāna is that it is the extinction of greed, hatred and delusion. Nibbāna is not something that exists some-
where, but something that happens to person who fulfills the requirements of the path. In keeping with the early Buddhist teachings it can be interpreted as the attainment of peace or the extinguishing of the fire of the passions.

The most conspicuous difference between Logical Positivism and Buddhism pertains to their interpretation of the logical characteristics of ethical statements. Logical Positivism maintained the meta-ethical thesis that ethical utterances are cognitively meaningless. Buddhism maintained not only that ethical knowledge is possible, but also that it is indispensable for human well-being. However, there does not seem to be any explicit commitment in Buddhism to a naturalist theory of ethics according to which moral predicates and statements are reducible to a set of empirically observable properties and a set of empirically verifiable statements or to a non-naturalist theory according to which moral predicates and statements refer to intuitively ascertainable non-natural properties. According to Buddhism, moral judgments can be justified by an appeal to considerations of human well-being and the Golden Rule criterion involving behaving towards others as one would want others to behave towards oneself.

The positivistic features of Buddhist philosophy developed in opposition to the authoritarian doctrines of the Brahmanical orthodoxy and the dogmatic metaphysics of non-Brahmanical rationalist philosophers. Yet, Buddhist philosophy was governed by a deep ethical concern. Logical Positivism in the recent Western world developed under the influence of the general ideological background which created a dichotomy between fact and value, and maintained that scientific knowledge which is value free is the only valid kind of knowledge regarding what has real existence. This crucial difference between Buddhism and contemporary Logical Positivism is sufficient to conclude that they represent two entirely incompatible world views.

P. D. Premasiri

LOHAPÁSÁDA is the magnificent nine-storeyed building put up by King Duṭṭhagāmini in the 2nd Century B.C. at Anuradhapura, Sri Lanka, for the use of the Mahāvihāra monks as a Chapter House uposathāgāra). As its roof was covered with copper sheets (copper tiles) it was called Lohapāsāda, the Brassen Palace.

The history of this uposathāgāra does not begin with King Duṭṭhagāmini. It was King Devānampiyatissa who put up an uposathāgāra at this site first, 140 years earlier, but it was not as magnificent as that of Duṭṭhagāmini.

'Tato mahābodhigāaram lohapāsādam eva ca salākaggam ca kāresi bhattachālam ca sādhukām

Then (King Devanampiyatissa) built the Mahabodighara, Lohapāsāda, Salāka House and the Eating House. (Mhv. Ch. XV Verse 205)

Apparently the author of the Mahāvamsa has made a confusion by calling the building put up by Devanampiyatissa Lohapāsāda. The term Lohapāsāda came to usage only after Duṭṭhagāmini, by reason of his covering the roof of the building he put up, with copper sheets. In the fifth century A. C., when the Mahāvamsa was written, it appears that the term Lohapāsāda has already become a synonym for an uposathāgāra. When the author of the Mahāvamsa says, that King Devanampiyatissa put up a Lohapāsāda, what he would have meant was that the king put up an uposathāgāra, though he used the term Lohapāsāda which originated after Duṭṭhagāmini covered the building (uposathāgāra) with copper sheets.

The author of the Vamsatthappakāsini apparently had noted the confusion created by calling both buildings (i.e. one put up by Devanampiyatissa and the other by Duṭṭhagāmini) Lohapāsāda, and had tried to help the reader out of the confusion.

"Lohapāsāda eva ca ti Vihāraparipunamattakam pāsādam kārāpesi, ti atho. Taṃ hi paccā viddhāṃ setvā Duṭṭhagāmini mahā rāja suvāṇakahicatam kavā kārāpesi.

(King Devanampiyatissa constructed) the Lohapāsāda, too, means that the (king) constructed a building just to complete the (requisites of a) vihāra. The King Duṭṭhagāmini later demolished it and constructed (a new) one with gold carvings." (Mhv. A. II 364)

Therefore it should be clear that what King Devanampiyatissa put up was a utility building, an essential component of a vihāra complex and it cannot be called a Lohapāsāda. The creator of the magnificent building called the Lohapāsāda was king Duṭṭhagāmini in the 2nd century B. C. In the light of
the facts stated above, it is clear that Suravira’s argument that the author of the *Mahavamsa* has attributed the construction of the Lohapasada to the King Dutthagamini in order to give him additional credit, is unfounded (Suravira. A. V. Anurâdhapura Culture, Saman Press, Colombo 1959 p. 115-116). The site on which the Lohapasada is built is a holy spot, according to tradition. The *Dipavamsa* (chapter xiii verse 55) as well as the *Mahavamsa* (chapter xv verses 36 and 37) report that Maha Mahinda Thera honoured the site by sprinkling flowers and predicated that the future Uposathâgâra would come up there. Both reports say that when the Elder Mahinda sprinkled flowers on the site, there occurred an earth tremor (pathavikampâ). What we can gather from this report is that the Elder Mahinda, who gave King Devanampiyatissa on outline of the Sacred City that would come up there, identified the site as the appropriate place for an *uposathâgâra*. The *Dipavamsa* does not give the name of the site. But the *Mahavamsa* says that the site was called Mahâmucala Mâlaka, (The place Barringtonia Acutangila tree stood) in the Mahâmeghavana Park.

The *Saddharmâlankâra* a Sinhala literary work of the 14th century (edited by Ven. Makuluduve Piyaratana Thera, Colombo 1971 p. 440) provides additional information not given either in the *Dipavamsa* or the *Mahavamsa*. The *Saddharmâlankâra* reports that the spot was sanctified by the Buddha spending a moment in trance there, on his third visit to Sri Lanka.

The *Saddharmâlankâra* does not stop there, but traces the history of the site to the time of the “Three Previous Buddhas: Kakusanda, Kölnâgâmana and Kassapa. Unlike in the case of Gautama Buddha who sanctified the place by spending a moment in trance, the previous Buddhas sanctified it by preaching the Dhamma on the spot. Accordingly Kakusanda Buddha visited the Island of Lanka which was then known as Ojadîpa and preached on the spot, which was known as “Sirisamâlaka” to 20,000 beings. When the Buddha Konagamana appeared in the world, the island was called “Varadîpa”. Konagamana Buddha visited the island and preached at the site, which was known as Nâgamâlaka enlightening 20,000 beings. The Buddha Kassapa, too, is said to have visited the island, which was then known as Maṇḍadîpa, preached at the Lohapasada site then known as Asokamâlaka, helping 4000 beings to understand the Dhamma.

The author of the *Saddharmâlankâra* has not indicated the source of the additional information. The *Saddharmâlankâra* is based on the Pali treatise *Rasavâhini* of Ven. Vedeaha, also assigned to the 14th century. But the *Rasavâhini* does not contain the said additional information. But the *Rasavâhini* is said to be a revision of a Pali translation made from an original Sinhala compilation by Ratnapala Thera of Guttavamka Pirivena of the Mahâvihâra (*DPPN* Vol. II 718). It is possible that the additional information were contained in the Ven. Ratnapâla’s work, which formed the basis for the *Rasavâhini*. The author of the *Rasavâhini* Ven. Vedeaha, did not wish to include this additional information, but the author of the *Saddharmâlankâra* who belongs to the same period, took the information direct from Ratnapâla’s work to which he too had access. There is also a possibility that the Sihala Âthakathâs on which Ven. Ratnapâla based his work, were still extant. Therefore it is possible that the author of the *Saddharmâlankâra* took the additional information direct from the Sihala Âthakathâ.

As stated in the *Mahavamsa* (Chapter XXVII verses 1 ff) king Dutthagamini heard of the prediction made to his grandfather by the Elder Mahinda, that his grandson would put up an *uposathâgâra* in the future on the spot. Searching in the place he came across the gold plate where the prediction was engraved. It is said that the king thoroughly rejoiced and applauded and summoned the monks and told that he would put up a building, similar to a divine mansion, for them (*vimânatulyam pâsâdayam kârayissiyo va aham, Mhv. Ch. XXVII verse 9*). The king requested the monks to provide him with a suitable (building) plan from the Devaloka (“dibbavinâman pesetvâ tadâlekhan, dadâtha me”. Mhv. Ch. XXVII verse 10). The monks sent eight arahants to the devaloka. The arahants having seen the Ambalatthikâ pâsâda, the mansion of the nymph Birâni, copied its plan with vermillion on a cloth and gave it to the king. It is interesting to note here that as far back as the 2nd century B. C. inhabitants of the island were advanced in the field of architecture and preparing plans for the constructions. It is also clear that at this instance the monks prepared the plan for the Lohapasada, which indicates that the monks were conversant with architecture too. When the construction commenced the king was apparently selfish and wished to accrue all the merit for himself. The king proclaimed that no work shall be done here without payment (*amâlakâm kamâm eṭṭha na, kâtabbam Mhv. verse 23*). The king kept 800,000 gold
LOHAPĀSĀDA

pieces (hiraññāni), and food and clothes at the gates, assessed whatever the work done and paid the workers in gold and kind. The building was constructed similar to the drawing (alekhakulyam kāresi lohapāsādam uttaman, Mhv. Ch. XXVIII verse no. 20). Since the building was covered with copper tiles, it was known as Lohapāsāda ("tambalohitthakāh 'eso pāsādo chādito ahū, lohapāsāda vohāro tena tassa ajāyata" Mhv. Ch. XXVIII verse 42.

he Mahāvamsa (Chapter xxvii verses 24-42) provides a detailed description of this nine storeyed building. Geiger renders the Mahāvamsa description of magnificence of the Lohapāsāda into English thus:

"The pāsāda was four sided, (measuring) on each side a hundred cubits, and even so much in height. In this most beautiful palace there were nine storeys and in each storey, a hundred window chambers. All the chambers were overlaid with silver and their coral vedikās were adorned with manifold precious stones, gay with various games were the lotus flowers on the (vedikās) and they (the vedikās) were surrounded with rows of little silver bells.

A thousand well-arranged chambers were in the pāsāda, overlaid with various gems and adorned with windows. And since he heard of Vessavana’s chariot, which served as a car for the women (Buddhadatta objected to) was even of gold; what need then to speak of the other utensils in the palace? Surrounded by a beautiful enclosure and provided with four gateways the pāsāda gleened in its magnificence like a hall in the heaven of the thirty-three gods. The pāsāda was covered over with plates of copper and thence came its name “Brazen Palace”. (Geiger Wilhelm The Mahāvamsa or The Great Chronicle of Ceylon published by the Govt. of Ceylon 1950 p. 184-85)

he ivory throne referred to in this description reminds us of the symbol that represented the Buddha before the Buddha statue was invented, when the Lohapāsāda was constructed in the 2nd century B.C. Representing the Buddha with a statue was not practiced yet. It is possible that the empty throne represented the Buddha before the advent of the Buddha statue. In the alternative it would have been for the preachers of the Dharma.

After the completion of the pāsāda the king covered an assembly of monks. The monks assembled as in the case of Maricīvaṭi (vihāra) consecration festival. he floors of that 9 storeyed mansion were allocated to the monks according to their learning and spiritual attainments. ordinary monks (puthuijana) stood in the first story and the bearers of the tipitaka (tipitakā) in the 2nd floor. The Sotāpanna etc. were accommodated from the 3rd floor onwards. According to the degree of attainment the upper four floors were adorned by the “arahants”.

Although it was primarily meant for an uposathāgāra or a chapter house, it had been used for several purposes in the course of its long history. Among the many other purposes it had been utilized, its use as a preaching hall is prominent as seen in the Pali commentaries and other literary sources. Lohapāsāda had been a popular preaching hall for eminent monks.
As stated in the Vamsatthappakāsini (Vol. II 552-553) Ven. Cittagutta, resident at Ambapāsāda of Angakolagāma of Dakkhinadisābhāga, while yet being a puthujjana (ordinary monk) became an expert preacher. One day he was preaching to an audience of 12,000 monks on the Rathavinīta Sutta on the ground floor of the Lohapāsāda. In the course of his discourse he tried to describe the beauty of the relic chamber of the Mahācetiya. But he felt that some did not believe him. Consequently he was discouraged and shortened the description. An arahant by name Mahātissa endowed with the analytic insight (pabedha patisambhidā patto) and the six apperceptive knowledges (chalabhiñño), the preceptor of Asubhakammika Tissa thera resident of Kotapabbata Vihāra in Mahāgāma in the Rohana Janapada, who happened to be close by, said: "Friend Dhammakathika your sermon is deficient, do not get discouraged. Explain it in detail". This not only shows that the ground floor of the Lohapāsāda was utilized as a preaching hall, but also it was large enough to accommodate an audience of 12000 participants.

The Sāratthappakāsini, the commentary on the Samyutta Nikāya (SA. II. 276) records an incident of how a certain Brahmīn thoroughly got excited and ran home while listening to a discourse describing the Tilakkhaṇa by Tipiṭaka Culanāga thera on the ground floor of the Lohapāsāda. The Samantapāsādikā Vin. II, 591) describes how two hostile monks were involved in an argument when Tipiṭaka Cullabhaya thera got up in the evening after explaining the Vinaya to the monks on the ground floor of the Lohapāsāda.

As recorded in the Mahāvamsa (Chapter XXXII verse 42-43) King Dutthagamini having heard that the gift of the Dhamma (dhamma dāna) is much superior to material gifts, tried to discourse on the Māngala Sutta to the monks on the ground floor of Lohapāsāda. But he was too nervous and could not proceed, and had to end the discourse no sooner he commenced it. Papañcasūdani, the Majjhima Nikāya commentary (MA V, 101) records that maliyadeva thera preached the Chacakkha Sutta to the monks on the ground floor of the Lohapāsāda and 60 monks attained ‘Arahanthood’ as a result.

According to a narration in the Vamsatthappakāsini (Vol. II, 553-55) King Bhātiya was shown the interior of the Mahācetiya with the intervention of Sakka, when he resolved that he would not get up unless he is shown the relic chamber of the Mahācetiya. Afterwards when the king wanted to enlighten the monks on the details of the relic chamber of the Mahācetiya, he summoned the monks to the ground floor of the Lohapāsāda. The Visuddhinagga (Vism. p. 91) describes the Lohapāsāda as a place where one can listen to the dhamma as in the days of the Buddha. The Atthasālinī the commentary on the Dhammasaṅgani (p. 31) describes how Gāmavāsi Sumana Deva thera tried to answer those who held the view that the Abhidhamma has no origin (nīdāna) when he was preaching on the ground floor of the Lohapāsāda.

All these incidents show that the ground floor of the Lohapāsāda was often used as a preaching hall or an assembly hall. There is an instance, which records the using of the Lohapāsāda to perform disciplinary acts (Vinaya Kamma), during the reign of King Saddhātissa. According to the Manorathapūrani (AA II 247) once Mahāvagga thera was attending to a disciplinary matter of bhikkhus in the seventh floor of the Lohapāsāda, saw the body of Kuṇijatissa thera of Mangana who had attained parinibbāna, coming in the air in a Kuṭāgāra (pavilion with a peaked roof). Mahāvagga thera too wished to receive similar honour as the former entered the same pavilion and attained parinibbāna and was cremated with the same honour. Here is an instance where the seventh floor was used for a vinaya kamma apparently a vinaya ritual. Apart from that it is seen that it was used for emergency purposes too. The Mahāvamsa (Ch. XLII verses 53-56) describes how when a portion of the Thuparama Cetiya collapsed during the reign of Aggaboddhi II (600-611 A. C.) the collar bone of the Buddha that was enshrined there was taken to the Lohapāsāda to be kept there till the repairs to the damaged cetiya was effected. Further an inscription discovered by the Dept. of Archaeology in the Ruwanveli Seya premises during the excavations in 1946-47, assigned to the 1st year of King Kaniṭṭhatissa provides valuable information regarding the use of the Lohapāsāda. The inscription commemorated the donation to the Mahācetiya. Though the name of the donor is defaced, it says that documents relating to the donation are kept in the Lohapāsāda. Therefore, it is seen that Lohapāsāda was used as the Record Room of the Mahāvihara.

The Lohapāsāda was not an isolated building. There appears to have been a building complex with the Lohapāsāda as the main building. The Ambalṭattikā was apparently a building situated to the east of the Lohapāsāda, because the Lohapāsāda is always found mentioned in the context of referring to
he Ambalaththika. (DA. I. 131, DA II. 635). Therefore it could be inferred that it was in the same premises. Pañca Nikāyika Mañḍala (DA II 581 where the bhikkhus used to recite texts or commentaries when they assemble after the rainy season appears to have seen a part of the said Lohapasāda complex. King Khalathana (110-103 B.C.) added 32 pāsādas (apparently apartments) to the Lohapasāda (Mhv. Ch. XXIX verse 30). The above facts certify that there had been a building complex with the Lohapasāda as the main one. Therefore it is reasonable to assume that Lohapasāda was the center of Buddhist activities during the Anuradhapura period and was more or less as an example of luxurios living.

In the commentaries the Lohapasāda was treated as an example of luxurios living.

"Lohapasāda sarese pi ca pāsāde bhikkhu sahassamajjhe paññatte vicitta paccatharanupadāne mahārāhe sayane".......

In a mansion similar to the Lohapasāda, in the middle of the Bhikkhu sangha, in a bed covered with beautiful and luxurious carpets, if a bhikkhu lays down to his right side. (DhA. III 472)

The Sārathappakāsini the Samyutta Commentary (Vin. A. I 74) takes the Lohapasāda to explain the size or proportion. It is said that if a rock of the size of the 7th floor of the Lohapasāda if dropped from the Brahmaloka takes seven months to reach the earth, the commentary to the Majjhima nikāya (MA II 184) has deployed it to show the extent of space. When the 1st king Mucalinda coiled around the Buddha, in the sixth week after the enlightenment, keeping its hood above, to protect the Buddha from the rain, the space created for the Buddha, within its coil was equal to the ground floor of the Lohapasāda. In the Sārathappakāsini (SA I 148) takes Lohapasadā as an example of a pāsāda surrounded by a wall having four entrances.

"So kira pāsādo lohapasādo viya samantā catu dvāra kothakena pākārena parikkhitto" (SA I 148)

Lohapasāda is one of the eight most sacred Buddhist places (atamasthāna) in Sri Lanka and as the 100th place in the 17th century list of sacred places of Sri Lanka, called "Nam Potā" which is used as a basic text for the beginners in the traditional system of temple education. The creator of Lohapasāda king Dutthagamini had an immense appreciation and respect for it. According to the Vamsatthappakāsini the king, lying in his deathbed, was heard to say that he saw the Mahacetiya while lying on the right side and the Lohapasāda when lying on his stomach and the bhikkus in front.

"Dakkhiṇa passena sayita mahān bhikkhuniyam passanto vāmapassena upaṭṭha sāmarāja nava bhūnikam lohapasādam pāsādo bhikkhusamham pūrato passanto saman dasa... (MA II 185)

The Vamsatthappakāsini reveals an ancient practice followed during the Anuradhapura period which is important historically as well as politically. The Vamsatthappakāsini includes Lohapasāda as one of the seven sacred spots from which clay was obtained to make the earthen pot in which the objects used for the king's consecration were kept. Accordingly clay was obtained from the northern flight of steps of the Lohapasāda (uttirapada ganṭhiyā hettābhāgato Mhv. A. I. 307). This shows the important position given to the Lohapasāda, and its close relation to the kingship during the Anuradhapura period. The Sumāṅgala Vilāsini (Vol. II. 581) records an important information regarding the Lohapasāda, namely the monks residing to the north of the river (Mahaveli) used to assemble at the Lohapasāda to spend their rainy retreat. The Vamsatthappakāsini (Mhv. A. Vol. III 505) says that it is mentioned in the Āṭhadakathā (no doubt the Sihaḷaṭṭhakathā) "that it could be seen from the east by those who are on the summit of the Udumbara Rock (present Dimbulagala) near Kacchattiththa, which is nine yojanas distance from Anuradhapura and from the west by those who travel either by sea or by land up to a distance of one yojana in the sea. However, apparently what the author of the Vamsatthappakāsini records is not what he personally has observed, but what was recorded in the Sihaḷaṭṭhakathā. It is possible that when the Vamsatthappakāsini was written in the 10th or the 11th century the Lohapasāda may not have been of that height, but possibly reduced.

This magnificent building in the course of its long history had been subjected to improvements, additions, repairs, destructions, vandalism, plunder etc. Not long after its construction in the reign of the next king Saddhatissa, Lohapasāda was burnt down accidentally by an oil lamp. But the King rebuilt it reducing it to seven floors.
Dipena Lohapāsādā udādhatihita susamkhato
Kāresi Lohapāsādam so sattabhumiṇikan puna
(Mhv. Ch. xxxiii Verse 6)

It could be inferred from this that the original structure would have been a wooden one. As elsewhere mentioned King Khallāthanaga (110-103 B.C.) added 32 small pāsādas apparently apartments around Lohapāsāda to adorn it.

Lohapāsādaparivāre pāsade ti manorame
Lohapāsadasobhattham eso dvatimsa akārayi
(Mhv. Ch. xxxiii Verse 30)

King Bhātikābhaya (22-7 B.C.) renovated (kāresi Lohapāsādādepaṇisākharām ettha so. (Mhv. Ch. xxxiv Verse 39). The King Amandagamini (19-29 A.C.) made varendas (kucchiājiram ..., karāpesi Mhv. Ch. xxxv Verse No. 3.). King Abhayanāga (231-240 A.C.) constructed a pavilion Lohapāsādahangam hi rājā kāresi maṇḍapam eva ca. (Mhv. Ch. xxxvi no. 52) in the yard of the Lohapāsāda.

King Sirināga (240-242 A.C.) rebuilt it making it five storeyed. (Kāresi Lohapāsādā sakhītaṃ paṇcabhūmiṇikan. Mhv. Ch. xxxvi verse 25). It appears that it was king Sirināga who reduced Lohapāsāda to five storeys. According to the available records five storeys is the least number of storeys that Lohapāsāda has ever had and there is no record of further reduction of floors.

King Jēthatissa (263-275 A.C.) son of Gōthābhaya apparently had done a substantial improvement to the Lohapāsāda.

Pitarā so vippakataṃ Lohapāsādām uttamaṃ
Kōṭidhanaaagaganakan kāresi sattabhumiṇikan
Saṭṭhisatasaahassagham pujayitva maṇiṃ tāhīṃ
Kāresi Jēṭhatissa taṃ maṇipāsādā nāmaṃ
ti

"The king Jēthatissa completed what his father could not finish in the Lohapāsāda. He made it worth a crore and made it seven floored. He donated a gem worth 60 lakhs to it and made it (call) mansion of gems (Manipāsāda (Mhv. Ch. xxxvi vv. 124-125)

The most unfortunate period of the history of the Lohapāsāda dawned in the region of King Mahasena (275-301 A.C.). Up to the reign of Mahasena only the natural disasters fell upon the Lohapāsāda. It was subjected to man made disasters for the first time in the reign of Mahasena. A bhikkhu named Sanghamitta of the Abhayagiri fraternity, with the approval of King Mahasena, who was converted to his side, got Lohapāsāda razed to the ground, and the valuable articles there were taken to Abhayagiri.

Bhinditvā Lohapāsādam sattabhumiṇikan uttamaṃ
Ghare nānappakāre ca ito’ bhayagirīṃ navuṃ
ti

Having demolished the seven storeyed precious Lohapāsāda took the various (valuables) to Abhayagiri.

(Mhv. Ch. xxxvii verse No. 11)

According to the traditional view after the demolition, the land was sown with Flemingia seeds (Udu). It is clear that by the time of Mahasena Lohapāsāda was only seven storeyed. However, his son Sīrimēghavannagha (301-328 A.C.) rebuilt Lohapāsāda (Mhv. Ch. xxxvii Verse 62). King Dhattusena (455-473 A.C.) repaired it (Lohapāsādake Jīṇe Navakamma akārayi (Mhv. Ch. xxxviii Verse 54.) King Aṅgābadhī (467-483 A.C.) repaired the middle pinnacle lohapāsādake saha chadesi majjhikātakam (Mhv. Ch. XLv. 30) and Manavamma (684-718 A.C.) repaired the roof (chadesi Lohapāsādam Thupārāma gharam tathā (Mhv. Ch. XLvii Verse 65). Apparently the Lohapāsāda was plundered during the Pandya invasion (Mhv. Ch. LI verse 25) in the reign of king Sena I (833-853 A.C.)

The reign of King Sena II (853-887) has been an important era in the history of the Lohapāsāda. The Mahāvamsa records the improvements effected during the period thus

Kāretvā Lohapāsādam Vejayantasa rakkhaṃ
Vadaṭhesi paṭītām tattha suvaṇṇaghanakoṭi mam

Sutta ud patthathāvahavan sabbameshinam
Tuccho’ yam n’eva hotu ti vāsam sahassatam akā
ti

Bhogaγāmeca tassādā, rakhkhe ca niyojayi
Bhikkhu dvattimsamattānī vaṣaṇṭu ti niyamayi

"King (Sena II) completely restored the pāsāda similar to the Vejayanta mansion (of Sakkha) and placed an image of the Buddha in gold and mosaic.
Having heard that this Uposathāgāra meant for all the monks is now vacant, converted it to a habitable place for monks, assigned villages for its maintenance and stationed guards and arranged 32 monks to reside there (Mhv. Ch. Verse 69-71).

It is clear from this report that the Lohapāsāda was not in use at the time, and the king again made it a habitat for monks.

King Sena IV was in the habit of preaching periodic sermons to the monks in the Lohapāsāda which were based on the Suttas (Mhv. Ch. LIV. v. 4). King Kassapa V (913-923 A.C.) and King Mahinda VI (959-972 A.C.) too are said to have affected some repairs (Hettiarachchi, V. S.; Mahavihārāya in Anuradhapura, C. R. mbo, 1996 p. 88 Sinhala script).

Once more Lohapāsāda was destroyed by the Cholas, and it was Parakramabahu I (1153-1186) that effected the last repairs to it. The Mahāvamsa (ch. LXXVII verse 102 ff) provides a detailed account of these repairs and improvements effected by Parakramabahu I.

Eka pa passato hathasatam hattisairukam
Uccato sattakam Lohapāsādam colanāsītam
sahassam ca satam c‘eva silāthambhe nidhāpiya
Anekasata gabbhehi kūta garā varāhi ca
Siha paṇjare pantihi bhūsītam nekabhumikam
Vinhayavāha kammantam kārāpesi narissaro

Lohapāsāda destroyed by Cholas which measured in every direction one hundred cubits, one hundred in length and breadth and as much in height, which was adorned with many hundred apartments with fine turrets and with rows of cells and which had several storeys whose embellishment call forth admiration. The ruler of men restored by raising again it’s thousand and six hundred stone pillars “(Mhv. Ch. LXXVII verse 102-104).

This is the first time that such a detailed account of Lohapāsāda is found after King Dutthagamini’s episode (Mhv. Ch. xxvi) and this is the first instance that records the use of 1600 stone pillars either for the construction or for the repairs of Lohapāsāda. Also, since the accidental burning during the reign of King Saddhatissa, apparently this was the first time that it was restored to it’s original nine storeys. In the course of earlier repairs it was reduced to seven or five storeys. It was soon after pillaged again and fell into ruin, in which state it remains to this day.

The Lohapāsāda is also referred to in the ancient Sinhala literary works. As mentioned elsewhere the Saddharmālaṅkāra provides additional information on the site not found in any other source. Sinhala Thūpavamsa (13th century) which is a translation of the Pali Thūpavamsa of 12th century describes Lohapāsāda in the context of describing the meritorious acts of Dutthagamini. It is seen that the author of the Sinhala Thūpavamsa has followed the Mahāvamsa (ch. xxvii) account, or the Pali Thūpavamsa account on the Lohapāsāda. But there is not worthwhile additional information provided in the Sinhala Thūpavamsa. The Mahāvamsa as well as the Sinhala Thūpavamsa say that the water vessel and the ladak (kūta garā), the king provided for the Lohapāsāda were golden. The Sinhala Thūpavamsa says the golden vessel could hold 60 posts of water (Sinhala Suthavamsa edited by L. Lankananda, Colombo 1939) another Sinhala literary work in the 13th century, too, contains information on the Lohapāsāda. The Pujavaliya records that the Lohapāsāda had 120 cubits (Mahāvamsa 100 cubits) in length and breadth. The Pujavaliya apparently follows the Mahāvamsa (ch. LXXVII verse 102-104) which states that King Dutthagamini built the Lohapāsāda using 16,000 pillars in forty rows, containing 40 pillars in the row. The Pujavaliya description does not agree with the original description of the Mahāvamsa (ch. xxvii) regarding the Lohapāsāda. But it agrees with the Mahāvamsa LXXXVIII account of Parakramabahu’s rebuilding of the Lohapāsāda. The Mahāvamsa (ch. XXVII) account does not mention Dutthagamini’s stone pillars for the Lohapāsāda. Therefore it would be clear that the author of the Pujavaliya in the context of describing the Lohapāsāda built by Dutthagamini is actually describing the Lohapāsāda rebuilt by Parakramabahu I (1153-1186) which he might have personally witnessed in the 13th century A.C., but not as original as recorded in the Mahāvamsa (ch. xxvii).

The cluster of pillars found in the North of Sri Mahā Bodhi is now identified as the ruins of the Lohapāsāda. There are 1600 stone pillars in 40 rows, each row having 40 pillars. The pillars are of equal height but of different sizes. The platform is 4 1/2 feet from the present ground level. One can see today towards the middle of the cluster of pillars, resting over a wooden deck on top of several pillars, an Uposathāgāra recently put up for the use of bhikkhus who are attending on the Mahābodhi.

The Lohapāsāda had been subjected to an excavation by the Department of Archaeology in the year 1949. The report of the excavation is found in the
Administration report of the Department of Archaeology for the year 1949. According to the findings, the virgin soil was found 4 ft. below the present ground level. Evidence of building activities of different periods have been observed. According to the report neither the stones used for the foundation nor the bricks used in the construction of the retaining walls had been specially made for the purpose, for, most of these parts are fragments collected from early buildings which had already been ruined when the existing edifice of the Lohapāsāda was put up. The general impression one gets by examining the material of what is left of the retaining wall is that it is a work of very late date, probably the 12th century A. C. The pillars form an assortment and like bricks used in the retaining wall and the stones of the foundation had not been специально prepared for the purpose which they were made to serve, when planted in their present position. Some among them are roughly hewn, the type used to be embedded in brick or clay walls. Others are well dressed pillars with tenons to keep the capital in position. Some pillars have been planted with the rough base up, just the reverse of how it was originally intended to the set up. The better type of pillar is in the style of which we are familiar with two ruined edifices between the Ruwanveli and Thupārāma chaityas. Stylistically, they can be assigned to a date between the 5th and 10th centuries. It is thus clear the pillars of the existing edifice called ‘the Brazen Palace’ (Lohapāsāda) have been collected from a number of ruined buildings of different types and that they had been planted in their present position at a later date. See PLATE XXXIX

The excavation also revealed other evidence leading to the conclusion that the existing ruins of the Brazen Palace are those of an edifice of a later date. Just outside the South Western corner of the building was found the circular pond of which the circumference gradually diminish with the depth. (The rubble facing bespeaks to an early date for the pond, and as it was close to the main entrance of the Bo Tree enclosure it must have been of considerable importance though the name and the history of it has not yet been discovered). For, if the earlier edifice that must have stood while the pond itself was functioning occupied exactly the same position as the Lohapāsāda of today, the Southwestern corner of the (original) building must have abutted the side of the pond. The ancient Sinhalese architects did not favour the locating of their buildings in such a cramped position.

Moreover there is literary evidence to show that the original Lohapāsāda was located somewhat to the North of the existing ruins of the Lohapāsāda. The Mahābodhiyamsa (p. 137-138) tells us that in the lay out of the principal edifices of the Mahāvihāra, Lohapāsāda, and balanced with the Sannipātāsālā. The ruins of the latter are today popularly called Ransimāligāva, and a line drawn east to west bisecting the Lohapāsāda, if continued would have run through the center of the eastern entrance of the building. The reference to literature would also confirm the later date of the existing building. As already cited the Mahāvamsa (Culavamsa ch. 78 verse 102-104) records the reconstruction of the Lohapāsāda destroyed by the “Cholas”, by Parakramabahu I (1153-1186 A. C.) erecting 1600 stone pillars. The ruins of the Lohapāsāda as we see them today are therefore of the building of that name erected at the instance of Parakramabahu I (1153-1186). This also is in accordance with the obvious fact that ruins existing today of an edifice with a long history must be of its latest phase (Department of Archaeological Survey of Ceylon Administrative Report 1949 p. 11-12).

Recent excavations has revealed remnants of a wall re-inforced with palmyrah (or similar timber) plastered and decorated with paintings and the signs of its destruction by fire. Also a stone capital bracket (pekaḍa) with paintings has been discovered (Hettiarachchi V. S. Mahāvihāraya Anuradhapura Colombo 1996 p. 86 ff). This confirms the Mahāvamsa description that the walls of Lohapāsāda was decorated with paintings depicting Jātaka stories. (ibid).

The copper tiles have been discovered at the excavations of Jetavana and Mirisaweti complexes. Therefore it is possible that the Lohapāsāda might have been roofed with copper tiles as reported in the Mahāvamsa.

Lohapāsāda is the most important and magnificent building mentioned in the annals of Sri Lanka apparently the masterpiece of ancient Sri Lanka architecture.

K. Arunasiri

LOKA : According to the PED. “Loka is not a fixed and definite term. It comprises immateriality as well as materiality and emphasizes either one or the other meaning according to the view applied to the object or category in question. Thus a translation of ‘sphere, plane, division, order’ interchanges with ‘world’. Whenever the spatial element prevails we speak of its ‘regional’ meaning as contrasted with ‘applied’ meaning. The fundamental notion however is that of
substantiality, to which is closely related the specific Buddhist notion of impermanence (loka lujjati'). It is in this latter sense that loka has been defined in the Salâyatana Samyutta as, "Lujjatitī kho bhikkhu tasmā loko ti vuccati" – Loka is so called because it breaks up, because it dissolves. (S. IV. 52). Taken in this sense the term can go back to the Sanskrit root ruj meaning destruction, (vināṣa). The same source suggests another derivation from ruc, to shine, to light up. It is this sense that is found in the Vedic explanations of the world as the place of light.

In the early Buddhist texts the term loka describes the entire Universe including all the imaginable and the unimaginable substantiality. Although its primary meanings seem to be that which describes it as the house of gods and men. According to a frequently repeated passage found in the early canonical texts, the Buddha is described as one who has understood the unimaginable substantiality. Although its primary concern in early Buddhism only as far as it had direct relevance to the individual human being. It is important to note here that of the ten arahants of gods and men. According to a frequently repeated passage found in the early canonical texts, the Buddha is described as one who has understood the unimaginable substantiality. Although its primary concern in early Buddhism only as far as it had direct relevance to the individual human being.

The phenomenal world has formed the subject of serious concern in early Buddhism only as far as it had direct relevance to the individual human being. It is important to note here that of the ten arahants (unexplained) questions, the first four concern the nature of the phenomenal world, viz. (i) Sassato loko (the world is eternal), (ii) Asassato loko (the world is not eternal), (iii) Antavā loko (the world is finite) and (iv) Antarvā loko (the world is infinite).

In these, as well as in other similar passages 'loka' as been described as all that which comes within the sphere of the six senses. This sense in which the world as been defined can best be described as analytic in contrast to the cosmographic sense, which though not considered relevant for Buddhism is not altogether bent from the Pali canonical texts.

In this latter sense, loka seems to include the entire cosmos. A lokadhātu on the other hand seems to indicate a smaller unit within the loka a unit which may reasonably be described as a solar system. Such a lokadhātu extends 'as far as the moon and the sun move in their course and light up the quarters with their radiance (yavatā candimasuriyā pariharanti disā 'bhatti virocanā tava). Such a unit (i.e. lokadhātu) consists of the following: the moon and the sun; Mount Sineru; the four continents, viz., Jambudīpa, Aparagoyāna, Uttarakuru and Pubbavideha; the four great oceans; the four Great Kings; and the seven heavenly spheres viz. Cātummaharajika, Tatavatimsa, Yamā, Tusita, Nimmāranati, Paranimmittavasavattin and Brahmāloka. A thousand of the above consists of the system of the thousand – fold lesser world system (Ṣahasī cūlanikā lokadhātu). A system which is thousand times the size of this is the twice-a-thousand middling world system (Divasaḥassi majjhimikā lokadhātu). A system which is thousand times the size of the above (i.e. divasaḥassi majjhimikā lokadhātu) is the Thrice-a-thousand mighty world system (Tiṣasassi-mahāsaḥassi lokadhātu).

Thus, in its immensity loka is unlimited. It is not possible therefore to reach the end of the loka by traveling (Nāham tam gamanena lokassa antaṁ natayyam daṭṭhaṁyam pattayyam ti vadāmi) and its immensity cannot be grasped by thinking either, hence lokacinta is one of four unthinkables.

The term cakkavāla in the post-Nikāya literature seems to have come into use in the same sense that the term lokadhātu is found in Nikāya texts, of course with more details of cosmographic nature. Therefore, the observation of the PED that, "the distinctions between the Universe (c.p., cakkavāla) as a larger whole and the world as a smaller unit are the fluctuating and not definite" ignores the historical development of the two concepts. Also, its explanation of the word loka under the three meanings, the spatial, the regional and the applied, seems to be misleading although it is true that the word loka, as we have already seen, is used to mean the entire cosmos as well as the world of beings.

S. I. 61; A II. 47; Gods in Early Buddhism, p. 57

A. I., 227; A. V. 59; Gradual Sayings I. p. 207; See also D. II. 139.

253 where ten lokadhātus are referred to. Also see AA. II. 341

S. IV. 93; Gods in Early Buddhism p. 57 DPPN I. 834

PED
Cakkavāla according to these post-canonical accounts is, 'The name given to a whole world system, there being countless such systems. Each Cakkavāla is twelve hundred and three thousand four hundred and fifty yojanas in extent and consists of the earth, two hundred and four thousand nahutas of yojanas in volume, surrounded by a region of water four hundred and eight thousand yojanas in volume. This rests on air, the thickness of which is nine hundred and sixty thousand nahutas of yojanas. In the center of the Cakkavāla is Mount Sineru, on hundred and sixty-eight yojanas in height, half of which is immersed in the ocean.8

The world (loka) being constituted of impermanent and transcient entities is itself transcient and impermanent. As we have already noted, it is in this sense that it is called loka (lujjati ti kho loko ti vuccati). Buddhism does not accept that it is the work of a creator deity like Brahmā, nor is it the product of the interaction between two or more immutable, eternal substances like the Prakṛti and Puruṣas of the Sankhya system.9

Although the Jains too, like the Buddhists, deny a creator deity and governor of the things of the world, unlike the Buddhists Jains hold the world and its constituents to be eternal and imperishable.

The present state of the world according to the Aggaṇa Sutta of the Dīgha Nikāya10 is the result of a process of evolution. A first beginning either of the world or the living beings in it is not spoken of in Buddhism. The point of the first beginning of any individual series of existence (samsāra) is said to be inconceivable. (Anamataggayaṃ bhikkhave samsāra pubpakoti na paññāyati.)11 The beginning spoken of in the Aggaṇa Sutta is not the first beginning of the world, although as E. J. Thomas observes, 'here we have the nearest approach to a beginning as represented in the Brāhmaṇas'.12 It is only the beginning of a single cycle of the world. Such an evolutionary process of the world is only one in a long series of such processes.

The duration of any such single evolutionary process is an aeon or a world cycle, a kappa, which is subdivided into four as a dissolving phase (samvatṭa kappa), a static phase after dissolution before the beginning of the next evolving phase (samvatṭa titthahiti).13 The length of time of any one of these four phases of a kappa cannot be determined,14 and a kappa therefore is an incalculably lengthy period of time, and is sometimes illustrated by a simile, like the Jain illustration offered to explain their measure of cosmic space which is the rajju.15

It may be noted here that the Aggaṇa Sutta account is more important as a description of the evolution of human society, than purely as an account of the evolution of the physical world. Its emphasis is on the gradual transformation which takes place in the physical surroundings of man as a result of his degradation which resulted from his succumbing to lust, greed and hatred leading to conflict. The physical surroundings and the changes that took place in these are described only as far as and in so far as these have direct relation to the human being. Also, it may be noted here that this account of the evolution of human beings from the pre-food gathering phase through the next food-gathering phase to the next food-producing phase with the evolution of corresponding social institutions, seems to be far closer to knowledge gathered by social-anthropologists on the evolution of human societies than either the Jain16 or the Brahmanic17 accounts. Of special interest in this direction are the accounts of the functional origin of the four social classes, which

15. Rajju is the distance travelled in six months by a god who goes at the rate of two million miles in an instant - Gods in Early Buddhism p. 45, n. 7.
16. According to the Jains, the four castes are derived and are determined by the inequality of human beings - inequality which had grown with passing of time.
17. According to the Brahmin theory, the entire social order as divided into the four castes was derived from the Creator Brahma, the brahmins being the first to be created from his mouth. M. II, 148 f.
later developed into castes and the account of the election of the first (tribal) chief-tain by common consent, before it came to be determined by heredity.18

The Cakkavattisīhanāda Sutta account of the gradual deterioration of moral standards in the world resulting in the decline and near total loss of social harmony, followed by a gradual improvement thereof, bringing in more harmonious social conditions, is, though less elaborate similar in some respects to the Jain theory of the historical evolution of society, according to which each cycle is divided into six periods.19

In a discourse on the impermanence of all compo- nent things (saṁkhāra), there is a description of the destruction of the world by the gradual appearance of seven consecutive suns. Details are given of the havoc caused by each subsequent sun. On the appearance of the seventh sun, the entire earth with everything in it, is consumed by a great conflagration.20

As we have already seen, a lokadhātu consists of the Four Continents, the Purgatories, the sevenfold realms of the deva21 etc. Although different spheres of beings are spoken of, it is important to note here that these are not spoken of in spatial terms as in the case of the Jain and the Brahmanic accounts. In other words, the Nikāya texts do not say either that the Purgatories are situated below the surface of the earth or that the realms of the devas are placed above the earth. Although it is said that the realm of the Tavatimsa (loka) is superior to the realm of the Čatummahārājika devas, it is not said that the realm of the Tavatimsa devas is placed spatially above the realm of the Čatummahārājika, and so on.22 Also, it is important to note that in almost all contexts where heavenly birth is spoken of in terms of birth into a particular realm of the gods, it is always said that one is reborn into the companionship of these particular devas, not into that deva world, thereby not necessarily implying spatially definable compartments in space. For example, in the Saṁkhāruppatti Sutta of the Majjhima Nikāya, it is said that a bhikkhu having heard that the Čatummahārājika devas are long-lived, full of splendour ..... aspires thereto and consequently is reborn into the companionship of these gods.23 The only exception to this is in the reference to the realms of the Brahmās which are referred to as Brahmakāyika deva24 and also as Brahmloka.25 As the use of the term devaloka to describe the realms of the gods is post-canonical, the term Brahmloka, if understood in a cosmographical sense, which it inherited from Hinduism, seems to fall in line with the post-canonical readings into Buddhist cosmological material contained in the earlier texts, than with the distinctive Buddhist cosmological thinking of the Nikāya texts.

Thus the word (loka) according to the Buddhist conception is not a storeyed structure where the realms of the gods are placed one above the other in ascending order, located above the surface of the earth, with the purgatories located below its surface, where the suffering increases the deeper one moves. The realms of the gods and the purgatories are best understood, according to the early texts, as conditions into which beings can be reborn than as spatially defined compartments in space.

But these non-cosmograhical descriptions of the world in the earlier texts of the Pali cannon have been almost submerged by the deluge of post-canonical cosmological matter which has borrowed profusely from the contemporary Jaina and Hindu cosmologies, bringing Buddhist cosmological material almost in line with these, despite its distinctly different cosmological thinking quite clearly discernible in the early texts of the Pali canon.

As we have already noted the first four of the ten unexplained questions according to the Pali texts are regarding the nature of the phenomenal world. These ten questions which seem to have been quite popular in the sixth century B. C. religious debates were left un-answered by the Buddha, as such knowledge did not contribute to one's maturity in the path to Nibbana.

18. We see evidence of heredity determining leadership in the Sākyas as well as among such other monarchical peoples as the Magadhas during the time of the Buddha.

“The Simśapa Sutta, as Prof. Oldenberg observes, states briefly what Buddhism is and what it is not. “It does not purport to be a philosophy which inquiries into the ultimate ground of things, unfold to thought the breadths and depths of the universe.” For it is little interested in metaphysical questions and in constructive speculations of the universe, which have not immediate relevance and reference to the problem of salvation. Hence questions concerning the first and final causes or the original germ of all things are set aside. Speculative questions on the infinity and duration of the world are among those brought under the heading ‘avākata’ (not explained). The reason for this attitude is that knowledge of such questions, whether they can be known or not, is another question is not essential for one to work out one’s own salvation.”

We have also noted that the world view of Buddhism is individual centred or individual based. As the maturity of the individual to the attainment of enlightenment depends on his correct grasp of external stimuli which flow in through the sense-doors, the external world becomes of serious importance and therefore of concern to Buddhism. This is brought out quite eloquently in several textual contexts were it is said that, “where there is eye, where there is visible (rupa), where there is visual consciousness ……, there lies the world ….” The same formula is extended to the other sense-organs and the corresponding sense-objects. This has sometimes been understood as countenancing a phenomenalistic interpretation of the external world: The external world has no independent reality but is dependent on the activities of the senses. Taken in itself the quotation does point to such a conclusion. However, it seems doubtful whether it was meant to be an exhaustive definition on the nature of external reality but is dependent on the activities of the senses. Taken in itself the quotation does point to such a conclusion. However, it seems doubtful whether it was meant to be an exhaustive definition on the nature of external reality.

Although the Buddha set aside the questions regarding the eternality or not, and the finiteness or otherwise of the phenomenal world, he did in fact explain that there is both the arising and the end of the world. The correct grasp of the external world and the adoption of the correct attitude to the stimuli which flow into the individual through the six sense-doors is essential to the realisation of the end of dukkha. Hence the statement that the end of dukkha cannot be reached without reaching the end of the world.
Thus, not only is the existence of the phenomenal world not denied in Buddhism, it is also emphatically stated that its comprehension is essential to the attainment of Nibbana. “If we base ourselves on the Pali Nikayas, then we should be compelled to conclude that Buddhism is realistic. There is no explicit denial anywhere of the external world. Nor is there any positive evidence to show that the world is mind-made or simply a projection of subjective thoughts. That Buddhism recognizes the extra-mental existence of matter and the external world is clearly suggested by the texts. Throughout the discourses it is the language of realism that one encounters. The whole Buddhist practical doctrine and discipline, which has the attainment of Nibbana as its final goal, is based on the recognition of the material world and the conscious living beings living therein.”

Thus the Buddhist text contain two distinctly discernible descriptions of the world (loka). The first is the distinctly Buddhist description of the world which is man-centred, according to which the human being claims supremacy of place as only it is by being re-born as a human being that one can attain Nibbana and thereby put an end to the recurring cycle of births and deaths. The loka and everything contained within it are subject to the same normal laws of impermanence (aniccatā), unsatisfactoriness (dukkhatā) and non-substantiality (anattatā). The second is the one which describes the world as comprised of innumerable solar systems each of which houses the realms of the different types of beings such as human beings, devas, brahmās, and denizens of the purgatories. 

Thus, the training of a disciple of the Buddha aims at creating in him this ability to maintain balance of mind and psychological composure. The Buddha and the arahants had developed in them this ability to maintain mental equilibrium and equipoise. In the life of the Buddha incidents are many illustrating these eight vicissitudes. When he made the great renunciation, he left behind a fabulous wealth along with his loving parents, the wife and the new born child, with a view to achieving a more sublime state, the Buddhahood, he gave up everything without any attachment to them. When the Buddha established the sāsana, luxurient parks and magnificent buildings were offered to him by the devoted lay disciples and he accepted them only as common property of the Sangha without any desire and clinging to them. The Buddha’s fame as a revolutionary religious teacher spread far and wide and many young and intelligent men volunteered to join

him as disciples. His cousin Devadatta, envious about his fame and the honour the Buddha received in many places, plotted to kill him several times, and the Buddha's foot was cut and injured by a splinter of rock in one such attempt. Several rival religious groups, plotted and planned to slander the Buddha and the bhikkhus calling them womanisers and murderers. But whatever challenges the Buddha had to face, he was always pacified and undisturbed.

The ability of a mature and intelligent person to maintain balance of mind and psychological equipoise is extolled in several Buddhist discourses. The Mahāmangala Sutta extolls this ability in a person to maintain balance of mind in all situations as an auspicious thing (maṅgalam uttamam Sn. v. 268). The Dhammapada (v. 81) says that the wise man (pandita) is not shaken by censure and praise (nindapasamā) like a solid rock withstands the wind coming from all directions. Sutta Nipatā (V. 229) says that the mind of virtuous persons who clearly understands the four Noble Truths is like unto a firmly buried door post (indakhila) which can withstand wind from all four directions.

W. G. Weeraratne

LÖKĀNUVARTANA literally means conformity (anuvartana) to ways of the world (loka); the term is used in Buddhist Sanskrit literature with reference to the Buddha's appearance and behaviour in the world of human beings, since the deification of the Buddha required the explanation of his appearance, existence and death as a human being.

The origin of Buddha - deification may be traced in the Pali Suttas themselves. According to the Mahāpadāna Sutta, the bodhisatta (the Buddha-to-be) arose in the Tusita heaven and remained there quite mindful and clearly conscious, he descended from that heaven and entered Māyā's womb quite mindful and conscious (D. II, 12, M. III, 119). According to the Mahāparinibbāna Sutta, the Buddha made his appearance in assemblies of different categories of beings; when he was among men he looked and spoke like a man; when he was among gods he looked and spoke like a god (D. II, 109).

There were intermediary schools of Buddhism which held similar views by the time of Asoka in the third Century B.C. According to the Kathāvatthu and its commentary, the Vaitulyavadins held the view that the bodhisatta, on being born in the Tusita Heaven, dwelt there while visiting this world only in a shape specially created (KVU. XVIII, 1; KUVA. XVIII, 1). The created shape taught the doctrine to Ananda, while the Buddha lived in the Tusita Heaven (ibid. XXI. 6). The Mahāsanghikas thought that a Buddha exists in the four quarters of the firmament changing his habit from one sphere of beings to another (ibid. XXI. 6). The Andhakas were of the opinion that the bodhisatta goes to an evil doom, enters a mother's womb, works penance under alien teachers and so on, of his own accord and free will (ibid. XXIII, 3).

Although these views were vigorously combatted by the early Theravādins (see Kuv. XVIII, 1; XXI. 6; XXIII, 3) the later Theravādins seem to have entertained such views as is evident from the Pali commentaries. According to the Jātaka Nidāna, for instance, the bodhisatta, while at Tusita heaven, decided to descend to earth at the request of other deities and made his choice of the place, the time and the parents.

These docetic tendencies were fully developed to a theory which is best known in the Mahāvastu which expressly claims to be drawn from the Vinaya of the Lokottaras, a branch of the Mahāsāṅghikas (Mhv. I, 2; III, 461). The ideas are also found in the Lalitavistara and Divyāvadāna.

The chief principle is that the Buddha is supramundane (lokottara), above the laws and conditions of normal human existence. His behaviour as a human being is, therefore, merely a convention and an illusion.

Nothing in the fully enlightened Buddha, says the Mahāvastu, is comparable to anything in the world; everything connected with him is supramundane (Mhv. I, 159). But he acts like a human being just in order to conform to the customs of the world. It is for this reason that he allowed himself to be conceived in the womb of Māyā, and be born after ten months (ibid. 167-70). He is, however, not really born from mother and father at all, but arises as an apparitional being by the force of his own qualities (ibid. 145, 170). He allowed himself, as an infant, to be taken to the temple, although he was the god of all gods (devātideva): Lal. 83, 93 f). He becomes fully conversant with all human arts and crafts at his very birth; there was no need for him to learn them from others, although he allowed himself to be taught in them (Mhv. I, 153). He is free
from passions while he was at Tusi ha Heaven (ibid. I, 147 f). He does not, therefore, indulge in sexual acts. Rahula was not the result of his intercourse with Yasodharā (i.e., Bhaddakaccāna); he, like the Buddha, descended on his own accord, to Yasodharā’s womb (ibid. 153). When he first saw an old man, a sick man and a corpse, he asked his charioteer what they were, although he knew them (Lal. 83, 93 f). He eats, drinks, takes medicine and sleeps only in order to conform to the ways of the world (Lokānūrvartana); he was, in fact, not subject to hunger, thirst disease or any human needs and infirmities (Mhv. I 167 ff; Divy. 48 ff; 128, 203 ff).

The process of deification, i.e., that the Buddha is a supernatural being who, out of compassion for all beings, descends to earth and partakes of all human experience, was complete before the period at which Mahāyāṇa can be called a separate system. In the Mahāyāna the Buddha is not only a divine being whose sojourn on earth and entry into nirvāṇa are purely and simply sportive, but he is also the ultimate reality.

The purpose of lokānūrvartana, i.e., of the Buddha appearing and acting like a human being, is to win the confidence of human beings and to make them self-confident that if the Buddha is a human being, all human beings are capable of attaining enlightenment. Had he descended to earth in his true form, i.e., god, the human beings would be discouraged thinking ‘We are mere men, and are unable to reach the state of the Jod’ (Lal. 64).

Thus, Lokānūrvartana is a fine example of upāya-kus'āya (q. v.), Buddha’s skill in expedients. See BUDDHOLOGY, DOCETISM.

Upali Karunaratna

LOKA PĀŁĀ See CATTĀRO MAHĀ RĀJĀ

LOKA PĀṆNAṬTIPAKARAṆA is a Pali treatise by an unknown author (DPPN. Vol. II p. 787). It is mentioned in the Gandhavamsa, a Pali work written in Burma, which relates in brief the history of the Pali Canon. The Gandhavamsa does not give the name of the author, but says that it was written independently (attano matiya). Lokapaññatti Pakarana is referred to in the Jinālankāra Vaṇṇana written in verse to describe the life of the Buddha, by Ven. Buddhakkhita of Rohana in Sri Lanka, 1700 years after the Parinibbāṇa of the Buddha (Jinālankāra vaṇṇana

edited by W. Dipankara and B. Dhammapala, Alutgama, Sri Lanka, 1913), which shows that the treatise was known to Sri Lankan scholars as far back as the 12th century A. C. But it is not extant in Sri Lanka at present.

Ven. Buddhakkhita refers to Lokapaññatti pakarana in the Jambudipa vaṇṇana, the introductory chapter, before he proceeds to describe the life of the Buddha. The Chapter (Jambudipavanṇana) describes not only Jambudipa, but also the other four great continents (Cattāro mahādipā), namely Uttarakuru, Aparagoyāna, Pubbavideha and Sinerupabba, apparently to describe the environment the Buddha was born in. The quotations such as ‘Lokapaññatti pakarana sinerupabba udake asītyojaana sahasanā jhito ti kathito’ (It is said in the Lokapaññatti pakarana that the mount Sineru is immersed 84000 leagues in the ocean), Lokapaññatti pakarana pi asa vaṣṭatā yeva vutta (its roundness is also stated in the Lokapaññatti pakarana) shows that Lokapaññatti pakarana dealt with Buddhist cosmology.

Cakkavāladipani of Ven. Sirimangala, which deals with Buddhist Cosmology and which was published in Thailand in Thai script, refers to Lokapaññatti pakarana several times. No manuscripts of his works were found in Sri Lanka. However, it is reported that a manuscript of it was found in Myanmar (Burma).

K. Arunasiri

LOKAPPADĪPAKASĀRA is a Pali treatise written in mixed prose and verse (campu). As per its colophon, it was composed by Ven. Medhankara Sangharaja of the ‘forest Dwelling Fraternity of Sihaladipa’ (Sihaladipa araṇīvāsana) who was the preceptor of queen Susaddā, the mother of king Setubindu, the reigning king of Muttimana-gara of Burma. It is said that Ven. Medhankara came to Sihaladipa and received the higher ordination once more from the Forest Dwelling theras (araṇīvāsī) and went back to Burma, residing at the monastery built by the king’s mother, and wrote Lokappadīpakasāra. He is identified as Sangharaja Vanaratana Medhankara of Kāragala in Sri Lanka (Jayawickreme, N. A., Epoches of the Conqueror, PTS. 1968, p. 129). As stated in the Lokappadīpakasāra Lokappadīpa means the origin of the three-fold world, Saṅkhāraloka, Sattaloka and Okāsaloka which he proposes to discuss. Accordingly Ven. Medhankara describes in the ascending order niraya (hell), petayoni (realm of the
other thence arising ....... The Greek word eres represents the sensual aspect of love and agape its spiritual aspects. The difficulty in confining love to a definition is that love has so many facets ranging from an ecstasy of love to God to the most profound love between man and woman. These facets include love of parents, filial love, love of children and love for fellow-men. Love is in reality 'a continuum of emotions' containing within itself a blending of fine shades and distinctions.

In the sphere of religion love assumes an added significance. Love becomes a necessary pre-condition in every religious system. In pantheistic systems like Brahmanism love is based on the hypothesis that all beings are part of a divine cosmic principle (tattvam asi that - thou art) and that in the ultimate analysis there is a mutual identity among all beings. In theistic systems like Islam love springs from the principle of Muslim brotherhood (Ye people! Hearken unto my speech and comprehend it. Know that every Muslim is the brother of every other Muslim. All of you are on the same equality: ye are one brotherhood). In Christianity the object of unconditional love is the creator and from the love for the creator emanates the love for the beauty of creation. You love your fellow men because all men are children of God, and God you should love "with all thine heart, with all thy soul and with all thy might." -Deuteronomy 6.5 'God is love, and he who abides in love abides in God and God abides in him......' John 4:16:12 'Let us love one another, for love is of God, and he who loves is born of God and knows God. He who does not love does not know God; For God is love. John 4:7, 8. In John 13 34-35 it is stated 'A new commandment I give to you; that you love one another; even as I have loved you, that you love one another.' The first commandment of love in Mathew 22:37 is followed by the second. 'Thou shalt love thy neighbour as thyself. 'Love for God is extended to God's creatures. 'It is the 'Fear of God' and the 'love of christ' which in the whole Biblical literature determines the behaviour toward other human beings.'

6. Paul Tillich in the 'Dynamics of Faith' p. 112
In Buddhism the concept of love is not derived from a divine or theistic hypothesis. Basically it is derived from a recognition of the inescapable fact that there is nothing dearer to a person than himself. The Samyutta Nikāya (1.74) narrates the episode of king Pasenadi of Kosala who once asked Queen Mallika whether she held anyone dearer to her than herself. The queen replied that there was no one and the king agreed with her. Later the Buddha when informed of the conversation approved of what the queen had said and added.

'Traversing over all regions with my mind I have in no place found any one dearer to me than my own self. The self is equally dear to others and therefore let a man who regards his own self as dear not injure others (S. I, 75: Ud. 47). The same idea is repeated in the Dhammapada (v. 130) which emphasises that life is dear to everyone (sabbesam jivitam piyam) and enjoins that one should not hurt or kill, taking oneself as an example (attanam upamam katvā). Altruistic love in Buddhism is therefore an extension of love for oneself. This is held out to be an undeniable fact.

Mettā: Many terms are used in the texts to denote different shades of love. Some of them are Pema, kāma, rati, hita, sineha and avera. The greatest stress however is on love in the sense of friendliness, amity, benevolence and goodwill as represented by the Pali word mettā or state of friendliness. In this sense the Buddha himself was a repository of love (mettavihārī). In the Majjhima Nikāya (I, p. 369) Jivaka, a lay disciple, states, "I have seen with my own eyes how full of love the Blessed One is." The Ariyapariyasa Sutta of the Majjhima Nikāya refers to the Buddha's compassion towards beings when in response to Brahma's entreaty to preach the Dharma, he surveyed the world with the eye of an Enlightened one (sattasu ca kāruṇānatam paṭicca Buddhacakkhuṇā lokam vilokesiṃ (M I, p. 169). Out of compassion for beings surveyed the world with the eye of an Enlightened One. The Majjhima Nikāya again refers to the compassion and benevolence with which the Buddha preached the Dhamma. Anukampako bhagavā hīsesi anukampam upādaya dhammam desesi M. II, p. 238 (The Buddha preached out of compassion and benevolence). The Saṅghār Vagga of the Samyutta Nikāya records the Buddha's feeling of love and compassion towards those whom he instructs - Hitānukampī sambuddho yaḍāṅca anusāsati. Love and compassion doth the Enlightened One feel towards another when he teaches him.

The importance of mettā in the context of Buddhist ethics is clear from the liyuttaka (19.21) where the Buddha stresses that 'None of the good works employed to acquire religious merit, O monks, are worth a fraction of the value of loving kindness (mettā).

This is reminiscent of the words of the poet Coleridge who wrote:-

He prayeth well, who loveth well Both man and bird and beast. He prayeth best who loveth best All things both great and small.

Again in the Kakacūpama Sutta of the Majjhima Nikāya (I, p. 129) it is stressed that even if ruffians were to seize you and cut you limb by limb with a double handled saw, you would not have carried out my bidding if you felt the slightest anger towards them. Herein you should train yourselves thus: 'Neither will our minds become perverted, nor will we utter an evil speech, but kindly and compassionate will we dwell, with a mind of friendliness, void of hatred; and, beginning with him we will dwell, having suffused the whole world with a mind of friendliness, that is far reaching, widespread, immeasurable, without enmity, without malevolence. The same sentiment is expressed in the Mahāatthipadopama Sutta in the Majjhima Nikāya (I, 189) .... tatrāpi yo mano padoseya na me so tena sāsanakaro .... The kakacūpama or the simile of the saw later became the norm for curbing thoughts of anger. The Theragāṭhā (V. 445) admonishes that 'if anger arises in you, reflect upon the parable of the saw. 'Uppajje te sacce kodho āväja kakacūpamaṃ'. Reference is also made in the Dhammapada (V. 368) to the monk who lives in loving kindness delighting in the teaching of the Buddha (mettavihāri yo bhikkhū pasanno Buddhassāsane) as attaining the pacification of all compounded things.

In the scheme of Buddhist religious values love has two aspects. On the one hand the practice of love is part of the individual training (sikkhā) leading to the Buddhist goal of emancipation. On the other it contributes to the attainment of social harmony and equilibrium in society. The Buddhist texts are replete with references to the pacification of the mind upasammati by the generation of wholesome (kusala - skilful) thoughts of love and the elimination thereby of thoughts of hatred and ill-will (dosa-vera). The morally unwholesome (akusala) qualities of lobha, 'greed', dosa, 'hatred' and moha, 'delusion' generate unwholesome actions. Conversely mettā is the direct
consequence of the antithesis of these qualities viz. alobha, adosa and amoha. In this regard the virtue of metta has two aspects the functional aspect and the reward aspect. In the aspirant under training the functional aspect of love is a protective shield against thoughts of hatred and makes him advance into an equanimous enrichment. In the Arhat, thoughts of love perform no function. Feeling of love is a reward for the training that is accomplished. At the same time love as an integral part of the Buddhist social philosophy is advocated in no uncertain terms as contributing to the attainment of 'the weal and happiness of mankind' (bahujanahita, bahujanasukha). In this sense metta becomes socially relevant not only in the control of negative traits of personality and the appeasement of social conflict. It has a more positive role in that it contributes to the transformation of personality and the establishment of harmony and equilibrium in society.

That Metta is not a mere attitude of goodwill, but a conscious expression of positive universal love, is clear from the Metta Sutta in the Sutta Nipata (Sn. p. 8) which advocates the suffusion of every sentient being in every niche of the universe with glowing thoughts of loving kindness. Every kind of sentient being, weak (tasa), strong (thavara) of all dimensions (digha, mahanta, majjhima, rassaka, anuka thiila, seen and unseen (diitha and aditiha) dwelling far and near, born or awaiting birth is to be enveloped in limitless (aparimana) love. A conscious radiation of uninhibited love (manasa bhavaya) to all the world (sabdalokasmin) encompassing all directions (uddhati) of all dimensions (maha dhamma) is to be practised bereft of any vestige of obstruction, hatred or enmity - asambadhama averama asappattama. This quality of boundless love precludes the development of thoughts of ill will to others and the wishing of harm to each other - byarosana patighasaanama manama marassa dukkhamiccheyya. The epitome of the practice of universal love is reached in the following admonition -

Mata yai niyam putta
Ayus ekapatamurakke
Evam sabhaheutesu
Manasam bhavaye aparimana (Sn. v. 149)

Just as with her life
A mother shields from hurt
Her own her only child,
Let all embracing thoughts
For all that lives be thine.

This is the ideal of total sacrifice for others even at the risk of one's life.8 The practice of love entails pervading and permeating (Pharati vyapetva titthati PvA 52) all beings with thoughts of benevolence. It constitutes a constant (satata) development of the mind (mettam cittam bhavayam) day and night (rattindivam) (Sn. v. 507).

Similarly metta; karotha manasiya pajaya occurring in the Ratana Sutta of the Sutta Nipata is an injunction to the devas (gods) to show benevolence to all mankind. The practice of love by the denizens of celestial regions takes it beyond its earthly confines and marks a cosmic integration of metta.

Metta is also the first of the four Brahnaviharas or sublime states, the others being karuna, 'compassion', mudita 'sympathetic joy' and upekkha 'equanimity'. Literally translated 'abodes', but more meaningfully 'modes' of life the Brahnaviharas are referred to in the Digha Nikaya as the four immeasurable appamanna (D. III, 223). They were part of pre-Buddh brahmanical practices as is evident from the legend of king Makkheva of Mithila who was reborn in the Brahma-world as a result of practising the Brahma-viharas (M. II, 76). In Buddhism the practice of Brahma-viharas is not aimed at birth in the Brahma world and thus goes beyond the aims of the brahmanical practice. The practice of the first

8. 'Motherly love is often taken as the very analogy of selfless devotion and sacrifice. Against the background of this homily anything like the Freudian oedipus complex stands rejected .... Of course there is definitely no attempt in Buddhism to prove that the parent-child relationships are of erotic origin. In fact any such phenomenon would be counter to the very grain of the Sigalovada Sutta .... Padmasiri de Silva in Buddhist and Freudian Psychology p. 105. But in an instance where was incest between mother and son the Buddha exclaims.

'What monks, does this foolish man think that a mother would not lust after her son or son after his mother' (kinnukho bhikkhave moghapuriso maññati na mata putta saranjati putto va pana matari A. III, 68). The possibility of such incestuous relationships is therefore recognised in the texts.
In the Buddhist scheme of values loving kindness (metta) and its concomitant avihimsa non-injury spring from the basic consideration that all life desires to preserve itself in happiness and security. Deriving its validity from this position metta in Buddhism transcends the confines of human life and extends to all forms of life including birds and beasts. The harmony between man and man and the peaceful co-existence of man and beast enunciated in the Buddhist doctrine of metta out of the very root of the experience of “separateness” which as indicated by Erich Fromme is the source of all anxiety.9 The fallacy of ego-consciousness or sakkayadgiti is the source of this notion of “separateness” as well as of narcissism. It is in the context of the eradication of these wrong traits of personality that the practice of metta and the other brahmaviharas assumes its real importance. In other words attachment to the ego and the wrong construction of “I” and “Mine” are at the root of all anxiety and there is no better antidote to this anxiety and the accompanying experience of “alienation” than the understanding of the fallacy of egoism and the conscious extension of self love to universal love by the practice of metta. It is the practice of metta that breaks down the barriers between man and man and demolishes the erroneously constructed walls that isolate one from another.

Pema: Love denoted by the word Pema is affection to another person and ‘pemañīya’ describes a nature that is affectionate or amiable. The distinction between metta and pema is that while metta is all-embracing and limitless in its scope as well as detached and non-specific, pema is exclusive and directed towards a specific individual or individuals. Sutta Nipata (v. 41) puttesu ca vipalam hoti peman describes the affection one has for one’s children. The word pema has also a quasi-sexual connotation when it refers to conjugal love or love between husband and wife. Pema was thus outside the pale of a monk’s life and confined only to lay life. Yet even for the layman pema is emphasised as generating grief (soka) and fear (bhaya) and delaying the attainment of ultimate release. Release from pema (pemato vipappamutta) is therefore stressed as ensuring release from grief and fear-Dhammapada (v. 212). As a generator of soka and bhaya, pema is categorised with piya, rati, and kama = Dhammapada (vv. 213, 214) Although Buddha acknowledged the dignity of marriage pema as well as sineha (affection) and piya (clear) was depicted as a product of the fallacious notion of self and that which belongs to the self. The emotions of pema, sineha and piya are directed towards particular individuals and to direct such emotions on particular individuals is to perpetuate the false notion of “I” and “Mine”. The possibility of expression of such personalised love even in the sphere of religion is condenmed in Buddhism where it is said that such restricted love of a lower emotional nature does not lead a devotee to a height greater than births in the heavenly world (Yesam mayi saddha mattam pema mattam sabbe te saggaparayanā - M. 1, 142). Metta on the other hand is all-encompassing and therefore bereft of any tinge of possessive. Yet in the context of married life pema was accepted within a legitimate framework. The episode of king Pasenadi of Kosala and Queen Mallika in Samyutta (1, 74) makes it abundantly clear that love of self is pre-eminent and from this it follows that love for those whom one holds dear is not to be under-rated. The Buddhist attitude is that love in marriage is not lukewarm. The value of conjugal love in the Buddhist teaching should be understood in the background of the sanctity that marriage had acquired in the Indian social context of the time of the Buddha. The Buddha accepted this sanctity of the marital relationship. The Sīgālavāda Sutta (M. III, 281) accepts conjugal love and domestic happiness as a basis for a healthy society. Even the Mahāmāyūra Sutta accepts the legitimacy of conjugal love and espouses the validity of domestic responsibilities of (puttaḍarassa saṅgho). Conjugal love in the Buddhist context is an integration of qualities that go beyond exclusive physical attachment. The general attitude to personal endearments and attachments is based on the more or less cautious forewarming given by the Buddha to grieving Ananda in the Mahāparinibbāna Sutta of the Dīgha Nikāya (D. III, 48).

Love of nature - Nowhere in the whole range of Pali literature is the feeling of love for nature more articulate than in the use of the 'ramati'. Ramati from ram reflects love in the sense of delighting in or finding a stimulus in. Ramati is used to express love of nature or to describe the emotion aroused by the beauty of nature. In the texts 'ramati' expresses an almost mystical ecstasy at the sight of natural beauty and portrays a keen sensibility to the movement and sound of natural phenomena. Love of nature finds its finest expression in the ecstatic utterances of the monks of the Theragāthā. Indeed the consequent control and stilling of the passions seem to have elevated the theras to a higher dimension - aesthetic appreciation. The sylvan haunts have a special appeal to these contemplative elders. Rāmatīyānīyāraṇīnāyathathā na ramati jano10. Delightful are the forests where the vulgar worldling takes no delight. Dhammapada (v. 99) reveals a secret bliss which only the vītarīga (those without passions) can experience due to their possession of unfettered minds. There is a delight in the withdrawal from the maddening crowd to the silent sanctuaries of quiet contemplation (Vānante ramito siyā, In the forest find thy bliss’ (Sn. v. 709). Similarly mountains and glades - pabbata kandara, plains covered by musk-rose trees (kāverimāla) and rain-washed up lands (abhivutta rammatatalā) have a special appeal to them, these mountains charm me' is an oft-repeated expression in the Theragāthā. The splendour of the night sky with a resplendent full moon is described in cando yathā dosinapunnamāsyā (Thag. 1119). Love for the variety of the colour in nature is expressed in the description of the clouds and the denizens of the air nānadījanganā particularly the peacock (mayūra) with its multi-coloured plumage flying majestically against the background of a blue sky-nilabbhavaṃ.  

Suunilaṅiva susikha supekhunā  
Suciṭṭapatṭaccathanā vihaṅgamā (Thag. 1136)

"The birds with deep blue necks, comely crests and beautiful wings, with a covering of variegated plumage illustrate the force of his imagery. Similarly the noises and sounds that arise from the stillness of their forest retreats had a special melody for them. The sonorous trumpeting of elephants (Thag. 1062) the student sounds of singing birds (Thag. 1070) and the reverberating thunder of the skies are music to the ear of him who has subdued his senses and whose flame of fire is extinct. The sweet melody of the incessant patter of rain, the croaking of frogs from a nearby pond and the gentle rustle of the wind through leaves, the sound of the breaking of twigs seem to reflect a delight arising from contact with the natural elements. So is his wish for contact with open spaces as well as his preference for a couch on a rocky slope amidst the mountain which to him is as soft as cotton wool. Loving all loveliness the monk experiences a suffusion of rapture within him. This entire body is engulfed in rapture. It is an efflorescence of rapture that makes him see the world draped in a new veil of loveliness.

Love of natural beauty as reflected by the word 'ramati' constitutes love in its most refined form. It is the expression of love without the desire to possess the object of love. In the Buddhist scheme of things it is the sublimest form of detached love that lends itself to collective enjoyment. It is love untainted by any desire for possession or claim to individual ownership. Ecstasy is a reward that the monk has won, an ecstasy which makes him see all phenomena within and without as alike in nature, fleeting and void. This records a total or near total reduction of the vicious trait or sakkāyadiṭṭhi or ego consciousness. This is clearly set out in the Theragāthā (1101).

Kadānu kaṭṭhe ca tine latā ca  
khandhe ime' haṁ amite ca dhamme  
aţhittikāneva ca bāhīrāni  
saman tuleyyaṃ yadidaṃ kadā me  
‘When shall I see all alike  
wood, grass, plants which creep, the aggregates  
The infinite, within and without  
As fleeting and void of self’

Love of nature in the full realisation that all the loveliest things are transient and perishable has released a new aesthetic faculty that makes the monks delight in the grotesque, see beauty in conventional ugliness, be indifferent to what is repulsive, and find security in  

10. The use of the word 'ramaniya' to describe natural beauty is also found in the Buddha's address to Ananda in the last days of his life - 'Ramaniya Ananda Vesāli ramaniyān Udēnaṃ cetiyaṃ' ramanīyaṃ Gotamakāṃ cetiyaṃ, ramanīyaṃ sattambakāṃ cetiyaṃ, ramanīyaṃ Bahuuttaṃ cetiyaṃ, ramanīyaṃ sārandadaṃ cetiyaṃ, ramanīyaṃ cāpalaṃ cetiyaṃ - Mahāparinibbāna Sutta. (D. II, 118).
The expressions of the love of nature reach the heights of ecstasy.

Domestic stability in the social structure is recognized. All things endearing of universal love and self-sacrifice is analogous to a mother's love for her only son. Everything has its own dissolution and separation and the very conception of piya and appiya is the result of fallacious subjective constructions relating to "I" and "mine". The importance of conjugal love is stressed and the warmth of domestic relationship is upheld in no uncertain terms. The importance of the family unit and domestic stability in the social structure is recognized. The expressions of the love of nature reach the heights of ecstasy.

The torque of the mind suffers from alluring pleasures (kama) is graphically portrayed - kama hi citra madhuram manoramam - viruparupena mathanti cittam (Thag. 787), for by the charm, sweet and diversity of sense desire - one way or other, the mind is unbalanced. Yet sense pleasure is not without, but within oneself-

Na te kama yani citrani loke
Saankapparago purisassa kamo
tithanti citrani tateva loke
attettha dhirata vinayanti chandam (S. I, p. 22)

'The manifold objects in this world
This in itself is not desires of sense
Lustful intention is man's sense desire
that manifold of objects doth endure
The will thereto the wise exterminate.'

The stress is therefore not on the external object
but on one's reaction to it, on its impact on one's mind.
The stress is not on the external stimulus but on the thoughts it generates.

The importance of the view one takes of what is seen is best illustrated by the Buddhist attitude to beauty. In the Buddhist scheme of things there is no derogation of the love of beauty. There is only an adjustment of the lenses that are focussed on the kingdom of beauty. In the words of the Sutta Nipáta the Buddha has lifted and rolled back the veil - vivattacchada (S. 372) that mars and distorts the correct view. The distortants are the cankers viz. the greed for name and form-sabbaso namarupasmim vitagedhassa asava ssa na vijanti (Sn. 1100), lust for forms, sounds and tastes, scents and things of touch, 

ripesu, gandhesu atho raasesu, gandhesu phassesu saheha ragan (Sn. 974) and the perception of self by the self-yo attanat Attanam nupassati(Sn. 477). In the Buddhist texts a distinction is made between two world-views. Two levels of the view of the world and its beauty are clearly enunciated - the lower and the higher, that of the worldling and the monk. One is the view of the common people (jano), the lower and the vulgar. The other is that of the Ariyan, noble and sublime. The forests that the vulgar avoid give delight to the viharagga ramaniyani aranighani yattha na ramati jano (Dhp. v. 99). The worldling is often depicted as one who is immersed in sensual pleasure - kama hi citra madhuram manoramam avidasu yattha sita putuhjjanata (Thag. 1112).
The viṭarāga is attuned to the rhythm of beauty on an entirely different wavelength. His selfless love is an exclusive prerogative that is almost a contradiction in terms. His fires are extinguished. He is upasānta and nibbuta. Bereft of egoism and longing - amamō nirāsā (Thag. 1092) he does not isolate a thing of beauty as something to be utilised. His love of beauty is without the alienation or individuation of the object of beauty from its true context as part of all being which is a flux - aniccato sabbabhavam vipassañā (Thag. 1091).

He looks at beauty without any ‘gross visual appetites’ and any ‘nagging visual curiosity’. He is not engaged ... in a struggle with the image on his retina .... (His) mind’s eye does not snatch greedily at what the physical eye offers it”.

When the curtain is lifted - vivattacchada - he sees the world as it truly is - yathāvadassass (Thag. 1096). He has purged the self as silversmith the dross (Sn. 962) and finds joy in what is lovely (kalyānapiṭṭi-Sn. 969). He sees the universality of the process of becoming in all things of samam tuleyyam both within and without. His is a passive silent reaction to things beautiful with no desire to participate in beauty.

Still like the waveless depths of the ocean (majjhe yathā samuddassa umi nō jāyatī’ - thito hori, Sn. 920), like a wind not caught within a net or a lotus bloom unsoiled by water (vātam va jālamhi asajjamanaṁ padumam va toyena alippamānam - Sn. 213), the monk reacts to beauty in a harmony of synthesis that equates beauty to the rest of being without seeing to dissect or measure beauty on worldly criteria. Being a true ‘artist of life’ his reaction to beauty is a passive communion with the object of beauty. For the monk appreciation of beauty is not a process of intellection. A thing of beauty is just part of its background viz. the broad canvas of the world which he knows is void and lacking in anything substantial (suññato avækkhamāno attānudiththīm uñaccā-Sn. 1119). To him beauty is really in the eye of the beholder. He is not soiled by beauty as the lotus is not soiled by the mud.

Elambujam kantakavārirjam yathā jalena pāñkenn ca anūpalittam evaṁ muni santivādo agiddho kāme ca loke ca anūpalitto (Sn. 845)

Love is not depreciated in Buddhism. On the other hand love based on a true understanding of the nature of things is elevated to a higher level where it is transformed and transmutted into a new dimension of experience. Love is scrubbed of its gross nature until it receives a transparent refinement. In other words love acquires in the Buddhist teaching a supramundane transcendence that is set aglow by a true appreciation of the nature of reality. For the monk knows no greater delight than to be aware of and be attuned to reality. Not the most exquisite musical symphony will give him the same rapture.

Na pañcaṅgikā turiyena rati me hoti tādissi yathā ekaggacittassamā dhhammaṁ vipassato (Thag. 1070)

M. D. H. W.

LOVING KINDNESS See BRAHMAVIHĀRA, METTĀ

LUMBINI (1). The holy birth place of Gautama Buddha is now known by the name of Rummindēi. In the accounts given of the holy nativity of the Buddha, the geographical location of Lumbīṇī is not very clear. It was within the Sakyan country, in the vicinity of Hima-

11. ‘Eric Newton’s description of the Oriental artist on p. 41 f. of his European Painting

12. The idea of participation or empathy is an intellectual interpretation of the primary experience, while as far as the experience itself is concerned, there is no room for any sort of dichotomy. The intellect, however, obtrudes itself and breaks up the experience in order to make it amenable to intellectual treatment, which means a discrimination or bifurcation. The original feeling of identity is then lost and intellect is allowed to have its characteristic way of breaking up reality into pieces. Participation or empathy is the result of intellectualization. The philosopher who has no D. T. Suzuki in Mysticism, Christian and Buddhist, p. 104

Notes of position given by Fuhrer on lumbini are inaccurate and misleading. In his capacity as the Archaeological surveyor of North-western provinces and Oudh, he made an exploration in the Nepalese Terai in 1896. But his work entitled, *Monograph on Buddha Sakyamuni's Birth Place in the Nepalese Terai*, Allahabad 1897, pp. 22-124 has been withdrawn from circulation by the Govt. of India. Smith contends that some of Fuhrers descriptions are of fertile imagination. (Smith, Mukherji op. cit. Introduction; *Indian Antiquary* vol. 34 p. 1)

According to Smith approximately E long. 85°11', north lat. 25°58' (Smith, Early History of India, 4th ed. Oxford 1957. p. 117/8)
The present geographical bearing of Lumbini is to be taken from the eastern Himalayan range, the peaks of which stand back towards the plateau of Tibet. Towards India, the mountains fall away to a long valley in which the small and independent kingdom of Nepal had grown up later. In the lap of the foot-hills of eastern Nepal, in the present forest belt of Terai, there was Lumbini a grove of flowery trees, many centuries ago (Sukumar Dutt, The Buddha and Five After Centuries, London, 1957, p. 104; Mukherji, Report on a Tour of Exploration of the Antiquities in the Terai, Nepal, ASIAR, Imperial Series, No. XXVI, part I, Calcutta 1901, p. 34), and about a mile north of Paderia (var. Pararia) village, Mukherji notes, a very high ground extending east to west for about two furlongs and about a furlong north to South, and according to him it represents the site of an ancient town. About five hundred feet on the north of this site and beyond a long tank, now dry, is another rectangular plot about four hundred feet long, and three hundred feet broad, which appears to have been once surrounded by a wide ditch and access to which was had from the south east, and that elevated ground is the sacred site of Rummindei who is known throughout Terai as a local goddess of some celebrity and hill-men call her Rupa-dei (Mukherji, op. cit. p. 34).

The present name Rummindei refers to the shrine dedicated to Māyādevī, the mother of the Buddha who has been made a localised goddess, and for whom various offerings are being made by hill-men. The name Rummindei means the goddess (dēbi< Sanskrit devī) of Rummin (Luminī of the Asokan pillar edict). But it is not clear what Luminī is and in what connection it stands to the Pali and Sanskrit form Lumbini. There are various forms of the word in the Pali canon and in other works in Buddhist literature. The oldest passage in the Pali canon which refers to the holy native place of the Buddha is found in the Nālaku Sutta of the Suttanipāta. There, the birth place of the Buddha has been referred to as Sākyānam gāme jānapade Lumbineyye (Sn. III, II, 5). Oldenberg (Buddha, Berlin, 1881 p. 423 n.1) suggests that the two words gāme and the Jānapade of the above passage should change places, which construed accordingly, means in the country of the Sākya in the village of Lumbineyya. The Kathāvatthu (Kvū vol. II. p. 559) and the Nīdānakathā (Jātaka, vol. I p. 52) have the form Lumbini. But in the Lalitavistara (Lal.) and in the Mahāvastu (Mhvu. ed. Senart, Paris, vols. I & II) there are variant forms such as Luminivana and Luminīya.

The Mahāvastu has (vol. II. p. 99) Lumbodyāna which gives a word Lumba ‘apparently connected, but not identical with Lumbini’ (Charpentier, Indian Antiquary, vol. 43, 1914, p. 17) and in the same text occurs the word Lumbini in a position which gives the right to assume with Senart (op. cit. vol. I p. 453) that it is not a nomen proprium but merely an adjective (cf. also, Jones, trsl. Mhvū 1949, vol. I. p. 78 n. 1). Charpentier (op. cit. p. 18) assumes that lumba is the simple word from which Lumbini is derived. A Prakrit word lumvi, lumba, occurs in Hāla’s Sattasai (Weber, Uber das Saptasātakam des Hala, Leipzig, 1881, v. 322, pp. 117-18) and it means valli or lațā i.e. ‘a creeper’, and also a cluster, a bunch of flowers, for that word had been annotated as stabako lațā ca. (Desināmamāla of Hemachandra, ed. Pischel BSS XVII. Poona, varge 7, v. 28, p. 283). With the addition of the possessive adjectival suffix ini (feminine)3 to lumba i.e. lumbainī the word lumbini is derived and it would stand beside lumba just as kumudinī (‘a place where water-lilies grow’), puskaraṇī (a lotus-pool) etc. stand beside kumudu and puskara, and thus lumbini would mean a place where creepers grow, it also can mean a wood of creepers, or a grove of flowery trees. This would be the connotation of the word lumbini, but later, when the original sense of the word was uncertain, it was necessary to suffix vana to convey the idea that lumbini was a grove, or a park. In this context lumbini has been treated as a nomen proprium. This is evident from the same kind of treatment found in Jātakaṭhavānvanā which takes lumbini-vana as a proper name and qualifies it by Maṅgalasālavana.
Emperor Asoka, in his pillar inscription in Lumbini has used lumbini (gāma). But the Sutta Nipātha (ibid) which is older than the inscription has lumbineyya and therefore it is possible that lumbini may be a local dialect form from Lumbini with the assimilation of b to m just as Sanskrit amba giving the derivation amma in Pali and Sinhalese. And the lumbini gāma (Skt. lumbini grāma) which was declared tax-free by Asoka refers not to the park but to the adjoining village - the ruins of which are to be found in the mound described by Mukherji (op. cit. p. 34) as representing the site of an ancient town.

Lumbini, at the time of the birth of the Buddha, was a pleasure grove of sāl trees. (mangalasālavananam) and it was the common property of the people of both cities Kapilavastu and Devadaha. At that time it was one mass of fruits and flowers; and amidst the blossoms and branches swarms of various coloured bees and flocks of birds of different kinds roamed warbling sweetly. The whole of the Lumbini grove was like a wood of variegated creepers, or the well decorated banqueting hall of some mighty king. (Rhys Davids, Buddhis Birth Stories, London, p. 153; Fausboll, ed. Jātaka vol. I p. 52). The Lalitavistara refers to lumbini as udāyāna ‘a park’ and kriyāudyāna bhūmi ‘a playing field in the park’ (lal. pp. 78, 79, 81, 91). The Mahāvastu refers to it as lumbā park carpeted with flowers and filled with sweet notes of the cuckoo and lumbini is mentioned as a tree (vol. I p. 99) and also as a grove (vol. III p. 18) All accounts given of Lumbini in Sinhalese are consistent in taking the description as found in the Jātakaṭṭhakathā but with a slight development as discussed earlier. Thus it was not a forest in which the Buddha was born, for the suffix vana in Veluvana, Jetavana Lumbinīvana Meghavana etc. means a park or a grove.

The Nepalese and Tibetan sources agree with Pāli sources as to the location of Kapilavastu and Lumbini near the Himalayan mountains. But the origin of the Lumbini park according to Dulva III p. 446-47, as quoted by Rockhill (Rockhill, The life of the Buddha, London, 1907, p. 14) was that king Suprabuddha had a beautiful queen by the name of Lumbini with whom the king used to visit a beautiful grove near the city and which belonged to a wealthy citizen. As the queen loved that park very much the king had her made a more beautiful garden a grove of plaksa trees and called it lumbini’s grove

Lumbini, the park, gained recognition and became a sacred spot after the birth of Gautama Buddha at the place. Legends recorded in Buddhist literature, have it that queen Māyā was on her way with her attendants to Devadaha, to her parental home, for the delivery of her first child, when she saw, the beautiful Lumbini park. Seeing the sāl-trees in flower she was anxious to pass a few moments there and she took hold of a branch of a sāl tree. Then, as she was experiencing the pangs of labour she stood leaning against the tree and in that position she gave birth to the child. It was Lumbini, that was first to be sanctified by the foot-steps of the Buddha and at which he made his first utterance of supremacy. During his life time, after the attainment of Full Enlightenment, the Buddha once visited lumbini, on his way to Devadaha, stayed there for a short time and preached the Devadaha Sutta of the Majjhima Nikāya (M. II. p. 214). In the Mahāparinibbāna Sutta (D. II p. 140), which lists four holy places of pilgrimage, the birth place of the Tathāgata, has been described by the Buddha as a place which the believing clansmen should visit with feelings of reverence. But until Emperor Asoka’s visit, Lumbini, had only a legendary fame. There was no monument put up to mark the spot. It was during the 20th year of Asoka’s coronation, (ie. after 316 years from the Buddha’s birth) that Asoka by his imperial visit, restored the legendary fame of Lumbini. The Divyāvadana (Divy. p. 389/90) narrates, that Emperor Asoka who was desirous to worship the places where the Buddha lived, and set up memorials there for the later generations, was taken by his preceptor Upagupta, first to Lumbini, when Upagupta pointed out the place and said ‘Lo, and behold, here was the Buddha born’. On his word the Emperor worshipped the spot and gave away hundred thousand (satasahasāram) on the spot in charity to the kinspeople of the Buddha and erected a memorial mound (caitya) to mark the spot.

4. Rhys Davids, Buddha. p. 52, says that Suprabuddha’s wife was Amtra. Beal, Romantic Legends, p. 42, note has that the Lumbini garden was so called after the name of the wife of the chief minister of Suprabuddha.
Lumbini, after receiving official recognition and imperial patronage was a favourite place of pilgrimage. It prospered from the lavish donations from Buddhist pilgrims from all quarters. But with the fall of Kapilavastu, the glory and grandeur it had was obliterated by the Terai forest that advanced slowly upon it, and finally it was fully covered from the vision of the faithful pilgrims, and the legends, once again, had to nurse Lumbini, as seen in the records of the Chinese pilgrims Fa-shien (400 A. C.) and Hsuan-tsong (636 A. C.). It is purely a story of Lumbini falling into oblivion, along with the passage of time, that we can glean from these records.

In the year 400 A. C. Fa-hsien visited Lumbini. When he visited Kapilavastu, the city was a deserted area, 'having neither king nor people and it was like a great desert. There was simply a congregation of priests and about ten families of lay people. Fifty li to the east of the city is the royal garden of Lumbini' (Samual Beal, Buddhist Records of the Western world vol. I, Calcutta, 1957, pp. 29-30). Fa-hsien records the holy nativity of the Buddha in Lumbini and his description of the place is vague. He does not mention at least the 'monolith' set up by Emperor Asoka to mark the spot for later generations. Perhaps, he could not locate it in the heart of the Terai forest and therefore he does not seem to have seen Lumbini—the holiest of holy places.

After the lapse of nearly 230 years, Fa-hsien was followed by another pilgrim, Hsuan-tsang (636 A. C.). From his record it is clear that he had seen the ruins of the vanished city of Kapilavastu, and heard only the legend that was Lumbini; the holy birth place of the Buddha and the memorial monolith erected by Asoka. His account was a hearsay about Lumbini, 'There is an Asoka-flower tree, which is now decayed; this is the place where the Bodhisattva was born ..... East from this is a stupa built by Asokarāja and the ancient Asokan memorial which had been a great stone pillar on the top of which was the figure of a horse and that after-wards, by the contrivance of a wicked dragon it was broken off in the middle and fell to the ground. By the side of it is a little river which flows to the south-east. The people of the place call it the river of oil (Tilar-nadi).

After Hsuan-tsang and until the year 1894, i.e. for 1258 years, there was nothing mentioned of Lumbini. It was a dense forest infested with wild beasts. While falling timber in the Terai forest, some wood-cutters noticed a yellow pillar of sand-stone cleft down to the middle by the stroke of lightning and the top of it shattered and embedded in accumulated debris. The ruined pillar also showed an intelligible inscription which attracted the attention of Fuhrer an archaeologist in 1894 A. C. In 1895 it was identified as Emperor Asoka’s monolith i.e. after 2175 years of its inception. The lower girth of the pillar is 7’ 9 and 2’ 7 1/4” in diameter and 21 feet in height. The capital of the pillar was bell shaped in form and it was broken into two halves and was found in the compound of the Rummindei temple. Now the pillar has been restored. The inscription in the pillar was deciphered and edited by Buhler in 1898. The language of the inscription was an eastern dialect-Māgadhī, of which the principal peculiarity was the tendency to convert medial or initial r of Sanskrit into l. In the inscription the word ‘Rājina’ (by the king) is modified as ‘Lājina’. The conversion of r into l was the phonological tendency that helped to identify the local name Rumin (dēi) with Lumbini. Several archaeologists were detailed for work at Rummin-dēi by the governments of India and Nepal. The temple occupies the highest plateau of the big mound on the north-west of the elevated area enclosed by the ditch. About one hundred feet south of the temple is a small tank with clear water. About forty-five feet west of the north west corner of the temple Rummin-dēi and about twenty-five feet below the top of the mound stands the Asokan pillar. On the north face of the pillar and towards the present top, there are several pilgrim’s marks among which the Tibetan formula Om mani padme hum (O’, the jewel is in the lotus) inscribed in bold characters which shows that Tibetans have kept a recollection of this site and pilgrims used to come here with great respect.

Mukherji’s excavations in Rummindei have made several discoveries. In the foundation of the temple of Rummindei was found a very beautiful bay (rathaka) masonry in carved bricks, and the temple has been built according to the Saptaratha ‘seven bayed one’ plan. (Mukherji, op. cit. p. 36). On the east of Rummindei was an ante-chamber in which was found

5. Pischel suggests that the horse image was intended to represent the legendary steed Kanthaka which the Buddha rode when leaving Kapilavastu.
a heap of broken sculptures. In this chamber, the sculpture depicts the nativity scene. The sculptured group of Māyā-devi is about 5 1/2' x 3 1/4' height and breadth. It appears to be once an excellent example of the ancient art, being of that style of workmanship which is generally associated with the time of Asoka the Great. It is probably the earliest period of Buddhist sculpture. Māyā-devi is represented standing in a graceful attitude holding the branch of a sāl-tree with her right hand while with her left she adjusts her lower garments. Her three attendants are helping her in different ways. Below and between them stands the infant Bodhisatva. According to Mukherji, the temple of Māyadevi must have been built subsequent to the decay of the original one, but long before the visit of the Chinese pilgrims in the 5th and 7th centuries, during which it was all in ruins.

At a certain stage of its defaced history, Lumbini was the dwelling place of a sannyāsi who had cleared a portion of the mound and destroyed some of the stūpas. The Babaji’s Math was discovered by Mukherji about sixteen feet north of Māyadevi’s temple. Some fragments of ancient sculpture-the statue of Gauri-Sahkara indicate that this holy place was once occupied by non-Buddhists.

The Asokan pillar inscription at Lumbini has three sentences running into five lines viz:-

(A) Devana (pi) yena Piya dasina lajina visati-vasabhisitena atana agacha mahiyite hida Budhe jate Sakyamuniti.

(B) Sila Vigadabhi Cha kalapita sila-thabhe cha usapapite hida Bhagavani jate ti.

(C) Lumb mini - game ubalike atha-bhagiye cha.

Trsl. A. When king Devanampriya Priyadarsin had been anointed twenty years, he came himself and worshipped (this spot), because the Buddha Sakyamuni was born here.

B. (He) both caused to be made a stone bearing a horse (?) and caused a stone pillar to be set up (in order to show that the Blessed one was born here)

C. (He) made the village lummini free from taxes and paying (only) an eighth share (of the produce).

Two pilgrims from China, Fa-Hien and Hiuen-Tsiang, who visited Lumbini in the 5th and 7th Centuries A. D. have written detailed descriptions of the Monuments found in Lumbini. King Ripu Malla of Nepal who visited Lumbini in 1314 A.D. has inscribed his name on the Asoka Pillar.

The rebellions of the medieval times have brought immense damage to this Holy Place of the Buddhists, and Lumbini was lost to the world for about six centuries. It was re-discovered in the year 1895; the Asoka Pillar was half buried in mud, in the remote Terai Plains of South Western Nepal. The re-discovered Lumbini was virtually inaccessible to the devotees of the world due to total lack of facilities.

The first effort toward restoration of the re-discovered Lumbini was by King Mahendra who donated one Million Rupees, on being deeply moved by what he saw during his visit in 1956. However, it was only
a decade later that Lumbini caught the attention of the world. The late Mr. U Thant, the Secretary General of the United Nations, a devout Buddhist, visited this Holy Place in 1967, and decided that it should be opened to the world for the restoration of world peace through Buddhism. The response to his call was encouraging, and by the year 1970 the International Lumbini Development Committee comprising thirteen nations was formed in New York, under the Chairmanship of Nepal’s Permanent Representative to the United Nations. The thirteen member Nations were: Afghanistan, Burma, Democratic Kampuchea, India, Indonesia, Japan, Laos, Malaysia, Nepal, Pakistan, Singapore, Sri Lanka and Thailand. Later these thirteen nations also served as the Advisory Panel to the world renowned Japanese Architect Professor Kenzo Tange for the preparation of a Master Plan for the Development of Lumbini. Since then Bangladesh, Bhutan and the Republic of Korea, have also joined this historic effort. The Master Plan was finalised at a tripartite review meeting of India, Thailand and Nepal held in Tokyo in 1978, and received the approval of His Majesty’s Government of Nepal, for implementation. The Lumbini Development Trust of Nepal now administers and coordinates the effort of many nations to develop Lumbini as a place of Worship, Research, Learning, and Practice of Buddhism for achieving world peace.

Lumbini Development Master Plan

The Master Plan of Professor Kenzo Tange transforms three square miles of flat marshy land into a sculptured landscape of repeating squares and circles, in a rectangular form developed on a central North-South Axis. The Project Area has three zones namely: The Lumbini village, The Monastic Zone and the Sacred Garden inter-linked by a Central Spine. The Spine is a 1,474 meter long pedestrian walkway placed on either side of a central canal.

The Lumbini Village

This is the Gateway to the outer world where the visitors to Lumbini are provided with tourist facilities. Visitors will find a wide selection of accommodation to fit one’s budget and liking here. The Sri Lanka Pilgrims Rest with multi-bedded rooms, financed by the Government of Sri Lanka, is located in this zone.

The Monastic Zone

This is the Central Zone where forty-one plots of land are set aside amidst lush green forest for development by the interested nations as an international worshipping zone. The Central Spine divides the zone into East and West sectors for the development of Theravāda and Mahāyāna Monasteries respectively. Sri Lanka has leased two plots, each approximately 80m x 80m in the East Monastic Zone, close to the historic Telar River, approximately one km. to the North East of the Asoka Pillar, for a Monastery Complex, whose construction work has just begun. The other Monasteries presently being developed on the East Monastic Zone are by the Indian Mahābodhi Society, Burma, Thailand, and Nepal. The West Monastic Zone presently has Monasteries of Japan, China, South Korea and Vietnam at various stages of construction. After perhaps a decade or two when all the plots have been fully developed, this zone would present to the visitors a rich variety of Art and Architecture, and a unique place on earth for the practice of Buddhism.

The Sacred Garden

The Sacred Garden is a Circular Zone at the southern end of the Project Area with the historic Telar River flowing on its eastern border. The Central Spinal Walkaway focuses on the Asoka Pillar at the center of the Sacred Garden, with the Māyādevi Temple and the Sākya Tank by its side.

Sri Lanka Monastery (Sri Lanka Viharaya) at Lumbini - Design of the Monastery

The entire design is based on Buddhist Philosophy and is intended to remind the visitor of two of its fundamental teachings, namely the Noble Eightfold Path (Ariya aṭṭhakakacca magga) and the doctrine of Dependent Origination (Paticcasamuppāda). While one site designed as a Meditation Center is for the learning and Practice of Buddhism (Pratippati pūjā) the other incorporating a Stūpa and Monks’ Residence (Sanghavāsā) provides for the worship of the Buddha, Dhamma and the Sangha (Amisa Pūjā).

The Meditation Center

This site is approached from a Garden Reserve in the North through a 4m. wide access road. The visitor will enter the complex from the road, facing south-
wards, through a Traditional Entrance Portal of Legendary Deities and Art Forms (Makara Torana). On either side of the Entrance Portal are two Decorated Lion Pillars, each containing 3 lions on its top and bearing the Buddhist Flag, and the Country Flags. A flight of steps at the Entrance Portal takes the visitor to the lowest floor of the Meditation Center containing a Reflecting Pond in the Center and two Sāla Trees (Shorea Robusta) on either side, symbolizing the Sal Garden where the Birth of Prince Siddhartha ensued. Behind the Reflecting Pond on a Podium is placed a Statue of Prince Siddhartha Gauthama, uttering the famous Proclamation ‘aggohamasmi lokassa having taken seven steps on lotus flowers that arose from the ground. The visitor will see Prince Siddhartha on the seventh lotus, with the Prince’s utterance inscribed on marble, and a painting depicting His Birth in the background. An open Colonnaded Pavilion crowned with a traditional two-tier roof named after Prince Siddhartha (Siddhartha Pavillion), provides cover to the ensemble on the Podium.

The central feature of the Meditation Centre is Lord Buddha in the Meditation Posture (Samādhi Mudrā) under a Bo-Tree (Ficus Religiosa). The Bo-Tree is placed about thirty feet above the lowest floor level, and the Samādhi Buddha Statue is placed at such an elevation at the foot of the Bo-Tree, so as to present to the visitor approaching from the Entrance Portal, a glimpse of both Prince Siddhartha and Lord Buddha at the same time; Prince Siddhartha at normal Eye-level and Lord Buddha in an elevated position.

As the visitor approaches closer and closer, the curious visitor will find Lord Buddha gradually disappearing from the visual field due to the high retaining wall behind Siddhartha Pavillon, supporting the elevated center. In order to rediscover Lord Buddha the visitor is now made to follow eight Flights of Steps placed symmetrically on either side of the Siddhartha Pavillon, symbolizing the Noble Eightfold Path followed by Prince Siddhartha, to attain Buddhahood.

The visitor climbing the stair way will observe each step of the Noble Eightfold Path inscribed on the decorated balustrade walls at very Landing, giving him the feeling that he is now treading this Noble Path to worship Lord Buddha. On reaching the eighth landing containing the inscription “Samma Samādhi”, the visitor will see Lord Buddha in Samādhi Mudrā under the Bodhi Tree, directly in front of him.

The visitor is now in a spacious terrace containing a semi-circular open colonnaded shelter (Bodhi-ghara) designed for meditation. From this terrace a narrow ladder of steps leads to the highest level of the complex containing the Bo-Tree. Two semi-circular lower terraces are also available for the meditators with paved platforms under trees. All the terraces are interconnected by easy stairways. The Meditation Center also has a rear entrance marked by a pavilion. Entry through this pavilion leads the visitor through a paved foot path to the Main Entrance.

The Stūpa and the Monks’ Residence (Saṅghāvāsa)

The second site is to be developed as a place of worship of the Buddha, Dharma and the Sangha. Lord Buddha’s relics enshrined in a Stupa built on a spiraling ring of Hexagonal Chambers (Dharma Mandir), will enable the worship of the Buddha. The spiraling Hexagonal Chambers are to contain specially selected Dhamma related to the Principle of Dependent Origination (Paticca Samuppāda), and a Monks’ Residence (Saṅghāvāsa) placed behind with facilities for the worship of Saṅgha and the preaching of Dhamma.

Lalith Muthukumāra

L.Y QUOC SU’: The L.Y Quoc Su’ pagoda is in the district of the Cathedral in the centre of the Capital City of Hanoi. In ancient times the place was known as the hamlet of Tiến-thi belonging to the canton Thuần.

The porch of the pagoda has three doors with small superposed roofs and richly decorated pylons. It stands near a big century old banian tree.

The court of honour of the pagoda is behind the porch and has a small garden on the left. On the right of the porch is the court of service where there are outhouses of the pagoda, such as library, bonzery, storehouse, kitchen.

There is an old commemorative pillar which has very old calligraphies. They tell of the history of the pagoda and the life of the famous monk to whom the pagoda was dedicated.

A square kiosk called Huong dinh is at the back of the court of honour. There are two annexed lateral edifices which are on the two sides. One is called the Bonzery and the other the Điện Maũ or Altar of the mother goddess.
Newly built big galleries with flat roofs join three parts of the edifice to the square kiosk which has been the reception hall resulting in a remarkable transformation. The reception hall is built of wood. Its roofs are superposed and the eight angles turn up towards the sky in harmonious line. The main frontage has just been partitioned and one has to pass by the galleries in order to go to the inside of the hall.

It is clear that the pagoda is composed of three compartments: The Tien duong ngoai khach (external pavilion of reception), the Noi cung Phat tei (interior pavilion of the Buddhist altar) and the Han Cung (sanctuary). The Tien duong is a pavilion of three bay-windows. Among the three bay-windows, the one in the middle is bigger than the other two.

The Noi cung is also a pavilion. Its breadth is identical to that of the Tien duong, but its roof is perpendicular to that of the latter. Four lateral central columns in wood and two lateral walls without windows support the two frames of the roof. The Buddhist altar is at the back of the median bay. The Cuoi long statue depicting the birth of the Buddha is in its usual place. A statue of Quon am is in front of it.

The altars of the Han are in the lateral bays. On the right there are three statues of gentlemen dressed in costumes of high officials and on the left, four statues of noble ladies. These groups of statues including the one representing the holy monk L’y Quoc Su constitute the artistic treasure of the pagoda.

At the back of these bays there are the statues of Duc ong and Duc Thanh. Duc ong is the guardian genius of the pagoda and Duc Thanh (Ananda?) the disciple of the Buddha.

The great statue of the sedent Buddha is placed on the highest grading of the altars. The standing statues of his two disciples are placed on his two sides. After the Buddha is the statue of the holy monk L’y Quoc Su sitting in the same position. He is wearing a monkish diadem taking in the right hand a lotus flower. There are also the statues of Giac Hai and Tu-dao hanh who were the famous colleagues of the holy monk Ning Khong. The lateral altars are dedicated to the parents of the holy monk and his two famous colleagues. The statues of these four personages are sculptured in stone and painted in multicolour.

The pagoda is called Ly-Quoc Su which means the master of the kingdom of Ly’. The pagoda has been dedicated to the cult of a second master of the kingdom, Ven. Ngvyn Chi Thanh.

The Ly Quoc Su pagoda has been preserved as a historic monument of the Buddhists in Viet Nam.

MACCHARIYA, (Var, Macchera, Skt. Matsarya). The PED gives the following meanings to this term, namely, avarice, stinginess, selfishness and envy and calls it one of the principal evil passions and the main cause of rebirth in the Petaloka. Macchariya is reckoned as an unwholesome or immoral psychological factor (akusala cetasika). Its characteristic is hiding or concealing one’s own fortune (attano sampattinam nighuhana lakkanam).

There are five kinds of Macchariya namely, (1) Stinginess or avarice about dwellings (avasamacchāriya); Stinginess or Avarice regarding families (kula macchariya); Stinginess or avarice about gains (labha macchariya); Stinginess or avarice about knowledge or dhamma (dhamma macchariya); and Stinginess and avarice about fame and praise (vanṇa macchariya).

In the Dhammapada, Macchera or avariciousness is called a stain (mala) in a donor (dadato macchera mala - Dhp. V. 242). It is one of the evil psychological conditions, which have to be renounced by force of intelligence. “With the stain of avarice vanished’ is frequently mentioned as a feature of the blameless life and a preparation for arahantship.

MACHERA See MACCHARIYA

MADA - Infatuation. The Vibhanga (p. 345) defines it as infatuation, conceit, self-imaging, conceitedness, loftiness, haughtiness, flaunting a flag, assumption, desire of the heart for self-advertisement. (Yo mado .... māno maññanā maññitattaṃ unnati unnamo dhajo sampaggāho ketukamayātā cittassa, ayaṃ vuccati mado - Vib. p. 360). Infatuation could arise due to birth (jāti), lineage (gotta), health (ārogya), youth (yobbana), life (jīvita), gain (lābha), hospitality (sakkāra), honour (garukāra), devotion (purekkhāra), retinue (parivāra), wealth (bhoga), colour or beauty (vaṇṇa), learning
MADA - Here the person is intoxicated with the pride of his learning comparing it to the lesser education of others.

Pathibhānamada - Here the person is intoxicated with the pride of his intelligence thinking that he is more intelligent than others.

Rattāññumada - This is intoxication due to a person's recognition, experience etc.

Pīṇḍapātamada - The person is intoxicated with the pride of getting his meals regularly while others are getting their meals occassionally.

The other possible grounds for the arising of mada are: The superior way one is treated over others (avāññattim mada); one's pleasant postures (iriyāpatha mada); possession of psychic powers (iddhi mada); reputation due to such factors as superior skills in advising others (yasa mada); cultivation of virtue (śīla mada); ability to attain jhānic experience at ease (jhāna mada); accomplishment in craft (sippa mada); height of the body (āroha mada); growth of the body (parināha mada); physical appearance or shape of the body (saññhāna mada); having a physical body free from deformities (pāripūri mada).

It is on realizing Nibbāna that all forms of mada (conceit, intoxication) come to a complete end. (nimmadā amadā honti vinassanti). Hence mada nimmadana, which literally means “disintoxication from intoxication”, is used as another expression for Nibbāna.

MADHURATTHAVILĀSINĪ: The commentary on the Buddhavamsa written by Buddhadatta Mahā Thera of Uragapura (in the Kāvirapaṭṭana) in the Cola coun-
try of South India, under the patronage of Accutavikkama.1 Buddhadatta is said to have had his education at the Mahāvihāra monastery which was the principal centre of Buddhist education in Sri Lanka.

The Buddhavamsa is the fourteenth book of the Khuddaka Nikāyā and is a narration of the biographical details of the twenty-five Buddhas of whom Gotama was the last. The last chapter deals with the distribution of Gotama’s relics.2 The Buddhavamsa is a poetical work consisting of an introductory chapter of 81 verses, followed by the story of the Bodhisattva Gotama making his first resolve under the Buddha Dipānkarā as Sumedha to become a Buddha in 187 verses.3 It is for this reason that Dipānkarā becomes the first Bhuddha whose biographical details are narrated in the Buddhavamsa. This is followed by individual chapters on the twenty-four former Buddhas ending up with the chapter on Buddha Gotama which is the shortest of the biographical chapters, consisting of 24 verses. The Buddhapakīṇnāka kaṇḍa which follows the chapter on Buddha Gotama is followed by the story of the division of the relics of Buddha Gotama in 13 verses. The Buddhavamsa contains a total of 1310 verses.

The Madhuratthavilāsini is the commentary on this text of 1310 verses. It opens up with the Nidānavānṇanā which after a few introductory remarks starts to comment on the first chapter of the Buddhavamsa, verse by verse. According to the author, the Buddhavamsa was expounded by the Buddha when he was residing at Nigrodhārāma in Kapilavatthu of the Sākyan country, consequent to a request by the Venerable Sāriputta. Although it is not possible to say with any degree of certainty when the Buddhavamsa was written, the references made by the author to the Nidānakathā of the Jātakaṭṭhakathā goes to show that it is posterior to the Jātaka commentary, probably pointing to a period later than that of Buddhaghosa.

It is with the declaration by the Buddha Dipānkarā that the ascetic Sumedha, who had laid himself face down on the muddy stretch of the path he undertook to clean, in order to allow the Buddha to walk across untouched by the mud, would become a Buddha in a future birth, that he becomes a Bodhisattva. The commentary on this chapter which follows the Nidānavānṇanā is the second longest chapter of the commentary. The commentaries on the chapters which follow this are much shorter except for the commentary on the chapter on Buddha Gotama which becomes the third longest chapter of the commentary. The first declaration made by Dipānkarā is confirmed by each of the twenty-three Buddhas who came after him, hence their inclusion in the Buddhavamsa.

The work displays commendable familiarity with relevant textual as well as commentarial material which were in existence at the time of its writing. Another important feature which cannot fail to attract the attention of the reader is the style of language used by the author. He seems to have taken delight at the slightest opportunity to use alliteration throughout his work, thus making it enjoyable to the reader. His descriptions are fascinatingly pleasant to read and it is a pleasure to witness how he plays with his words reminding the reader of the language style in the second half of the Ātānātiya Sutta.4

The author’s familiarity with the textual traditions of the Mahāvihāra fraternity seems to have also helped him to keep within the ethos of the Mahāvihāra traditions in the elucidation of the texts which he was commenting on. The Mahāpadāna Sutta tradition which gives details of six former Buddhas with Buddha Gotama as the seventh, had developed by the time of the Jātaka commentary into a tradition of twenty-four former Buddhas. It is this same tradition which is supported by the Buddhavamsa text and its commentary. The importance of the Buddhavamsa and its commentary lies in the affirmation they have given to the tradition of the twenty-four former Buddhas, which had already been accepted by the Mahāvihāra tradition in the commentary on the Jātaka tales compiled by Buddhaghosa.

M. M. J. Marasinghe

2. *DPPN.* II. 310
3. *DPPN.* II. 1249
4. It may be noted here that the second half of the Ātānātiya Sutta belongs to a period (ideologically) much later than that of the first half of the *sutta.*
The first chapter of the text, “Examination of Conditions” (Pratīyasaṃutpāda), is devoted to the refutation of the substantialist or identity and the nihilistic or non-identity theories of causation mentioned earlier. The second, “Examination of the moved and the unmoved” (Gatāgata-parīkṣā) is an attempt to clarify the metaphysical theories of change or movement that contributed to the metaphysical theories of causation.

At the end of this, Nāgārjuna is not ready to give an explanation of the Buddha’s theory of dependent arising (pratīyasaṃutpāda), in contrast to the substantialist and nihilistic theories. The reason for this is that almost all forms of knowledge and all objects of knowledge explained in the early discourses also had received similar metaphysical interpretations at the hands of the Sarvāstivādins and the Sautrāntikas. Thus the first major part of the text was devoted to the refutation of these views. These pertain to the examination of (3) faculties (indriya), (4) the aggregates (skandha), (5) elements (dhamma), (6) lust and the lustful (rāgarakta), (7) dispositionally conditioned (saṅskṛta) (8) action and agent (karmakāra), (9) antecedent state (pūrva), (10) fire and fuel (agniṇdhana), (11) prior and posterior ends (pūrva-parākoṭi), (12) suffering (duṣkha), (13) dispositions (sainskāra), (14) association (saṁsarga) and (15) self-nature (svabhāva).

Again, in all these instances, having criticized the metaphysical views, Nāgārjuna does not present an explanation as to how they can be understood in terms of the Buddha’s own teachings. In the discourse to Kaccāyana, the Buddha himself did not do so. Indeed what is most significant is that at the end of the section, namely, in Chapter 15, he refers to the two metaphysical extremes of existence (saṁsāra) and non-existence (nāsāttha) rejected by the Buddha in his address to Kaccāyana, where they are replaced by the empirical facts of arising (uppāda) and ceasing (niruddha).³

Nāgārjuna is not yet ready to explain the Buddha’s middle ....... of dependent arising. The reason is that, in addition to the two extremes of existence and non-existence, the Buddha’s discourse refers to another pervasive metaphysical theory, namely, that of the self (atta).⁴ Buddha’s statement to Kaccāyana is as fol-
lows: ‘The world, for the most part, Kaccayana, is bound by approach and grasping. One does not follow that approach and grasping, that determination of thought, that commitment and leaning, and grasp and determine: “That is my self”’. Nagarjuna now feels that it is his responsibility to examine the explanation of the categories that led the later Buddhists to formulate a theory of a subtle personality (pudgala). Therefore, the next few chapters deal with the problem of self and those concepts that generate such a metaphysical notion. They are the examination of (16) bondage and release (bandhanamokṣa), (17) fruit of action (karmaphala), (18) self (ātma), (19) time (kāla), (20) harmony (sāmagrī), (21) occurrence and dissolution (śambhavavibhava), (22) the Thus-gone One (tathāgata), and (23) perversions (viparyāsa).

After mentioning the theory of self (atta), the Buddha, in the discourse to Kaccayana, admonishes him to focus on the problem of suffering (dukkha) as it arises and ceases: “Who thinks, suffering that is subject to arising, arises, suffering that is subject to ceasing, ceases.” Here again, as in the previous cases, the four noble truths have received metaphysical treatment at the hands of the Buddhist metaphysicians. Therefore, in the next two chapters examining (24) the noble truths (āryasatya) and (25) freedom (nirvāṇa), Nagarjuna devotes himself to a refutation of such metaphysical views. In the former, he makes one of the most significant statements, in the most positive terms, explaining his own understanding of what the Buddha’s doctrine is.

Whatever, is dependent arising, that we say is emptiness. That depends on an expression. That itself is the middle way.

(Yaḥ prātiyasaṃutpādaḥ śunyatāṁ tām prakāsmāhe, sā prajñāpūrti upādāya pratipat saī va madhyamā.)

Having dealt with the metaphysical issues relating to the four truths, especially the existence of suffering, its arising and ceasing, Nagarjuna proceeds directly to the discourse to Kaccayana that explains the arising and ceasing of suffering, namely, the examination of the twelfefold factors that constitute the human personality (dvādasāṅgaparīkṣā) in their progressive (anuloma) and regressive (paṭiloma) orders. It is the most positive description of the Buddha’s doctrine in this text and an indication of his realization that ultimately truth or reality is dependent upon the problem of human suffering and its resolution.

The first twenty six chapters of this work thus seem to follow step by step the themes presented by the Buddha in his very short admonition to Kaccayana, which is the only discourse quoted by Nagarjuna, but placed in the background of the metaphysical interpretations of Buddhist categories by some of the later Buddhists. This is therefore a grand commentary on the discourse to Kaccayana.

The final chapter (27) on views (drṣṭi) is a return to the Buddha’s “Discourse on Brahma’s Net” (Brahmajāla-suttanta) mentioned above. Herein, he summarized the major metaphysical views mentioned in that discourse, and concludes with the statement:

I reverently bow to Gautama who, out of compassion, has taught the true doctrine in order to relinquish all views.

(Sarvadrṣṭiprahaṇaya yaḥ saddharmam ades’ayat, anukampāṁ upādāya taṁ namasyāmi gautamaṁ.)

It is the realization that grasping onto any one of the metaphysical views, listed as sixty-two in the Buddha’s discourse, will leave no room for the elimination of suffering, and that the practice of compassion calls for the letting go of the views, not the non-acceptance of a view such as ‘dependent arising’ (pratityasamutpāda). The major controversy that led to a dissension among the followers of Nagarjuna is this final statement in the Mūla-madhyamaka-kārikā. One group assumed that the relinquishing (prahāna) is a synonym for non-grasping, and this is the view of the Svātantrika school that recognized a theory or perspective without considering it to be the absolutely valid one. The second is the Prāsaṅgika school for which relinquishing means adopting no views or theories whatsoever because language is not capable of expressing the ultimate truth (see, Madhyamika system).
MADHYAMAKA SĀSTRA
See MŪLAMĀDHYAMAKAKĀRIKĀ

MADHYAMĀ PRATIPAT (Pali MAJJHIMA PAṬIPADĀ). Before Siddhartha Gautama left his royal inheritance, he had come to be well-instructed in the traditional as well as non-traditional systems of thought. He was aware that the traditional Brahmanical thinkers, for centuries, emphasized the existence (sat) of an eternal reality in the individual as well as the world (ātman), but also an equally eternal and incorruptible moral law (brahman).1 The non-traditional or the śramana tradition known to us have insisted upon the non-existence (asat) of the eternal reality of the individual as well as the incorruptible moral law, but recognized the reality of the physical world (loka)2. Therefore, they came to be popularly known as the “worldly philosophers” (lokāyatikā), admitting the reality of the material elements only. This latter was simply an extreme reaction to the Brahmanical claims.

These two extremes, existence (sat) and non-existence (asat), or according to the Buddha’s terminology atthita and natthita,3 dominated every aspect of philosophical speculation during the pre-Buddhist period.

It is in this context that young Siddhartha renounced the home life and went looking, not for the truth or existence (satya), but for the good (kīṃkusālagavesī) and the incomparable and noble path to peace (anuttaraṃ santivarapadamaṇ paraiesamāna).4 After six long years, he felt that he had attained the good and the peaceful. He wanted to express it to the world so that it can benefit by it. However, this communication was not easy. This is why he decided to avoid extremes (anta) and follow a “middle way” (majjhima patipadā, madhyamā pratipad) in almost every sphere of explanation.

The first is in the explanation of human knowledge. The Brahmanical thinkers, having first utilized a priori reasoning in order to justify an eternal self (ātman) and world (brahman), subsequently moved in the direction of adopting a transcendental yogic intuition, at the same time, devaluing the sensory experiences. This is what prompted some members of the reclusive (śramana) tradition to recognize sensory experience only, and reject the efficacy of any psychological or moral behavior on the part of the humans. They accepted only the physical processes observable through the physical senses.

In this background of two extremes, the Buddha proceeded to analyze and explain how both processes, sensory and contemplative (jhāna), have defects as well as limitations and how the defects can be rectified. It seems that the Buddha’s suggestions for the rectification of the process of sensory experience came as a result of his reflections on the nature of yogic contemplation. He received instructions from two Brahmanical contemplatives. Ālāra Kālāma and Uddaka Rāmaputta, regarding the contemplations described as the “state of nothingness” (aṇkhicāṇāyatanā)5 and the “state of non perception and not non-perception” (nevasaṇṇāna-saṇṇāyatanā)6, respectively. The latter satisfies the yearning on the part of the Brahmanical thinkers for a yogic intuition (=not non-perception), but which transcends ordinary perception (=not perception). That this was not what he was looking for is evident from his leaving these two teachers, being dissatisfied with their contemplations. After experimenting with the practice of severe austerities for a long period of time, and realizing that they too were futile and not leading to the good and the peaceful, he returned to the contemplations he practised earlier. He persisted in proceeding further and reached the “state of cessation of perception and what is felt” (saṇṇāvedayatanirodha).7 It is after emerging from this state that he realized the total absence of what the Brahmanical thinkers were looking for, namely, a permanent and eternal ultimate reality (ātman), hence his doctrine of no-self or non-substantiality (anatta), which probably made him re-reflect on the route to be taken in regard to the contemplations.

In this process, keeping in mind his goal of achieving the good and the peaceful, it could be said that he decided to follow a method of contemplation that eliminates unwholesome thoughts, rejects certainty in

regard to knowledge and retains the validity of sense experience as well as yogic insight. This is precisely what he did in the contemplations that are generally considered to belong to the material world (arūpajjhāna). These are his own contemplations, not related to anything of the traditional contemplative tradition. In fact, their naming according to numbers as first to fourth, compared to the names of the non-material (arūpajjhāna), is indicative of their novelty. The first stage of contemplation (pathamajjhāna) is one in which a person remains aloof from pleasures of sense (kāma) and bad tendencies (akusaladhamma). This assures the moral character of whatever that follows. In addition, it also serves as the basis of joy (pīti) and happiness (sukha) that are qualitatively different from those that are derived from pleasures of sense. That joy and happiness are accompanied by reflection (vitakka) and investigation (vicāra), the former taking the contemplative to the past to gather information, and the latter, widening the circle of inquiry. Once this information gathering is done, it becomes necessary to suspend reflection and investigation, without undertaking wild-goose chase for absolute origins and ultimate realities. The contemplative then enjoys joy and happiness born of concentration (samādhiyam pītísekhanī). The joy that could become an obsession is then terminated. This allows the contemplative an experience of happiness associated with being 'considerate' (upekkhā). And the fourth contemplation is devoted to the purification of consideration and mindfulness (upekkhāsatipārisuddhi) by abandoning even the feeling of happiness. This is not the closing down of the thought process in order to perceive an ineffable ultimate truth. It is when the thought process becomes pure (parisuddha), cleansed (pariyodāta), without blemish (anāṅgana), with defilements gone (vagatūpakkilesa), become tender (mudubhūta), pliable ( kammaniya), become steadfast (thita) and steadied (ānejjapatta). The recognition of this unprejudiced and steady sensory experience, without running after unverifiable mysterious substance (nimitta) contrasted with qualities (anuvāyajjana), is the Buddha’s rejection of the extreme attitude of the Brahmanical thinkers who completely devalued that experience.

Next, the Buddha was left with the task of rejecting the extremist treatment of sense experience, especially confined to the five physical senses, as the only valid source of knowledge, and denying any other source emerging out of the concentration of thought. This was the attitude of the materialists and natural determinists of the pre-Buddhist period. The Buddha’s response to it was the recognition of higher forms of knowledge (abhinnā). After reaching the state of consideration (upekkhā), when the thought became flexible, pliable and stable, he was able to direct it toward the extraordinary forms of knowledge. Leaving aside the first three, psychokinesis (iddhividha), the divine ear (dibbāsota) and telepathy (cetopariyānāna), as possibilities, but of not great moral value, the Buddha focused on recollection (pubben ivasanussati) and clairvoyance (dibbacakkhu). The first provided information about one’s own past lives, hence of survival of the human personality, and the second provided information about another’s survival at the moment of death. These two forms of knowledge convinced him of the reality of certain occurrences, namely, karma and rebirth, both of which were denied by the materialists. The extraordinary perceptions thus enable the Buddha to reject the second extreme of denying any form of knowledge other than sensory experience.

For the Buddha, the best form of knowledge was a middle one between the extremes of recognizing the unrestrained sense experience, on the one hand, an unlimited yogic intuition, on the other. It is called the knowledge of the spewing out of defilements (asavakkhayāna), knowledge of things as they come to be (yathābhūtañāna), which is wisdom (paññā).

In the area of logical thinking, the Buddha once again adopted a middle way avoiding the extremes of the true and the false. In the Indian context, as it was in the West, the true is understood as existence (satya) and the false meant non-existence (asatya). As the Buddhist epistemologist, Dignāga, pointed out centuries later, this position can be upheld only through a principle of exclusion (apoha).11 In the Western world, the purity of the two valued logic was preserved by the excluded middle. Once again, in the Indian context, the two-valued logic contributed to four alternatives that included the assertion of both and the negation of both. Thus we can have the following:

A is B (true)
A is not-B (false)
A is both B and not-B (contradiction)
A is neither B nor not-B (unspeakable).

These four alternatives served as the foundation of the philosophy of Sañjaya, the skeptic, as well as the Jainas. It is in this background that the Buddha made the following statement:

I know what has been seen, heard, conceived, cognized, attained, sought and reflected upon by the people, including the recluses and brahmans. If I know what has been seen by the people ... and if I were to say, "I do not know it," that would be confusion (musā) on my part. And if I were to say, [it is both that] "I know it and I do not know it," that too would be confusion (musā) on my part. [However,] if I were to say, "[it is both that] I neither know it nor do not know it," I would be committing a sin (kali) on my part.18

K. N. Jayatilleke, trained in the Western logical tradition with its true-false dichotomy, mistook the last three statements by ignoring the different terms used by the Buddha. The four statements may be summarized as follows:

1. I know p (truth, sacca)
2. I do not know p (confusion, musā)
3. [It is both that] I know p and do not know p (confusion, musā)
4. [It is both that] I neither know nor do not know p (sin, kali)

The Buddha uses the pre-Buddhist term satya (sacca) to refer to truth, but in order to undermine its metaphysical meaning of existence (sat) uses the term bhūta, a past participle meaning ‘become’ as a synonym.19 Furthermore, the Buddha never used the terms sacca and asacca at the same time to refer to the true and the false. Instead, he invented a new dichotomy, truth (sacca) and confusion (musā), a distinction that was to eliminate the absolutist existence and non-existence dichotomy. This characterization enabled him to keep both propositions, 2 and 3, open with the possibility of their becoming true. Confusion (musā) thus becomes a synonym for abhiṣāta, 'not yet become'.20 This is a middle way between truth as existence and false as the non-existence. Indeed, what he condemns as epistemological sin (kali) is the fourth proposition that negates both ordinary experience and conception, but leaves room for indescribability of what is claimed to be the ultimate truth or reality.

Following this middle way in epistemology and logic, the Buddha proceeded to formulate his conception of reality. Here again, the Buddha was faced with the dichotomy of existence and non-existence, not as the true and the false as in epistemology, but as existence (atthita, asitva) and non-existence (n'atthitii, nātītov) in the sphere of ontology. This is the famous middle way discussed in the discourse of Kaccāyana.21 The discourse presents an empirical argument, maintaining that for one who perceives with right wisdom the ceasing of the world, the idea of existence in the world does not occur, and, similarly, for one who perceives with right wisdom the arising of the world, the idea of non-existence in the world does not occur.22 Having referred to an idea that most people adhere to, are committed to and grasp on to, namely, “This is my self” (attā me iti), the Buddha’s admonition is that one should perceiving the arising of suffering that arises,

22. Ibid., 2.17.
perceive the ceasing of suffering that ceases. This is an attempt to move the person away from metaphysics to empirical issues relevant to the good and the peace of human beings. Another set of extremes, similar to the one that is mentioned earlier, but which is placed in the context of the universal, is then introduced. "Everything exists" (sabbam atthi) is one, the other being, "everything does not exist" (sabbam nāththi). It is at this point that the Buddha makes a claim regarding the ontological middle way. "Without approaching these two extremes, the Tathāgata teaches the doctrine through the middle (mājjhena)." This middle is then explained in terms of the principle of dependent arising (paticcasamuppāda), consisting of the twelve factors explaining the human personality. Here the Buddha's concern being the arising and ceasing of suffering, he does not get involved in a technical discussion of the principle of dependent arising.

In what sense is dependent arising a middle way in ontology? Dependent arising (paticcasamuppāda) is a theory based upon the experience of the dependently arisen (paticcasamuppanna). Both terms were not part of the Indian vocabulary before the Buddha. They, as well as many other terms, were coined by the Buddha in order to express his ideas which were totally different from those of the previous Brahmanical and Śrāmaṇa traditions.

First of all, the Brahmanical tradition, enamoured with its pursuit of the permanent and eternal self (ātman) and the world (brahman) was never involved in a serious discussion of the problems of space, time and causality. The reclusive of Śrāmaṇa tradition was, while reacting against the Brahmanical teachings, remained satisfied with explaining everything in terms of material elements. Since causality or dependent arising is invariably connected with the problems of space and time, and since the Buddha was more interested in dealing with psychological and moral events than the physical, he did not spend much time on the problem of space, but focused on the problem of time. The conception of time (kāla) available in the background was commonsensical or non-philosophical. These were the concepts of the past (aita, a past participle meaning, 'gone away'), the present (wartamāna, a present participle meaning, 'existing') and the future (anāgata, a past participle implying, 'not yet come'). The present thus remains separated from the past and the future, thereby making it almost impossible to relate a cause and an effect.

Thus, the first task of the Buddha was to coin a new term to express an enduring present, that is, a present that includes at least the immediate past. Hence his creation of the term paccuppanna (pratīyutpanna), meaning 'arisen facing [back]', another past participle a grammatical form that describes a continued process that has been terminated. Similarly, the dependently arisen term (paticcasamuppanna, pratīyasamuttan) explains the arising of an effect having moved toward the condition or conditions. This represents the experience of the relationship between the effect and the condition or conditions on which it depends. This leaves room for revisions in our description of the condition or conditions, thereby eliminating the need for an unverifiable substance or essence in the cause that gives rise to the effect. This constitutes the knowledge of phenomena (dhamme nāṇa). Dependent arising (paticcasamuppāda, pratīyasamuttanā, a nominal form) is based upon inductive knowledge (anvaye nāṇa), since it is an application of the experienced dependence into the obvious past and the future. By limiting the evidence for the causal relation to the experience of the enduring present, by recognizing the limitations of that experience, the flexibility of the theory of dependent arising itself is assured. This is clearly expressed in the Buddha's statement:

What, monks, is dependent arising? Dependent upon birth, monks, is decay and death, whether the Tathāgatas were to arise or were not to arise. This element, this status of phenomena, this orderliness of phenomena, this interdependence has remained. That the Tathāgata comes to know and realize, and having known and realized, he describes it, sets it forth, makes it known, establishes it, discloses it, analyses it, clarifies it saying, "Look".

It may be noted that the Buddha was prepared to assure the validity of this principle only up to the present, hence his careful use of the past participle,
has remained (thita). Thus, the theory of dependent arising is a middle way between absolute determinism and chaotic indeterminism.

The application of this theory also serves as a middle way in the explanation of the (1) human person, the psychophysical personality (nāmarūpa), (2) human behavior (kamma) and (3) survival (punabbhava). In regard to the first, the Buddha could avoid the belief in a permanent and eternal self (ātman) as well as the total denial of a conscious self by the materialists. In regard to the second, the Buddha rejected the absolute determinism between a deed and its consequence, as it was advocated by the Jainas, and the complete negation of the effectiveness of any human deed, as proclaimed by the materialists and the natural determinists. Finally, in regard to the third, the Buddha’s was a denial of the Brahmanical theory of the inevitability of rebecoming until the attainment of the permanent and eternal state of bliss (brahman) and the denial of rebecoming by the materialists.

First, the middle way adopted by the Buddha in the explanation is very significant, in contrast to the Brahmanical notion of a permanent and eternal spiritual self distinct from the physical personality (aṇham jīvam aṇham sarīram) and the materialist notion of a self confined to the physical body (tam jīvam tam sarīram). The Buddha attempted to explain the change and continuity of a human person by placing his description in a middle position between these two extremes. Thus, undermining the view of the spiritualist, the Buddha recognized the foundation of the human person as the physical body or form (rupa). He did not recognize a disembodied existence, except as a metaphor signifying experiences such as the immaterial contemplations (arūpajjhāna). Taking the psychic part of the human person, in contrast to the materialist view of a person, the Buddha recognized the importance of feelings (vedanā) and perception (saññā), both of which enables a person to become part of a society, for feelings and perceptions are experiences shared with others. While being part of a society, what individuates a person are the dispositions (saṅkhārā), psychic tendency through which a person becomes selective in choosing one’s own personality and its behavior. The continuity of that human person is explained more by consciousness (viññāna) than even by the body. Consciousness does not represent an entity, but only a function (vijñāti ti viññāna). More often it is described as a stream of consciousness (viññānasota), a conception posed as an alternative to the Brahmanical notion of self. Without this stream of consciousness, with which a person is able to respond to the world of experience, there is no human person, even if there were to be a physical body. A human person is distinguished from all other living beings because of its possession of dispositions and consciousness, together referred to as becoming (bhava), which is also characterized as a stream (bhavasota).

The Mahākammavibhaṅga-sutta, one of the few discourses that has been preserved outside the Pali Nikāyas and the Chinese Agamas, thus indicating its significance and popularity, is the best illustration of the conditionality operative in the field of human behavior and consequence. The four types of individuals who perform bad and good deeds are described as follows:

1. A person of evil deeds being reborn in hell.
2. A person of evil deeds being reborn in heaven.
3. A person of good deeds reborn in heaven.
4. A person of good deeds being reborn in hell.

The Buddha argues that all four are possibilities, and that it would be wrong to assume, on the basis of 1 and 3, that the relationship between deed and consequence is completely determined and that, on the basis of 2 and 4, one is committed to recognizing indeterminism in regard to the relationship. The Buddha’s theory of conditionality eliminated determinism or indeterminism, but left room for change depending

upon conditions. The best illustration of this conditionality is expressed by the simile of the ‘fruit of salt’ (lonaphala) in the following discourse:

Monks, whosoever were to say: “Just as this man does a deed, so will it be experienced,”37 when that is the case, monks, there will be no living of the higher life, opportunity is not evident for the complete ceasing of suffering. But whosoever, monks, were to say: “Just as this man does a deed to be experienced in such a way, so is its fruitioning experienced,”38 when that is the case. monks, there will be the living of the higher life, opportunity is evident for the complete ceasing of suffering. Herein, monks, of a certain person, even a minor evil deed done, that will lead him to hell. Herein, monks, of a certain person, a similar minor evil deed done, that may be experiencible in the present life or even an atom of it may not appear, let alone much of it.

Of what kind of person, monks, even a minor evil deed done will lead him to hell? Herein, monks, a certain person is with undeveloped body, undeveloped virtue, undeveloped thought, undeveloped wisdom, insignificant, small self,39 living with little suffering. Monks, of such a person, even a minor evil deed done, that will lead him to hell.

Of what kind of person is even a minor evil deed done, that may be experiencible in the present life or even an atom of it may not appear, let alone much of it? Herein, monks, a certain person is with developed body, developed virtue, developed thought, developed wisdom, significant, great self,40 living with immeasurable (thought). Monks, of such a person, even a minor evil deed done, that may be experiencible in the present life or even an atom of it may not appear, let alone much of it. Just as, monka, a man would place a crystal of salt in a drinking cup with little water. What do you think, monks? Would the little water in the drinking cup be salty and undrinkable by that crystal of water?

Yes, Sir.
What is the reason for this?
Yes, Sir, the water in the drinking cup is little. That would be salty and undrinkable by that crystal of salt.

Just as, monks, a man would throw a crystal of salt into the river Ganges. What do you think, monks? Would the river Ganges become salty and undrinkable by the crystal of salt?

It is not so, Sir.
What is the reason for this?
Sir, the volume of water in this river Ganges is great. It would not become salty and undrinkable by this crystal of salt.41

The one-to-one relation between bad deeds and evil consequences and good deeds and good consequences is avoided by explaining the relationships in terms of conditionality. Various conditions can interfere in the aggravation or diminishing of the nature of the consequences.

The Buddha adopted a middle way in explaining the survival of the human personality as well. Unlike the Brahmanical system that upheld a permanent and eternal self, and the materialist denial of survival, the Buddha, on the basis of the higher forms of knowledge, especially retrocognition and clairvoyance, admitted the fact of survival and the possibility of its occurrence in the future. This again, is explained in terms of theory of dependence. The psychophysical personality is explained as the product of three factors, the union of the parents, the mother being in the proper season and the availability of a gandhabba42 (a being seeking for survival, sambhavesi43). Nowhere does the Buddha claim that every human being who dies will be reborn. He was only maintaining that as a result of the availability of conditions that lead to survival, it has happened in the past, but there is no way to guarantee that those conditions will always be there.

43. Ibid., 1.48.
The well-known and often emphasized middle way pertains to the moral life, as embodied in the Buddha’s first discourse to the world.\textsuperscript{44} It may have been the context that made him speak of the middle way in the moral life as the content of his first discourse to the world. It may be remembered that his first group of ‘listeners’ (sāvaka) was the five friends in whose company he practised severe mortification of the flesh. When he abandoned that practice, they left him in disgust. Therefore, he had to convince them, not only about the evil effects of the pursuit of pleasures of sense (kāmasukhakāyikāyoga), but also of the futility of commitment to self-mortification (attakilamathānuyoga). Indeed, the avoidance of the extremes is encouraged not only because of moral concerns but also because of ontological facts. It is possible that one who indulges in pleasures of sense has no concern for thepossibility of a future life, as reflected in the teachings of the Indian hedonists, the Carvākas, who encouraged a life of pleasure.\textsuperscript{45} In contrast were those who practised severe self-mortification in the hope of attaining some spiritual status free from physical suffering.

The middle path in ethics is divided by the Buddha into the beginning (ādi), the middle (majhya) and the conclusion (pariyosāna).\textsuperscript{46} The beginning consists of virtues (sīla), where a person refrains from activities that are harmful mostly to society.\textsuperscript{47} To induce a person to follow these virtues, rewards and punishments are offered. Rewards in good destinies such as the heavenly world (devaloka) and the world of humans (manussaloka), while punishments are reaped in the animal womb (tiraccānāyoni), the sphere of the departed ancestors (pettivisaya) and hell (niraya).\textsuperscript{48} As a person advances with the cultivation of virtues, that person embarks on the genuine moral life consisting of the eightfold path (āṭṭhaṅgikā magga) wherein one has abandoned the conceptions of rewards and punishments, of merits and demerits (puññāpāpapahīna)\textsuperscript{49} and has adopted the more exalted doctrine (sāmukkānsikā dhammadesaṇā)\textsuperscript{50} that involves an understanding of the four noble truths, that there is suffering in the world, there is a cause of it, it can be eliminated and there’s a way to eliminate it. This is the genuine middle way that contributes to the ultimate goal, namely, one’s own happiness and the happiness of others. To place it in the background in which it was presented, it is a middle way between the deontological ethics of the Brahmanical tradition, reflected in the caste-system and its inalienable duties (yarna-dharma) and the utilitarian ethics of the Śramaṇa tradition, emphasizing the utility value of the stages of life (āśrama-dharma). These two traditions came to be elaborated subsequently in the Bhagavadgītā and Kautilya’s Arthasastra respectively.\textsuperscript{51} The noble eightfold path is a middle way between deontology and utilitarianism, the former calling for self-sacrifice, the latter underscoring self-aggrandisement. The eightfold path emphasizes one’s own welfare (attahita) and the welfare of others (parahita)\textsuperscript{52}

The conclusion of the middle way, namely, freedom (nibbāna) is also a middle way in the Indian context. While the Brahmanical tradition emphasized the attainment of a permanent and eternal blissful state (brahman), the materialists denied any possibility of freedom except death, the Ājivikas arguing for freedom without human initiative, and the Jainas recommending a state of inaction leading to an end of life, a form of suicide. In the background of these extremes, the Buddha presented freedom as the capacity to lead a life free from ideological constraints, and therefore one of happiness, stability, absence of frustration, etc. Such a life is also due to the absence of craving for pleasures of sense (kāmaṇṭhā), for becoming (bhavatānthā) and for becoming something different (vibhavatānthā).\textsuperscript{53} It is a life of happiness in this life and the avoidance of suffering in the future by not becoming (apunabhava).\textsuperscript{54}

Finally, another significant middle way, not highlighted by traditional Buddhist explanations, is in the middle way in the treatment of language, the most significant means of communication. First of all, the Buddha changed the entire perspective about language. When the traditional Brahmanical system claimed language to have only two aspects, namely, etymology (niruktī) and grammar (vyākaraṇa), two disciplines that corresponded to their philosophical enterprise, namely, the unitary self (ātman) and the universal self (brahman). These two disciplines, cultivated to their extreme by Yaska in his Nirukta and Pāṇini in his Aṣṭādhyāyī combined to produce the Sanskrit (saṃskṛta “well-done”) language. Even though Pāṇini came two centuries after the Buddha, the move toward creating an artificial language was already prevalent during the Buddha’s day. He felt that this was an extremist version of language. Hence his recongnition of many other aspects of linguistic convention, which eventually led him to a middle way in evaluating the nature and function of language.

While using the term ‘etymology’ (niruktī) to refer to language in general, prefixing it with the term ‘provincial’ (janapada), the Buddha used the Indian term for grammar (vyākaraṇa) to refer to expositions, declarations, explanations, etc, and utilized the term ‘commonality’ (sāmaṇīa, sāmānya) to refer to relations among the components of language. In fact, the later logical treatises used the term sāmānya to refer to ‘universals’. The Buddha utilized three more terms to refer to language. The first is ‘convention’ (saṃmāti), that is, getting together and agreeing. For the Buddha, language is one that functions in a language speaking community, and unless there is agreement among members of that community, communication, the most important function of language, is not possible. The second is ‘current usage’ (vohāra, vyavahāra). The middle way that he followed prevented him from adopting an official language of the Brahmanical tradition, namely, Sanskrit. He was ready to recognize the validity of every dialect, saying: “I recommend that each person learns the Buddha’s doctrine through one’s own language.”

Thirdly, if there were to be a language that is of great significance, it was not the language of existence (sat) as in the case of the pre-Buddhist traditions, but a language of becoming (bhava) that reflects the Buddha’s wisdom. Thus language became the expression of wisdom (pañña, prajña). While the term prajña was available in the pre-Buddhist vocabulary, sat was absent for the expression of reality. This was probably because of the assumption that the object of wisdom, ātman or brahman, is the expression, hence expressed in negation: “Not thus” (neti neti). As mentioned before, a position was not acceptable to the Buddha, so he invented another term, paññatti (prajñāpatti), the causative verb paññāpeti (prajñāpatti), so that it is an expression of the content of the language. For the Buddha, it is the language of denotation (paññicasamuppāda).

Having made the above remarks, the Buddha learned the Buddha’s doctrine in one’s own language. The Buddha remained faithful to his object of wisdom, excluded the language of existence, insisted that one should not take any stand, and say: “This alone is true, all else is false” (tathā gata eva sacca cakāra). The Buddha advises his disciples not to adopt extreme positions regarding language. The extreme in concerning (abhinivesa) in regard to language as the object of wisdom, and going beyond (atīsāra) language as the object of reality, is thus made incapable of expressing reality. The Buddhist specialist in linguistics, has selected abhinivesa and atīsāra, not without reason. Vaiśīṣa was the medical term for diarrhoea. Atīsāra could then mean constipation. In the philosophical language, they represent conceptual diarrhoea and conceptual constipation. The Buddha’s admonition that “it is recognized in those countries, so it is a speak of it, without clinging: “For this reason, sandhāya) these venerable ones speak thus. It is most interesting is that this analysis (sandhāya) is the conclusion to a discourse on non-contradiction (satvānta)
and Venerable Subhūti is hailed as the best among those who live in peace (aranāvihāri). It is also of significance that this discourse served as a source for the Vajracchedikā-prajñāpāramitā, which is an attempt to give flexibility to frozen concepts (see below).

After the passing away of the Buddha, for centuries the disciples were embroiled in philosophical disputes primarily relating to metaphysics. The first major philosophical view that deviated from that of the Buddha was presented by the Sarvāstivādins. It was the consequence of the acceptance of an atomic theory of moments (kṣanavāda) in the explanation of continuity. The Sarvāstivādins proposed the idea that all phenomena (dharma) remains during the past the present and the future in a form of a substance (svabhāva, dravya) and what changes being variously termed as existences (bhāva), characteristics (laksana), conditions (avasthā) or relations (anyonyathāva).

In addition, the Sarvāstivādins recognized dharmas termed as aggregated (skandha), gateways (āyatana) and elements (dhātu), which have their own self-nature or substance (svabhāva) to be real in an absolute sense (paramārtha), while objects like a house, a pot or a personality are mere conventions (saṁvrti). The Sarvāstivādins, holding such views, still considered themselves to be following a middle way, one between the empty (śūnya) and non-empty (asaṁyā). The conventional (saṁvrti) is the empty, while the real in the absolute sense (paramārtha) is the non-empty. However, their view that there is a substance in phenomena led them to a theory of causation that recognized the pre-existence of the effect in the cause (satkāravyāvāda). They were the unrelenting realists of the Buddhist tradition.

The Sautrāntikas who remained faithful to the theory of moments and considered the Sarvāstivāda theory of substance as another theory of self (“from substance means from self,” svabhāvata ity ātmatah), argued against making a distinction between substance and what are referred to as conditions (kārīra). The denial of an absolute reality left the Sautrāntikas with the mere convention (saṁvrti, prajñāpāramitā) and made them the nominalists of the Buddhist tradition. However, it seems that they assumed their conception of reality as mere convention (prajñaptisa) as a middle way between the externalist ultimate realities (paramārtha) and the transcendentalist reality that went beyond linguistic convention (lokottaravāda). It also led them to a position where, the extreme atomistic momentariness allowed no causal relations except simple succession of events. Causation, in this context, becomes the production of a non-existence effect (asatkāravyāvāda).

One of the first reactions to the two extremes—Sarvāstivāda realism and Sautrāntika nominalism—is represented by the famous treatise, the Vajracchedikā-prajñāpāramitā, presented in the form of a dialogue between the Buddha and Subhūti, referred to earlier as the chief among the Buddha’s disciples who lived a life of peace (aranāvihāri). The discourse, traditionally identified as a Mahāyāna work and included under what came to be known as the Vaiśeṣika-sūtras, has nothing to do with that tradition.

It may not be an exaggeration to say that the entire Vajracchedikā is a colossal attempt to discredit the extremist use of language, that is, to eliminate any ontological commitment to concepts, while at the same time retaining their empirical and pragmatic value, without rendering them totally empty of meaning. The following philosophical analysis is applied to more than thirty popular Buddhist concepts. For example, taking the most important concept, namely, dharma (phenomenon) about which the Sarvāstivādins and the Sautrāntikas had presented realistic and nominalistic interpretations respectively, the Vajracchedikā maintains:

63. Ibi., p. 270.
64. Abhk. v p. 362.
66. Hajime Nakamura examining an early translation into Chinese by Ch’ih-ch’ien, provides us with the information that it follows an introduction similar to those of the early discourses; the location of the sermon is Jetavana, the audience consisted of 1250 monks (bhikkhu) only, with no mention of a bodhisattva. Furthermore, the Purvāśīlas, a sect of the so-called Hinayāna, is said to have the sutra in Prakrit. See Indian Buddhism, p. 159.
The first represents an assertion about a phenomenon (dharma) such as that presented by the Sarvāstivādins. This is a correspondence between a term and a reality represented by it. It is an ontological commitment to a phenomenon (dharma). It is then followed by a negation, represented by the Sautrāntikas, which stands for a deconstruction of the fossilized conception, hence the statement: a non-phenomenon (adharma). Unfortunately, this leaves a totally negative impression about concepts, with no explanation of their status. The middle standpoint, as highlighted in the Buddha’s “Discourse on the Analysis of Non-conflict” (Aranavibhaṅga-sutta), referred to earlier, is one in which concepts are recognized as being expressive of experiences, hence placed in quotes: “dharma dharma” indicating that they are neither absolute realities nor absolute unrealities, but expressions of human experiences.

The most prominent exponent of the middle way (madhyamā pratipad), after the Buddha, was Nāgārjuna, who is said to have been introduced to the Buddhist doctrine through the Prajñāpāramitā literature and went looking for the other discourses of the Buddha. After reading the early discourses, Nāgārjuna was made to be quite aware that the Buddha’s middle way was between the dualistic thinking involving permanent existence (astiṣṭva) and nihilistic non-existence (nāastiṣṭva), whether it was in epistemology, metaphysics, ethics or linguistics, as explained earlier, together with their possible combination (both existence and non-existence) and the negation of the combination (neither existence nor non-existence).

One of his major works is the “Verses on the Fundamentals of the Middle” (Mūlamadhyamakakarikā). The first chapter of this work is devoted to a refutation of the metaphysical theories of causation. In the very first verse itself Nāgārjuna rejects self-causation, external causation, the assertion of their combination and its negation. The fact that his refutation is directed at his Buddhist compatriots is evident from the fact that in the second verse he refers to the four conditions (pratyaya) presented by the later Buddhists. Having mentioned the four conditions, Nāgārjuna immediately denies the Sarvāstivāda notion of substance or self-nature (svabhāva) which it assumed to be part of the condition. Here Nāgārjuna was utilizing an empirical argument that it is not evident (na vidyate). In the dualistic system, if self-nature is not evident, then what is evident should be other-nature (parabhāva). Nāgārjuna does not deny other-nature on empirical grounds, for other-ness is evident, even though a permanent and eternal self-nature is not evident. He therefore resorts to a denial of the conceptual correlation, arguing that in the absence of a self-nature, there cannot be a conception of other-nature. It is this form of argument that confused many an interpreter of Nāgārjuna, including one of his well-known commentators, Candrakīrti, to assume that he accepted a linguistic transcendence of an ultimate reality (paramārtha). Chapter II is devoted to a rejection of the perspectives regarding change or motion that deviated from that of the Buddha and contributed to the metaphysical theories.

After that Nāgārjuna devotes thirteen chapters analyzing a variety of categories such as the faculties (indriya), aggregates (skandha) and elements (dhātu) which were misinterpreted by the Buddhist metaphysicians. The last chapter here, on the “Examination of Self-nature” (Svabhāvaparākṣā), is the conclusion and a fitting climax to this analysis, and one in which he quotes by name, “The Admonition to Kātyāyana” (Kātyāyanavāvāda, Kaccāyanagotta-sutta) where the Buddha rejects the two metaphysical extremes in ontology and presents his famous philosophical middle way.

The next ten chapters are devoted to an examination of the metaphysical positions adopted regarding the concept of a person, both in bondage and in freedom. The most significant statement of Nāgārjuna in regard to the middle way is in Chapter XXIV (verse 18).

Whatever is dependent arising, we say that is emptiness. That is a dependent expression; that itself is a middle way.

In other words, the middle way (madhyamā pratipat) is an expression, through concepts that are themselves dependently arisen (prajñāpāramitā upādāya),

---

69. S 2. 16-17.
of a negation of permanent and eternal selves or realities, which is the meaning of emptiness (śūnyatā) and the positive description of experience as dependent arising (pratītyasamutpāda).

The application of dependent arising to explain a human person and its experiences is dealt with in Chapter XXVI, which is also a middle way formulated by the Buddha in the discourse to Kaccayana. It is an exposition of the twelve factors (dvādasāṅga). The final chapter refers to the various metaphysical views criticized by the Buddha as well as his adomotion not to grasp on to such views (diṭṭhiparāmāsa), which is the equivalent of letting go of all views (sarvadṛṣṭiparāhāna). Nāgārjuna was not unaware that letting go of all views is also a middle way propounded by the Buddha between having views (diṭṭhi) and having no views (adiṭṭhi).

Another middle way, not the least compatible with that of the Buddha, was presented by the Saddharma-puṇḍarīka-sūtra, which suggested two extremes in the area of human knowledge, (1) sensory experience of the ordinary people, and (2) the first five forms of higher knowledge developed by the Buddha's disciples. For it, the middle way in knowledge is "image-less-ness or appearance-less-ness of dharmas" (nirābhāsadharmā), again similar to the reality described in negative terms, "non-ceasing, non-arising" (aniruddhānupāda). The middle way here is the attainment of the state of cessation (niruddhasamāpatti), along with a claim for a positive state "of the stage of Tathagata" (tathāgatabhāmi). It is the ultimate state of blissfulness, undisturbed by discriminative thought (nirvikalpa-samādhi).

The development of such extreme idealism in the Buddhist tradition, generally referred to as Yogācāra or Viśṇānavāda, led to the wrong identification of two great philosophers with that tradition and the misinterpretation of their writings. These are Vasubandhu and Dignāga who, like Nāgājuna before them, tried to rescue the original teachings of the Buddha. Instead of being idealists, the former wrote one of the outstanding treatises on philosophical psychology, and the latter turned out to be the best exponent of the Buddha's epistemology and logic, and his writing generated an avalanche of logical treatises by traditional Indian logicians.

Vasubandhu's primary work, the Vijnaptīmatratāsiddhi was wrongly understood as "The Establishment of Mere Consciousness" by the idealists in India as well as by the Far Eastern Buddhists, the latter following the rendering of the term vijnapti into Chinese as "consciousness" (vijnāna) by Hsuan-tsang. Vijnapti (Pali, viññatti) is more appropriately understood as the expression of consciousness (a nominal form derived from the causative verb viññāpeti), that is, "conception".

The treaties is comprised of two texts, the "Twenty Verses" (Vimśatikā) and the "Thirty Verses" (Tryṃśiṅkā, or more appropriately, Tryṃśatikā). The first is an attempt to establish mere consciousness as a middle way between realism, which takes the object, whether constituted of substances or atoms that are ultimately real, and the nominalism which considers discriminative conceptions that express such objects as mere names. As explained earlier, the first is represented by the Sarvāvādins and the second was advocated by the

74. Vin 3.144, yācanabhulā viññatībhalulā; see also Vbh 13; Vsān 41.
Sautrantikas. The middle way between these two extremes is achieved by pointing out the functioning or the pragmatic value of conceptions. This work was not much studied in the Far East, where the study of Vasubandhu’s thought is based primarily upon the second.

The second work is devoted to an explanation of the various transformations of consciousness (vijñānaparīnāma), with a view to indicating how the usages such as self (ātma) and real elements (dharma) come to be fossilized as ultimate realities. His conception of ālayavijñāna, the first of the transformations, is more in conformity with the Buddha’s theory of the “stream of consciousness” (viññānasota)75, rather than the more metaphysical conception of the Yogācārins who took it to mean a “store-house or container” (āś'rāyā). It is the stream of consciousness in bondage, and reminds us of the Buddha’s use of the term ālaya in the Ariyapariyesana-sutta,76 where the reference is to the people delighting in attachment (ālaya-ratā) and engrossed in attachment (ālayasamuditā). Thus, according to Vasubandhu, with the attainment of the state of “worthiness” (arhatva), the turning around (vyāvṛtti) of this transformation of consciousness from leading on to the conceptions of real self and real elements takes place.77 After explaining the functioning of the mind (manana), which is the second transformation, Vasubandhu refers to the third, namely, “the conception of the object” (viśayavijñānapti), which in the case of the unenlightened ones lead to the grasping of the object (viśayasyopalabdhiḥ).78

The most significant is the manner in which Vasubandhu treated the three types of self-nature or substances (svabhāva)-the falsely discriminated (parikalpita), the dependent (paratrantra) and the achieved (parinispanna). The achieved, being the nature of the enlightened one free from defilements, is not a state of absolute transcendence, as the Saddharmapuchārīka-sūtra and the Lankāvatāra-sūtra presented (see above explanations), but one in which false discriminations do not function in the understanding of the dependent, that is, dependent arising (paratrantra = pratiyāyasamutpāda).79 In other words, it is not a transcendence of dependent arising, but retaining it as a middle way between the two extremes of existence and non-existence, which are the falsely discriminated (parikalpita).

Finally, the last of the major philosophers who tried to return to the Buddhist middle way was Dignāga. He was writing during a period when the traditional Indian logicians were making absolute distinctions between the particular (svālakṣaṇa) and the universal (sāmānyalakṣaṇa). The purpose of the former was identified as sense experience, or perception (pratyakṣa) and the source of the latter being inference (anumāna). The problem regarding these forms of knowledge was how far one can be certain of them.

Dignāga takes up the first, namely perception, and makes the remark that it is the absence of absolute discriminations (kalpartaraṇa), but does not maintain that it is error-free (dūtram), a qualification added by his commentator, Dharmakīrti. Just as perception is not error-free, so is inference. Inference can be error-free only if one arbitrarily closes the mode of reasoning. Thus, while trying to reach an absolutely correct universal conception, for example, that all swans are white, one has to make the arbitrary claim that there are non-white swans. In fact black swans were discovered in New Zealand since the above claim was made. In other words, one has to close the conception leaving no room for other possibilities. This is what Dignāga called principle of exclusion (apoha), one that would arbitrarily circumscribe a conception. Dignāga was not unaware of the Buddha’s condemnation of such an exclusionary principle, when he condemned the assertion: “This alone is true, all else is false” (idam eva saccam mogham aññam).80 Instead of strictly confining the particular (svālakṣaṇa) to a perception alone, and the universal (sāmānyalakṣaṇa) to an inference, Dignāga adopted the middle way when he maintained that the particular gets highlighted in perception, without eliminating conception, and the universal gets underscored in inference without abandoning perception altogether.81

Such are the middle ways presented by the Buddha as well as his disciples of a later date, some of whom deviated from the original intentions of the Buddha, while others tried to remain faithful to them. This indeed involved the whole history of Buddhism.

David J. Kalupahana

**MĀDHYAMIKA SYSTEM**: The Mādhyamika system is one that is associated with the writings of the famous Buddhist philosopher, Nāgārjuna (circa. 150-250 A.C.) (see NĀGĀJUNA). It has been pointed out: 'At first, the appellation “Mādhyamika” was not used to designate a school because an opposing Mahāyāna tradition was not present. Only after the Yogācāra tradition arose about a century after Mādhyamika did the term “Mādhyamika” came to be used.' Mādhyamika school has been traditionally regarded as part of the Mahāyāna tradition. In fact, a few centuries later, the Mādhyamika came to be coupled with the Yogācāra. This is probably the time when it came to be looked upon as a fully-fledged Mahāyāna school. By then, the ideas by Nāgārjuna had come to be interpreted in a totally different way, so much so that he is attributed with a pure Mahāyāna treatise like the *Mahāprajñāpāramitā-sūtra*. This attribution was questioned by Etienne Lamotte when he translated eighteen of the hundred chapters from Chinese into French. However, the one who provided a detailed analysis of this work after Lamotte, being a traditional Indian philosopher, has ignored Lamotte’s evidence. This is understandable, since traditional Indian philosophers, even prior to Śaṅkara, tried to understand the basic teachings of this school from the point of view of Vedaṇta. In fact, this interpretation began with the writings of Budhapālita (circa. 470-540), followed by those of Candrakirti (circa. 650), especially his lengthy commentary on Nāgārjuna’s *Mūlamadhyamaka-kārikā*, entitled *Mādhyamika-vṛtti*. Among those who adopted this interpretation during modern times are T. R. V. Murti and Marvin Sprung, to mention a few. This interpretation is associated with what came to be known as the Prāṣāntika school. While both Mahāyāna and traditional Indian philosophical schools like Vedaṇta favored this school, there was another version known as Svātāntrika advocated by another disciple of Nāgārjuna named Bhāvaviveka or Bhavya (circa. 490-570).

Even though Nāgārjuna himself does not use the term ‘mādhyaṃkama,’ especially in the treatise that he himself named *The Verse on the Fundamentals of the Middle Way (Mūlamadhyamakakārikā)*, he was highlighting ‘the middle way (mādhyama pratipad),’ even quoting the Buddha’s discourse to Kaccāyana. It is also possible that Nāgārjuna himself was not aware that he was starting a new school of thought. Nāgārjuna probably had no such intention, since there is undeniable evidence that what he was attempting was to resurrect the original teachings of the Buddha by eliminating the substantialist and transcendentalist metaphysics that grew around them (see Nāgārjuna). For this reason, it is possible to surmise that it was some of his disciples who called themselves the Mādhyamikas.

Even among those disciples there were differences in the understanding of Nāgārjuna’s writings. Thus, as mentioned above, there came to be two schools, the Svātāntrikas and the Prāṣāntikas.

The Svātāntrika school was founded by Bhāvaviveka or Bhavya. His works are (1) *Prajñāpradīpa*, a commentary on Nāgārjuna’s *Mūlamadhyamaka-kārikā*; (2) *Karatalaratana*, refuting the ideas of the Yogācāra and preserved in Chinese; (3) *Madhyamaka-hṛdaya*, a work composed in verses refuting some of the philosophical traditions available during his day, and with his own commentary called *Tarkajñala*, both preserved in Tibetan only, and (4) *Madhyamakārtha-samgraha*, existing only in Tibetan.
Bhāvaviveka's most important thesis is that one has to present one's own theory (svatantra) in order to refute another's, if that were not consistent with empirical facts. Adopting a theory on the basis of one's own experiences is different from grasping on to a theory as absolute truth. Scholars leaning toward transcendence have interpreted Bhāvaviveka's concepts of parājaya-paramārtha as "speakable ultimate truth" and aparyāya-paramārtha as "unspeakable ultimate truth." Paryāya, which literally means 'synonym', is generally used to refer to the method of teaching in the discourses (sutta), where it signifies a discursive method, while the Abhidharma represented the non-discursive method (nirpariyāya-desanā). It is highly possible that Bhāvaviveka was noticing such a distinction in the writings of Nagarjuna. Taking paramārtha as 'ultimate fruit' (which is the sense in which Nagarjuna used the term), it is possible to hold that a work like the Suhṛlekha, with its profuse use of metaphors and similes, is a discursive treatise on the ultimate goal in Buddhism, while the Madhyamaka-kārikā is an absolutely non-discursive text. By understanding them in this manner, one can easily avoid linguistic transcendence attributed to both Nagarjuna and Bhāvaviveka. Furthermore, this is again confirmed by Bhāvaviveka's analysis of the 'conventional (śamvrtī) as the genuine (tathāya) and false (mithyā). This is an attempt to distinguish between genuine and false concepts, the genuine concepts being those that are employed in the discursive as well as the non-discursive discourses on the ultimate goal. For Bhāvaviveka, as it was for Nagarjuna, the principle of dependent arising is the theory in terms of which the four alternatives stemming from the two-valued logic, existence and non-existence, was rejected. In other words, prajñāsamatpāda is the svatantra. This would mean Bhāvaviveka was a faithful follower of Nagarjuna.

Although Candrakirti speaks of Buddhāpālita in respectful and favourable terms, he himself was the chief exponent of the Prāsaṅgika school. He was the author of the extensive commentary on Nagarjuna's Madhyamaka-kārikā called Prasannapadā Madhyamakavṛtti, and one of the few treatises that survives in the original. Among his own systematic treatises, are the Madhyamakāvatāra and Pañcaskandhaprakaraṇa, the latter being extremely influential in Tibet. The popularly held view that Nagarjuna did not have a thesis or position when refuting other theories was put forward by Candrakirti, who assumed that the negative terms in the dedicatory verses characterize the principle of dependent arising (prajñāsamatpāda) and freedom (nirvāṇa).

Most scholars, both classical and modern, have been unable to understand Nagarjuna's rejection of the traditional two-valued logic and the resultant four alternatives, and failed to realize that Nagarjuna was faithfully following the Buddha's teachings embodied in the Brahmajāla-sutta, where sixty two theories based upon the four alternatives were rejected, giving the impression that the virtues listed in the first part of the discourse could not be cultivated if one were to adopt any one of those views. Not only did they argue for the non-recognition of a thesis, but also advocated the linguistic transcendence of what they called 'ultimate reality'. Thus, Candrakirti needed more than sixty pages to explain the first verse in Chapter I of the Kārikā which refers to the four alternative theories of causation. Assuming that in order to criticize self-causation, one has to accept the truth of external causation, Candrakirti makes statements like the following: 'The teacher merely demonstrates his propensity for inference, introducing inference in the wrong place. It is not proper for a Madhyamika to resort to inference based on one's own framework (svatantrānāma), because [for him] there is no reaching out (abhyupagama) for an alternative position.' The dialectic developed by the Prāsaṅgikas is a series of reductio ad absurdum arguments (prasaṅgāpada), when every thesis is turned against itself. For example, the self-arising is refuted as follows: "Existents are not arisen from self because of the meaningless of arising, and also because of excessive implication of error. There is indeed no purpose in the arising of meaning of terms that are experienced as being on their own." Again, arising from another is rejected with the following analysis:

8. See note 4.
9. This is a reference to Bhāvaviveka.
10. MKV p. 16.
“Existents do not arise from other, because it implies the arising of everything from everything.”

12. History is silent as to when and by whom Mādirīgiri was first founded. An uposathāgāra (a chapter house) was built here by King Kanīṭha Tissa (165-193 A.C.). This is the earliest available reference to this monastery, which makes clear that it was in a flourishing condition at the time. When excavations were made, bricks containing Brahmi characters were found. These characters had been inscribed for the use of masons on work at the place, and it is therefore easy to conclude that the monastery has a very ancient origin.

In the reign of King Aggabodhi IV (673-689 A.C.) a chief of the Malaya District (a man of great wealth), is said to have constructed a dhātuvr̥tā-grhā over the stūpa at Madirigiri. There is no doubt that this refers to the Vatadāge (vr̥ttā-dhātuvr̥tā-grhā), the remains of which are to be seen even at the present day. The date of the circular shrine room may therefore be taken to be the 8th century A.C. According to the Mahāvamsa (li, 75), King Sena II (866-901 A.C.), dedicated some of his own possessions for the support of the Manḍalagiri-vihāra.

A pillar inscription of the 10th century A.C. of King Kassapa V (929-939), was found in this place by Mr. H. C. P. Bell in 1897. This inscription gives the next piece of information with regard to this monastery. It was published in the Epigraphia Zeylanica by Dr. D.M. De Z Wickremesinghe (Vol. II, No. 6). The contents tell us that King Abhāsālamevan, under a decree of his Supreme Council (in the third year of his sovereignty), sent three officers of state (who have been named) to the monastery to grant certain communities in respect of the land within the four boundaries of Mādirīgiri-At-veher-Piyangala. The nature of the privileges agrees in the main with other similar records of this period. There is an order that dead goats and fowls should be given to the hospital attached to this vihāra. This shows that animal food was allowed in these Buddhist institutions under certain restrictions. Obviously the regulation refers to animals killed by accident. Another inscription engraved on a slab was discovered about 100 yards to the south east of the Vatadāge. It is engraved in 44 lines of writing in small Sinhala script of the 11th century but as the letters are so worn out that it is not possible to read its contents satisfactorily. It is however a simvattā-pahanā (a royal

12. Ibid., p. 36.
The reference to the hospital makes quite clear the extensive nature of the monastery itself. *Ved-hal-gambim* refers to the lands donated for the maintenance of the hospital. This means that Mādirigiri with its attendant institutions covered hundreds of acres of land. Anurādhapura period of Sīrī Lankan history comes to a close with the Chola invasion of 1017 A.C. This incident had a very serious effect on the religious, social and political conditions in the island. The Cholas held sway over a large part of the land for more than half a century. They were strong Hindus and did their utmost to propagate their faith in Sīrī Lanka during the period of their occupation. Buddhism in India at this time was undergoing a rapid course of decline. Its influence began to be felt in Sīrī Lanka as well and the Chola invasion merely helped to aggravate the situation.

With the accession of Vijayabāhu I (1056-1111) and the subsequent expulsion of the Cholas, Buddhism gained new ground in Sīrī Lanka. This King reconstructed monasteries that had been damaged and restored the Buddhist faith to its rightful place. He is reported to have repaired Mādirigiri (*Mhv. IX, 59*). Therefore it is very likely that this monastery too did not escape the ravages of Chola rule. With the establishment of Sinhala rule in Polonnaru, Mādirigiri comes into prominence again. According to *Mahāvamsa* (Ixxi, 4), King Gajabāhu II (1131-1153), after a series of wars with Parākramabāhu I (1153-1186) which ended with his defeat, entered into an agreement with his victorious rival. The declaration was inscribed on a stone at Mādirigiri. This has not yet been traced but a copy has been found at Samgamu-Vihāra in Gokarālla (Kuruṇāgala District). This discovery has made up for the original copy which is lost. It is very likely that the monks of Mādirigiri and Samgamu-Vihāras brought about the settlement between Parākramabāhu I and Gajabāhu II.

The decline of Rajarata began with the invasion by Māgha (1215-1236) who came from Kalinga and ruled from Polonnaruwa. He was a terror to the inhabitants of this country and is said to have been opposed to Buddhism. Gradually Mādirigiri fell into disuse, the monks and the other inhabitants fleeing from the terror of the foreign tyrant. From this time onwards, history is silent with regard to the affairs of this monastery.

*Vatadāgē* (circular relic house: *vrutta-dhātu-grha*) is an architectural feature which had an interesting development in Sīrī Lanka. The *cetiya-ghara* at Karle, Ellora and Ajanta in Western India claims relationship to the *Vatadāgē* in Sīrī Lanka, but in Sīrī Lanka this form developed on lines of its own. The most celebrated example are those found at Thūpārāma, Ambasthala and Polonnaru. All *Vatadāgē* in Sīrī Lanka conform to a general plan of structure with the exception of Mādirigiri and Polonnaru which deviate from the rest by having a screen in line with the outer circle of pillars. A *Vatadāgē* is a superstructure constructed over a stūpa, incircling it on all sides.

A glance at the pillars around Thūpārāma and Lānkārāma stupas at Anurādhapura puzzles the inquisitive observer as to their original purpose. Archaeologists claim that over these pillars, a roof, probably of wood was constructed round the stūpa, and a circular mandapa was erected connecting it with the roof above. This superstructure gave shelter to the pilgrims from sun and rain. The stūpa itself could be preserved from inclement weather conditions. With regard to architectural features, the *Vatadāgē* at Polonnaru resembles Mādirigiri with the slight difference that the door at the entrance to Mādirigiri is larger than the one at Polonnaru. Furthermore, Mādirigiri Vatadāgē has been built on a rock, probably with a view of enhancing the beauty of the structure. See PLATES XLII, XLIII

Beside the *Vatadāgē*, there are in its precincts, ruins of four image houses. The first one consists of three standing images of the Buddha, the one in the centre being slightly taller than the other two. The hair which is represented by snail like curls and the *civa* (robe) show the influence of the Amarāvati school of art. The three images are subject to exposure and exhibit clear signs of decay. Hands too have broken away and may not stand the ravages of time.

The pillars of the *Vatadāgē* are interesting with regard to form. The capitals are of excellent workmanship, figures of dwarfs and lions in unbroken lines
adding much to their aesthetic value. Inside the \textit{Vaṭādāgē} are four sedent Buddhas facing the four cardinal directions, with their backs against the stūpa. The faces are flat and the hair snail-like. The flight of steps leading to the stūpa is a stone construction and retains its original features up to the present day. The stūpa has lost half its hemispherical dome and the superstructure. What now remains is a circular heap of bricks and what relics were treasured within are not known. The treasure hunters have forestalled the archaeologists.

The \textit{Vaṭādāgē} itself had been a brick structure when it was first constructed. A large hole (made on one side probably by archaeological excavators) on the stone superstructure that has replaced the earlier brick framework, gives a faint idea of what it may have looked like when it was first built. The stone superstructure is obviously the result of renovations made from time to time.

This architectural form is regarded as one of the main features of early Sri Lankan architecture, having distinctive features of its own. The monumental gracefulness of the pillars, the polished stone that constitutes the balustrade and the flight of steps leading on to the shrine, the serenity of the sedent Buddha images inside and the auspicious symbol the \textit{piṇṇa-gīṭa} at the entrance are so impressive that they are capable of heightening the religious feelings of the approaching pilgrim. As Mr. H. C. P. Bell has rightly called it, this building seen from a distance, is without doubt “an architectural gem in the jungle”.

Nandasena Mudiyanse

MAGADHA, the scene of the greater part of the Buddha’s missionary activity and the last stronghold of his faith in India. Magadha was one of the four chief kingdoms at the time of the Buddha, the other three being Kosala and the kingdoms of Vamsas and Avaithi. It was from Magadha that Buddhism spread to the other parts of the Indian sub continent during the time of Emperor Asoka. It is identical with modern south Bihar.

As the home of Buddhism and Jainism, this area is replete with archaeological remains of great religious importance. The Buddha was born not in Magadha, but in the country to the north of it, at the Lumbini Grove near Kapilavatthu, the Sakya capital, in modern Nepal.

Magadha, again, was one of the sixteen Mahājanapadas (q.v) and had its capital at Rajagaha or Giribajā where Bimbisara and after him Ajatasatthu reigned. By the time of Bimbisara, the Anga Janapada, too formed part of Magadha (\textit{Vin} I 27). Earlier these two kingdoms were often at war with one another (e.g. \textit{J IV} 454). According to the \textit{Vidhura Pāṇḍita Jātaka}, Magadha had once been under the suzerainty of Anga (J. XI 272).

In the Buddha’s day, Magadha together with Anga consisted of 80,000 villages (\textit{Vin} I 179) and had a circumference of some 300 leagues (\textit{DA}. I 148). Magadha is said to have been bounded to the north by the river Ganges, to the east by the river Champa on the south by the Vindhya Mountains and on the west by the River Sona (T. W. Rhys Davids, \textit{Buddhist India p. 24-DPPN}). The river Ganges formed the boundary between the kingdom of Magadha and the republic of Lichchavis. When the Buddha visited Vesali Bimbisara constructed a road five leagues long from Rajagaha to the river and decorated it. The Lichchavis did the same on the other side of that river (\textit{DhpA}. III, 439).

In the middle of the seventh century B. C. Mahakosala the father of Pasenadi of Kosala extended his domain and the Lichchavis, on the other hand, strengthened their powerful confederation, which led to a struggle between these two smaller kingdoms of Magadha and Champa. By the time of the Buddha’s boyhood Magadha became victorious. The free clans and the great kingdom of Kosala were absorbed by it, and viceroys from Magadha administered the government in distant Punjab and Uddeni (Rhys Davids \textit{op. cit.} 260). Pali chronicles again admit that Asoka was appointed governor of Ujjeni by his father (Ananda W. P. Guruge, \textit{Asoka} pp. 38-39).

On the origin of the word ‘Magadha’ commentators say that the kingdom was named after the provincial princes who were known as Magadhā (\textit{Sn A}. I. 135). Buddhaghosa also gives two other traditional accounts as to how Magadha was named so. One is that the kingdom was named after king Cetiya (\textit{J. 422}), when he was about to be swallowed by the earth for having introduced lying into the world and onlookers pleaded with him saying do not enter the earth (\textit{māgadhām pāvīsa}). The other story is that the kingdom was named Magadha because the people digging the earth on the king’s road were heard to say ‘māgadham karotha’ (do not make it as deep as a fathom) (\textit{SnA}. 1, 135).
Fa-hien reports that the country of Magadha was about 5000 li in circuit. This traveller has given an extensive account of Magadha describing the important places of religious worship. According to him towns of the Magadha kingdom were thickly populated and the soil, rich and fertile. After the first month of summer and before the second month of autumn the level country constantly became flooded. The manners of the people were simple and honest. There were some fifty sangaramas with about 10,000 priests of whom the greater number studied the teaching of the great vehicle. (Samuel Beal, Chinese account of India Vol. III p. 320).

The Mahavamsa presents a comprehensive list of the rulers of Magadha from the time of the Buddha up to Asoka.

Bimbisara was killed in his fifty-third regnal year by his son Ajatasatru who ruled for thirty years. The Buddha passed away in the eighth year of his reign (Mhv. II 29-32). Ajatasatru was killed by his son Udayabaddha who reigned for 16 years. Udayabaddha was killed by his son Anuruddhika. Anuruddhika was killed by his son Munda. These two reigned for eight years. Munda was killed by his son Nagadasaka who reigned for twenty-four years. (ibid. IV 1-4). The people overthrew Nagadasaka and installed a minister named Susunaga on the throne who reigned for eighteen years. His son Klassaka ruled for twenty-eight years. The tenth year of Klassaka coincided with the centenary of the Buddha’s death (ibid. iv. 5-8).

Klassaka had ten sons and these ten brothers reigned for twenty-two years (ibid. 14). Nine Nandas ruled in succession for twenty-two years and the last among them was Dhanananda (ibid. vv. 15-17). Dhanananda was killed by the Brahmin Cankaka who anointed Candagupta of the Maurya dynasty of Kshatriyas. He reigned for twenty-four years (ibid. vv. 16-18). His son Bindusara ruled for twenty-eight years and he had a hundred and one sons, (ibid. vv. 18-19). Bindusara’s son Asoka killed ninety-nine stepbrothers and became the sole ruler of Magadha. His consecration coincided with the two hundred and eighteenth year from the demise of the Buddha (Ananda W. P. Guruge Asoka p. 412-413).

Chandragupta had been a powerful ruler of the Maurya dynasty who was strong enough to withstand the Greeks. But after him Alexander found there to be a succession of small kingdoms and republics in India (Rhys Davids Buddhist India p. 269).

After Asoka, the empire of Magadha lost its provincial power and consisted only of the ancient kingdom and Champa together with the eastern part of Kosala (ibid. p. 309-310).

Magadha was famous for garlic (Sp. IV 290 (and Magadha nola was a common standard of measure (AA 1. 101). Paddy seems to have been the main crop cultivated. Fa-hien mentions a special kind of paddy, which was grown in the country (Samuel Beal op. cit. Vol. III p. 420). Magadhaketttha was an extensive rice field with terraces. This field struck the Buddha’s imagination and he asked Ananda to design a robe on the same pattern and this has been adopted for robes of members of the order ever since. (Vin. 1. 287). Again, the Magadha rice field finds mention in a simile (Mahavamsa kathahaththi A. III 122-123).

The Samyutta Nikaya (1.47) mentions a devaputta by the name of Magadha who once asked the Buddha as to how many things light up the world but this particular Devaputta seems to have no connection with the land of Magadha.

According to the Sri Lankan tradition, Pali the textual language is called Magadhi. The reason for this is attributed to the fact that Buddhism was brought to the island from the kingdom of Magadha during the time of emperor Asoka (Rhys Davids - Pali English Dictionary, Foreword vi). Meanwhile Buddhagosa (Sp. 1, 255) says that Magadhabhāsā is an Aryan language.

MAGGĀMAIIGGAṆĀṆADASSANA-VISUDDHI, ‘purity consisting of knowledge and insight into what is the path’ and not, the fifth of the seven stages of purity outlined in the Rathaviniyatutta (M. I. 147 f) and elaborated in the Visuddhimagga (ch. XX). It is founded on wisdom (pañña) as the base (MA. SHB. II, 131) and consists in that understanding which knows the right path from the wrong path (Vism. 520); and by this knowledge one realises the truth of the path (magga-sacca; Vism. 548). This Visuddhi, ‘purity’ like other forms of visuddhi, is not an end in itself; it is only the means to the attainment of the next higher purity, called the patipaddaññadassanavisuddhi (q. v.;
MAHĀATṬHAKATHĀ

MAGGA PACCAYA See PACCAYA

MAHĀAṬṬHAKATHĀ, the great or General Sihala Commentary was the most prominent Sihala aṭṭhakathā (Sinhala commentary) that was available to the celebrated commentator Buddhaghosa when he arrived in Lanka, having undertaken the noble task of translating Sihala commentaries into Pali in the 5th century A.C. It is also known as Mūlaṭṭhakathā (MA IV 110), which means the basic or the foremost commentary. The tradition is that, when Arahant Mahinda introduced Buddhism to Sri Lanka in the 3rd century B.C., he brought with him the texts, as well as the commentaries in Pali, that were translated into Pali during the period of the Buddha (anupādā parinibbāna) which, together with the other six froms of visuddhi, constitutes the means by which the final goal, i.e. the attainment of absolute freedom (anupādā parinibbāna) is attained (M.I. 150). Upali Karunaratne

MAHĀAṬṬHAKATHĀ 384

The Pali commentarial tradition which originated within the life time of the Buddha was translated into the Sinhala language by the teachers of Heladipa (Lanka). Traditions have been written about the translation of the Sīhala aṭṭhakathā to Pali, the Mahāaṭṭhakathā occupied the paramount position among the Sīhala commentaries. It is evident from his commentaries that it was the main source. In the colophon to the Sumanalavilāsini, the commentary to the Dīgha Nikāya, the first commentary he wrote to a Nikāya, Buddhaghosa records that he composed it having taken the essence of the Mahāaṭṭhakathā.

When Buddhaghosa arrived in Sri Lanka in the 5th century A.C. having accepted the request of the Theravāda Mahā Saṅgha of Jambudīpa, to translate the Sīhala commentaries to Pali, he found a fully developed commentarial literature in the Sīhala language covering the Tipiṭaka as a whole, as well as those that concentrated on particular areas of the Tipiṭaka such as theVinaya. Adikaram, E.W. has enumerated a list of twenty-eight Sīhala commentarial sources that are referred to in the Pali commentaries of Buddhaghosa. He further adds that “Some of the collections were in book form, others scattered literature embodying the views of learned teachers of the past (Adhikaram, E.W., Early History of Buddhism in Ceylon, 1946 Colombo, p. 10).

Among the numerous commentaries that were available to Buddhaghosa when he undertook the translation of the Sīhala aṭṭhakathā to Pali, the Mahāaṭṭhakathā occupied the paramount position among the Sīhala commentaries. It is evident from his commentaries that it was the main source. In the colophon to the Sumanalavilāsini, the commentary to the Dīgha Nikāya, the first commentary he wrote to a Nikāya, Buddhaghosa records that he composed it having taken the essence of the Mahāaṭṭhakathā.

The purpose of explaining (the Teachings of the Buddha) the commentaries have been rehearsed and re rehearsed by five hundred ‘Arahants’ (at the First Council), and kept them in the language of the inhabitants of the island (translated into the Sihala language).

Atthappakāsa anattham aṭṭhakathā adito vassatehi, pañcāhi yā sangitā ca anusangitā ca pacchāpi Sīhaladīpam pana ābhathā Vasīna Mahamahindena, ṭhapitā Sīhalabhāsāya dipavāsinamatthāya.”

“For the purpose of explaining (the Teachings of the Buddha) the commentaries have been rehearsed and re rehearsed by five hundred ‘Arahants’ (They) were brought to the Sīhala dipa by the Great Sage Mahinda and were kept in the Sīhala language for the benefit of the inhabitants of the island” (DA.I, p. 1; MA.I, p.1; SA.I, p.1; AA.I, p.1).

According to the Dampiyā Aṭṭūvā Geṭappaday, Sinhala glossary to the Pali Dhammapada Commentary (circa 9th century A.C.), the commentaries maintained in Pali that belong to the time of the Buddha were translated into the Sinhala language by the teachers of Heladipa (Lanka).

“Magadha basin vetiminā budukeli āṭṭuva heladiva ājuro helabasin tubūhā”: “The commentaries in Pali that belong to the period of the Buddha were translated into the Sinhala language by the teachers of Heladipa (Lanka)” (Dam Piya Aṭṭūvā Geṭappaday edited by Meda Uyangoda Vimalakirthi and Nehinne Sominda - M.D. Gunasena Press Colombo (1960 p. 5-6).

Therefore it is clear that the Pali commentarial tradition which originated within the life time of the Buddha was translated into the Sinhala language no sooner it was introduced to Sri Lanka. Whatever may be the authenticity of the tradition that Arañant Mahinda himself translated Pali commentaries to Sīhala language, it is reasonable to assume that Arañant Mahinda himself trained the Sīhala Monks the art of writing commentaries to the Buddha’s teaching in their own language (Sīhala).
Sā ti Mahāatthaṭhakathāya
Sāramādāya niṭṭhita (DA II - 780 Hewavitharana Edit)

(The entire colophon is missing in the PTS. Edition of the Sumanagalavilāsini).

It is seen that Buddhaghosa is repeating the identical lines at the end of the Pāpaisāsādī (MA. V. 109), the commentary to the Majjhima Nikāya Sāraththapakāsini (SA. III. 308), the commentary to the Samyutta Nikāya and the Manorathapiurani, (AA. V. 98) the Anguttara Nikāya commentary.

In the case of the Samantapāsādikā the commentary to the Vinaya Pitaka, his allegiance to the Mahāatthaṭhakathā appears to be much more than what was expressed regarding his commentaries to the four Nikāyas. In the prelude to the Samantapāsādik ā, the Vinaya commentary, Buddhaghosa pays his tribute to the Mahāatthaṭhakathā thus:

"Samvaññaṇā dāni samārabhanto
Tassā Mahāatthaṭhakathāya sāriṇā"

"While commencing the exegesis (to the Vinaya Pitaka) I shall make the Mahāatthaṭhakathā the body of it. (Vin A.I. p. 2).

However in the commentaries to the Abhidhamma, where the Buddhaghosa’s authorship is not challenged, he has not shown a similar dependence, to the Mahāatthaṭhakathā, although there is indisputable evidence to show that he consulted the Mahāatthaṭhakathā. Instead, in the preface to the Atthaśālini, the commentray to the Dhammasaṅgani Buddhaghosa declares:

Nikāyanatara laddhīhi asammi samākulaṃ Mahāvihāravāsinīṇi Dipayanto vinicchayām

"I shall compose the commentary (to the Dhammasaṅgani) elucidating the decisions of the Mahāvihara fraternity which are not contaminated by the views of alien sects" (DhsA. p. 2).

Similarly it is seen in the Sammohavinodani, the commentary to the Vibhaṅgapakarakāna of the Abhidhamma Pitaka, Buddhaghosa has not paid any specific respect to the Mahāatthaṭhakathā. There he says that he compiled it, taking the essence of the Porāṇatthaṭhakathā, apparently referring to the Sihala Atthakathā as a whole.

"Porāṇatthaṭhakathāyaṃ sāramādāya sā ayāṃ niṭṭhami patta"

"It was completed having taken the essence of the Porāṇatthaṭhakathā (ancient commentaries VibhA. p. 523.)

Unlike in the case of the other Sīhala commentaries such as the Mahāpacčāri Atthakathā and the Kuruṇḍatatthaṭhakathā which were apparently confined to the Vinaya Pitaka, the Mahāatthaṭhakathā is found referred to in the Buddhaghosa’s commentaries to the entire Tipitaka. Mahāatthaṭhakathā is referred to in the Sumanagalavilāsini, the Dīghanikāya commentary:-

"Rajāpatho ti rāga rajādinām
Uthanaṭhāhanānā ti Mahāatthaṭhakathāyaṇā vuttaṃ"

"It is said in the Mahāatthaṭhakathā that “Rajāpatha” means the places where lust is born” (DA. I, 180).

Similarly the Mahāatthaṭhakathā is referred to in the rest of the Nikāyas such as the Pāpaisāsādini, the Majjhimanikāya commentary (MA. I. 33) Sāraththapakāsini, the Samyutta Nikāya commentary (SA. II. 179), the Monorathapiurani, the Anguttara Nikāya commentary (AA. III. 186) the Paramatthajotikā, the Suttaniṭṭha commentary SnA. II, 202 (Khuddaka Nikāya).

The Samantapāsādikā, the commentary on the Vinayapiṭaka carries the largest number of references to the Mahāatthaṭhakathā.

"Mahāatthaṭhakathāyaṃ pana ṭhapita thāna meva thānam. No sakala kumbhi. Tasmā ṭhapita thānato kesaggamattampi moccetassa Pārajikamevāti vuttaṃ"

"In the Mahāatthaṭhakathā, it is said that the place where an object is kept in the place, not the entire pot (container). If someone moves the object (with an intention of stealing) even to a length of a tip of a hair, he is guilty of a Pārajikā offence” (Vin A. II. 317 Commentary on the Pārajikā kaṇḍa).

Not only in the exegesis of the Pārajikā kaṇḍa the Mahāatthaṭhakathā is referred to in the exegesis of the Khandakas too, namely the Vinaya Mahāvagga (Vin A. VI. p. 1135) the Cullavagga (Vin A. VI. p. 1167). In addition it is also referred to in the exegesis on the Parivāra. (Vin A. VII, p. 1344)
Buddhaghosa has referred to the *Mahāāṭṭhakathā* in his Abhidhamma commentaries too. The Atthasaṅgani has referred to the *Mahāāṭṭhakathā* thus:

"Imassa pana atthassa pakāsanattham
Imasmim ṭhāne dvārakathā kathikā"

"In order to explain the present meaning, the *Mahāāṭṭhakathā* has brought in Dvārakathā in this context" (Dhs A. 81-82)

Therefore it is reasonable to conclude that the *Mahāāṭṭhakathā* was the general commentary that covered the entire Tipiṭaka comprising of the Sutta, the Vinaya and the Abhidhamma.

As already stated the largest number of direct references to the *Mahāāṭṭhakathā* is found in the Vinaya commentary the Samaṇṭhapāṣādikā. The Samaṇṭhapāṣādikā refers to the *Mahāāṭṭhakathā* not less than seventy occasions. Therefore it would be possible to form an idea of this great commentary now lost, by perusing such references.

Buddhaghosa had great respect and trust for the *Mahāāṭṭhakathā*. He did not want to refuse an explanation categorically expressed in the *Mahāāṭṭhakathā*. While commenting on buying and selling (kaya vikkaya) under the Pārājikā rule number two (Dutiya Pārājikā), Buddhaghosa says

Mahāāṭṭhakathāyāṃ dalhaṃ katvā vuttattā na sakkā etāṃ paṭikkhipitun

"As it is categorically expressed in the *Mahāāṭṭhakathā* it is not possible to reject" (Vin A. III, 706)

Buddhaghosa’s great regard for the *Mahāāṭṭhakathā* is expressed once more in his following statement in the context of discussing Pārājikā number three.

Ayaṃ nayo Mahāāṭṭhakathāyāṃ suṭṭhu dalhaṃ katvā vuttattā tasmā rathā na anādariyāṃ kātabbāṃ

The rule has been well explained in the *Mahāāṭṭhakathā*. Therefore one should not have any disregard towards it (Vin. A. II, 448)

Buddhaghosa usually, but not always, prefers the *Mahāāṭṭhakathā* to the Kurundi Āṭṭhakathā or the Mahāpaccari āṭṭhakathā, the other prominent Sihala āṭṭhakathās. While discussing stealing of water under the Pārājikā rule number two, Buddhaghosa upholds the explanation given in the *Mahāāṭṭhakathā* against the explanation given in the Kurundi Āṭṭhakathā etc.

"Kurundi āḍīsu pana ‘Avahāroti vuttaṃ. Tām vatthum kālaṅca desaṅcāti. Iminā lakkhaṇena na sameiti. Tasmā Mahāāṭṭhakathāyāṃ vuttaṃ eva yuttam”

"In the commentaries such as Kurundi, it is explained as “acquisition”. But that explanation does not agree with context of time and country. Therefore the explanation given in the *Mahāāṭṭhakathā* is reasonable". (Vin A. II, 346).

Buddhaghosa while having great respect for the *Mahāāṭṭhakathā*, does not hesitate to point out its mistakes or lapses. While discussing Pārājikā rule number two (stealing), which the Buddha subsequently extended to cover even the acts committed within the precincts of a forest, Buddhaghosa has observed a mistake occurring due to a slip of the pen in the *Mahāāṭṭhakathā*.

"Mahaāṭṭhakathāyāṃ pana saccepi ali kepi dukkaṭameva vuttaṃ. Tam pamāda lekkhanti veditabbam."

"It is stated in the *Mahāāṭṭhakathā* that whether it is false or true, it amounts to an offence of dukkaṭa (wrong act). This should be regarded as a slip of the pen." (Vin A. II, 311).

Buddhaghosa has come across an instance where a particular point has not been properly analysed and discussed in the *Mahāāṭṭhakathā*, whereas it is found well discussed in the *Mahāpaccari Āṭṭhakathā*.

"Ayam pana nayo Mahāāṭṭhakathāyāṃ na suṭṭhu vibhatto Mahāpaccariyāṃ vibhatto” ti.

"This rule has not been well analysed in the *Mahāāṭṭhakathā*. The *Mahāpaccari* commentary has analysed it well." (Vin A. III, 617)

Again Buddhaghosa has highlighted an instance where the *Mahāāṭṭhakathā* is not clear while it is clear in the *Mahāpaccari*. 
"Ayaṃ pana nayo Mahāatthakathāyaṃ apākaṭo Mahāpaccariyādīsu pākaṭo".

"This rule is not quite clear in the Mahāatthakathā. But it is clear in the Mahāpaccari etc." (Vin A. III, 726)

There is also an instance where Buddhaghosa declares that the Mahāatthakathā explanation apparently contradicts with the text. "Yañcetam Mahāatthakathāyaṃ vuttam, tam pāliya viruddha miva dissati. (Vin A. II, 300)

Buddhaghosa has noticed an instance where certain teachers of Sri Lanka differed from the interpretations given in the Mahāatthakathā. One such teacher is Mahāpaduma Thera of the 1st century A. C. (Vin A. I, 283).

According to the Paramatthajotikā, the commentary on the Suttanipata, the Mahāatthakathā did not contain the exegesis of the last two verses of Kokālika Sutta of the Sutta nipata. (SnA. II, 477)

The similarity between the language spoken by the Buddhist missionaries headed by Arahat Mahinda and the language of the inhabitants of Sihaladipa helped to understand each other easily, and facilitated the rapid spread of Buddhism. The same similarity would have made the task of writing Sihala commentaries to Pali Tipitaka easy. Though these commentaries were compiled in Sihala, they appear to have contained Pali verses also. As seen in the Dampiyatāvuppi Gātāpadaya, a Sihala commentary to the Pali Commentaries, it is possible that the Mahāatthakathā also used Pali terms to explain the meanings of Pali terms. (DPPN Vol II, p. 558).

There appears no base at all for the statement of the Buddhaghosupattipīya, Malalasekara, that the collection of books with stories (Sihala Atthakathā) written by the Arahat Mahinda therā to a clean spot near the Mahā cetiya not Pali. The collection of books then written by the Mahinda therā in the Sihala language was equivalent in weight of seven middle-sized elephants. There is no other than the past say so. (Buddhaghosupattipīya ed. by Sir James Grey: Luzacs Company, London 1892, p. 193).

According to Adikaram (Early History of Buddhism in Ceylon, Colombo 1946 p. 14) numerous verses and passages in the Pali commentaries, the sources of which we are unable to trace, are possibly from Sihala Atthakathās (of which the Mahāatthakathā was the most prominent)

There is also evidence to show that the Mahāatthakathā contained a large number of anecdotes based on incidents that took place in Ceylon. Buddhaghosa included in his commentaries only a few of these stories.

The Mahāatthakathā is not extant today, nor does any other Sihala Atthakathās exist. How and when the Sihala Atthakathā ceased to exist is not known. According to a Burmese tradition, after translating into Pali, the Sihala Atthakathā Buddhaghosa collected the Sihala Atthakathā and set them on fire.

Tato paṭṭhāya so pi Mahinda therā likhāpiṇī ganthāni rāṣṭhim karāpeva Mahācatiyassā samīpe parisuddhāṭhāne bhāsya Sihala bhāsaya kira Mahinda therā Mahāatthakathāni sabbaganthāni rāṣṭkārāṃ visattho sāla majjhimaṭṭhitthipamānāṃ maṃgalaṭṭhakathāya vadanīti amhehi sutam.

"Then he (Buddhaghosa) collected the books (Sihala Atthakathā) written by the Arahat Mahinda therā to a clean spot near the Mahā cetiya not Pali. According to Law "It is less authentic than that contained in the Cūlavamsa (Law B.C. A history of Pali Literature, Kogan Paul Trench Trübner & Company, London 1933, vol. II p. 558).

According to a tradition in Sri Lanka, the source of which is not known, the Sihalatthakathās are safely deposited in the Abayagiri Stupa. According to this belief an attempt was made during the colonial period to excavate the Abayagiri Stupa to recover the Sihala commentaries. The excavation of the Abayagiri Stupa was commenced in 1887 under the direction of Avers, the Government Agent of the Northern province with the consent of Ven. Medhakantat Theratissa of Aramasthāna. However as a result of the public protest headed by Ven. Hikkaduwa Medhakantat therā, The Colonial Secretary had ordered the Government Agent to stop the excavations immediately. The hole that was bored was closed in the presence of the pilgrims and nothing had been discovered in the attempt. (Brahmacāri Walisinghe Harischandra and Anuradhapura Buddhist Revival, Colombo, March 1991 (ISBN 955-95281-1-5) p. 15-16, Administrative

It is difficult to come to a conclusion as regards the exact time of the extinction of the Sihalaatthakathās. Contrary to the Buddhaghosuppanatti account of immediate destruction, there is evidence to show that the Sihalaatthakathā survived several centuries after being translated into Pali by Buddhaghosa. The Vamsatthattappakāsini (Mahāvamsa tiśa) the commentary to the Mahāvamsa which Malalasekera assigns to the 8th and 9th centuries, (Geiger opines that it belongs to a period between 1000-1200 A. C. The Vamsatthappakāsini introduction (Vol. I CVI - CLX) contains valuable information regarding the survival of the Sihalaatthakathā. According to Oldenberg the Sihalaatthakathā Mahāvamsa, which the author of the Vamsatthappakāsini often cites as his main source, was the historical introduction to the Sihalaatthakathā. If the historical introduction (according to Oldenberg) existed when the Vamsatthappakāsini was written there is no doubt that the Sihalaatthakathā proper (which includes the Mahāatthakathā) would have been available. However Malalasekera argues that it might have originated as the historical introduction to the Sihalaatthakathā, but subsequently it grew up to be a separate Sihalachronical, which the Vamsatthappakāsini refers to as the Sihalaatthakathā Mahāvamsa (Vamsatthappakāsini introduction Vol I p. LVIII). It is clear from the Vamsatthappakāsini that when it was written Sihalaatthakathās were still being studied in the 8th or 9th century. In fact the author sometimes refers the readers to his sources (various Sihalaatthakathās) for further details (Vamsatthappakāsini Vol. I p. 30, Vol. II 362)

However, no specific reference to the Mahāatthakathā is found in the Vamsatthappakāsini. The absence of Mahāatthakathā, the foremost among the Sihalaatthakathās, appears somewhat strange, when we consider the large number of Sihalaatthakathās referred to in the Vamsatthappakāsini such as Atṭhakathās, Sihalaatthakathā, Mahavamsatthakathā, Sihalaatthakathā Mahāvamsa, Poraṇaṭhakathā, Uttaravihariṛṭhakathā, Uttaraviharavāśinam Atṭhakathā, Uttaraviharaha Mahāvamsa, Vinayāṭhakathā, Dipavamsaṭṭhakathā, Simākathā, Cetiya vaṃsaṭṭhakathā, Mahācetiya vaṃsaṭṭhakathā, Mahabodhi vaṃsaṭṭhakathā, Sahassavattuḥaṭhakathā, Culaśīhāṇādasutta vaṃsaṭṭhakathā, Sihalābhaśānāmakkara vaṃsaṭṭhakathā, Sumedhaṭṭhakathā Gaṇṭhipada vaṃsaṭṭhakathā etc. It may be that the author of the Vamsatthappakāsini had no reason to refer to the Mahāatthakathās specifically due to the nature of the subject he was handling, although it existed at the time. It is also possible that when the author of the Vamsatthappakāsini refers to “Atṭhakathā” or “Sihalaatthakathā” it would have included Mahāatthakathās as well. Therefore it can be reasonably assumed that the Mahāatthakathās was surviving when the Vamsatthappakāsini, the commentary to Mahāvamsa being written in the 8th or the 9th century.

In addition to the Pali sources, ancient Sinhala literature too provides some clues as to the time of extinction of the Sihalaatthakathās. Dampiyaatuvā Gāṭapadayā a Sinhala Glossary to the Pali Dhammapadāṭhakathā, written during the reign of king Kassapa V (913-923 A.C.) contains the quotations from the Mahāatthakathā.

Thanks to the author of the Dampiya atuvā Gētapadayā the following two lines that could be indentified as those from the Mahāatthakathā, without any doubt, have survived:

"Yoge so yodāvanaki upaddavahi semi maha atuvā hi ki bōvin" (because it is said in the Mahāatthakathā that one is free from all dangers when free from all bondages.)

"Sāmāvatīyā vatthunāma paṭhama ki yi mahāavāvāhi ki bōvin" (Sāmāvati episode is told first as found in the Mahāatthakathā). (Dampiyā Atuvā Gāṭapadayā edited by M. Vimalakitti and N. Sominda, Colombo 1960 p. 76)

Therefore, it is clear that the Mahāatthakathā existed when the Dampiyaatuvā Gētapadayā was written in the 10th century A.C.

The Sikhavalanda and the Sikhavalandavinisa a short monastic code of discipline in Sinhala generally assigned to the early 10th century A. C. is also helpful here. The Kurundiaṭṭhakattā a Sihala commentary which Buddhaghosa often refers to along with the Mahāatthakathā , is found quoted in the Sikhavalanda and the Sikhavalandavinisa (Sikhavalanda and Sikhavalandavinisa, Prācina Bhāsopakara Samagama, Colombo 1999 p. 58). Therefore there is no doubt that the Kurundiaṭṭhakathā was available when
The Kankhāvitaraṇī Piṭapota is a Sinhala glossary to the Kankhāvitaraṇī the Pali commentary to the Bhikkhu Pātimokkha, and the Bhikkhunī Pātimokkha, which is attributed to a date in or after the reign of Parakramabahu II (1236-1271 of the Dambadeniya period). Suraweera, apparently having felt in the process of studying the contents of the Kankhāvitaraṇī Piṭapota infers that the author of the Kankhāvitaraṇī Piṭapota has associated the Sihalaṭṭhakathā. Therefore he is of opinion that the Sihalaṭṭhakathā might have been available even during the time when the Kankhāvitaraṇī Piṭapota was written in the 13th century (Suraweera A. V., Anuradhapura Sanskrutiya (in Sinhala script), Colombo, 1959 p. 39).

As already stated it is difficult to ascertain an exact period when the Sihalaṭṭhakathā ceased to exist, though there is sufficient evidence to show they continued to be in use several centuries after being translated into Pali by Buddhaghosa in the 5th century A. C. The Sinhala Language in which Sihalaṭṭhakathā was written during the 3rd century B. C. was subjected to the natural evolution in the centuries that followed. The language of the Sihalaṭṭhakathā gradually became archaic and the books written in Sinhala too became obsolete and went out of use.

The ola leaf books or palm leaf manuscripts have been preserved by the process of successive copying through the centuries. If the copying process stops at a particular point i. e. if no new copies are produced anew when the old copy show signs of decay, the book leads to a natural death.

After several centuries, when the language of the Sihalaṭṭhakathā including the Mahāṭṭhakathā became archaic and went out of use, no effort would have been made to produce new copies of them with the perishing of the last copies they must have ceased to exist, possibly in or after the 12th century A. C.

MAHĀBHINIKKHAMANA (Skt. Mahābhīnikkramaṇa) derived from Mahā + abhi + niṣ + kram, to go forth, is generally rendered into English as the Great Renunciation and it is used in Buddhist literature to connote exclusively Siddhātha Gotama’s (i.e., the bodhisatta) act of going forth from home into homelessness in order to lead the life of an ascetic.

The term abhinikkhamana is found in canonical literature. The abhinikkhamana of Vipassi is referred to in the Dīghanikāya (II, 51). This term is used in the sense of ‘going forth’ in the Therā-gāthā (p. 195, 249, 250, 251) and in the Suttonipāta, too. (v. 64). In later literature such as Papañcasūdani the abhinikkhamana of Sāriputta and other theras are mentioned (II, 246, 247). But when joined with the epithet mahā, it is exclusively used to connote the ‘going forth’ of Siddhātha Gotama and this term mahābhīnikkhamana is found for the first time in the Jātakanīdānakathā (J. 61), which contains the later tradition dealing with the ‘going forth’ of Siddhātha Gotama.

It is also implied in a verse quoted in the Mahāparinibbāna Sutta (D. II, 151), that Gotama, at the age of twenty-nine, renounced the ease, comfort and luxuries of household life and became an ascetic seeking Enlightenment. Textual as well as sculptural evidence makes it evident that there are two main trends in the tradition regarding this event. One is the early tradition which represents this act in its bare simplicity merely as another event in the life of the Buddha. The other is the late tradition which transform this simple act into an unique event accomplished with the aid of the deities and accompanied by numerous miraculous happenings.
The early nikāya references show that Gotama left the household life not due to any sudden impulse but as a result of the remorse he experienced after seeing and reflecting for a considerable period of time over the ills of saṃsāric existence and his sole intention in renouncing the household life was to find a way to put an end to these ills. The Ariyapariyesana Sutta which contains the early biographical tradition of the Buddha bears evidence to this. This sutta after explaining what the ariyan quest is says:“ And I too, monks, before awakening, while I was still the bodhisatta, not fully awakened, being liable to birth (attanā jātidhammo) sought what was likewise liable to birth, being liable to ageing (attanā jarādhhammo) sought what was likewise liable to ageing, being liable to disease (attanā byādhihammo) being liable to dying (attanā maranadhhammo) being liable to sorrow (attanā sokadhhammo) being liable to stain (attanā sānkilesadhhammo) sought what was likewise liable to stain. Then it occurred to me, monks: why do I, liable to birth seek what is liable to birth, being liable to ageing ... being liable to stain seek what is liable to stain? Suppose that I, (although) being liable to birth having known the peril in what is likewise liable to birth should seek the unborn, the uttermost security from the bonds, Nibbāna? ....... Being liable to stain ....... should seek the stainless, the uttermost security from the bonds-Nibbāna (ajātam-anuttaram yogakkhemaṁ nibbānam pariyeseyyam)

“Then I monks, after a time, being young (daharo va samāno), my hair coal-black (susu kālakeso), possessed of radiant youth (bhadrena yobbanena samannāgato) in the prime of my life (pathamena vayasā), although my unwilling parents wept and wailed, having cut off my hair and beard, having put on yellow robes, went forth from home into homelessness (agārasma anagāriyam pabbajijām) (M. I, 163:).” The Mahāsaccaka-sutta and also the Bodhirājakumārsutta adhere, to the early tradition when describing the ‘going forth’. (M. I, 240, II, 93, 212). Even the Mahāpadāna Sutta though later than any of the previously mentioned three suttas, does not describe Siddhattha Gotama’s ‘going forth’ as a great, unique act. However, the last mentioned three suttas show how certain key events in the life of the Buddha gradually lost their simplicity and how they were transformed into unique, marvellous events accomplished with the intervention of deities.

The social and religious conditions prevalent during the time of the Buddha show that renunciation of household-life in favour of ascetic-life, in order to win emancipation from the vortex of birth and death was a common practice among the brahman thinkers of the time. The Upanisads refer to numerous such thinkers who thus went forth from home into homelessness to practice asceticism (tapas) or to become wanderers (parivrajaka), hermits (sanyāsin), or ascetics (sramanas). As already pointed out the early tradition represents Siddhattha Gotama as one among many such thinkers who followed an ancient custom to find a way to put an end to all ills of saṃsāric existence.

But later tradition represents this simple act as an unparalleled, unprecedented event. One of the main reasons for the exaggeration and transformation of this event into a unique one appears to be the fact that this late tradition came into being only after the Buddha and the bodhisattva concepts were considerably developed. As the early tradition was not compatible with the other events found in the Buddha and bodhisattva concepts, the early tradition had to change to conform to the developed concepts. Another reason could be the attempt on the part of those who formulated the biography of the Buddha to establish the belief that Sudhodana, father of Siddhattha Gotama was a great king and that Siddhattha Gotama himself was destined to be world-ruler (cakkavattin). This greatly facilitated their attempt to represent Siddhattha Gotama’s ‘going forth’ as a unique event of self-sacrifice by doing which he not only abandoned the luxuries of household-life but also world-rulership.

As already pointed out it was after realising and reflecting much on the ills of saṃsāric existence that Siddhattha Gotama resolved to renounce household life in preference to the ascetic life which was customarily held to be more conducive to the attainment of Enlightenment. But the later biographers were not only discontented with the early tradition but were also forced by circumstances to transform the early tradition giving it a more concrete form. The early tradition is clear in saying that Siddhattha Gotama had a very comfortable household life; that he had been for sometime reflecting on the ills of samsāric existence, and that he ‘went forth’ as a result of the great remorse he experienced by his reflection. The later tradition not only accepts that Siddhattha Gotama had a comfortable household life but greatly exaggerates it and suggests that he lived amidst so much of luxury and care that he had no opportunity of even knowing what disease, old-age and death meant. Obviously this was in direct conflict with the early tradition which represents him as reflecting on the ills of life such as
disease, old-age and death. The later biographies were faced with the problem of bringing about a compromise between the two traditions, and they seem to have considered that the best way of getting out of this difficulty is by representing Siddhattha Gotama’s ‘going forth’ as an act of sudden impulsion brought about by his confrontation with the four ‘signs’ namely, disease, old-age, death and monk hood, in concrete form which was brought to his sight for the first time by the intervention of the deities.

A comparatively early attempt at this transformation is seen in the Mahāpadāna Sutta which account served as the proto-type of the life of Gotama Buddha (D. II, 12 ff). Therein it is graphically described how prince Vipassi encountered the four signs on his way to the park on four different occasions. It is this account that form the basis of the account found in the Jātakaniḍāna-kathā. The Jātakaniḍāna-kathā (p. 57) clearly states that Sudhdhodana after hearing from the eight brahmans that his son, if he saw the four signs, would leave the world. All precautions were taken to keep them off from the sight of his son. However, when the time for his Enlightenment approached the deities decided to show him the four signs. Thus, one day, when Siddhattha Gotama was going to the park the gods showed another god in the guise of a man worn out with old age, with broken teeth, grey hair, bent, with broken down body, a stick in hand and trembling. Seeing this unusual figure he enquired from the charioteer. Having heard the charioteer’s explanation he exclaimed ‘woe to birth wherein old age appears’. Then with his mind agitated he returned to the palace cancelling his drive. When Sudhdhodana came to know about it he provided more luxuries to please his son and to calm him down. On two other occasions the gods presented a monk for him to see. Siddhattha Gotama set out to the park as before. On this day the gods showed him a sick man and a corpse and would leave the world. All precautions were taken to prevent his son ‘going forth’. Then with his mind agitated he returned to the park and after bathing sat on the royal slab. Sakka perceiving that Siddhattha Gotama would ‘go forth’ at mid-night commissioned Ākkamma to appear in the guise of the royal charioteer to adorn him. After enjoying himself in the park he returned to the palace. On his way he received the news that his wife had given birth to a son. At that time a kṣatriya maiden named Kisāgotamī seeing him, made a solemn utterance which set the Siddhattha Gotama’s heart more firmly on renunciation.

At night when Siddhattha Gotama had entered his palace an all female orchestra began to play music. But he being disinterested soon lay down on bed and the musicians, too, then fell asleep. Later when he awoke he saw the female musicians sleeping in very disgusting attitudes. He decided to ‘go forth’ immediately. That was the full-moon day of Uttarāsālha (June-July). He awoke Channa and ordered him to saddle his horse Kantaka. Desirous of seeing the new born son he entered the wife’s chamber and saw her sleeping with her hand placed on the son’s head. So he decided not to take his son in his arms thinking that he might awaken the wife.

He left the city on horse back with Channa clinging to the horse’s tail. The deities muffled even the sound of the horse’s hoofs. The city gate was opened by the deity residing in it. At that moment Māra appeared in the air and pleaded with Siddhattha Gotama not to depart, assuring him that seven days hence he would become a world-ruler. But disregarding Mara’s assurance he proceeded on his journey. When he became desirous of seeing the city the great earth turned round and brought the city before him. Siddhattha Gotama went thirty leagues passing three kingdoms in one night and reached the river Anomā which Kanthaka crossed in one leap. Having reached the further bank he gave his ornaments and the horse to Channa and asked him to return. He, taking out the sword cut off his hair and beard. When he threw his hair into the sky Sakka appeared and accepted the hair in a golden casket and returned to Tavatīmāsa and enshrined it in a cetiya which came to be known as Cūḷamāṇi-cetiya. Thereafter the Mahābrahma named Ghaṭikārā appeared and offered him the eight requisites of a monk.

The Sanskrit tradition not only multiplies the incidents but further exaggerates the whole event by introducing more miraculous happenings and bringing deities to intervene whenever required. The Lalita-vistara (chp. xiii) says that the deities were anxiously waiting for the time when Siddhārtha would set his heart on renunciation and it further says that it is a general rule with the Buddhas residing in the ten directions to turn the music of the seraglio of the
bodhisattva into an exhortation. Thus it contains a lengthy exhortation inducing Siddhartha to ‘go forth’. In chap. XV the Lalitavistara describes how Siddhartha caused his father to dream about his imminent departure. Sudhodana had walls erected round the city and placed guards at different points. Then it describes, more or less as found in the Jātakamāṇḍapakāthā, how Siddhartha encountered the four signs. However, a point worthy of note here is that the Lalitavistara tradition does not uphold the position that Siddhartha who had been preaching even to gods while he was yet in the mother’s womb, was ignorant of old age etc. So it says though Siddhartha inquired, from the charioteer about the ‘signs’ he himself knew about them, thus making it appear as if he was following the custom of all Buddhas (Lal. p. 137). On the night on which he was to ‘go forth’ his wife Gopā, too, had numerous ominous dreams which he favourably interpreted. Siddhartha himself dreams numerous dreams and on waking he decides to ‘go forth’. Then he goes to his father and asks his permission to leave the household life. When the father discouraged him he asked for four boons namely freedom from birth, old-age, disease and death, if he is to remain in household life. When the father discouraged him he asked for four boons namely freedom from birth, old-age, disease and death, if he is to remain in household life. When the father discouraged him he asked for four boons namely freedom from birth, old-age, disease and death, if he is to remain in household life. When the father discouraged him he asked for four boons namely freedom from birth, old-age, disease and death, if he is to remain in household life. When the father discouraged him he asked for four boons namely freedom from birth, old-age, disease and death, if he is to remain in household life. When the father discouraged him he asked for four boons namely freedom from birth, old-age, disease and death, if he is to remain in household life. When the father discouraged him he asked for four boons namely freedom from birth, old-age, disease and death, if he is to remain in household life. When the father discouraged him he asked for four boons namely freedom from birth, old-age, disease and death, if he is to remain in household life. When the father discouraged him he asked for four boons namely freedom from birth, old-age, disease and death, if he is to remain in household life. When the father discouraged him he asked for four boons namely freedom from birth, old-age, disease and death, if he is to remain in household life. When the father discouraged him he asked for four boons namely freedom from birth, old-age, disease and death, if he is to remain in household life. When the father discouraged him he asked for four boons namely freedom from birth, old-age, disease and death, if he is to remain in household life. When the father discouraged him he asked for four boons namely freedom from birth, old-age, disease and death, if he is to remain in household life. When the father discouraged him he asked for four boons namely freedom from birth, old-age, disease and death, if he is to remain in household life. When the father discouraged him he asked for four boons namely freedom from birth, old-age, disease and death, if he is to remain in household life. When the father discouraged him he asked for four boons namely freedom from birth, old-age, disease and death, if he is to remain in household life. When the father discouraged him he asked for four boons namely freedom from birth, old-age, disease and death, if he is to remain in household life. When the father discouraged him he asked for four boons namely freedom from birth, old-age, disease and death, if he is to remain in household life. When the father discouraged him he asked for four boons namely freedom from birth, old-age, disease and death, if he is to remain in household life. When the father discouraged him he asked for four boons namely freedom from birth, old-age, disease and death, if he is to remain in household life. When the father discouraged him he asked for four boons namely freedom from birth, old-age, disease and death, if he is to remain in household life. When the father discouraged him he asked for four boons namely freedom from birth, old-age, disease and death, if he is to remain in household life. When the father discouraged him he asked for four boons namely freedom from birth, old-age, disease and death, if he is to remain in household life. When he returns to his palace again god caused him to see the women of his harem sleeping in very disgusting postures. Siddhartha deciding to renounce household life awakened Channa and got the horse saddled. Channa tried to discourage him but failed.

In spite of the precaution taken by the father Siddhartha ‘went forth’, and the deities helped him in doing this. Siddhartha, accompanied by Channa, went beyond Kodya and Malla in one night and reached Anavaineyya. There, he cut off his hair and beard, and handed over the horse and armaments to Channa who returned to the palace. A Sudhāvāsa deity knowing that Siddhartha needed robes, appeared dressed in robes. Siddhārtha seeing him obtained the robes in exchange for his silk shawl.

The Mahāvastu account too agrees with the account found in the Lalitavistara. But one thing noteworthy in the Mahāvastu account is that, as in the early nikāya tradition, it uphold the fact that Siddhārtha was reflecting on the ills of samsāric existence even before he encountered the ‘four signs’.

An analysis of these different traditions shows that the underlying them is an actual happening which later came to be imbued with extraneous miraculous events.

S. K. Nanayakkara

MAHĀBHŪṬA is a term used by most of the schools of Indian thought to denote five elemental substances, namely prthivī (earth), apa (water), tejas (fire) vāyo (air) and ākāśa (space, ether). Although ākāśa is reckoned as the fifth, it is distinguished from the other four as a non-corporeal substance devoid of tactility (sparsā) and characterized by ubiquity (vibhā), absolute continuity and infinite magnitude. Ākāśa is thus on par with such intangible substances as kāla (time). In all schools of Buddhist thought, on the other hand, only four mahābhūtas are recognized, namely pathāvī (earth), āpo (water), tejo (fire) and vāyo (air). It is of course true that in the Pali Nikāyas, ākāsa is sometimes enumerated immediately after and apparently as coordinate with the above four items. But this does not mean that ākāsa is the fifth mahābhūta, just as much as viññāṇa (consciousness) which is also sometimes enumerated with the five items in question is not the sixth mahābhūta. It may be observed here that when ākāsa and viññāṇa are mentioned along with pathāvī, āpo, tejo and vāyo, the general designation used to denote all the six items is dhātu. On the other hand, the term mahābhūta is reserved only for the last four items. That Jainism, too, does not recognize ākāsa as a mahābhūta is shown by its use of the term, “bhūdacatukka”, the elemental tetrad, in referring to the mahābhūtas.

The earliest Buddhist definition of the four mahābhūtas is found in the Pali Nikāyas, where they are often illustrated with reference to the physical constituents of a living being: Pāthāvī is that which is hard (kakkhaṇa) and rigid (kharigata), e.g. hair of the head or body, nails, teeth, skin, flesh, etc. Āpo is water or that which is watery (āpogata), e.g. bile, phlegm, pus, blood, sweat, tears, etc. Tejo is fire or heat or that which is fiery (tejogata), e.g. the heat in the body which transmutes food and drink in digestion. Vāyo is air or that which is airy (vā yogata), e.g. “wind discharged

---

2. See Pañcatikāyasāra, pp. 79 ff.
upwards or downwards, wind in the abdomen or belly, vapours that traverse the several members, inhalings and exhalings of breath.\(^{33}\)

This early Buddhist definition of the mahābhūtas finds further elaboration in the Abhidhamma, particularly in its commentaries and compendiums. The change to be noted is that they are presented in more abstract terms. Pathavi, the earth-element, is defined, not as that which is hard or solid (kakkha), but as the very fact of hardness or solidity (kakkhalatta). It is of course true that sometimes the earth-element is defined as that which has the characteristic of hardness or solidity (kakkhalatta-lakkhana pathavi-dhatu). However, it is observed that this kind of definition is not valid from an ultimate point of view, because it assumes a duality between the earth-element and the characteristic of hardness or solidity. The correct definition is the one that states: solidity itself is the earth-element (kakkhalattam eva pathavi-dhatu).\(^{4}\) For this definition does not assume a distinction between the characteristic and that which is characterized by it. The earth-element is also defined as that which extends or spreads out (patharatā ti pathavi). Extension is occupation in space: "Tri-dimensional extension gives rise to our idea of a solid body. As no two bodies can occupy the same space at the same time, Buddhists derive their idea of hardness (kakkhalatta-lakkhana) from pathavi, the earth-element."\(^{43}\) Thus the definition of earth-element as the element of extension is another way of saying that the earth-element stands for the characteristic of solidity. Āpo, the water-element, represents the characteristics of liquidity (davatā), viscidity (sinhe), and cohesion or binding together (bandhanatta). The last refers more to its function: "For the water-element binds together iron, etc. in masses, makes them rigid. Because they are so bound, they are called rigid. Similarly in the case of stones, mountains, palm-seeds, elephant-tusks, ox-horns, etc. All such things the water-element binds and makes rigid."\(^{46}\) Tejo, the fire-element represents the phenomenon of heat (usumā, uṇhatta) or caloricity. Cold is recognized, not as a separate phenomenon, but as the relative absence of heat: "Although cold (sītātā) is known by the sense of touch, it is really heat (tejo). The sensation of cold (sītabuddhi) is obtained when the heat is less, for there is no distinct quality called cold. Hence it is that during the summer season when people having first stayed in the sun enter the shade they experience the sensation of cold. And when they stay there for a long time they experience the sensation of heat."\(^{47}\) Vāyo, the air-element, stands for the characteristics of distension (thambhitatta) and fluctuation or mobility (chambhitatta, samudiranā). In contrast to the other three primaries, it represents the more restless and dynamic aspects of matter.

From the foregoing description of the four primary elements of matter it should become clear that the earth element stands for solidity and extension; the water element, for liquidity, viscidity and cohesion; the fire element, for caloricity or for all degrees of temperature; and the air element, for distension and motion. The four are not the qualities or attributes of what is called bhūta-rūpa, the primary matter; on the contrary, they are its constituents. Their position in relation to one another is co-ordinate for they represent four distinct forces or phenomena in the realm of matter. The characteristics (lakkhana), functions (rasa), manifestation (paccupāṭhāna) of one are different from those of another. However much one primary element is influenced by the others, it never abandons its essential nature.\(^{8}\) What all this amounts to is that the four primaries are neither transmutable into one another nor reducible to a common ground.

Another fundamental feature of the primary elements is that they always arise and exist together (saḥajāta). None of them can exist independently of the other three. The nascence (uppāda), existence (thiti) and cessation (bhaṅga) of one do necessarily synchronize with those of the others.\(^{9}\) It is precisely for this reason that their relationship is described as one of reciprocal co-nascence (āṇḍamaṇī-sahujāta). Since no primary element can come into being independently of the others, in this sense, each is postu-

See M. 1, pp. 421 ff.
Aṣā. p. 355 (tr. from Expositor)
ADSVT. p. III; see also VsmT. p. 459; VsmS. V, pp. 75 ff.
Vsm. p. 346.
lated as a condition by way of co-nascence (aṇḍamaṇḍa-sahajāta-paccaya) in relation to the other three.\textsuperscript{10}

The Theravada commentators seek to explain the mutual conditionality of the mahābhūtās under all possible combinations and permutations:

"Taking each one beginning with 'earth' there are three others whose occurrence is due to that one, thus with three due to one, their occurrence takes place in four ways. Likewise each one beginning with 'earth', occurs in dependence on the other three, thus with one due to three, their occurrence takes place in four ways. But with the last two dependent on the first two, with the second and fourth dependent on the first and third, with the first and third dependent on the second and fourth, with the first and fourth dependent on the second and third, with the second and third dependent on the first and fourth, they occur in six ways with two elements due to two."\textsuperscript{11}

The fundamental principle involved in the conditional relation by way of reciprocal co-nascence is that when one element arises, what is related to it, too, must arise simultaneously. With this as the basis, the commentators seek to show how each of the primary elements becomes, at one and the same time, the conditioned, in relation to the others, under all possible combinations and permutations.

Each primary element assists the remaining three by performing its peculiar function:

"The earth element which is held together by water, maintained by fire and distended by air is a condition for the other three primaries by acting as their foundation. The water element which is founded on earth, maintained by fire and distended by air is a condition for the other three primaries by acting as their cohesion. The fire element which is founded on earth, held together by water and distended by air is a condition for the other three primaries by acting as their maintaining. The air element which is founded on earth, held together by water and maintained by fire is a condition for the other three primaries by acting as their distension."\textsuperscript{12}

If the four primary elements are invariably co-existent (niyata-sahajāta) and reciprocally conditioned (aṇḍamaṇḍa-sahajāta), it necessarily follows that they are positionally inseparable (padesato avinibhoga).\textsuperscript{13} Their positional inseparability means that they are present in every instance of matter. However, there is no quantitative (pamāṇato) difference between the four primary elements that enter into the composition of different material aggregates. There is as much water-element in a blazing fire as there is in wood or water. It is argued that if there were to be a quantitative difference between the primaries that enter into the composition of material objects, then the conclusion that they are inseparable would not be logical (nāyuṣjeyya).\textsuperscript{14} If they are present in equal proportion how are we to understand the variety and diversity of material objects? To put it differently: Since the primary elements are said to be cognized only by the sense of touch, what accounts for the diversity in tactile sensations?

The diversity, it is maintained, is not due to a difference in quantity (pamāṇa), but due to a difference in capability (sāmatthiya) or extrusion (ussada).\textsuperscript{15} Accordingly each primary element exhibits different degrees of intensity in different material objects. It is observed that although the four primary elements reach the avenue of the sense of touch simultaneously, yet tactile cognition of them does not arise at once. For the object of touch is determined by one of two alternative factors, namely, deliberate attention (ābhūṭijīta-vasena) and extrusion (ussada-vasena). The first alternative is illustrated as follows:

"When the bowl is filled with food and brought, one who takes up a lump and examines whether it is hard or soft is considering only the element of extension, though there may be heat and mobility present. One who

investigates by putting the hand in hot water is considering only the element of heat, though extension and mobility are present. One who lets the wind beat upon the body by opening the window in the hot season is considering while the wind beats gently and softly, only the element of mobility, though extension and heat are present".16

The other alternative, where deliberate attention is absent, is explained with reference to the extrusiveness (ussada) of one element in relation to the others:

“But he who slips or knocks his head against ) a tree, or in eating bites on a stone, takes as his mental object only the element of extension on account of its extrusiveness, though where he slipped, etc., heat and mobility were present. One treading on fire makes only the element of heat his object owing to its extrusiveness, although extension and mobility are present therein. When a strong wind blows striking the ear as if to make one deaf, although extension and heat are present therein, the element of mobility alone is made the object owing to its extrusiveness".17

It should be noted here that in the above explanation of how the primary elements become objects of touch or of factile consciousness no mention is made of the water-element (āpō-dhātū). The reason for this that according to the Theravada Abhidhamma only the other three primary elements are cognized by the sense of touch. Why the water element is excluded from the tangible is partly explained by what was observed earlier on the position of cold in relation to the primary elements. Unlike the Sarvastivadins the Theravadins do not associate cold as a characteristic of the water element. For the latter, cold is not a phenomenon distinct from, but is only the relative absence of heat. According to the Theravadin, therefore, both cold and heat, in other words, at all degrees of temperature, are represented by, and therefore testify to the presence of, the fire element. The water element, as stated above, is representative of bandhanatta, the fact of ‘binding together’ or cohesion and dravātā, fluid-ity. But these are not felt by the sense of touch. “When one puts his hand into cold water, the softness of water felt is not āpō (water element), but pathavi (earth element); the cold felt is not āpō (water element) but tejo (fire element); the pressure felt is not āpō (water element) but vāyo (air element)"18. Its cohesion and fluidity, whatever be their degree of intensity and capability, are not felt by the sense of touch. Hence the water element is excluded from the sphere of the tangible (phoṭṭhabhāyatana) and is included among the objects of mind (dhammāyatana).19 This means that it cannot be known by any of the senses other than the mind. It is known by a process of inference.

In conclusion it may be observed here that the mahābhūtas are assigned a comparatively primary position in the Buddhist conception of the material world. For instance, what the Sāmkhya considers as mahābhūtas are not the ultimate irreducible constituents of matter, for they are evolved immediately from the tanmātras and ultimately from prakṛti, i.e. the uncaused first cause of the world or non-self. According to Vedanta the mahābhūtas are produced from sūkṣma-bhūtas, a species of subtle matter. For Jainism the ultimate constituents of puggala (matter) are not the four elements (dhādu-catukka) but the homogenous atoms. The latter are the essential causes of the former. The Nyāya-Vaiśeṣika postulates four kinds of atoms corresponding to the four elemental substances, namely earth, water, fire, and air. This may be described as an attempt to reconcile the older theory of the mahābhūtas with the later atomic theory.

In Buddhism, unlike in many other systems of Indian thought, the mahābhūtas are assigned a primary position in the sense that they are recognized as the ultimate irreducible data of material existence. It is of course true that a given instance of matter consists of not only the four mahābhūtas but also of a set of upādā-rūpas (secondary material elements), such as colour (vaṇṇa), odour (gaṇḍha), savour (rasa) and the nutritive quality of matter (āhāra-rūpa, ojā). But these so called upādā-rūpas, as conceived in Buddhism, are always dependent on, and therefore secondary to, the mahābhūtas. Even with the development of the theory of rūpa-kalāpa, i.e. the Theravada version of atomism, the mahābhūtas did not come to be reduced to a sec-

19.  See e.g. Dhs. p. 179.
MAHĀBODHI

ordary position. For even in the smallest unit of mat­
ter called rūpa-kalāpa (paramāṇu=atom), all the four
mahabhūtas are present. Although the mahabhūtas
are postulated as the ultimate (primary) elements of
matter, this does not mean that they are uncaused, ever-
perduing elemental substances. They, too, come un­
der the laws of phenomenal (saṅkhata) existence: They
are brought about by conditions (sappaccaya), devoid
of any abiding essence (asāra) and are of momentary
duration (khanika).

Y. Karunadasa

MAHĀBODHI, the tree in the shade of which Siddhātha Gotama attained sammasambodhi or sup­
reme Enlightenment is popularly known as the
Mahābodhi. The location of this tree is Buddhagaya (Bodhayā) in India. According to Buddhist litera­
ture this tree was on the banks of the river Neranjara in
the province of Uruvela. At present Buddhagaya (Bodhayā) is a thriving vil­lage in the state of Bihar
bounded on the north by Haripur, on the east by
Mastipur Dhondora and Turi, on the South by Rampur
and on the west by the river Lilajan (ancient Neranjara).
According to Pali sources this tree belongs to the
assattha (Skt. Aśvattha) family of trees
(sammasambuddho assatthassa mūle abhisambuddho
D. II, p. 4). It is rendered into English as the 'holy fig­
tree' or Ficus Religiosa. See PLATE XLIV.

Very little detail of this Bodhi tree is found in the
Canon. The Vinaya Mahāvagga (Vin. I, p. 1) records
that once the Buddha, the Blessed one, was staying at
Uruvela on the banks of the river Neranjara, soon af­
er attaining Enlightenment. It is said that the Buddha
spent seven days in the seated posture at the foot of the
Bodhi tree enjoying the bliss of emancipation.

Tena kho pana samayena buddho bhagavā
uruvelāyaṃ viharaṇa nañja
neranjarāya āye paññamābhisambuddho, atha kho
bhagavā bodhirukkhamūle
sattāhāṃ ekapālākena niṣidi vimutīsukha-
patissamvedi (Vin. I, p. 1).

The above reference may be the only reference to
the Bodhi tree found in the older strata of the Canon.
Though the Mahāparinibbāna sutta of the Dīgha
 Nikāya, includes the site of the Buddha’s attainment
of Sambodhi as one of the four places a devout Bud-
dhist should visit, there is no mention thereof the Bodhi
tree under which the Buddha attained enlightenment.
Apparently the emphasis was on the site and not on the
Bodhi tree:

Idha tathāgato anuttaraṁ Sambodhiṁ
abhisambuddhoti saddhassā kulaputtassa

It is clear from this reference that the Bodhi tree
did not receive the attention or veneration during the
period of the formation of the older strata of the Canon,
as it received subsequently. It is also interesting to
note that the report that the Buddha, with motionless
eyes gazed at the Bodhi tree for seven days as a mark
of gratitude, is not found in the Vinaya Mahāvagga,
but is found only in the Vinaya Commentary
Samantapāsādikā (.... uttara disābhāge ṣatāṁ
cassheyyāni kappatasaahasena upacitaṁ
pāraṁinam phālādiganattaṁ thānāṁ pallanakaṅca
bodhirukkhaṅca animisehi akkhāhi olokaṁana
sattāhāṃ viṭānaṁesi (Vin.A. IV, p. 957).

The other reference to the Bodhi tree is found in the
Jātaka commentary with regard to the Kālinga
Bodhi Jātaka (J. IV, 288 ff). According to its story of
the present (avidure nidāna) the incident in connec­
tion of which the Buddha happened to relate the Jātaka
proper was as follows: when the Buddha was away
from Jetavanārāma on his usual preaching rounds, the
devotees who came to see the Buddha at the
Jetavanārāma were disappointed not to see him there,
and discarded the offerings, such as flowers, they
brought with them for the Buddha. Ven. Ananda thera
reported the matter to the Buddha and proposed that a
seed from the Great Bodhi tree be planted at
Jetavanārāma so that the devotees could honour the
Bodhi tree in lieu of the Buddha. Further the Buddha
is supposed to have declared: “It will be like my per­
manent presence at the Jetavanārāma, (Evam sante
jetavane mama nibadda vāso viya bhavissatii - J. IV,
228). Accordingly Ven. Mahāmoggallāna thera went
to the Bodhimaṇḍa by air and collected a fruit from
the Bodhi tree before the seed fell on the ground.
It was planted by Anāthapiṇḍika (q.v) at the entrance to
Jetavanārāma. On the invitation of Ven. Ananda thera
the Buddha spent a whole night in the site, engaged in
a trance (ekarattham samāpatti sukheṇa tam pariṇāṇi
(ībīd). However no detail of the condition of the
Mahābodhi, the parent tree, is found at this instance,
too. No doubt it was thriving unharmed at the time.
There is no record of the Buddha visiting the Bodhi tree after leaving it, having attained Enlightenment, although there are several references (A. IV, 302; S. IV, 19) to the effect that the Buddha was residing in Gayā at Gayāsīsa; but in such references, too there is no mention of the Bodhi tree.

Since then, there is no mention of the Bodhi tree till we come to the reign of Emperor Asoka in the 3rd century B.C. Apparently one of the first acts of Asoka, no sooner he embraced Buddhism was to undertake a pilgrimage to the sacred places connected with the life of the Buddha. As recorded in his rock Edict No. VIII, Asoka visited the Bodhi tree 10 years after his consecration (Barua, B. M. Inscriptions of Asoka, University of Calcutta 1943 p. 186). It has to be noted that the inscription refers to a Sambodhi instead of to a Mahābodhi. Though Asoka has established monoliths with inscriptions at the sites such as Lumbini, the birthplace of the Buddha, no such pillar has been surfaced yet at the Bodhi Mandā. But a carving at Bharut provides a clue in this connection. There are two carvings at Bharut, one representing a scene of worship of the Bodhi tree and the other that of an offshoot or descendant of the same, in both of which the Bodhi tree is confronted by an apparently Asokan monolith surmounted by a standing figure of an elephant. Both stone pillars are placed in the north east side of the tree and at a short distance. It is possible that these Bas-Reliefs represent the Asokan pillar adorned with a standing figure of an elephant on top that once marked the sacred spot of Enlightenment, lost or to be surfaced in future. (Barua B. M. Gayā & Buddha Gayā Calcutta 1931 p. 9, ff).

The next reference to the Mahābodhi is found in the Mahavamsa in ch. xviii (The Mahabodhivamsa p. 148 ff. and the Samantapāsādikā, VinA. I, p. 93 ff. as well) in connection with the establishment of its southern branch in the island of Sri Lanka. On receipt of the request from king Devanampiyatissa king Asoka proceeded to the Mahābodhi at (Gayā) accompanied by his four-fold army. The distance from the capital Pataliputta is given as seven yojanas. The Mahavamsa describes how the southern branch of the Mahābodhi severed of its own as per a Resolution of Will (adiṭṭhānami) of the Buddha (made earlier) and established itself in the golden vase. According to the Mahāvamsa report, the establishment of the Bodhi sapling in the Mahāmeghavana Park was in the 18th year of Asoka’s reign.

Aṭṭhārasamhī vassamhī Dhammāsokassa rājino Mahāmehevanārāme Mahābodhi pariṭṭhahī (Mhv. Ch. xx, verse 1)

The Mahāvamsa does not provide any detail of the parent tree and the attention is focused on the newly reared Bodhi sapling intended for Lanka.

The Mahābodhi is appearing in the scene again in ch. xx of the Mahāvamsa, this time of course not with pleasant news. It is the destruction of the Bodhi tree at the hands of Tissarakkha the chief queen of King Asoka, who succeeded his former chief queen Asandimitā. The Mahāvamsa related the incident thus:

Tato tu tatiye vasse sā bālā riṣapamāṇī
Mayā pi ca ayan rājā mahābodhīm mamāyi
Iti kodhavanam gantva attano nathakārikā
Maṇḍukaṇṭhakayogena mahābodhīm aghātayar

After the lapse of three years (after Tissarakkha was made the chief queen) she, the foolish woman proud of her beauty overcome by vengeance killed the Mahābodhi employing “maṇḍuka thorns” (Mhv. ch. xx 4-5).

Neither the Dipavamsa nor the Mahābodhivamsa nor the Samantapāsādikā were aware of this incident. The Mahāvamsa record is the only record of the southern branch to this effect. But there are several records of the northern branch of Buddhism, which recount this tragedy.

Among the records of the northern school, the Divyāvadāna, the last of the Avadānas which contain Asokāvadāna, Kunālāvadāna etc. provide more information as regards the reported destruction of the Mahābodhi at the hands of Tis’yarakkhita, (Pali Tissarakkha), the second chief queen of Asoka. As the story runs, it occurred to Tis’yarakkhita “This king enjoys sensual pleasures with me, but sends jewels of special quality to the Bodhi Tree”. Accordingly she sought the assistance of Mātāngi, an outcaste woman, to destroy the Bodhi. She tied a spelled thread around the bodhi, as a result of which the bodhi tree was withering. On hearing of this news the king is reported to have fainted. After regaining consciousness the king threatened that he himself would die if the Bodhi tree died. The queen Tis’yarakkhita’s effort to console the king failed. However the queen realizing that the life of the king was in danger is said to have revived the
Bodhi tree with the help of Mataangi herself who caused the damage (Divyavadana, ed. Vaidya, Darbhanga 1958 p. 254 f.).

The records of the Chinese travellers such as Fa-hien and Hieun Tsang, too, are relevant to the subject. According to Fa-hien who visited the Mahabodhi in the 5th century A.C. the Bodhi was destroyed by a queen of Asoka, but does not give her name. According to his report the queen hired men to cut down the tree. But miraculously Asoka was successful to restore the Bodhi to its original state by resolving not to rise up, until the tree returned to its original state (Giles Travels of Fa-hien Records of the Western World, Cambridge 1923 p. 58).

Hieun-Tsang has a different story to tell in that connection, according to which the Bodhi tree was destroyed by Asoka himself. According to that report Asoka was wicked at the beginning and got the Bodhi tree cut and burnt it in a sacrificial fire by a Brahmin: “Scarcely had the smoke cleared away, when lo! a double tree burst forth from the flaming fire .... Asokaraja seeing the miracle repented about his crime. He bathed the roots with perfumed milk to fertilize them. When lo! in the morning of the next day the tree sprang up to its original state. The king seeing the miraculous portent was overpowered with deep emotion and himself offered religious gifts to the tree. See PLATE XLV.

Hieun-Tsang’s account differs from the rest of the accounts and does not occur in any other literary source. It is unique in that, it is the first occasion that Asoka himself destroyed the Bodhi tree, before his conversion to Buddhism. “It is described as the most incredible of the stories pertaining to the conversion of Asoka to Buddhism, a local legend with no historical truth. If, at all, it reflects possibly the memory of the destruction of the Bodhi tree by Tissarakkhâ alias Tiśyarakkhítâ during the closing years of the Emperor’s reign (Ananda W. P. Guruge, Asoka A Definitive Biography. Central Cultural Fund, Ministry of Cultural Affairs, Colombo, Sri Lanka 1993 p. 93 & 371).

The comparison of the Southern and Northern traditions shows that, according to the former the Bodhi tree was destroyed, but according to the latter it was only an attempted destruction and the Bodhi tree revived the attempt. But there is a common factor in both reports, namely the second queen of Asoka was involved in the plot. There appears to be a historical kernel of the recorded destruction of the attempted destruction of the Bodhi tree and Asoka’s queen’s involvement in the issue.

According to the southern tradition Tissarakkhâ was successful in killing the Bodhi tree. There is no record of recovery or another bodhi being planted in its place, while the northern tradition says that the Bodhi tree did not die completely, it was revived and continued to exist.

However Asoka’s contribution for the development of the Mahabodhi temple as well as popularising of the Bodhi Cult (Bodhi worship) looks substantial. The Worship of the Bodhi tree which prevailed up-to-date among the Buddhists all over the world was popularised from the time of Asoka. He is said to have had an immense love for the Bodhi tree apparently which ultimately brought about the destruction of the Bodhi tree. See PLATE XLV.

The Bodhi tree seems to have suffered another destruction at the hands of Sasanka, Śaiva king of Gandhar (Bengal), the powerful rival of king Rajawardana of Kanauj. As Hien Tsiang records Saśanka râjâ a believer of heresy slaughtered the religion of the Buddha, and through envy destroyed the converts and cut down the Bodhi tree digging it up to the very spring of the earth. But he did not get to the bottom of its roots. Then he burnt it and sprinkled it with the juice of sugar cane, desiring to destroy it entirely. Śasanka is said to have met with tragic death after the incident. Some months afterwards the King of Magadha by name Purnavarma (Pû-la-na-fa-mo), the last of the line of Asoka râjâ, hearing of it sighed and said, “the sun of wisdom having set, nothing is left, but the tree of wisdom of the Buddha and thus they have destroyed that, too. What source of spiritual life is there left now? He then cast his body on the ground overcome with pity, then with milk of a thousand cows he bathed the roots of the tree, and in a
night the Bodhi tree revived and grew to the height of ten feet. (Samuel Beal, Si-yu-ka Buddhist Records of the Western World London 1884-p. 188).

But Rajendra Lala Mitra in “The Hermitage of Sākyamuni" (Bengal Secretariat Press 1878 p. 99) says that he had not come across that destruction of the Bodhi tree by Saśānka in any Buddhist Sanskrit manuscript collected by Hodgson in Nepal. Cunningham gives the date of the destruction as 610 A. C.

As regards the Bodhi tree supposed to have been reared by king Purnavarma, Barua observes, “we are completely in the dark as to what happened to the tree reared by Purnavarma. It is certain that the present is one of recent growth. There may be some truth in the following observation of Cunningham concerning the duration of the tree associated with King Purnavarma.

“It seems to have been during the latter end of the 7th century A. C. after the death of Harshawardhana .... If it escaped during the following century 700-800 A. C. the tree planted by Purnavarma may have lasted down to the time of the dynasty of Pala kings, which began about 813 A. C. After this it was safe until the time of the Muhammadan invasion under Bakhtiyar Khalgi in A. C. 1201. As the Muslims spared the famous tree at Peshawar it is probable that the Mahabodhi tree was left untouched.” (Cunningham Mahabodhi p. 31- Barua B. M. Gayā and Buddhagayā Calcutta, 1931 p. 4 ff)

Two pieces of an old pipal tree discovered by Cunningham in the course of his excavations of the holy site of Bodh Gaya Temple are 9 1/2 inches and 4 1/2 inches in length. He presumes that those fragments were part of the tree cut down by Saśānka about 610-620 A. C. (Cunningham loc. cit. p. 3).

On the question of the number of predecessors of the present Bodhi tree at Bodh Gayā, Barua notes, “Precisely how many predecessors of the present tree took in succession the place of Bo reared up by King Purnavarma, is a matter beyond our knowledge. The present tree leaped into its proud position by the year 1876 which witnessed the death of its immediate predecessor.” (Barua, B. loc. Cit. p. 5).

Dr. Buchanan - Hamilton who visited Bodh Gaya in 1809 and submitted his report to the transactions of the Royal Asiatic Society of Great Britain & Ireland found the tree “in full vigour" and thought that in all probability the tree could not have exceeded 100 years in life” (Martin, Eastern India Vol. 1 p. 76).

In 1861 Cunningham said: “the celebrated Bodhi tree still exists, but very much decayed. One large stem, with three branches to the westward, are still green, but the other branches are bark less and rotten. The green branch perhaps belongs to some other younger tree as there are numerous stems of apparently different trees clustered together” (Archaeological Survey reports Vol. 1, p. 5). In 1863 the tree appeared to me “ decayed and dying and scarcely two hundred years old”. The trunk was then leaning towards the west, and bore two green branches and the stumps of three or four dead ones. In 1876 the tree was dead and knocked down by a storm and its place has now been filled by a seedling about 3 ft. high. (Mitra, Rajendra Lala BuddhaGaya-Hermitage of Sākyamuni, Bengal Secretariat Press 1878 p. 99). On the successive Bodhi trees at the site of Enlightenment and its continuity despite a number of attempts to destroy it, Barua sums up “The Bo tree of Sākyamuni appear to have an eventful history of its own. It goes without saying that it could not have maintained its identity save and except through a number of deaths, revivals, and preserved its line and extended its domain save and except through grafts and seeds. It is difficult to say precisely how many times it died and revived” (Barua, loc cit p. 3). As Barua (loc cit p. 8) correctly presumes the bodhi would have remained in its natural condition along with its environment till the end of the reign of king Bindusara, father of Asoka or even up to Asoka’s first pilgrimage to the Bodhi tree which he undertook in the 8th year of his consecration as recorded in his 8th rock edict. Human interference with the Bodhi tree and its natural environment, no doubt commenced after Asoka who commenced building activities at the site for the first time, though no definite archaeological evidence of his constructions are yet discovered. However Bharut Bas-reliefs (Circa 150 B.C.) which depict the Bodhi tree with the Vajräsana (Diamond Throne) in front, adorned with umbrellas, and garlands sheltered by a Pillared Hall while close by stands one of his famed monoliths including a sand stone railing around the Bodhi tree with a Yaksha Gateway on the east, are thought to be portraying the earliest simple constructions that were added. With this simple begining, in the course of time numerous buildings such as monasteries (Sanghārāmas), stūpas high walls, towers, ponds being added, formed the extensive Mahabodhi
monastery complex. The Mahabodhi temple appears to have been a popular place of worship as well as an important centre of Buddhist activities in India from the very beginning. According to the Mahavamsa (ch. xxix 41) a delegation of 30,000 monks headed by Arahant Cittagutta represented the Mahabodhi temple in India, at the ceremony of the laying of the foundation for the Mahâ thûpa (q.v.) by Dutthagâmini in the 2nd century B.C. Numerous inscriptions, belonging to different periods discovered at the site testify to the enthusiasm shown by devotees for a period of 1200 years in constructing, repairing, restoring, adorning, enhancing various buildings at the foot of the Mahabodhi. In addition to the inscriptions, Chinese pilgrims such as Fa-hien who visited the Bodhi tree in 409 A.C and Hieun tsang in the 7th century A.C. have recorded the condition of the Mahabodhi at the time of their visit which are useful for the student who explores the Mahabodhi.

When the sacred shrine at Both Gaya came to be called Mahabodhi is not certain. In his inscription Rock Edict No. viii Asoka called it ‘Sambodhi’. Fa-hien who visited it in 409 A.C. does not call it by that name. However Hieun Tsang who visited the place in 637 A.C. calls it the Mahabodhi. Thereafter several inscriptions found at Bodh Gaya had used the name, last of which is belonging to the 14th century A.C. Neither the term Buddha Gaya and the present Bodh Gaya were found in the early texts. Instead it was referred to as Bodhi maññala, Gayâ, or Gayâsisa.

The origin of the present Mahabodhi temple goes back to the period of the Kushana dynasty. Apparently it has been build over the ruins of Asoka’s temple in the 2nd century A.C. by Kushana kings. The discovery of, gold coins belonging to the period of Huviska, the second Kushana king after Kanishka, among the relics deposited in front of the Vajrasana led to the above conclusion. Moreover Indo-Sythian and Gupta inscriptions at the site also record the construction of the great Mahabodhi temple in the reign of Huviska.

King Siri Megha Vanna of Sri Lanka is said to have sent bhikkhus to India to King San-Maon-Tao-co-kiuto, that is Samudragutta, requesting him to provide shelter there for the Sinhalese monks, who were on pilgrimage to the Sacred tree at Bodh-Gaya (Adikaram E. W., Early History of Buddhism in Ceylon Colombo 1946, p. 140). “Hieum tsang does not give the name of the Sinhala king who built the Sangharâma at the Mahabodhi. The king is identified as Meghavanna with the help of the Chinese historian Wang” (Barua loc cit p. 38). An inscription at the site testifies to the existence of a Sihala Sanghârâma at the Mahabodhi. The building it described as having three lofty towers and surrounded by a wall of 30-40 ft. high. In 409 A.C. Fa-Hian saw three monasteries including the one put up by the Sihala king. He further records that monks of the said monasteries observed the disciplinary rules strictly. There is also a record of some additions effected to the Mahabodhi temple by the Burmese in 450 A.C.

As already mentioned the Bodhi tree was cut down and burnt by king Sâsanka of Bengal around 600 A.C. But later king Purnavarmâ is reported to have restored the Bodhi tree and put up a wall 24 feet high, to prevent it being cut down again. Hieun tsang who visited the Mahabodhi in the 7th century A.C. saw a fully developed Mahabodhi premises perhaps the peak of its development. He saw 21 stupas, 6 monasteries including that of Lanka which had more than 1000 monks and three ponds named Buddha, Sakra and Mucalinda. He has made a special reference to Animisa stupa, Ratna Cankamana stupa, Ratnagrhu stupa, Ajaîpâla stupa, Mucalinda stupa and Rajayatana stupa built on the spots associated with the Buddha during the first seven weeks immediately after the attainment of enlightenment. It is clear from the description that by that time the premises was dotted with buildings and stupas.

From Hieun Tsang’s visit in the 7th century till about the 11th century A.C. apparently no major repairs were undertaken, except for some minor repairs effected by Mahipala of the well known Pâla dynasty of Bengal in 1010 A.C. In 1080 A.C. extensive repairs have been carried out in the reign of the Burmese King Dharma-râja. The last of the Indian Buddhist kings who carried out repairs to the Mahabodhi temple was Raja Asoka Balla of Sapadalaksha (Swalik hills) in Punjab. As seen from one of his inscriptions at the time of his visit to the Mahabodhi in 1157 A.C. venerable monks from Lanka were in charge of conducting Buddha puja at the Mahabodhi. After king Asoka Balla it was the Burmese King Letyaminam who carried out extensive repairs to the Mahabodhi temple (Harvery S. History of Burma p. 46). The Burmese inscription at the Mahabodhi temple testifies to the Burmese repairs (Cunningham, Mahabodhi p. 46).
In addition to the repairs and improvements above discussed there are many more names of donors inscribed in the pillars, railings and railing bars whose services should not be underestimated.

The name of a noble lady Kurangi is found inscribed as the donor of the 15 surviving pillars of the sandstone railing. She is identified as the wife of king Kausikiputra Indragnimitra who probably belonged to a Neo Mitra dynasty. No doubt Kurangi should belong to an early stage of development of the Mahabodhi temple. Barua (loc cit p. 17) seems to think that the surviving old sand stone railing, the old diamond throne, and the jewel walk were added mainly by her munificence. According to Barua (loc cit) Cunningham made a serious mistake apparently misled by the report of Hieum Tsang, calling the above railings as Asoka railings, because Kurangi’s name is found inscribed clearly.

Sirimā (Srimathi) is appearing as the female donor of one of the surviving pillars. Her name is also appearing as a co-donor of two surviving pillars, along with Kurangi. Name of Nāgadevi is inscribed as a donor of a Yaksa Pillar in the old sand stone railing. She was the wife of King Brahmarmitra. Amoghā is recorded as a donor of the surviving rail bars of the old sand stone railing. Bodhirakshita of Tamraparni (sometimes island of Lanka) is mentioned as the donor of the rail bar of the old sand stone railing. An inmate of the Vinayadharas monastery is recorded as having installed two Buddha images and an image of a Bodhisattva during the reign of king Tirikamala, possibly 142 A.C.

Mahanama II, the author of a lengthy Sanskrit inscription (248 A. C.) who traces his pedigree to Mahā Kasyapa who was entrusted with preserving the Samyutta Nikāya installed an image of the Buddha in a temple erected at the holy site. He is from Amradipa (Mango Island) a member of the royal family of Lanka. Cunningham tries to identify him as the author of the Mahāvamsa (Cunningham loc cit p 60). Dharmagupta and Damshtrasena two Buddhist monks from Tishyamritthra in Lanka jointly installed an image of the Buddha, Dharmādāsa a Buddhist monk from Lanka dedicated an image of the Buddha. Bodhisena a pilgrim from Dattagalla in Lanka also installed an image of the Buddha.

Prakhyatakirti an illustrious bhikkhu from Lanka visited the Mahabodhi in the 7th or 8th century, and probably erected a temple adjoining the Bodhi tree and the diamond throne. He also got the temple whitewashed providing 250 Dinaras and also provided for burning ghee lamps. Udayasiri accompanied Prakhyatakiri and came to the Mahabodhi with his wife and son and installed an image of the Buddha. Purnabodra, a Buddhist king from Sind erected a gandhakūṭi for the installation of Buddha images. Tunga, a Buddhist king from Rashtrakuta family also erected a gandhakūṭi.

The above are a few among the many who contributed for the development of the Mahabodhi temple, whose names are inscribed in the pillars and railings at the site. This shows how popular was the temple among the Buddhists all over the world, at the time. It is interesting to note that there were kings, queens, princes, monks, as well as ordinary people, among those who developed the temple.

There are several from Sri Lanka whose contributions are recorded at the site. The commentaries as well as the treatises such as Rasavāhinī Sahassavatthupakaraṇasā Lokaṃpadikāsārā record a very large number of Sri Lankans visiting Jambudipa to worship at the Mahabodhi. It is the very reason that Kittisiri Meghavanna provided a sanghārāma for Sri Lankan monks at the Mahabodhi temple.

The dark era of the Mahabodhi dawned with the Muslim invasion of India in the 13th century. The armies of Bhatiyar Khilgii sacked Bihar in 1201 A. C. and destroyed Nālanda, Odantapuri etc. and slaughtered Buddhist monks in an unprecedented scale. The majority of the population fled from Gaya. When Dharmaswamin the Tibetan pilgrim visited the Mahābodhi in 1234 A. C. the place was deserted, and only four monks remained. They, too, fled the following day. Soon after the visit of Dharmaswamin the Mahabodhi temple went into oblivion. The only glimpse of the Mahābodhi temple during the dark era was a grant of a village to a Sri Lankan monk named Mangalasāmy for the maintenance of the temple, done by a local king Amasing and some repairs to the temple by a Burmese mission at the close of the 15th century.

In 1590 Gosain Giri, a Hindu Mahant established his mahant at Bodh Gaya. The mahant, though he claimed the ownership of the temple, did not take steps to maintain or repair the temple. When Sir Edwin Arnold (author of the Light of Asia) visited Bodh Gaya in 1885 it was in a very pathetic condition, and published his report in the Daily Telegraph, London in
1893 divulging the sorry state of the Buddha Gaya temple to the world. In the meantime King Mindom Min of Burma had initiated some repairs in 1875. By 1880 the repairs had not made much progress. At this juncture the Colonial Government of India, having understood the importance of the shrine, intervened and undertook the repairs. The project was entrusted to the engineer J. D. Belglar under the supervision of general Cunningham and Dr. Rajendra Lala Mitra. A stone model of the shrine discovered among the ruins helped to determine the correct design, as it existed in the mediaeval times. The repairs were successfully completed. The Maha Bodhi Temple as it stands now is approximately 160 ft. high and consists of a straight edged pyramidal tower surmounted by the stupa. The four sides of the tower have several tiers of niches. At the base of the tower rises a turret at each of the four corners, each a replica of the main spine.

Anagarika Dharmapala, the celebrated Buddhist revivalist of Sri Lanka launched a movement to get back Buddha Gaya for the Buddhists and founded the Buddha Gaya Mahabodhi Society in 1891. He sought the assistance of law against the Mahant. However the legal battle continued till India gained independence from the British in 1947. After independence the State Government of Bihar enacted “Buddha Gaya Temple Management Act” in 1949 providing for a management committee comprising of four Buddhists, four Hindus with the Collector of Gaya as the Chairman. The Buddha Gaya Management Committee was set up and the management and the control of temple land and other property was vested with the committee in 1952. The committee is managing the temple up to date.

MAHĀBODHI, SRI. The southern branch of the Great Bodhi Tree at Gayā in India, under which the Buddha attained Enlightenment, which was brought by the Theri Sanghamitta to Sri Lanka and was planted in the Mahāmeghavana Park in Anuradhapura, in the 3rd century B.C., is reckoned as the oldest surviving historical tree in the world. Though the particular variety of trees is generally known as “Asvathā” (Skt. Aśvatta) and botanically (Ficus Religiosa) Buddhists call it the Bodhi, by reason of the Buddha’s attainment of Enlightenment (bodhi) under its shade. As a result of the continuous usage of the word Bodhi for a period over 2500 years, the term ‘asvathā’ has gone into oblivion, and the Buddhists as well as others refer to this tree as the “Bodhi Tree”. The Bodhi tree at the Mahameghavana Park is popularly known as the Sri Mahā Bodhi or the Mahā Bodhi. The Mahābodhi vamsa Granthi Padavivaranaaya, analyses the above terms thus: "Bodhi means wisdom that understands the Four Noble Truths. The tree, which assisted the Buddha (by providing shade) to achieve wisdom (bodhi), is also called Bodhi". The term Mahā is explained as having two meanings i.e. sacred or great. Thus Mahā bodhi means ‘sacred bodhi’ as well as ‘great bodhi’. Sri Maha Bodhi is explained as the ‘resplendent Mahā bodhi.’ It is said that, as the rays of six colors emanates from the bodhi, as in the case of the Buddha’s body, the bodhi is called Sri Maha Bodhi. Explaining the term Jaya Siri Maha Bodhi, it is said that the the
In Sri Lanka Sri Mahābodhi or Jaya Sri Mahābodhi are very popular names used when referring to the Sacred Bodhi Tree at Anuradhapura. Further the honorific suffix Vahanse is added to the terms at the end i.e. “Sri Mahā Bodhin Vahanse” and “Jayasirimañā Bodhin Vahanse” as if referring to a living holy person.

Several sources are available for the study of the history of the Sri Mahā Bodhi at Anuradhapura, such as the Dipavamsa (4th century A. C.) the Mahāvamsa (5th century A. C.) The Samantapāsādkā, Buddhaghosa’s Vinaya Commentary (5th century A. C.) the Pali Mahābodhivamsa (circa 10th century A. C.) the Mahābodhivamsa Granthipada Vivaranaya, glossary to the Pali Mahābodhivamsa (circa 12th century A. C.) the Vamsatthappakāsini the commentary to the Mahāvamsa (circa 8-9th centuries) the Sinhala Bodhivamsa, the translation of the Pali Mahābodhivamsa (circa 12th century A. C.) the Dharmapradipikāwa of Gurulugomi, commentary to the Pali Mahābodhivamsa on selected chapters (circa 12th century A. C.) the Cullabodhivamsaya (18th century A. C.) the Madhurārthaprakāsini a Sinhala exegesis on the Pali Mahābodhivamsa (17th century A. C.) the Mahābodhivamsa Tika (unpublished). Historically it is of vital importance that the sources such as the Dipavamsa, the Mahāvamsa, the Samantapāsādkā and the Mahābodhivamsa are reckoned as being based on the Sihalāsañthakatha of the Mahāvihāra or similar works of the Anuradhapura period that originated shortly after the introduction of Buddhism to Sri Lanka and the establishment of the Bodhi sapling at the Mahāmeghavana Park in Anuradhapura. The Mahāvamsa provides a more elaborate account of the establishment of the Sri Mahābodhi in the island devoting two chapters, namely chapter eighteen and chapter nineteen for the purpose. The chapters are named “Procurement of Mahābodhi (Mahabodhi gahano nama āṭṭha rasamo paricchedo)” and the arrival of the Mahābodhi (bodhi āgamanā nama ekiṇa visātimā paricchedo) respectively. The Samantapāsādkā relates the same story more poetically. There the miracles that are said to have occurred are dealt with minute details adding to the serene joy of the devotees.

The story of the Sri Mahā Bodhi monument it was extracted from the parent tree at Gaya, till its final establishment at Mahāmeghavana, Anuradhapura, after crossing the Folk Strait, is given tumed with miraculous occurrences, in the Mahāvamsa, Samantapāsādkā and the Mahābodhivamsa, when Anulā, the wife of Devanampiyattissa’s brother along with 500 companions, wished to enter the Order and made a request through the king to Mahinda Thera, he explained to the king that it is not proper for him to ordain women and requested the king to invite Sanghamittā Therī for the purpose.

“na kappati, mahāraja pabbājetun thiyo hi no Atthi Pataliputta samirī bhikkhuṇī me kanipitikā Sanghamittā ti nāmena vissutā sa bahussutā narinda samanindassa mahābodhidumindato dakkhiṇam sākhāṃ adāya tathā bhikkhuṇīyo varā agacchanti ti peshi rañño no pitu santikam pabbājessati sa therī āgātā itthiyo imā”

Oh! Great king it is not permissible for us to ordain women. At Pataliputta my younger sister, Learned Theri by name Sanghamitta, is there. Please send a message to my father to send her here with the branch of the Mahābodhi of the Great Sage. That Theri having come will ordain these ladies.’ (Mhv. Ch. XV vv. 20-23)

According to the Mahāvamsa report, it appears that the request to send the bodhi was an incidental one, that arose while discussing to invite therī Sanghamittā to ordain the ladies. But as Welamitiyāwe Dhammarakkhita, correctly concluded, that the establishment of a branch of the Mahābodhi in the island was a part of the master plan drawn by Moggaliputta Tissa therā, Emperor Aśoka and Mahinda therā, when the idea of introducing Buddhism was first planned.
The prompt acceptance of the request of King Devānampiyatissa, the care, the importance and the honour the Emperor himself bestowed in the matter, seem to suggest that it was not an idea that casually occurred at the time of sending for Sanghamitta theri but a part of the pre-planned programme. It was coupled with Sanghamitta’s arrival for the convenience to kill two birds with one stone.

King Devānampiyatissa selected his own nephew, Ariśṭha, for this important mission of bringing Sanghamitta theri and the Mahābodhi to the island, who accepted the task on the condition that he be allowed to enter the Order on his return. The Mahāvamsa (ch. xviii v. 8) and the Samantapāsādika (VinA. I p. 91) and the Mahabodhivamsa (Mhbv. p. 145), say that Ariśṭha and company reached Paṭaliputta the very day they embarked on the ship from Jambukola Pāṭhama, by virtue of resolution of will of the theris (Therādiṭṭhānayogato). But the Dipavamsa (Dpv. ch. xv v. 86) account appears more realistic, when it says that Ariśṭha had to cross Vindhyā forest after crossing the sea before he reached Paṭaliputta.

On receipt of the message of King Devānampiyatissa, the Emperor Asoka had no hesitation in sending the Mahābodhi sapling to the island of Lanka, and if the Great Bodhi is shipped it at eight places. The king got the golden vase made for the king. The king set out from Paṭaliputta with a large army seven yojanas long and three yojanas deep and went to the vicinity of the Great Bodhi; accompanied by the Mahāsaṅgha. The Great Bodhi was dressed with banners and streamers, decked with various gems, adorned with diverse ornaments, covered with various kinds of flowers and resounding with the music of diverse instruments.

“Taking with him about a thousand Great Elders who were the leaders of groups and surrounding himself and the Great Bodhi with a thousand consecrated kings from the whole of Jambudīpa, he stood at the foot of the Great Bodhi and gazed upon it.”

Rāja sahassamatte gaṇapāmokkhe mahā there gahetvā sakalajambudipe pattabhisekānam rājānaṁ sahassena attānam ca mahabodhiṁca pariwarāpaṇvā mahabodhimūle thatvā mahābodhiṁ ulokesi (VinA. I, 93)

At that moment it is said that the whole Great Bodhi, except for the trunk and a portion of the great southern branch four cubits long, became invisible. The king was so pleased with the miracle that he offered the entire kingdom of Jambudīpa to the Great Bodhi. The king making offerings of flowers and perfumes, and going round thrice in veneration, worshipped it at eight places. The king got the golden vase placed upon a stool inlaid with all precious gems, and elevated it from the ground to the height of the southern branch of the Great Bodhi. The king himself climbed the jeweled stool and took a golden pencil and drew a line with red arsenic (manosiśāyā). Tradition has it that the king made the following asservation of truth. “If the Great Bodhi should be established in the island of Lanka, and if I should be rid of doubts..."
as to the Dispensation of the Buddha, let the Great Bodhi plant itself in the golden vase of its own accord". With this asseveration of truth, the branch of the bodhi tree severed away at the place marked with red arsenic and stood above the golden vase filled with perfumed muddy soil. The king then marked another circular line on the stem three inches above the marking at the bottom, and it is said, instantaneously, ten large roots emerged. Again, at intervals of three inches above it, he made nine other circular markings. From them too ninety shoots emerged.

It is said that there occurred an earth tremor (mahā pathavya cali), the moment the Bodhi Branch established itself in the golden vase. The Mahāvamsa (ch. xviii v. 50-53), the Mahābodhivamsa (Mbh. p. 157) and the Samantapāsādikā (VinA. I p. 95) describe the miracles that are said to have occurred at the moment. But the Samantapāsādikā provides a beautiful and poetic account of the miracles that occurred in the land, sea, and the sky at the moment, which testify to the poetic skill of the author, the celebrated commentator Buddhaghosa. It is said that the Bo-sapling thus established itself in the golden vase entered the snowy clouds and remained concealed for seven days. At the end of seven days the clouds disappeared and, the Bodhi was seen complete with trunk, branches and twigs adorned with five fruits, standing in the golden vase. Conspicuously the Dipavamsa is silent as regards the royal ceremonial extraction of the bodhi branch, which the other sources discuss with minute detail. The Bodhi was taken to Pātaliputta and was placed at the foot of the Eastern Great Sala Tree. (Pācina mahā sāla mūle).

Though shrouded with miracles Asoka's journey to Gayā to obtain the sapling appear to have a historical kernel. In addition to the Pali sources there is archaeological evidence that co-relate his visit to Buddhagaya and the procurement of bodhi. Asoka's visit to the Bodhi Mandapa at Gayā is apparently portrayed in the eastern gateway of Sanchi, carved not long after the event. In the middle of the architraves is a Bodhi tree at Gayā with long procession winding round it. A person in royal garb, presumably Asoka is descending from an elephant. Incidentally, it is interesting to note that the Mahāvamsa record that the king got himself and the Mahābodhi surrounded with a thousand leading Mahā Therās and more than a thousand anointed princes.

Mahathera sahasena pamukhena mahāgaṇe raṇanā pariṭṭhābhesakānām Sahassenādhikānaca pariṇārayīta attanam mahābodhiṃ ca saḍhukānāma (Mbh. Ch. xviii vv. 32-33)

In the middle of another architrave shows a small Bodhi tree again with a great procession. The right side of the relief shows a noble person kneeling before a footprint, obviously representing the Buddha, as done before the invention of the Buddha image. The decorations of peacocks and lions on either side apparently represent Mauryas and Sinhalese. The archaeologists are of opinion that the above architraves depict Asoka's journey to the Mahābodhi at Buddhagaya and the return journey with the bo sapling. (Grunwedel, A. Buddhist Art in India. Translated by Gibson, A. C., revised and enlarged by Burgess, J.; London 1901, p. 70-71).

As regards the technique followed here to procure the Bodhi branch, Barua, observes, that out of three natural processes of propagating Bo trees (Asvattha) which have been successfully tried out, such as the process of generating as a shoot from the root of the parent tree, generating as a sapling from a seed and generating it as a graft from a branch, it is the grafting technique that has been adopted to generate the Bodhi sapling to be sent to Lanka.

The Mahāvamsa as well as the other sources record of an automatic severing of the branch (as per Buddha's resolution of will) when a line was drawn in red arsenic with a golden pencil.

Adiyitvāna sovannatulikāya manosilam lekham datvāna sākhāya ..... (Mbh. Ch. xviii v 39)

But the Dipavamsa is silent as to how the branch was severed from the parent tree. It is conjectured that a chemical preparation with red arsenic and gold was applied on the branch to get it automatically severed without causing damage either to the branch or the parent tree, an ancient technique apparently now lost. Further according to all the sources with the exception of the Dipavamsa, the branch so severed and established itself in the golden vase disappeared for seven days before it was seen again. Is it a part of the grafting process to keep the severed branch covered for seven days before it is ready for planting? Further
The so-called scented soil (gandhakaddama) put into the golden vase possibly can be a special soil preparation used in the grafting process.

The new graft (Taruna mahabodhima) was kept in a decorated vehicle and was taken along the decorated route to the city of Pataliputta in one day and was kept at the foot of the Great Sala Tree in the East. After the lapse of 17 days from the day the branch was established in the golden vase, new shoots (navakhura) appeared in the sapling, which means the graft was successful. According to the Samantapasadika (VinA. I, p. 96) novice Sumana who left Lanka to obtain relics (after Ariitha left to bring Sanghamittā Theri and the Bodhi) saw the Kattika Festival offerings (Kattika chana puja) at the Mahabodhi brought to Pataliputta, to be dispatched to Lanka. Samantapasadika reveals another important point, that Emperor Asoka was desirous of sending the Bodhi to Lanka before the arrival of the novice Sumana (Rājā kira tato pubbe eva dhātugahanathāya anāgāte Sumane Lankādippam Mahābodhiṁ pesetukāmō - (VinA. 1, p. 92). But the king could not execute it; The Novice Sumana came back to Lanka before the bodhi. According to the Samantapasadika report the delay was due to the king’s dilemma as to the problem of severing of the bodhi branch with a weapon. However, as already said, Therā Moggaliputtatissa came to the Emperor's rescue revealing the Buddha's Resolution of Will at the deathbed. (Parinibbāna Mańce).

The dispatch of the Mahābodihi to the island of Lanka, too, appear to have been done amidst great celebrations. Asoka himself was present at the Port Tāmalittā. Mahavamsa, which earlier said that Prince Ariitha arrived in Pataliputta the very day he left Anuradhapura, now reports that the bodhi was ferried down the river and the king had to cross Vindhya mountain and arrive at the port Tāmalittā in seven days. It is said that the celebrations at the port took seven days. The king waded into water to a depth up to his neck to keep the bodhi in the ship.

Ukkhipitvā mahabodhima galamammachi jaṭham tañham Ogahetva sa navāya patiṭṭhāpayi sadhukam (Mhv. Ch. XIX v. 11)

According to all reports the ship bearing the Bodhi was confronted by Nāgas who came to pay their homage to the bodhi. Theri Sanghamittā had to take the form of a Supanna to drive away the Nagas. Later with the approval of Theri Sanghamittā the Nāgas took the bodhi to their realm, and kept it there worshipping it for 7 days before returning it to the ship.

The Dipawamsa (Ch. XVI vv. 8-29) appears to overemphasize how the nāgas, the yakṣhas, numerous gods and various spirits confronted and worshipped the bodhi in the sea, heading for Lanka which the Mahāvamsa author discusses very briefly in four verse. (Mhv. Ch. XIX. vv 19-22). The Samantapasadikā, too does not dwell too much upon the Nāgas, and Devas who confronted the bodhi heading for Lanka.

It is seen that the Mahāvamsa is repeatedly emphasizing how Asoka at the moment the sapling was severed, and at the occasion of sending it off to Lanka from the port Tāmalittā, honoured the bodhi, bestowing the kingdom and the kingship upon the bodhi. According to the Mahāvamsa, Asoka at the Port said, “I have honoured the bodhi by bestowing my kingdom thrice to the bodhi. Let my friend too, honour the bodhi by bestowing the kingdom. See PLATE XLVII.

Aham rajjena tikkhattum Mahabodhim apijayam Evans evabhijietu rājā rajjena me sakāḥ (Mhv. Ch. XIX v 13)

Similar to the celebrations at the port Tāmalittā the day the bodhi was dispatched, the bodhi was welcomed with great honour and celebrations at the port Jambukolapattana in the Island of Lanka. King Devanampiyatissa himself was present at the port and waded neck deep into the water to receive the bodhi. The novice Sumana who returned with the relics had already advised the king regarding the arrangements to receive the bodhi. The road from Anuradhapura to the port Jambukolapattana was decorated. The celebrations at the port took three days. On the fourth day the bodhi was taken to Anuradhapura, kept in a vehicle in a procession via Tivakkha Brahmanas’s village. On the 14th day the bodhi was ushered into the city through the northern gate, the when the shadow was seen lengthening. Then having left the city through its southern gate, bodhi was taken to the precincts of the royal grounds at a distance of 500 bow lengths from the southern gate, where the ground had been prepared already (on the advice of the novice Sumana), the site sanctified by the Buddha by sitting in the attainment of Cessation of consciousness (yattha amhākam sambuddho nirodha samāpattim samāpajjitva nisīd) (Vin. A. I, p. 99) in the Mahameghavana park. According to all the sources including the Dipawmsa it was on the same spot where the bodhis of former three Buddhas Kakusanda, Konāgama, Kassapa stood in the past.
Miracles are also said to have occurred at the moment the bodhi was established. The members of sixteen noble families, who came to attend upon the bodhi, took upon themselves their respective places. The king stationed himself as the gatekeeper (in honour of the bodhi). The sixteen families took the bodhi reverentially and placed it on the ground. Scarcely had the bodhi been released from their hands than it rose into the sky to a height of eighty cubits and emitted the six hued rays. It is said that the magnificent rays spread over the entire island and penetrated as far as the world of Brahmā above. Until the sunset the bodhi remained in the sky. After the sunset, it established itself upon the earth under the asterism of Rohini (Rohini Nakkhatrena). With the establishing of the bodhi the earth shook to its ocean limits. The Mahāvamsa as well as the Mahābodhivamsa record that there occurred a great rain at the moment the bodhi had established itself. The bodhi remained enclosed within a bank of snowy clouds, hidden to the view of the people for seven days. On the seventh day the sky was clear of clouds and the six hued rays flashed radiant and dazzling. The trunk of the bodhi, the branches, and five fruits, became visible. As per the Mahāvamsa and the Mahābodhivamsa there was a great gathering at the occasion of the planting of the bo sapling at the Mahamegavāna park, including Maha Mahinda Thera, Therī Sangamittā, the king, Khattiya of Kajaragama and Candanagama and Brahmān Tivakka. Even while they were looking on, one fruit on the northern branch, ripened and fell from the branch. Mahinda Thera held out his hand and the fruit came to rest on his hand. The Thera gave it to the King saying, “Plant it O! Great king”. The king accepted it; and scattering scented earth out his hand and the fruit came to rest on his hand. 

There took place a complete social and Cultural Revolution in the inland as a result of the establishment of the bodhi. The most important factor was the large retinue that accompanied the bodhi to the island. Sources differ as to the number that constituted this retinue. The Dipavamsa is silent about it, while the Mahāvamsa enumerated it as eighty-two families; The Samantapāśādikā gives the number as sixty-six, and Pali & Sinhala Mahabodhivamsas record it as 210 families. All the records agree that the retinue included the higher strata of society such as the royalty, brahmans, the wealthy (Seṭṭhi) as well as service grades such as craftsmen and attendants etc. As Welamityiye Dhammarakkhiya correctly observes, the retinue that arrived with the Bodhi sapling expanded its scope very much beyond attending to the Bodhi, and reached the administrative realm of the island, too. It is seen that higher grades such as the Devatākula, Khattiya, Brāhmaṇakula, Seṭṭhi and becoming very powerful sections of society in course of time, capable of even capturing the throne of the country (ibid p. 162 f). It is of great importance that the crowd included princes such as Sumitta, Bodhigutta, Devagutta, Dharmagutta, Suriyagutta, Candagutta, Gotama and Jutindhara. Being the brothers of Vedisa Devi, the mother of Mahinda Thera they were directly connected to Asoka. The king placed them in appropriate high positions. Their descendants were known as Bodhīhāracakula. In the meantime various craftsmen such as goldsmiths (sovanākāra), weavers (pesakāra), potters (kumbhakāra) etc. enriched the arts and crafts of the island. In fact it is thought that the arts and crafts really began only after the arrival of craftsmen with the bodhi. It is clear that Emperor Asoka had not only sent those needed to look after the bodhi, but also sent experts to help his friend Devānampiyatissa to streamline his administrative machine and upgrade various trades, occupations and crafts in the island in the line of the Maurya Empire.

After the establishment of the Sri Mahā Bodhi it was accorded the veneration similar to the living Buddha. It was directly connected to the kingship. The Vamsatthappakasini (Vol. I p. 307) quoting from the Sīhālaṭṭhakathā says that the spot under the northern flight of steps of the Mahābodhiśāra was one of the seven places from which clay was obtained to make the vessels used to deposit the accessories connected with the ceremonial coronation of the king. Various kings not only looked after it devotedly but also contributed to its development and adornment in the course
of history. The chronicles often record the various steps taken by many kings for the enhancement of the bodhi and its precincts and also restorations when necessary. In the subsequent centuries, around the high terrace on which the sapling of the bodhi was planted a ‘Bodhighara’, an architectural structure with railings, has been developed. There has been an outer wall enclosing the complex with four entrances at four cardinal points. The earliest work after Devanampiyatissa being that of king Vasabha (67-111 A. C.). He (Vasabha) built a temple in the courtyard of the bodhi tree with statues of the Buddhas.

适量的 \textit{patimā ramnā patimānaṁ gharman tathā}

Mahābodhaṅgane rājā so yeva kārayi (Mhv. Ch. xxxv. v. 89)

Though Sirinaga I (189-209 A.C.) is reported to have restored the steps of the four entrances leading to the bodhi tree (Mhv. xxxvi v. 25), it is not on record when the four entrances were first added. Siriweera suggests\(^4\) that Devanampiyatissa might have constructed them at the initial stage. King Vohārikatissa (209-231 A.C.) set up two bronze images in the eastern side of the Bodhighara (Mahabodhīhara pācine loharūpadvayoṁ tathā) (Mhv. xxxvi. v. 31). The Mahavamsa (Mhv. xxxvi. v. 52) states that king Abhayanaṅa (231-240 A. C.) constructed a stone wall (pāsana Vedim kāresi mahābodhi samantato) round the Mahābodhi. It is possible that there was no outside wall up to the reign of king Abhayanaṅa. The wall seems to have been in a dilapidated condition in a short time, because Sirināga II (240-242 A. C.) is reported to have restored it. Further king Abhayanaṅa constructed a pavilion beyond the “sand spread terrace” of the bodhi (Mhv. ch. xxxvi, vv. 55-56). King Goṭābhaya (249-262 A.C.) is reported to have taken steps to develop the Mahābodhi more than the other kings. He constructed a stone railing around the Bodhi tree as well as an arched gateway at the northern entrance and placed stone pillars with “cakras” (possibly Dharma cakras) at the four cardinal points. He also established the three statues at the three entrances: and a stone throne at the southern entrance.

适量的 Mahābodhisilāvedīṁ uttaradvāra toranāṁ

Patiṭhāpesi thambe ca catuṁkane sacakkāke

Tissa silāpaṁtī ca tisu dvāresu kārayi

Thapāpesi ca pallaṅkam dakkhinamhi silāmayaṁ (Mhv. ch. xxxvi v. 103-4)

According to the Mahavamsa Jetthattissa (263-273 A. C.) built three gateways at the Bodhighara. The Vamsatthappakāsiṁi adds that the gateways were at the southern, the eastern and the western gates (Mhv A. II p. 674). Though the Mahāvamsa says that the king built the gateways, it would have been repairs to the existing gateways, which may have been in a state of decay.

Though King Mahāsenā (272-301 A. C.) razed the Mahāvihāra to the ground, apparently no damage was done to the Mahābodhi. In spite of doctrinal differences between the Mahāvihāra and the Abhagārirī, the Mahābodhi would have been a common object of worship, for both sects. In fact Mahāsenā not only spared the Mahābodhi, but he had taken steps to develop the Mahābodhi shrine. He is reported to have established two bronze statues to the west of the Bodhīghāra. (Mhv. xxxvii v. 31).

The chronicles furnish details of further improvements, renovations and additions effected to the Mahābodhi shrine by various kings between the fourth and the tenth centuries. Sirimeghavānuma (301-328 A. C.) built a stone terrace and a wall beside the Bodhi tree (Mhv. ch. xxxvii v. 91). King Dhātusena (455-473 A.C.) built a Bodhīghara at a cost of a hundred thousand (gold coins) (Mhv. ch. xxxviii v. 69). King Kittisirimēgha (551-569 A. C.) covered the (roof) of the Bodhīghara with tin sheets (Tippupāṭhe - ibid ch. xli v. 65). King Mahānāga (569-571 A. C.) had done substantial improvements, according to the Mahāvamsa. He built an irrigation trench (Alavalam) around the Bodhi tree complex (Mhv. xli v. 94). King Dappula II (815-831 A C.) renovated the dilapidated Bodhīghara strong and new (Mhv. xlix (Culavamsa v. 74).

In addition to the developments and restorations effected to the Sri Mahābodhi, chronicles also refer to several offerings and rituals performed by various kings to the Sri Mahā Bodhi during the Anuradhapura period. King Duṭṭhagāmini (161-137 B. C.) performed a marvelous offering to the bodhi (mahābodhi pījam sulāram) having spent a hundred thousand, possibly gold coins (Mhv. ch. xxvii v. 1). King Bhātikābhaya (22 B. C. - 7 A. C.) conducted an annual festival called the Bodhi sināna pījā apparently a watering ceremony.

King Vasabha (67-111 A. C.) lighted a thousand lamps at four places namely Mahabodhigahara, Cetiyaabattata, Thupārāma and Mahāthūpa. (Mhv. ch. xxxv. v. 80). King Sirimeghavana (301-328 A. C) made an image of Mahinda thera and conducted a great festival in honour of the therā and kept the image in the courtyard of the Mahābodhi for three months (Mhv. ch. xxxvii v. 85-86). King Dhātusena (455-473 A. C.) is reported to have conducted a Sinānapiṇḍa (bathing ceremony) for the bodhi (Mhv. xxxviii v. 55). It is said at this instance that the festival conducted by king Dhātusena was similar to the one done by king Devanampiyatissa (Devānampiyatissena kathā bodhi mahānīvīya). According to this information apparently it was Devanampiyatissa who conducted the watering festival for the bodhi for the first time. King Silakāla (518-531 A. C.) conducted daily pūjas (anvahām pujāyī bodhiṃ Mhv. xli v. 29).

Scholars have observed that, though chronicles often record the events pertaining to the Mahābodhi up to the 10th century A. C. there is a marked absence afterwards (Geiger, Wilhelm, Culture of Ceylon in the Mediaeval times - Otto Harrassowitz Wiesbaden 1960 p. 187). Apparently this was due to the arrival of the Tooth Relic in the reign of Sirimeghavana (circa 326 A. C.), which gradually replaced the important position hitherto held by the Mahābodhi, in the centuries that followed. Around the same period the capital was shifted from Anuradhapura to Polonnaruwa. This too had a bearing on the position held by the Sri Mahā Bodhi. Nevertheless the Sri Mahābodhi was not completely neglected or abandoned, for we see kings of Polonnaruwa renovating, and maintaining the Mahābodhi shrine. King Vijayabahu I (1070-1111 A. C.) who defeated Colas and unified the country renovated the Bodighara at Anuradhapura (Mhv. Lx v. 63). According to the Rājaratnākaraya (p. 35). King Parakramabahu renovated the Vatadāge of the bodhi complex. However when the capital was further shifted to Dambadeniya and afterwards to Yapahuwa apparently the kings were unable to maintain the Sri Mahābodhi and other sacred places as in the past. When Vijayabahu IV of Yapahuwa (1270-1272 A. C.) visited Anuradhapura, he found the sacred places covered with forest and got the forest cleared and entrusted the Vanni chieftains the protection of Anuradhapura.

Around the middle of the 13th century, with the collapse of the Rājaratna civilization and the gradual shifting of the political and cultural center of the island towards the wet zone, Anuradhapura lost its importance and was gradually neglected. Sacred places were gradually encroached by the jungle, which was frequented by wild beasts. Nevertheless, Anuradhapura, (Anuradhapura District present demarcation) was not completely de-populated. While the majority migrated towards the wet zone some courageous people continued to live in isolated pockets around small village tanks. Though engaged in constant battle against the drought and malaria, they looked after the sacred places, specially the Sri Mahā Bodhi, to the best or their ability. In the full moon of July-August (Nikini Full moon) the people of the surrounding villages came to the Sri Mahā Bodhi carrying bundles of firewood on their heads to light bonfires round the bodhi at night to keep away the wild elephants, who used to enter the premises to eat tender Bo leaves. The pilgrims carrying firewood on their heads looked like a procession, hence it was called Dāramiṭṭa Perahera (Procession of firewood bundles and the Nikini Poya was called Dāramiṭṭa Poya). The descendants from the hereditary families both high and low, who were entrusted with various duties to the Sri Mahā Bodhi from ancient times, did not neglect their sacred duties to the Mahābodhi. Further the Sri Mahā Bodhi premises were not devoid of monks. There was a handful of dedicated monks headed by the chief priest of Atamasthāna (the Atamasthānādhipati) looking after the bodhi at the site. Though covered with thick jungles infested by wild beasts, Anuradhapura was still a popular place of worship. Enterprising people continued to go to Anuradhapura even from distant places, especially during the season of Poson (June). King Kirti Sri Rajasinghe (1742-1782) visited Anuradhapura accompanied by a retinue and participated in rituals at the Mahābodhi and gave lavish gifts to the holy places. (Mhv. ch. XCIX 36-37). Thanks to the dedication of devoted Buddhists, while the structures around the bodhi were collapsing Sri Mahā Bodhi was safe and intact during the dark period of Anuradhapura. A drawing of the bodhi in the early British period shows it with no damage but without any structure around. With the restoration of the irrigation tanks and the commencement of the colonization schemes in the early 20th century, more and more people coming and settling in and around Anuradhapura ended the isolation, and the jungle that once covered the sacred places was cleared. It is significant and surprising that in spite of the fact that Anuradhapura was invaded, plundered, destroyed and occupied for a considerable period, by the South Indian invaders on several occasions in the course of history, no harm was done to the Mahābodhi, while many edifices suffered heavy damage at their
hands. The Vamsatthappakasini possibly quoting from the Sihalaṭṭhakathā Mahāvamsa explains the phenomenon thus:

Mahābodhīṃ pujissanti lanke 'tasmiṇ naraṇāhipa
Paccatthikā na himseyyum esa sambodhi dhamaṭā

The kings of Sri Lanka honour the Mahābodhi while the enemies do not damage it. This is the nature of the Sambodhi. (MhvA. Vol. II p. 412)

This may be due to the fact that those South Indian invaders themselves being Hindus, who considered the Asvattha Tree as a holy tree, did not want to harm the bodhi.

As regards doubts expressed by some critics about the historicity of the tree, James Emerson Tennent says “the conjecture that the original tree might have died and its’ place been supplied by one secretly substituted, may fairly be regarded as an hypothetical impossibility.”

In addition to the religious developments that took place due to the establishment of the Sri Maha Bodhi, as already said, the higher strata of the society with royal connections, included in the retinue that accompanied the Sri Maha Bodhi, no doubt would have enriched the administration of the country with their experience in the Maurya empire. Several other developments also took place in areas such as literature, architecture, design, music, folklore etc. Due to the advent of the Bodhi.

There arose a separate literature centered on the Sri Maha Bodhi. The earliest literary work on the bodhi is the Bodhivamsatthakathā, which is not extant. Apparently that should belong to the Sihalaṭṭhakathā period written not far from the date of the establishment of the Sri Maha Bodhi. The oldest extant work on the Mahabodhi is the Pali Mahabodhivamsa of Ven. Upatissa, circa 10th century A. C. According to the preamble it is a Pali translation of the non-extant Sihala Mahābodhivamsa (Bodhivamsatthakathā) above referred to.

The Pali Bodhivamsa was translated into Sinhala as the Sinhala Maha Bodhivamsa in the Kurunegala period in the 13th century A. C. by Ven. Sāhiya Vilgammula. Mahā Bodhivamsa Granthi pada vivaranaya is a Sinhala glossary on the Pali Mahabodhivamsa apparently by an anonymous contemporary of Ven. Upatissa, the author of the Pali Mahabodhivamsa. Gurulugomi wrote his Dharmapradīpiṭāva an exposition of the Pali Mahabodhivamsa, in the 12th century. Mention is also made of a Bodhivamsa Tikā, which is yet to be traced. Welivita Saranankara Saṅgharāja wrote the Madhurārtha Prakāśini, a paraphrase of the Mahabodhivamsa, in the Kandy period, on the invitation of king Narendra Singha (1707-1739 A. C.). There is another work, small in size, named Sulubodhivamsaya explaining the place where the other bodhis were planted in addition to the Sri Maha Bodhi, written in the reign of Rājādhirāja Singha (1782-1798 A. C.). Therefore it is clear that books on the Mahā bodhi continued to be written up to the late Kandy period. According to Welamitīyāve Dhammarakkhiṭta (op. cit. p. 70) altogether thirty works were written on the theme Mahābodhi, some of which are not extant. Apart from the literary compilations of the learned, there are numerous popular songs, verses, stanzas meant for loud oral recitations on the theme, Sirimahābodhi, some of which fall into the folk tradition. Mahābovanṇama, a song somewhat similar to panegyric songs on the Mahābodhi has won the appreciation of the learned today.

The Bodhighara a shrine around the bodhi is an architectural form unknown to the country, which was introduced along with the Mahābodhi, the first of which would have been designed according to the bodhigāra at Buddhagāya in India. The Sirimaha Bodhi is said to have had a bodhigāra in the early period. The famous bodhigāra at Nilakkāgama Kurunegala district, is a typical example of a bhodhigāra in the early days. The bodhi leaves were introduced to the Sinhala design tradition, after the advent of the bodhi. The Bo-leaf design is found used in architecture, jewellery, and pottery in day-to-day implements such as the Betel box, Chunam box and in several other areas for adornment, especially in the Kandy district. The names with the prefix bodhi such as Bodhidāsa, Bodhipāla, Bodhināyaka Bodhigupta etc. became popular personal

names even among the Sinhalese. In addition to Sanghabodhi there was a line of kings bearing the name Aggabodhi.

It is interesting to note that the birth of the museum concept in that remote era start with the establishment of the bodhi in the island. The Mahāvamsa records that the mast (kūpayṭhthi), rudder (arīṭta), and oar (piyām) of the ship that brought the Bodhi, have been preserved in the three different buildings of the nunnery put up for nuns headed by Theri Sanghamitta. The buildings came to be known by the name of the ship’s part that it contained i.e. kūpayṭhṭi āṭhita geha (the building where the mast is kept) etc. This may be regarded as the earliest reference to the concept of a museum.

Mahābodhi sametāya nāvāya kūpayṭhthikam
Ekasmin piyām, ekasmin arīṭtam tehi tevidu
(Mhv. ch.xix, 70).

As a result of being venerated as the most sacred object for a period of over 2000 years by the ordinary folk as well as intellectuals, it is natural that various forms of beliefs, superstitions, and myths got woven around the bodhi, in course of time. From ancient times the people, specially the farmers of the North Central Province, believe that the Sri Mahā Bodhi has the power to generate rain. Therefore during a drought they bathe the bodhi, make various offerings, and chant pūrṇa in order to get rain. There is another belief among the ordinary folk that with the blessing of the Sri Mahābodhi, women can get male offsprings. Further there is a belief that a deity by name Kāḷudevatābāndara protects the bodhi. People consider it a great sin to cut a branch of a bodhi unless it obstructs a chaitya or an image of the Buddha. According to the Mahāvamsa, in the reign of Sēna IV (972-975 A. C.) When Mahinda IV (975-991 A. C.) was the Yuvaraja, some carpenters were constructing a building at the Mahābodhi premises. They tried to raise a branch of the bodhi tree that obstructed the construction and keep it raised supported by a bamboo, in which operation the branch broke. Thoroughly frightened the carpenters reported the matter to the Yuvaraja. The Yuvaraja made a resolution of will that the branch itself may raise up till the construction was over. The following morning, to the surprise of every one, the branch was found raised.

Fa-hien who visited the island circa 412 A. C. has recorded how a branch of the Bodhi that was bent to the southeast was severed ceremonially. The ordinary folk fears even to step on the roots or the fallen leaves of the bodhi.

The Sri Mahabodhi has stood the test of time and has survived for more than two thousand three hundred years. The bodhi has survived while the structures around it perished in the course of time. As Paranavitana has pointed out, "later developments however have swept away, all ancient features and the bodhi shrine at Anuradhapura, as it exists today may not contain any vestige of the architecture of the third, second and first centuries B. C. and the early centuries of the Christian era"6 The buildings found today around the Mahabodhi are those put up in the course of the last century.

The bodhi is situated on an elevated ground, which is arranged in four terraces, decreasing in size as one ascends. The bodhi occupies the highest terrace, which is 21 ft. in height and 71 and 57 ft. in length and breadth respectively. This terrace is called "wedahindina maluwa", the terrace where the Mahābodhi stands. When Walisinghe Harischandra measured the bodhi at the turn of the 19th century it was 30 ft. in height and the circumference of the trunk was 8 ft. 2 inches. It had three main trunks.7 In the same terrace by the side of the Mahābodhi, there is another bodhi with a straight trunk. Earlier there were two iron railings on the top for the protection of the Mahābodhi, put up by Ven. Egodapitiye Saṅgharakkhitī, Chief High Priest of Isurumuni Vihāra. But today in place of the iron railings there stands a gold plated railing put up by Mahanuwara Bodhi Ārakshaka Ranwēta Dāyaka Sabhā on the advice of Ven. Yatirāvana Nārada Thēra. This enclosure is not open to the ordinary worshippers and remain locked always, and is open on special occasions for special guests only.

In the second terrace there are two bodhi trees one to the south and the other to the north west of the Sri Mahābodhi and there is an iron railing too. On the third terrace there are six bodhi trees, three to the south and three to the west. The wall of this terrace was put up by devotees of Gonagala Induruwa, Galle on the advice of Ven. Yagirala Paññānanda Nayaka thero.

On the fourth terrace where the image house stands there are eight Bodhi trees. At the ground level there are 21 bodhi trees and 13 more on the great parapet wall. Those bodhi trees are called Parivara bodhi, the bodhis that from the retinue. The stone parapet wall round the bodhi was constructed by Ven. Illupendeniy Attadassi with the permission of King Kirthi Sri Rajasimghe (1749-81 A. C), with stones collected from various sites around to prevent elephants entering the bodhi terrace. There is an image house to the east. It has been subjected to repairs several times. By 1906 it was almost in ruins. Late Mudliyar E. R. Gunaratne of Galle initiated the last repairs to it. In fact a new image house was built on the old foundation. The image house measures 62 ft. in length 30 ft. in breadth. Of the two Buddha images in the image house one is standing and one is sedent. They are ancient images sculptured in stone and plastered over and painted, possibly in the course of repairs. Anuradha Seneviratne thinks that one of the statues may be the one referred to in the inscription of Mahinda IV (10th, century A. C).

Among the sculptural remains seen on the surface are moonstones of the 6th and the 7th centuries A. C., a guard stone circa 8th century, a seven hooded Cobra king and five-hooded Cobra young ones on the site, are noteworthy.

The administration of the Sri Mahâbodhi is in the hands of the chief High Priest of Atamasthāna and Atamasthāna Palaka Sabha, the Administrative Body of the Atamasthāna. The rituals are performed for the Sri Mahābodhi up to date as done in the past. There are two types of rituals performed daily as well as annually. There is a special staff for the purpose. The daily rituals begin after cleaning the premises, which includes the cleaning of the top terrace (Wedahindina Maluwa) where the Sri Mahābodhi is established, the other terraces and the cleaning of flower altars. The Wedahindina Maluwa is swept by a bhikkhu and a trained person according to the accepted pattern. The official Buddhapija, brought with the beat of drums, is offered to the Sri Mahābodhi. The gates are kept closed for the Buddhapija and are opened again at 2.00 p.m. The cleaning is done in the morning. Offering of gilanpasa is made in the evening and the gates are closed at 8.00 p.m. The beating of drums which is called revâ hevîsi is done thrice a day, in the morning, noon and evening.

The following four annual rituals are performed in honour of the Sri Mahābodhi:

Alusahal (aluthsahal) Maṅgallaya where the first portion of the new harvest is offered in December - January (Duruthu Full Moon).

Paraṇa Avurudu Maṅgallaya or Nānumura Maṅgallaya, which is done on a visā nekata (an auspicious time) prior to Vesak Full Moon. This ceremony is done collectively with the rest of the eight sacred places as well. The Sri Mahābodhi is decorated with ornaments, and milk rice is offered at the same time to the eight sacred places. A special medicinal preparation called Nānu is applied prior to bathing, on the head of a reflection of a Buddha Statue fallen on to a mirror, at this ceremony. Deva pūjā is also offered to gods headed by Kaludevatābandara, the deity supposed to protect the Sri Mahābodhi.

Kartī Maṅgalyaya is performed in July-August in the auspicious time known as Kāti Nekata, apparently through which it has got the name. After cultivating their fields the peasants come to Anuradhapura on pilgrimage and the ritual coincides with their pilgrimage period. According to the records available the rituals connected to the Mahābodhi appear very much more complicated and vivid during the days of the ancient Sinhala kings. It is said that in ancient times there were 48 villages, inhabitants of which were entrusted with various duties pertaining to the Mahābodhi. But today only a few remain, such as Pusiyanukulama, Iluppukulama, Kārpetīya, Mādavćcyā, Pēryakalovcya, Tirappane, Bulankulama Hammillēkukulama who are expected to supply pottery and implements and provide services such as blowing of conch shells etc. for the Mahâbodhi (Dhammarakkha, Welamitiyaye, (op. cit. p. 389).

The Sihala Bodhivamsaya is a very useful source to form an idea of the various services and rituals performed during the latter part of the Anuradhapura period. The services and rituals such as circumambulation, blowing of conches, watering, hanging banners and garlands, reciting hymns, burning incense, holding sesath, covering the Bodhi tree top with a white cloth, and drumming are found mentioned in the

The Mahabodhi Society is a missionary organisation founded in 1891 by Anagarika Dharmapala of Sri Lanka (then known as Ceylon). Its primary aim was to revive Buddhism in India, the land of its birth, and spread it throughout the world; also to restore and maintain places in India which are sacred to Buddhists. In addition, its agenda included the mounting of agitation to assert the right of Buddhists to freedom of worship at Buddhagaya, when that freedom was obstructed, and to restore to Buddhists the custodianship of the Mahabodhi Vihāra. At that time it was under the control of the powerful Hindu Saivite Mahant.

Over the Years, the society's activities expanded to include humanitarian service and educational work such as the setting up of schools, industrial (technical training) centres, monastic training centres, libraries, temples, dharmasālās, the teaching of Pali and the publishing of books and journals.

I. Early History

a. Founding of the Mahabodhi Society. The Mahabodhi Society came into being when both India and Sri Lanka were under British colonial rule. It was founded on 31 May 1891 at the Vidyodya Pirivena, Colombo, at a conference specially convened for the purpose by Anagarika Dharmapala. The office-bearers elected at that original meeting were Ven. Hikkaduwe Sri Sumangala Mahanayaka Thero as president, Colonel Henry Steele Olcott as Director and Chief Advisor, and Anagarika Dharmapala as General Secretary. Representatives from Siam, Japan, Ceylon, Burma and India were included in the committee.

In order to achieve the objectives of the society, it was thought necessary to

i) establish a Buddhist Monastery and a Buddhist College, maintain a staff of Buddhist bhikkhus at Buddhagaya representing Buddhist countries such as China, Japan, Siam, Cambodia, Burma, Ceylon, Chittagong, Nepal, Tibet and Arakan and also to

ii) publish Buddhist literature in English as well as in the vernacular languages of India.

K. Arunasiri

MAHABODHI SOCIETY. The Mahabodhi Society derives its name from the tree under which the ascetic Gotama, the Buddha-to-be, attained Enlightenment. The tree was an Asvattha (Ficus Religiosa) and it grew at Buddhagaya in the present state of Bihar in North Eastern India.

11. ibid p. 89
b. Buddhagaya Temple Affair: The Society sent its first mission to Buddhagaya on 10 July 1891 consisting of four Sinhala Buddhist monks. They resided at the Burmese Rest House built by the Burmese king, Mindon Min. Anagarika Dharmapala then began negotiations with the Mahant to purchase a piece of land and from then began his "unequal struggle with the second wealthiest landlord in the whole of Bihar ..." (Hindustan Standard of 17.9.1964, published in the Centenary volume of the Maha Bodhi Society Journal)

In October 1891, an International Conference was arranged at Buddhagaya to draw the attention of the Buddhist world to the dilapidated condition of the Buddhagaya Temple and the state of Affairs existing there.

In February 1893, the Buddhist bhikkhus at Buddhagaya were attacked by the Mahant’s men, and on the advice of Colonel Henry Steele-Ocott, they were requested to stay at Gaya as their lives were in danger.

In 1894, at the request of Anagarika Dharmapala, the Mahabodhi Society of Japan presented a Buddha image to the Buddhagaya Temple. It was to be placed at the Buddhagaya Temple in May 1894 but the Mahant prevented the bhikkhus, who were bearing the image, from entering the premises and his men forcibly carried away the image and placed it in the open square before the temple. The bhikkhus took refuge in the Burmese Rest House and legal proceedings were instituted by the General Secretary. The Great Buddhagaya Temple Case was the result. Finally, the High Court decided that the Mahabodhi Temple had never been converted into a Hindu shrine and that it was a Buddhist Temple.

The Government of Bengal under British Colonial rule did not support the Buddhist cause but the Governors, Sir Alexander Mackenzie and Sir Johan Woodburn were sympathetic. So were many influential Indian friends of Anagarika Dharmapala in Bengal who remained staunch allies of the Mahabodhi Society. They belonged to the Bengali intelligentsia such as the educationalist Sir Ashoutosh Mookherjee and leaders of the business community such as Neel Comal Mookerjee and many others like them.

In 1915, the Mahabodhi Society became a registered body and a governing body was formed with Anagarika Dharamapala as its General Secretary. Its objectives were broadly defined as resuscitating Buddhism in the land of its birth with its headquarters at Buddhagaya, disseminating the philosophical and ethical Teachings of the Buddha, translating Pali and Sanskrit texts into English, Bengali and Hindi and setting up a permanent office in Calcutta.

In 1949, the Government of Bihar initiated legislation and consequently the Buddhagaya Bill was passed in the Legislative Assembly of Bihar. This act would appear to be the culmination of the struggle the Mahabodhi Society had to face in order to gain control of the Buddhagaya Temple for the Buddhists.

On 28 May 1953, the Buddhagaya Temple was transferred to a new management committee. This 9-man committee consisted of both Buddhists and Hindus.

c. Mahabodhi Journal: The Mahabodhi Journal was started in May 1892 for the purpose of propagating the Teachings of the Buddha and having an interchange of news between Buddhist countries, thereby uniting them.

The first number was printed at the Baptist Mission Press in Calcutta and the second at the Bengali Press. Thereafter it was printed at Carton Press till 1905 after which the Mahabodhi Society of Colombo undertook the task of printing till 1916 when it was taken over by the Mahabodhi Society office at Calcutta.

Copies of the first issue were sent to oriental scholars in various parts of the world. One copy was forwarded to Sir W.W. Hunter, author of the "Indian Empire" and another copy sent to the American Consul in Calcutta. The journal gave Sir William Hunter material to write about the future of Buddhism in India in his work on Indian Buddhism. The copy that reached the hands of the American Consul was sent by him to the Chairman of the World Parliament of Religions, who invited the Mahabodhi Society to send a representative to the world Parliament of Religions at Chicago in 1893.

The first editor of the journal was Anagarika Dharmapala who was the General Secretary of the Mahabodhi Society as well. He remained its editor till his death in 1933 and thereafter his successor, Brahmacari Valisinha took over the editorship till 1938. He and Seela Bhadra were joint editors from 1939-41, then Seela Bhadra, Kalidas Nag and bhikkhu N. Jinaratana edited the journal from 1942-55 and from 1956 onwards an editorial Board was formed.
The journal started with an exchequer of only Rs. 25/- but somehow managed to put out a monthly publication, mainly due to Anagarika Dharmapala's personal funds. It has an unbroken record of publication for over one hundred years, since its inception.

The journal published reviews of books on Buddhism, articles on Buddhism and Buddhist news of interest. Among the contributors were B. Hodgson, Dr. Sylvan Levi, T.W. Rhys Davids, Dr. B.M. Barua, Dr. D.R. Bhandarka, Dr. A. Commaraswamy, Dr. B.C. Law and many other scholars. The journal attracted the Support of even non-Buddhists.

d. World Parliament of Religions: In 1893, the World Parliament of Religions was held in Chicago. It was one of the major events of the time. Anagarika Dharmapala was nominated by the Mahabodhi Society to attend the Parliament as its representative. He and Swami Vivekananda were the most popular speakers at the Parliament according to American newspaper reports. Dharmapala’s paper on "The World's Debt to Buddha" was well received as the message of the Buddha's teaching reached a wide audience through the American press. It was on his return journey that he met Mrs. Mary T.R. Foster, the wife of a wealthy American Banker of Hawaii. She became one of the greatest benefactors of the Mahabodhi Society until her death. She left in her Will a handsome legacy to further the activities of the Society.

e. Mahabodhi Society Centres and Temples: The mahabodhi Society established an office in Calcutta in 1892 at 20/1 Gaugadhar Babu Lane, Bowbazar. It later shifted to 2 Creek Row and thereafter in 1908 it purchased the Beniapukur House.

In 1926, Anagarika Dharmapala purchased a house at Ealing in London with funds donated by Mrs. Mary T.R. Foster of Hawaii and called it Foster Home where lectures and meetings were held.

In 1928 Anagarika Dharmapala established a mission at 41 Gloucester Road in Regent's Park with three Buddhist monks from Sri Lanka. It was the first Buddhist monastery to be established outside Asia, known as the London Buddhist Vihara. This vihāra is now housed at Chiswick, West London, the Gloucester Road House having been commandeered during the war. The vihāra is managed by the Anagarika Dharmapala Trust and administered in conjunction with the Mahābodhi Society of Sri Lanka which also appoints the dhammaduta bhikkhus.

The foundation stone of the Shri Dharmarajika Vihara at Calcutta was laid in 1918 and completed in 1920. A holy relic of the Buddha which was discovered in the process of archaeological investigations at Bhattiprolu Stupa in the Madras Presidency was offered to this vihara and it was enshrined in the vihara.

Regular meetings for the propagation of Buddhism and religious ceremonies were conducted at the vihara. It was a step forward in the Society's aim of spreading the Teachings of the Buddha. The Temple was built with funds donated by Mrs. Foster and many well-wishers. Its proximity to the University of Calcutta was an asset. Sir Ashutosh Mookerjee, Justice of the High Court of Calcutta, Vice Chancellor of the University of Calcutta and president of the Mahābodhi Society of India gave it much support.

Anagarika Dharmapala had to wage another protracted struggle with authorities, similar to the struggle he had at Buddhagaya, to restore the Dhammaka Tope at Sarnath. This stupa marked the site where the Buddha preached his first sermon. When Anagarika Dharmapala visited the holy shrine in 1890 the sacred spot was used as a breeding ground for hogs.

In 1901 he purchased a piece of land with donations from his mother and friends and erected a building there. In 1904 he began to set up the Benares School of Arts and Agriculture.

In 1916 the government of India offered through the government of Bengal a relic of the Buddha for the Society if it would erect a suitable vihāra. The result is the present magnificent Mulagandhakuṭi Vihāra started by Anagarika Dharmapala in 1920 and completed in 1931. Despite many negotiations and disputes he had with the Department of Archaeology, finally they offered a suitable plot of land in 1926 for the vihāra and agreed to bear the cost incurred in connection with the foundation work. The Department of Archaeology also set apart twenty acres of land as an adjunct to the vihāra and agreed to bear the cost of laying it out as a park with suitable trees.

The Buddha temple in New Delhi is situated on Mandir Marg. It stands on a piece of land given by Sarva Nand Barua to the Mahabodhi society. The then secretary, Brahmachari Devapriya Valisinhar requested a donation from Raja Seth Jugal Kishore Birla towards the building of the Vihara, but he bore the full cost of
erecting the Vihara. It was completed in 1939 and opened by Mahatma Gandhi. It has become a thriving centre of Buddhism and the most prestigious Buddhist institution in the capital.

As a result of the persuasion of Brahmachari Devapriya Valisinha, who succeeded Anagarika Dharmapala as General Secretary after the latter's death, the government of India supported and pressed claims to receive back the bone relics of Ven. Sariputta and Ven. Moggallana, the chief disciples of the Buddha, from the Victoria and Albert Museums in London. On 12 January 1949, they were finally returned and were enshrined in a specially built vihara of the Mahabodhi Society at Sanchi.

f. Early Benefactors: Without the financial assistance of benefactors, the Mahabodhi Society would not have been able to forge ahead so vigorously and undertake its multifarious programme of activities.

One of the greatest benefactors of the Society from almost its inception was Mrs Mary Elizabeth Foster, the wife of a wealthy North American Banker in Hawaii. With her generous donations, temples, monasteries, schools and numerous other institutions were established in India and Sri Lanka.

Besides Mrs Foster, and Anagarika Dharmapala’s parents, many scholars lent support to the Mahabodhi Centre at Calcutta, like the Ven. Krapasharan, Mahasthavira of Chittagong. It was he who started the Bengali Buddhist Association in 1892. As Dharmapala’s circle of contacts became wider, many eminent educationalists, scholars and social reformers became associated with the Society.

The Mahabodhi Society was started at a time when there was a resurgence in Bengal in the Fields of Indian literature, culture and religion. Along with this wave of interest was a renewal of interest in Buddhism. Anagarika Dharmapala has acknowledged in the MBS journal of December 1901-January 1902 the help of many Bengali friends. National leaders such as Mahatma Gandhi, Pandit Jawaharlal Nehru, Ravindranath Tagore also expressed their sympathy and moral support for the aims and objectives of the Society.

II. Humanitarian and Welfare Activities

a. Calcutta: A Welfare Home and orphanage was established when a famine had broken out in Bengal in 1943. The Society started a Relief Fund and jointly with the Ceylon Relief Society, started relief work in the premises of the Society in Calcutta. Six milk canteens were set up to distribute milk to six hundred destitute children and sick people. A free kitchen and centre distributed rice and clothes to one hundred persons daily.

With Ven. Jinaratana Maha Nayaka Thero’s initiative, an orphanage was started with twenty boys who had lost their parents in the famine. At first, they were kept in the Arya Vihāra of the Bengal Buddhist Association. In 1945 they were removed to the Society’s building at 46, Beniapukur Lane. Due to the continuous efforts made by Ven. Jinaratana Maha Nayaka Thero to construct a suitable building to accommodate more boys and also to start other social service activities, finally in 1962, the present five storied building of the Welfare Home and Orphanage was constructed in Calcutta.

The five storied building of the Anagarika Dharmapala Institute of Culture and International Guest House was declared open in 1891.

Jinaratana Memorial Free Homeopathic Dispensary was opened in 1984.

Mary Foster Allopathy Dispensary, where consultation was free, was opened in 1991.

An ambulance Service to serve the poorer section of the community has been introduced recently. Anagarika Dharmapala Meditation Centre was inaugurated in 1978.

Also attached to the Mahabodhi Centre at Calcutta are the following amenities:

Library and Reading Room
Mahabodhi Book Agency

b. Buddhagaya: The Mahabodhi Centre at Buddhagaya provides much needed accommodation, board and lodging as well as religious guidance to visitors.

The Dharmasāla was built in 1914 by Anagarika Dharmapala and it provides shelter to one hundred pilgrims at a time.

Medical facilities are provided for the needy through the Homeopathic Free Dispensary.
The Mahabodhi Book Stall at the Dharmasala provides books on Buddhism and Indology.

There are a number of International Buddhist Temples working in cooperation with the Mahabodhi Centre such as the Japanese, Tibetan, Nepalese, Chinese, Royal Thai, Thai, and Burmese Temples and the Bhutanese and Vietnamese Monasteries. There is also an International Meditation Centre.

c. Sarnath: The Mulagandhakuti Vihara conducts recitations of the Dhammacakkappavattana Sutta daily by resident monks. It also conducts poojas and other Buddhist ceremonies and undertakes maintenance and development work.

There is a Library and Reading Room attached to the Vihara.

Also at Sarnath are the following institutions: Dharmapala Vipassana Meditation Centre, Mahabodhi Book Agency, Mahabodhi Inter College which is an educational institution with modern facilities up to the level of the General Higher Education examination with government assistance.

Dharmapala Bhikku Training Centre where Buddhist philosophy and the Bhikkhu Vinaya are taught with preliminary training in Buddhist missionary work.

Mahabodhi Primary School which has a trained staff to educate and supervise children.

Mahabodhi Birla Dharmasala, a spacious building complex that provides residential facilities for pilgrims.

Mahabodhi Saṅgārāmaya, a hostel for resident monks with free food and other facilities.

A multi storied building housing the General Office, Dharmapala Museum and Library.

III. Education: The MBS realized the need for the study of Pali in earnest for the proper understanding of the original texts of the Buddha's Teachings. This was essential for the revival and spread of Buddhism in India and the world. It therefore influenced the Indian government authorities to introduce courses in Pali studies at the University of Calcutta and the University of Bombay. Now several national universities conduct courses of study in Pali and Sanskrit.

A training unit for bhikkhus was initiated by the founder of the MBS at Sāntiniketan and then shifted to Sarnath. The college now exists under the name of "Dharmapala Bhikku Training Centre".

IV. Conclusion: At present the Mahabodhi Society has centres and branches in Myanmar, Thailand, Japan, Chittagon, Darjeeling, Benares, Kandy, New Delhi, Sanchi, Madras, Bombay, Calcutta, Shanghai, and Chicago.

Due to the untiring efforts of the distinguished successors, places sacred to Buddhism such as Sarnath, Kushinagar, Sanchi, Lumbini, Lumbini, sacred places, once deserted, are now visited by thousands of pilgrims.

The support Anagarika Dharmapala received from distinguished scholars and sympathizers of Buddhism in Calcutta helped to establish the MBS on a firm footing. The awakening of interest in Buddhist studies in Bengal at the time was very conducive to the growth of the MBS. The Buddhist Texts Research Institute had been founded by Rai Bahadur Sarat Chandra Chatterjee, a scholar and pioneer in Tibetan studies in 1917. It was also Ven. Kṛpāharana, Maṇḍāvīra of Calcutta, who started the Bengali Buddhist Association in 1922.

In those early days, there seems to have been a symbiotic relationship between the MBS and the Indian intelligentsia. It is an acknowledged fact that Anagarika Dharmapala who was, in his lifetime, synonymous with the MBS, contributed much to the Buddhist renaissance in India. The propagation of the Dhamma in the West was also ushered in by Anagarika Dharmapala and his most effective instrument was the MBS and the MB journal.*

Suymati Karunaratne

MAHĀBODHI SATYAM also called Dhamma is a translation into Pali prose of a Sanskrit original, which is not extant now, giving the history of the arrival of the bodhi-tree in Sri Lanka.
It begins with the history of Buddha Dipañkara, and gives in a short summary an account of the various lives of the bodhisatta under previous Buddhas, the life of Gotama, his enlightenment at the foot of the bodhi tree, the planting of the bodhi-tree at Jetavana by Ananda providing the occasion for the Buddha to preach the Kālinga-bodhi Jātaka, the parinibbāna of the Buddha, the three Councils, Mahinda's mission to Lanka and the establishment of Buddhism there, the introduction there of the relics and a branch of the bodhi tree, its planting and the establishment of ceremonies (bodhipājā) (q. v.) in connection with it.

The book is divided into twelve chapters. In the whole of the first chapter the close dependence on the Jātaka-nidāna-kathā is evident. Even verbal identity is not rare. Usually the Mahābodhivamsa account is shorter and more like an epitome. It is interesting, however, to note that the story of the Kālinga-bodhi Jātaka as given in the Bodhivamsa differs from the version in Faushboll's edition of it (J. IV, 228-236) among its peculiarities in the former version being a long description of clairvoyance (dibbacakkhu) and the seven gems (sattaratanā) of a world ruler (cakkavatti-rājā). The later chapters show direct dependence on the Samantapāsādikā and the Mahāvamsa, chiefly the former. Thus, the description of Mahinda's activities after his arrival in Sri Lanka agrees almost word for word with that in the Samantapāsādikā (Vin. A. I, 73 f.), so much so that we are led to the conclusion that the whole passage was directly borrowed from Buddhaghosa's commentary. The concluding verses of some of the chapters are the same as those of the Mahāvamsa. The quotations from works such as the Mahāvamsa and the Samantapāsādikā would lead us to believe that the author of the Mahābodhivamsa did not merely translate the Sinhala text directly, but also improved upon it in the translation, supplementing it with quotations from works which in the meantime had attained great authority.

Even where the Mahābodhivamsa borrows from other works, its style is different from theirs, more ornate and affected; the stanzas are written in sonorous Pali, the ornamental epithets are plentiful and the author is fond of long sentences. There are distinct traces in the language of the influence of Sanskrit on Pali, and we may regard this book as marking the beginning of the period of Sanskritised Pali. Sometimes Pali words are used in their Sanskrit sense; sometimes words not found perhaps elsewhere at all in the old Pali literature, and long Pali compounds possibly derived from his acquaintance with Sanskrit kāvyas are employed; the whole tone and manner of the work betrays a tendency to use a kind of Sanskritised Pali.

The book itself says nothing about its authorship or its date, except that it was a translation from a Sinhala original (Mhbv. p. 1). The Gandhavamsa (p. 61) mentions the work by name, but in a group of five works assigned vaguely to unnamed authors. The Sāsanavamsadīpa (v. 1262) calls Upatissa the author of the Bodhivamsa, but says nothing more about him. The Sinhala Bodhivamsaya, which is an enlarged Sinhala translation by Vilgamulla Mahāthera of the Pali work, in the beginning of the fourteenth century, ascribes the authorship of the Pali Mahā Bodhivamsa to Upatissa, and so does Saranankara Sangharāja's inter verbal glossary (senna) written at the beginning of the eighteenth century. Gurulugomi (author of the Amāvatura) who lived about the latter half of the twelfth century wrote a masterly commentary in the Sinhala language of the Pali Mahā bodhivamsa, called the Bodhivamsapariṣkāthā, but better known as the Dharmapradīpika, and there, too, the work is assigned to Upatissa. A Sri Lankan author Upatissa is mentioned in the Gandhavamsa (p. 67), but nothing more is said of him.

S. Arthur Strong, who edited the Mahābodhivamsa for the Pali Text Society, erroneously assigned its authorship to the same period as Buddhaghosa, his reason being that the Gandhavamsa mentions it as having been written at the instigation of one Dāthānuṇāg, whom he identified with another named Dātha. Dātha is said in the Gandhavamsa to have requested Buddhaghosa to write the Sumangalā-Vilāsini, Saranankara Sangharāja's verbal interpretation (The Bodhivamsa-sanna), called the Madhurārthā-Vilāsini too, mentions that the mahā Bodhivamsa was written at the request of a therī named Dāthānāgā. Geiger, however, identifies Dāthānāgā with the therī of the same name whom Mahinda IV, the king of Sri Lankā appointed to discourse on the Abhidhamma (Mhv. L.V. v. 36). If that supposition be correct, the Mahābodhivamsa would have been written in the last quarter of the tenth century (Geiger, Dipavamsa and Mahāvamsa, p. 79).

The fact that the Mahābodhivamsa was considered a great Pali classic is shown by the existence of a glossary (gātāpāda) in Sinhala and a commentary (rika) in Pali to assist the study of it. Gurulugomi in the
twelfth century wrote his Dharmapradipikā with the Mahābodhivamsa as its basis. The whole chronicle was written down in Sinhala by Vilgammula Sangharāja during the reign of Parakramabāhu IV of Kurunagala. (1302-1326 A. C.)

But, Vilgammula did not write his Sinhala Bodhivamsaya as an aid to the study of the Pali work of Upatissa. His work was meant for the Sinhalese reader, and he attempted to make it a literary work by itself. The style and method of the scholar is evident in the Bodhivamsaya. He had before him both the glossary and the commentary. One finds passages from the glossary taken complete with quotations in such places as the description of the Mahāsambahra dynasty or in the Ananda-bodhi-katha. The section dealing with the acceptance of the Mahāvihāra in the Jātaka is taken from the Dharmapradipikā. Nothing from the Pali Mahābodhivamsa has been omitted in the Sinhala work, and it is larger than the Pali work, inasmuch as several descriptions and anecdotes have been added. The division of chapters is according to the Pali version, and even the concluding verses have been quoted.

The author followed the ornate Sanskrit style in which the Pali Mahābodhivamsa was written. Passages after the style of Sanskrit prose-poems (gāyikāvya) like the Kādambarī are written in Pali by Upatissa, and Vilgammula turns them into Sinhala. Apart from following Upatissa's Sanskritised Pali style, Vilgammula himself was a Sanskrit scholar. He gives his own Sanskrit compositions in verse at the beginning and at the end of the Bodhivamsa.

Saranankara Sangharāja of Vālīvita compiled a complete inter verbal interpretation (The Bodhivamsa-pannaya) called the Madhurārthaprakāsini.

The history of the bodhi-tree is continued as far as the reign or Kirti-sri-Rājasimha of Kandy in a little work called the Cūla-Bodhivamsa. This work gives an account of the places where saplings from the tree at Anurādhapura were planted. It also mentions the families of different craftsmen who accompanied the bodhi-tree to Sri Lanka.

MAHABODHIHĪRĀ | See MAHĀBODHI, MAHABODHI SOCIETY

MAHACHAT. Introductory: The birth-stories are called in Thai "Chadok" (Pali-jātaka), and traditionlly they are 550 in number. They have been a storehouse of folk-lore and as literary productions in Thailand until recent times, and they have influenced the life and thought of the people. Of all these birth-stories, the last ten, before the Lord Buddha attained Buddhahood after a long chain of re-births, are deemed more important. They are called collectively "Thotachat" (Pali-Dasa Jāti) or "The Ten Births", a name peculiar only to Thai Buddhism. The last one called "Wetsandon Chadok" (Vessantara Jātaka) is the most important. It is called Mahā Chat (Pali-Mahā Jāti) or the "Great Birth". According to Buddhist belief, before he could attain Buddhahood, the Lord Buddha had to perfect himself with the Ten Virtues. These could not be done in a single lifetime but through the ten stages of virtuous life as depicted in the last ten births. A person striving to become a Buddha by perfecting the Ten Virtues is called a Bodhisat a would-be Buddha or one who seeks enlightenment. Such a Bodhisat cult forms fundamentally the ideal of Northern Buddhism, the Mahāyana Sect. The Wetsandon Chadok, Buddha's last birth but one on earth, portrays the life of Prince Wetsandon fulfilling his mission as a Bodhisat. The life of Prince Wetsandon is the highest ideal of the faith and one which the people like to hear recited, for Prince Wetsandon's supreme sacrifice touches their hearts. For the story vide VESSANTARA JĀTAKA.

The story of Prince Wetsandon is divided into 13 parts or divisions called in Thai "kan" (Pali-Khando). It is a very well-known story in Thailand and influences immensely the life of the people. The story serves as an inspiration to Thai poets and artists of the school. For the story contains noble sentiments, humour, pathos and beautiful descriptive scenes which fire the imagination and evoke artistic expression. The original story is in Pali. But there are, apart from its literal translation, many versions in paraphrase not to mention the versions in other languages. The versions are written generally as a kind of prose kavya in a non-metrical rhyming pattern, which allows a free play on words in a rhetorical manner. The oldest version which dates back some 400 years is used as a subject of literary study in the Universities. Many of the "Kans" or parts were written by famous Thai poets. The book as a whole is called "Mahachat" or "The Great Birth", a well known household name is the Thai language.

Customs: Every year after the traditional three month term of religious Lent and retreat of Buddhist monks expires, i.e. usually in the latter part of October, many wats or monasteries have their own "Thet Mahā Chat"
festival. "Thet" means to preach, to give a sermon, but in this instance, to recite the Mahā Chat or the Great Birth Story. The recitation may be performed during the Sat (Pali-Sarada) or Mid-year Autumnal Festival in early October, or on other special occasions such as the raising of funds for the monastery. The reason why it is usually performed after the Lent is obvious. For during the period October to December, food, especially fish and prawns, is found in abundance, and the people, in particular the countryfolk have a comparative leisure time, in former days the recitation of the Mahā Chat might be performed at a private residence in special case or in the preaching hall of the village. Nowadays the performances, are confined to the preaching hall within the precincts of a wat. The recitation begins early in the morning and continues sometimes till midnight. It is the traditional belief of the people that whosoever hears the Mahā Chat or the Great Life in its complete version will gain great merit. In the old days opportunities of hearing such recitations were rare for want of the texts and monks who were versed in such a recitation. But in Bangkok the performance may be carried over many continuous days. The original text of the Great Birth contains a number of gathas in Pali or interspersed with the story. These stanzas may be collected in the form of one special text. They are called "Gāthā Phān" or the "Thousand Stanzas" Special attention is attached to this Gāthā Phān.

Each of the thirteen kans or parts bears a name appropriate to an episode in the story, and at the end of each recitation there is a performance of music with a particular melody of its own. There are thirteen persons trained in each particular kan in its recitation which has its own musical theme. Accustomed to such a melody, many of the people know, when they hear the recitation or the music played at the end of each kan, the progress of the performance. In a village where music cannot be obtained there is no obligation and if there is music and the musicians cannot play the right melody the rule is not strictly adhered to. As long as there is music and noise to mark an interval between each kan, that is all that is required by the people. Each kan must have a sponsor either an individual or several collectively. It is the duty of the patron of a kan to provide a gift for the presiding monk with money and things fit for a merit offering. These are called "Kreuŋ Kan" or material things of the kan. They include monk's robes and essential requisites for monks, eatables and sweetmeats and a large quantity of fruits of the season. Any person, apart from the owner, may join in the merit-making by contributing money or anything else to the common offering for whichever kan he prefers.

Nowadays the recitation of the version with all its thirteen parts takes too long to conclude. It begins early in the morning and does not come to an end before midnight. It is therefore curtailed on special occasions. Only the Gāthā Phān or the Pali Thousand Stanzas are recited. Such a recitation is not popular with the people. Although the hearing of such sacred words recited may evoke religious sentiment, the people do not understand them and their emotions are not satisfied. The people want something more. They want to hear the voice of their favourite presiding monk, to hear his melodious voice which is familiar to them for many are able to recite too. They want to live in love and hate, in happiness and sorrow, to be sad or to be in humour, and to raise their sentiments to a higher plane and ideal, which the the various characters of the story manifest. Hence the reciting of the Pali Thousand Stanzas only, does not appeal to the masses. They want the recitation to be performed in full both the prose version and the stanzas. The contents in the version are more of a secular nature, and in fact in some parts of the story, the reciter has to display his and his own additions are thrown into the recitation which sometimes border on drollery and vulgarity. The pious people frown a it.

It has been a tradition in Thailand from the King downwards to have his eldest son, enter the order as a "nane" (Pali-sāmaṇera) or novice during his boyhood, and once to become a temporary monk for at least three months of the year when he reaches his manhood at the full age of twenty years. The popular belief is that when a son becomes a novice, the gates of hell are shut for the mother of that son, and for his father when he becomes a monk. This belief is important in a sense. For it constitutes a living force to the Faith, not to say to that of the wat or monastery which has remained a centre of learning and spiritual training up to the present day. The novice, apart from learning and observance of precepts is to be initiated in the recitation of the Great Birth. There is a certain kan with a popular and favourite melody which the father of the novice wishes his son to learn and recite. When he has mastered the kan with its melody, he is invited to give a recitation of that kan at his parents' house. It is a great day for there is a gathering of the family, also of friends and neighbours to hear the recitation of the Great Birth by the novice. As a rule the novice will recite only the
kan or the part he has learnt. This is done as a special instance and has nothing to do with the customary recitation described earlier. Such a performance, it is believed, is done in initiation of an episode of the Lord Buddha's life, when after having attained Buddhahood, the Buddha came back to his country and preached a sermon to the gathering of his family and recounted his last birth as Prince Wetsandon. The imitation is deemed to be a highly meritorious act, and it has been done with great display of piety by the family of the novice. They are proud of the novice's ability, and the friends and neighbour join in the rejoicing. Many kings and princes of the present dynasty have, in the past, entered the Faith as novices and have performed such recitations of the Great Birth.

Preparation: Before the Thet Maha Chat or the recitation of the Great Birth takes place, the monks of the wat where the performance is to be held, and certain leading members of the village or other committys, discuss the date and preparation for the performance. When everything has been planned as to who will be the patron and which particular kan will be recited, invitations are made in advance, in order that the invited persons may have ample time to prepare and arrange the presentation of gifts. Sometimes more than one family or group of persons combine as a single patron of a particular kan. Each owner vies with the other for the performance. They want to be the best in this matter of merit-making. For such an occasion comes but once a year. The village which does not have the Thet Mahá Chat performed, suffers loss of face, and nobody, if he can, will refuse an invitation to participate in the common merit-making of their own wat in their own village.

When one accepts the invitation to be one of the patrons of the thirteen kans, one has to prepare and arrange both food and other essentials as offerings for the occasion. There will be bustles and merriment in the house on the eve of the recitation, the cooking of food and the preparing of sweet-meats both for merit-making and for feeding the people. In such an occasion, neighbours will come to help. They will come voluntarily, and etiquette requires reciprocal help when opportunity arises. This custom has gradually disappeared in Bangkok and other urban places where money is everything and the spirit of neighbourly help is somewhat lacking.

Usually there is a big basket made of bamboo in the shape of a huge blooming lotus flower with its many coloured-paper petals pasted on, together with other decorations. This basket is called "Krachat Yai" or 'big basket' and is used as a container for things offered as merit-making. It is sometimes so big that it takes a number of persons to carry in procession from the house to the wat. If there are a great number of things as gifts, the basket is used for storing food, sweetmeats and fruits, as the case may be, while the other offerings such as monks' robes and other requisites are put in special valuable vessels or carriers. On the actual day when the recitation is to take place and when the time arrives, all the offering are carried in a procession with music and other performances as the case may be. One knows the approximate time when the recitation of the kan of which one is the patron, is to take place. If it is the first or second kan, one has to reach the wat in time, early in the morning. If it is a later kan, say the tenth or eleventh, the time will be in the evening and one can gauge the approximate time. There will be crowds of people along the route to witness the procession. If a wealthy man gives meagre offerings, there will be gossip in the village. If there are many wealthy patrons of different kans or parts of the recitation, it will be a great day. For there will be competition among them as to whose offerings are the best and most costly, because everyone wants to "gain face" as much as possible. The traditional Thet Mahachat is still a living force but the aspect of the merry side is now on the wane. Many of the younger generation whose attitude of mind tends to subordinate the traditional to the modern, view the performance of the Thet Mahachat in disfavour. In order to save this old tradition from being lost altogether a novel way is introduced in Bangkok today when a theatrical performance of each episode of the story is given just before the recitation of each kan. This is to attract the attention of the people. It is an innovation in place of the merrier side of the custom which is not now to be seen in Bangkok.

The Wat and the performance: The entrance to the wat on the day of the Mahā Chat recitation is made as a sort of gate decorated with branches of trees. This is called the Pratu Pa or the "Forest Gate". Along the path after passing the forest gate, a sort of ceremonial fence called Eachawat is erected at intervals and decorated with flags and banana trees. Banana trees with bunches of ripe fruit are preferred. On reaching the preaching hall there is another forest gate. Sometimes the path is made as a sort of maze or labyrinth in order to confuse those who have to pass along the passage. This maze is called Khao Wongkot, the name of the mountain where Prince Wetsandon had his hermitage.
In the preaching hall every post is decorated with a banana tree or sometimes with sugar cane plants. There hang in some preaching halls thirteen paintings depicting the life of Prince Wetsandon as narrated in the thirteen kans. In some places, the preaching hall is hung all over with home-made toys made of interlaced leaves and split bamboo or of wood, in the shape of birds, fish, etc. They are sometimes painted. These toys are distributed among the children after the recitation ends. There are also small flags in various colours to the number of one thousand, which is equal to the Gathā Phan or the Thousand Stanzas.

Arriving at the wat the procession passes the Forest Gate into the path leading to the preaching hall. If the path is made into a maze there will certainly be fun when one gets into a blind passage and becomes confused. One may even have to pay a fee to the guide if one is in a hurry to reach the preaching hall. When the procession arrives at the preaching hall, and if the preceding kan is still in progress, it means that you are before time. One will have to wait outside until the preceding kan comes to an end. Then one can carry all one's offerings to their proper place in the preaching hall, a place in front of the preaching canopy. There is bustle and ado during such times when the offering of the preceding kan which has ended, are taken out and the offerings of the next kan are carried in. Some of the people who have heard the recitation will come out and the new audience will go in. There is music marking the end of a kan and there is more music marking the beginning of another kan. As already described, there are small coloured flags equal to the number of a thousand of the Gathā Phan. The number of these thousand gāthās is distributed unevenly among the thirteen kans. Besides the small flags, there are also small beeswax candles equal in number to that of the small flags. There are flowers for offering too. In some cases when there is a special kan in which the whole Gathā Phan or the Thousand Stanzas are recited alone as a whole, the patron of such a kan has flowers, usually lotus flowers and small candles to the number of a thousand, as an offering.

Now when the preaching or recitation is to begin, candles and incense sticks as provided, will be lit, and an act of worship is made to the Three Gems, i.e. the Buddha, his Law and his body of the Clergy or Sangha. The presiding monk will pronounce an act of faith and administer the usual five precepts, which acceptance is binding on the receiver for at least that whole day and night. After such rite has been performed, the preaching or recitation may then begin.

The recitation of the first kan takes place early in the morning, therefore the congregation is few in number, with the exception of the patron of the kan and his party, and a few old people who wish for merit. There will gradually be more people in the congregation in the succeeding kans until the fifth kan describing the scenes of Chuchok, the aged Brahmin mendicant and his stew, young and beautiful wife. There is much drollery and humour which naturally attracts the people. If the reciting monk is well known for his wit and humour, the place is packed to the utmost, for people from far and near, come to hear the recitation. The young men will ask for encourages and more money contributions will willingly be made by the congregation. Such monetary offering are called Tit Thian Kan Thet or the sticking (of money) for the reciting kan to the candle, the custom of sticking money to a big beeswax candle provided for the purpose. In former days such recitations with additions of drollery and humour in some cases over-stepped the limits of modesty and were distasteful to cultured minds. Through the progress of time such things are now seldom to be found, for moral ideas have changed, but the need of humour is still there with the folk. While in Bangkok the recitation in some watses has the tendency to be more prosaic and has become monotonous thus depriving much of its psychological value of display and ceremony which needs as well.

After the recitation ends with the thirteenth kan, there is a supplementary kan giving an exposition of the “Four Noble Truths” as preached by the Lord Buddha after he had recounted his last “Great Birth” to the audience. The preaching of the “Four Noble Truths” is usually done on the next day after the recitation and may be preached by one, two or four monks in the manner of a dialogue, if required.

Phya Anuman Rajadhon

MAHĀGĀMA (identified as the present Tissamahārāma) was the capital of Rohana (s.v.), one of the three principal territorial divisions in ancient Sri Lanka. This City, situated in the south-east of the island about six and a half miles from the mouth of the Kirindi Oya was the birthplace of the great national hero Duttthagāmaṇi, who brought-about the revival of Buddhism in the early part of the Anurādhapura period. Throughout history, as a seat of government, Mahāgāma remained the most important place in Rohana playing a significant role as the centre of Buddhist activities in that region. It is said that the resourceful and devout
residents of Mahāgāma were ever generous to the community of Buddhist monks, who dwelt in great numbers in the hundreds of vihāras there (ed. Kirielle Nanavimalathera, Rasavāhinī, Colombo, 1961, p.106f.; id. Saddharmālankārāya, Colombo, 1954, p.416; D.E. Wickramasooriya, Ruhunu Māgam Varjanāvā, pt. 1, Anuradhapura, 1913, p.4f). Although the account given in the Rasavāhinī should not be taken in its literal sense, it nevertheless, suggests that people of Mahāgāma were well known for their devotion to the religion. In the capital were several Buddhist monuments. It is learnt that the Bhikkhus of Mahāgāma were reputed for their virtue and erudition (cf.T. Ratnasara thera, Bauddha Šūpa, Colombo, 1967, pp.10, 20-21).

Ancient Mahāgāma was located near the place where the ruins of the Tissamahārāma vihāra lie on the left bank of the Māgama (or Kirinī) river (W. Geiger, Mahāvamsa, trsl. p. 146, n°, also see E.W. Adikāram, Early History of Buddhism in Ceylon, Colombo, 1953, p.117; H. Parker, Ancient Ceylon, London, 1909, p.241). Parker, who identifies Tannammātōta (the landing place of Vijaya) with the mouth of the river Kirinī in South Ceylon, is of opinion that Mahāgāma was the first seat of government of the original Aryan settlers in Sri Lanka (ibid., loc.cit.). According to the chronicle Rājāvaliya (ed. B. Gunasekara, Colombo, 1926, p.15), Mahāgāma was founded by one of the six Śākyas princes, the brothers-in-law of king Pañḍuvasadeva. It has been surmised that, Mahagama, as the capital of Sri Lanka, flourished even before the establishment of Anuradhāpura (ibid, p. 240 f; JRAS (CB) Vol VIII, pt. 1, pp.10-14; G.C. Mitton, The Lost Cities of Ceylon, London, 1917, p.251). This fact, however, is not corroborated by any authentic historical evidence. Until a comprehensive archaeological survey in this region is made, it is hardly possible to state with certitude anything about the original settlers of Mahāgāma. (cf. H.W. Codrington, A Short History of Ceylon, London, 1947, p.10; P.A.T. Gunasinghe, Purātana Rohana Rājyaya, Nugegoda, 1968, pp.20,22, and 24).

Mahāgāma could have been, at first a settlement (gāma) which had gradually developed to be a village (mahāgāma, lit. large village). By the time Buddhism was introduced to that region, it had already become the capital of South Ceylon. (Parker, loc. cit; G.C. Mendis, The Early History of Ceylon, Calcutta, 1935, p. 27). Like Anuradhapura, Mahāgāma might have been chosen as the seat of government considering its strategic importance. In addition to its central location, Mahāgāma "was safe from attack by foreigners on account of its distance from the sea" (ibid, loc.cit). On the other side the central mountain range together with the river Mahavāḷi seemed to have formed a rather impregnable barrier (cf. P.A.T. Gunasinghe, op. cit, pp.6-8). For a long time in the history of the Island it preserved its identity both as an independent kingdom and a vassal state of the Anuradhapura rulers, as well.

The first mention of Mahāgāma as the residence of a ruling dynasty begins with Mahānāga (s.v.), the younger brother of king Devanampiyattissa (247-207 B.C.), who fled to this region when his life was threatened due to a court intrigue (Mhv. XXIII; 2-9; History of Ceylon, published by the University of Ceylon, Vol. I, pt. 1, Colombo, 1959, p.145; W. Rāhula, History of Buddhism in Ceylon, Colombo, 1966, p.19). Mahānāga, according to a brāhmi inscription, had been hitherto a heretic, who became a convert to Buddhism at the Galauffa vihāra at Kiriḍa in Mahāgāma (T. Ratnasara thera, Bauddha Šūpa, p.4.). The dynasty he thus founded there played a leading role in the history of the country's politics later. Although no historical data are available to establish that there was a ruling dynasty at Mahāgāma earlier than that, it is obvious that this part of the country was under the authority of a royal house that may or may not have been of the same dynasty of Anuradhāpura kings. (cf. Mhv. xix: 54, 62; DPPN. Vol. II, p.488; Rahula, loc.cit.)

Evidently the rulers of Mahāgāma were linked with those of Kālanjīya. Dhatuvamsa, (ed. Dambagasare Sumedhaṅkara Śvāmi, Colombo, 1930, p.30) and

1. A small village on the left bank of the Mānik-gaṅga between the Tissamahārāma ruins and the mouth of the stream still retains the appellation, Māgama (cf. Geiger, Mahāvamsa, trsl. p.146, n°; Adikāram, op. cit. p.117; JRAS (CB), Vol.I, pt.1,p.18 etc.).

2. Reference should be made, in this connection, to the Kṣatriyas of Kājaragāma who, on occasion of the planting of the branch of the sacred Bo-tree, flocked to Anuradhapura to pay their homage (Mhv. XIX:54). Further, they were honoured by granting one of the first eight Bodhi-saplings to be planted in their locale (ibid, XIX: 62). Some maintain that the Kṣatriya of Kājaragāma were related to the ruling dynasty in Kālanjīya and were descendants of the ruling dynasty of Anuradhapura (cf. P.A.T. Gunasinghe, op. cit. pp.27-29 and 32). Paranavitana, however, is of opinion that the Kṣatriyas of Kājaragāma belonged to a different family and they were present in Anuradhapura on aforesaid occasion by invitation (cf. God of Adam's Peak, Ascona, 1958, p.66).
Anurādhapura (Codrington, op. cit. p. 17f.). The king Kākavanṇatissa, the great grandson of Mahānāga, married Vihāramahā Devī (s.v.), a princess from the ruling dynasty in Kālanīya, in a legendary fashion (Mhv. XXII: 13-22; Adikaram, op. cit., p.60; History of Ceylon, loc. cit.) She bore two sons, one being Duṭṭhadāmanī (s.v.), who brought about a revival of Buddhism at a later stage. After his father's death, Duṭṭhadāmanī became the ruler of Mahāgama and embarked on his campaign against the Damīlas in the Rajarata (s.v) from there (Mhv. XXVII, 8, 59; XLV; 42 etc. DPPN. loc. cit.; History of Ceylon, op. cit. p.155).

Although Anurādhapura had once again become the chief seat of government of the Sinhalese kings after the triumph of Duṭṭhadāmanī, Mahāgama seems to have continued to enjoy considerable autonomy with her own ruler who at times exercised a powerful political sway over her dominant neighbour.3

In spite of the fact that Mahāgama was situated far away from Anurādhapura, there was regular communication between these two capitals from early times (cf. Mhv. XXV: 6-51; Geiger, trsl., Mahāvamsa, p.165,n3; History of Ceylon, p.15 etc.) As a result a chage that took place in one capital, very often had its repercussions on the other.

The fact that the kingdom of Rohana had developed as a separate entity, more or less preserving its own identity from the kingdom of Rajarata, is explicit in the cultural remains available at Mahāgama. The remains of religious edifices at Mahāgama show clear proof that they were not outright copies of the Anurādhapura monuments. The stūpa which is the most common religious monument of the ancient Sinhalese, could be taken as an example here. Recent archaeological excavations at several sites in Mahāgama, such as Tissamahārāma Dāgāba, Yaṭāḷa vehera, Māṇik vehera etc. have shown that these types which were found there were not common with those at Anurādhapura. The stūpas like Tissamahārāma are erected in the shape of a bubble (bubbulākāra), the dome (anṭa) being more global than pyramidal, which is not a common feature in the stūpas found elsewhere in Ceylon (cf. T. Ratnasārā thera, Baudhā stūpa, p.28). Another striking feature of the stūpas built in Mahāgama during the early Anurādhapura period is the size of bricks used. It is said that they "were much more uniform than those at Anurādhapura" (Parker, op. cit., p.324).

Although several remains of Buddhist significance have been unearthed from Mahāgama (cf. JRAS, op. cit. p.1ff), they bear "no comparison with those of Anurādhapura or Polonnaruwa" (History of Ceylon, p. 13). It is possible that most of the stupas in this region were built by those Sinhalese kings, from Uttiya dates to Duṭṭhadāmanī (167-137 B.C.), who were forced to rule from the southern capital owing to the Tamil domination in the Rajarata (E. V. Suraweera, Anurādhapura Samskṛtiya, Maharagama, 1959, p. 62). It should also be said of the ruins at Mahāgama that since they have not been fully explored and studied yet, the identification of most of them is only tentative. Hence it is premature to speak of the religious edifices there with certainty.

The following, however, could be mentioned as the significant Buddhist sites in Mahāgama dating from the earliest period. Mahānāga, the first king of the southern capital, built the Nāgamaḥāvihāra (s.v.) which is probably identical with the Mahānāga vihāra, the remains of which are still to be found according to Parker (op. cit., pp.324-26).4 The original stūpa built by Mahānāga in the second half of the 3rd century B.C. (ibid., p. 324f), had been enlarged by Ilanāga (33-43 A.C. ; Mhv. XXXV: 32) while he was in exile in Rohana. It is presumed that Ilanāga too, as in the case of Mahānāga, was a non-Buddhist at first, but became aconvert after listening to the preaching of Mahāpaduma thera of the Tulādhāra vihāra (J.M. Seneviratne, The story of the Sinhalese, Vol.II Colombo 1923, p.91), to whom he had given the renovated Mahānāga-vihāra together with land for its maintenance (Mhva. II, p. 643). Besides, Ilanāga is said to have made several endowments to various other Buddhist institutions in Mahāgama. The king Voharakatissa (209-31 A.C.) is recorded to have erected a chatta-canopy-over the Nāgamaḥā dāgāba (Mhv. XXXVI: 34 Mhva. II, p.662). Lying to the south east of the Tissa vāva in

---

3. This is suppoited in the rebellion caused by the brahman Tissa during king Vaṭṭagāmani Abhaya's (104-77 B.C.) reign.

4. Authentic identification of the Nāgamaḥāvihāra and the Tissamahārāma, in fact, presents a poser, which is to be unravelled with further archaeological and epigraphical exploration and study in that region. For details see NĀGAMAHĀVIHĀRA and TISSIONAHĀRĀMA.
Mahāgāma is the most significant Buddhist monument in Mahāgāma, namely the Tissamahārāma stūpa (s.v.), which dates from the time of king Kākavannatissa (Mhv. XXII:23). The monastery attached to his stūpa is recorded to have been "embellished with three hundred and sixty monastic cells" (EZ, Vol. V, pt. 2, p.278) and was, moreover, reckoned to be the headquarters of the Mahāvihāra in Mahāgāma. Kākavannatissa is also credited with the construction of sixty-three other vihāras (Mhv. XXIV: 22). Accordingly there could have existed several other religious edifices built by him in the vicinity. Another important dāgāba in Mahāgāma that dates from ancient times is the Manicetiya (s.v.), which is identified with the Māṇikvehāra situated to the west of Tissa-vāva. In close proximity to it is the Yaḥthālaya-vihāra erected by king Yaḥthālayatissa. The Rasavāhiṇī (p.108) records a monastery called the Mahāvāpi that existed in the same locality, where resided about hundred monks (Ency.Bsm., Vol.II, p.90 b, 91 b). Two other monasteries situated within close proximity to Mahāgāma were the Ambariya-vihāra (cf. Adikaram, op.cit, p.117) and the Anurārāma built by king Vasabha (65-109 A.C.: Mhv. XXXV: 83; Geiger, Mahāvamsa, trsl., p.258, n¹). The Perumaiyan-kulam rock inscription discloses that king Vasabha had bestowed on Anurārāma eight karīsas extent of land (EZ, Vol.I, p.68). King Aggabodhi, an independent ruler of Rohana in the 7th century A.C., constructed the Mahāpāli Hall, a refectory and a parivena called Dāthaggabodhi (Mhv. LXV: 42; DPPN. I, p. 1068; also see History of Ceylon, p.314). One may find the remains of the Mahāpāli Hall, which is said to have been built on the model of the Mahāpāli Hall in Anurādhapura (Geiger, Culture of Ceylon in Mediaeval Times, Wiesbaden, 1960, p.56), among those ruins that are to be found in the vicinity of the Māṇik Vehera and the Yaṭāle Vehera (P.A.T. Gunasinghe, op. cit, p. 158). Vijayabāhu I (1055-1110 A.C.) has built another prominent stūpa in Mahāgāma, namely the Candagiri stūpa (Mhv. LX, 62), which is known today as the Saṅgadāgiri Vehera (cf. Geiger, Čulavamsa I, trsl., p.220,n²). It is also interesting to note that there were two stūpas in Mahāgāma by the name of Thūpārāma. These were said to have been destroyed by Tamils (ibid, p.219 and 220, n²), but subsequently restored by Vijayabāhu I (Mhv. LX, 56).

Since no other mention of these two stūpas is found elsewhere, they might have been two insignificant stūpas; or else the term 'Thūpārāma' could probably has been used as a common epithet to denote some architectural feature of these stūpas. King Nissanka Malla (1187-96 A.C.) claims that having visited ancient vihāras in Mahāgāma he caused repairs to be done to them (EZ. Vol. II, p.119). Shortly after Nissanka Malla's reign there arose political disturbances in the country that continued for centuries resulting in the neglect, decay and abandonment of most of the ancient stūpas in this part of the country. However, with the inauguration of archaeological research in the late 19th century, the buried cultural heritage of the Sinhalese in South Ceylon too was brought to light. As a result, most of these dāgābas in Mahāgāma, which were in ruins for centuries, had already been brought under the restoration and conservation programme of the Department of Archaeology.

Besides the main religious monuments in Mahāgāma there are also other traditional, adjuncts with religio-architectural significance. One such is the Vāhalkaḍa, a feature common to the stūpas of Mahāgāma and Anurādhapura. Although most of the architectural appurtenances in the southern capital are inferior to their counterparts in Anurādhapura in respect of artistic skill, the Vāhalkaḍa appears to be an exception. "Near the large stūpas at Tissamahārāma are to be seen sculptured architectural fragments of the same type as have been employed in the construction of the Anurādhapura vāhalkaḍas" (S. Paranavitana, The Stupa in Ceylon, Colombo, 1946, p. 56). Another architectural feature Mahāgāma shared with Anurādhapura is the massive stone pillars, most probably the structural remains of Upoṣṭha gaaras, dating from the early Anurādhapura period (S. Paranavitana, Sinhalayo, Colombo, 1967, p.16). It is also evident that some guardstones and stone engravings found in Mahāgāma are quite old, probably dating from the same period mentioned above (cf. T. Ratanasara ther, Tissamahārāmaya, p.51; Baudhā Stūpa, p.29). The moon-stone in Mahāgāma, however, shows a marked deterioration when compared with those of the Anurādhapura period. The specimen discovered at Tissamahārāma dāgāba, which depicts figures of horse

5. Thūpārāma could be a generic term applicable to a particular type of monument, as in the case of the Thūpārāma at Anurādhapura. According to Paranavitana (The Stūpa in Ceylon, Colombo, 1946, pp.89, 94, fig.13), it is an edifice that has common architectural features with the very early circular caityagharas. The existing rock-cut example from Junnar presupposes wooden structures of which no examples are found in India (cf. J. Fergusson, History of Indian and Eastern Architecture, London, 1876, p. 167, Woodcut 911 also see JUNNAR in Ency. Bsm,
and elephants only, is the only noteworthy one of its kind. The examples unearthed from other sites in Mahâgâma are, in fact, without any motifs or designs (T. Ratanaśāra thera, Tissamahârâmaya, p. 54). The other Significant archaeological finds in Mahâgâma are the traditional stone pitchers, stone troughs and a urinal stone (ibid. p.35), which were quite common among the archaeological finds in Anurâdhapura. On the whole, the ruins of the capital of South Ceylon, however, do not display the same artistic skill manifested in their corresponding specimens in the northern capital.

Some of the sculptural remains in Mahâgâma, as in the case of the aforesaid architectural remains, date back to the early Anurâdhapura period. Specimens of Buddha images, depicting various schools of sculpture of the day, have been discovered from the ancient capital of South Ceylon. Nevertheless, special mention should be made of those Buddha images in the round found at the Tissamahârâmaya vihâra which are believed to have been fashioned after the Amaśâvana style of sculpture. It is argued that those Buddha images in the round belong to an indigenous style. If that fact is established, then it should be said that, from early times that the indigenous school of architecture had been represented in Mahâgâma as well.

During the ancient and medieval periods Mahâgâma played an important role in the sphere of learning, which was exclusively ecclesiastical in character. The monasteries of the southern capital claimed collections of religious literature (Rahula, op. cit., p. 134). The ancient manuscripts discovered in and around this capital would corroborate this fact. From very early times Tissamahârâmaya vihâra was the most outstanding seat of learning in the kingdom of Rohâna. Mahâsivâ thera, who resided there, was reputed for his erudition. He "is reported to have taught eighteen great groups (atthârâsa mahâgaṇa) both texts and commentaries (atthavasena ca pâlvavasena ca) day and night without much rest. Even the commentators (atthakathâ therâ) came to him to clear their doubts" (Rahula, op. cit. p. 293; AA (SHB), p. 24; DA, p. 521f).

Like in Anurâdhapura, all the three fraternities existed in Mahâgâma as well (Mhv. LXX, 181; Geiger, Culture of Ceylon in Mediaeval Times, p. 209). It is probable that the follower of the Mahâvihâra had their headquarters in Rohâna at the Tissamahârâmaya monastery. Although the Mahâyânikas of the Abhayagiripura and the Jetavana too had their respective monasteries in Mahâgâma, it is not known where they were located. According to the Mahâvamsa (LX: 56) the relic shrines belonging to these three fraternities were destroyed by the Cola invaders. Vijayabâhu I is recorded to have restored those later.

In ancient Ceylon, two great convocations were held twice a year—before and after the vassâna (rainy) season respectively. One was held at the Mahâvihâra in Anurâdhapura while the other was held at Tissamahârâmaya in Mahâgâma. At the Mahâgâma ceremony, all the monks in Rohâna used to assemble there in order to fulfil their vassâna observances (cf. Rahula, op. cit. pp. 172, 207-08 and 296). Hence, it is evident that during the Anurâdhapura period Mahâgâma functioned not only as a centre of learning, but also as a centre of ecclesiastical activity being second only to Anurâdhapura in importance.

The Visuddhimagga (p. 31) states that there was a cave called Kurundakamâhâlaṇa near Mahâgâma, which was the residence of Cittagutta thera. The cave was known to have been beautifully painted with murals, of which some traces can be seen even today (T. Ratanaśâra thera, Bauddha sītâ, p. 8), depicting the story of the renunciation of the last seven Buddhas. It is further mentioned how the king of that time, yearning to pay homage to that thera, who was renowned for his virtue, employed a stratagem savage trick to get down the thera to Mahâgâma (cf. Rahula, op. cit., p. 206 f.)

Another interesting fact to be noted in respect of the southern capital is the preaching of the Ariyavamsa Sutta, which appears to have been a popular event there. Several instances are recorded in connection

6. For a critical study on this subject see ArtA (Vol. XIX, 3/4, p. 251 ff) and CJHSS (Vol. III, no. 1, 1960, p. 59 ff).
7. Geiger, however, believes that probably refers to the plundering of Rohâna by the Damiṇīs in Mahinda V’s time (Cîlavansa, trsl. p. 219, n. 4).
8. These murals, which could be treated as examples of earliest Sinhalese paintings, prove the existence of the art of painting in South Ceylon. Although some remnants of painting belonging to the Anurâdhapura period have been discovered from most of the ancient kingdoms and hallowed places from Mahâgâma they have altogether disappeared leaving only some faint traces, probably due to ravages of nature and time.
9. Rahula (op. cit., p. 207, n.) conjectures that it was king Kakavannatissa.
with the preaching of this particular suttan in Mahāgāma. When the Dīghabhāṇaka thera named Abhaya dis­coursed on the Mahāariyavamsapratipadā, the whole of Mahāgāma thronged to listen to him (MA, I, p.79).

On another occasion, a thera from the Kuḍḍaraja province is said to have gone to Mahāvāpi-vihāra, which was also in Mahāgāma, to listen to the preaching of the Ariyavamsa Sutta. The Preaching of this sutta was held there annually and people flocked from distant places to listen to it (Rasavāhinī, p.108; Ency. Bsm. Vol.II, p.90 and 91; Rahula, op.cit., p. 269f).

Several are the interesting episodes occurring in the texts that speak about the piety of the people of Mahāgāma. If their acts of piety, as found in the texts, were true, then it should be said of them that some of those acts are not in accordance with Buddhist teachings since they amount to self-mortification, an extreme rejected by the Buddha. Once, an upāsīka went to Manicetiya with her son in order to listen to a sermon. As she was listening to the dhamma, her son was bitten by a serpent; but she did not take any notice of it through fear of interruption to her listening (Rasavāhinī, p.107f; cf. Rahula, op. cit., p.130, n 1). Quite analogous with the aforesaid episode is the story of the monk of the Kuḍḍaraja monastery, who continued listening to a sermon preached at the Mahāvāpi-vihāra in Mahāgāma enduring the pains of a viper-bite (gonasasappa: Rasavāhinī, p.108).

The Manorathapūraṇī (AA. II, p.249) relates how a young monk residing at the Tissamahārāma monastery had walked to Dīghavāpi covering in one day, the entire distance of nine yojanas in order to listen to the Mahājātakabhāṇaka thera there preaching the Mahāvessantara Jātaka (No 547).

Amidst extremely pious and generous citizens of Mahāgāma, there were also fiendish evil-doers. One of them was Vidhola, a hunter, who had resorted to brutal forms of slaying. Having listened to the Devaṣaṭasutta preached to him by the monks of the Tissamahārāma monastery, he had ultimately given up killing. In the latter part of his life he became a monk and eventually attained arahantship at the Tissamahārāma monastery (Rasavāhinī, pp.236-39; cf. Rahula, op. cit., p.252,n1).

There are instances to illustrate the fact that not only in respect of their piety, but also in their generosity, the people of the capital of South Ceylon were outstanding. The Manorathapūraṇī(AA. II, pp. 60-65) gives a very touching story of a poor man named Dārubhaṇḍaka Mahātissa (s.v.), who lived in Mahāgāma in the time of king Kākavannatissa. Spending twelve kāhāpānas he had earned by hard work, Dārubhaṇḍaka offered alms to Pīṇḍapātyatissa thera of the Anbarāvihāra, while he was on his way to worship a cetiya⁰ at Mahāgāma (Adikārām, op.cit.,p.117). The Rasavāhinī (p.279) gives yet another generous act performed by an inhabitant of Mahāgāma called Sānīgāmacca, who inherited from his father a precious pair of garments (sātaka yugam), a sword and a dagger. Once, he noticed that Nāga thera of the Koṭṭagallapabbaṭa returning to the monastery without receiving any alms. Thereupon, he pawned his priceless necklace and, with that money, offered alms to the thera.

There is evidence to believe that along with the devout Buddhists, the existence, particularly in the earliest period, of non-Buddhists like animists, devotees of Śiva (issa-ra-bhattiyā) and Parībhājakas and their institutions in Mahāgāma (Rasavāhinī, p.268; Saddharamālānkāraṇy, p.704 f). However, since no mention of them is made in connection with the later history of the southern capital, it is probable that they might have been gradually absorbed as Buddhism course of time. See further ROHANA, and TISSAMAHĀRĀMA.

C. S. Ranasinghe

MAHĀJANAPADA, Sixteen Great Countries (solasa Mahā-janapadas) mentioned in several places in the Pali Canon as political divisions of India at or shortly before the time when Buddhism arose (A.I, p. 213; IV, 252, 256; 260). It is a mnemonic list usually given in pairs as Aīgā, Magadha; Kāśi, Kosala, Vājji, Malla, Ceti, Vamsa, Kuru, Pañcālā, Maccha, Śūrasena, Assaka, Avanti, Gandhāra, Kāmboja. These names, as observed by Rhys Davids, "are names, not of countries, but of peoples as we might asy Italians or Turks". (Rhys Davids, Buddhist India, Calcutta, 1950, p.16) and he further points out, that "the main idea in the minds of those who drew up, or used, this old list was less geographical. In several other places this list appears sometimes incomplete and with variations.

A less complete list is found in the Janavasabhā Sutta. (D.II.p.200) where the first two and the last four countries have been omitted. The Niddesa includes the Kalingas to this mnemonic list of sixteen countries and substitutes the Yona for the Gandhāra
MAHĀJANAPADA

(Nid. p.37). In Buddhist Sanskrit literature also a similar list is found and in this list Gandhāra and Kamboja have been omitted and Sibi and Dasāma have been substituted (Mhv., I. p.34). The Jaina Bhagavatisūtra gives a slightly different list of the sixteen people viz:- Aṅaga, Baṅga, Magaha, Malayā, Malava, Accha, Vaccha, Kocchha, Pādha, Lādha Bajji, Moli, Kāsi, Kosala, Avaaha and Sambhatturā (Hoernle, ed. The Uvāsagadāsā, appendix II. Calcutta, 1985, Saya XV, Uddesa I, pp. 6-7). According to Bhandarkar, "the Sixteen Great Countries embrace that portion of India which was colonized by the aryans at the time" (Bhandarkar, Ancient History of India, University of Calcutta, 1919, p.48, 56). In the above list Vajji and Mallā have been mentioned by their tribal names. and they formed two confederacies. When reference was made in the Conon (supra) to these countries it was almost always a specification by pairs like Anga - Magadhā and Kāsi - Kosalaj, etc. which gives the right to Bhandarkar, "there can be no doubt that the countries of each pair are contiguous to each other". Some of the countries mentioned in the list were as far back as the Vedic literature (eg: Ceti, Cedi - Cadyā occur in the Rgveda VIII. 5.37.9 and Maccha Skt. Matsya (Satapathabrahmana). From the lists of names of the countries mentioned above, there can be no doubt, that during the time of the composition of the mneemonic list the Mahājanapadas remained as sixteen states of varying size vilage kingdoms but during the life-time of the Buddha, Aṅga ceased to be an independent kingdom and was annexed to Magadhā and Kāsi was incorporated into the Kosalan dominions. By this process of centralization, according to Bhandarkar (op. cit. p.48,57) there developed four monarchies namely Magadhā, Kosala, Vatsa and Avanti and of these the most prominent was Magadhā which was in the process of expansion and during the reign of king Ajātaśatrū the dominions of the Licchavīs (i.e. the Vajjī country) and Mallas and some parts of Kosala which included Kāsi were annexed to Magadhā. The Magadhan expansion continued till a century after the death of the Buddha, as Bhandarkar says, the Magadha empire gradually extended and swallowed up Kāsi Kosala Avanti and Vatsa and Ugrasena Mahapāda made himself master of about that whole portion of India, i.e. Sixteen Great Countries into which India was divided in the Buddha’s times.

For details regarding each country see under each name.

M. Karaluvanna

MAHĀKACCĀNA

MAHĀKACCĀNA was a celebrated disciple of the Buddha who was honoured by the Buddha himself as the chief of the exponents of the dhamma. His speciality was the exposition in detail of terse pithy statements of doctrinal import.

According to Theragāthā Āṭṭhakathā (I. 483) Mahākaccāna was a brahmin well versed in the Vedas who succeeded his father as the chaplain of King Candapajjota of Ujjeni. On the instructions of the king he visited the Buddha in order to invite the latter to Ujjeni. Kaccāna listened to the doctrine and attained arahantship. When he informed the Buddha the purpose of his visit the Buddha replied that it is sufficient now if Kaccāna himself returned to Ujjeni.

Mahākaccāna seems to have spent some time in close association with the Buddha before taking up residence at Avanti. During this time he had the privilege of listening to the rich discourses of the Buddha which would have acted as wholesome seeds sown on fertile soil. Very soon he became renowned as a great exponent of the doctrine, and this fact is amply testified by suttas such as Madhupiṇḍika, Mahākaccāna Bhaddekaratta and Uddesa Vibhaṅga all of the Majjhima Nikāya. These were suttas delivered at Kapilavatthu, Rājagaha and Sāvatthī respectively, perhaps when Mahākaccāna accompanied the Buddha during the course of his missionary tours. In all these three instances Mahākaccāna is called upon by the monks to explain in detail a terse statement made by the Buddha. The suttas show Mahākaccāna as suffering a sense of embarrassment on being asked to explain in detail. The reason for his embarrassment is clear from the simile employed. Just like a man who is in need of timber overlooks the trunk, and seeks timber among the foliage, the monks too having missed the opportunity of getting full details from the Buddha come to him for details. However he explains the issue involved in detail and with a sense of modesty adds that he understands it in this manner and monks might as well get the Buddha's explanation also. When Mahākaccāna's explanation is reported back to the Buddha he heartily endorses the views saying that he himself would have given the very same explanations.

During the Buddha's life time itself Mahākaccāna seems to have gone into residence at Avanti Dakkhiṇāpatha. Udāna (p.57) and Vinaya (1,194) both of which describe the same episode show that Mahākaccāna had already laid the foundation for a
school at Avanti. The conditions prevailing there were different to those in Magadha, and therefore Mahākaccāna suggests, through his pupil Sōna Kuṭikānna Tissa, that certain amendments be made to some existing Vinaya rules in order to make life more comfortable, and relax the conditions laid down for some ecclesiastical acts for the convenience of the monks dwelling there. Buddha regards them as useful suggestions and readily grants the concessions. The school founded here was still in its infancy for it is reported that monks were so scarce that collecting together ten monks for an upasampādā was itself a difficult task.

According to the Anguttara Nikāya, Mahākaccāna was residing at one time at Vāraṇā on the bank of Kaddamadaha. There he delivers a discourse (similar in essence to the Kalahavīvadasutta of the Āthakavagga of the Suttanipātā) to the brahmin Āramadāṇḍa on the causes of disputes. At the end of it, in reply to a question of the brahmin Mahākaccāna says that Buddha is residing in a city called Savatthī in the east “atthi puraththimesu janapadesu Sāvatthī nāma nagaram ātatha so bhagavā etarahi viharati araham sammāsambudhao”. The wording of the reply suggests that Sāvatthī was not known at Vāraṇā and the mention of puraththimesu janapadesu shows that the scene of this discourse was not situated in the east. Perhaps Vāraṇā was a town in the Dakhināpāthā, the locality connected with the missionary zeal of Mahākaccāna. Therefore it may be surmised that this too is one of the places at Avanti to which he took the message of the Buddha.

The Kuraragharaṇapabbata at Avanti seems to have been the headquarters of Mahākaccāna's missionary activities. It was from here that Sōna was dispatched to the Buddha at Savatthī with a 'report' of the prevailing conditions. Here even lay folk, both men and women, seem to have taken a keen interest in studying the scriptures. Hāliddikāni asking another question pertaining to sense perception. Anguttara nikāya (V, 46) records a discourse occasioned by a question raised by Kāli, an upāsikā in Kuraraghara. It is noteworthy that Mahākaccāna answers all these questions without any hesitation or embarrassment. As Buddha is not present in the immediate neighbourhood, he solves all problems posed before him as an excellent authority on the subject. Thus we see the early fruits of the pioneering efforts of Mahākaccāna in the propagation of the Buddha’s teachings in Avanti. Not only did he succeed in gathering new adherents but also created a keen interest in the intelligent lay public for the serious study of the newly introduced doctrine.

Makkarakāta forest must have been another station of Mahākaccāna in Avanti. This may have been a brahmin stronghold, for the arrogant words used by the pupils of Lohicca (Samyutta IV, 116) show that they not only despised the shaven headed ascetics, but also envied (or were alarmed at) their growing popularity. Ime pana munda kā saman akā ibbhaṁ kīṁ hā bandhaupadāpaccā āimesam bhāratakāṇāṁ sakkatā garukatā māṁta pūjita apacita tijata. Reviling in these contemptuous terms they deliberately tried to cause annoyance to Mahākaccāna who was perhaps a new comer there. Undaunted by these words Mahākaccāna silences them and addresses them in a few verses in which he unequivocally exposed the brahmin hypocrisy and the futility of their practices. The brahmin pupils immediately inform their teacher that śramaṇa Mahākaccāna categorically denounces brahmin mantras-yagghe bhavaṁ jāneyya saman tra Mahākaccāno brāhmaṇāṇāṁ mante ekamṣena apavadatipatiikkosati. Hearing this complaint Lohicca, in his indignation hastens to question Mahākaccāna for an explanation. Then follows a detailed exposition at the end of which the arrogant Lohicca was converted. This episode perhaps portrays the resistance and opposition offered by brahmanism in Avanti in general, and how prudent Mahākaccāna was able to overcome them successfully with far reaching results.

Mahākaccāna seems to be an early pioneer to introduce the message of the Buddha to Madhurā as well. The king of Madhurā was called Avantiputta (Majjhima II, 83) which suggest that Madhurā belonged to the Western region. According to the Madhurasutta Mahākaccāna visited Madhurā and was residing at Gundavana. Soon after arrival his fame ...
spread far and wide as an eloquent orator and a learned ascetic. and no less a person than the king himself pays him a visit. The question asked by the king shows that brahmanism was widespread in that locality. Mahākaccāna delivers a discourse on the much vexed problem of the brahmins' claims to superiority to the entire satisfaction of the king. Expressing his sincere appreciation of the rational exposition the king takes refuge in Mahākaccāna, saying Kaccānaṃ saranam gacchāmi. Mahākaccāna hastens to correct the king that he should take refuge in the teacher and not in himself. The king is eager to visit the Buddha, but to his disappointment is told that the Buddha has already passed away (Majjhima I, 90). Aghuttaranikāya (I, 67) records another discourse of Mahākaccāna at the Gundavana in Madhurā. Here a brahmin named Kandarāyana inquires why the śramaṇas do not pay homage to the brahmins and points out that it betrays lack of good manners not to respect brahmins (tayidam bho Kaccāna na sampannam evātī). This comment of Kandarāyana shows to what an extent the brahmin influence had permeated the day to day life of society, for courtesy shown to brahmins was vested with conventional ethical dignity. It is therefore no wonder that both discourses recorded as having been delivered at Madhurā by Mahākaccāna are related to the caste-pride of the brahmins.

This available evidence shows that Mahākaccāna was the pioneer who introduced the message of the Buddha to brahmanic territory of the West. Himself born and bred a brahmin in the west. Mahākaccāna would have been most suitable for the task which he took upon himself. As he had the advantage of knowing thoroughly the ins and outs of both contending schools he was able to handle this stupendous task with tact and confidence. In the choice of his disciples he seems to have acted with mature discretion. It is said that he dissuaded Sonā Kuṭikanṇa Tissa from joining the order thrice. It was only after realising the persistent earnestness of Sonā that he conferred ordination on him. Thus his far-seeing wisdom would have cautioned him to recruit only the strong charactered whose convictions were sincere and firm. He won the hearts of the intelligent public by inculcating in them a thirst for knowledge of the dhamma. Whenever it was possible to tolerate he tactfully tried not to violate the long cherished die-hard customs of the people. For instance, because the people in Avanti believed in the efficacy of udakasuddhi he urged the Buddha to permit frequent baths for monks residing there. But this policy of following the path of least resistance did not deter him from exposing the vanity of brahmanic pretensions whenever necessary (e.g. Samyutta IV, 116).

The school established by Mahākaccāna in Avanti seems to have made steady progress. Not only did the number of adherents increases gradually, but it also produced monks of very great learning. Samyuttaṇīkāya (IV, 283, 285) shows the maturity of knowledge and discipline of the immediate disciples of Mahākaccāna. Isidatta, a pupil of Mahākaccāna, who was described as the most junior (sabhanaṇava) in a congregation of monks was the only one who could save much embarrassment for the Elders in whose company he was by answering a question raised by a householder named Cittā at Macchikasanda. Later the senior most Elder speaks in appreciation of Isidatta's wisdom and admits that the solution to the problem did not occur to him. A similar situation was repeated at another occasion, where Cittā discovers that this learned monk was none other than his own adīthasahāya Isidatta of Avanti. Joyfully he invites Isidatta to reside at Macchikasanda promising to provide him with all comforts. Isidatta thanks him for his kindness, and quietly leaves Macchikasanda for good (Samyutta IV, 288). This last act is a good clue to his strength of character for it is said sakka kāpurisena dujjho. Such was the calibre of the pupils of Mahākaccāna belonging to the school he established at Avanti.

After the demise of the Buddha the school at Avanti seems to have developed into an influential seat of learning. Hundred years after the parinibbāna of the Buddha the Vesalian monks started indulging in ten unlawful practices. This was soon discovered by Yasa Kākaṇḍaputta who was an honest, virtuous and law-abiding disciple. He soon recognised the imminent danger threatening the sāsana and decided to take firm action. Perhaps, considering the degenerate state of monastic affairs he decides to seek the support of the others in order to raise their voice in protest. Immediately he thinks of the seat of learning in Avanti and sends a messenger seeking their co-operation. As a result of Yasa's painstaking endeavours, the Cullavagga records, a great assembly of arahants took place at Ahogāṇa in order to discuss their plan of action. It is interesting to note that the majority of arahants taking part in settling this issue, which they themselves described as difficult and unruly (kakkham ca vādān ca), hailed from Avanti. The east which was the cradle of Buddha's missionary activities had, a century after the demise of the Buddha, to solicit the support of the west.
in order to crush its own growing indiscretion. The shift of emphasis from east to west becomes all the more conspicuous when Avanti of this day is compared with Avanti of Buddha's day, when monks were so scarce that an upasampadā had to be postponed for three years for want of a quorum of ten. The east too felt, and regarded with envy and alarm, the growing importance of the west, for they contended that Buddhās are born in the east and therefore the easterners are the upholders of truth and virtue.

According to tradition Mahinda the celebrated disciple who introduced Buddhism to Sri Lanka also hails from Ujjeni. Thus he may have been a representative of the school established by Mahākaccāna in Avanti, sent here to convert Sri Lanka. History shows that Buddhism took deep roots in the island and moulded the national character with a distinctive Buddhist stamp. This mission. Perhaps may be considered as the crowning glory of the untiring efforts of Mahākaccāna in the propagation of Buddhism.

Lily de Silva

Mahākarunā. Though the term Karunā occurs frequently as one of the four brahmavihari, the term mahākarunā does not seem to occur in any of the first four nikāyas. In the Pali canon mahākarunā occurs for the first time in the Paṭisambhidāmagga. In the Ariyapariyesanasutta (M. I, 169) the Buddha says that he looked at the world with his Buddha-eye out of compassion for the worldlings (sattesu kāruṇānatam pātiṣa) and saw beings at different stages of development. But karunā is rarely used to denote the Buddha's compassion, the term used instead is anukampā with much greater frequency. The Buddha urged his first sixty disciples to go out into the world and spread the sublime message out of compassion for the worldlings and spread the sublime message out of compassion for the world (lokañcūvakampāyā, Vīṇ. I, 21). In the Dhammadāyādasutta (M. I, 12) the Buddha expresses the wish that his disciples should be inheritors of his dhamma and not material gain because he has compassion for them (atthi me tumhesu anukampā). In a number of suttas the Buddha exhorts his disciples saying: I have done everything that could possibly be done by a kind sympathetic teacher for his disciples. There are shady trees, go and meditate. Do not have room for regret later on (M. I, 118, iv, 373, A. IV, 139).

The Buddha's compassion for the suffering masses stands out in bold relief through his words and deeds in numerous suttas even though it is not spelt out in words such as karunā and anukampā always. Tirelessly the Buddha walked miles to meet people who could benefit from his teachings. He walked about 120 miles from Gaya to Benares in search of the Pañcavaggiya monks. Angulimāla was a ruthless murderer, but fearlessly the Buddha approached him out of compassion to rescue him from an imminent spiritual disaster (M. II, 98). There are two recorded instances when the Buddha personally attended on sick monks (Vīṇ. I, 301; DhpA. I, 319). He even pronounced that attending on the sick is equal to attending on the Buddha himself.

The episode of Suppavāsā (Ud. p. 16) is a clear example which illustrates the power of the Buddha's compassion. She was suffering labour pains for seven days after an unusually prolonged pregnancy and the matter was reported to the Buddha. The Buddha pronounced the words; "May Suppavāsa be well and may she deliver the baby with ease." Immediately after his compassionate benediction the baby was delivered. When Suppavāsa invited the Buddha and the monks for a meal the next day the Buddha went so far as to change an appointment which was already made in order to accommodate Suppavāsa's request, as he felt that her need was greater.

On another occasion the Buddha postponed a tour that was planned on the request made by a slave girl named Punnā as she was promised freedom from slavery by her master if she succeeded in getting the Buddha to postpone his tour (M. A. IV, 34).

In all these episodes the compassion of the Buddha is quite obvious, but no particular words have been used to express it.

There are instances when the Buddha resorted to harsh action out of compassion for his disciples. According to the Udana (p. 25) once the Buddha chased away a group of 500 monks for noisy behaviour. They went to the bank of the river Vaggumudā and strove hard to attain arahantship as they felt that the Buddha chased them away out of compassion to discipline them. After they attained arahantship the Buddha sent for them and sat in meditation with them for a long time. A similar instance of chasing away monks for noisy behaviour is reported in the Cūtaṇasutta (M. I, 457).

The Abhayarakūkumārasutta (M. I, 395) illustrates with a simile the Buddha's use of severe measures out of compassion. Supposing a child put a pebble in the
month, an elder would force it out even if the mouth bled, because the elder has compassion for the child. Similarly sometimes the Buddha uses stern measures to discipline his monks. Pothila (DhA. III, 417-21) was a learned monk, but he had not disciplined his mind according to what he learned. Therefore in order to incite him a on to meditative action the Buddha jibbed him by addressing him as Tuccha Pothila, Empty Pothila.

With great compassion the Buddha went from place to place touring a large area in northern India spreading his message, preaching tirelessly for 45 years. He has preached to earnest seekers even when he was on his alms round as is evidenced from the episode for Bāhiya Daruciriyā (Ud. p. 8). On his deathbed too he counselled Subhadda, the mendicant who came in search of his help. The Buddha was also much concerned about the feelings of those who supported him. He left a message of comfort for Cunda the blacksmith who served him the last meal. Cunda should not be remorseful that the Buddha fell ill after partaking of the dish prepared by him. In fact great merit accrues to him who served the last meal.

It appears that the later stratum of the Pali canon has paid special attention to compassion as a great quality of the Buddha, and the Paṭisambhidāmagga mentions the term mahākarunā for the first time. This text maintains that the Buddha's knowledge of great compassion is one of the knowledges he does not share with his disciples - a notion not found in the first four nikāyas. According to the Paṭisambhidāmagga when the Buddha sees that worldlings are burning and that they are without refuge etc. great compassion descends upon him. The text devotes an entire chapter to the question of the Buddha's attainment of great compassion (Pts. I, 126-1).

By the time of the commentarial tradition the great compassion of the Buddha had assumed much importance. The commentaries to the first four nikāyas open with the phrase karunāsitalahadayanā meaning the Buddha who has a heart cooled by compassion. Dhammapāla's commentaries to Udāna, Theragāthā, Therīgāthā, Vimānavatthu, Petavatthu and Itivuttaka start with mahākārunicakānātham as an epithet of the Buddha, meaning the Lord of great compassion. It appears that the concept of mahākarunā is an offshoot of this concept of Buddhacakkhu. The commentary to the Brahmacālasutta (D A. I, 47-48) gives a succinct account of the Buddha's daily routine. According to this the Buddha surveys the world with his Buddha eye during the latter part of the third watch of the night, in order to locate people who have done meritorious deeds during the dispensation of previous Buddhas. Mahākarunāsāmahāpatti is not mentioned here, but Buddhacakkhu is mentioned in its place. In the commentary to the Angulimalasutta too mahākarunā is conspicuous by its absence. It merely says taṃ divasānaṃ ca Bhagavā paccūsasamaye lokamālokoṃto Angulimalāṃ divasā etc. But it is noteworthy that mahākarunāsāmahāpatti is mentioned in a number of places in the commentaries. The Buddha is said to rise from the mahākarunāsāmahāpatti during the last watch of the night to survey the world to pick those who had the potential to benefit from his teaching. The following are a few such references: SA. I, 68; AA. I, 322, 150; DhA. I, 26, 367 etc. In some places Buddhacakkhu too is mentioned along with mahākarunāsāmahāpatti as in SA. I, 319 which runs as mahākarunāsāmahāpatti samāpajjivā Buddhacakkhunā lokamālokoṃto ......

There are a number of jātakas which portray compassion and altruism as great qualities of the Bodhisatta. The Sasajātaka and the two Mahākapijātakas can be cited as three outstanding examples. In the former the Bodhisatta was a hare who sacrificed himself by jumping into a fire to provide the flesh of his body to a brahmin who came begging for food. In the Mahākapijātaka No. 407 the Bodhisatta who was born as a monkey helped his large retinue to cross over a river along a long bamboo shoot the end of which he himself held fast against a tree. The retinue carefully crossed over to safety without hurting their leader, but Devadatta who was the last to cross jumped on his back so hard that the impact broke his back. Thus through compassion and resourcefulness the Bodhisatta helped his retinue to reach safety at the cost of his own life, The next Mahākapijātaka No. 516 relates how the Bodhisatta as a monkey helped a man to come out of a deep pit into which he had fallen. Later this man tried to kill the Bodhisatta monkey to get its flesh to satisfy his hunger. The injured monkey leapt out to safety, but through compassion for this man who was lost in the forest, showed him the way out of the forest jumping from tree to tree out of reach of the treacherous man. There are very many similar jātakas which portray the compassion of the Bodhisatta.

AA. III, 10 maintains that the knowledge which enabled the Buddha to penetrate into the truth and gain enlightenment has wisdom as its origin, while the
knowledge with which he preached to make others realise the truth has compassion as its origin (paññāpaṭabhāvitam attano ariyaphalāvaham paṭivedhānānam, karunāpaṭabhāvitam sāvākanāṃ ariyaphalāvaham desanānānam). According to AA, V, 84 paṭivedha paññā has samādhi, concentration as its basis, while desanā paññā has karunā, (compassion) as its basis. The Visuddhimagga (I, 203) states that he Buddha’s attainment of knowledge finds fulfilment in omniscience, while his attainment of virtuous conduct finds fulfilment in great compassion (vijjasampadā Bhagavato sabbaññutam pūreṇvā thiṇā caramasampadā mahākārunkatanām). With omniscience he knows what is good and bad for all beings, with great compassion he prevents them from doing. It is bad, and encourages them to do what is good.

By the time of the tikās the division of the virtues of the Buddha into two main categories as karunā and saññā had become so prominent that even the three viṭakas have been categorised accordingly. The Dīghanikāya Aṭṭhakathā Tikā (DAT I, 2) maintains that preaching the vinaya, karunā is predominant in reaching the abhidhamma, paññā is predominant in preaching the suttas, both karunā and paññā are predominant. The DAT I, 3 further adds that all Buddha qualities have compassion as their matrix karunānidāna hi sabbe pi Bhuddhagunā). The Visuddhimagga Tikā (p. 192 Sinhala ed.) has long discussion to show that wisdom and compassion play complementary roles in the attainments of the Buddha. The translation of the passage would run as follows:

“Here the teacher’s possession of knowledge shows the greatness of his wisdom (paññāmahattanā) and the possession of virtuous conduct shows the greatness of his compassion (karunāmahattanā). It was through wisdom that the Exalted one attained the kingdom of righteousness (paññāya dhammaṁ rajappatti), and through compassion that he shared it (with the rest of humanity) through compassion he endured it. Through wisdom he fully understood the suffering of others, through compassion he undertook to treat them. Through wisdom he came face to face with nibbānā, through compassion he attained it. Through wisdom he crossed over himself, through compassion he made others to cross over. Through wisdom he accomplished Buddhahood, through compassion he accomplished the function of a Buddha.

Or through compassion he faced the round of births as a Bodhisatta, through wisdom he took no delight in it. Similarly through compassion he practised non-violence towards others, through wisdom he feared none. Through compassion he protected others to protect himself, through wisdom he did not torment himself. Therefore of the four types of people beginning with the one who works for his own welfare, he accomplished the state of the fourth type. Similarly through compassion he became the support of the world, through wisdom he became his own support. Through compassion he had the humility (of a Buddha), through wisdom he had the dignity (of a Buddha). Through compassion he helped all beings, through wisdom associated with that compassion he kept a mind detached from them all. Through wisdom he had a mind detached from all things, through compassion associated with that wisdom he was helpful to all beings. Just as the Blessed One’s compassion was devoid of sentimental affection and sorrow, his wisdom was free from thoughts of ‘I’ and ‘mine’. The Buddha’s accomplishment of knowledge and conduct (vijjasarana) has the special quality of being perfectly pure as they purify each other.”

When mahākarunā of the Buddha is compared with karunā as a brahmavihāra enjoined on all discipies one sees a marked difference in degree and intensity between the two concepts. The great compassion of the Buddha moves him to work for the liberation of all beings, while the compassion of the disciple is only a means of getting rid of his negative emotions and egoism for the purpose of personal liberation. According to the Pali texts Buddha Gotama as ascetic Sumedha first resolved to attain Buddhahood at the feet of Buddha Dipaṅkara in spite of having the possibility of attaining nibbāna during that very life-time (J. I, 13-14). No doubt he was moved by compassion for suffering beings, and admiration for Buddha Dipaṅkara but the Pali texts extol the virtue as a great determination. According to the commentary on the Khaggavisāṇasutta (Sn Al, 49 and J. I, 14-15) the resolve (abhinīhāra) to attain Buddhahood, and the ardent desire (chandāta) for the same goal were so strong and unshakable that he would not hesitate to suffer for aeons even in hell if that would give him enlightenment. Even if he had to traverse the entire universe
filled with burning embers, he would not hesitate to do so if that would give enlightenment. Even if the whole universe was filled with thorns and spikes, he would not hesitate to walk across if enlightenment was assured. Even if the whole universe was covered with water and he had to swim across, ... even if the whole universe was overgrown with bamboo bushes and he had to clear his way through, he would not hesitate to do so if that would guarantee enlightenment. The firm determination, while the Buddhist Sanskrit texts (Mahāvastu II, 164) cite the very same to show the depth and force of the great compassion which moves the heart of the Bodhisattva.

The concept of compassion reaches its climax with the Bodhisattva doctrine in Mahayana Buddhism. A Bodhisattva is a spiritually mature being who is greatly moved with compassion for the suffering masses. He contemplates how he could best relieve their suffering and realises that it is only by becoming a Buddha that he could do so. Then he sets about cultivating methodically the thought of enlightenment (bodhicittotpāda) so that it becomes a firm determination, an all-conceiving concern. The texts delineate two important methods of systematically conceiving the spirit of enlightenment. One is the "mother-recognition technique" and the other is the technique of the "equal exchange of self and other".

The first method depends on the conviction that in this beginningless samsāra all beings are born over and over again a countless number of times. All these beings have limitless potential and they all desire happiness and dread suffering. Then one contemplates one's own mother who is biologically the closest being to oneself. As there have been innumerable births there have been innumerable mothers too. In this beginningless cycle of births all beings would have been one's mother at some time or other, and one continues to relate emotionally and imaginatively to all species of living beings as a child to its mother. This culminates in a profound emotional experience of the biological unity of all living beings. Then one begins to appreciate all the loving care one has received from one's own mother and the kindnesses one's mother has done to oneself. Similarly in all previous births all beings as mothers would have rendered such loving service to oneself. Contemplating thus one begins to feel great tenderness towards all beings. As all beings who as mother have meant so much to oneself, and as they are undergoing great suffering, one is moved with a profound sense of compassion to repay the kindnesses they have done to oneself. The only way one can give them lasting happiness is by becoming Buddha. Thus moved by great compassion for beings who have been recognised as one's own mother, one conceives the spirit of enlightenment and resolves firmly to become a Buddha.

The other major technique of conceiving the spirit of enlightenment is called the "equal exchange of self and other." This consists of the meditation on the equality, the essential sameness of self and others. Just as one wants happiness and does not want suffering so all beings desire happiness and wish to avoid suffering. So one should identify oneself with all beings and take their suffering as seriously as one's own suffering. Moved by great compassion one conceives bodhicitta. Sāntideva in his Bodhicaryāvatāra immortalises this bodhicittotpāda and the compassion which moves one to make his great resolve, in a long poem:

May I be the doctor and the medicine
May I be the nurse
For all sick beings in the universe
Until everyone is healed.
May a rain of food and drink descend
To clear away the pain of thirst and hunger
And during the aeon of famine
May I myself change into food and drink

Thus bodhicitta comprises a special form of love and compassion for all beings. The magnificent conception of this will to enlightenment is a central moment in the evolutionary career of a living being, the moment in which a new spirit of love and compassion pervades its whole life and destiny, and its further evolution becomes a purposive, creative progress.

Not only at the outset of a Bodhisattva's career does compassion operate. The scriptures show it present through all later stages of a Bodhisattva's development. Through compassion he practises virtues, purifies his dispositions, undertakes discipline, cultivates heroism and even sacrifices himself for the good of the others. The Vṛghṛī Jātaka is a well known illustration of a Bodhisattva's self-sacrifice motivated through compassion for a hungry tigress who was about to devour her own cubs being unable to bear hunger. Another moving episode relates how the Bodhisattva was sailing in a ship with five others when the ship met with disaster. Moved by compassion for his companions the Bodhisattva thought of a way of saving them. He asked them to cling on to his body and
committed suicide by slitting his throat with a blade. As the sea does not keep a dead body the waves cast the body ashore and the five companions who clung to the body were thus saved. Such is the compassion of a Bodhisatta who sacrifices himself for the sake of others. Thus karunā is intimately associated with the dānapāramitā. Through compassion a Bodhisattva perfects himself in every way and at last attains Buddhahood. According to a famous simile in the Lotus Sūtra he then becomes like a lifegiving rain cloud, pouring forth the rain of his teaching upon all creatures. At the highest stage of attainment compassion reaches an infinite dimension dispensing its bounty impartially in all directions.

MAHĀKASSAPA one of the eminent disciples of the Buddha and the chief among those who practised minute observances of form (etadaggam dhutavādānam yogīna Mahākassapam A. I. p. 23; Mana sasane dhuta-vādānam bhikkhūnām Mahākassapam aggoti theranāthānānte thapesi AA. I. p. 183). He was born in a brahman village called Mahātiṭṭha in Magadhā, His father was brāhman Kapila and his mother was called Sumanādevi. He was named Pippiliyana. (The Apadana gives his father’s name as Kosigotta, Kosigotta dījo piṭā, AP. II. p. 583 v. 56). Mahākassapa was endowed with seven qualities of a great man (Mahākassapassesattamahāpurusalakkhanapa-timanādita, AA. I. p. 182), but no specific mention is made of the seven marks. To distinguish him from other Kassapas and also as he was possessed of great virtues he was called Mahākassapa.¹

When Mahākassapa grew up, he was reluctant to marry in spite of the wishes of his parents, but ultimately, to escape from their importunities, he agreed to marry if a suitable wife could be found resembling a statue which he had made of gold. With difficulty, his parents’ endeavour to find a suitable wife resembling the statue was successful. Bhaddakapilāni, who was born in the family of the brāhman Kosigotta in the city of Sāgalā in the country of Madda, fulfilled all requirements. But the two of them wrote to each other suggesting that somebody else should be found as a match for each. Their attempts failed as their letters were intercepted and finally they were married. By mutual consent, the marriage was not consummated as the two spent the night separated by a chain of flowers.

Pippali was very rich. He had immense wealth. He used twelve measures of perfumed powder, each measure a magadhanāli, daily for his person alone. He had sixty lakes with waterworks attached (yantabaddāni sattimattāni talakāni ibid.) and his workmen occupied fourteen villages each as large as Anuradhapura, and his workplace was extended over twelve yojanas. He possessed fourteen troops of elephants and an equal number of troops of horses and chariots. (cuddasattāna nika .... assānika ..... rathānika. op. cit. p. 178).

One day Pippali went to one of his fields which was being ploughed and saw the birds eating the worms turned up by the plough. On being told that the sin therein was his, he decided to renounce all his possessions. In the meantime, Bhaddā-Kapilāni had seen watching the crows eating the little insects which ran about among the sesame seeds that had been put out to dry. When her attendant woman told her that hers would be the sin for their loss of life, she also determined to renounce the world.² The husband and wife, 

¹ Mahākassapoti uruvelakassapo, Nādikassapo, Gayākassapo, Kumārakassapo tiime khuddānukhuddakathere upādāya ayam mahā, tasmā Mahākassapam ti vutto AA. I. p. 163; Mahanūhi Silakhandahā Sāmanagatattā, Vibhā. p. 60).
² Mahākassapa told Ānanda that when he decided to embrace the religious life that he left his sumptuous home, renounced his eighty cartloads of gold, fivehundred bondsmen, fivehundred head of cattle, fivehundred fields and villages, ninehundred and ninety-nine ploughs, goodly and shiny ploughshares made at Kapila. And, taking my one patched cotton cloak with me, I wandered out in quest of whatever arahants there might be in the world (Mīlva. III. p. 50).
finding that they were of one accord, took yellow rainments from their wardrobe, cut off each other’s hair, took bowls in their hands, and passed out through their weeping servants to all of whom they granted their freedom, and departed together, Pippali walking in front. But soon they agreed that it was not seemly they should walk thus together, as each will prove hindrance to the other, and also they thought that the people would say that these two, though taken to religious life are unable to give up each other, and they thus having thought ill of the two of them, accrue sins (ime pabbajitvāpi vinābhatvam nasakkonti cintetvā amhesu paduṭṭha cito mahājano apāyapūraka bhaveyya. AA. I. p. 180). And at the cross-roads, he took the right and she the left and the earth trembled to see such virtue. The Buddha, sitting in the Gandhakūṭi in Veluvana, knew what the earthquake signified, and having decided to receive them, walked three gāvutas, sat down at the foot of the Bahuputtaka Nigrodha, which was between Rājağaha and Nālandā, resplendent in all the glory of a Buddha. Pippali saw the Buddha thus seated and recognising him at once as his teacher prostrated himself before him saying, “my teacher, lord, is the Exalted one, His disciple am I” (sūthā me bhante Bhagavā sāvako ham asmitī S. II. p. 220).

The Buddha told him to be seated and he accepted Pippali as his pupil saying “I would give you inheritance” (dāyajjan te dassāmi, AA. I. p. 182). The Buddha in three homilies gave Mahākassapa his ordination viz:- There shall be a lively sense of fear and regard (hirotappa) towards all monks, seniors, novices and those of middle status; whatever doctrine I shall hear, bearing upon what is good, to all that I will hearken with attentive ear, digesting it, pondering it, gathering it all up with my will; and happy mindfulness with respect to the body shall not be neglected by me (S. II. p. 220). The Buddha had given instructions as to Mahākassapa’s training, set off to Rājağaha with Mahākassapa as his attendant (SA. II. p. 170; pacchāsamaṇam katvā AA I. p. 182). On their way the Buddha desired to sit at the foot of a tree by the side of the road and Kassapa folded his under-robe of Cut Clothes (patapilotikānan samghātini) and offered it to the Buddha as his seat. The Buddha sat on it and feeling it with his hand praised its softness. Kassapa, thinking that the Buddha preferred to wear it, requested the Buddha to accept his under-robe of patched clothes, and on the suggestion put to him by the Buddha, agreed to wear the Buddhas rough rag-robe past wear which he would praise above the whole world, and the robes were thus exchanged. This exchange of robes is very significant, in that, it had never happened before and Mahākassapa always referred to it with pride as an exclusive privilege he had (S. II. p. 221). Mahākassapa himself is mentioned to have told that the earth quaked in recognition of his virtues, for no ordinary being would have been fit to wear the Buddha’s rag-robe. It was after the exchange of robe that Mahākassapa took to the practice of minute observances of form from the Buddha, and having practised for seven days, he attained Arahatship on the eighth day4 (Buddhanān santike yeva terassa dhutagunanāma devadāyā sattadivasa patthairam attāhāy amune saha paṭisambhidāhi arahattam pāpuṇi. AA. I. p. 183).

The Manorathapuraṇi records several birth stories of the past of Mahākassapa and Bhadda as husband and wife and companions in good works. In the time of the Buddha Padumuttara, Kassapa was a rich householder named Videha in the Deer park called Khema in the city of Hansavati. He married Bhadda and was very devoted to the Buddha. One day he heard the Buddha’s third disciple in rank, Nisabha by name, being awarded the place of pre-eminence among those who observed austre practices and he registered a wish for a similar honour for himself in the future. He listened to the sermon preached by the Buddha and invited the Buddha and the samgha for alms and for seven

---

3. The account given in the Nikāyas, of Pippali’s renunciation, does not confirm with the account given of Mahākassapa in the Manorathapuraṇi. The Śamyutta Nikāya mentions that while Mahākassapa was still leading household life, it occurred to him that ‘Stuffy it is to live in a house, a dusty procedure. Free as air is life out of the world ...’ and decided to shave his hair, don the saffron raiment and go forth from home into the homeless. And taking an under-robe made of cut cloth and following the example of the world’s Arhants, left home for the homeless and met the Teacher at Bahuputtaka cetiya. He was never a pupil of any other teacher, save the Exalted one. (S. II. p. 219).

According to the Mahāvastu Pippali met the Buddha at the foot of the Bahuputtraka Cetiya at the end of a full year’s time after renouncing the worldly life (Mhvu. III. p. 51).

4. The Mahāvastu mentions that when Pippali bowed down and told the Buddha ‘Lord Thou art my Master; I am thy disciple, the Buddha is mentioned to have said “Even so, Kassapa, I am your Master, you are my disciple ....” (Mhvu. III. p. 51).
days he offered alms to the Buddha and sixty-eight hundred thousand of monks and made his wish. He was inspired by Nissabha and further he learnt from the Buddha of the qualities in which Nissabha excelled the Buddha himself and determined to obtain them. When he wished for pre-eminence among those who observed austere practices, the Buddha Padumuttara assured him that during Gotama Buddha's time his wish will succeed. Having this as his goal, he expended all his energies in good deeds in all his subsequent births.

Ninety-one Kappas ago, in the time of Vipassi Buddha, Kassapa was known as the brāhmaṇa Ekāsātaka and Bhadda was his wife. He was very poor, and once he went to listen to the dhāmma preached by Vipassi Buddha. He was impressed by the Buddha and offered to the Buddha the only cloak (ekāsātaka) that two of them (the husband and wife) had to put on in turn when they go out of the house. King Bandhuma who was in the same assembly came to know of his conduct and was very pleased and supplied him a pair of cloaks which also he offered to the Buddha, and this was repeated till he kept two cloaks for him and his wife and offered the rest to the Buddha. On a subsequent occasion the king was very much pleased with the brāhmaṇa’s conduct and wanted to have his services and therefore made him his Puṣṭhita (AA. I. p. 167). In the interval between Konāgamaṇa and Kassapa Buddhās, once Kassapa was born in the family of a householder in Benares, He helped a paśceka Buddha to dry his robes without damage and wished that he experience no downfall in his future births.

then again in a subsequent birth he was a treasurer (setṭhi) in the same city and married Bhaddā, but because of an evil deed she had done in the past, she became unattractive to him and left him, but took her as wife again when she became attractive. Having seen from what had happened to his wife, and thinking of the great powers of the Buddhās, the setṭhi worshipped Kassapa Buddha’s golden cetiyā with costly robes and decked it with golden lotuses each having the size of a Benares and as he had given robes in the past lives, he had thirty-two wishfulfilling trees (Kapparukkhas) which provided him and all people of his kingdom with garments. At the suggestion of his queen, he made preparations to feed holy-men and five hundred paṭcēkabuddhas, sons of Paduma came to accept his gifts. In that life, too, Nanda and his queen renounced the world and became ascetics. They developed jhānas and were reborn in the brāhmaṇa world (AA. I. pp. 163-175).

Mahākassapa was not present at the final passing away of the Buddha. He was journeying with a company of monks from Pāvā to Kusinārā when he met an Ājīvaka carrying in his hand a mandārava flower picked up by him from among those which had rained from heaven in honour of the Buddha, and it was the Ājīvaka who told Mahākassapa the news. It was then the seventh day after the Buddha’s death. (D. II. p. 162) Rockhill records that according to the Tibetan sources, at the passing away of the Buddha “the Venerable Mahākāśyapa was stopping in the Kalantakanivāsa Bamboo grove at Rajagṛha; and when the earth quaked, he sought what might be the reason, and he saw that the Blessed one had utterly passed away... then he thought that Vaidehiputra Ajātāsāru, who has such infinite faith, suddenly heard that the Blessed one has died, would die of hemorrhage and therefore, he told the brāhmaṇa Vassakāra to make arrangements to get Ajātāsāru recovered. After giving these instructions, Mahākassapa started for Kusinārā, and Vassakāra did as Mahākassapa had told him and Ajātāsāru’s life was saved (Rockhill, The Life of the Buddha, London, 1907, pp. 141-42).

The Mallas, who took upon themselves the privilege of attending to the funeral rites, had been trying in vain to set fire to the pyre of the Buddha. On being questioned by the Mallas, the venerable Anuruddha who was present at the place of the pyre with the other arahant theras, told them that the pyre would not be kindled until Mahākassapa and his five hundred companions had saluted the Buddha’s feet (D. II. 162). When Mahākassapa was nearing Kusinārā people saw him coming from afar and took perfumes and wreaths etc. and went out to meet him and then they bowed down at his feet and followed after him to the place where the Blessed One’s body was (Rockhill, op. cit. p. 144). Mahākassapa went to Muktātbandhana, to the shrine of the Mallas where the funeral pyre of the Buddha was made and he arranged his robes on one shoulder, and thrice walked reverently round the pyre, and then uncovering feet, he bowed down respectfully at the feet of the Buddha (D. II. p. 163). Buddhaghosa elucidates that the Buddha’s feet became visible from out of the pyre in order that Mahākassapa might worship them when he wished for the same. Then he stretched his hand and got hold of the feet up to the calves and kept-them on his head (Thero... hatthe pasāvetvā suvaṇṇa-vanṇa-sathu-pade yāva goppakā galham gahetvā attano sriavare patiṭhāpesi DA. II. p. 603). Mahākassapa was followed by his five hundred colleagues, and when all of them had worshipped, the
After the funeral rites were over, Mahakassapa was thoughtful of the words uttered by Subhadda at Pāvā, on the announcement of the passing away of the Buddha. Mahakassapa considered the implications of the remark 'That they were well rid of the Mahāvamsa and could now do as they liked,' and thought of the desirability of holdings a recital of the Buddha's teachings. Mahakassapa announced his intentions to the assembled monks and as he was the most senior among them (sanghathera) and as having been considered by the Buddha himself to be fit for such a task, he was supported by other theras to make all necessary arrangements. (DA. I. p. 3. VA. p. 30). It was decided by a formal resolution (ṇatti) moved by Mahakassapa at the assembly of theras to hold the Recital (sangīyanā) during the rainy season (vassa), and according to his wishes all monks, other than the fivehundred arahants chosen for it, left Rājagaha. The fivehundred arahants who were selected met for the recital under the presidency of Mahakassapa and recited the dhamma and vinaya and it became known as the Therasangīti or Theravāda.

According to the Tibetan sources, Mahakassapa is mentioned to have expounded the āṭṭhaka to preserve the sense of the sūrēnta and vinaya as it was spoken. (Rockhill op. cit. p. 160) and when Mahakassapa had finished compiling the metaphysical parts of the doctrine, the yakṣas above the earth praised Mahakassapa and other arahants (op. cit. p. 161). In Buddhist literature Mahakassapa figures as a monk par excellence.

In addition to the position he held among the eighty great disciples (āsīi mahāsāvaka) he is classed with Moggallāna, Kappina and Anuruddha for his great psychic (iddhi) powers (S. I. pp. 145-46). The Buddha regarded Mahakassapa as equal to himself in exhorting the monks to lead the active and zealous lives. According to the Kassapa-samyutta, the Buddha invited Mahakassapa with the words 'Exhort the brethren, Kassapa. Give them discourse on doctrine. Kassapa. Either I, Kassapa, or thou must exhort the brethren. Either I or thou must give them discourse on doctrine' (S. II. pp. 203-210). The Buddha also thought Mahakassapa equal to the Buddha himself in his power of attaining the jhānas and abiding therein (S. II. pp. 210-14). Mahakassapa was considered by the Buddha as an example to others in this great contentment and his ability to win over families by his preaching (S. II. pp. 194-95). These are clear indications that the Buddha was grooming Mahakassapa to lead the saṅgha after the Buddha's passing away. In point of fact, after the passing away of the Buddha, there did arise an occasion for Mahakassapa to dispel all malicious talk about his authority to lead the saṅgha and he did put his claim in the words 'Verily, friend (Ananda), if one might speak truly of me (i.e. Mahākassapa), truly might he say that here is a very son of the Exalted one, born of his mouth, born of the Norm, created by the Norm, hear to the Norm, who has received from him his rough cast-off rag-robes. 'I friend, according as I desire (can) attain to and abide in each of the several nine jhānas I (can) enjoy the diverse forms of mystic potency, hear by deva-hearing, know by will the will of other beings, remember my former lives, see by deva-sight the fates of other beings, and, by the withering of the intoxicants I have entered into and abide in that sauc and immune eman­cipation of will, emancipation of insight which I have come thoroughly to know and to realize for myself even in this present life. It were as easy, friend, to imagine that an elephant seven to eight cubits high could be hidden under a young palm leaf, as to imagine that the six super-knowledges of me could be hidden (S. II. pp. 221-22; The Book of the Kindred Sayings, pt. II. PTS. pp. 149-50). This passage recapitu­lates the salient qualities of Mahākassapa.

5. According to the Mahāvastu, he was a probationer of eight days and on the ninth day attained perfect knowledge (Mhv. III. p. 55).

6. According to a passage in the Aggañña Sutta, all Sākyaputriya Samanas had the right to call themselves as veritable sons of the Exalted one, born of his mouth etc. provided their faith in the Tathāgata is settled, rooted, established and firm, a faith not to be dragged down by recluse or brahmin, by deva or Mär or Brahma or any-one in the world (D. III. p. 84).
Mahākassapa was willing to help monks to lead the higher life and he gave exhortations to them (A. V. pp. 161-64; Thag. vv. 1051-57; 1072-81). Though Mahākassapa was a therā of the highest calibre, he was very sensitive to criticism. He would not address monks unless he was convinced that they were tractable and differential to instructions. When the Buddha requested him to exhort the brethren he is mentioned to have refused to exhort, politely with the words “Just now, lord, it is difficult to speak to the brethren. They are in a state that makes it difficult to speak to them. They are intractable, they pay no deference to instruction ...” Mahākassapa’s explanation for refusing to address the brethren shows that he had good reasons for not wishing to address recalcitrant monks (S. II. 203-210). Once, according to the Kuṭidūsaṇa Jādaka, one of his disciples - Uluṇka-saddaka, annoyed by some admonition by Mahākassapa burnt the latter’s grass hut while he was away on his alms round (J. III. p. 71). He was very reluctant to preach to the nuns; but once he was persuaded by Elder Ānanda, and accompanied by him he visited the nunneries and gave a discourse to the nuns. At the end of the discourse a nun-Thullatissā by name, openly reviled Mahākassapa for what she considered his impertinence in having dared to preach in the presence of Elder Ānanda whom she held in high esteem. She expressed her displeasure in the words “As if the needle-pedlar were to deem he could sell a needle to the needlemaker” (S. II. pp. 215-16). Once there arose occasion for Mahākassapa to blame Elder Ānanda and called him ‘boy’ (Kumārakavādena), and Thullanandā who heard that Mahākassapa had blamed Elder Ānanda, was displeased and gave vent to her displeasure saying “What now, does Mahākassapa, who was once a heretical teacher, deem that he can chide Elder Ānanda the learned sage, calling him ‘boy’. This thoughtless comment of Thullanandā made Mahākassapa feel sorry for her and he made it clear that he acknowledged no other Teacher save the Buddha (S. II. p. 219). Thus it is seen that Mahākassapa was not popular among the nuns.

Mahākassapa loved Elder Ānanda dearly. According to the Tibetan sources, the Buddha shortly before his death had told Ānanda that he must turn to the Bhikkhu Mahākassapa as to the head of the order (Rockhill. op. cit. p. 150). When Elder Ānanda attained arahantship in time to attend the first council which consisted of five hundred arahants, Mahākassapa was delighted and when Ānanda appeared before the arahants, it was Mahākassapa who led the applause (DA. I. p. 10). But he was more concerned about the preservation of the good name of the Order and once he blamed Elder Ānanda for admitting into the order new members incapable of observing discipline, and tour about with young brethren who have the gates of their senses unguarded, who are without moderation in their food, who are not devoted to vigils. He said “Corn-trampler me thinks art thou! Despoiler of families... thy following, friend Ānanda, is breaking up. Thy youngsters, friend, are melting away! This boy does not know his own measure.” (S. II. pp. 219). Elder Ānanda was annoyed at being called ‘boy’ and his protest was ‘Surely my head is growing grey hairs, your reverence’ and expressed his displeasure at being called ‘boy’. According to Buddhaghosa, this incident took place after the passing away of the Buddha and when Ānanda was a new arahant. It is possible that the two nuns mentioned-Thullatissā and Thullanandā Championed Elder Ānanda against Mahākassapa (S. op. cit; Mhv, III, pp. 48-49).

Rockhill mentions, that according to the Tibetan sources when the first council was to be held Kassapa excluded Ānanda from the assembly and when Elder Ānanda wanted some explanation from Kassapa for his action, Kassapa charged Ānanda for having done wrong to the congregation (for charges against Ānanda see ĀNANDA). And if the samgha was willing Mahākassapa agreed to appoint venerable Ānanda to bring water to the assembly. Ānanda had no other alternative as he was instructed by the Buddha before his passing away to “be patient and do as ...... he (i.e. Mahākassapa) shall tell thee.” When the work of the first council was over Mahākassapa said to Ānanda “The Blessed One committed to my care the keeping of the doctrine and passed away. Now, when I shall have passed away, thou shalt take care of the doctrine” (Rockhill. op. cit. pp. 149-61).

Venerable Sāriputta had high regards for Mahākassapa. The Kassapasamuyutta records two discussions they had when they were staying at Benares, at Isipatana in the Deer Park. On one occasion Sāriputta consulted Mahākassapa on the necessity of zeal (anatāpi) and ardour (anottāpi) in the attainment of Nibbana (S. II. pp. 195-97) and on the other occasion the subject of discussion was the existence of Tathāgata after death (hoti tathāgato parammaranā S. II. pp. 222-23). Mahākassapa with suitable explanations cleared Sāriputta’s doubts. On the other hand Kassapa also had regards for Sāriputta in that when
Mahākassapa saw the great honour paid to Sāriputta by the devas he rejoiced greatly and broke forth into song (Thag. vv. 1082-85).

Mahākassapa took a serious note of the growing laxity among members of the order with regard to the observance of rules, even in the very lifetime of the Buddha and the falling off in the number of those attaining arahantship. He asked the Buddha as to why formerly there were both fewer precepts and more brethren were established as arahants, and now-a-days there are more precepts and fewer brethren are established as arahants, and consulted the Buddha as to the remedy available. (S. II. pp. 223-25). Since he was concerned about the discipline of the Saṃgha, at the first council, Mahākassapa opposed to do away with minor rules of the order for it would lead to slackness among the monks and contempt from the laity (V. II. p. 287). Mahākassapa led an exemplary life of a monk. He used to dwell in the forest, subsisting solely on alms, wearing rag robes, always content with little, holding himself aloof from society, ever strenuous and energetic. It was his belief that these observances are a must for a monk. Once at Rajagaha in the Bamboo-Grove, the Buddha requested Mahākassapa to give up his cherished practices—i.e. his coarse-rag-robe etc. and dwell near the Buddha, since the Buddha felt that Mahākassapa was too old to continue the same practices. Then Mahākassapa begged to be excused, and when questioned by the Buddha as to the advantage that Kassapa had discerned by practicing that course for many a day lived on this wise—discerning mine own present happiness, and advantages, lord, have I for many a day lived on this wise—discerning mine own present happiness, and advantages, lord, have I for many a day lived on this wise—discerning mine own present happiness, and advantages, lord, have I for many a day lived on this wise. The Buddha praised him with the words "Well said Kassapa .... For the good of many, truly, hast thou thus practised, for the happiness of many folk, out of compassion for the world...." and permitted him to continue his practices (S. II. pp. 202-203). The Theragāthā contain forty verses whose authorship is attributed to Mahākassapa and the verses contain his sentiments (Thag. vv. 1051-1090). Once when Mahākassapa was at Pipphaligūhā, he stared suffering from a dire sickness. The Buddha visited him and inquired about his health. When Mahākassapa complained of his sickness the Buddha reminded him of the seven bojjhaṅgas which he had practised. Then Mahākassapa had the knowledge that he had profited by the Buddha’s teaching. This thought calmed his blood and purified his system and the sickness fell away from him 'like a drop of water from a lotus leaf' (S. V. pp. 79-80; SA. III. 128). The Dhammapadaṭṭhakathā records a story according to which a goddess wanted to wait upon him as she was benefited in her former birth by Mahākassapa. But he refused permission as it might lead to a bad example (DhpA. III. pp. 6-9).

Owing to his great saintliness, even the gods vied with each other to give alms to Kassapa. Once when he had risen from a trance lasting seven days, fivehundred nymphs, wives of Sakka, appeared before him, but, snapping his fingers, he asked them to depart, saying that he bestowed his favours only on the poor. When Sakka heard of this, he disguised himself as a weaver worn with age, and accompanied by Sujātā transformed into an old woman who appeared in a weaver’s hut along the lane where kassapa was begging. The ruse succeeded and Kassapa accepted their alms; but soon Mahākassapa discovered the truth and chided Sakka. Sakka begged pardon and on being assured that in spite of his deception the almsgiving would bring him merit, he flew into the air shouting ‘Aho dānām, parama dānām, Kassa pepatīṭhitam’. The Buddha heard his cry and sympathised with Sakka in his great joy (DhA. I, pp. 423-430). But on one occasion so great was the importunity with which the monks of Alavi had wearied the people, that even Mahākassapa failed to get alms from them (J. II. 282). According to the Visuddhimagga, once when Mahākassapa was begging for alms in Rajagaha, in the company of the Buddha, on a festive day, fivehundred maidens were going to the festival carrying cakes. They saw the Buddha but passed him by, and gave their cakes to Kassapa. The Elder made all the cakes fill just his single bowl and offered it to the Buddha (Visuddhimagga. Vol. II. p. 403).

The story of Kālavilangika is an example of Mahākassapa’s compassion for the poor. Once after a seven days’ trance, he went to the house of Kālavilanga and received alms from his wife, which he gave to the Buddha for their greater benefit. The Buddha took a portion of this and gave the rest to fivehundred monks and said that as a result Kālavilangika would become a settihi within seven days (MA. II. p. 812).

Mahākassapa lived to be very old and when he died, he had not lain on a bed for one hundred and twenty years. He was one hundred and twenty years old at the time of the first Council (SA. II. p. 130). According to Northern sources Kassapa did not die; he dwells in the Kukkuṭagiri mountain wrapt in
MAHĀKASSAPA

samādhī awaiting the arrival of Metteyya Buddha (Beal, II p. 142). A tooth of Mahākassapa was enshrined in the Bhīmatitha vihāra in Ceylon (cv. Lxxxv. 81).

The Tibetan sources mention that when the work of the first council was over, Kassapa thought that he had done all that was necessary for the preservation of the doctrine for future generations, his time had come to pass away. So he entreated the care of the doctrine to Ananda and worshipped all the objects of worship that were available of the Buddha and wanted to see King Ajātasatru. Since the latter was asleep Mahākassapa climbed the southern peak of Vulture's Peak mountain and having arranged a grass mat in the centre of the three peaks he went through the marvelous manifestations customary on such occasions and entered parinivāna. When Ajātasatru heard of Mahākassapa’s passing away, he was grieved and climbed the mountain and built a caitya on the spot of Kassapa’s passing away and honoured it (Rockhill, op. cit. pp. 161-62). According to some scholars Mahākassapa died after twenty years of the Buddha’s passing away (Hsiun Tsang). Mahākassapa is several times referred to in the Jātakas. He was the father in the Gagga Jātaka (J. II p. 17), the brāhman in the Kurudhamma Jātaka (op. cit. p. 381); one of the devaputtas in the Kakāru Jātaka (J. III p. 90), Menḍissara in the Indriyya (op. cit. p. 469) and Sarabhaṅga Jātakas (J. V. p. 151); the teacher in the Yakusalamanāva Jātaka (J. III p. 514), the teacher in the Tittira Jātaka (op. cit. p. 545), Mātali in the Bilārakosiya Jātaka (J. IV p. 69), one of the seven brothers in the Bhissa Jātaka (op. cit. p. 314), the bear in the Paścuṇposatha Jātaka (op. cit. p. 332), the chaplain in the Hathhipāla Jātaka (op. cit. 491), Vidhura in the Sambhava Jātaka (J. V. p. 67), the senior ascetic in the Saṅkhapāla Jātaka (op. cit. p. 177), Kulavaddhama Śethi in the Cullasutasa Jātaka (op. cit. 192), Suriya in the Suddhabhojana Jātaka (op. cit. p. 412), the tree-spirit in the Mahāsutasama Jātaka (op. cit. p. 511), the father in the Sāma Jātaka (J. VI p. 95), and Śūra-vānagotta in the Khāṇḍahīla Jātaka (op. cit. p. 157). DPPN.

MAHĀMĀNGALA SUTTA See MAṅGALA SUTTA

MAHĀMĀTI, the bodhisatta, who is given as the chief interlocutor in the Lānkāvatāra sūtra. He is there called the bodhisatta the great-minded (bodhisattvah mahāsattvah) and is the leader of the large company of the learned and wise men who were surrounding the Buddha at the time the sūtra was preached. He is the only one who interrogates the Buddha and hence he becomes the only one to whom the Buddha addresses himself in this sūtra.

When Rāvaṇa invited the Buddha to preach in Lāṅkā, Mahāmāti was the only other person that was personally requested to accept the invitation. Once the invitation was accepted, and the Buddha and the retinue were conducted to the city, Mahāmāti was specially selected to interrogate the Buddha as he was the best speaker (vadatām varam; Lāṅka. I, V. 28) among those who were present and hence the most qualified to undertake the responsibility. He is described as a great debater and a powerful yogī, (vādinām tvam mahāvādī yoginām yogavāhakah; ibid. v. 30) and also as a highly proficient person (visārada.)

Prior to the preaching of the sūtra proper, the Buddha is made to laugh and this laughter becomes an occasion for Mahāmāti to begin his interrogation, of the Buddha. The Buddha praises him for accepting the responsible task of interrogating him on deep philosophical problems. Subsequently (Ch. II) before putting his long series of questions he introduces himself to the Buddha as a person who is well-versed in the Mahāyāna (Mahāyāna-gatīṃ gatah; II, v. 9). Henceforward the dialogue continues and no personal information about him is given. D.T. Suzuki, in the introduction to his translation of the Lāṅkāvatāra-sūtra, (pp.XV-XVI) makes the following observations about Mahāmāti: “The Bodhisattvas, who have gone up successively all the rungs of the Bhūmi ladder, and who are thus capable of extending their help over us, are really our own brethren. Therefore Mahāmāti of the Lāṅkā opens his questions generally with this “I and other Bodhisattvas etc.’ Mahāmāti is our mouthpiece voicing our wants and aspirations.” It is sometimes supposed that Mahāmāti of the Lāṅkāvatāra is none other than the Well-Known Mahāyāna bodhisattva Mañjuśrī (See Charles Elliot, Hinduism and Buddhism, II, p.54).
It is possible that Mahamati was a learned man in pre-Vijayan Sri Lanka who had met the Buddha when he paid his first visit to the country. This surmise becomes possible when one considers the references to king Rāvana, Lankāpura and the Malaya mountain in the Lākhāvatāra-sūtra. God Sumana of Samantakūṭa may be compared with Mahāmati.

A.G.S. Kariawasam

MAHĀMĀYĀ. Many legends have gathered round the birth of the Bodhisatta in his final birth and it is mainly in those accounts that references are found to Mahā Māyā Devi. In whatever text they are found, whether in the Pali canon or in the Sarvāstivāda Sanskrit accounts such as the Lalita vistara and the Lokottaravāda Sanskrit work, the legends bear a striking resemblance to each other. The Lalita vistara and Mahāvastu have far more embellishment though they conform to the same framework found in the Pali texts with very few differences. However, in the Sanskrit texts mentioned the embellishment seems to allow a tendency towards the Lokottaravāda dogma of the Buddha being supramundane, whereas the Pali canon emphasises a natural interpretation of the legends concerning the Bodhisatta's birth.

What is underscored in the Pali canon, then, is the human nature of the Bodhisatta's birth. That is to say, he was born naturally from a human father, king Suddhodana of Kapilavatthu, and a human mother, queen Mahā Māyā. It is mentioned in all the accounts that the Buddha's previous birth had been in the Tusita heaven from where he descended into his mother's womb in the fullness of time. The Sonandaṇḍa suttā explicitly states that the Buddha was born from the union of his father and mother:

"Samaṇo khalu bho Gotamo ubhato sujāto mātīto ca pītīto ca sansuddha - gahaniko yāva sattamā pitāmaha yugā akkhito anupakkuṭṭho Jātivādena"

That is to say, he was born of pure descent on both sides, through the mother and through the father down through seven generations with no slur put upon him and no reproach in respect of birth.

The Mahāpādāna suttanta states:

"Bhagavato mārīsa suddhodana rājā pitā, Māyā devi mātā janetti, Kapilavatthu-nagaram rājadhānī."

That is, the father of the Buddha was king Suddhodana and was given birth to by Māyā devi in the royal city of Kapilavatthu.

Again, in Apadāna ii Dhammaruci therō's biographical verses relate the story that the previous Buddha Dipankara told Sumedha that in the same cycle of time (kappa) Buddha Gotama will come into being and that he will be born from his mother Māyā Devi and father, Suddhodana:

"Imassa janikā mātā Māyā nāma bhavissati pitā Suddhodano nāma, ayam hessati Gotamo."

In Apadāna ii4 Mahāpajāpati Gotarī's verses state that her father was Afijanasakko and her mother Sulakkhānā and that she married Suddhodana in Kapilavatthu. Mahāpajāpati Gotarī was queen Māyā's younger sister. Both sisters married king Suddhodana.

Thera Kāludāyin's verses5 in the Theragāthā also confirm the fact of the Buddha's natural birth from a father and a mother:

"Surely a hero lifts to lustrous purity Seven generations past wherever he is born and so methinks can He, the vastly wise, the god of gods. In thee is born in very truth a seer. Suddhodana is named the mighty prophet's sire, And mother of the Buddha was (our queen) Māyā. She, having borne the Wisdom-being in her womb, found, when the body died, delight in Tusita. She, Gotamī, dying on earth, deceasing hence, now lives in heavenly joys attended by those gods."

2. Mahāpādāna Suttaṇā, D. II, p.52

4. Ibid, p. 538 vs. 115

Mrs. Rhys Davids has given a very free translation of the word ‘Mahesi’ (Mahaisi from Sk. maharsi) which is used as a mere epithet of the Buddha in Buddhist poetic literature. It does not have the usual Biblical connotation of ‘prophet’.

The union of the Buddha’s parents is recognized explicitly in the Tibetan Vinaya also. The Avidurenidāna or second part of the introduction to the book of Jātaka stories, which is a canonical book belonging to the Khuddaka Nikāya, states that the Bodhisatta while in the Tusita heaven surveyed the world, looking for a suitable place in which to take a human birth. He then selected the Middle country (Ajjhima Desa) in Jambudīpa (India) within the Khattiya clan in Kapilavatthu and king Suddhodana to be his father:

"Suddhodano nāma rājā me pita bhavissaiiti ..."

Further, it states concerning the mother whom he saw and selected,

"Tato mātaram vilokento Buddhāmātā nāma lolā surādhuttā na hoti, kappasatasahasam pana pūritapārami, jātito paṭṭhāya akhaṇḍapaṇcāsilā yeva hoti, ayaṁ ca Mahāmāyā nāma devi edisā, ayaṁ ca me mātā bhavissati pan asa ayum" ti dasanaṁ upari sattadasāsāni passi."

He saw that his (future) mother was not fickle or heedless, not given to intoxicants and had been for a period of one hundred thousand cycles (kappa) of time developing qualities (suitable to be a mother of a Buddha which she had previously determined) and had established herself in observing an unbroken record of following the paṇcāsīla (five precepts) and that her name was queen MahāMayā. He also saw that the balance of her life span remaining was limited to ten months and seven days.

The account goes on to relate that on the full moon day of Uttarāṣaḷa Nakkhatta, after the seven day Āsana festival in which queen Mahāmāyā participated, she had a perfumed bath, spent four hundred thousand on a generous almsgiving, partook of a delicious meal of fine food, then took upon herself the Uposatha vows of chastity and kept the fast. While sleeping she had a dream. The four Regent Gods of the four Quarters lifted her in her bed and took her to Himavā (Himalayas) and placed her under a Śalā tree on Manosilatā mountain. Then their wives came and took her to Anotatta lake, bathed her to wash away all human impurities from her, clad her in divine robes, anointed her with scented perfume, decked her with divine flowers and led her into a golden palace situated on a silver mountain and laid her down on a divine couch. Then the Bodhisatta in the form of a white elephant, bearing a white lotus in its gleaming silver trunk, trumpeting all the while, circumambulated her bed three times and striking her right side, entered her. Thus the Buddha’s conception took place in his mother’s womb. When she woke up, she told the king of her dream and he summoned several brahmins to interpret the dream. From that day of the conception, she was guarded by the Four Regent Gods and she had no desire for men. The child in her womb could be seen from outside. After ten months, she wished to return to her parents’ home at Devadaha but the way she broke journey at the Lumbini Grove and there, while holding on to the branch of a Śal tree, she was delivered of the Bodhisatta.

Another account in the Jātaka stories relates that Māyā resolved to be a mother of a Buddha during the time of Buddha Vipassi, ninety one cycles of time before she was born as Maya Devi. In that narrative it is said that a certain subking sent king Bandhuma a gift of a golden wreath worth a hundred thousand pieces of money with precious sandalwood. The king had two daughters and he gave the sandalwood to the elder and the golden wreath to the younger. Both wished to offer the gifts to the Master. The elder powdered the sandalwood and filling a golden box with the powder, reverently sprinkled the powder on Buddha Vipassi’s golden hued body and scattered the balance over the floor of his cell, making the wish at the same time that she would in a future birth, be the mother of a Buddha such as he.

As a consequence of her deed, she was born in the Tavatimsa heaven and at the close of her life span was granted ten boons by God Sakka. She requested that

---

6. Rockhill, p. 15, quoted more in detail by Foucaux, Rgya tsh'er pa, Vol. 2. P. xxi
She be born with dark eyes, dark eyebrows, dark hair, to be named Phusati, to have a son, to keep a slim figure, to have firm breasts, soft skin and to save the condemned. She was then born as Phusati, the mother of the Bodhisatta, king Vessantara. She was born as Māyā in her following birth.

In the Acchāriyabhūtadhamma sutta the Buddha requests Ven. Ananda to repeat to a gathering of bhikkhus what he had related to him earlier. An extract of the sutta is given below:

"Face to face with the Lord, revered Sir, have I heard, face to face have I learnt: "When, Ānanda, the Bodhisatta is entering his mother's womb, the Bodhisatta's mother is virtuous through her own nature, restrained from onslaught on creatures, restrained from taking what has not been given, restrained from wrong enjoyment of pleasures of the senses, restrained from lying speech, restrained from the occasions of slothfulness resulting from (drinking) strong intoxicants. And inasmuch, revered sir,... I regard this too as a wonder, a marvellous quality of the Lord's.

"Face to face with the Lord, revered Sir, have I heard, face to face have I learnt: "When, Ānanda, the Bodhisatta is entering his mother's womb, no desire connected with the strands of sensual pleasures arises in the Bodhisatta's mother towards men, and the Bodhisatta's mother is not to be transgressed against by any man of infatuated thoughts." And inasmuch revered sir,... I regard this too as a wonder, a marvellous quality of the Lord's.

"Face to face with the Lord, revered Sir, have I heard, face to face have I learnt: "When, Ānanda, the Bodhisatta is entering his mother's womb, the Bodhisatta's mother is enjoying the five strands of sensual pleasures and she diverts herself, endowed with and possessed of the five strands of sensual pleasures." And inasmuch, revered sir,... I regard this too as a wonder, a marvellous quality of the Lord's.

"Face to face with the Lord, revered Sir, have I heard, face to face have I learnt: "When the Bodhisatta is entering his mother's womb, no ailment whatever arises in the Bodhisatta's mother, the Bodhisatta's mother is at ease, her body not tired; and within her womb the Bodhisatta's mother sees the Bodhisatta complete in all his limbs, his sense-organs perfect. As, Ānanda, an emerald jewel of lovely water and well cut into eight facets might be strung on a thread - a deep green or yellow or red or white or an orange-coloured thread and as a man with vision, having taken it in his hand, might reflect: "This is an emerald jewel of lovely water, it is well cut into eight facets and strung on a thread - a deep green--or an orange-coloured thread", even so, Ānanda, when the Bodhisatta is entering his mother's womb... the Bodhisatta's mother sees the Bodhisatta, complete in all his limbs, his sense-organs perfect. "And inasmuch, revered sir,... I regard this too as a wonder, a marvellous quality of the Lord's.

"Face to face with the Lord, revered Sir, have I heard, face to face have I learnt: "While, Ānanda, other women carry the child in their womb for nine or ten months before they give birth, the Bodhisatta's mother does not give birth to the Bodhisatta in this way. The Bodhisatta's mother carries the Bodhisatta in her womb for exactly ten months before she gives birth." And inasmuch, revered sir,... I regard this too as a wonder, a marvellous quality of the Lord's.

"Face to face with the Lord, revered Sir, have I heard, face to face have I learnt: "While, Ānanda, other women give birth sitting or lying down, the Bodhisatta's mother does not give birth to the Bodhisatta in this way. The Bodhisatta's mother gives birth to the Bodhisatta while she is standing."

According to the Dictionary of Pali Proper Names Mahāmāyā's father was the Sakyan Añjana of Devadaha, son of Devadaha akka and her mother was Yasodharā, daughter of Jayasena (Mhv ii 17ff). Daṇḍapāṇi and Suppabuddha were her brothers and Mahāpajāpati, her sister. Elsewhere, her father is called Mahā-Suppabuddha (Thig. A.141) while Apadānā II 538

9. M. III pp. 166-167
gives her mother's name as Sulakkhanā. Both Mahāmāyā and Mahāpajāpatī were given in marriage to king Suddhodana. The Buddha, it is said, was born to Mahāmāyā when she was between 40-50 years of age. (Vibha. A. 278)

The Buddha is said to have visited Tāvatimsa heaven immediately after he performed the twin miracle at the foot of the Gandamba tree, on the full moon day of Asalhā, and there, during the three months of the rainy season, he stayed preaching the Abhidhamma Pāṭapaka to his mother, Mayadevaputta, who came there to listen to him, seated on Sakka's pandukambasilāsana at the foot of the Pāriccaññā tree. It is said that during this time, at certain intervals, the Buddha would return to earth, leaving a seated image of himself in Tāvatimsa heaven to continue the preaching while he attended to his bodily needs, begging alms in Utrākuru and eating his food on the banks of Anotatta lake where Sāriputta waited on him and learnt of what he had been preaching to the devas. (Dha. A. i.15; Dh.A. III 216 f.)

In the Mahāparinibbāna sutta11 the Buddha explains to Ananda that there are eight causes for earthquakes. One is when a Bodhisatta quits his temporary form in the heaven of delight and descends into his mother's womb, and another is when he quits his mother's womb and is born into the world. In a note to the first of these statements, Rhys Davids comments that there are many curious legends concerning the Bodhisatta's voluntary incarnation and that the earth quaking and the legend regarding the elephant are repeated in identical terms in the Buddhist birth stories. He mentions that it is a hal lowsael sun myth by which Buddhist converts embellished the life story of the Teacher.

Mahāmāyā is mentioned in several Jātaka stories as the mother of the Bodhisatta, such as the Aññacitta, Katṭhāhāri, Kurudhamma, Kosambi, Kāṇḍhahāla, Dāsaratha, Bandhanāgāra, Mātauposaka, Vessantara, Susima, Somanassa and the Hatthipāla. In the Vessantara Jātaka, Māya as Phusasti was the daughter of king Kīki and became the chief queen of the Sivi king, Sañjaya.

In the introduction to the Sanskrit work, Mahāvastu, the translator12 comments that the Mahāvastu is a collection of practically all the history, quasi-history and legends (Avadāna) relating to the Buddha that passed current in the long period during which it was compiled. It consists of compositions of several authors and it is conjectured that these compositions date from the second century B.C. to the third century and fourth century A.D. One finds influences from the Pali texts in it as well as the subsequent Mahāyāna. In these highly descriptive accounts there appears to be a tendency towards the Lokottaravādīn dogma of the Buddha being supramundane. Excerpts from the Mahāvastu quoted below13 illustrate this point.

"The Bodhisattva considered the matter of the place in which he should be reborn. "The king Suddhodana", thought he, "is worthy to be my father." He then sought a mother who should be gracious, of good birth, pure of body, tender of passion, and short-lived, of whose span of life there remained only seven nights and ten months. "The mothers of all Bodhisattvas die on the last of the seven days following their delivery of the Supreme of Men. Now what is the reason why mothers of an Omniscient One should die so soon after giving birth to the Best of Men?"

"While he is still dwelling in Tusita the Bodhisattva makes this his care as he searches for a mother whose karma is good. "I will descend, "says he, "into the womb of a woman who has only seven nights and ten months of her life remaining. See PLATE XLVIII.

"And why so? "Because," says he, "it is not fitting that she who bears a Peerless One like me should afterwards indulge in love."

"For if the mother of a Sugata should indulge in the pleasures of love, the hosts of devas would say that the king was violating his duty."

"The Exalted One, indeed, at all times proclaims the depravity of sensual desires. Should then the mother of the Saviour of the world indulge in the pleasures of sense?"

"(To take an illustration from) the Jewel-casked which are found in the palaces of princes the Best of Men is the jewel, his mother the casket."
Although this account does not ascribe parthenogenesis to the Bodhisatta’s birth, the beginnings of a Buddhological trend is evident in it.

The account goes on:

"While he seeks a mother who was to be short-lived on earth, the Bodhisatta sees in Kapilavastu the chief queen of Suddhodana. And she was gracious, of good birth, pure of body, tender of passion, and short-lived; for of the span of her life only seven nights and ten months remained. Then the Bodhisatta thought to himself, “She is worthy to be my mother...."

"...Then Māyā like the consort of an immortal, rose up from her lovely couch and said to the king just as the sun had set, "I will cultivate harmlessness towards living things, and the chaste life. I will abstain from theft, intoxication and frivolous speech.

"I will, my lord, refrain from unkindly speech and from slander. I will, O king, refrain from abusive speech. This is my resolve.

"I will not nurse envy of the pleasures of others, nor cause injury to living things. And I will abjure false beliefs.

"I will, O king, follow these eleven rules of moral conduct. All this night has this resolve been stirring in me.

"Do not then, I pray you, O king, desire me with thoughts of sensual delights. See to it that you be guiltless of offence against me who would observe chastity."

"The king replied, "I shall have all your wishes fulfilled. Be at ease, you who have entered upon a noble life. I and my whole realm are at your command."

"... Lo, I depart" So did the Exalted One speak out and utter the happy word. And at that very moment the conqueror’s mother saw in a dream him who had won maturity of fruition, entering her body in the form of a noble elephant, light of step, flawless of limb, gleaming like snow-white silver, with six tusks, a gracefully waving trunk and a crimson head."

"Bodhisattvas do not descend into their mother's womb during the dark fortnight, but on the night of the full moon in the month Pausa. Bodhisattvas enter the womb of a mother who observes the fasts, who outstanding among women, who is Joyful, distinguished, holding no intercourse with what is mean, who is gracious, pure of body and tender of passion, is of good birth and family, comely, beautiful, renowned, tall and well-proportioned and accomplished, and who is in the prime of life, learned, wise, mindful, self-possessed, it all ways right minded and perfect - the very best of women."

The account also mentions the following:

"Again, a Bodhisattva's mother is not delivered as she lies or sits down, as other women are, but in a standing position. And the Bodhisatta, mindful and thoughtful, issues from his mother's right side without doing her any harm."

This last statement does not occur in the Pali texts which is significant. There is a reluctance in the Sanskrit accounts to allow the Bodhisatta to be born in the normal way for the same account goes on,

"His body is untouched by impurities of the womb, even like the exquisite lotus that is born in the mud of pools. Beautiful as the newly risen sun he excels the immortals in Brahma's heaven."

Further on it is stated that as soon as the Bodhisatta is born he takes seven strides over the earth, surveying the regions and laughs a loud laugh because it is his birth.

There is a parallel in the Rgveda concerning the birth of God Indra who also contemplates emerging from his mother's side and not from the normal passage which he considers not good. After he is born, he takes seven strides and proclaims he is chief among all. The event of the Bodhisatta's birth therefore, seems to have been 'brahmanized' and overlaid with embellishments from legends current in the oral tradition.

Dr. P.L. Vaidya suggests that Lalita Vistara is a recast of the old ballads found in the orthodox Sthaviravāda Pali texts but at the same time admits the possibility that both the Pali and the Sanskrit accounts could have originated from an earlier common source, namely, the oral tradition.
An extract is given below from the *Lalita Vistara* which illustrates the highly ornate embellishments which are absent in the Pali canon.

"......The wife of Suddhodan was the daughter of Suppabuddha of the Sakya clan, the young and fresh, endowed with youth and beauty, exceedingly charming, pleasant as a painted figure, adorned in all ways like a celestial maiden, devoid of all impurities of a woman, not harsh in truthful speech, not unkind, not prattling, of very pleasant speech, devoid of all hatred, conceit, pride and arrogance....endowed with generosity, virtuous, satisfied with her husband, chaste, with a mind not inclined towards other men, well formed head, ears and nose, having dark hair similar to the colour of a bee, with a pleasing fore-head, with lovely eyebrows and face, not wrinkled with frowns, with a smiling face, of measured speech, of refined speech, receiver of respect, straight and not deceitful, not crafty, not deluding others, (amāyā) not fickle, not vacillating, not quarrelsome. of unscattered speech, of little rāga, dosa and moha, endowed with patience and good character.... with some, supple limbs, with a touch as soft as that of 'kakacincika' with eyes as pure as the petals of a fresh blue lotus, with a pink, erect nose, well formed limbs, extremely well-disciplined... virtuous, with lips similar to the colour of 'bimba' fruits, of pleasant appearance, having a well shaped neck, adorned with a good and pure mind, extremely good deportment, orderly, pure bred.....shanks like that of an antelope, hands and feet like the colour of lac, pleasing to the eyes of the world, with unimpaired faculties, of pleasant sight, exclusive jewel among womankind. like the reflection (shadow) of an illusion created by a magician, a symbol of an illusion (Māyā)....."

It is clear that the accounts both Sanskrit and Pali represent Mahāmāyā as the epitome of feminine beauty, chastity and goodness, conforming to the standards that were present in the Indian tradition. Even the fact that she enjoyed the five strands of sensal pleasure is not lost sight of but emphasised. She was a woman moulded in the Indian tradition which upheld the ideals of *artha, kāma* and *dharma*.

The women who step out of the Pali Canon after Mahāmāya exhibit Buddhism's influence, that of giving up the bonds of *kāma* and attachment. The difference is seen in a marked manner between Mahāmāya on the one hand and Mahāpajapāti Gotamī on the other though they both fulfilled their roles as mothers, one nourishing the child in the womb not only physically but by providing a perfectly wholesome environ ment for the developing embryo and the other nurturing the Bodhisatta after birth both physically and with tenderness. The difference in the two is seen in that Mahāmāya after the break up of her body attained the bliss of heaven but Mahāpajapāti Gotamī, who as the Buddha's foster mother came under the direct influence of the Buddha's teaching, ended up not in heaven but in the saṁhitaship.

_Suvimalee Karunaratna_

**MAHĀMEGHA VANA**

The park situated to the south of Anuradhapura in Sri Lanka which was laid out by king Muṭasiva (307-247 B.C) This park was called Mahāmeghavana, because, at the time the land was chosen for the park, a great cloud (mahā megha) was gathering at an unusual time which subsequently poured down a torrential shower of rain (*Mhv.* chapter XI 2f). Mahāmeghavana has been considered as a sacred park, because, all the four Buddhas of this *kalpa* (aeon) are said to have visited this park during their life time (*Mhv.* ch. xv).

In the time of Kākusanda Buddha the Mahāmeghavana was known as Mahatīthavana; in the time of Konāgamana Buddha it was known as Mahanomava.; in the time of kassapa Buddha it was known as Mahāgāgaravana. All the three Buddhas have caused the planting of branches of thier bodhi trees on the same spot in the Mahāmeghavana, where the southern branch of the bodhi tree in India, under which the Buddha Gotama attained Enlightenment and

which was brought to Sri Lanka by Arahat Sanghamittā theri in the 3rd century B.C., was planted. Mahāvamsa records (ch. 1) that the Buddha in his Third visit to Sri Lankan in the eighth year of his Enlightenment went to the Mahāmeghana and consecrated several spots in it, for the Buddha foresaw that very important religious edifices in his dispensation would be erected on those spots in the course of history. After his demise.

Arahat Mahinda theri who came to Sri Lanka during the reign of king Devānampiyaṭṭhasīṇa was invited by the king to reside in the Mahāmeghana, as the park was neither too far, nor too near to the city of Anuradhapura. The theri accepted the invitation and lived there until his demise. The place where the theri lived is presently known as the Nivatta Cetiya.

The day after Arahat Mahinda Therī came to reside in the Mahāmeghana the king inquired from the theri whether it was suitable for bhikkhus to accept ārāmas (monasteries) as their residences, and the theri intimated to the king how the Buddha approved of the acceptation of ārāmas by the bhikkhus, on the occasion of accepting the Veluvanārāma offered by king Bimbisāra to the bhikkhusāṅgha (Mhv ch xv). King Devanampiyaṭṭhasīṇa thereupon poured water from the ceremonial pot (bhikka kāra) on the hands of the theri and offered the Mahāmeghana to the Mahāsaṅgha (order of monks). It is said that the earth quaked at this moment signifying the firm establishment of the Buddhāsāna in Sri Lanka. The king caused to be erected an ārāma in the park for the monks and named it Mahāmeghanārāma which gradually developed into a great monastery complex by name Mahāvihāra (q.v.) which functioned as the pivot of Theravāda Buddhism in Sri Lanka, for several centuries.

The first important Buddhist shrine to come up in the Mahāmeghana was the Sri Mahābodhi (q.v.), brought to Sri Lanka by Arahat Sanghamittā theri who came to Sri Lanka several months after the arrival of Arahat Mahinda theri. The Thūpārāma (q.v.), the first Buddhist Dāgāba to be erected in Sri Lanka after the official introduction of Buddhism by Arahat Mahinda theri, was built by King Devanampiyaṭṭhasīṇa in the Mahāmeghana, enshrining the collar-bone of the Buddha. In subsequent times many religious shrines and buildings were put up in the Mahāmeghana. The Mahāvamsa (Ch. XV.) gives a list of the chief spots connected with Buddhism which came into existence there. Chief among these are the thirty-two mālakas, the Catusśāla, the Mahāthūpa (q.v.) the Lohāpāsāda (q.v.) and various parivenas (educational institutes) connected with Arahat Mahinda theri: Sunhāta, Dīhacākamana, Phalaggā, Therapassaya, Marugana and Dīhasandasenāpati. In later times the Ablhayagirivihāra (q.v.) and the Jetavanārāma (q.v.) were also erected there (DPPN).

D. Saddhasena

MAHĀ-MOGGALLĀNA

Var. MOGGALLĀNA, Skt. MAHĀ-MAUDGALYAYĀNA, one of the two chief disciples (aggasāvaka) of the Buddha. The Pali commentators and later literary works make him the second (infra) of the two chief disciples. He was born in a brahmin family in Kolitāgama half a yojana away from Rājagaha (Mhv. III. p. 56). His mother was a brahmin woman named Moggalī (var. Moggallānī). His father was the chief householder of the village named Kolīta. In his young days he was called Kolīta, a name derived from the village in which he was born, and it has been used in the Mahāvastu as his personal name even after his ordination (see. Mhv. p. 5, 27 etc.). The Dhammapadāṭṭhakatha, the Vinavapīṭaka, the Mahāvastu, and some of the Sinhalese classical literary works mostly written as commentaries on Pali literary works, give the early life history, the ordination and the elevation to the unique position of chief disciple, of both Sāriputta (s. v.) and Mahā Moggallāna. The account of Mahā Moggallāna’s life is closely connected with that of Sāriputta and it appears that they were almost inseparable twins (infra). He was born on the same day as Sāriputta. Their families had maintained an unbroken friendship for seven generations and the two children became friends from their childhood. The Mahāvastu adds that the two of them were co-pupils. studying Vedic mantras under the same guru. After completing their education Upatissa (i.e., personal name of Sāriputta) went to his native place called Nālandā while Kolītā went to his village. But the two of them continued to visit each other. Once at Rājagaha the two friends went, on a festive day, to see a mime play called the Mountain-top Assembly (Skt. girīyagrasamāja, Pali giraggasamajja). But they could not enjoy the mime-play, and both of them realised impermanence of things and decided to go forth on renunciation. They first became wanderers (paribbājaka) under Sañjīyā, a reputed sophist at the time. They wandered all over Jambudīpa meeting learned men and discussing with them in search of inner satisfaction. They separated for a short period each giving his word to the other that the first to find ‘ambrosia’ (amata) should tell the other of his discov-
Sāriputta wandering about in Rājagaha, met Assaji (s. v.) one of the pañca-vaggiya monks, and was converted by him to Buddhism and became a sotāpanna. Soon he remembered his bosom friend Moggallāna and went to him with his new experience. He repeated the stanza (gāthā) he heard from Assaji:

 ‘Of all phenomena sprung of a cause
 The teacher the cause hath told;
 And he tells, too, how each shall come to its end,
 For such is the word of the sage.’

Moggallāna also became a sotāpanna when he heard the stanza from Sāriputta. The two of them wanted to visit the Buddha along with their teacher Saññājaya and his pupils, five hundred in number. When Saññājaya refused, Sāriputta and Moggallāna went with the five hundred pupils of Saññājaya and saw the Buddha at Veluvana. The Buddha preached to them and gave them ordination by the formula Come Monk! (ehi bhikkhu pabbajjā). All but Sāriputta and Moggallāna became arahants. Moggallāna went to the hamlet of Kallavāla (var. Kallavāla mutta) where on the seventh day after his ordination, drowsiness overcame him as he sat meditating. The Buddha saw this with his divine eye and appeared before him and exhorted him to be zealous, that same day he attained arahantship.

Sāriputta and Moggallāna were made the two chief disciples of the Buddha on the very day they entered the order. In the assembly of monks the Buddha announced, even before Sāriputta and Moggallāna entered the order, that he has assigned to them the place of chief disciples. The monks were offended that new comers should be shown such great honour. The accusation brought against the Buddha, was an opportunity to relate how those two had for a whole innumerable number of years strenuously exerted themselves to win this position under him. In the past they had made the first resolve in the time of the Anomadassi Buddha. Moggallāna and Sāriputta were then two householders named Sirivaṭṭha and Sarada. The latter gave away his riches and became an ascetic. The Buddha visited his hermitage and Sarada and his pupils showed him great honour. Anomadassi’s chief disciple, Nisabha, gave thanks and this induced Sarada to make a vow that he should become the chief disciple of some future Buddha. The Buddha Anomadassi foretold him that his wish would be fulfilled. Then Sarada went to his friend Sirivaṭṭha and announcing the Buddha’s prophecy, wanted Sirivaṭṭha to wish for the place of second disciple. On this advice Sirivaṭṭha acted promptly, made elaborate preparations and entertained the Buddha and his disciples for seven days and finally announced his wish to the Buddha who declared that his wish would be fulfilled. From that time the two friends in their subsequent births engaged in good deeds. (Vin. I. pp. 39-43; DhpA. I. pp. 73; AA. I. pp. 84, Ap. II. 31; SnA. I.).

From the above account it appears that nowhere has the Buddha mentioned that Elder Moggallāna as the second chief disciple. He referred to Sāriputta and Moggallāna as his two chief disciples and the commentators considering the fact that Sāriputta was the first of the two to be converted to Buddhism, and Moggallāna subsequently, has assigned for the latter the second place. Both of them enjoyed equal status. Though Sāriputta’s name precedes Moggallāna’s when both are mentioned jointly. When Moggallāna was elevated to the exalted position of a chief disciple the honorific title Mahā (Great) was prefixed to his name.

Sāriputta and Moggallāna were ideal disciples and the Buddha wanted the others to follow their example (S. II. p. 235; A. I. 85). In the Saccavibhaṅga sutta the Buddha has distinguished these two twin brethren thus. “Sāriputta is as she who brings forth and Moggallāna is as the nurse of what is brought forth; Sāriputta trains in the fruits of conversion, Moggallāna trains in the highest good. Sāriputta is able to teach and make plain the four noble truths, Moggallāna, teaches by his psychic power (iddhipātihi-riya).” The Anguttara nikāya mentions that the Buddha classed Mahā-Moggallāna as the chief among those of psychic powers (Etad aggam bhikkhave mama sāvakānaṃ bhikkhunāṃ iddhimantānaṃ yadidam Mahā Moggallāna, A. I. p. 23). Thus Maha Moggallāna’s pre-eminence lay in his possession of iddhi power. He could create a living shape innumerable times and could transfer himself into any shape at will. He claims to have all magic power at will (Thag. v. 1183). He is recorded as saying that he could crush mount Sineru like a kidney bean (DhpA. III. 212) and rolling the earth like a mat between his fingers, could make it rotate like a potter’s wheel or could place the earth on Sineru like an umbrella on its stand. It is said, that when, once, the Buddha and his monks failed to get alms in Veranā, Mahā-Moggallāna offered to turn the earth up-side down, so that the essence of the earth, which lay on the under surface, might serve as food. He also offered to open a way from Nalerupucimāna to Uttarākuru, for the monks to go there easily for alms; but the Buddha did not permit him to perform these
miracles (V. III. p. 7; VA. I. 182, DhpA. II. 153). But the Idhāpāda sutta of the Samyutta Nikāya mentions that the Buddha once requested Mahā-Moggallāna to give a good stirring to some monks who sat in the ground-floor of the terraced house of Migāra’s mother (Migāra-mātupāsāda) talking loosely and frivolously, regardless even of the fact that the Buddha was in the upper story. Then Moggallāna by concentrating on the element-of-water-device, contrived a feat of magic power and with his great toe shook and rattled and made the building quake and quake again till those monks were panic-stricken and their hair stood on ends. At this juncture the Buddha explains to the monks that by cultivating and making much of the four bases of psychic power that Moggallāna enjoys manifold forms of magic power (S. V. pp. 269-71; SnA. I. pp. 336-39). Once, when Moggallāna visited Sakka to find out if Sakka was profited by the teachings of the Buddha, Moggallāna found him far too proud and obsessed by the thought of his splendour. Then to humble Sakka’s pride, Moggallāna shook Vejayanta the Sakka’s palace, till Sakka’s hair stood on end with fright (M. I. p. 251). Once Moggallāna visited the Brahma world to help the Buddha to dispel the arrogance of Baka-brahmā. On this occasion Moggallāna himself questioned Baka-brahmā in solemn conclave in the Sudhamma hall in the Brahma world and made Baka confess that his earlier views were erroneous (M. I. pp. 326-31; Thag. v. 1198; ThagA. II. p. 185). He had visited the Brahma world several times and had conversations with Tissa Brahmā (A. III. p. 331; IV. p. 75. etc.). The Māratajjanīya sutta mentions that once Māra started worrying Moggallāna by entering into his belly, but Moggallāna ordered him out and explained to Māra how Moggallāna himself had once been a Māra named Dūṣī. His sister Kāli was the mother of the present Māra (M. I. p. 332-38).

Moggallāna’s greatest exhibition of iddhi power was the subjugation of the nāga named Nandopananda (Divy. p. 395). This combat has been dealt in detail in various commentaries. It is said that no other monk could have survived the ordeal, because no other was able to enter so rapidly into the fourth jhāna and this was the reason why the Buddha would give permission to no other monk but Moggallāna to bring the Nāga under control, (Thag A. II. pp. 188). The Dhammapadatthakathā also records another similar story where Moggallāna subjugated a Nāga who lived near the hermitage of Aggiddatta (DhpA. III, pp. 242). Moggallāna’s vision was par excellence. He could see without entering into any state of mind, petas and other spirits invisible to the naked eye (DhpA. II. p. 64; III. p. 60: 410, 479). The Samyxutti Nikāya mentions that once while in the company of Lakkhana, Moggallāna saw petas. He visited various worlds and brought back to the Buddha reports of their inhabitants. The Mahāvastu gives in detail the visits Moggallāna made to the Nirayas and to the deva worlds (Mhv. I. pp. 4-65). The Vimānavatthu also contains a collection of stories of such visits. Moggallāna’s visits to the deva-worlds like that of Tavatiṣāsa were always welcome to the devas (S. V. p. 366). It appears that from reports received from Moggallāna about inhabitants of other worlds the Buddha used to illustrate his sermons.

In wisdom Moggallāna was second only to Śāriputta. The Dhamma-padaṭṭhakathā mentions that these two could answer questions within the range of no other disciple of the Buddha (DhpA. III. p. 227). Like Mahākaccāna (s.v.) Moggallāna was a great preacher. The Buddha, once paid a compliment to Moggallāna’s power of preaching, the Buddha having preached himself to the Sakyans at Kapilavatthu, asked Moggallāna to deliver a sermon to the monks, as the Buddha was weary. Then Moggallāna preached to them on lusts and means of getting rid of them. At the end of the sermon the Buddha praised him warmly (S. V. p. 366). The Samyutta Nikāya contains several other eloquent sermons preached by Moggallāna on the jhānas. (S. V. pp. 262-69); and elsewhere on qualities that lead to true emancipation (A. V. p. 155). Sakka in company with numerous other gods used to pay visits to Moggallāna to hear him preach. The other devas like Candana, Suyāma, Santusita, Sunimmita and Vasavatthi also used to visit him to hear his sermons (S. IV. pp. 269-80). Moggallāna was consulted by Yācchagotta (S. IV. p. 391), and Vappā (A. II. p. 196) eager to learn from him the teachings of the Buddha. When the Buddha went to Tavatiṣāsa to preach the Abhidhamma, the Buddha entrusted to Moggallāna the task of preaching to the people who were waiting for the Buddha’s return. When the time drew near for the Buddha’s return, at the request of the people, Moggallāna went to Tavatiṣāsa, diving into the earth and climbing Sineru, in full view of them all in order to find out what the Buddha intended doing so that people might be kept informed (DhpA. III. pp. 219-224; J. IV. 265. Divy. p. 375).
Moggalāna was an obedient disciple of the Buddha. Whatever task he might be asked by the Buddha to perform, he did to the best of his ability. Once the Buddha employed him as a messenger to the arahant Ugasena, telling him that the Buddha wished to see him (DhpA. IV. p. 62). He was sent to Sakkhara, to Macchariya-Kosiyya (s.v.) to check his miserliness and bring him to Jetavana (DhpA. I. p. 369; J. I. 347) and also to Silavā, whom Ajatasatru was plotting to kill (ThagA. I. p. 257). When Visākha was building the Migāra-matūpāsāda, Moggalāna by his iddhi power, and five hundred monks supervised the construction, and the work was completed without difficulty (DhpA. I. p. 414).

The Buddha had full confidence in his two chief disciples and wanted them to keep the order pure. When, once, the Buddha said that the assembly was not pure Moggalāna fixed his thought intently upon all the monks of the order there, compassing their minds with his and seized the wicked and impure monk by the arm and thrust him outside the porch and bolted the door (A. IV. pp. 204-206). Once, when a monk charged Elder Sāriputta with having offended him and without asking his pardon has set out on a journey. The accusation, explains the commentary, was out of jealousy and to stop Sāriputta’s departure (DA. I. p. 276). Then Moggalāna and Ānanda went from lodging to lodging to summon monks that they might hear the Buddha, but the latter ignored it (Thag. VV. 1178-81). Their strongest bond was the love of each for the Buddha, even when they were away from him, they would relate to each other how they had been conversing with him by means of the divine eye and the divine ear. In the Samyutta Nikāya mention is made by Moggalāna to the monks of a conversation he held with the Buddha by means of divine powers (S. II. pp. 273-74). Moggalāna and Sāriputta had several discussions in this manner. The Mahāgogisīhga sutta mentions them as staying in the Gosinghasālavana in the company of Mahā Kassapa, Ānanda, Revata, and Anuruddha engaged in friendly discussion and referring their conclusions to the Buddha for his opinion (M. I. p. 212). Once Moggalāna, Sāriputta and Anuruddha stayed at Ketakivana at Sāketa (S. V. pp. 174-75;). Among discussions between Anuruddha and Moggalāna is one in which Anuruddha speaks of the value of cultivating the four satipaṭṭhānas (S. V. pp. 294-98). It was customary for Moggalāna and Sāriputta as the two chief disciples, to travel together at the head of the monks. The lay disciples were anxious to include the two of them in their invitations for ams, as Veḷuṇaḍakī in Dakhhinagiri (A. III. p. 336. IV. p. 63) and Cittagahapati in Macchikāsanda (DhpA. II. p. 74).

Moggalāna died before the Buddha, but after Sāriputta, for the Theragathā contains several verses attributed to Moggalāna regarding Sāriputta’s death (Thag. VV. 1158-61). Sāriputta died on the full moon day of Kattika and Moggalāna two weeks later on the new moon day (SA. III. 181). Buddhaghosa mentions that Moggalāna’s death resulted from a plot of the Niganthas who treated Moggalāna as their despicable enemy. Moggalāna’s visits to various worlds (sūtra) and his report that he had discovered that those who followed the Buddha’s teachings reached happy...
worlds, while followers of the heretics were reborn in woeful conditions. These statements of Mogallāna reduced the number of heretics and the niganthas bribed brigands to kill Mogallāna. The brigands surrounded Mogallāna’s hut in Kāsāli, but he escaped through the key-hole on six successive days. On the seventh day they caught him and beat him and crushed his bones. But Mogallāna recovered consciousness with his effort of will and dragged himself to the Buddha to take his leave and there he died. The commentaries explain that Mogallāna’s sad death was the result of a sin he committed in a previous birth. It is said that once acting on the instigations of his wife he had taken his blind parents into the jungle and pretending that they were being attacked by robbers he had beaten them to death. For this sinful action he suffered in hell for innumerable years and consequently in his last birth he lost his life by violence (J. V. pp. 125-27). Elsewhere this account given of Mogallāna’s death by violence differs in several details. The Dhammapadatha-kathā mentions that thieves tried for two months before succeeding in their plot and in the story of the past, when the blind parents were being beaten, they cried out to the thieves to spare the life of their son. Mogallāna was moved by this sentiment and did not kill them. Before he finally passed away, it is said that Mogallāna preached to the Buddha at the latter’s request and performed many miracles and returned to Kāsāli to die. (DhpA. III. p. 65). The Jātaka mentions that his cremation was performed with much honour and the Buddha had the relics collected and a Thūpa built in Veḷuvana. (J. V. p. 127). Emperor Asoka visited and worshipped this shrine and made an offering of a hundred thousand to the shrine on the advice of Elder Upagupta (Divy. p. 395).

Traditionally it is said that Mogallāna’s body was of the colour of the blue lotus (-niluppala) or the rain cloud. And the oral tradition in Ceylon is that this colour is due to his having suffered in hell in the recent past. In paintings in Ceylon where the Buddha and his two chief disciples are depicted, Mogallāna is always depicted to the left hand side of the Buddha and the colour used is blue, though in fact the colour ought to be dark or black (See. PED. nīla). Mogallāna is identified with several characters in the Jātakas. He was Kīśāvācchā in the Indriya Jātaka (J. III. p. 469). Sakka in the Ilīsa Jātaka (ibid. I. p. 354), one of the devas in the Kakkāru Jātaka (ibid. III. p. 90), the tortoise in the Kurūngamiga Jātaka (ibid. II. 155), Candasena in the Khanḍhāhala Jātaka (ibid. IV. 157), the Commander in the Cullasutasa Jātaka (ibid. V. p. 192), the youngest bird in the Javanahārīsa Jātaka (ibid. IV. 218), the elephant in the Pittīra Jātaka (ibid. I. p. 220), Ayūra in the Desaṇṇaka Jātaka (ibid. III. p. 341), the jackal in the Pañcīupoṭa and Sasa Jātakas (ibid. IV. p. 332; III. p. 56), Suriya in the Bilārakosiya Jātaka (ibid. IV. p. 62), the tiger in the Pittīra, Vanarāha and Vyaṭṭhīga Jātaka (ibid. III. p. 543, 149; II. p. 358), one of the brothers in the Bhisa Jātaka (ibid. IV. p. 314), Subhaga in the Bhārīḍatta Jātaka (ibid. VI. p. 219), the old tortoise in the Mahāukkusa Jātaka (ibid. IV. 297), Migajina in the Mahājanaka Jātaka (VI. p. 68), Bijaka in the Mahānāradakassapa Jātaka (ibid. VI. p. 255), the king’s charioteer in the Vidyurapandita Jātaka (ibid. VI. 329), the rat in the Saccānkara Jātaka (ibid. I. p. 32), Bhadrakara in the Sambhavajātaka (ibid. V. p. 67), Canda in the Sudhābhōjana Jātaka (ibid. V. p. 412), and Gopāla in the Hatthipāla Jātaka (ibid. IV. p. 491).

M. Karaluvinna

MAHĀ-PACCARIATṬHAKATHĀ, is one of the three main Sinhala commentaries (Sinhala Aththakathā) that Ven. Buddhaghosa used as his basis, when he translated the Sinhala commentaries into Pali in the 5th century A.C. The Mahāpaccari is not extant today. According to Malalasekera, ‘tradition has it that it was so called, because it was compiled on a raft’ (DPPN Vol. II p.522).

The Sāratthapadipanī, a sub commentary on the Samantapassādikā by Ven. Sariputta written during the Polonnaruwa period (edited by B. Devarakkhuta, published by D.C. Wickramasinghe, Vijābhūsana press, Colombo 1914, p 17 Sinhala script) records the same tradition as follows:

**Mahāpaccarīyanti, paccarīti vrccati ulumpana**,
Tasmā niśīditāva kaṭatā tameva nāmam jātan.

“Here Mahāpaccari means: ulumpana (raft) is called paccari, written seated on a paccari, that itself became its name.”

The Saddhammasaṅgaha a short chronicle containing the history of Buddhism, written by Ven. Dhammakitti of Ayodhya in the 14th century A.C. describes the origin of the paccari in the same way.
Mahāpaccariyaṁ nāma, sīhalabhāsāya ulumpo kira atti tasmiṇā
nisidītā kaṭatta paccariyāṁ nāmeva jātā āṭṭhakahā
dhāma.

"In the Sinhala language paccari is ulumpa (raft). The commentary written seated on it is also named paccari" (JPTS. 1890, p.5).

Buddhadatta provides little more information regarding the origin of the name Mahāpaccari. According to him, during the calamity, the famine Bāmunitiyāsāya, bhikkhus assembled in Jambukola Pāṭana to proceed to Jambudīpa and made a big raft (paccari). The bhikkhus having boarded the raft and thinking of the future, (danger) prepared a vānaya exegesis (vinaya vaṇṇana) and that became the Mahāpaccari commentary (Pali literature, Swabhasa Press 1966 p. 151). But the source of the additional information is not given.

Adikaram also records the same conventional theory of writing on a raft as regards the origin of the name. Further, according to him, (Adikaram) the Mahāpaccari and the Sāṅkhapaṭṭhakathā apparently had much in common and suggests that it is possible that Sāṅkhapaṭṭhakathā might have been an abridged version of the Mahāpaccari. Further he reports that apparently the Sāṅkhapaṭṭhakathā has also been known as Cullapaccari. But some hold the view that the Cullapaccari referred to in the Vajirabuddhi, as a separate commentary (Early History of Buddhism in Ceylon, Colombo 1946 p. 12). Law doubts the conventional explanation of the origin of the name. He says that the suggested origin of the name is quite fanciful. Mahāpaccari appears to have been a distinct compilation of a monastic school of Ceylon (History of Pali Literature, Kegan Paul, Trench Trubner, London 1953 Vol. II p. 375).

As regards the origin of the names of the other Sinhala commentaries, we find that they have been named after the place of origin. The Kurundi Aṭṭhakahā is so called because it was written in the Kurundiwela Vihāra, while the Andaka Aṭṭhakahā was so named by reason of its being written in the Andhaka country. Similarly Paccari might refer to a place name, either a village or a temple though it is difficult to identify due to distortion. If a paccari (raft) is involved, as pointed out by Buddhadatta, it might refer to the place where the decision was made to compile a Vinaya Exegesis, though the actual writing might have taken place elsewhere subsequently. There is no evidence to show that either people or bhikkhus lived on rafts in ancient Sri Lanka.

It is evident from the references Buddhaghosa has made to it that the Mahāpaccari had occupied a very important place among the Sinhala commentaries. According to the colophon, Buddhaghosa has recognized only three commentaries as Sinhala commentaries, out of which the Mahāpaccari is one.

"Mahāattthakahāna ceva Mahāpaccariya mevaca Kurundiyaancāti tissopi Sihala aṭṭhakahā imā"

Three Sinhala commentaries such as Mahāāṭṭhakathā, Mahāpaccari, Kurundi etc." (Vin A. Vii p. 1455 PTS)

Although he has referred to Andhakaṭṭhakathā, Sāṅkhapaṭṭhakathā in the Samantapāsādikā, he had not included them in the category of Sinhalattthakathā, as seen above. Further it is seen that only the Mahāpaccari is given the title Mahā (Great) other than the Mahāāṭṭhakathā. Mahāpaccari is being referred to only in the Samantapāsādikā. Therefore it is reasonable to assume that the Mahāpaccari was confined to the Vinaya Pīṭaka only.

By examining the quotations and references to the Mahāpaccari that exceed a hundred, found in the Samantapāsādikā, it is possible to understand the nature of this ancient Sinhala commentary, which is lost forever. And also one could see how Buddhaghosa has made the best use of it as a source, and its influence on the Pali commentaries he composed. It is obvious that Pali quotations that are given, as quoted from the Mahāpaccari in the Samantapāsādikā are the Pali renderings of Sinhala lines of the Mahāpaccari.

Buddhaghosa has recorded the views expressed in the Mahāpaccari although they do not agree with the Mahāāṭṭhakathā and other aṭṭhakahās.

Under the first Pārājikā the Buddha laid down, when a monk was resting in seclusion during the day time (after meals) that he should keep the door shut, as a result of a woman abusing the body of a monk who was sleeping, with the door open.

While discussing the circumstances under which a person may fall into the category of one who has committed an offence and those who are exempted, if they sleep keeping the door open, Samantapāsādikā records the Mahāpaccari view as follows:
"When the door is kept open only the person who falls asleep instantly is not guilty. (Apparently he had no time to close the door). When the feet are raised above the ground even if he is possessed by a demon or unconscious (if sleeps with the door open) he is guilty".

But according to the Kurundi Aṭṭhakathā only the person tied and made to sleep is acquitted if the door is kept open. (Bandīṭvā nipaṭājāpitā' va muccaṭati vuttam)

But the explanation of the Mahāṭṭhakathā is different from both. Mahāṭṭhakathāyam pana yo caṅkaṃanto mucchitvā patito tattheva supati, tassapi aṣāyattā āpatti'nā dissati. Ācariyā pana evan na kathayaṇī. Tasma āpattiyeva' ti (If one falls asleep while walking (when the door remains open) there is no guilt due to unconsciousness. But the acariyas do not say so (do not say not guilty). Therefore, there is guilt. (VinA. 283)

In certain instances the Mahapaccariya appears to be strict in the application of a vinaya rule.

The killing of a human being (manussaviggha) the third grievous offence that a monk could commit where he is liable to be expelled. One of several means, a person may deploy to kill a person is to excavate a pit for a man to fall and die (manussaḥ obissa opatam khanati) when discussing the application of this rule the Mahaṭṭhakathā says if a person excavates a pit in (sufficient) length breadth and depth and lifts soil baskets with the vested intention of (Killing a person), the intention produces results without interval. Thus if a person falls and die there even after 100 years he is guilty of committing the third parajīka offence (Killing of a human being).

But the explanation offered by the Mahapaccari and also the Kurundadhakatha appears more severe. According to the latter explanation, if a person hits the ground with a spade once only and a person dies having stumbled there he is guilty of the third parajīka (VinA. II, 454).

There are instances where the Mahapaccari appears more liberal than the Mahaṭṭhakathā. In the context of discussing the Bhesajja Sikkhapada (the rule of medicine) the Mahāṭṭhakathā says (medinal) drink such as sugar cane juice is suitable only the noon. But the Mahapaccari having paused question whether it is suitable or not says that there no such thing as sugar cane drink is not suitable for the afternoon. (Mahapaccariyan... etam svattivihakappaka vattatī no vattatī ti pucchanā katvā ucchuphāṇita pacchā bhattam no vattanakam nāma naṭṭhi ti vutta (VinA. III 716).

There are instances where Buddhaghosa finds in a particular point has not been properly explained in the Mahaṭṭhakathā but the Mahapaccari has explained well.

Under the Saṅghādisesa rule No. 13 Kuladūṣaka, Sikkhapada (Vin III 177 f) the Buddha admonis... Assaji Punabbasuka monks who were planting flowers, watering them, picking flowers, making garlands, taking garlands to women playing with them etc. and enacted a Vinaya rule prohibiting such practices.

Buddhaghosa finds that the circumstances where one would fall into category of committing an offence (as regards planting of flower plants) are not well explained in the Mahāṭṭhakathā but the Mahapaccari has done it well.

"Ayaṃ pana nayo Mahāaṭṭhakathāyaṃ na sutthu vibhatto Mahapaccariyaṃ vibhatto' ti.

This rule has not been properly explained in Mahāaṭṭhakathā. Mahapaccariya has done well. (VinA. III 617).

Similarly Buddhaghosa has also commented that a certain point is not clear in the Mahāaṭṭhakathā, but clear in the Mahapaccari. Nissagāya, rule no. 25 (the Suttaviṇṇati sikkhapada), the Buddha prohibited monks to provide thread and get robes woven by the weavers. Buddhaghosa explaining the application of this rule says:

"Ayaṃ pana' ttho Mahāaṭṭhakathāyaṃ apākato Mahapaccariyaṃ ttho pākato idha sabbakāreneva pākato

This meaning is not clear in the Mahāaṭṭhakathā but is clear in the Mahapaccari etc. Here it is very clear. (VinA. III 726).

The Mahapaccari view as regards the Bhānaka tradition (recitors who preserved the tipiṭaka orally) is found recorded in the Samantapāsādikā. As recorded
in the Samantapāsādikā the reciters of the Anguttara nikāya (Anguttara bhānākā) should learn half of the nikāya from the beginning or from the end. But the Mahāpaccari held the view that if a bhikkhu wants to take one (Nipāta of Anguttara) only, he should take either the fourth nipāta (Catukka Nipāta) or the fifth nipāta (Pañcaka Nipāta). Further according to the Mahāpaccari, the jātaka bhānakas (in addition to jātakas) should learn the dhammapada with the relevant stories (Vin. IV 789). This shows that to be ‘bhānaka’ or reciter, one need not learn the entire text of a Nikāya, and that one could become a bhānaka by studying a prescribed part. Further, it is also clear that different schools held different views regarding the extent that should be learnt to become a bhānaka of a particular text.

It is a rare instance where Buddhaghosa has rejected the explanation offered by the Mahāpaccari. In the Paccītiya bhikkhuni vaggā samvidhāna sikhāpada where the Buddha prohibited monks and nuns going to villages together. …………… Buddhaghosa has rejected the explanation found in the Mahāpaccari regarding the Samvidhāna sikhāpada (rule).

...Mahāpaccari vuttam tām neva pāliyā na sesa āṭṭhakathāya sameti.
...Mahāpaccari says so, that does not agree either with the texts (Pali) or with the rest of the commentaries Vin. IV 807-8).

There are instances where Buddhaghosa has not brought in the views of any commentary other than the Mahāpaccari. While explaining the Saṅghādīsesa rule nos. 5 Samcarita Sikkhāpada (Vin. III 553) where the Buddha prohibited bhikkhus to arrange marriages between men and women, Buddhaghosa cites only the Mahāpaccari.

An examination of the references and quotations of the Sihala Āṭṭhakathā (Sinhala commentaries) found in the Samantapāsādikā shows that it was the Mahāpaccari that Buddhaghosa has consulted more than Mahāāṭṭhakathā in compiling the Samantapāsādikā. Buddhaghosa has quoted or referred to the Mahāpaccari approximately 109 times and the Mahāāṭṭhakathā approximately 47 times in the compilation of Samantapāsādikā. The significance of the Mahāāṭṭhakathā is that it covers the entire tipiṭaka. But as far as the Vinaya is concerned, it is the Mahāpaccari that is significant, ecause it concentrates only on the Vinaya Piṭaka. The influence of the Mahāpaccari is very much seen in the exegesis of the Pārājikā Khaṇḍa of the Samantapāsādikā. But when it comes to the exegesis of the khandakas (Mahāvagga and Cullavagga) it is the Kurundi Aṭṭhakathā, which is also a Vinaya commentary, that is most quoted. The Mahāpaccari comes next. The Mahāāṭṭhakathā apparently becomes insignificant, being quoted approximately three times in the Mahāvagga and four times in the Cullavagga.

Since the Mahāpaccari specialized in the Vinaya pitaka, it is natural that it contained more details than the Mahāāṭṭhakathā on Vinaya. It is evident from the quotations that the Mahāpaccari discussed the application of the Vinaya rules with minute details and clarity. It is the very reason that Buddhaghosa is seen consulting the Mahāpaccari more often that the Mahāāṭṭhakathā.

The Vinaya Viniccaya, the summary of Vinaya written in verse by Ven. Buddhadata of Uragapura, is another source where one could catch a glimpse of this non-extant Sihala Āṭṭhakathā. According to the Buddhagosophupatti (biography of Buddhaghosa) and Ven. Sariputta’s sub commentary (tikā) on the Samantapāsādikā, Buddhaghosa coming to Sri Lanka and Buddhadata returning from Sri Lanka met at sea. On the request of Buddhaghosa, Buddhadata summarized the Samantapāsādikā and composed the Vinaya Viniccaya.

But since no mention either of Buddhaghosa or of the Samantapāsādikā is found in the Vinaya Viniccaya, Buddhadata doubts the story of the Buddhagosophupatti and the Tika (Buddhadatta’s Manuals Part II, introduction, PTS., London 1927 XI). He further adds that Buddhadata (of Uragapura) would have composed the Vinaya Viniccaya independently, with the help of the Sihala Aṭṭhakathā to which he has had access as seen from the Buddhavamsa Commentary, without summarizing the Samantapāsādikā of Buddhaghosa.

The Vinaya Viniccaya contains quotations from the Mahāpaccari (here too it is the Mahāpaccari that is quoted more than the Mahāāṭṭhakathā, which is quoted only three times.

Upaddabhāgam dātabbam iti vuttam kurundiyaṃ Thoka thokam ti niddhiṭṭham Mahāpaccarīyam pana.

Kurundi (Aṭṭhakathā) says one fourth should be given. Mahāpaccari prescribes little by little. (Buddhadatta’s Manuals Part II p. 33)
Aññassa Atthāya niddhiṭṭham bhikkhuno parīsāghahato
Dukkataṃ tassa hoti ti Mahāpaccariyam pana

The monk who takes what is prescribed for another is guilty of Dukkata according to the Mapaccari. (Ibid. p.47).

Punamat patitathane datvā tassa pan’indhanam
Aggim vattati kätum ti Mahapaccariyam ritam

According to the Mahapaccariya it is proper to kindle fire-putting fuel where it fell (the torch of grass) ibid. p. 71).

Form the quotations it appears that the author Buddhadatta (of Uragapura) is quoting direct from the Mahapaccari itself and not from a secondary source.

Therefore some idea could be formed of this great Sinhala commentary Mahapaccari from the material available as discussed above.

K. Arunasiri

MAHĀPAJĀPATI GOTOṀĪ, Step mother of Siddhartha gotama. She was born at Devadaha in the family of Suppabuddha (Q.V.) as the younger sister of Mahāmāyā (Q.V.). At the birth of each sister, interpreters of bodily marks prophesied that their children would become ‘cakkavattins’ or universal monarchs. King Suddhodana (Q.V.) married both sisters and when Mahāmāyā died seven days after the birth of the Bodhisatta, Mahāpajāpati Gotamī looked after him and nursed him. She was the mother of Nanda (Q.V.) but it is said she gave her own son to nurses and herself nursed the Bodhisatta. When the Buddha visited Kapilavatthu on the first occasion after his enlightenment, he ordained Nanda on his wedding day, against his wishes, it is said. Under the Buddha’s guidance and instruction, Nanda shed away his extreme attachment to sensuality and became an Arahant. The Buddha declared him foremost among the bhikkhus in the training of self-control.

Mahāpajāpati Gotamī was also the mother of Sundarī-Nandā(Q.V.) who renounced lay life on seeing that many members of her family had entered the Order. Later, she became an Arahant, having followed the Buddha’s instructions regarding meditation, earning from him the praise that she was foremost among the community of nuns who practised meditation.

The name Mahāpajāpati could be a title for it means ‘Great Lady’ or the wife of a chieftain, a queen. Some have interpreted the name as denoting a person who has a large following such as a renowned teacher. Gotamī was her clan name.

King Suddhodana died when the Buddha was at Vesali and Mahāpajāpati Gotamī then decided to renounce the world and waited for an opportunity to request permission from the Buddha to join the Order. Her opportunity came when the Buddha visited Kapilavatthu to settle a dispute between the Sakyan and the Koliyans as to who had the right to take water from the river Rohinī. When the dispute had been settled, the Buddha preached the Kālavivāda sutta as a result of which five hundred young Sakyan men joined the Order. Their wives, led by Mahāpajāpati Gotamī, went to the Buddha and asked leave to be ordained, but, it is said, the Buddha refused to give her permission, three times. After he concluded his visit to Kapilavatthu, the Buddha went to Vesali and Mahāpajāpati Gotamī and her companions, nothing daunted, shaved off their hair, put on yellow robes and followed the Buddha to Vesali. There, at the gates to his monastery, Ananda saw Mahāpajāpati Gotamī standing weeping with swollen feet and dusty limbs. This record of the founding of the Nuns’ Order is found in Chapter X of the Cullavagga. (Vin. II 253 ff. and A. 8.51). Learning the reason for her visit, Ananda conveyed the request to the Buddha but again he is said to have refused the request three times. Ananda then asked the Buddha whether women could attain the different stages of stream entry and final liberation from samsāra. The Buddha acknowledged women’s ability to do so. Next Ananda asked the Buddha whether it were not good to grant Mahāpajāpati Gotamī her request considering this important fact and also because she was his aunt and step mother who nurtured him; since she had been of great service to the Buddha, Ananda asked whether it would not be a fitting thing to do to help her to obtain emancipation from samsāra. The Buddha then granted permission to Mahāpajāpati Gotamī to enter the Order provided she complied with eight Special Rules which he laid down as conditions for entry to the Order. These conditions were accepted joyfully by Mahāpajāpati Gotamī when they were conveyed to her by Ananda. Her acceptance of them became her induction into the order as well as her higher ordination. Later, she went to the Buddha personally to clarify the position regarding the Sakyan women who had followed her and after she had heard Dhamma from him and had left the presence of the
Buddha, he summoned the bhikkhus and having deliberated on the matter declared that monks could ordain nuns. Mahāpajāpati Gotamī later requested, again through Ananda’s good offices, whether the first of the Eight special Rules could be waived and replaced by homage being paid vis a vis monks and nuns according to seniority in the two-fold Order. This request the Buddha is reported to have refused, retaining, it would appear, the seniority and leadership of the Bhikkhu Sangha over the Bhikkhuṇī Sangha.

After the ordination, Mahāpajāpati Gotamī came to the Buddha on yet another occasion and having worshipped him, requested that he teach her Dhamma. The Buddha preached to her and gave her a subject on which to meditate. Accordingly, she practised meditation on the given topic with great earnestness, developed insight and attained Arahatship while her five hundred companion attained the same after listening to the Therigāthā. The second of those stanzas states her realization of nibbāna in the following manner:

"Sabbadukkha pariññātā hetu tañhā visissiṭā, ariyathāṅgiko maggo nirodho phusito mayā."

"All forms of sorrow known, craving, the cause, dried up, touched have I the noble Eight Fold Path that puts a stop to birth."

Once at an assembly of monks and nuns in Jetavana, the Buddha declared Mahāpajāpati Gotamī chief among the bhikkhū-s who had gained recognition by virtue of being long standing (A.I.xiv 6) "Etad aggam, bhikkhave mama Sāvikānaṁ bhikkhuṁnaṁ rattaṁnaṁ yadidaṁ Mahāpajāpati Gotamī."

In the Samaññaphala sutta (D.I.2) Ajātasattu says of Makkhali Gosala:

"Ayan deva Makkhali Gosalo Sanghi c’eva gaṇi ca ganaçāriyo ca niṭo yaساسi tiṭihakaro sādhusammato bahu-janassa rattaṁnu c’eva pabbajito addhagato vayo anuppatto." Here the meaning of rattaṁnu comes out as recognition gained through being a recluse of long standing who has, as a renowned teacher a vast following.

At DA 1.143 the word rattaṁnu is explained as "Pabbajīta paṭṭhāya atikkantā bahu ṛattiyo jānīti ti rattaṁnu". Here again many years spend after enouncing the world is meant. The meaning of rattaṁnutā in this sense is also found at M.I.445.

Mahāpajāpati Gotamī was ordained when she was already advanced in years. She qualified to being given foremost recognition as a long standing person among the nuns from the fact that she was the first to be ordained as a nun and was virtually the founder of the Nuns’ Order. She was entitled in special recognition because she was the person who led the original group of Sakyan women, a veritable concourse of prospective renunciates, to press for permission from the Buddha to enter the order. She was acknowledged the leader of the group by virtue of the fact that she had been the queen of Suddhodana, chief of the Sakyans and also she was the step mother of the Buddha.

From the view of feminist history, she was the first woman to focus attention on an issue concerning women’s rights, if not human rights. The Buddha’s doctrine was the only doctrine at the time which recognized the spiritual equality of the sexes. She would have been convinced of the fact that her request was reasonable because of the Buddha’s stand in the doctrine.

It is said that once Mahāpajāpati Gotamī made a robe for the Buddha of wonderful material and marvellously elaborate. But when it came to be offered to the Buddha, he refused it, and suggested it should be biven to the order as a whole. She was greatly disappointed, and Ananda intervened on her behalf. But the Buddha explained that his suggestion was for her own greater good and also as an example to those who might wish to make similar gifts in the future. This was the occasion for the preaching of the Dakkhināvibhanga sutta (M. III 253).

Once when she was ill and no monk could visit her because of the Vinaya rule prohibiting monks visiting nuns who were ill, the Buddha himself amended the rule and visited her. (Vin.IV 56)

Some time after her ordination, while at Vesali, Mahāpajāpati Gotamī realised that her life was drawing to an end. It is said she was one hundred and twenty years old. She took leave of the Buddha and at his request performed various miracles to dispel the doubts in the minds of many who were skeptical of women’s attainments. This is recorded in the Apadāna, V. 305.

"Tīnaṁ dhammābhisamaye ye bāḷā vimatīṁ gataṁ tesam diṭṭhipāhānamathāṁ iddhiṁ dassehi gotamī."

It is also said that the marvels which attended her cremation rites were second only to those of the Buddha.
According to the tradition that has come down via various commentaries which embody myth and legend concerning the *theris*, it was in the time of Padumuttara Buddha that Mahāpajāpatī Gotamī made her resolve to gain eminence. She then belonged to a clansman's family in Mānsāsvatī, and, hearing the Buddha assign the foremost place in *rattāṇīnātā* to a certain nun, wished for similar recognition herself, doing many good deeds to that end.

After many births, she was born once more at Benares, foremost among five hundred slave girls. When the rains drew near, five Pacceka Buddhas came from Nandamūlaka to Isipatana seeking lodgings. Pajāpatī saw them after the treasurer had refused them assistance, and, after consultation with her fellow slaves, they persuaded their several husbands to erect five huts for the Pacceka Buddhas during the rainy season and they provided them with all requisites. At the end of the rains they gave three robes to each Pacceka Buddha. After that she was born in a weaver's village near Benares, and again ministered, this time to five hundred *Pacceka Buddhās*, sons of Padumāvati (*Thīg A. 140 ff.; AA. I. 185 f.; Ap. II. 529-43*).

Mahāpajāpatī's name appears several times in the *Jātakas*. She was the mother monkey in the Cūlanandiya Jātaka (*J. II. 202*), Candā in the *Culla-Dhammapāla Jātaka* (*J. III. 182*) and Bhikkhādāiyikā, daughter of Kiki, King of Benares (*J. VI. 481*).

There is a story related of a nurse employed by Mahāpajjakīpa Gotami who was born in Devadaha. She renounced the world with her mistress, but for twenty five years was harassed by thoughts of lust till, at last, she heard Dhammadūna preach. She then practised meditation and became an Arahant. (*Thīg A. 75f. S.V. DPPN*)

Suvimali Karunaratne

**MAHĀPĀḷI**, a refectory (*bhattasālā*). In ancient Sri Lanka there were two refectories known by this name. One was the royal refectory at Anuradhapura maintained by the Sinhalese kings of that period and the other was at Mahāgāmā (s.v.) in Rāhāna. The Mahāpāḷi alms-hall located at Anuradhaura was by far the more significant and prominent than that at Rāhāna.

The word Mahāpāḷi (*mahā = great + pāḷi = row*) literally means 'long line' Most probably the Mahāpāḷi Hall could have been so named owing to the fact that there was a long queue of monks lined up regularly at the royal refectory to receive their ration of alms. The very fact that the monks had to assemble there for their morning and midday meals suggests that it occupied an important place in the monastic life in early Sri Lanka (*University of Ceylon, History of Ceylon, Vol I, Colombo, 1959, p. 400*).

Although some do believe that the term Mahāpāḷi could be applied to a refectory attached to any monastery (of *EZ*. Vol. III, p. 134, n3), investigation would prove that it was not so. There is much evidence to confirm that the refectory which belonged to the Mahāvihāra alone was referred to by the name of Mahāpāḷi (Cf. W. Rahula, *History of Buddhism in Ceylon*, Colombo, 1956, p. 131; W. Geiger, *Culture of Ceylon in Mediaeval Times*, Wiesbaden, 1960, p. 56). According to the Jetavanarāma slab inscription (No. 1) of Mahinda IV datable to the 10th century, the Mahāpāḷi at Anuradhapura also known by the name Purimalā Mahāpāḷa (Mahāpāḷi: *EZ*. Vol. I, p. 219; *JCBRAS*, NS, Vol. VI, 1959, p. 140).

The Mahāpāḷi alms-hall was located in the inner city adjacent to the temple of the Sacred Tooth Relic (*Daladāge*) and the royal palace (*ASC Mem. Vol. III*, pp. 2, 18; S. Beal, *Chinese Accounts of India*, Vol. IV, Calcutta, 1958, p. 445, etc.). It formed a part of the royal palace (*ABCMem. op. cit. p. 2*) and was maintained by the monarch himself. This practice seems to have continued up to the end of the Anuradhapura period (*circa* 10th century A. C. *JCBRAS*, NS, op. cit. p. 139). With the fall of the Anuradhapura kingdom the institution, like the royal palace and the Daladāge might have been abandoned and neglected and gradually fell into ruin. Probably the political turmoil that prevailed in the island at the time may have led to the final dereliction of the Mahāpāḷi, which depended mainly on royal patronage for its maintenance. When it was rediscovered in the present century, it was only a mound of earth with a few pillar stumps remaining above the ground. Guided by certain references to it in the chronicles, E. R. Aynon, one time Commissioner of Archaeology in Sri Lanka, rightly conjectured it to be the remains of the Mahāpāḷi Hall (*ASC Mem. Vol. I*, pp. 50 f; *EZ*. Vol. III, p. 134). Excavations conducted by the Department of Archaeology, in 1933, corroborated the authenticity of his assumption. The decipherment of certain inscriptions discovered on the stone canoe at the site had further confirmed these facts (*ASC Mem. op. cit. p. 2; EZ, op. cit, p. 137; Ency. Bsm*. Vol. III, p. 7).
Mahāpāli Hall was originally founded by king Devanampiyatissa (250-210 B.C.), who also provided for its maintenance (Mhv. xx: 23, 24; Dhv 2, p. 105). Khujjanāgā (186-87 A. C.), despite a severe famine (ekānālīka) that was ravaging the country at the time, had continued at the refectory alms-giving for 500 monks (Mhv. XXXVI: 20). Upatissa I (365-400 A. C.) had the habit of distributing there food prepared for him in the royal palace, and he himself partook of whatever food that was left after distribution (ibid, XXXVII, 182, 203-04; W. Rahula, op. cit, p. 261). Mahānāma (406-28 A. C.) had enlarged the Mahāpāli (Mhv. XXXVII: 211). Dhātupatissa (455-73 A. C.) was yet another monarch who had continued the practice of alms-giving at this refectory (ibid. XXXVIII: 41). Silākāla (518-31 A. C.) too distributed there the delicious meats prepared in the same manner as for himself (ibid, XLI: 28). Aggabodhi I (571-604 A. C.) constructed for it a canoe of bronze (ibid, XII: 33), which was subsequently enlarged by Aggabodhi II (604-14 A. C.). He also set up a stone canoe for cooked rice (Bhattanāvā: ibid, XII: 67). When food was scarce in the royal palace owing to a civil strife Saṅghatissa II (circa 614 A. C.) was fed from the Mahāpāli Hall (ibid, XLIV: 12). Śilāmeghaṇaṇa (619-28 A. C.) enlarged it (ibid, XLIV: 65). Dāthopatissa I (639-50 A. C.), however, gave the canoe in the Mahāpāli to his Tamil soldiers (ibid, XLIV: 134). His successor, Kassapa II (650-59 A. C.) held a special alms-giving at the refectory to celebrate the victory he had achieved by vanquishing the enemies (ibid, XLV: 1). Dāthopatissa II (659-67 A. C.) distributed there clothing, rice, sour-milk and milk rice on uposatha days (ibid, XLV: 25). Mahinda I (730-33 A. C.) offered to ten cart-loads of rice (ibid, XLVIII: 34). Aggabodhi IX (831-33 A. C.) enlarged it and distributed there daily an amount of rice equal in weight to his own body (ibid, XLIX: 78). Udāya II (887-98 A. C.) also enlarged the refectory (ibid, LI: 132). The last reference to it is in the time of king Mahinda IV (956-72 A. C.), who restored it after it had been burnt down by the Cholas (ibid, LIV: 45; ASCMem. Vol. I, p. 50; EZ. Vol. I, p. 219).

The remains of the Mahāpāli alms-hall have “been used as a quarry for building material after it had been fallen into decay” (ASCMem. Vol. III, p. 26). The site was excavated in 1933 by the Department of Archaeology and several important discoveries were made there.

At the excavation, only the foundations of walls on the south and west were discovered, the foundations of the other two sides being dislodged. The lower portions of the walls were constructed of stone to an average height of about 2 1/2 ft, and the rest of brickwork. All the brickwork of walls, save a few sporadic traces, have disappeared. A comparison with similar ruins found at Anuradhapura would disclose that “the methods of construction employed here are rather crude and purely utilitarian, very little or no attempt having been made to impart any artistic beauty to the structure” (op. cit). Since no foundation wall is completely preserved, it is impossible to give the exact dimensions of the building. Paranavitana, however, conjectures that it would have measured 128 feet north to south and 120 feet east to west (op. cit). Similarly, no idea could be formed as to the exact number of stone pillars and how they were arranged. Since there were no traces of walls dividing the interior space, it is presumed that, like in other ruined refectories at the ancient capital, the ground floor of the Mahāpāli was an open hall. As regards the date of the remains, Paranavitana believes that it is contemporaneous with the stone trough found at the site, which dates from the 10th century A. C.3 The style of the edifice according to him, further corroborates his views (Cf. ibid, p. 27).

Of the objects discovered at the Mahāpāli Hall, the above-mentioned stone trough seems to be the most conspicuous. On it are found three short inscriptions dating from the 10th century A. C (EZ. vol. III, pp. 132-34; ASCMem. Vol. III, p. 2). Several specimens of those boats, which are popularly known a kānda-oru (gruel boats) or simply nāvāyō (boats), may be found at Anuradhapura and Polonnaruwa. This particular boat is measuring more than 27 feet in length and 6 feet in breadth. An inscription on the trough itself refers to it as gal-nāva (stone boat: ibid, p. 25; Ency. Bm. loc. cit). This canoe, which was gifted by a Sala vadhuna (the custodian of the relics; W. Rahula, op. cit. p. 132; JCBRAS, NS, op. cit, p. 1400) seems to have been used as a repository “for boiled rice intended for feeding the monks” (ASCMem, Vol. III, p. 25). The size of the boat is an index to the vast multitude of monks daily fed from the refectory.

1. Geiger too had identified the unexcavated site (cf. trsl, Cūlavamsa, I. p. 17, n²).
2. It may be noted that Geiger, in his translation of the Cūlavamsa (p. 257, n²) interprets mahāpeñan as a great almsgiving (or great basket) in contrast to ekānālīka.
3. What Paranavitana meant here may be the latest possible date of the findings at the site.
Another significant adjunct that belonged to the refectory was the well, located outside its north-west corner. It had a depth of 26 feet 7 inches and was of unique design (ibid, p. 28). A weathered inscription of about the 6th century found at the site reveals that the date of its original construction was synchronous with it (ibid; p. 30).

There seems to have been another adjunct called the Salâkâgga connected to the main refectory. It was there that "tickets, probably tokens made of wood, were issued to the monks before they proceeded to the refectory for receiving their ration of food" (W. Rahula, op. cit, p. 132; also see, W. Geiger, Mahâvansa trsl, published by the Ceylon Govt, Information Dept. 1950, p. 112, n6; Mhv. XV: 205, XXXVI:). This particular appartment, however, was not traceable among the ruins.

Among other less significant antiquities discovered at the site was a small flat piece of crystal depicting a female figurine in a very graceful tribhanga pose carved in integlio. It is also plausible that this crystal was a seal set in a signet ring (ASCMem. Vol. III, p. 30). There were also copper coins (H. W. Cordrington, Ceylon Coins and Currency, Memoirs of the Colombo Museum Series A, No. 3, 1924, p. 20), beads, specimens of pottery, terra-cotta and miscellaneous metal objects (ibid. pp. 31-36).

Apart from the chronicles, useful accounts on the Mahâpâli alms-hall are available also from epigraphical remains and certain travel records. According to a 10th century inscription inscribed on the stone canoe found at the site (cf. EZ, Vol. III, pp. 132 f), the monks, who were recipients of alms given at the royal refectory, were at one time in the habit of donating their share of rice for the repairs carried out at the Jetavana monastery (W. Rahula, op. cit, pp. 185 f; H. Ellawala, Social History of Early Ceylon, published by the Dept. of Cultural Affairs, Ceylon, 1969, p. 118). Another inscription states that each sack of paddy brought into the city of Anuradhapura was taxed at the rate of one pata (Skt. prastha) and it was given to the Mahâpâli refectory (EZ, loc. cit; W. Rahula, op. cit, pp. 72, 150). When paddy was brought to the royal alms hall, "the expenses connected with bringing them were to be borne by the person who was bound to give it as a due: (EZ. op. cit, p. 136).

Travel records of the two famous Chinese pilgrims Fa-hien and Hsuan-tsang throw more light on the history of the Mahâpâli. According to Fa-hien, who visited Sri Lanka in the 5th century A. C., five to six thousand monks were regularly fed at the refectory (S. Beal, Buddhist Records of the Western World, Vol. I, London, pp. 170 f). Hsuan-tsang, from information gathered in India from Sri Lankan monks, estimates the number as eight thousand (S. Beal, Chinese Accounts of India, loc. cit.). Although the Rasavâhiṇī (ed. Kirielle Nanavimala, Colombo, 1961, p. 155) does not quote any specific number, it reveals that the recipient monks amounted to several hundreds. It, moreover, discloses that not only the monks, but nuns, too, gathered there for alms.4 It is possible that the number of recipient monks at the Mahâpâli varied from time to time depending on their number that resided in the metropolitan monasteries during each specific period.

Notwithstanding the fact that this refectory was attached to the Mahâvihâra, it extended its liberality to the monks and nuns from five great monasteries (paṭicamahâvâsa), irrespective of their sectarian differences (Rasavâhiṇī, loc. cit). The monks waited in the long queue for their turn and collected their ration of rice with their alms-bowls (patta). Having partaken it at the refectory itself, they finally returned to their respective monasteries (S. Beal, Chinese Accounts of India, p. 445). According to it a fairly long time had been spent by them at the Mahâpâli Hall.5

Besides the kings, whose duty it was to perpetuate the practice of alms-giving at the royal refectory, there were also donors from the nobility as well as the common people who occasionally held alms-givings there. It is also interesting to note that not only vuchials, but also other requisites of the clergy such as robes, etc. were sometimes given as alms at the Mahâpâli Hall (Mhv. XLV : 25; Rasavâhiṇī, loc. cit).

Another refectory by the same name Mahâpâli existed at Mahâgâma in the kingdom of Ruhâna in South Sri Lanka. It was set up by king Aggabodhi, an independent ruler of the territory in the 7th century A. C. (Mhv. XLV: 42; W. Geiger, Culture of Ceylon in Mediaeval Times. p. 56; DPPN. II, p. 532). One may

---

4. Most probably there might have been two sections of the same refectory, where alms were served for monks and nuns separately (cf. EZ vol. I, p. 219).

5. Also there were some monks at Anuradhapura, who did not visit the royal refectory; instead they went round from house to house on piṇḍapâta (alms round W. Rahula, op. cit, p. 176).
find the remnants of the aforesaid refectory which is
said to have been built after its sister institution at
Anuradhapura (W. Geiger, among ruins found in the
vicinity of the Mānīk vēhera and the Yatāla vēhera (cf.
P.A.T. Gunnasinghe, Purātana Rōhana Rājāya,
Nugegoda, 1968, p. 158). It is, however, not certain
whether the southern institution had enjoyed similar
royal patronage as the one at Anuradhapura. Due to
insufficient epigraphical and other evidence and the
so-far unexcavated state of the site, it could be pre-
sumed that, many valuable facts about this refectory
at Rōhaṇa are still shrouded in obscurity.

C. S. Ranasinghe

MAHĀPARINĪBBĀNA SUTTA (1) The Mahāparinībbāna
Sutta belonging to the Mahāvaṇga of the Dīghanikāya
of the pali canon is the longest sutta to be found in any
of the Pāli canonical works. The sutta begins a few
days before the rains retreat when Vassakāra, the
Magadhan minister visited the Buddha in Rajagaha on
the initiative of king Ajātasattu and continues the
narrative beyond the three months of the rains retreat
and records the passing Away of the Buddha, Cremation
and the Division of relics and winds up with the
erection of eight cetiyas or monuments enshrining the
relics of the Buddha.

Although the theme of the discourse should be the
Great Decease as suggested by the title there are
numerous details relating to the doctrine and discipline
which could be categorised under different heads. It is
neither a pure dialogue nor a pure narrative.

There are of course numerous recensions of the
MPS. Among them the Pāli Version is the oldest in
respect of language and contents. It runs into ninety-
six pages in the Pāli Text Society edition of the text.
The MPS is of utmost historical and cultural value and
therefore it has become a source book for the students
of Buddhism, Buddha biography and history of Bud-
dhism thought and literature.

Winternitz referring to the nature and character of
the discourse says; "It is neither a dialogue nor a speech
on one or more chief points of the doctrine but a
continuous record of the latter part of the Buddha's life,
his last speeches and sayings and his death". And
further, assessing the historicity of the Sutta he rightly
remarks that the oldest parts of this extensive record
surely, belongs to the oldest parts of the Tipitaka and to
the earliest beginnings of a poetic treatment of the life
of Buddha. But referring to the diversity of subject
matter he says," It is composed of parts which belong
to different ages".1

When compared with the extant Buddhist Sanskrit,
Tibetan and Chinese versions of the text, the fact that
the Pāli version is comparatively earlier in language
and contents is categorically beyond contention. Hence,
while pointing out the importance of the sutta he
asserts that "the memory of the Master has been pre-
served and handed down with fidelity and devotion".2

All the scholars who dealt with the Pāli version of
the Sutta are emphatic of its improtance. According to
B.C. Law "the MPS is one of the most important suttas
as it furnishes us with a highly interesting narrative of
the peregrination of the Buddha during the last year of
his mortal existence"3 Geiger is more precise when he
refers to the sutta as a 'running description of the events
of the last weeks of the life of the Buddha'.4 Venerable
A.P. Buddhadatta while asserting the significance of
the Sutta for the study of the last days of the Buddha,
observed the biographical and doctrinal data embed-
ded in the sutta and said that "it is not a single sutta but
is a unified compendium of life and teachings of the
Buddha".5

Rhys Davids, however, points out that only one
third of the sutta is original to it while the rest of the
passages are found in identical or almost identical
words elsewhere in the canon. The gradual growth of
the living traditions is anticipated; "It is well known
that all the ancient sacred literatures of the world have
grown up gradually and are mosaics of earlier and later
material. The Buddhist pitaka forms no exception.6

The Tibetan translations of the text are later than
the 7th century, because Buddhism was introduced to
Tibet in that century. There are three Tibetan transla-
tions of the text, namely, Dulva xif 535b-625b, Mdo

MAHĀPARINIBBĀNA SUTTA (1) 462 MAHĀPARINIBBĀNA SUTTA (2)

viii, fl-231, and Dof f 231-234. W. W. Rockhill used the first of these texts and the other Tibetan texts in narrating the life of the Buddha as recorded in the Pali version. He has noted the differences at the relevant places. A.K. Warder has made reference to three Chinese versions and named T1, T2, and T5, as they are popularly numbered. Referring to these versions Warder says, "The huge unwieldy text which resulted might be compared in size and its rambling organisation with the longest Mahāyāna Sūtras or on the other hand with contemporary Harivansa (a long supplement to Mahābhārata narrating the life of Krishna or a Purāṇa except that Brahmanical texts are mostly in verse".

Besides, there are several other translations in Chinese. They are of different length. Pachow points out that their sizes vary to such an extent that some of them consist of thirty to forty fasciculi while others two or three fasciculi only. They are called Chuan in Chinese. At a rapid glance indeed we find that their differences are very great.

He has selected four versions of the MPS found in Nanjio which have many facts in common and bear similarity to the Pali text for comparison with the latter:

Buddhāparinirvāṇa Sutra: Nanjio No. 552 translated by Po-Fa-Tsu, A.C. 290-306. Tsin dynasty A.C. 265-316, 2 fasciculi

Mahāparinirvāṇa Sūtra of the Dirghagāma Sūtra Nanjio No. 545 (2) translated by Buddhayasas together with Chu Fonien A.C. 412-413 of the latter Tsin dynasty A.C. 384-417, 3 fasciculi Parinirvāṇa Sūtra or Vaipulya Nirvāṇa Sūtra Nanjio No. 119, translated under the eastern Tsin dynasty A.C. 317-420 The name of the translator is not known, 2 fasciculi

Mahāparinirvāṇa Sūtra : Nanjio No. 118, Translated by Fa-hien of the Eastern Tsin dynasty A.C. 317-420, 3 fasciculi Besides these texts the numbers 113,114,115,116,117,120,121,122,123,124,125,542 and 1121 mentioned in Nanjio's catalogue may be used for further references.

The Sarvāstivāda version of the text has been edited by waldschmidt(Abhandlungen Deutsche Akademie der wissenschaften zu Berlin 1957, 1962) and also by N. Dutt in Gilgit Manuscripts, Vol. iii, p. 415. An earlier attempt in comparing the different versions of the text is found in Journal Asiaticque 1918-1920 under the title "comparative Study of the Different Parāinirvāṇa Texts" by Przyluski.

Pategama Gnanarama

MAHĀPARINIBBĀNA SUTTA (2): The Mahāparinibbāna Sutta, the Discourse on the Great Passing away of the Buddha, is contained in the Digha Nikaya (D. II. pp. 72-168). The Sutta belongs to a later stratum of the canon and has been described as a mosaic of earlier and later material. It is distinguished from other suttas in the Sutta Pitaka by its extraordinary length and unique literary character, organized round the theme of the Buddha's last missionary journey. Though it begins with the familiar words with which Ven. Ananda prefaced his rehearsal of suttas at the First Council, namely, "Thus have I heard", it differs from other suttas in that it pre-supposes not only Ven. Ananda hearing the Teachings presented but also witnessing and participating in the incidents related. It is, therefore, meant to be a first hand account of the Buddha's last days of ceaseless missionary activity as he walked from Rajagaha to his final halting place, Kusināra, where at the Upavattana sāla grove of the Mallas, he laid himself down on a prepared couch and attained Parinibbāna.

The journey would have been a tiring one for anyone to undertake on foot at the age of eighty, especially after sustaining a severe illness on the way, crossing rivers and following in part, the road that ran along the Himalayan foothills to Kusināra. The duration of the journey would have stretched over several months; for it is recorded that the Buddha spent vassa at Beluvagāma, a village near Vesali. Judging by the North Westerly direction of the route taken from Rajagaha to Vesali and from there again North Westwards to Kusinara, it is possible that Kapilavatthu, Lumbini and Savatti were envisaged in the itinerary as possible destinations.

However, due to ill health, the Buddha was able to reach only Kusināra in the Region of the Northern Mallas, a republican city state situated in the foothills of the Himalayas.

7. Rockhill, W. W. The Life of Buddha, p. 1
8. Warder A. K. Indian Buddhism p.415
According to the detailed, almost step by step, account in the MPS, the Buddha set out from Gijjhakûta Pabbata (Vultures' Peak) at Rajagaha with a large retinue of monks and halted at Ambalāthika, then on to Nalanda, 1 Yojana (7 miles) from Rajagaha, then to Pāvārika mango grove and from there to Pataligama, still in Magadha territory. At Pataligama the Buddha crossed the Ganges and went into the country of the Vajjians, to Kāṭigāma, Nadika, Ambapāli grove at Vesali and Beluvagama, a village at Vesali, where he took up residence for Vassa. It was here that a severe illness overcame him but suppressing it with determination he went on. His next halting place was at the Kuṭagāra sālā in the Mahāvāna, a natural forest outside the town of Vesāli. Having returned to Vesāli for alms and after having had the meal, the Buddha left Vesāli and went on to Bandagāma where he resided for some time. Thereafter, he went on to Hatthigāma, Ambagāma, Jambugāma and Bhoganagara where he resided at Ananda Cetiya. All these places were in the country of the Vajjis. From Bhoganagara he went on to Pāvā in the country of the Mallas where he rested at the mango grove of Cunda, the metal worker. It was there that he was subjected to another bout of the earlier dire illness, lohitapakkhandika (diarrhoea) which took a fatal turn. He succumbed to this illness after accepting a dāna offered by Chunda which contained a preparation of sūkaramaddawzd, thought to be pork or a kind of truffle. From Pāvā, the Buddha walked to the bank of the pleasant Kakuṭtha river and being exceedingly tired, bathed in it and drank of its pure clean water. Then, coming out of the water he proceeded to a mango grove where he requested Ven. Ananda to fold his upper robe in four and lay it on the ground so that he could sit down and rest. Soon after, he makes another request of Ven. Ananda. He says “I am thirsty Ananda, I should like to drink”. The humanness comes through in spite of the few embellishments of a miraculous nature which stud the text. Even the utterance, put into the mouth of the Buddha, that he could) if he wished, live on for a Kappa (aeon) does not diminish his humanness, which is consistently underscored. At one point in the narrative, the sorrowing Ananda is told by the Buddha that his body has the same nature of dissolution as all else that are born, brought into being and put together.

The quality of humanity is another aspect of the Buddha’s personality which shines through the MPS. Knowing that Cunda’s grief would be extreme when he discovers that it was his dāna offered to the Buddha that resulted in his fatal illness, he instructs, Ven. Ananda, with keen psychological insight as to what exactly he should tell Cunda to allay his feelings of deep regret and self blame. On a previous occasion when the Licchavi princes request that the Buddha accept dāna from them the following day, the Buddha declines as he had already agreed to accept dāna on the following day from Ambapali, the courteson. The Buddha’s humanity and egalitarian attitude is very clear, in spite of the fact that the Licchavi princes were the most powerful in the Vajji confederation and in his own words to Ven., Ananda, resembled in appearance the gods of the Tavatīṃśa heaven. It is recorded that the Licchavi princes snapped their fingers with irritation because they had “beaten” by the “mango girl”. In another anecdote, the Buddha, while lying ailing and very near to breathing his last, grants Subaddha’s request to answer questions and clear his doubts. To

1. T. W. Rhys David’s introduction to the MPS, SBB Vol. iii, Dialogues of the Buddha, part II, PP. 71-77.
the very last, the Buddha is seen to be the very epitome of a spiritual teacher, “putting forth energy” (a quality which he constantly urged his disciples to cultivate) to expound the doctrine and exhort his disciples for the benefit and welfare of the many.

Dramatic Episodes: The Sutta begins dramatically with king Ajatasattu of Magadha sending his chief minister to the Buddha to inform him of his intention to attack and completely destroy the Vajjis. The purpose is to observe the Buddha’s reaction so that they may glean whether such a campaign would be successful or not. The visit of the chief minister with the message entrusted to him, presents an opportunity for the Buddha to deliver a lecture on the 7 conditions that conduce to prosperity, Satta Apanihantiya Dhamma, preached on an earlier occasion to the Vajjians. Later, these seven conditions and additional ones were expounded to the bhikkhus for their progress.

There are many more such dramatic episodes in the narrative, Mara’s visit to the Buddha and his dialogue that ensues, being one.

The most dramatic scene in the Sutta is of course the Parinibbana, to which the entire narrative builds up with appropriate foreshadowing. The Buddha’s illness, the earthquake immediately after he makes known his decision to attain Parinibbana in three month’s time, and other such portents direct the narrative to its final conclusion. The drama of the closing scene is heightened by descriptions of the anguish expressed by certain of the devas, bhikkhus and laity who had not yet attained to mind composure and self-possession.

Miraculous Events: The injection of miraculous events into the text should not cause surprise as such embellishments are invariably found in ancient literatures. An example is how the Buddha and his entire retinue crossed the Ganges at Pataligama, disappearing and re-appearing on the opposite bank “as a strong man stretching out his bended arm or bending his outstretched arm”. The stanza at that point of the narrative invests the crossing over to the opposite bank with a metaphoric meaning which gives the text an enhanced value.

There are several such embellishments. For instance, Ven. Ananda going to fetch water for the Buddha to drink from a nearby stream, muddied by five hundred carts going through it, finds the water miraculously clear and pure.

The scene of Parinibbana is presented with the kind of embellishment one might expect, with the sala trees bursting into flower out of season and showering the Buddha’s body with blossoms and the devas scattering celestial Mandara flowers and sprinkling sandalwood powder over him, while divine music and singing wafts through the air. Even here, the opportunity is not lost for an appropriate homily which is interwoven into the text’s rich tapestry., for the Buddha remarks that the correct way to honour him is by following the dhamma (yo dhamman passati-so mam passaïi). After the cremation it is said torrents of water fell form the sky. All the embroider point to the fact that the MPS Mahaparinibbana Sutta had already acquired legendary elements when it crystalized into its present form in the canon.

Other Literary Aspects: There is never a dull moment in the narrative for it flows on with a momentum of its own. It does not even pause long at the scene of the Parinibbana but makes known other activities and arrangements going on a-pace in the background, like a new minor theme being introduced into a musical composition or a detail being worked into a tapestry’s main design. These activities relate to the Mallas being informed of the impending Parinibbana of the Buddha so that they may pay their last respects to him before the actual event takes place. It is on account of Ven. Ananda’s organisational skill that all the Mallas were presented to the Buddha in groups of family members so that the whole business was brought to a finish by the end of the night’s first watch itself.

The lofty edifying stanzas interspersing the text at this juncture elevate the mood of the narrative to a pitch of sublime grandeur and pathos from the human predicament of mortality to a cosmic dimension. The Buddha’s last words of admonition are:

“Vayadhamma Saîkhârâ appamâdena sampâdetha”
“All component things are subject to decay. Exert yourself with diligence.”
The stanza attributed to God Sakka is the following
“Aniccâ vata saîkhârâ uppdavaya dhammino Uppajjivâ nirujjhanti tesanî vipasamo sukhoti”. All component things are impermanent. It is the nature of things that what is born should die.... their cessation is happiness.

Ven. Ananda’s utterance on experiencing the mighty earthquake that takes place immediately after the Parinibbâna is the following.
"Tadāsi bhimsanakham tadāsi lomahansananam Sabbākāravarupete sambuddhe parinibbutे'ti"
"As the Sambuddha, possessed of all virtuous qualities passed into parinibbāṇa, immediately there occurred a mighty earthquake making the hair stand on end."

The description of the Buddha’s actual passing away is contained in a passage of extraordinary power and which can be described only in terms of a grand musical score. It states the Buddha’s ascent from one jhāna to another, step by step, to the very peaceful pinnacle of Niruddha Sanāpatti and then rising from that state entering in descending order to the fourth, third, second and first jhānas and then again rising from the first jhāna and ascending step by step to the fourth and immediately afterwards passing into Parinibbāṇa. It is not a wonder that this event has inspired many works of art and sculpture throughout the Buddhist world.

After the Parinibbāṇa the momentum of the narrative is sustained in a subdued key. The body of the Buddha is taken charge of by the Mallas for the purpose of according the Buddha a state funeral and while arrangements are being made for the cremation, the body is made to lie in state in their Assembly Hall. According to custom, they put up a canopy and decorated the hall with lengths and lengths of cloth and festoons of flower garlands. For a whole week through they honour, revere venerate and esteem the body of the Buddha with music, songs and dance. Finally after the elaborate cremation, the narrative relates how the bodily relics were distributed among the Khattiyas for the elaborate cremation, the narrative relates how the pyre inste ad.

The Teaching: Apart from the seven conditions for prosperity which the Buddha advised the Vajjians to follow mentioned the maintenance of shrines worshipped by the people and the continuance of customary offerings made at those shrines. The funeral rites of the Mallas have already been mentioned and the Buddha himself describes to Ven. Ananda the elaborate way a Buddha or a Cakkavatti king should be cremated. It is interesting to note how the Mallas worshipped the relics of the Buddha in their Assembly Hall within a lattice work structure of spears surrounded by a rampart of bows.

The sutta also yields information of a historical and geographical nature. The narrative describes how Pataligāma was being fortified against the Vajjian attack, and the Buddha prophesying that it would develop into a prosperous city. This remark anticipates what the city became in the future and could be something that has been thrown back to the Buddha’s lifetime in the form of a prophesy. Kusinārā, though a humble wattle and daub town is said to have been a thriving city in the past called Kusavafi. Geographical details presented include names of villages, towns, cities, rivers, mountains, regions and clans whose names were sometimes synonymous with the regions they occupied.

The Teaching: Apart from the seven conditions which conduce to progress of a state (satta aparīhāniyā dhammā) which the Buddha had earlier expounded to the Vajjians and which were related to Vassakāra and later related to the Bhikkhus with 5 additional sets of seven conditions and another set of 6 conditions for their progress, the Teachings in the MPS are mainly

**Other Aspects of Interest:** Apart from the interest the MPS evokes with regard to the main theme, it yields information about various aspects of Indian life, social and religious. For instance, it is learnt that there were rest houses in towns, cities and villages where visitors could stay. The villagers of Pataligāma decked their village rest house, arranged seats, placed a pot of water and provided an oil lamp for the Buddha and his retinue of bhikkhus. The Buddha mentions several cetiyas or silvan shrines which he appears to have delighted in visiting. By the number of cetiyas mentioned it would seem they were pre-Buddhist shrines at which the people were accustomed to worship. The seven conditions for prosperity which the Buddha advised the Vajjians to follow mentioned the maintaining of shrines worshipped by the people and the continuance of customary offerings made at those shrines. The funeral rites of the Mallas have already been mentioned and the Buddha himself describes to Ven. Ananda the elaborate way a Buddha or a Cakkavatti king should be cremated. It is interesting to note how the Mallas worshipped the relics of the Buddha in their Assembly Hall within a lattice work structure of spears surrounded by a rampart of bows.
When divine Mandara flowers and sandalwood powder were sprinkled on his body by devas at the scene of the parinibbāna and heavenly music and singing wafted about in honour of the Buddha, the opportunity is made use of to tell Ven. Ananda that it is not by such means that the Buddha is rightly honoured, revered, venerated and esteemed but by living according to the dhamma.

A theme repeated several times is the concern expressed by the Buddha to establish on a firm footing the fourfold assembly of bhikkhus, bhikkhunis, laymen and laywomen. The importance of establishing such an assembly for the progress of the sāsana (dispensation) was expressed by the Buddha to Māra and later to Ven. Ananda when recounting his dialogue with Māra, both the Enlightenment and at the Cāpala Cetiya.

A significant utterance attributed to the Buddha is, the parinibbāna is his granting of permission to abhor the minor and lesser rules, (kuddhanukhuddani sikkhapadani) if so desired. This remark, especially coming from the mouth of the Buddha himself, strikes a discordant note in the Theriya tradition. It has been pointed out that there was a move among a certain section of the Sangha to do away with the minor and lesser rules of conduct. There is indication of this when Ven. Mahā Kassapa on his way from Pāvā to Kusinara heard of the Buddha’s parinibbāna’ from an Ajivaka Paribbajaka, one of the monks in Ven. Mahakassapa’s retinue Subaddha expressed joy, that members of the sangha would be free of the restraint of following disciplinary vinaya rules. A historical consideration of this movement which grew into a formidable proportion after the parinibbāna and a comparative study of the Buddha’s remark as recorded in recensions other than the Pali, begs the question why it finds mention in the recensions of all the Buddhist schools with significant variations between the texts of the Sthavira and Mahāsāṅghika sects. A conclusion that may be reached from the data is that when the MPS crystalized into its present form in the Pali (Theriya) recension, with its earlier and later historical layers, divergent attitudes were co-existing in one and the same Saṅgha community before their division into schools and sects.

MAHĀPURISA. The Pali term Mahāpurisa literally means Great Man. In the Buddhist literature the term is used to refer to a person who is destined to become either a Universal Ruler (Cakkavatti) or a Buddha. Thus the term presents a concept of both secular and spiritual importance.

The origin of the concept of Mahāpurisa is not quite clear. All available evidence shows that it is a concept going back to great antiquity, and certainly to pre-Buddhist times. The concept as well as the essence of its theory was adopted by the Buddhists from pre-Buddhist traditions. This view is supported by the Suttas which attribute the knowledge of the theory of Mahāpurisa to sages of yore. Thus it is said that “Seers not of our communion, are acquainted with marks (of a Mahāpurisa): but they do not know as a consequence of what deeds done these marks (D. III, p. 145) are (D. III. p. 145).

This reference is important, for it suggests that the Buddhists not only adopted this concept from pre-Buddhist sources, but also enlarged its scope by adding certain innovations, specially on the moral side. It is also seen from Sutta references that the science of prognostications, particularly foretelling of the future of a person by interpreting specific marks on his body, was one of the branches of the traditional system of education (D. I, pp 28, 114; M. I., pp 135; Sn. vv. 101 etc.). There is reference to this in the Vedic texts, too. (Atharva Veda, VIII, 115, 1). The Jainas too seem to have practised prognostication (Śāhāanga Sūtra III, 6, 78, Utararādhāna Sūtra VIII, 13), Basham says that there is evidence to show that even the Ājīvakas practised some kind of prognosticatory science. All this shows that the belief in the Mahāpurisa was part of traditional lore of the time, and Buddhism, being a junior contemporary of the religious systems, adopted it and gave it more importance while widening its scope.

The earliest reference to the concept of Mahāpurisa is perhaps in the Parāyananavagga of the Suttanipāta, which contains Suttas belonging to the earliest strata of the Pali canon. In the Sutta called Tissametteyyamānārākapucchā the brahmin, Tissametteyya asks the Buddha as to whom he calls a Mahāpurisa. This question is immediately followed by another question “Who has here gone beyond desire?” The whole tone of the Sutta is rather ethical, and hence, both the question and the answer are ethically biased.

However, there is something specially noteworthy in the Buddha’s explanation as to who a Mahāpurisa is. In defining Mahāpurisa there is no mention of any distinguishing bodily marks. Perhaps, it may be that the Buddha, when adopting the pre-Buddhistic concept, originally did not pay any heed to such marks, but was concerned about the virtues embodied in such a Great Being. And, hence, in answering the question the Buddha says: “the man who abstains from sensual pleasures, who is free from desire, always mindful, happy by reflection, without turmoil, often knowing both ends, does not stick in the middle as far as his understanding is concerned, him, I call a Great Man (Mahāpurisa). He has overcome craving in the world”. It is true that this answer was made to fit into the question. Yet, it shows that at first the Mahāpurisa concept was used to focus attention on moral perfection. In this explanation there is no identification of a Great Man with any particular individual like the Buddha, an Arahant or even a Bodhisattva. Hence, it is seen that in the earliest stages of its use in Buddhism the term Mahāpurisa generally denoted none other than a being who had destroyed his defilements, i. e. an Arahant.

The Samyutta (V. P. 158) records an incident where the Buddha tells Sariputta that according to him a Great Man is called so because his mind is emancipated. Here the Buddha explains emancipation of the mind through the Four Foundations of Mindfulness. The Dhammapada also records a similar account of the concept of Mahāpurisa. It says: “He who has overcome craving, devoid of grasping, who is skilled in etymology, who knows the grouping of letters and their sequence he, who bears the final body and is of profound wisdom is a Great Man.

In this, though the ethical aspect is quite prominent, one can notice an expansion of the concept to include certain secular areas of proficiency. This widening of the scope of this concept is evident from numerous other Suttas as well. The Aṅguttarañikāya (II, pp. 25-37) contains an account of the meeting between the Buddha and the Brahmin Vassakāra where the
latter expresses his views about the Mahāpurisa. Here he lists four qualities, namely the much learning (bahussutta), ability of comprehension (bhasitassa attham jānāti) possession of a good memory power (satimā kho pana hoti cirakatampi cirabhāsiyampi), skill and diligence in a layman’s duties (gañhamahākaraṇiyeyeasu dakkho hoti analas). Herein, Vassakāra, who was the chief minister of King Ajātasaṃgaha, seems to have conceived the Mahāpurisa concept from a broad social perspective. This shows that the pre-Buddhist concept of Mahāpurisa was freely used by religious men and lay people alike to interpret their own ideas of who a Great Man is.

The social aspect of the Mahāpurisa concept finds development in the Lakkhana Sutta of the Dīghanikāya. This sutta is important for another reason, namely, for presenting the popular conception of the Mahāpurisa concept based on physical characteristics. This conception of the Mahāpurisa concept seems to be related to the science of prognostication which, as pointed out before, was mentioned in both pre-Buddhist as well as Buddhist literature. Though this kind of science was looked down upon by Buddhism as a low science (iracchāñavijjā), this condemnatory attitude does not appear to have affected the Buddhist Mahāpurisa concept and its close relation to the Buddha and Cakkavatti concepts. Though this relation between the Mahāpurisa concept and the Buddha and Cakkavatti concepts is mentioned in the Canon itself, it could be that this belongs to the later stratum of the Canon wherein one finds evidence of development of the Buddha concept. The development of the Buddha concept seems to have necessitated the adoption of the pre-Buddhist Mahāpurisa concept.

The belief that a person with specific bodily signs of a Great Man has only two destinies came to be a part of the Buddhist tradition at a fairly early date. The Suttas record that if such a person leads the life of a householder he will certainly become the Universal Monarch (Cakkavatti, S.V.) or if he leaves household life and enters reclusehip he will become a Buddha (M. II, p. 133; S. I p. 89, 114, 120 etc.). This seems to be a Buddhist innovation introduced to the pre-Buddhist concept of Mahāpurisa. In the Majjhima commentary (M A. II, p. 76) the commentator says that when the time comes for the birth of a Buddha, the Sudhāvāsa Brahmas visit the earth in the guise of Brāhmaṇas and teach men about the bodily signs of such a great man as part of the Vedic teaching, so that wise men may recognise the future Buddha. The Mahāpadāna Sutta of the Dīghanikāya which presents the biographies of six previous Buddhas says that soothsayers were summoned to prognosticate on the bodily signs of Prince Vipassi, who later attained Buddhahood under the same name. The Jātakanidāna describes a similar event connected with Prince Siddhartha (J. I., p. 55f). In the case of Prince Siddhartha one young soothsayer was supposed to have confidently declared that there is only one destiny for Prince Siddhartha and that is the attainment of Buddhahood.

These signs of a Mahāpurisa are said to be thirty-two in number though it is not quite certain how, why and when this number got fixed. Whether all these thirty-two signs are seen in the body of the Mahāpurisa at the time of his birth is not quite clear; however, it assumed that they could be identified in the body of the child and through them one can predict his destiny.

After the enlightenment, too, there were several occasions when the thirty-two marks of Mahāpurisa on the Buddha’s body came up for investigation. These incidents describe how by examining these marks on Gothama’s body some Brāhmaṇas wanted to make sure whether he surely had attained Buddhahood. The Majjhimanikāya (M. II, p. 146) and the Suttanipata (104f) record such an investigation made by a Brahmin called Sela. The Lakkhana Sutta of the Dīghanikāya is of special importance in this regard, as it presents the Mahāpurisa concept based on the bodily marks. Although the Buddha did not specifically define a Mahāpurisa by virtue of his physical excellence, the texts maintain that these marks are an absolute requirement for a person who becomes a Buddha. The Buddha’s disapproval of this belief is seen in his rather condemnatory attitude to prognostication which he labelled as a lowly science.

The Lakkhana Sutta introduces the theory of the physical characteristics of Mahāpurisa without specifically saying whether the Buddha himself possessed them. It refers to the Tathāgatas as being endowed with them. However, the incident connected with the Brāhmin called Sela makes it clear that the Buddha himself was endowed with them. It is said that when Brāhmin Sela, Brahmaryu and pupils of Bāvare were not quite sure whether the Buddha was endowed with two particular marks, the Buddha contrived by iddhi power to make those brāminś see them. This suggests that the Buddha, according to the accepted tradition, was endowed with these thirty-two marks.
Although the Buddha did not define *Mahāpurisa* by virtue of his physical excellence, it can be seen that he did not reject the theory of the *Mahāpurisa* advocated by the Brahmins. However, he gave it a different interpretation by adding a moral dimension to it. Thus in the *Lakkhana Sutta* the Buddha while attributing the knowledge of the theory of *Mahāpurisa* to certain sages of the past says that these sages did not know the cause and reason in consequence of which an individual could obtain the signs of a Great Being (*D. III*, p. 145). In Buddhism one finds this *Mahāpurisa* concept being combined with the doctrines of *Kamma* and rebirth. It is seen that although the *Sutta* introduces the past good actions with reference to the Tathagata only, physical signs and their present effects have been referred to of both the Buddha and the Cakkavatti, the secular counterpart of the signs reveals two different efforts relating to the Buddha and the Cakkavatti respectively.

In Buddhist texts the Mahapurisa as Cakkavatti is represented with miraculous power and external possessions such as seven treasures (*satta ratana*) supremacy over the quarters, etc. On the other hand, the Mahapurisa as the Buddha is represented with greater emphasis on internal spiritual attainments such as the seven factors of Enlightenment (*satta bojjhagga*). In spite of this fundamental difference the marks are similar.

A number of Pali *Suttas* e.g. *Mahāpadāna* (*D. III*, p. 17 f), *Lakkhana* (*D. III*, p. 143 f) and *Brahmāyu* (*M. II*, 134) give the physical signs of the *Mahāpurisa* which are enumerated as thirty two. Besides the Pali *Suttas*, the Mahāvastu (*Mhvu. 2.52*) makes a brief reference to them. The *Lalitavistara* deals with them fully (*Lal. p. 105*). The *Madyamagama* of the Chinese Tripiṭaka also enumerates these marks and this is good evidence for the antiquity of the belief.

Max Muller who had made a critical study of these marks has collected a list of thirty-seven from different sources. Research done by Burnouf and Franklin Edgerton, too, are quite noteworthy. The thirty two characteristics of a Great Being (*dvattinissa-Mahāpurisa-lakkhaṇa*) are as follows:

1. *Suppatīṭhitapāda* (feet with level tread)
2. *Heṭṭhāpadatālesu cakkāni* (soles are marked with wheel signs complete with spokes, rim, hub etc.)
3. *Āyatapanhi* (projecting heels)
4. *Dīghanlguli* (long fingers)
5. *Mudutālahatthapāda* (soft and tender hands and feet)
6. *Jālahattapāda* (evenly spaced fingers and toes)
7. *Ussankapāda* (ankles are over the exact middle of the tread)
8. *Enijangha* (legs are shaped like those of antelopes)
9. *Thitakova anonamanto ubhohi hattehi jannukāni parimasati* (can touch and rub knees without bending)
10. *Kosohitavathaguyya* (privities are within a sheath)
11. *Suvanāvanāṇa* (golden complexion)
12. *Sukumachavi* (soft texture of skin)
13. *Ekekaloma* (hair grows singly, one in each pore)
14. *Uddhaggaloma* (straight hair, blue-black, curling to the right at the tip)
15. *Brahmujjugatta* (erect body frame)
16. *Sattussada* (body having seven convex surfaces)
17. *Sihapubbadhakāyā* (upper part of the body well built like that of a lion)
18. *Citantaramasa* (having no hollow between shoulders).
19. *Nigrodhaparimāṇḍala* (symmetrical proportion like a banyan tree)
20. *Samavattakkhandha* (symmetrical shoulder curves)
21. *Rasagghasaggi* (an exquisite, acutely sensitive sense of taste)
22. *Sihahanu* (jaws like those of a lion)
23. *Cattālisadanta* (forty teeth)
24. *Samadanta* (even teeth)
25. *Avivaradanta* (having no interstices between teeth)
26. *Susukkidanta* (sparkling white teeth)
27. *Pahuta-jivha* (long flexible tongue)
28. *Brahmas vara* (voice is like that of Brahma and is mellifluous like the kuravik birds)
29. *Abhinlanetto* (dark blue eyes)
30. *Gopakhuma* (long eye-lashes like those of a cow)
31. *Unna* (soft white hair between eye-brows)
32. *Unhīsaśīsa* (head shaped like a royal turban
It is seen that some of these marks are quite obvious in their meaning, some are obscure and difficult to account for as physical attributes.

It could be surmised that most of these marks are meant to emphasise their symbolic nature in relation to the Buddha’s character than their physical importance. This is shown by the Lakkhana Sutta (Q. V) where it is said that the fortunes in respect of the Lakkkhanas are different in relation to the Buddha and the Cakkavatti king. Hence most of these Mahāpurisa lakkhanas attributed to the Buddha can be seen not only as physical marks, but also as songs that portray outwardly the inner spiritual qualities of the Buddha.

The development of docetic theories concerning the Buddha appeared to have greatly contributed to the further elaboration and even increase in the number of special bodily marks. One of the major developments of the Mahāpurisa concept at this stage is the enumeration of eighty secondary marks (asīti-anuvayanjana) subsidiary to the thirty two major marks (Lal. p. 142). By this time the Buddha was considered to be a transcendent being and thirty two marks were felt to be insufficient for his glorification, and hence eighty minor marks were evolved as an attempt to provide a detailed description of each major mark. This transcendent conception of the Buddha as possessing three bodies (tri-kāya) which developed in the Mahāyāna had an influence on the concept of the Mahāpurisa as well. At this stage the thirty two marks which were considered signs possessed by the Nirmāna-kāya, the form in which the Buddha appeared on earth, were also attributed to Sambhogakāya the Glorified Body or the Body of Bliss in which the Buddha manifests himself in the midst of the Bodhisattvas.

Still later when the Bodhisattva concept developed as an ideal to be pursued, these marks were attributed to the Bodhisattvas who are in heavenly worlds.

The concept of Mahāpurisa also played an important role in Buddhist iconography. Although thirty-two marks are enumerated only some of them are depicted in iconographic representation of the Buddha, and this is purely due to certain technical difficulties in representing some of them. Thus the most frequently represented are such marks as the level tread of feet, soles of feet marked with wheel signs, long fingers, soft and tender limbs, evenly placed fingers and toes, legs like those of antelopes, colour and texture of skin, the erect frame, the torso like that of a lion, absence of a hollow between shoulders, symmetrical bodily proportion comparable to a banyan tree, symmetrical curves of shoulders, ārāja and usṇīsa. It is seen that these Mahāpurisa lakkhanas have greatly facilitated the task of the artists to transfer the inner abstract qualities of the Buddhahood into visual artistic representation.

Bellanwila Wimalaratana

MAHĀSAMMATA, a king who lived in the beginning of the present kalpa. The Pali chronicles mention him as the original ancestor of the Sakyan family to which the Buddha belonged, and gives a list of dynasties from his day to the time of the Buddha, to prove that the line was unbroken (Mhv. ii, vv. 1 ff.; Dpv. iii, vv 1 ff., MhvA. p. 122ff. See also J. II, p. 311, III, p. 454. Mhvu. I, p. 348; II, p. 146). Mahāsammata belonged to the solar race and is identified with the bodhisatta, who was born among men after sojourn in the Brahma-world (MhvA. p. 121 ff). He was called Mahāsammata, because, on the arising of wickedness in the world he was chosen by the people (sannipatitā sammaggajātehi mahājānehi sammannitvā kato Mahāsammato) to show indignation against and disapproval of those worthy of blame (D. III, p. 92 f. Mhvu. I, p. 384; MhvA. p. 122; DhsA. pp. 390, 392). In return for his service he was given a portion of their harvest. It is said that in the dynasty of Mahāsammata the idea of meting out punishment, such as torture, fining, expulsion, was unknown. These were invented later with the advance of civilization! (J. IV, p. 192).

His life span was incalculable (J. III, p. 454). The Pali texts say that he had a son named Roja (J. II, p. 311; III, p. 454). But the Mahāvastu (Mhvu. I, p. 348) record the son’s name as Kalyāṇa.

The Vimānavatthu commentary explain that Mahāsammata is the name given in the sacred books (sāsana) for Manu (MhvA. p. 19). Some, at least, of the Sinhala kings traced their descent from Mahāsammata (Mhv XLII, v. 2). Monier Williams in his Sanskrit-English Dictionary gives this also as a name of a Buddhist Turkish chieftain.

Sanath Nanayakkara

MAHĀSAṆGHIKĀ: The origin of the Mahāsāṅghikas goes back to the Second Buddhist Council which was held about a century after the Buddha’s parinibbāna. They were the first sect to secede from the main fra-
ternity of the *bikhhusangha*, who up to the time of this secession continued to maintain their identity as members of the *sāmaṇāsakayaputtiya* (the *sakya*pātīya *samaṇas*). As it was from this point onwards that the single tradition of the Buddha’s dispensation became divided into two, each tradition claiming authenticity only for their own inter pretations of the teaching as well as of the rules of discipline, the history of Buddhism has inherited two distinct traditions even on the causes which led to the summoning of the Second Buddhist Council.

The *Cullavagga*, *Mahāvamsa*, *Dīpavamsa*, *Samantapāsādikā*, *Mahābodhivamsa*, *Sāsana vamsa* and the Sinhala *Nigayasangrahaya* are the texts which record the southern traditions of the Council. The northern traditions are found in the Tibetan and the Chinese translations from texts which originally belonged to various sects which came to be included under the umbrella designation “Mahāyāna” which appellation is historically posterior to the period of existence of some of those sects.

The Tibetan traditions of the Council are recorded in (i) the *Dul-va*; (ii) *Mulasarvāstivāda Vinaya*, translated by W. W. Rockhill; (iii) Bu-ston’s *History of Buddhism* translated by E. Obermiller; and (iv) Tārānātha’s *History of Buddhism* translated into German by A. Schiefner. The Chinese traditions are recorded in, (i) *Mahāsāṅghika Vinaya* found at Pātaliputra by Fa-hien and translated into Chinese by Buddhadatta and Fa-hien in 416 A. D.; (ii) *Mulasarvāstivāda Vinaya* (*Kṣudrakavastu*) translated by I-tsing in 710 A. D.; (iii) *Recitation in four parts: School of the Dharmaguptakas*, translated into Chinese by Buddhayaasas and Tchou-fu-nien in the 5th century A. D.; (iv) *Recitation of the Mahīśasaka Vinaya* translated by Buddhajīva, a Kashmirian monk, in 424, A. D. Fa-hien came across a copy of the original *Vinaya* in Sansk it in S i Lanka. It is thought to have been in Pali as it closely followed the chapter XII of the *Cullavagga*; (v) *Recitation of the Che-song-liu* (*Vinaya* in ten sections, Daśādhyāya) of the Sarvāstivāda school, translated by Puṣyatrāta, Kumārajīva and Vimalākṣa; (vi) The account of the *Vinaya-māṭrka-sūtra*; (vii) *Vasumitra*, Bhavya and Vinitadeva, translated by J. Masuda in Asia Major, vol. II. *Vasumitra’s* treatise has one Tibetan and three Chinese translations of Kumārajīva (402-412), Paramārtha (557-569) and Huen Tsang (662). Koue-ki, a disciple of Huen Tsang wrote a commentary on Paramārtha’s treatise.\(^3\)

The main tradition of the Council of the Southern tradition is the one recorded in the *Cullavagga* of the *Vinayapitaka* which runs as follows; “Some of the Vajjian monks of Vaisāli allowed as lawful certain rules, which were not in conformity with the rules of the *Pātimokkha-sutta*. Yasa of Kosambi, while at Vaisāli, happened to notice the deviations and strongly protested against them. At this attitude of Yasa, the Vajjian monks excluded him from the *Saṅgha* by *ukkhepanīya-kamma* (act of excommunication). Yasa then made an appeal to the laity, but it was of no avail and he had to flee from the country to his native place. From there he attempted to form a group of monks, who supported his views. He sent messengers to the monks of Paṭheyya and Avanti, and he himself went to Ahogariqa, the residence of Sambhūta Sāṇavāsī. There he was joined by sixty theras of Paṭheyya and eighty theras of Avanti, and g adually by several others. They all decided to meet Shāvīra Revata of Soreyya, who was then the chief of the *Saṅgha*. Before they could reach Soreyya, Revata became aware of Yasa’s mission and started for Vaisāli and the meeting of Revata with other monks took place at Sahajāti. The Vaisāli monks, in order to forestall Yasa’s plans, approached Revata at Sahajāti with robes and other gifts but failed to win him over to their side. Sālha of Sahajāti was at first wavering between the two parties, but ultimately he sided with Yasa. The Vajjian monks, being unsuccessful in this attempt of theirs, approached king Kālāsoka at Pupphapura, and persuaded him to believe that the monks of the western contries were making a sinister move to get possession of the Teacher’s *Gandhākuti* in the Mahāvānivhāra at Vaisāli. The king at first took up their cause but later on changed his mind, it is said, at the intervention of his sister who was a *bhikkhunī*. The session of the Council was held at Vaisāli with 700 members, but as there was great uproar during the deliberations it was decided to refer

2. This work appertains to the Haimavata sect and is preserved only in Chinese translation of about the end of the fourth and beginning of the fifth century A. D. N. Dutt, *Buddhist sects in India*, 1998, 12.
3. “Paramārtha was the most learned Indian missionary who went to China to propagate the religion. He was as intelligent as Kumārajīca. Ki-tsang, a monk of Parthian origin, being the son of a Parthian merchant settled in China, and the Chinese mother of Nan-kin’s. He traced the origin of sects from the beginning to the end. He wrote a commentary on Paramārtha’s treatise on Vasumitra”; N. Dutt, Ibid.
the matter to a body of referees consisting of eight members, four from the western and four from the eastern countries. This was done by ubbāhikā (voting) as described in the Patimokkha. The findings of the referees, which were all against the Vaisāli monks, were placed before the larger body constituting the Council and were confirmed.

The Council of Ten, called Mahasanghika or Mahasanghīti."

The Ceylonese chronicles continue the story and write that the findings were not accepted by all the Vaisāli monks, some of whom held another Council and included in it all monks, arhats and non-arhats, and decided matters according to their own light. This assembly was called Mahāsaṅgha or Mahasaṅgiti."

The account of the Second Council as recorded in the Mahasanghika Vinaya, translated by M. Hofinger from Chinese into French runs as follows: "The Piṭakas of Buddha's teachings were rehearsed by 700 monks, at Vālukā Saṅghārāma in Vaiśāli. The monks of Vaiśāli used to address the donors (dānapati) in these words: "Respected brothers, at the time when Bhagavan Bud- dha was living, we received two meals in a day, robes, service and adoration. After his parinirvāṇa, who will take care of us, we have become orphans, and so we request you to give silver to the Saṅgha. As we are Buddhist friars, you should give to the Saṅgha one, two, up to ten Kārśāpanas.

On the day of Uposatha, donors put large sums into the basin placed at the crossing of roads. The monks collected the contents, and after dividing them according to the number of bhikṣus, distributed the same among the monks present. In this way came the turn of Vinayadharā Yāsa, and he was offered his share. Yāsa enquired, 'Wherefrom was this money coming?' They replied, 'We received money as well as medicines'. Yāsa retorted that it was wrong; it was not permissible. They replied 'You are slandering the Saṅgha by these words. You should therefore be excommunicated by utkṣepaniya karman (act of excommunication)'.

After this was done, Yaśa went to Venerable Daśabala, who was then residing in Mathura and told him that he had been excommunicated by utkṣepaniya karman. Daśabala said, 'why did you submit to it? There was no reason for your submission'. Yaśa said, 'The Vinaya Piṭaka must be rehearsed. Buddha's law must not be allowed to be destroyed'. To the question where the Council should be held, Yaśa replied that it should he held at the place where the deviations had occurred.

Then the Saṅgha of 700 monks assembled from the regions of Mathura, Sāmkāṣya, Kāñyakubja, Śrāvasti, Sāketa and other places of Madhyadesa. The Saṅgha was composed of those who received directly from the mouth of the Teacher one or two sections of the Vinaya Piṭaka as also those who heard it from the mouth of his direct disciples, the Śrāvakas. There were also common men (prthagjanas), sākīsas, aśaṅgas, śrīdivas and sādabhajñas balaprāptas and vasībhutas - in all 700 members. They assembled at Vāluka Saṅghārāma in Vaiśāli. At this time Mahākāśyapa, Upāli, Ānanda, etc. were parinirvāṇa, and so Yaśa became the president of the Council. First, he put the question to the Assembly that who would rehearse the Vinaya Piṭaka? The bhikṣus replied that Venerable Daśabala should rehearse it. ... All was then settled and approved".

Thus, according to the southern Buddhist traditions as recorded in the Pāli and the Sinhala texts and the northern Buddhist traditions recovered from the Tibetan and Chinese translations from texts which were in the custody of various sects, the main business of the Council was to examine the validity of the ten Vinayic practices by a section of the Vaiśāli monks, although there exists a wide divergence of opinion on their interpretation.

The different versions of the ten practices which have been elicited are as follows: (i) The account of the dasa-vatthini in the Pāli texts; (ii) Bu-ston's account based on the traditions preserved in the Mūlasarvāstivāda Vinaya which has already been translated by Prof. L. de la Vallée Poussin from the Tibetan Dul-va; and (iii) Obermiller's translation which is also from the Tibetan sources. While there is agreement among the explanations of the ten points in the Pāli texts, such agreement is not seen in the explanations given by the presenters of the northern traditions even when they are based on the same source for their explanations.

4. N. Dutt, Buddhist Sects in India, 1998, 13f; also, P. V. Bapat, 2500 Years of Buddhism, 1956, 99.
It is clear that all the earlier sources agree, that the main business of the Council was to examine the validity of the ten un-Vinayic practices by a section of the Vaisáli monks although there exists a wide divergence of opinion in their interpretations.6

"Vasumitra, followed by Bhavya and Vinítadeva, writes that on account of the five propositions propounded by Mahádeva, the Saígha became divided into two schools, Mahásánghika and Sthaviraváda. The five propositions are:

The Arhats
1. are subject to temptation (cf. Kvü. II. 1; Atthi arahato rágo ti?)
2. may have residue of ignorance (cf. Kvü. II. 2. Atthi arahato añíjanan ti?)
3. may have doubts regarding certain matters (cf. Kvü. II. 3. Atthi arahato kañkhā ti?)
4. gain knowledge through other’s help (cf. Kvü. II. 4; Atthi arahato paravítiáranã ti?)
5. The Path is attained by an exclamation (as "aho" cf. Kvü. II. 3 & 4 & XI. 4)7

According to an account of the Second Council given by Paramáthra (which has been translated by Paul Demiéville- Mélanges chinios et bouddhiques, I), “The Second Council was held at Páñaliputra, 116 years after Maháparinívána, during the reign of Asoka (perhaps Kálasoka). The members were all bhikṣus (i. not necessarily arhats). The president of the Council was Báspa (lit. tears). In the Council the controversy provoked by Mahádeva led to the division of the Saígha into two schools, Sthavira and Mahásánghika. Mahádeva’s heresy was twofold. On the one hand, he wanted to incorporate all the Maháyána sútras into the Tripítaka, and on the other he attributed to the Arhats diverse imperfections, such as doubt, certain measure of ignorance, etc. Paramáthra did not condemn the latter entirely, as he recognized the imperfections of Arhats as partially true and partially false. He was inspired by the Maháyánic moral teachings, which contained in essence more particularly the Víjñánaváda views. He was a fervent supporter of Víjñánaváda .....”8

There are a number of important points emerging from the discussions in the preceding pages which are important for our theme under discussion. All ancient sources agree that there was a Council about a hundred years after the pariníbbána of the Buddha. There is also agreement that the main business of the Council was the resolution of the problem caused by the ten un-Vinayic practices of a section of the Vaisáli monks. There is also agreement that the ubbáhká which was appointed to report on the conformity of the ten practices with the rules of the Vinaya pronounced that they were inconsistent therewith.

It was after this that the senior theras decided to rehearse the entire dhamma and Vinaya in congregation so that the correct dhamma and Vinaya be held by the bhikkhu saígha, as these were held in oral traditions and transferred from teacher to pupil as was in the Vedíc traditions. It is also said that the dissidents who did not accept the verdict of the ubbáhká moved out to a distant town and held a Council of their own. While the Council of the theras who rejected the ten practices of the Vaisáli bhikkhus had seven hundred participants who were all arhats, the Council of the dissidents had ten thousand participants and hence it was called the Mahásángüti. Those who held this rival council and followed the decisions of this Council came to be known as the Mahásánghikas.

While there is agreement that the frontal cause of the second Buddhist council was the situation created by the un-Vinayic practices by a section of the Vaisáli bhikkhus, a study of the new interpretations heralded by the secessionists seems to point to the possibility of differences on more important non-Vinayic matters having fuelled the breakaway. Nalínaksha Dutt explains, “The question that should be discussed next is whether the schism was due to the divergences in Vinaya rules only or to the five dogmas of Mahádeva or to both. It seems that both the causes were responsible for the schism, because both of them indicate the advent of the broad division of Buddhism into Hinayána and Maháyána, the latter favouring the Bodhisattva practices even at the sacrifice of Vinaya rules, e. g. fulfilling the wishes of an individual even by sacrificing the Vinaya prohibitions. The Mahásánghikas were the forerunners of the advent of

6. Ibid. 15.

8. N. Dutt, Ibid. 23.
Mahāyānism. The Mahāvastu, the first book of the Vinaya of the Lokottaravādins, a branch of the Mahāsāṅghikas, contains many Mahāyānic traces.9

Nalinaksha Dutt argues that, “The division of monks began with the differences of opinion regarding the interpretation of the ten Vinaya rules during the reign of Kālāsoka, i.e. some time before the appearance of Mahādeva (or Nāga), i.e. it was about half a century later, Mahādeva or Nāga, propounded the five dogmas during the reign of King Nanda. His disciple Sthiramati propagated it further. As regards the fact that the tradition of the breach of ten rules appears in the Vinaya texts and the Ceylonese chronicles the tradition about Mahādeva’s five dogmas appears in the Tibetan and Chinese versions of the treatises of Vasumitra, Paramārtha and other writers on the doctrines of sects. It may therefore be stated that the Vinaya texts, being concerned only with the disciplinary aspect of the religion, passed over the doctrinal differences, while Vasumitra and other writers, being more concerned with doctrinal differences than with disciplinary rules, considered it unnecessary to repeat the ten un-Vinayic acts of the Vaisali monks. The sources of information for the Ceylonese chronicles, being the Vinaya texts, passed over the doctrinal differences. Yuan Chwang, being an annalist, was interested in both doctrines and disciplinary rules, and so he recorded the divergences in regard to both. It is quite probable that the schism began with disciplinary rules and, in course of time, incorporated matters of doctrines”.10

Although the historical time of the Second Council is not important for our discussion here, it nevertheless seems to have taken place during the reign of king Kālāsoka as given in the Sri Lankan traditions. Kālāsoka succeeded Sīṣunāga and is identified with Kākavarnin of the Pūrāṇas. “In view of the fact that Sīṣunāga transferred his capital to Vaisali it is not unlikely that his son should continue to make Vaisali his royal seat and take interest in the affairs of the Sāṅgha existing in his capital. If Kālāsoka be accepted as the royal patron of the synod, the date of the session should be put about a century after the Buddha’s demise”.11

“In the Dipavamsa it is said that the Mahāsāṅghikas not only introduced the ten new Vinaya rules but also propounded new doctrines contrary to the established ones. At the Mahāsaṅgāgīti held by them at Pātaliputra they made alterations in the Sūtra and Vinaya Piṭakas, as also in their arrangement and interpretation”.12 The Mahāsāṅghikas had a complete canon of their own in its three divisions. While in one of the two pillar inscriptions in Amaravati certain nuns are referred to as Vinayadharā in the other the monks of Mahāvanasa Eliya are referred to as Mahāvinayadharā. An inscription on one of the stone slabs found near the central stūpa of Amaravati refers to a monk of Mahāvanasa Eliya as Sanyuτa bhāṇaka. In the Nāgarjunikoṇḍa inscriptions the following references, Dīgha-Majjhima-paṇcamaṭuṭa-osaka-vācakānam, Dīgha-Majjhima-nikāya-dharena, Dīgha-Majjhima-paṃḍa-māṭuṭa-desakavācakānam and Dīgha-Manīgaya-dharena, seem to point to evidence of a Sutta-Piṭaka in at least three Nikāyas: Dīgha, Majjhima and Sanuyutta.13

The expression Paṇca-māṭuka, an irregular form of Paṇca-mātrikā (Pali mātika denotes the detailed contents of an Abhidhamma text) seems to point to the existence of an Abhidhamma Piṭaka of five (not seven) texts.14

“Bu-ston tells us that the Mahāsāṅghikas claimed Mahākassapa as their founder, and that the language of their Piṭaka was Prākrit. The language of the Mahāvastu, especially of its poetry portion, is mixed Sanskrit and which may well be called Prākrit or quasi-Sanskrit and pure-Sanskrit, and the Sūtra-piṭaka was divided into Āgamas instead of Nikāyas. The southern group preferred to divide the Sūtra-piṭaka into Nikāyas and adopted the Prākrit language instead of Pāli”.15

From the accounts given by the Chinese travellers and from inscriptive evidence, it is clear that the Mahāsāṅghikas “were scattered probably in small groups in a few localities of North-western and Eastern India and had their main centre at Pātaliputra or Kusumapura.

15. Ibid. 61; also, P. V. Bapat, 2500 years of Buddhism, 1956, III.
"Just as Bodh-Gaya grew up on the bank of the Nerañjara as an early centre of Theravāda and a place of pilgrimage for the Buddhists, so also did Amaravati (extending to Jaggayapeta) and Nāgarjunikonda on the bank of the Kṛṣṇā (including its tributary Paler) become a flourishing centre of the off-shoots of the Mahāsāṅghikas in the first century B.C. or A.D. and turned into a place of pilgrimage for the Buddhists of later days".16

"The Mahāsāṅghikas migrated from Magadha in two streams, one towards the north and the other towards the south. The northern, rather, the north-western section later became divided into five, viz., Ekavyavahārīkakas, Kaukulikakas or Kaurukullukas, Bahusrutiyas, Prajñāptivādīnīs and Lokottaravādīnīs, on account of minor doctrinal differences among them. Their offshoot, the Lokottaravādīnīs, developed leanings towards Mahāyānism, and in fact prepared the ground for the advent of the Mahāyāna school. Buddhaghoṣa in his commentary on the Kathavatthu, distinguished Mahāsāṅghikas by the words, 'ekacce Mahāsaṅghika' implying thereby that all Mahāsāṅghikas did not subscribe to the same doctrines or it might be that he referred by 'ekacce' either to the north-western or to the southern branch of the Mahāsāṅghikas. In the Kathavatthu, the views discussed are mostly of the Mahāsāṅghika, who migrated to the south, settled down in the Andhra Pradesh around Amaravati and Dhānya-kātaka. Their sub-branches concentrated at Nāgarjunikonda, dwelling on the mountains around. These were the Pubbaselīyas or Uttaraselīyas, Siddhatthakas, Rājagirikas, Kācyakas, collectively designated as the Andhakas by Buddhaghoṣa in the introduction to his commentary on the Kathavatthu. Of the northern Mahāsāṅghikas he mentioned the names of Ekabhōrākikas, Gokulikas, Paññāptivādīnīs and Bahusutukas, but in the Kathavatthu their views have not been referred to specifically, perhaps they originated after the composition of the Kathavatthu".17

"The southern group of the Mahāsāṅghikas migrated from Pātaliputra to the Andhra country through Kaliṅga, where Huien Tsang saw the monasteries of the Mahāyānist Sthaviras. Perhaps he refers by this nomenclature to a sect adhering to the disciplinary rules of the Sthaviras but having Mahāyānic leanings ... a characteristic which may be attributed to the Śaila schools. Unlike the northern group of the Mahāsāṅghikas, the southern group was concentrated in the Guntur district around Amaravati, Jaggayapeta and Nāgarjunikonda. The inscriptions (3rd or 4th century A.D.) at Amaravati and Nāgarjunikonda furnish us with the names of the following sects: (i) Hamghi (Burgess, 105), Ayira-haghāna (EI, XX, 17, 20); (ii) Caityikā (Burgess, 100, 102); (iii) Aparahamāvanaseliya (EI, XX, 41), Mahāvanaseliya (Burgess, 105); (iv) Puvasele (EI, XX, 22); (v) Rājagiri-nivāsika (Burgess, 53), Rājaśālī (ibid. 104); (vi) Siddhatthakā (ibid. 110); (vii) Bahusutikā (EI, XX, 24); (viii) Mahāśāsākā (ibid). Except the last two, the rest are all sub-branches of the Mahāsāṅghika school.

All these evidences are obvious pointers to the cleavage between the two groups of the Mahāsāṅghikas, i.e. (i) the Mahāsāṅghikas of the north being the earlier ones with liberal disciplinary views and Mahāyānic leanings and (ii) the Mahāsāṅghikas of the south, i.e. of Andhra, claiming their origin from the Sthaviras and Vātsiputriyās. Lin Li Kong is also of this view though Dr. Bareau does not fully approve of the same".18

Vasumitra has put together all the common views of the Mahāsāṅghikas, Lokottaravādīnīs and Kaukkuṭikas in his Samayabhedoparacana-cakara which has been translated by Paramārtha (557-569 A.D.). According to Bhavya, Viṇāṭadeva and Vasumitra, Ekavyavahārika was another name for the Mahāsāṅghikas and the Kaukkuṭikas held almost the same views as the Vātsiputriyās. The special views held by the three sub-sections of the Mahāsāṅghikas are as follows:

"The Ekavyavahārikas held that all composites were unreal and fictitious while the absolute was contingent (i.e., dependent on something else. The Lokottaravādīnīs held that while all mundane dharmas were unreal, the supramundane dharmas were real. This point was not in the ambit of Mahāyāna. Paramārtha explains it as the view that stands between Śūnyatā (the transcendental reality), Tathatā (thatness) and Amala-vijñāna (pure knowledge). Prof. Demiéville thinks that neither the text of Kitsang nor that of Paramārtha is quite clear on this point."

16. Ibid. 63.
17. N. Dutt, Buddhist Sects in India, 1998. 64f.; Also, P. V. Bapat, 2500 years of Buddhism, 1956, 112.
The Kaurukullikas held the view that of the Tripitaka the Abhidharmaka alone contained the real teaching of the Buddha; the other two pitakas dealt only with monastic rules. This school did not consider that the attainment of the sumnam bonam along with freedom from all disciplinary obligations was the sole object of a Buddhist monk. This was in conformity with the practices of a Bodhisattva. This school denied the importance of study and preaching as well as the practice of meditation.

The Bahusrutiliya school preferred a syncretism of Hinayana and Mahayana. They affiliated themselves to the Satyasiddhi school of Harivarman. One branch of this school established distinction between real and unreal, absolute and conventional, paramartha and samyuci. It recognized Kattyayaniputra of the Sarvastivada school as its patron.

The Mahasanghikas and their offshoots held that the (i) Buddha's body is entirely supra-mundane (lokottara). The eighteen dhatus are bereft of impure dharmas. The physical, vocal and mental actions of the Buddha are free from impurities (asrava-vinirmukta). The body has nothing worldly; it is purity only (anurasava-matra) and indestructible. (ii) His material body (rupakaya or nirmanka) is unlimited as a result of his unlimited past merits. In his created body (nirmanka) he can appear anywhere in the Universe. (iii) Buddha's length of life is unlimited on account of his past accumulated merits. He lives as long as the sentient beings live. (iv) Buddha’s divine power (tejas, prabhava) is unlimited. He can appear in one moment in all the worlds of the universe. (v) Buddha is never tired of enlightening sentient beings and awakening pure faith (paramartha). Therefore, it follows that his teachings collected in the Pitakas are merely samvrti or sammuti and are as such not his real teachings.

Not only the Buddha, but according to the Mahasanghikas the Bodhisattva too was supra-mundane. The Mahavastu giving expression to this states: "The Bodhisattva in his last existence as Siddhartha Gautama is self-born (upapaduka) and is not born of parents; he sits cross-legged in the womb and preaches therefrom to the gods, who act as his protectors; while in the womb he remains untouched by phlegm and such other matters of the womb, and he issues out of the womb by the right side without piercing it. He has no lust (kama) and so Rahula was also self-born".

The Mahasanghikas according to the works of Vasumitra, Bhavya and Vinisadeva conceived that, (i) the Bodhisattva takes any form of lower existence (durgati) for enlightening beings of the world; (ii) He enters his mother's womb as a white elephant symbolical of his great physical strength combined with softness and (iii) The Bodhisattva has in his mind no trace of desire, hatred and malice (kama. vyapada and vihinsa samjna).

The Mahasanghikas and some sects of the orthodox group, like the Sarvastivadins and Sammavayas held that Arhats are subject to retrogression. The other section of the Mahasanghikas who oppose this view held that the arahats have no chance of retrogression and further assert that he has done all that has to be done (krtakriya, krtakaraniya). An arahat or asaiksha...
who has passed through all the stages of spiritual progress cannot have any attachment for an object or a person.\footnote{22}

The Mahāsāṅghikas also held that a stream-winner (Srotā-āpannaka) has no retrogression as he gets rid of the ten fettters. The preparatory stage of the srotāpannaka is called the Athhamaka. It is also called the Gotrabhāmi. The Mahāyānists use the term Gotrabhamiṣṭamaka. As this preparatory stage leads to the comprehension of the four truths, it is also designated as Samayakta-niyāma. The stage of the srotāpannaka marks the crossing of the state of a common man (prthigjana). A stream-winner cannot commit any of the five ānantarya sins. “The Mahāsāṅghikas accept that a srotā-āpanna is niyato-sambodhiparāyano and hence, is not subject to retrogression, but a sakadāgāmi or anāgāmi may retrogress, but not further than the sotāpanna stage, for some of the adepts in the two stages may have dormant passion (anusaya), which may develop into actual (pariyuttoḥāna) passion and thus bring about the fall”.\footnote{23}

Like the Theravādins, the Mahāsāṅghikas hold that the realization of the four truths (ariyasaṅcaca) takes place simultaneously in a moment (ekākṣaṇika) and not gradually as held by the Sarvāstivādins. They argue that the moment one realizes the nature of suffering (dukkha), one also comprehends its origin and decay (samudaya, nirodha) as also the path leading to the eradication of suffering (nirodha). The Mahāsāṅghikas also contend that a spiritually advanced adept attaining the power of controlling thoughts (balapatto, vaśībhūto) can also control the thoughts of others.

While there is agreement in the Kathāvavatthu and the northern sources that the above doctrines are those of the Mahāsāṅghikas, there are other doctrines which only the Kathāvavatthu attributes to them. These are: (i) Restraint (samvara) or unrestraint (asamvara) of the sense organs should be treated as action (kamma); (ii) All actions are accompanied by results (vipāka); (iii) Sound and other āyatana (spheres of the organs of sense) are also results of actions (kammussa katattā uppannam). All non-materials (ariyapadhammā) are products of actions (kamma samuṭṭhāna); (iv) Acquisition of moral purity is not mental (silam acetasikam ti; silam na cittunuparivattī ti); (v) The collection of silas (moral observances) is not associated with mind (cittavippayuttaṁ silopacayam); (vi) Maggasamārīgissa ripam maggo ti (In the person practising the eightfold path, the body is included); (vii) A person practising the eightfold path is endowed with double morality; i.e. worldly and unworldly (Maggasamārīgī dvīhi sīlehi samannāgato ti); (viii) Acts of intimation are virtues (vīññatti silan ti); (ix) Acts of non-intimation of a moral purpose are immoral (avīññatti dussilan ti); (x) Insight is dissociated from mind (Nānaṁ cittavippayuttam); (xi) One should not be called ‘nāni’ (possessed of insight) though his aññāna (spiritual ignorance) is gone but his thoughts are not conjoined with insight (aññāne vigate nānavippayutte citte vattabbamāne na vattabbin ‘nāni ti); (xii) A basis of impure thoughts is consecutive to a basis of good thought and conversely (Akusalaṁ paṭisandahati kusalamulanti); (xiii) One phenomenon can be related to another in one way only (Paccayata vaśatthitā ti); (xiv) It should not be said that samkhāra issues out of avijjā but that avijjā issues out of samkhāra (Avijjāpaccayā pi samkhārā, na vattabbam, ‘samkhāra paccayā pi avijjā ti’); (xv) Decay and death of supramundane beings or objects are also supramundane (Lokuttaranāṁ dhammānān jārāmaranāṁ lokuttaram); (xvi) The spiritually advanced develop the power of controlling other’s thoughts (Paro parassa cittam niģganhāti); and (xvii) one who has mastered the iddhīs may live for an aeon (Iddhiyalaṇa samannāgato kappam tiṣṭheyya).\footnote{24}

Although the Mahāsāṅghikas agreed with the Theravādins that the srotāpannā did not fall from his state of attainment, they were the first to propound that the arahats are subject to temptation, that they may have residue ignorance, may have doubts regarding certain matters and also that they attain knowledge through others held as we saw earlier. These views did mean that they were the first to revolt against the supremacy of the arahats in the Buddhist fraternity.

The discussions so far show that the areas where the Mahāsāṅghikas differed from the Theravādins were those concerning the conception of the Buddha, Bodhisattva and the arahats. Not only did they consider the Buddha as supramundane, but they attributed all perfections to the Bodhisattva from the time
of his conception in the womb of queen Mahāmāyā. It is important to note here that the Mahāsāṅghikas knew only of one Bodhisattva, from the time of his conception in the womb of queen Mahāmāyā. It is important to note here that the Mahāsāṅghikas knew only of one Bodhisattva, the previous existence of Bodhisattva Gautama. It was the Mahāsāṅghika conceptions of the Buddha and the Bodhisattva which paved the way for the Mahāyāna conceptions of the innumerable Buddhas and Bodhisattvas of the innumerable world systems.

The other area in which the Mahāsāṅghikas differed from the Theravādins was, as we have already stated above, in their conception of the arahat. They did not accept that the arahat was fully emancipated as they held that he still had doubt, residue ignorance, etc., as opposed to the Theravādins who held that he was fully emancipated. But it is important to note here that the Mahāsāṅghikas were not aware of the concepts of Klesāvarana-vimukti and Jñeyāvarana-vimukti of the Mahāyāna which therefore must be considered posterior to the time of the Mahāsāṅghikas.

It was thus the doctrines of the Mahāsāṅghikas which paved the way for the full blossoming into the Mahāyāna doctrines during the later centuries. While the laxity which they introduced into the interpretation of the rules of discipline changed the original expectations of the bhikkhu life, the new interpretations which they introduced into the original teachings of the Pāli texts saw their growth into the Mahayana teachings. In the words of Edward Conze the Mahāsāṅghikas initiated the process centuries before the rise of the Mahāyāna, by which the historical Buddha becomes less and less important. They regarded everything personal, earthly, temporal and historical as outside the real Buddha, who himself was transcendental, altogether supramundane, had no imperfections or impurities whatsoever, was omniscient, all-powerful, infinite and eternal, for ever withdrawn into trance, never distracted or asleep. In this way the Buddha became an ideal object of religious faith. As for the historical Buddha, who walked the earth about 500 B. C., he was a magical creation of the transcendental Buddha, a fictitious creature sent by him to appear in the world and to teach its inhabitants. While on the one side intent on glorifying the otherworldliness of the Buddha, the Mahāsāṅghikas at the same time tried to increase the range of his usefulness to ordinary people. The Buddha has not disappeared into Nirvāṇa, but with a compassion as unlimited as his length of life, he will until the end of time conjure up all kinds of forms which will help all kinds of beings in diverse ways. His influence is not confined to those few who can understand his abstruse doctrines, but as a Bodhisattva he is ever re-born in 'states of woe', becomes of his free will an animal, or a ghost, or a dweller in hell, and works the weal of beings who have the misfortune to live in places where wisdom teaching must fall on deaf ears. Nor are the Buddhas found on this earth alone. They fill the entire universe, and are to be met everywhere, in all the world systems.

The Mahāyāna took over this Buddhistology in its entirety. The historical Buddha faded away, leaving the Buddha as the embodiment of Dharma as the only reality. In the Diamond Sūtra occur the famous verses:

Those who by my form did see me,
And those who followed me by voice,
Wrong the efforts they engaged in,
Me those people will not see.
From the Dharma should one see the Buddhas,
For the Dharma-bodies are the guides,
Yet Dharma's true nature should not be discerned,
Nor can it, either be discerned
(Vajracchedikā Prajñāparāmitā, ch. 26). 25

M. M. J. Marasinghe

Mahaparthaka, Cūlaparthaka, Bakkula, Kondadhāna, Dārujirīya, Yasoja, Ajita, Tissametteyya, Puṇaka, Mettagu, Photaka, Upasiva, Nanda, Hemaka, Todeyya, Kappa, Catukāni, Bhadrāvudha, Udaya, Posala, Mogharāja and Pingiya.

The above named disciples of the Buddha had won the distinction of “Great Disciples” because they had won emancipation through faith (saddhā) and wisdom (paññā), and had developed extraordinary mental qualities above the ordinary disciples.

D. Saddhasena

MAHĀSENĀ (1) See MAHĀVAMSA

MAHĀSENĀ (2), younger son of King Goṭabhaya and father of Sirimeghavānna. He became king of Sri Lanka (274–301 A. C.) and under the advice of his teacher Sanghamittā and his minister Sona he despoiled Mahāvihāra and enriched Abhayagiri. He issued a decree that no one should give alms to monks of the Mahāvihāra. But, later, his friend and minister, Meghavānalabhaya, convinced him of his error, and he became a supporter of the Mahavihāra. Soon after, however, he fell under the influence of a monk, named Tissa, and built the Jetavana vihāra in the precincts of the Mahavihāra, despite the protests of the monks. Tissa was later expelled from the order. The king built the Manihara, Gokana, Erakavilla, Kalandagama, Migagāma, Gangasenkapabbata, Dhatuse napabbata, Kokavata, Rūpārāma and Hulapiṭhi-vihāra, and two nunneries Uṭṭarā and Abhayā. He also built sixteen residences. There is also a reference to persons of unruly conduct.

It is obvious that the object of the edict was to regulate the ecclesiastical affairs of the ancient Buddhist Order of monks in Sri Lanka. Though the preserved fragments of the edict do not contain the name of the king who issued this edict, it has been presumed, almost with certainty, that he was none other than king Mahāsenā who, under the influence of the South Indian monk Sanghamittā ordered the Mahavihāra monks to accept the Vetiya doctrines, referred to in the edict as Vayatudala (s. v. EZ. 277 ff.).

MAHĀSTHĀMA (Mahāsthāmaprāpta) a bodhisattva who, along with Avalokiteśvara, is regarded as the chief attendant of Amitābha (Q. v.). Though he is referred to in many Mahāyāna texts there is not much detail about his personality. The Saddharmapundarīka Sūtra (xix) refers to him but does not mention anything about his appearance or status. The Larger Sukhāvatīvyūha, too, mentions him but gives no details (SBXLIX, p. 52). However, a brief account is found in the Amitāyurdhyāna Sūtra wherein he is compared to Avalokiteśvara himself. Therein it is said that his bodily signs, height and size are equal to those of Avalokiteśvara. The circumference of his halo is said to be one hundred and twenty-five yojanas and it shines as far as two hundred and fifty yojanas. The rays of his body which are purple-gold in colour can be seen by all beings in favourable circumstances. It is also said that one who sees a single ray issuing forth from the body of this bodhisattva will at the same time see the pure and excellent rays of the bodhisattvas in the ten quarters. For this reason he is called ‘Unlimited
MAHĀSTHĀMA

Light. It is with this light of wisdom that he shines over all beings and causes them to be removed from the paths of lower existence and obtain highest power and hence he is called Mahāsthāma.

His heavenly crown has five hundred jewel-flowers and each flower has five hundred jewel-towers. In each tower are seen manifested all the features of Buddha-fields in the ten quarters. His turban is like a lotus flower and on its top is a jewel-pitcher filled with rays, when he walks all the regions tremble and quake. This happens even when he sits. The Amitāyurdhvāna Sūtra further instructs the readers to meditate upon this bodhisattva (SBE. XLIX, p. 184 f.).

The Niśpannayogavālī, too, refers to this bodhisattva. In the Maṁvwajramandala of the Niśpannayogavālī he is said to have a white complexion. He carries a bunch of six full-blown lotuses in his left hand and displays the wish-granting gesture (varada-mudrā) with his right. In the Dharmadātavagīśvara-ramanḍala of the same text his complexion is given as yellow. According to this description he carries a sword in his right hand and a lotus in his left. In this form he is probably related to Mahāsthāma-Lokesvara and Padmapānī-Lokesvara, both representing two forms of Avalokiteśvara (B. Bhattacharya, Indian Buddhist Iconography, 1958, Calcutta, p. 89).

There is also a belief that Mahāsthāma-prāpta is a deification of Mahāmaudgalyāyana, one of the two chief disciples of Sākyamuni (A. Grunwedel, Buddhist Art, London, 1901, p. 205). Sometimes he is regarded as a Dhyānī-bodhisattva but does not belong to the accepted group of five or eight Dhyānī-bodhisattvas. His close association with Avalokiteśvara seems to have influenced his personality very much and this association also has overshadowed his popularity.

Though known in Nepal and Tibet, he is not popular in those countries. In China one finds him mentioned in the triad, Mahāsthāma, Amitābha and Avalokiteśvara.

He is more popular in Japan. In Japan he is known as Seishi or Dai-seishi, and is represented in the same triad. He is said to visit the death beds of the faithful and welcome the dying to Sukhavati. The great temple of Zenchōji and Nagano is dedicated to this triad. In this temple there is a statue of Mahāsthāma said to have been made by Sākyamuni from gold found at the foot of a Beiruri-tree on the south side of Mount Meru (Satow). There is also a belief in Japan that he is an incarnation of Honer (C. Eliot, Japanæse Buddhism, London, 1935, pp. 118, 122, 128; Alice Getty, Gods of Northern Buddhism, Oxford, 1914, p. 100).

MAHĀSUKHA, meaning ‘Great Bliss’ is the absolute, the ultimate reality that absorbs within it both existence and extinction. The Vajrayānists put forward this concept as the final goal. It is quite well known that the Theravāda Buddhist scriptures describe Nibbāna as a state of intense bliss (refer PED. s. v. Nibbāna). Probably the Vajrayānists and to a larger extent the Mahāyānists adopted this description and regarded Mahāsukha as a particular state and went to the extent of identifying Nirvāna with Mahāsukha. However, Tantric teachers such as Nagarjunapāda objected to this identification on the ground that this state of Mahāsukha is a mere thought construction (vikalpa).

In a commentary written to a Doha of Sarahapada (quoted by S. B. Das Gupta, An Introduction to Tantric Buddhism; Calcutta, 1958, p. 136) it is said that the identification of sukha and the final state as one is a mere confusion of the state of things. But on the contrary those who upheld the identification of Mahāsukha with Nirvāna argued that as Mahāsukha transcends all thought constructions it could be identified with Nirvāna for it is an absolutely pure emotion of bliss when all mentations are destroyed.

The concept of Mahāsukha developed on the metaphysical side and it came to be described as being devoid of a beginning, middle or an end; it is neither existence nor extinction; it is neither self nor not self and so forth. It came to be considered as the source of everything and as such everything was said to be of the nature of Mahāsukha.

This concept developed along pantheistic lines too. In Vajrayāna the ultimate reality is identified with the Supreme Lord who is generally designated as Vajradhāra or Vajrasattva. This identification led to the equation of Mahāsukha with the Supreme Lord who in this instance was designated as Sri-Mahāsukha. With this development it was held that it is Sri-Mahāsukha who created this world from his non-dual nature and that it is he himself who taught all the esoteric teachings.
A further development of this concept on the metaphysical side is seen in its equation with bodhicitta (q.v). According to early Tantric philosophy it is held that bodhicitta as a state of great bliss is attained through the purification of upāya and prajñā. But later with the gradual development of sexo-yogic practices the mode of attaining Mahāsukha, too changed accordingly. According to sexo-yogic teachings of Tantrism, Mahāsukha is to be attained by checking the downward flow of the bodhicitta represented by the male's sperm. After checking it either by sadaīngayoga practices or else by hata-yoga practices it should be made to move upwards till it finally reaches the lotus at the summit of the usṇīṣa-kamala on mahāsukha-cakra (q.v.) where it melts and flows through the whole body bringing about the state of great bliss (Mahāsukha). S. also BODHICITTA.

S. K. Nanayakkara

MAHĀTHŪPA (1) The term Mahāthūpa (meaning Great Thūpa), as found in the Mahāvamsa, the ancient chronicle of Sri Lanka, has been used with reference to the monument built by King Dutṭhagāmāṇi Abhaya (161-137 B.C.). Although the same term has been used with reference to the stūpas at Mihintale and Polonnaruwa (i.e. the one on the summit of the hill at Mihintale and the Dalada Thūpa at Polonnaruwa), in this article the reference is to the architectural monument built by King Dutṭhagāmāṇi Abhaya (which is also generally referred to as Ruvaṇvalīsāya, Ratnamāli-cetiya, or Hemamāli-cetiya). The Mahāvamsa describes four chapters (i.e. 28 to 31) for activities in connection with this stūpa. It says that a prophecied had been made by Mahinda Thera (the first Buddhist missionary to this island) to King Devānampiyatissa (307-267 B.C.) that a stūpa named Hemamāli would be built by Dutṭhagāmāṇi Abhaya in the future. King Devānampiyatissa thereupon set up a pillar of stone, inscribing on it the prophecies of Mahinda Thero.

The Mahāthūpa contains the relics which were originally deposited in Rāmagāma of the Koliyas (a tribe related to the Sākyas) and legends connected with it are given in the Sinhala chronicle Thīpavānsa. The original height of the Mahāthūpa was 120 cubits (300 ft). Diameter at the base was 298 ft. Archaeological evidence proves that these proportions have not changed with the passage of time. The Mahāthūpa was so called because at the time it was constructed, it appened to be the tallest and biggest stūpa anywhere in the Buddhist world. Dutṭhagāmāṇi Abhaya started the work of this stūpa on a very ambitious scale but before he could complete it, he was overtaken by a mortal disease and passed away. Completion of the work was done by his brother King Saddhatissa (137-119 B.C.) who succeeded him. A son of this king named Laṭṭhatissa (119-109 B.C.) has been credited with some important architectural embellishments to this stūpa.

Almost contemporary with the Mahāthūpa and the Kaṇṭaka-cetiya at Mihintale are the Indian counterparts at Sānci and Bharut. The stūpa (No. 1) at Sānci has an almost hemispherical dome (anda) truncated near the top. It was surrounded at its base by a lofty terrace (medhi) which served in ancient days as a procession path (pradakṣhinā-patha), access to which was by a double flight of steps (sopāna). Encircling the stūpa is a second procession path, enclosed by a massive balustrade (vedikā). The summit of the dome is surmounted by a pedestal (harmikā), surrounded by a stone railing. From the latter rose a stone shaft, supporting a stone umbrella (chattā), or a series of umbrellas (chattāvāli). The outer balustrade of stone had 4 entrances at which were ornamental gateways (toranas), which were subsequently added. When the architectural features of ancient stūpas as given in the Mahāvamsa are scrutinised, it becomes clear that the stūpas of Sri Lanka in the pre-Christian and early Christian centuries had much in common with their Indian prototypes.

The Mahāvamsa gives a long account of the building of the Mahāthūpa. But there are many legendary details connected with it which have to be regarded with caution. Great care seems to have been taken in laying the foundations of the stūpa securely so as to prevent the huge mass of brick from subsiding by its own weight. The words of the chronicler describing the process may be quoted: “The Lord of the land had the place for the stūpa dug out to a depth of seven cubits to make it firm in every way. Round stones that he commanded his soldiers to bring hither did he cause to be broken with hammers, and then did he, having knowledge of the right and wrong ways, commended that the crushed stone, to make the ground firmer, be stamped down by huge elephants whose feet were bound with leather. The fine clay that is to be found on the spot ever moist, where the heavenly Ganga falls down (upon the earth on a space) thirty yojanas around, is called, because of its fineness, butter clay. Sāmaneras who had overcome the āsavas brought the clay hither from that place. The king commanded the
clay to be spread over the layer of stones and that bricks then be laid over the clay, over these a rough cement and over this a cinnabar and over this a network of iron, and over this sweet scented marumba that was brought by the sāmaneras from the Himalayas. Over this did the Lord of the land command them to lay mountain crystal. Over the layer of mountain crystal he had stones spread; everywhere throughout the work did the clay called butter clay serve (as cement). With resin of the kapittha tree, dissolved in sweetened water, the lord of chariots laid over the stones a sheet of copper eight inches thick, and over this with arsenic dissolved in sesamum oil, (he laid) a sheet of silver seven inches thick". Leaving aside the details which appear as improbable, it is clear that the foundation was laid very securely. It is on record that the Abhayagiri-stūpa has a foundation going down to 26 ft., from the level of the pavement. As regards the shape of the Mahāthūpa, it is bubbulakāra (i.e. bubble shaped). The Mahāvamsa relates how the architect showed the bubble shaped character to the king. From this it becomes clear that the Mahāthūpa had a semi-circular dome. As at Sānci and most stūpas in Śrī Lanka, it is the bubble shape that was resorted to. It is symbolic of the unreal nature of the world.

The dome of the Mahāthūpa rises from the topmost of three circular terraces built one over the other, the upper being of smaller diameter than the one below it. Sānci-stūpas show only one terrace (medhi). But the Divyavadāna says that there were stūpas which had three terraces. In the great stūpa at Sānci, the terrace was built as an addition to the dome. According to the Mahāvamsa, the terraces of the Mahāthūpa were first built as a plinth to the dome. According to literary works of Śrī Lanka these were called pupphadhāna (place for depositing flowers). In most stūpas in Śrī Lanka there is a platform or ledge running round the base which is used as an altar for depositing flowers, incense or lamps. It may be that in the early days before stūpas assumed colossal shapes, these terraces were used for placing floral offerings. It is also possible that at one time these terraces were also used as processional paths.

In Sinhala literature and in common parlance these terraces bear the appellation tun-mahal (mal)-pesāva or pesā-vaḷalu. A slightly different form is tun-mal-piyyavasāva, Tri-māla, mal-piyyavasāva are also similar terms. From these we note that originally they were meant as altars for flower offerings. The terraces of most of the ancient stūpas are built of brick. Origin-entially those of the Mahāthūpa were also of brick construction. In the reign of Lāñjatasā (119-109 B.C.) they were faced with blocks of limestone. King Mahānāga (561-564 A.D.) caused to be made the hatthi-vedi (heads of elephants projecting from the face of the wall). Vedi means railing and the Mahāthūpa had three railings in the same manner as the great stūpa at Sānci. There is also evidence to show that there was a railing on the top of the uppermost terrace of the Mahāthūpa. Mahāvamsa says that King Bhāṭika Abhaya (20 B.C. - 9 A.D.) constructed two railings (vedikā) for this stūpa (muddha-vedikā and kucchi-vedikā). One was at the summit of the stūpa and the other on the topmost terrace. There were flights of steps (of bricks and of stone) for purposes of ascent to the terraces. According to evidence available, they appear to have been constructed much later.

When the three terraces of the Mahāthūpa were completed and before starting work on the dome itself, the relic chamber was constructed at the centre of the uppermost terrace. The Mahāvamsa gives a detailed description of the chamber and the manner in which it was made. Six immense slabs of stone of a particular variety, eighty cubits in length and breadth and eight cubits in thickness were brought for the purpose. Says the Mahāvamsa "When they had laid one on the flower terrace in the middle and had disposed four others on the four sides, in the fashion of a chest, (the theras) of wondrous might placed the sixth, to serve afterwards as a lid, upon the east side". These statements show the position and the method of construction of the relic chamber. It is apparent that the relic chamber was at the base of the dome on a level with the surface of the uppermost terrace and that it was constructed of 6 large monolithic slabs. The relic chamber of Stūpa No. 3 at Sānci, which contained the relics of Sāriputta, was also on a level with the terrace. The harmikā on the top of the great stūpa at Sānci (which is believed to have contained relics) was constructed like a stone box, precisely as the relic chamber of the Mahāthūpa. Some stūpas which have been excavated (in Śrī Lanka) throw light as to the composition of the relic chamber. A stūpa excavated at Sīgirīya had three chambers, one above the other. Of these, the topmost, inside the dome of the relic mound, had been thoroughly rifled by treasure seekers. The second chamber, lower down, was 7 ft. square, 5ft. 8 ins. deep, and had its walls lined with rough stones and plastered in lime mortar. The floor was paved with bricks and on it was a receptacle, referred to as a yantragala, having 25 square compartments,
Mahāthūpa would look like, caused the dome of that monument to be covered with white cloth, on which were painted rows of filled vases (ākṣata-haṭa) and five finger ornaments (pañcāṅgulika) in addition to other devices simulating architectural features which had yet to be supplied. The five finger ornament is the sign of the spread hand (which also occurs on a decorative motif in the early Buddhist art of India). Sculptures from Bāhrut show this feature at the base. It appears to be a magical sign meant to ward off evil influences.

The terraces and the dome remained without change for nearly a millennium and a half but the superstructure of a stūpa was subject to changes. There is evidence in the chronicles to show that the earliest stūpas of Sri Lanka resembled those of Sanchi. The superstructure is called ‘tee’ (a Burmese term). The name harmikā (small pavilion) is the term given in Indian writings. It is not known to writers of Sinhala literary works. The Mahāvamsa calls it caturassā-caya (four cornered pile), (Mod. Sinh. satārās-koṭuva-four cornered enclosure). In silpaśāstra works, the tee and cylindrical portion above it (devatā-koṭuva) - (enclosure of the gods) are together called ‘catus-sūrakoṭa’.

In the Mahāvamsa the term muddha-vedi occurs. It means ‘top railing’ - the railing on the dome of the stūpa. At the great stūpa of Sanchi, there was a railing on the top enclosing the harmikā which was in the form of a heavy stone box. It had a lid measuring 5 ft. 7 ins. in diameter and 1 ft. 8 ins. high, in which the relics were once preserved. This railing must have been of wood - for no traces of it have been found in Sri Lanka. However the Mahāvamsa states that the railing in question enclosed a cubical structure of solid brickwork and not a stone box as at Sanchi.

The account given in the Mahāvamsa of the completion of the Mahāthūpa helps us to reconstruct the superstructure of the earliest stūpas of Sri Lanka. At the death-bed of Duṭṭha-gāmaṇi Abhaya, the work on the stūpa had progressed up to the tee. Saddhātissa’s work was to show the dying monarch the completed stūpa. The relevant passage may be quoted in full.

“He had a covering made of white cloths by seamsters and therewith was the cetiya covered, and thereon did he command painters to make on it a vedikā duly and rows of filled vases likewise and the row with the five finger
From this account it becomes clear that stupas of Sri Lanka did not have the spire above the tee as in later times. After the completion of the tee what Saddhātissā had to do to finish the work of the stupa was in connection with the chattra and plastering and decorating it. It also shows that there were two railings—one on top and another at the base of the terrace. The Mahāvamsa gives later references to the top railing of the Mahāthūpa. The commentary to the Mahāvamsa designates the two railings constructed at the behest of Bhātīka Abhayā as kucchi-vedikā and muddha-vedikā (top railing). Āmānda Gāmāni (21-30 A. C.) had two railings constructed at the same shrine and one of these is called muddha-vedi (as earlier ones must have got decayed).

Laliṭadhātuvamsa calls the katarās-koṭuva as biso-koṭuva. Saddhātissā had figures of sun and moon made on the upper railing. Sarīghatissā (248-252 A. D.) is said to have set a precious stone of great value in the centre of each of the four suns which were represented on the faces of the tee of the same stūpa. There is no evidence to show at what time the wooden top railing ceased to exist. The presumption is that during 4th to 8th centuries A. C., this change took place. Saddhātissā's attempt to show the Mahāthūpa in a completed form clearly proves that this stūpa was crowned with an umbrella (chattra). Stone umbrellas have been found in ancient places. The shaft has been called yaśī. According to Divyāvodāna, a stone pillar called yūpa was built into the dome and it is possible that it was not altogether buried in the brickwork.

In addition to the chattra which had originally been provided to the Mahāthūpa, Āmānda Gāmāni is said to have caused a second umbrella for this stūpa to be placed above the one which already existed in his time, (chatṭātichatta). Sirināga I (196-215 A. C.) placed a chattra on the Mahāthūpa and had it gilded in an admirable fashion. It is not stated whether it replaced those which already existed or was placed above them. Saṅgha Tissa (248-252 A. C.), too, set up an umbrella over the Mahāthūpa in the same manner as Sirināga I. The Dipavaṁsa says that the chattra gifted by this monarch was of gold. Dhātusena (463-479 A. C.) also provided an umbrella of gold. It is not possible to find references to chattras after the 7th century A. C. While the series of umbrellas is called chattātichatta, the topmost one is called dhuracchatta.

Another interesting feature of a stūpa was a ring of crystal (vajra-cumbata) on the top. Saṅgha Tissa is said to have provided one of these to the Mahāthūpa. The purpose was to avert danger from lightening. Dhātusena is also said to have placed such a ring on the Mahāthūpa. So also did Mahānāga (561-564). Dipavaṁsa says that Saṅgha Tissa made a sikhā-thūpa of precious stone for the Mahāthūpa. Perhaps this is the same as the jewel referred to in the Mahāvamsa. Sikhiṁtūpa means a "a stūpa on a crest". This is probably a large gem carved into a stupa, placed on a series of chattras.

The Mahāvamsa, in its account makes no mention of any architectural member as vāhalkāda. But there is evidence to show that there were vāhalkādas at the Mahāthūpa of a later date. It seems likely that these structures were added after the enlargement of the stūpa in the reign of Gajabahu I (113-135 A. C.). In the Mahāvamsa it is said that this king constructed four ādimukhas at the gates of Abhayagiri-stūpa. This may refer to vāhalkādas. Kaṇṭiṭha Tissa (165-193 A. C.) too is said to have constructed four āyakas at the same stūpa (according to inscriptions at the site). It is very likely that āyakas refer to vāhalkādas. Inscriptions from Amarāvatī refer to such architectural members as āyaka-khambhas.

To a stūpa, various accessory features were considered necessary or appropriate to enhance its sacred character. These were not the work of original found- ers but were added in course of time. Round the bases of stūpas at Anurādhapura, there is a circular area paved with stone and bordered with a moulded kerb. At the Mahāthūpa, this kerb which is of limestone, is at a distance of 25 ft. from the base of the lowest terrace. The pavement of this circular path consists of large slabs of gneiss, the joints of which radiate from the centre of the stūpa. This rest of the platform on which the stupa stands. A similar circular pavement can be seen at Mirisavati-stūpa as well as the Kaṇṭa-hetiya. It is possible that the circular pavement of the Mahāthūpa dates from the reign of Mahādāthika Mahā Nāga (9-21 A. C.). The Mahāvamsa says that this king
laid kīncikkha stones at the Mahāthūpa. The commentary says, “Below the stone terrace for the flower offerings and next to the Kīncikkha brick, he laid kīncikkha stones expanding like a lotus”. From these we can infer that the stones were caused to be round the lowest terrace. The phrase ‘expanding like a lotus flower’ probably refers to the radiating arrangement of the stone-slabs of this pavement. Till about the 8th or 9th century, the stone paving round the stūpas of Sri Lanka, seems to have consisted of this circular path only. King Kallātanāga (109-104 B. C.) is said to have constructed such a kerb at the Mahāthūpa and King Mahādāthika Mahā Nāga, who had the path round the stūpa paved, is said to have re-laid this kerb so as to increase the extent of the sand courtyard (vālikāngana). It therefore seems likely that before path round the stupa was paved, it was strewn with sand.

Two railings (one at the base and another at the summit) of the dome were built at the Mahāthūpa. This stūpa seems to have had a ground railing also encompassing it. The Mahāvānsa mentions that in the reigns of Bhatikabhaya and Amanda Gamaṇi, a railing called pādavediṅkā of the Mahāthūpa (railing at the foot) were caused to be made. This reference is to the outer railing of the Mahāthūpa and corresponding to the ground railing of the monument at Sanchi. It may be conjectured that this was just outside the paved processional path (noted above) which ran round the stūpa. No remains of this have been found. They were probably of wood. There is no reference to any pādavediṅkā after the reign of Amanda Gamaṇi. It is therefore possible that these went out of vogue at a very early date. The railings at Sanchi were pierced at the 4 cardinal points by decorated gateways called toranās. Stūpas at Anurādhapura also had such gateways - for it is said that Mittasena (435-436 A. C.) constructed toranās at the three great stūpas in the city. Nothing has remained out of these structures. It may have had some likeness to the toranā carved in low relief as the background of the colossal seated Buddha figure at the Gal-vihāra in Polonnaruwa (12th cent. A. C.).

The great stūpas of Anurādhapura as they stand now, are on extensive rectangular platforms paved with stone and supported by retaining walls of brick. On these paved platforms are found various objects, altars, shrines, statues of Buddhas and Bodhisattvas. At the Mahāthūpa there is a flower altar resting upon a bold moulded base. A miniature votive stupa of stone is found on the platform of stone of the Mahāthūpa. It may belong to the late Anurādhapura period. The statues referred to were originally in shrines built on the pavement. Four images of the Buddha are found in a shrine on the platform of the Mahāthūpa. Dr. A. K. Coomaraswamy has assigned these to the 2nd Century A. C. The retaining wall of platform of the Mahāthūpa has on its face, foreparts of elephants in relief. The votive stūpa has also a platform supported by elephants.

According to the Mahāvānsa, the works carried out by Saddhatissa in completing the Mahāthūpa included an elephant wall (hatthi-pākāra). But what is now to be seen may be of a much later date. There are no Indian examples of this nature. Therefore it may be regarded as a feature peculiar to Sri Lanka. The platforms were ascended by broad flights of steps of stone at the four cardinal points containing wingstones, āga guardstones, moonstones and pūrṇa-ghaṭas.

The paved platforms of the stūpa were surrounded by broad processional paths on all the four sides. This is now known as vaiśimaluva (sand terrace). These were bordered by walls (prākāras), which formed the boundaries of the precincts of the stūpa. The lower portions were contructed of stone, while the upper portions were of brick. Only the stone built portions have been preserved. At the centre of each wall was a gate-house (dvāra-koṭṭhaka). Of these only the base­ments and the pillars are now preserved. The remains of the gate-house on the northern side of the Mahāthūpa were excavated in 1935. They consisted of a moulded stone faced platform, stone pillars, brick walls, flights of stone steps, guardstones and pūrṇa-ghaṭas. By the side of the gateways are generally found monolithic stone basins for holding water, for the use of pilgrims. In inscriptions these are called pā-daṇi (Pali. pāda­doni) meaning 'foot trough'.

Outside the prākāra near the north gate of the Mahāthūpa stands a huge monolithic pillar, the upper portion of which is missing. It is octagonal in shape, 5 ft. 6 ins. in diameter and its present height is 20 ft. 4 ins., above original floor level. At the base of the pillar is a mass of coursed stone work. Similar stone pillars bearing religious symbols were also set up near the stūpas of India, such as Sanchi. This is the only example of its kind known in Sri Lanka. When it was entire, it seems to have equalled the pillars of Asoka in height. Regarding this monolithic pillar, J. G. Smither says “The priests said that this is the identical pillar which was planted by King Devānampiyatissa.
on the intended site of Ruwanvali-dagaba, which was removed by King Dutugamunu, before he commenced the erection of the buildings. (It is reported to have contained an inscription embodying the prophesy of Mahinda Thero). Upon no part of it under notice can this propresy” be seen”.

It is clear that the layout of the precincts of great stupas as they are today, is in the form given (in the sīlpaśātra works) many centuries subsequent to the original foundation of these shrines. The ground plan of the Mahāthūpa as given by J. G. Smither furnishes a general idea of the layout of the precincts of ancient stupas at Anuradhapura.

MAHĀTHŪPA (2), popularly known as Ruwan Wali Mahā Sāya, is the most prominent cetiya in Sri Lanka. One “Donā” of the Buddha’s bodily relics is said to be enshrined in it. This is the largest quantity of the Buddha’s bodily relics found in one place, and it is said to be one eighth of the Buddha’s bodily remains after the cremation. The thūpa was constructed by King Dutthagāmini (161-137 B. C.). The thūpa is also known as the Mahā Cetiya (Mhv. Ch. xx v 19), the Hemamāli Cetiya, the Hemamālika Cetiya (Mhv. Ch. xv. 167, xvii v. 51) and the Sonṇamāli Cetiya (Mhv. ch. xvii v. 3). It was the biggest thūpa in the island at the time of its construction. Though cetiyas such as the Abhayagiri Thūpa and the Jetavana Thūpa that exceed Ruwanwali Mahā Sāya in height were subsequently constructed, it still enjoys the position of the “greatest or the most important thūpa “in the country”.

Several sources are available for the study of the Mahā Thūpa and its history, such as the Mahāvamsa, the Pali Thūpavamsa, Sinhala Thūpavamsa, Vamsatthappakāsini, the Tikā on the Mahāvamsa, the Dipavamsa and the Pali commentaries of Buddhaghosa. In addition to the above literary sources inscriptions provide valuable information on the Mahāthūpa. Moreover Sinhala literary works such as the Pujavaliya, the Saddharmalahkāra also contain valuable data on the subject. Among the sources mentioned above the Mahāvamsa is the most prominent. The Mahāvamsa has devoted five chapters (ch. xxviii to xxxii) to relate the story of the Mahāthūpa. It is also observed that the main theme of the Pali Thūpavamsa as well as the Sinhala Thūpavamsa is the description of the Mahāthūpa. Conspicuously the Dipavamsa has allocated only ten verses of ch. xix to describe what the author of the Mahāvamsa described with 422 verses.

Though the Mahāthūpa was put up in the 2nd century B. C. according to the Mahāvamsa, its history commenced in the 3rd century B. C. in the reign of King Devānampiyatissa (250-210 B. C.), with the introduction of Buddhism to the island by Mahinda Thera. As recorded in the Mahāvamsa (ch. xv verse 45 ff) Mahinda Thera while going about in the city with King Devānampiyatissa showing to him the sites on which important Buddhist edifices would come up in the future, stopped at a spot at the upper end of the small tank called Kakudha vāpi and honoured that spot by sprinkling “Campaka” flowers. When the king became anxious to know the importance of the spot, Mahinda Thera said thus:

1. Ancient unit of measuring grains
2. i.e. after the cremation of the Buddha’s body, relics were divided equally among eight parties (D. II. 146-47).
3. It is said that ‘Ruwanvālīsāya’ is the most venerated and the tallest of the ‘Dāgābas’. It is bigger than the third Pyramid in Egypt both in contents and height (Weerasuriya, H. E., Historical Guide to Anuradhapura Ruins, Asian Educational Services, New Delhi 1985, p. 18)
Evam ṭhānaṁ idaṁ rāja catubuddhanisevitaṁ
Tasmāṁ ṭhāne mahārāja thūpo hessati'nāgagate

Buddhasaṁraṁdhūnaṁ donadhātunidhānavā
Visaratanasatucco Hemamāli ti viṣṣuto

“Oh! King this spot is sanctified by four former Buddhas. A Thūpa 120 cubits high named Hemamali, wherein a dona, of bodily relics of the Buddha would be enshrined, will come up there”.

King Devanampiyatissa was over enthusiastic and said I myself will put up the thūpas. But Mahinda therā discouraged the king saying, “You have many other things to do. Do them oh! King. Your Grandson will put up the thūpa.”

Further according to the Mahāvamsa record, the therā identified the grandson as Duṭṭhadāmagiri, the son of Kakavatissa. King Devanampiyatissa is said to have erected a stone pillar inscribing the prediction (ussāpesi silāthambaṁ tam pavattim likkā piya (op.cit.).

The actual construction of the thūpa, took place, in the reign of king Duṭṭhadāmagiri, nearly 130 years later. The king is said to have seen the stone pillar where the prophesy of Mahinda Thera was inscribed, and also he found and read the gold plate inscribing the same (sovaṇnapattam laddhāna lekham tattha avācayi (Mhv. Ch. xxvii Verse 6). King Duṭṭhadāmagiri concentrated on the construction of the Mahāthūpa after he completed the Maricavatī Cetiya and the Lohapasāda. The Mahāvamsa relates the “Mahāthūpa Ballad” from chapter. xxvii onwards.

An examination of the lengthy Mahāvamsa account of the Mahāthūpa, will reveal that it is over-shadowed by the over enthusiastic author by unnecessarily crowding the description with miracles, thereby unwittingly diluting the fame of the courageous king Duṭṭhadāmagiri who commenced and almost completed this great construction, perhaps the greatest brick construction the world has not seen before. However, historical facts pertaining to the Mahāthūpa are visible underneath the piles of miracles invented by the author of the Mahāvamsa.

According to the Mahāvamsa (ch. xxviii verse 3 ff) the king was in a dilemma regarding how to raise the materials (funds) for the construction of the Thūpa. He thought that he had already harassed the people enough in his campaign to defeat the tamils (damile maddamānena loko’yam piḷita mayā. op. cit.) Therefore it is not possible to extract any more taxes from the people (na sakka balin_z uddhari ‘tu11J, tam vijjiya balina ahaṁ -op.cit.). It is clear from the statement that the country was passing through a very difficult period. It was after 50 years of foreign rule under Elāra (145-101 B.C.) and a war campaign that lasted several years. The rulers as well as the people had no time to spare for repairing of tanks and the development of agriculture. To make the situation worse Duṭṭhadāmagiri got himself involved in two massive constructions namely the Maricavatī Cetiya and the Lohapāsāda immediately after his victory. Also we hear of a famine (Mhv. Ch. xxxii 29-30) by name ‘Akkhakhāyika’ where the people had to eat even the nuts of ‘akkha’ (Terminalia Bellerica), which was on other times used as dice only, towards the latter part of Duṭṭhadāmagiri’s episode. The famine is said to have occurred in the mountain region and the king is said to have sold his valuable earrings to feed five arahants, possibly before his instalment as the king. The famine “Baminītiya Sāya” occurred in the reign of king Vālagambā not long after his death. All these factors lead to the conclusion that the period Duṭṭhadāmagiri commenced the work on the Mahāthūpa was an economically weak era.

However, as the Mahāvamsa author7 says Sakka the Lord of the Devas having heard that king Duṭṭhadāmagani was faced with the problem of supply-
ing bricks for the Mahāthūpa, ordered Vissakamma, the celestial artisan to create and supply the entire quantity of bricks needed for the purpose, which Vissakamma carried out immediately. The same day he found gold, copper, gems, silver, pearls and also four gems in size like to a small millstone (nisadapotappamāna), automatically in different parts of the country. The king had only to collect and transport them to the Royal Treasury. What could be gleaned from this is that King Dutthagamini exploited the mineral resources of the country, not tapped commercially so far, to raise funds for the Mahāthūpa.

According to popular tradition prevalent up to date that there was a “Golden Telambu” tree haunted by a deity named “Soṇṇamāli” on the exact spot where the thūpa was to be erected and which had to be removed. But the deity was reluctant to move out, to facilitate the cutting down the tree. But then the king promised to name the thūpa after her as Soṇṇamāli Cetiya, the deity agreed to move out, and the tree was removed. This story is not found in any of the literary sources. However the name Soṇṇamāli or Hemamāli is as old as the Thūpa itself. The Sinhala literary sources such as the Pūjavaliya, and Saddharmālankāraya call it “Ruwan Wālī Mahā Sāya which mean “Golden Sand Cetiya.” The Mahāvamsa ch. xxix, v 1-12 describes in detail the laying of the foundation for the thūpa which vouch for the existence of a scientific and advanced building engineering skill possessed by the people at the time. Wilhelm Geiger renders the building process described in the Mahāvamsa to English as follows:

“The lord of the land had the place for the thūpa dug out a depth of seven cubits to make it firm in every way. Round stones that he commanded his soldiers to bring hither, did he cause to be broken with hammers, and then did he, having knowledge of the right and the wrong ways, command that the crushed stone, to make the ground firmer, be stamped down by great elephants whose feet were bound with leather. The fine clay that was found on the spot, for ever moist, where the heavenly Gaṅgā falls down (upon the earth) (on a space) thirty yojanas around, is called because of its fineness, ‘butter-clay’. Sāmāneras who had overcome the āsavas, brought the clay hither from that place. The king commanded that the clay be spread over the layer of stones and that bricks then be laid over the clay, over these a rough cement, and over this a network of iron; and over this sweet-scented marumba that was brought by the sāmāneras from the Himalaya. Over this did the lord of the land command them to lay mountain-crystal? Over the layer of mountain-crystal he had stones spread; everywhere throughout the work did the clay called ‘butter-clay’ serve (as cement). With resin of the “kapiththa” tree dissolved in sweetened water, the load of chariots laid over the stones a sheet of copper eight inches thick, and over this, with arsenic dissolved in sesamum-oil, (he laid) a sheet of silver seven inches thick.”

Arrangements were made to lay the foundation on the Full Moon Day of the month “Āsālha” amid a great and colourful festival. The king invited the whole brotherhood (sabbo sāṅgho) and also the general public, the townfolk as well as the country people for, the occasion. The whole city and the roads leading to the Thūpa site were decorated and adorned in a many fold way. At the four gates of the city many barbers, and servants for the bath, and for cutting the hair, were stationed. Clothes and fragrant flowers and sweetmeats for the use of those who attended the festival were set up. It is reported that the Buddhist countries in the region as well as some of the countries in the Middle East were represented by delegates headed by prominent monks. The Mahāvamsa (Mhv. Ch. xxix, vv. 30-43) provides the names of the heads of the delegations etc. thus:

“With eighty thousand bhikkhus from the region of Rājagaha came the Thera Indagutta, the head of a great school. From Isipatana came the great therā Dharmasena with twelve thousand bhikkhus to the place of the cetiya.

11. Geiger, Wilhelm-The Mahavamsa - Great Chronicle of Ceylon-Dept. of information, Colombo 1950, p. 191-192. As regards the formation work Smithier states: “allowance must be made for the oriental exaggeration, but there can be little doubt that the above particulars are for most part true, as a mass of solid brick work, rising to the enormous height of 270 ft. above the ground would necessarily require foundations of an exceptionally substantial character (Smithier James G., Architectural Remains of Anuradhapura, London, 1894, p. 23).
“With sixty thousand bhikkhus came hither the great Thera Piyaddassi from the Jetārāma-vihāra. From the Mahāvana (monastery) in Vesāli came the thera Urubuddharakkhita with eighteen thousand bhikkhus.

From the Ghositārāma in Kosambi came the Thera Úrudhammarakkhita with thirty thousand bhikkhus. From the Dakkhiṇaipigiri in Ujjeni came the thera Úrussangharakkhita with forty thousand ascetics.

With a hundred and sixty thousand bhikkhus came the Thera named Mittinna from the Asokārāma in Pupphapura. From the Kasmir country came the Thera Uttinna bringing with him two hundred and eighty thousand bhikkhus. The wise Mahādeva came from Pallavabhīgga with four hundred and sixty thousand bhikkhus, and from Alasanda, the city of the yonas came the Thera Yonamahādhammarakkhita with thirty thousand bhikkhus. From his dwelling by the road through the Viṇīha Forest Mountains, came the Thera Uttara with sixty thousand bhikkhus.

The great Thera Cittagutta came hither from the Bodhimāṇḍa-vihāra with thirty thousand bhikkhus. The great Thera Candagutta came hither from the Vanavāsa country with eighty thousand ascetics. The great Thera Suriyagutta came from the great Kelāsa-vihāra with ninety-six thousand bhikkhus.” (Ibid. p. 193-194)

This may be considered as the largest international assembly on record to have been held in the island in the past. Though the numbers of bhikkhus included in \( \text{\textit{delegations}} \) appear as exaggerated, it is clear that the country has had religious and cultural connections with countries mentioned in the report.

When the king was about to mark the circumference for a very large thūpa, it is said that, a far seeing tāhā Thera by name Siddhatha, prevented the king from taking the circle for a very large thūpa for practical reasons.

Siddhatho nāma nāmena mahāthero mahiddhiko Tahā karontam rājānaṁ digha dassi nivāraṇi Evam mahantam thūpaṁ ce ayam rājārābhissati Thūpe anīṭhite yeva maraṇam asa hessati, Bhavissati mahanto ca thūpo duppatisamkharo (Mhv. xxix vv, 52-54)

“if this king shall begin to build so great a thūpa, death will come upon him before the thūpa is finished. Moreover, so great a thūpa will be hard to maintain.”

The king heeding to the advice of the Thera and the Sangha took the circle for a medium size thūpa. (It will be seen later that even the medium size Thūpa the king planned could not be completed before his death). It should be clear that the foundation was prepared for a thūpa much bigger in size. Smither infers that the portion of the foundation left out while making the Thūpa smaller, should be laying at some depth beyond the limits of the present Thūpa. Then the king laid the first brick (Mahālaṭṭhākam) on the eastern side on the perfumed mortar (gandha-kaddama). Thus the foundation for the Mahāthūpa was formally laid on the Full Moon day of the month of Asañha. It is said there occurred an earth tremor (paṭhvāi kampā) at the moment.

Apparently there has been no such grand festival in the island before. The Mahāvamsa says that ninety six crores of arahants alone attended the ceremony. The Mahāvamsa further adds that the ancient records do not provide the numbers of the local monks who were present (Mhv. Ch. xxix v. 44). The Pujāviliya a Sinhala treatise of the 12th century A. C. provides interesting information not found elsewhere, namely in the bottom of the Abhaya tank in which the bowls of Arahants, who attended the ceremony were washed, there formed a layer of sediment of ghee, four inches thick. It is an indication of the large number of Arahants who are reported to have attended the ceremony. It is further said that the effect of ghee was still felt (at the time of writing the book) on the water of the Abhaya tank.

It is said that the king summoned the master builders of the country to entrust the work and interviewed them. He rejected those who proposed quick work and selected the one named Siriwa dhana who proposed slow and quality work (Mhv. Ch. xxx, vv 5-10). When the builder was inquired as to the shape of the Thūpa he proposed to build, he took a bowl of water and taking a little water in his hands, let it fall on the surface of the water in the bowl. A great bubble like a crystal globe rose on the water. He said I will put up a Thūpa similar to this and the king was pleased. (Mhv. ch. xxx, v. 12). According to the Mahāvamsa, god

---

Smither James G., ibid, p. 24.
Asālhamāsassa sukha pakkhamhi samnante, uposate paṇṇarase pattiṭṭhāpesi iṭṭhākā-Mhv. xxix, v. 63.
Vissakamma entered the body of the builder and got him to do so. It is clear that out of five types of thūpas such as āmalakākāra (Emblic myrobalan) bubbulakāra (bubble shape) Ghaṭākāra (potshape) Ghanākāra (bell shape) and Dhānānākāra (a heap of grain shape). The Mahāthūpa was built in the shape of a bubble of water.

The King appointed the Thera Indagutta, an 'arahant' with great psychic powers as the superintendent of work (kammadhīṭṭhayaka) from the commencement of the thūpa and consulted him regarding all details of the work (Mhv. ch. xxx, v. 98). The king had a problem of transporting an enormous quantity of bricks to the site daily. But as per the Mahāvamsa author (Mhv. ch. xxx, v. 15) the gods came to his rescue and got the quantity of bricks needed for the following day transported to the site on the previous night.

The Mahāvamsa chapter xxx, vv. 51 and 52 are of special significance to students, according to which, when the thūpa was built up to the third terrace, it sank to the level of the surface of the earth nine times.

"The elders having miraculous powers caused to sink the bricks laid up to three flower offering terraces, to the level of the ground. They caused to sink bricks so laid nine times." (Mhv. Ch. xxx, vv. 51-52).

The excited king summoned the monks and inquired as to the cause of the sinking. The monks pacified the king and said that the elders did it so that the thūpa may not sink of itself (nosidanattham) and that they would not do it again. Whatever may be the poetic way, the Mahāvamsa author presents this to the pious readers, there is reasonable ground to suspect that the construction sank repeatedly due to constrictional faults. It is possible that the constructors had no previous experience of a similar colossal construction. According to available information there was no similar construction work even in India at the time. In spite of the Mahāvamsa author's fabulous account, it may be conjectured that there was a serious unforeseen technical lapse that led to the sinking of the Thūpa several times. In the field of construction, the foundation of a building is so designed that it could stand the weight of the proposed super structure. In the case of the Mahāthūpa the foundation was laid even before designing the thūpa and identifying the builder. It was after completing the foundation, that the king summoned builders to select suitable builders to entrust the building of the Thūpa. It may be conjectured that the selected master builder Siriwaddhana has had no hand in the laying of the foundation. It is not impossible that the thūpa sank as a result of lack of communication between those who laid the foundation and the builder selected subsequently. But Smither (loc. cit. p. 24) thinks that the sinking was due to the hasty work of proceeding with the building before the massive sub structure had consolidated itself. It is said that ten crores of bricks were used up to the level of three terraces. The king is supposed to have made an order that no work shall be done without remuneration. The king appears rather self-centred at this instance. Smither (loc. cit.) is of the view that the king did not wish to oppress the people who have already suffered from internal warfare. But evidence from the Mahāvamsa itself goes against Smither's explanation. The Mahāvamsa records of two bhikkhus who were very eager to contribute something for the construction of the thūpa with the connivance of the builders. They were successful in contributing, one with a lump of clay and the other with a brick, in secret. But when the king learnt it he provided certain gifts to both bhikkhus through a man, without divulging the reason, as compensation for their contributions. When the two monks learnt that their contributions were made null and void by the king, they were thoroughly unhappy and were furious. The author of the Mahāvamsa in his keenness to give Duṭṭhaṅkāmin additional credit has unwittingly painted a picture of a selfish king.

According to the Mahāvamsa author, working even for wages in the construction of the Mahāthūpa is sufficient to be born in the Tavatimsa heaven. He cites the example of two women who worked for wages in the construction, who were born in the Tavatimsa heaven as a result. The author further adds that they were seen by Ven. Mahāsīva, resident at Bhāṭīvaṅka, when they came to worship the Mahāthūpa late in the night. This is possibly to defend the apparent selfish attitude of the king who prevented any one working free. The irony of it is that though he did not accept

15. aṁūlaṁ ettha kammaṁ ca na kātabbaṁ ti ṅāpayi
16. Mhv. ch. xxx, v. 42f
any contribution from human beings, he has accommodated substantial assistance from the gods for the construction of the Mahāthūpa.

To make the relic chamber six fat coloured stone slabs (pāsāne medavannake) each eighty cubits in length and breadth and eight inches thick are said to have been brought from Uttarakuru by two novices, Uttara and Sumana. Smither (loc. it.) thinks that Uttarakuru is part of India and the said stone slabs must have been brought from there. But the length and breadth of a slab 80 cubits is equal to 120 ft and thickness 8 inches, makes it highly unrealistic unless they have been brought in pieces and assembled here.

The most important part of the Ruwanwėlisaya is to be its magnificent relic chamber, and its beauty is repeatedly described in several places. No other relic chamber in any of the thūpas is described in such detail in the chronicles as that of the Mahāthūpa. The Mahāvamsa author has devoted 35 verses of chapter xxx to describe the relic chamber of the Mahāthūpa. Apparently it is a unique relic chamber in the history of thūpas in Sri Lanka.

Wilhelm Geiger in his Mahavamsa translation has rendered the description of the Relic Chamber of the Mahathūpa into English as follows:

“In the midst of the relic chamber the king placed bodhi tree made of jewels, splendid in every way. It had a stem eighteen cubits high and five branches; the leaves perfectly pure silver was adorned with leaves made of gems, had withered leaves and fruits of gold and various shoots made of coral. The eight auspicious figures were on the stem and festoons of flowers and beautiful rows of four-footed beasts and rows of geese. Over it, on the border of a beautiful canopy, was a network of pearl bells and chains of little golden bells and bands here and there. From the four corners of the canopy hung bundles of pearl strings each worth a hundred thousand (pieces of money). The figures of sun, moon and stars and different lotus-flowers, made of jewels, were fastened to the canopy. A thousand and eight pieces of divers stuffs, precious and of varied colours were hung to the canopy. Around the bodhi tree ran a vedikā made of all manner of jewels; the pavement within was made of great myrobalan arils.

“Rows of vases (some) empty and (some) filled with flowers made of all kinds of jewels and filled with four kinds of fragrant water were placed at the foot of the bodhi tree. On a throne, the cost whereof was one kotti; erected to the east of the bodhi tree, he placed a shining golden Buddha image seated. The body and members of this image were duly made of jewels of different colours, beautifully shining. Mahā Brahmapāla stood there holding a silver parasol and Sakka carrying out the consecration with the Vijayuttaras shell, Pañcasikha with his lute in his hand, and Kālanāga with the dancing girls, and the thousand handed Māra with his elephants and the train of followers. Even like the throne to the east (other) thrones were erected, the cost of each being a kotti, facing the other seven regions of the heavens. And even thus, so that the bodhi tree was at the head, a couch was placed, also worth one kotti adorned with jewels of every kind.

“The events during the seven weeks he commanded them to depict duly here and there in the relic chamber, and also the prayer of Brahmā, the setting in motion the wheel of the doctrine, the admission of Yasa into the order, the pabbajjā of the Bhaddavaggyas and the subduing of the Jātīlas; the visit of Bimbisāra and the entry into Rājagaha, the accepting of the Veluvana, the eighty disciples, the journey to Kapilavatthu and the (miracle of the) jewelled path in that place, the pabbajjā of Rāhula and Nanda, the accepting of the Jetavana, the miracle at the foot of the mango tree, the preaching in the heaven of the gods, the miracles of the descent of the gods, and the assembly with the questioning of the therā the Mahāsamayasautta and the exhortation to Rāhula, the Mahāmaṅgalasutta, and the encounter with (the elephant) Dhanapala; the subduing of the (yakkha) Ālavaka, of the (robber) Angulimālā and the (Nāga king) Apalā, the meeting with the Pārāyanakas, the giving up of life, the accepting of the dish of pork, and of the two gold coloured garments, the drinking of the pure water, and the Parinibbāna itself; the lamentation of gods and men, the revering of the feet by the therā, the burning (of the body), the quenching of the fire, the funeral rites in that very place and the distributing of the relics by Dopa. Jātakas also which are fitted to awaken faith did the noble (king) place here in abundance. The Vessantarājātaka he commanded them to depict fully, and in like manner (that which befell beginning at the descent) from the Tusita heaven even to the Bodhi throne.

“At the four quarters of the heaven stood the (figures of) the four Great kings, and the thirty three gods and the thirty two (celestial) maidens and the twenty-eight chiefs of the yakkhas; but above these devas raising their folded hands, vases filled with flowers likewise, dancing devatas and devatas playing instruments of music, devas with mirrors in their hands, devas also bearing flowers and branches, devas with lotus-blossoms and so forth in their hands and other devas of many kinds, rows of arches made of gems and (rows) of dharmacakkas; rows of sword bearing devas and also devas bearing pitchers. Above their heads were pitchers five cubits high, filled with fragrant oil, with wicks made of dukula fibres continually alight. In an arch of crystal there was in each of the four corners a great gem and (moreover) in the four corners four glimmering heaps of gold, precious stones sparkling zigzag lines were traced, serving as adornment for the relic chamber. The king commanded them to make all the figures here in the enchanting relic-chamber of massive wrought gold.”

Though the Mahāvamsa says that the inner walls of the Relic chamber of Thūpas were painted with the important events in the life of the Buddha, Jātaka Tales etc. no specimen was discovered till the excavation of the Mahiyaṅgana Thūpa in 1951. In the process of excavating the Mahiyaṅgana Thūpa for restoration, a relic Chamber with painted inner walls was discovered and it proved the truth of the above Mahāvamsa record regarding the inner walls of Relic Chambers of Thūpas.

After the completion of the Relic Chamber the next important task was the enshrinement of Relics in the Thūpa. According to the Mahāvamsa a Dona of Buddha’s bodily relics given to the Koliyas of Rāmagāma was destined subsequently to be enshrined in the Mahāthūpa. When the thūpa erected by Koliyas at Rāmagāma on a riverbank was washed away by the waters of the river and the relic casket was carried into the sea and was floating in the sea, Nagas found it and took it to Mañjerikā Nāga bhavana of the Nāga king Kāla. The Mahāvamsa (Mhv. ch. xxxi verse 17-19) further says, the Buddha himself at his death bed (Pāriṇīthbāna Maṅca) had proclaimed to Sakka, the lord of devas, that out of eight donas of his bodily relics, one dona given to Koliyas of Rāmagāma would be taken to the Nāgaloka by Nāgas, and that (dona of Relics) would be enshrined in future in the Mahāthūpa, in the Island of Sri Lanka.

But there is diversity in the Mahāvamsa account. The king having completed the work on the Relic Chamber summons the Mahāsaṅgha and informs them: “I have finished the work on the Relic chamber and the relic enshrinement would take place tomorrow. So please provide the relics”.

Dhātugabbhamhi kammapi mayā niṭṭhāpiṭāni hi Suve dātum nidhessāmi bhante jānātu dātuyo (Mhv. ch. xxxi vv. 1-2)

As expressed in the Mahāvamsa, so far no one was concerned about the relics, a very important aspect of a thūpa. It appears unusual when the king suddenly tells the saṅgha that he has completed the Relic chamber and that the relic enshrinement would be on the next day, and his request to the Saṅgha to provide relics.

However, as the Mahāvamsa author narrates, the Mahāsaṅgha accepted the request and selected the novice Sonuttara, who was only sixteen years of age, for the purpose. The Mahāsaṅgha briefed him about the background of the relics under reference and detailed him regarding the mission of bringing relics from the Nāga realm. The king sets out in a great procession accompanied by the army, dancers, drummers etc. to the Mahāmehavanā to receive the relics. The novice Sonuttara leaves to bring the relics on hearing the noise of the king’s procession proceeding to receive relics. He immediately dives into the earth and appears before the Nāga king. The Nāga king hesitates to part with the relics and gets his nephew to swallow the relic casket. But the novice endowed with great psychic powers was able to get it from his belly and immediately appear back at his pirivena.

As described by the Mahāvamsa author the procurement of the relics had apparently taken only a few minutes. Possibly a historic event has been submerged in a sea of miracles by the over enthusiastic author, whose main concern was to arouse serene joy of the pious. According to the Mahāparinibbāna Sutta (D. II, p. 167) the Koliyas of Rāmagāma received a portion of the bodily relics of the Buddha, which they honoured by enshrining them in a thūpa. The relics concerned subsequently might have fallen into the hands of a Nāga tribe, a powerful contemporary tribe in India. Nāgas appear to have been a powerful section of people in Sri Lanka, too, and king Dūṭṭhagāmini had many dealings with them, as found in the Mahāvamsa. Possibly king Dūṭṭhagāmini was suc-
cressful in obtaining the relics for the Mahāthūpa with the assistance of the local Nāga people who might have had connections with their Indian counterparts. The Novice Sonuttara must have been a member of the Nāga community who was selected to execute the transaction on behalf of King Dhūthagamini.

It is said that there was great rejoicement at the time Sonuttara arrived with the relics. It is said (Mhv. ch., xxxi v. 78 ff) that Mahābrāhma, Sakka, the Four Guardian Kings; Vissakamma the heavenly master builder etc. were present at the moment. The enshrinement of relics was done amidst a great festival where ninety-six crores of arahants were present. The king keeping the relic casket on his head circumambulated the Mahāthūpa and descended to the relic chamber and was very happy. He breathed his last looking at the Mahāthūpa (Olokento mahā thūpaṃnipannova nimilayi) (Mhv. xxxii verse 74).

It was Saddhatissa (77-59 B. C.), Dhūthagamini’s brother who completed the remaining work on the Mahāthūpa.

Chattakammam sudhākammam hathipakāra meva ca Mahāthūpapassa kāresi saddhākatanāmako

"King Saddhatissa got the canopy (chattā kamma) made and effected the plaster of the Mahāthūpa. He also provided an elephant wall. (Mhv. ch., xxxiii v. 5).

Not only king Dhūthagamini and king Saddhatissa held the Mahāthūpa in high esteem. In the course of history, we see many kings paying equal respect to it. Successive kings repaired the Mahāthūpa whenever the necessity arose and adorned and embellished it providing it with additional items.

King Lahijatissa (59-50 B. C.) levelled the ground between the Mahāthūpa and the Thūpārāma and built three stone terraces at a cost of three hundred thousand (gold coins). King Khallatanāga (50-43 B. C.) made the courtyard of sand surrounded by a wall.

King Bhātikābiyā (38-66 A. C.) is said to have had a special love for the Mahathūpa. He constructed two vedi-kas for the Mahathūpa.

Aniṇṭhite chattakamme sudhākamme ca cetiya Marāṇantika rogena Rājā āsi gilānako
(Mhv. ch., xxxvi v. 1)

Neither the Mahavamsa nor its commentary Vamsathappakāsini give the nature of the disease. However, 98% of the work of the Mahāthūpa was complete at the time of his death. The king’s brother Saddhatissa was summoned from Dīghavāpi and the king requested him to complete what was yet to be done. Saddhatissa realizing the condition of his brother, got the cetiya covered with white cloth (to show that it was plastered) and got the ‘chattā’ (canopy) made of bamboo reeds. With the help of painters he gave the cetiya a finished look and informed the (dying) king that what was (left out) to be done was finished (thūpe kattabam niṭṭhitam-ibid). The king lying on a palanquin circumambulated the cetiya and worshipped the cetiya seeing the cetiya lying on his right side and seeing the Lohapāsāda lying on his left side and was very happy. He breathed his last looking at the Mahāthūpa (Olokento mahā thūpaṃ nipannova nimilayi) (Mhv. xxxii verse 74).

It is said (Mhv. ch., xxxii v. 74) that Mahābrāhma, Sakka, the Four Guardian Kings; Vissakamma the heavenly master builder etc. were present at the moment. The enshrinement of relics was done amidst a great festival where ninety-six crores of arahants were present. The king keeping the relic casket on his head circumambulated the Mahāthūpa and descended to the relic chamber and was very happy. He breathed his last looking at the Mahāthūpa (Olokento mahā thūpaṃ nipannova nimilayi) (Mhv. xxxii verse 74).

It was Saddhatissa (77-59 B. C.), Dhūthagamini’s brother who completed the remaining work on the Mahāthūpa.

Chattakammam sudhākammam hathipakāra meva ca Mahāthūpapassa kāresi saddhākatanāmako

"King Saddhatissa got the canopy (chattā kamma) made and effected the plaster of the Mahāthūpa. He also provided an elephant wall. (Mhv. ch., xxxiii v. 5).

Not only king Dhūthagamini and king Saddhatissa held the Mahāthūpa in high esteem. In the course of history, we see many kings paying equal respect to it. Successive kings repaired the Mahāthūpa whenever the necessity arose and adorned and embellished it providing it with additional items.

King Lahijatissa (59-50 B. C.) levelled the ground between the Mahāthūpa and the Thūpārāma and built three stone terraces at a cost of three hundred thousand (gold coins). King Khallatanāga (50-43 B. C.) made the courtyard of sand surrounded by a wall.

King Bhātikābiyā (38-66 A. C.) is said to have had a special love for the Mahathūpa. He constructed two vedi-kas for the Mahathūpa.

Aniṇṭhite chattakamme sudhākamme ca cetiya Marāṇantika rogena Rājā āsi gilānako
(Mhv. ch., xxxvi v. 1)
(loc. cit. vv. 40-45) records a unique pūjā the king Bhātikābhaya performed in honour of the Mahāthūpa. He planted jasmine plants (sumana) in an area one-yojana in width around the city for the purpose of reaping flowers for his intended pūjā. The Mahāthūpa was applied from the base up to the canopy with a perfumed paste four inches thick and fixing sumana flowers in the paste with the stems, the king made the thūpa look like a mountain of flowers (māлагulopamā). Again the king got the thūpa applied with a paste of red arsenic, eight inches thick the same way and covered the Mahāthūpa with flowers. Once more he covered the thūpa with flowers from the steps to the canopy.

Uṭṭhāpetvāṇa yantehi jalāṃ abhaya vāpito
Jalehi thīpam siṃcanto jalāpiṣam akārayai

The king also performed the offering of water (jalaṭāpuṣam) for the thūpa, sprinkling it with water from the Abhaya tank taken up with the help of a machine.

Mixing powder obtained from crushing sixty cartloads of pearls with oil, the king got the thūpa white washed. He performed another magnificent offering covering the thūpa with a net of pearls up to the ground which was adorned with golden lotuses as big as wheels, fixed at the joints. The Vamsatthappakāsini (MhvA. p. 630) provides us with valuable information, namely the pearls for the net were imported from Rome.

Once the king heard, as per the Mahāvamsa22 the arahants' collective recital of scriptures Gayasajāyana saddam) inside the thūpa. Unable to see who recited, the king layed at the eastern vahalkāda determined, not to rise up until he saw (the reciters). When he was lying thus without taking in any food Sakkha came and spoke to the king walked around the relic chamber observing its grandeur to his heart's content. But the Mahāvamsa and its commentary do not record of the Sakka's intervention in the incident. Therās of their own accommodated the king's request.

Smither in this connection says: “an enormous stone slab 12 1/2 ft. in length and 9 1/2 ft. in breadth, lying flat on the ground at a distance of about 325 yards south west of the centre of the thīpa is said to cover the entrance to the mysterious subterranean passage, which is believed by the priests to be still in existence” (Smither p. 26 foot note). Under the circumstances, it is conjectured that there was a secret passage for theras to enter the Relic chamber in the early days.

The king having seen all the adornments in the relic chamber came out and made offerings of figures modelled in clay similar to those (within). The king kept those models in a pavilion in the Royal courtyard covered with golden cloth and assembled the citizens by beat of drum and proclaimed “The golden figures inside the relic chamber are similar to these.” The Vamsatthappakāsini provides vital information at this instance. It says “since those figures were made similar to those inside, the drawing of them in books commenced thence onward (Tam rūpasadisaṃ rupam katattā tasmā kāle potthake rūpāni ahesum (MhvA.ii p. 554). Apparently there has been a tradition of drawing in books (possibly ola leaf books) to give illustrations. The king is said to have exhibited these replicas annually.

Further the king thought: “The monks who knew the splendour of the relic chamber are rare and therefore I should describe it to them”. He summoned the monks to the ground floor of the Lohapāsada and started to describe the splendour of the Relic chamber. Though he preached during all the three watches of the night, he could finish only one tenth of its splendour. (loc. cit.). The Mahāvamsa describes another ritual Bhātikābhaya performed in honour of the Thūpa. With honeycombs, with perfumes, with vases (filled with flowers, and with essences, with auri-pigment (prepared) as unguent. With lotus flowers arrayed in minimum that lay ankle-deep in the courtyard of the cetiya where they had poured it molten; with lotus flowers that were fastened in the holes of mattings spread on fragrant earth, wherewith the whole courtyard of the cetiya was filled, with many lighted lamps, prepared with wicks made of strips of stuff in clarified butter, which had likewise been poured (into the court yard), when the ways for the outflow had been closed up; and in like manner with many lamps with stuff wicks in madhuka oil and sesamum oil besides; with

these things, as they were named the prince com-
manded severally with each seven times offerings for
the Great Thupa".  

Mahadhätika Mahanàga (67-79 A. C.)24 had kiñcikkha stones laid as plaster on (the square of) the Mahathupa and he turned the sand path way round (the thiopa) into a wide court. Amandagàmini (79-89 A. C.) erected a canopy over the thiopa.  

King Ilanaga (93-103 A. C.)26 deployed many Lambakañas to construct a road to the Mahathupa. King Sirinaga (249-268 A. C.)27 had the whole thiopa gilded and crowned with a parasol.

Mahathupa vare chattam kārapettvāna bhupati Manoramam Suvañnakamman kāresi dassaneyya

King Sanghatissa (303-307 A. C.)28 is reported to have effected substantial improvements and additions. It is observed that this king undertook again the same work done by Sirinaga. Further King Sanghatissa got four great gems, each with a hundred thousand (pieces of money) and fitted them in the middle of the four suns (on the four sides of the tee). It is significant that the king is said to have put on top of the spire of the thiopa a precious ring of crystal (θiòppasa muddhānī tathā anaggha vajracumba taka) - Zoe. Cit. verse 66. According to the Vamsatthappakāsini (p. 666) it was intended to avert lightening (asani upaddavaviddhamsanattam) and it shows the scientific advancement of the people at the time. The king is also said to have provided 40,000 robes to the monks at the festival of consecration of the parasols.

King Sanghabodhi's name (307-309 A. C.) is also connected to the Mahathupa. As reported in the Mahavamsa29 the country was afflicted with a severe drought during the reign of the king. The king, in order to produce rain, prostrated himself in the compound of the Mahathupa determined not to rise up till he was moved by rainwater. As the king was lying, rains fell wetting the whole island of Lanka. But the king refused to rise up, as he was not floating in the water. The ministers closed the rainwater outlets of the Thiopa compound and made the king to float.

King Jethathissa (circa latter part of the 4th century A. C.) provided the Mahathupa with two precious gems30. Aggabodhi I (575-608 A. C.) provided the thiopa with a golden canopy (chattra) weighing four and twenty bhāras.31 King Mittasena who ruled the country only for one year is said to have built gate ways in the Elephant walls of the main three cetiyas (which obviously includes the Mahathupa).32

King Dhatusena (459-477 A. C.) repaired the parasols of the Mahacetiya33 (Mhv. xxxviii verse 54). Also he got the three main cetiyas (mahā cetiyattaye) white washed and pinnacles gilded and provided "Vajiracumbataka to avert lightening"34 (Mhv. xxxviii v. 74) as done by king Bhatika. King Mahanāga (573-75) restored the stuccowork, built elephant railings (hatthivedi) and renovated the paintings.35 Aggabodhi I (575-608 A. C.) presented the Mahathupa with a golden umbrella (chattra) weighing four and twenty 'bhāras' and also a precious gem.36

King Moggallana III (618-623 A. C.) covered the three thiapas (thūpattayam) with new cloth.37 Parakramabahu I (1153-1186 A. C.) restored the Ratnavāluka Thūpa (Mahathupa) which was destroyed by Tamils to one hundred and twenty cubits in height. The Mahāvamsa says that former kings, apparently Parakramabahu's immediate predecessors were unable to do much for the Mahathupa after shifting the capital to Polonnaruwa.

Anurādhapurasmim ca purā damilanasite Vihāre nekarajūhi dukkarattā akārite
Many kings were unable to repair the vihāras, formerly destroyed by Damilas as it was difficult. (Parakramabahu I) sent one of the ministers and got repaired Ratanavālūka thūpa to a height of 120 cubits. It is interesting to note that, when it comes to the Polonnaruwa period the Mahāthūpa came to be known as Ratanavālūka Thūpa which means golden sand thūpa instead of Ratnamāli Thūpa or Golden garlands of the Anuradhapura period.

It is also significant that Parakramabahu restored the thūpa to its original height. Kitti Sīrī Nissanka (1187-1196 A. C.) too carried out repairs and erected a stone replica of the thūpa on the platform. Malalasekera (DPPP II 502) quotes Mhv. ch. Ixxx vv. 20-21 in support of Kitti Sīrī Nissanka having repaired the Ratnamāli thūpa. But Geiger says that it refers to Kitti Sīrī Nissanka's repairs to Rankot Vehera of Polonnaruwa. However, there is epigraphical evidence to the effect that Kitti Sīrī Nissanka repaired the Mahāthūpa.40 Magha pillaged the Mahāthūpa. Mahāvamsa says that (Magha) destroyed the Ruvanvali dagāba etc.41 The Mahāvamsa does not mention Parakramabahu II (1236-1271 A. C.) of Dambadeniya as having repaired the thūpa. But reports that his son Vijayabahu IV (1270-72 A. C.) completed the work on the Ratanavālūka Cetiya commenced by his father which testifies that Parakramabahu II commenced the repairs.

Atha so pitu rājena ratanāvalī cetiyanā
Araddhaṃ nava kammantam apari niṣṭhitam42

The Mahāvamsa further says that Vijayabahu IV having repaired (shrines) entrusted the future protection to vanniyars (loc. Cit. v. 89). Apparently Vijayabahu's repairs were the last by Sinhala kings, before the modern restoration commenced in the latter part of the 19th century.

Numerous references and additional information are scattered in Pali commentaries pertaining to the Mahāthūpa. According to Sammohavinodanī (VbhA. 446-47) during the famine Bāmniṇīṭīyasāya, when many bhikkhus crossed over to Jambudīpa Venn. Culasiva did not wish to join them and went to worship the Mahācetiya. He found castor plants grown on the courtyard of the Mahācetiya. All around it were bushes and the Cetiya itself was covered with moss. Papancaśudanī (MA II p. 403) records an instance where a monk (ariyasāvako) was attending to whitewashing of the Mahācetiya.

The original Mahāthūpa as built by Duttthagāminī would have been very much similar to the contemporary Indian thūpas specially the thūpas at Sānci. It is clear that it had a chatta (umbrella) on the top similar to the Sānci thūpa, instead of the present spire. As already said the Mahāvamsa records several kings repairing or providing chattas to the thūpa. As no remains of chattas are discovered it can be conjectured that those chattas would have been made of wood. Similarly there is evidence to the effect that it had two railings (vedikās) one at the top and another at the top most terrace (pesāvā). The Mahāvamsa33 records that king Bhātikabhaya (38-66 A. C.) built two vedikās. The Vamsatthappakasīni explains that those were Mudhā Vedi kā and Kucchivedikā namely a vedikā at the top and a vedikā at the belly. Restored Sānci thūpas have retained those two features up to date though they have vanished from Sīrī Lankan thūpas. It was king Saddhātissa who provided an elephant wall (Hasti vedi) for the thūpa. King Mahānāga too, (373-75 A. C.) provided the thūpa with an elephant wall as already said. The archaeologists hold the view that the remains of the elephant wall that have survived are not those of the elephant wall originally built by Saddhātissa but of a subsequent one, perhaps the remains of the elephant wall built by Mahanaga. Vāhalkadas, the frontispiece as Smither calls them, appear to have been added at a later date. The excavations have revealed that vāhalkadas of Ruvanwālisāya have been built enclosing the limestone platforms projecting at the cardinal points constructed by Lāñjatissa (59-50 B. C.). Hence, the Vāhalkada of Ruvanwēli sāya should be posterior to Lāñjatissa's reign. It is clear that all the original features the thūpa inherited from contemporary Indian thūpas at the beginning have
been gradually erased in the course of successive restorations and repairs. What we see today is a thūpa having Sri Lankan identity.

Several inscriptions have been found at the site and elsewhere which refer to the thūpa. A damaged stone slab inscription which Paranavitana assigns to the first year of King Kanithathissa (Mālutissa) (227-245 A. C.) record the donation of land to the Ruvanvaliḍagāba. It has been wilfully damaged by treasure hunters. An inscription on a stone slab of Salapatala maluva (stone paved pavement) near the southern vāhalkatja which Paranavitana assigns to the reign of Queen Kalyanawathie records a gift of a kaṇicuka (closely fitted jacket) to the thūpa (silālekhana Sangrahā-Vimalakitti M. (Sinhala Script) 1958 Colombo p. 179-80). The Galpota inscription of King Kitsiri Nissanka record that he visited Ruvanvali Dagaba, effected repairs and made an offering of a stone replica of the Dagaba in the 4th year of his reign.

Due to South Indian invasions, drought and malaria the population of the North Central province gradually shifted towards the wet zone. The city of Anuradhapura with the sacred shrines was abandoned. Gradually covered with jungle and infested by wild beasts the shrines remained in the same condition for several centuries. Yet there were some courageous people who continued to live in pockets adjoining villages and who looked after the sacred places though they could not afford to effect any repair. In spite of the danger from wild beasts and lack of transport facilities Anuradhapura remained a popular place for pilgrims. People from even distant places continued to visit the shrines. The Kandyan king Kirti Sri Rajasinghe (1747-82) visited Anuradhapura on pilgrimage in that Dark Age.

With the gradual restoration of the ancient irrigation system and control of Malaria, more and more people started coming and settling down in and around Anuradhapura towards the latter half of the 19th century. It was during this period that Buddhists directed their attention for the restoration of shrines in Anuradhapura. Thuparama, the first to be repaired was already restored by 1842 (Smithe James G. Loc.Cit. p. 3). The next to receive the attention was the Ruwanvāli Sāya which was a “mere pile of fallen bricks”. It was Ven. Naranvita Sumanasara a monk with incredible courage who came with a group of pilgrims from Gampola who commenced the herculean task of restoring of Ruwanvāli Sāya in April 1873. It is said that he had no proper place to stay and was living under a discarded roof of a bullock cart. With the assistance of local Buddhists and those from other areas as well, he started to clear the jungle that covered the thūpa. The Governor General Sir William Gregory (1872-77) appreciated the work and the courage of Ven. Sumanasāra and contributed $100/- for the restoration work. The following extract of the testimonial, the Governor sent in appreciation of the work testify to the courage of Ven. Sumanasāra who undertook the formidable task.

Anuradhapura
February 15th 1876.

I have visited the Ruwanvāli Dāgāba and have been quite surprised at the progress made by Nāranvita Sumanasāra unناسāre in the restoration of the great work. Only three years ago it was a mere pile of fallen bricks. He has now completely cleared it and has restored the greater portion of the basement. The vigour displayed by Nāranvita Sumanasāra unناسāre deserves every encouragement and I trust it will be appreciated by his countrymen. I have myself contributed to this restoration and not looking at it as a religious work but as a conservation of a great national monument.

The best of Sinhalese art and identified with one of the most powerful and enlightened kings who ever ruled the country.

W. H. Gregory
Governor

While the work was in progress “Ratnamāli Cetiyawardhana Society” (Ratnamāli Cetiya Restoration Society was formed in 1902 initiated by Brahmācāri Walisingha Harischandra, the prominent revivalist of the day and the restoration was handled by the Society thenceforth. However, when the work to the value of over rupees 2 million was completed a sudden torrential rain that occurred in 1911 washed
away the entire construction which Ven. Sumanasāra did for 38 years. But the Buddhists were not discouraged and continued with their work. A philanthropist from Henegama (Akuressa) by name Situge Don Hendric De Silva Rālahāmy popularly known as Henegama Appuhāmy, contributed Rs. 250,000 for the restoration work which was an enormous amount at the time. It was the biggest individual contribution made to the fund. The work progressed steadily with people contributing in money, materials and labour.

However it is said that when the dome was nearly half done, it was feared that if the dome is constructed at the same proportions, the thūpa would be too big, and might not be able to complete due to the high cost. (It is needless to state that such an enormous project was too difficult to handle by public contributions alone). Consequently the authorities took action to reduce the dome from that point, in order to make the thūpa smaller than the proportion it was intended at the beginning. This deliberate sudden drop in size of the dome, which some people try to interpret as the fault of the construction, could be seen today with the naked eye by an observant person standing in the compound of the thūpa. However it has affected the bubble shape and the beauty of the thūpa to a considerable extent.

The work continued smoothly and the crowning of the thūpa with the pinnacle took place on the 17th June 1940, the Pọnson full moon day, amidst great celebrations. Burma donated the crest stone for the pinnacle. It is said 500,000 people participated at this ceremony. The four accompanying cetiya (parivēracetiyas) at the four corners were completed in 1970.

It was a stone replica of the thūpa offered by Kittisiri Nissanka extant up to date in the compound that helped to determine the shape of the thūpa during the restoration. The height of the thūpa after the restoration measures 338 ft. and the diameter is 300 ft. The height of the gold plated pinnacle is 25 ft. high. The thūpa stands on a platform 5 acres in extent one side measuring 475 ft. In the course of the restoration, Vahalkadas (frontispiece) have been newly constructed but the remains of the ancient Vahalkadas are preserved by the side of it. Similarly the elephant wall (Hastipākāra) has been newly built. But the remains of the ancient elephant wall are preserved. Two ancient statues supposed to be that of King Dutthagamini and the other of King Bhatikabha are found in the compound. Another statue believed to be that of Vihara Maha Devi is also found there.

Further Buddha statues, Vamana or dwarf figures, gauda stones, ornamental pillar capitals, statues of Nāgini (female naga) huge stone altars, asanas are among the archaeological remains found in the compound of the thūpa. See PLATES XLIX, L.

MAHĀVĀMṢA (The Great Chronicle): the epic poem par excellence of Sri Lanka. It was written in Pāli—the lingua franca of Southern Buddhism—by a scholar-monk named Mahānāma in the sixth century B. C. It is basically a historical work relating the story of the Sinhala Kingdom of the island from its foundation in the sixth or fifth century B. C. to the reign of King Mahāsena (274 - 310 B. C.)

The early Western scholars were impressed by both its antiquity and its uniquely systematic historiographical methodology. Its main literary value lies in effective use of the lucid and soft-toned Pali verse to narrate, with a minimum of distracting embellishments, the main trends of a nation's long and varied historical tradition. The author displays his skills of literary composition in the manner in which he organized, with rigour and restraint, his subject-matter culled from a wide variety of sources ranging from contemporary ballads and folktales to voluminous treatises on eslesiastical history. The importance of the Mahāvamsa is also founded on facts other than its literary form and presentation.

The Mahāvamsa has proved to be an indispensable source for the reconstruction of the ancient history of not only Sri Lanka but also India. Without the comprehensive account of Emperor Asoka in this Chronicle, the identification of Devanāpiya Piyadasi of the edicts and the pillar inscriptions could have been delayed by at least a century. Even more importantly, the identification of the great missionaries whose relics were found enshrined in the stūpas of Sānchi and Sōñāri (i.e. Moggaliputta Tissa, Majjhima, Kassapa-gotta, Dundubissara) could never have been made without the information which the Mahāvamsa had recorded of the missions sent out to foreign lands to propagate Buddhism in the reign of Emperor Asoka. The most authentic data on the Mauryan Empire-next to the lithic records of Asoka himself—are to be found in this poem and the literature which developed around it.

As regards the history of Sri Lanka, its authenticity is amply borne out by archaeological, epigraphical and numismatic evidence which corroborates, supplements and clarifies the wealth of information recorded in it. It is significant that the early Aryan settlers of Sri Lanka, who had come in several waves of migration from both the northwest and the northeast regions of the Indian sub-continent, had developed an exceedingly keen historical sense. They began to keep records of their exploits and experiences not merely as ballads or sagas of literary or folk interest but more systematically as historical accounts aimed at asserting their cultural identity as a new nation in a new land.

The dynastic history of at least two centuries was already thus recorded before the advent of the Buddhist monk as historiographer and custodian of historical tradition in Sri Lanka. Of course, since the Buddhist monk took over this task, Sri Lanka gained its unique distinction of being perhaps the only modern nation to have maintained, in a periodically updated chronicle, an unbroken historical record extending to over twenty five centuries.

This chronicle, whose latest prolongation in identical literary form and style in Pali verse, was published in Colombo, brings the narrative to 1956. Several previous prolongations are mentioned with specific information:Viz.

(I) chapter 37 verse 50 to chapter 79 verse 84 by the Thera Dhammakitti in the thirteenth century;
(II) chapter 79 verse 85 to chapter 90 verse 104 anonymous, some time in the fourteenth century;
(III) chapter 90 verse 105 to chapter 100 verse 301 by the Thera Tibbatuvave Siddhattha Buddharakkhi in the eighteenth century and
(IV) Chapter 101 anonymous in the nineteenth century.

1. Both Dipavaṃsa and the Mahāvamsa come to an abrupt end with the notation: "The Mahāvamsa ends" during the reign of Mahasena. Hence the continuation from Chapter 37 verse 51 has been called Cūlavamsa—the lesser chronicle. But the colophon of each chapter right up to Chapter 101 calls the Chronicle Mahāvamsa.
Two further prolongations had been attempted by the Thera Yagirala Paññānanda, who brought the narrative to 1935, and the Thera Polwatte Buddhaddatta, who complimented the Chronicle with the history of the island under Portuguese and Dutch rule.

This continuing tradition of bringing the Mahāvamsa up to date is by itself an irrefutable proof of the deep impression which the author of the original chronicle made on subsequent scholars of the country. He had provided a model of historiography which seemed to satisfy the national needs.

Another salient factor has to be considered in assessing the importance of the Mahāvamsa. In spite of its confinement in subject-matter to the history of Sri Lanka, it had found a very wide audience in South-east Asia. The manuscripts which were collated by Wilhelm Geiger in the preparation of the current standard edition of the Pāli text, came from Burma, Cambodia and Sri Lanka in their respective characters. Interestingly, some of the foreign MSS were better preserved than those in Sri Lanka. The Cambodian texts revealed a further phenomenon: the text had been enlarged to almost double the number of verses so as to add information elsewhere recorded only in a tenth-century commentary. This Extended Mahāvamsa appears to have been a literary feat of a scholar-monk of Thailand or Cambodia.

The Mahāvamsa is the culmination of a literary and historiographical experiment which seemed to have extended over at least eight centuries in Sri Lanka. It commenced with the massive literary movement launched by the Buddhist Missionaries of Emperor Asoka, who were led by none other than his own son and daughter, the Thera Mahinda and Theri Sanghamittā. While they brought the Tipiṭaka (the Buddhist Canon) in Pāli (possibly a literary from of the vernacular of Magadha), the commentators elucidating it were produced in Sri Lanka in Sinhala, which in its Prakrit form in the third century B.C., was not too dissimilar to the contemporary North Indian dialects.

The Sinhala commentaries grew in volume and substance and from the earliest times, included information on the history of the island—specially on the antecedents of the dynasty which embraced Buddhism. The historical sections of these commentaries came to be known as the Sihala - Atthakathā Mahāvamsa (The Great Chronicle of the Sinhala Commentary). There is evidence that several recensions or versions were extant in original form even as late as the tenth century when the commentary of the Mahāvamsa, known as the Vamsatthappakāsini or the Mahāvamsa-Ṭikā, was produced.

Somewhere between third century B.C. and fourth century A.C.—most likely after the reduction of Pali Tipiṭaka into writing in first century B.C.—a tendency had developed to translate parts of the historical narrative into Pali verse. A ready model was available from the narrative works of the Canon such as the Jātaka, the Buddhavamsa and the Cariyāpiṭaka. Sinhala Atthakathā Mahāvamsa, with the Sinhala text interpersed with Pāli verses, was an intermediary step in the evolution of the epic poem in Sri Lanka.

The first tentative and imperfect effort to present the historical information of the commentaries in a chronicle entirely in Pāli verse is to be found in the fourth-century Dipavamsa of unknown authorship. Its imperfections range from grammar, style and linguistic inelegance—exemplifying the lack of experience in the use of Pāli as a vehicle of literary expression—to technical difficulties in copying with different sources and organizing the material in a balanced readable form. The author, however, was not totally unaware of the tenets of ornate poetry which had made their appearance in contemporary Indian literature. The Dipavamsa has several passages which speak of the author’s preoccupation with artistic expression.

A major literary revolution marked the period between the Dipavamsa and the Mahāvamsa: namely, the far-reaching initiative taken with the direct involvements of several scholar-monks from India (mainly, Buddhaghosa from the region around Buddha Gaya in Bihar and Dhammapāla and Buddhaddatta respectively of Kāñcipuram and Uragapura - Uraiyur—of Tamil Nadu) to translate the Sinhala commentaries on the Buddhist Canon into Pāli. The motivation came from two factors:

(i) the Sinhala commentaries were found to be the most comprehensive and authentic or, in the words attributed to Buddhaghosa himself, “conveying the true meaning of the doctrines of the Buddha”; and

(ii) eight hundred years of independent evolution of the once similar Prakrits of North India and Sri Lanka had made the Sinhala commentaries unintelligible to the Buddhists of India. The most practical solution.

2. The Dipavamsa ends with the reign of Mahāsena. It is possible that it was completed during the reign of Mahāsena while he was alive.

to the problem was to translate the commentaries into the same language in which the Canon existed.

The unprecedented literary activity which this decision ushered in made Pali an effective as well as desirable medium of literary expression in Sri Lanka. Thence, for well over seven hundred years, Pali was the preferred language of many a great scholar who saw no doubt the advantage of an extended readership in at least South and South-East Asia.

Writing about a hundred years after Buddhaghosa, the author of the Mahāvamsa, Mahānāma, used Pali elegantly free of solecisms and employed correctly and with ease both the popular gāthā metre (4 lines of eight syllables each, similar to the Sanskrit Sloka or Anuṣṭubh) and several more complicated metres in the concluding verses of the chapters. Although it was not called a Mahākavya, the basic tenets, elaborated in later treatises on rhetorics, have already been observed. The Mahāvamsa aims at a most practical objective of narrating the history of the country concisely for the expressed purpose of generating “the serene joy and emotion of the pious”. This has been done most of the time in a direct business-like manner. One looks in vain in the Mahāvamsa for the linguistic gymnastics which characterized the ornate Mahākavya in contemporary Sanskrit literature.

The Mahāvamsa of Mahānāma is organized as three epics in one volume:

Chapters six to ten: the Vijaya-Paṇḍukābhaya Epic on the founding and the consolidation of the Sinhala Kingdom in Sri Lanka.

Chapters eleven to twenty: the Devānampiya-Tissa-Mahinda Epic on the introduction of Buddhism to Sri Lanka and its consolidation as the state religion of the country.

Chapters twenty-two to thirty-two: the Dutthagamani-Abhaya Epic on the national hero of the second century B.C. who reunified the kingdom by liberating the regions under foreign domination and left a lasting heritage of magnificent monuments to the glory of Buddhism.

Instead of singling out these themes for isolated treatment, the historian in Mahānāma favoured a chronologically continuous narrative using concise connecting chapters to present the reigns in between. Thus did the Mahāvamsa become a chronicle. The style of the connecting chapters (e.g. chapters 21, 33-37) provide the prototype for the numerous prolongations of the Chronicle, to which reference was made earlier.

The Mahāvamsa begins with an account of three visits by the Buddha to Sri Lanka. Reiterating a national tradition, which is however not corroborated by either the Buddhist Canon or its major ancillary works, the Chronicles account for the sanctity of the more important sacred Buddhist shrines as located on spots visited by the Buddha.

The second chapter traces the genealogy of the Buddha from Mahāsammata (the “Great Elect”) to whom is attributed the beginning of kingship. This chapter records a number of chronological synchronisms which are important in the reconstruction of the ancient history of India.

The next three chapters deal with the three Buddhist Councils held under the patronage of Ajatasattu (circa 5th century B.C.), Kālāsoka (circa 4th century B.C.) and Asoka (circa 3rd century B.C.). In spite of the faith-inspired accretions, which are inevitable in a monastic tradition, these accounts, after stringent and even overly critical scrutinies by several generations of modern scholars, have proved to be by far the most complete and reliable information on the early history of Buddhism.

The subject-matter for the Mahāvamsa is traceable to three distinct sources:

(i) early accounts of different waves of Aryan migrations with overtones of mythical elements --- in no way different from contemporary legends of Greece and Rome;

(ii) a detailed and quite possibly even documented monastic tradition on the crucial events in the history of Buddhism, highlighting the miraculous and supernormal and demonstrating the penchant for seeking explanations for current happenings from experiences of previous births --- again, no different from other religious traditions which seek to evoke faith, belief and devotion in the pious; and

(iii) royal records of meritorious deeds accomplished for the benefit of the Buddhist Faith, hand, and the general public on the other hand.
this last category would fall panegyrics and heroic ballads which court poets and wandering minstrels had produced for humouring royalty and edifying the population.

Sri Lanka, in keeping with the ancient Indian tradition, recognized heroes of three distinct categories; Dharmanā (heroes of righteousness), Dānakā (Heroes of liberality) and Yuddhavāra (military heroes). The history of the island is replete with all the three varieties of heroes and hence tales on them have been an integral part of the public literary heritage. The Mahāvamsa has drawn heavily on them and a discerning reader of the Pali original can easily identify the material drawn from such tales.

Of special interest is the substantial account of the military and religious achievements of Dutthagamani-Abhaya Epic. It is evident that the author of the Mahāvamsa has had access to an epic poem in Sinhala on this national hero. Here one can see so many “Sinhalisms” which have crept into otherwise chaste Pali. Equally evident is the avidity and competence with which the military exploits of the king are described -- a task somewhat difficult for a Buddhist monk without the assistance of the court poet.

Despite its literary merits and historical authenticity, the overarching character of the Mahāvamsa is religious and ecclesiastical. It is above everything else a with just reigns. The impartiality of E.J.ara in the dis-

\[\text{Notwithstanding the seriousness of purpose that is shown in recording the eventful history of a colour ful people, the Mahāvamsa abounds in human interest episodes relating to a wide spectrum of human types: a brave mother who accompanies her son to the battle field and does not hesitate to act as decoy to lure an enemy to his end; a nymphomaniac queen whose infamous career leads seven kings to death and a crown prince to monkhood; a pious king who slaves to earn his own money to offer alms to monks and proceeds to ultimate limits of liberality by offering himself, his wife and his children to the community of monks, in spite of their entreaties to the contrary; the tragic end of the ruler who declared the whole island a sanctuary for man and beast; a king with a flair for building construction who risks his life by lying down by a precipice to hold fast the mortar of a stupa until it sets; a door-keeper that turns tables against his king and master who loves a good laugh and plays a practical joke on the ministers; a crown prince who sacrifices the throne for the love of a pretty outcaste; the single pointed resolve of a king whose imagination knows no bounds when it comes to designing grand ceremonies in homage to the Great Thūpa; an incredibly ambitious uncle who voluntarily goes through mutilation so as to enable his nephew to usurp the throne; three unknown princes who come to the capital as strangers but end up by becoming rulers successively; a ruthless ruler who marks his father’s funeral with a bloody massacre; a rebel minister who, even in fierce battle, cannot but share with the king a delicacy they both loved and thus uses the evening meal to negotiate peace; etc., etc.}

\[\text{It is on account of all these characteristics that the Mahāvamsa qualifies to be a part of the literary heritage of humanity. It narrates the history of the people of a small island. But in doing it with vigour and ardour, it reflects and noble and the mean, the wisdom and the foibles, the sublime and the ridiculous which characterize human activity whatever be the social-cultural or temporal milieu.}

\[\text{The fact that the Mahāvamsa deals with real people, and not fictional or impersonalized types, adds a significant dimension to the insights it provides on the} \]
universality of the humankind's strengths and weaknesses. The Chronicle is an enduring record of men and women who, guided by diverse emotions, ideals, needs and aspirations, said and did things which a nation has considered worthy of perpetuation, whether as examples for emulation or otherwise. This human pageant which unfolds itself in the pages of the Mahāvamsa is its most convincing claim to be enshrined among the greatest classics of Aisan -- if not world --- literature.

Mahāvastu-avādāna. This text was introduced to Europe for the first time by B.H. Hodgson in his article “Notices of the Languages, Literature, and Religion of the Baudhās of Nepal and Bhot” with a somewhat misleading description, as follows, “Mahāvastu, an avadānasāstra, an account of the fruits of actions, like the Karma Vīpāka of the Brahmins” (p. 428). A manuscript of the Mahāvastu-avādāna arrived in Paris in July 1837 from Hodgson, the then British Minister Resident in Katmandu, at the request of the Asiatic Society of Paris (See JAs. Sept. 1837, p. 297). In his Introduction à l'histoire du bouddhisme indien (Paris 1844) E. Burnouf quotes many passages of the Mahāvastu-avādāna from a manuscript in his possession.

Since Hodgson’s time, the title Mahāvastu (not Mahāvastu-avādāna) has been used by a number of scholars. Original MSS., however, almost always call the text Mahāvastu-avādāna. In his article “On the Sanskrit Mahāvastu” (pp. 128f.) Kogen Mizuno explains this as follows: Mahāvastu originally indicates a chapter of the Vinaya-pitaka of the Lokottaravadin of the Mahāsāṃghikas (cf. e.g. Pāli Mahā-khandhaka), as is described at the beginning of the text itself (ed. Senart I, 2.13-14). 3 “Here begins the Mahāvastu, which is based on the redaction of the Vinaya-pitaka made by the noble Mahāsāṃghikas, the Lokottaravadin of the Middle Country” (tr. Jones, I pp. 2-3). This reminds us of the well-known postscript to the Fo-pen-hsing-chi-ting (Taisho No. 190, Nanjio No. 680): “The Mahāsāṃghikas call this work Ta-shih (i. e. Mahāvastu), …” (cf. Encyclopaedia of Buddhism, I p. 96b). The Buddhist legends were first told in order to establish ordination rules and rites. Those legends were extracted from this part of the Vinaya-pitaka and formed the original of our text. The Lokottaravādins called it Mahāvastu. Later the revised and extended text was called Mahāvastu-avadānā. Although the Mahāvastu-avadāna was originally derived from the Vinaya-pitaka, it has lost the so-called Vinaya-terms in the course of transmission from the Mahāvastu to the Mahāvastu-avšdāna. The Mahāvastu-avādāna

1. Asiatic Researches, XVI (Calcutta 1828).
2. Mizuno’s article often quoted hereafter is to be highly recommended. This article was published in the Festschrift for Ryūshō Hikata (Fukuoka 1964) on pp. 127-156.
4. J.J. Jones, The Mahāvastu, 3 vols. (London 1949-52-56). All scholars in the field of South Asian and Buddhist studies must be grateful to Jones for having completed a translation of such a difficult text.

Mahāvastu has often been translated as the “great event”. However, what the word vāstu meant exactly is hard to know. Mizuno examines various meanings of it (op. cit., pp. 130f.). As Mizuno precisely says, avādana of the Mahāvastu-avādana should be taken in the wider sense of “allegory” including the stories of the former births of the Buddha Śākyamuni, and of his disciples, and other edifying tales (op. cit., pp. 131f).

The basic story of the Mahāvastu-avādana starts with the great vow taken by the Buddha as a bodhisattva practising under the Buddha Dipākara in the distant past. It is followed by his rebirth in the Tuṣita Heaven in the near past, and then the Buddha’s decision to enter Queen Māyā’s womb to be born in this world. The story continues, relating the Buddha’s youthful life, renunciation of the worldly life, enlightenment, first preaching, up to his edification activities and the formation of the Buddhist order. This basic story is often interrupted by many other stories, allegories, scriptural literature, birth-stories, doctrinal discourses, and so on, sometimes out of place. Mizuno has attempted to reconstruct the original order of the Mahāvastu-avādana (op. cit., pp. 148-156).

A number of episodes show interesting similarities to other Buddhist works. For example, the birth-stories in the Mahāvastu-avādana are closely related to the Pāli ones (see Ryūshō Hikata, *A Historical Study of the Thoughts in Jātakas and the Similar Stories*, with a supplementary volume *A Comparative List of References of Jātakas and the Similar Stories*, Tōkyō-1954). The present form of the Mahāvastu-avādana must have been composed during the period of several centuries down to the 4th or 5th century A.C. In his *The Sanskrit Buddhist Literature of Nepal* (Calcutta 1882) R. Mitra describes the text as follows, “A cyclopaedia of Buddhist legends and doctrines. It gives an elaborate history of Buddha’s life and preachings, explaining every incident of his life by references to his past existences. It also gives a simple and popular exposition of many abstruse doctrines of the Buddha’s faith” (p. 115).

Neither a Tibetan nor a Chinese version of the Mahāvastu-avādana is known. T. Byōdō believes that the Fo-pên-hsing-ch'i-ch'ing is its Chinese version freely translated from the Mahāvastu-avādana with little revision and extension, and decorated with beautiful verses taken from the Buddhacarita of Asvaghosa (op. cit., pp. 156, also 392, 612ff). The Fo-pên-hsing-ch'i-ch'ing is, as chi (i.e. Skt. samgraha) exactly shows, a collection compiled from the Buddha’s legends transmitted by the five schools mentioned in the postscript itself. Mizuno thinks that each school had its own text and that Jñānagupta (tr. 587-591/592 A. C.) has compiled and translated at his discretion with omissions and additions, and probably with emphasis on the tradition of the Mahasanghikus (op. cit., pp. 134ff).

The Mahāvastu-avādana is said to represent a stage of transition from the Theravadā, the Old Vehicle, to the New One (see e.g. M. Winternitz, *Geschichte der indischen Literatur*, Leipzig 1920, p. 192; cf. also La Vallée Poussin, *ERE*, VIII, pp. 329b-330a).

The Mahāvastu-avādana is written in the so-called Buddhist Sanskrit, or Buddhist Hybrid Sanskrit as Franklin Edgerton calls it. Edgerton’s monumental work *Buddhist Hybrid Sanskrit Grammar and Dictionay*, 2 vols. (New Haven 1953, reprinted Delhi-Varanasi-Patna 1969), is an indispensable tool for scholars reading the text. According to Edgerton (Grammar 1.73), the language of the Mahāvastu-avādana is “perhaps the most difficult and corrupt, as also probably the oldest and most important of all BHS works”.

The above is a very brief description of the Mahāvastu-avādana. Since the publication of the editio princeps by Senart a good many works have appeared.

---

5. In comparison with the contents of the Fo-pên-hsing-ch'i-ch'ing (up till Vol. II of the ed. Senart)

A. Yuyama

**MAHĀVIBHĀṢĀ** is a voluminous commentary belonging to the Sarvāstivāda School of Buddhism, believed to have been composed at the (4th) Buddhist Council of Kashmir (circa 4th century A.C.). It is a commentary on Kātyāyanaśrutpa's Gāṇaprapraśthāna (origin of knowledge), the main Abhidharma treatise of the Sarvāstivāda School of Buddhism. Its Sanskrit original is lost, but three Chinese translations are extant.

_Vibhāṣā_ in the Northern School of Buddhism literally means a commentary or a discussion, equivalent of "āṭṭhakathā (Skt. Arthakathā) in the Southern school. Takakusu explains the term thus: 'vibhāṣā' originally means 'option.' The idea seems to be that numerous opinions collected from the compilers (500 arahats) were compared with one another and the best one among them was selected as the orthodox. The Chinese explain the word either as 'comprehensive exposition' or 'various opinions' (JPTS 1905 p. 67). Monier Williams' Sanskrit English Dictionary (p. 978) gives the same meaning. The commentary receives its name from the fact that different opinions of leading teachers of the school have been carefully recorded in it, so that the reader may, at his own will adopt whatever opinion he feels inclined to (JPTS p. 198). The name Vaibhāṣika used for Sarvāstivādins subsequently by their Hindu opponents, by reason of their adherence to _Vibhāṣās_, is derived from _Vibhāṣā_. Mādhavācārya (14th century) in his _Sarvādars’ānasamgraha_ ch. II refers to Vaibhāṣikas as one of the four Buddhist Schools. The tradition is that the _vibhāṣās_ were compiled at the Kashmir Buddhist council, which is not recognized by the Southern school of Buddhism. All the records of the Southern school of Buddhism are silent regarding the Kashmir Buddhist Council. But the Chinese and the Tibetan records such as Yuan Chuan (Watters I pp. 270 ff), Tāranātha (Schiefner ch.xiii) life of Vasubandhu, _Abhidharmakośa Vyākhyā_ by (Paramartha p. 1.) Bu-ston (II p. 97) record the Kashmir Buddhist Council. Although there are some discrepancies pertaining in the Council in the above records they all agree as far as the convening of the council is concerned, under the patronage of king Kaniska.

The tradition goes that the Council was held circ 400 to 500 years after the _Parinirvāṇa_ of the Buddha, by Kashmir, under the patronage of king Kaniska. By the first century A.C. Kashmir had become the main seat of the Sarvāstivāda school of Buddhism, when it spread Eastwards covering almost the entire Central Asian Region and China, and Westwards to Iran etc., while Theravāda centered round Magadha. During the period under review king Kaniska of the Kushāna Dynasty swayed his power over a vast area that included Gandhāra (modern Afghanistan), Bactria, Kashmir, Khotan, and Yarkland in addition to his North Indian territories, and he was a great patron of (Sarvāstivāda) Buddhism, even as Asoka was for Theravada Buddhism. It is said that king Kaniska studied Buddhism in his leisure hours under the guidance of Pārśva, the Chief Buddhist monk of the day. The king was greatly puzzled by conflicting explanations on the Buddha’s teachings presented by the different schools of Buddhism that were prevailing during that time. Consequently the king suggested to Pārśva to summon a council of eminent monks of the day in order to obtain an authentic explanation of the teachings of the Buddha.

At the begining there was difference of opinion regarding the venue of the Council, but finally it was decided to convene the council at Kuṇḍalavana Vihāra in Kashmir. There is another tradition, which says that the venue was at Jalandhar. Five hundred 'arahants' were selected as the participants. According to another tradition the participants of the council consisted of five hundred arahants, five hundred bodhisattvas and five hundred _pandits_. The Majority of them were Sarvāstivādins. Vasumitra who was a Sarvāstivādin was invited to preside over the Council. Naturally, the decision-making authority on disputed points was with the president. Therefore the accepted version in most cases was that of the Sarvāstivāda School. V.A. Smith concludes that the Council was of the Sarvāstivāda School and the literature written at the time viz. _Mahāvibhāṣā_ belongs to that School, (Smith V.A. Early History of India pp. 267-68). It is also said that an attempt was made to reconcile the conflicting opinions of different sects, and settle once more the _Sūtra_, _Vinaya_ and _Abhidharma_ texts. But the most important task of the Council, according to tradition, was to prepare the _Vibhāṣās_ for the canon. Accordingly it is said that the ‘Council prepared _Upadesaśīlas_ (a compendium of rules) for the children in schools, and _Vibhāṣās_ for the final canon’.
Sūtra, Vinaya Vibhāṣā sāstra for the Vinaya and Abhidharma maha Vibhāṣā sāstra for the Abhidharma consisting 100,000 slokas each. It is clear that the conflicting views of many Sarvāstivāda philosophers residing at the two great centers, namely Kashmir and Gandhāra were carefully recorded and discussed. Vasumitra himself the president of the Council, is said to have composed two Abhidharma Pādas (Supplements) to the Abhidharma (Piṭaka) of the Sarvāstivādins, namely Abhidharma Prakaraṇa Pāda and Abhidharma Dhātukāya at this council.

The eminent Buddhist philosopher Aśvaghosa, who was described as a contemporary, had a hand in the proceedings of this council. According to the biography of Vasubandhu, the president of the Council invited Aśvaghosa who was living at Sāketa to give a literary form for the deliberations of the Council, when the import of the commentary was fixed. He turned it section by section into a literary form. The composition was said to have been completed at the end of 12 years. Afterwards king Kaniska is said to have caused the Vibhāṣās to be scribed on copper plates enclosed them in stone boxes and enshrined them in a stūpa specially constructed for the purpose. Although it is said that the Vibhāṣās were compiled for sūtra, Vinaya and Abhidharma at this council, only Abhidharma maha Vibhāṣā Sāstra, written for Abhidharma is extant, and that, too, not in the original Sanskrit, but as Chinese translations.

Vibhāṣā and Mahāvibhāṣā are extant in three Chinese translations, translated in A.C. 383, 427 and 659 respectively. Therefore the compilation of the original Sanskrit treatise should be attributed to a period prior to the first Chinese translation.

Takakusu (JPTS 1905 p. 67 ff) and Nanjio (Catalogue of Chinese translations of the Buddhist Tripitaka (Oxford 1883 p. 272 f) provides details of the extant three Chinese translations. The three Chinese translations bear the Nanjio Catalogue numbers 1263, 1264 and 1299. It is clear the Chinese translations are the three different Chinese translations of the Vibhāṣā (exegesis) of Jñānaprasthāna the main Abhidharma treatise of the Sarvāstivādins. In short those that are named Vibhāṣā as well as those named Mahāvibhāṣā are different Chinese translations of the Vibhāṣā (exegesis) of Jñānaprasthāna by three different translators. The Nanjio Catalogue records the details of the Chinese translations thus:

Abhidharma maha Vibhāṣā Sāstra
Nanjio Catalogue No. 1263
Authors five hundred ‘Arahants’
Translator Hiuen Tsang 656 - 59 A.D.
400 years after the death of the Buddha.
Amount 8 groups (Skandha) 43 sections
200 fascicles, (chuan); 1,438 Chinese letters
3630 pages. However Takakusu (JPTS 1905) gives the number of Chinese characters of No. 1263 as 438, 4449. Perhaps Takakusu (who made an extensive study of Vibhāṣās) had not come across this particular fragmentary Vibhāṣā.

Abhidharma Vibhāṣā Sāstra
Nanjio Catalogue No. 1264
Author Katyāyani Putra
Translator Buddhavarman A.C. 437- 439
Originally 8 gatho
44 vaggio, 100 fascicali
but lost during the war between the Northen Liang and Wei (A.C. 439). They were collected afterwards, but only 3 gatho, 16 vaggio were found and made into 82 fasciuli 400 pages (ye). It is noteworthy that though the tradition says that Vibhāṣās were compiled by 500 arahants, this copy (Chinese translation) gives the author as Katyāyani Putra who was the author of the original text on which that Vibhāṣā was written. Takakusu, instead of saying that it was lost and later recovered, says the copy is incomplete.

Nanjio catalogue number 1299:

The information given on this Chinese translation by the Nanjio Catalogue and Takakusu are contradictory. According to Takakusu the title is Vibhāṣā Sāstra. But in the Catalogue (Nanjio p. 272) it appears as Mahāyānabhūmi Ghyavākamula Sāstra. It is clear that Nanjio too was not sure of the correct title of the book, because he has put a question mark before the name of the title. The author is given as Bodhisatva Asvaghosa and the translator as Paramārtha, A.C. 557-569 of the Khan Dynasty 557-589. But according to Takakusu the author is Katyāyani Putra and the translator probably Sanghavartin of Kipin (Kashmir) A.C. 383.

It is clear from the above descriptions that there is a certain amount of ambiguity as regards the extant Chinese translations of the Vibhāṣā. There appears a substantial difference in the size of the extant Chinese translations, for no. 1263 is reported to have 200
fascicles while no. 1299 has 8 fascicles. Therefore a certain amount of doubt exists regarding the extant Chinese translations as to whether they represent the exact Vibhāṣa or the Mahāvibhāṣa that was in Sanskrit, or at least to what extent they represent the original.

The number of Slokas in the Vibhāṣa varies according to different sources. Hiuen Tsang says that it contains more than 100,000 (watters Yuan Chwang I, 271); Paramartha says that it contains about 100000 (Tong-Pao July p. 279). An independent tradition says it has 100,000 slokas in which were three million and two hundred thousand syllables.

As regards the date of compilation, there is no consensus. According to Hiuen Tsang it was compiled 400 years after the Parinirvāṇa of the Buddha. Paramartha says that it was 500 years after the Parinirvāṇa, and Tao-yen 600 years after the Parinirvāṇa (Takakusu JPTS 1905 p. 123). Vasumitra the President of the Council also cannot be clearly identified because there were seven Vasumitrās on record (Watters Yuan Chwang I p. 274-75).

Some scholars hold the view that there may have existed several Vibhāṣás before the compilation of the Mahāvibhāṣa, for the name Vaibhāṣika does not seem to be originating from Mahāvibhāṣa. According to Paramārtha Kātyāyani Putra himself earlier compiled a Vibhāṣa with the help of Asvaghosa of Sāketa, who was entrusted with the responsibility of putting the decisions of the Council to a literary form. Watters has conjectured that the Mahāvibhāṣa was not compiled at the Kashmir council on the grounds that (a) Mahāvibhāṣa refers to Kaniska as a former king (b) reference in the Mahāvibhāṣa to Vasumitra as one of the four great Sastrins (c) quoting of Vasumitra and Pars'va in the Mahāvibhāṣa (d) reference to Kashmir Vaibhāṣika masters in the Mahāvibhāṣa (Takakusu 1905 p. 123).

As regards extant sources and the conflicting data, Takakusu after a careful study of the subject (i.e. Kashmir Council and the Mahāvibhāṣa) remarks as to the reliability of the sources as follows.

"All these points casually noticed in our authorities seem to be conflicting and confusing" (Takakusu JPTS 1905 p. 124).

Although an indepth study of the Mahāvibhāṣa is not to be undertaken, to the extent it has been studied as an Encyclopaedia of Buddhist philosophy where many opinions of ancient and contemporary (circa 1st century A.C.) Buddhist philosophers are carefully registered and discussed. It is a rich storehouse of source material for students engaged in research into the history of Buddhist thought, specially the development of Abhidhmatic thought.

Between the establishment of fundamental Abhidharma texts of the Sarvāstivāda School and the compilation of Mahāvibhāṣa, there was a considerable time gap during which abhidharma philosophy of the school made great progress. The results of the progress are embodied in this great commentary. It is also interesting to note that during the period of its compilation there seems to have been several philosophers who were generally called Abhidharmaka Mahaśastrins. There were two bodies of such Sastrins differing in their views on one another. They were Kashmir Sastrins and Gandhara Sastrins apparently named after their centers of operation.

Mahāvibhāṣa contained the doctrines and theories of Buddhist schools as well as the doctrines of non-Buddhist philosophical systems of the day. Among the various Buddhist school and philosophical systems referred to in the Mahāvibhāṣa, we find Yuttavādin Drastāntikas Vibhadyavadins, Ėkaçittasamāvādīns, southern Yogācārins, Northern Yogācārins, Universal Yogācārins, Dharmaguptakās, Mahīśasakās, Mahāśāṅghikās, Vātsiyaputriyas, Kāśyapīyas, Staviravadins and Sautrāntikas. Outside Buddhism are found Sāmkya, Vāiśesika, Hetuvidyā, Sābbadāvadins, Anyatirthakas etc.

We also find some philosophers to, by their appellations such as the Great Kashmir Teachers the Great Western Teachers, the Great Gandhara Teachers, For JPTS eign masters, old Abhidharmikas, New Abhidharmikas etc. which shows the geographical expansion of the Sarvāstivāda school.

Mahāvibhāṣa has its drawbacks too. As already explained it is a commentary on Jñānaprasthāna Sāstra of the Sarvāstivāda School. Following the Jñānaprasthāna it is divided into eight chapters and each chapter discussing the corresponding chapter of the text (Gñānaprasthāna). The chapters are divided into sections. But the eight chapters have no doctrinal connection with one another. Same applies to the sections of the chapters. Even if the chapters are ann...
digression from the main subject, often inserted in the comments, produce complications and confusion. The great commentary, though it is a very rich source of material containing the doctrines and the theories of the time in detail, has no unity, whatsoever, as a whole. There is no coherent system. It is of great use to the scholars already versed in various doctrines, but it is very hard for the beginner to understand. To remedy this situation there arose the necessity to summarise the doctrines of the Sarvastivada School and present the doctrines in a systematic manner. As a result, many abridgements and manuals were produced such as Abhidharmakośa Sāstra of Vasubandhu, Abhidharmayānusaśāra Sāstra of Sanghabhadra (great critic of Vasubandhu), Abhidharmahrdaya Sāstra of Upasena, Samyukta Abhidharma Hṛdaya Sāstra of Dharmatrata etc. were composed through which the philosophy of the Sarvastivada School was greatly advanced. In spite of above drawbacks Mahāvibhāṣa is certainly a masterpiece, unique in its merit and scope. It is seen that the paramount position Vibhāṣa occupied during the hey day of the Sarvastivada School when Paramartha (499-569 A.D.) says Vibhāṣa was the principal subject of philosophical discussions during the 5th century and when there was a grave controversy between the Buddhists and Sankhya philosophers (Translations of Paramārtha’s Life of Vasubandhu-Tong Pao, July 1904). Watters who studied the Great Commentary in detail remarks thus on the Mahāvibhāṣa.

“The extent of the commentator’s investigations is, doubtless overstated (by Hiuen tsang), but there is evidence of Great study and research in the Vibhāṣa and Mahāvibhāṣa (Watters Yuan-chwang Vol. I p. 271).

The compilation of the Vibhāṣa definitely produced a profound and stimulating effort on the sphere of Indian Buddhism and contributed much to promote and strengthen the position of Sarvāstivādins at that time, and spread it even beyond the Indian frontiers, covering vast areas, including Central Asia, China, Korea and Japan.

MAHĀVIHĀRA A few days after the arrival of Mahinda-thera and his four colleagues in Anuradhapura, King Devanampiya Tissa (307-267 B.C.) as advised by the Thera himself, ploughed a furrow to mark the boundaries of the area consecrated to the Saṅgha. The Mahāmegha garden was the place where edifices necessary were to come up. Work was commenced to put up the buildings which were required. This was the origin of the Mahāvihāra, the great centre of orthodox Buddhism in Sri Lanka. Mahāvihāravāsins (residents of the Mahāvihāra) was the term by which monks residing here were known. This was the original meaning of the term, but as a result of later developments such as the appearance of new sects like those of the Abhayagiri and Jetavana the meaning was extended to embrace all the monks who owed allegiance to the Mahāvihāra wherever they lived. When later developments took place, they signified a sect or school as opposed to Abhayagirivāsins and Jetavanavāsins whose origin could be assigned to the 1st Cent B.C. to 4th Cent. A. C. respectively. The Mahāvihāra enjoyed the undivided patronage of all Sinhala kings from the time of King Devanampiya Tissa until King Vaṭṭagamani Abbaya (88-76 B.C.) founded the Abhayagiri-vihāra and rewarded a therā named Mahattissa of the Mahāvihāra with its incumbrancy. This reward of the king to an individual monk instead of the Buddhist Saṅgha from the four quarters (as in olden times) perhaps led to dissatisfaction among the other monks of the Mahāvihāra and before long the therā Mahattissa was charged by Mahāvihāravāsins, with the offence of frequenting families of laitymen and was expelled from

Vaitulyavadins and also from complete destruction

under very trying circumstances. In the 51h century A. C.,

when Buddhaghosa wrote his commentaries, the views
held by the M ahavihara were considered to be unmixed
and unentangled with the views of other sects, and all
the commentaries including the

Visuddhimagga were

written with theifcontents based on the traditions of
the Mahavihara.
The scriptures and the traditions which the earl i­
est missionaries who introduced Buddhism to the is­
land brought with them, were under the custody of the
Mahavihara. These tradi tions, relating to the Buddha,

the Vetullavadins raised their heads again. Taking the

side of the M ahii.vihara, the king meted out severe pun­
i shment to those who accepted new teachings by plac­
ing brand marks on the bodies of sixty of them and
banishing them from the island.
The events wh ich fol l owed as a sequel to this
i n c i d e t proved di s as t r o u s to the monks of the
Mahavihiira. The monks who were thus expelled found
refuge in a monastery at Kavlrapa_t_tana in the Col a
country in south India. One of them had a disciple there,
named Sanghami tta, who, one day saw the brand marks
on the body of his teacher and having inquired, came
to know the whole incident. S ahghamitta vowed to take
vengeance from the Mahaviharavasins for having been
instrumental in punishing his teacher and his compan­

added to and el aborated in course of ti me by the

the heart of King Go.thabhaya at an assembly of monks


of the two sons of the king, namely Jeṭṭhatissa and Mahāsena. Saṅghamitta however, could not convert Jeṭṭhatissa to his side and therefore left the island when he ascended the throne (267 A.C.). But he returned as soon as Mahāsena (277-304 A.C.) ascended the throne and brought disaster to the monks of the Mahāvihāra. He convinced the king that the Mahāvihāravāsinīs did not teach the correct Vinaya and persuaded the king to issue a royal edict to the effect that “whoever gives alms to a monk dwelling in the Mahāvihāra is liable to a fine of five hundred pieces of money”. For three days the monks went round their usual tours for alms (pindapāta) and each day they returned with empty bowls.

On the fourth day the monks of the Mahāvihāra (i.e. Theriya Nikāya), assembled in the Lohapasāda and resolved not to accept Vaitulyava ṅa (Pali. Vatullavāda). Leaving their viharas and their seats of learning they journeyed out of Anuradhapura, some to the Malaya (i.e. the hill country) and some to the Rohana (i.e. south of Sri Lanka). The monks of the Cetiya-pabbata-vihāra too left likewise and the monks of the Abhayagiri thereupon occupied that monastery. The buildings of the Mahāvihāra were demolished and the materials were utilised to erect new buildings for the Abhayagiri-vihāra. Subsequently, even when the Mahāvihāra was rebuilt and the monks who left it earlier, re-occupied it, King Mahāsena who was not very much disposed towards them, built the great Jetavana-vihāra within the boundaries of the Mahāvihāra and ignoring the protests of the Mahāvihāravāsinīs, dedicated it to a monk named Tissa who happened to be a follower of the Sagaliya sect. On account of this, the Mahāvihāravāsinīs abandoned the Mahāvihāra again for nine months.

The Mahāvamsa itself bears testimony to the fact that Saṅghamitta and his partisans characterised the Mahāvihāravāsinīs as not observing the Vinaya rules properly. A fragmentary inscription found in the grounds of the Jetavana monastery and which appears to be an edict issued by King Mahāsena, accuses the monks of the Mahāvihāra fraternity of being guilty of various sinful acts though they had been repeatedly rebuked. The Mahāvamsa states that Saṅghamitta set people on to destroy the Mahāvihāra, and, if this really happened, the people themselves seem to have acquiesced in the severe measures which Mahāsena adopted against the monks of the Mahāvihāra. On the other hand, the accusations of the Mahāvihāravāsinīs against sources. On the contrary, the available scanty references to the Abhayagiri-vihāravāsinīs in other sources are full of praise about them. Hieuen-Tsiang describes them as follows:

“……… The priests attended to the moral rules and were distinguished for their power of abstraction and their wisdom. Their correct conduct was an example for subsequent ages; their manners grave and imposing.”

Regarding the events in the reigns of Goṇabhaya and Mahāsena, one has to conclude that neither the Mahāvihāravāsinīs nor the Abhayagiri-vihāravāsinīs have acted in manner that would have had the approval of the founder of the Faith.

The nature of the mutual accusations levelled by the two factions against each other could be learnt from the Mahāvamsa commentary. The Abhayagiri-vaisins are said to have maintained that it was unbecoming for monks to use fans with ivory handles but their opponents disagreed, quoting from the Vinaya texts. Monks of the Mahāvihāra maintained that ordination can be conferred through a messenger but Abhayagiri-vaisins refuse to accept the validity of such an ordination. The Mahāvihāravāsinīs also maintained that the age of twenty years necessary for admission to the order could be reckoned from the time of the conception which too the Abhayagiri-vaisins declared contrary to the Vinaya. The Abhayagiri-vaisins again declared that it was unbecoming for a monk to spit on the ground after brushing the teeth, but the Mahāvihāravāsinīs ruled that the Buddha has nowhere prohibited this.

These and other points of dispute between the two factions only show that they had been quarrelling over very trivial matters, not involving any fundamental matters affecting moral and spiritual laxity, for, if there were any more serious reasons to quarrel, the spokesman for the Mahāvihāra who had mentioned these trivialities would definitely have mentioned them.

Rivalries between the two factions were dormant for about two centuries after the death of Mahāsena until certain events in the reign of King Silākāla (526-539 A.C.) proved detrimental to the cause of the Mahāvihāra. In the reign of King Aggabodhi I (564-598 A.C.) however, the orthodox school found a great champion for their cause in Jotipāla-thera, who, according to Nikāya Sāṅgrahaya, hailed from the conti-
silenced the Vaitulyavādins. For the time being, Mahāvīhāra appeared to have achieved a victory over its rivals.

Parakramabahu I (1153-1186 A.C.) is reported to have reconciled the factions of the Mahāvihāra and then reconciled the three main sects. At a convocation held by him he removed all the undesirables from the order and made arrangements to settle them down in lay life. According to the Nikāya Samgrahaya, this ecclesiastical court was held at a place called Latajñāpa in Polonnaruva and the king remained on his feet one whole night while the judicial proceedings were in progress. After the expulsion of the undesirables, a code of disciplinary rules (katikāvata) was promulgated by the elders of the Church for the guidance of those who remained. Thereafter the two dissenting factions Abhayagiri and Jetavana ceased to exist for ever.

Nandesena Mudiyanse

MAHAVIRA (circa 599-527 B.C. but more likely 561-489 B.C.) - Generally considered the founder of Jainism, though the Jaina tradition regards him as the last in a succession of twentyfour Jinas (conquerors) or Tirthankaras (ford-makers). His full name appears in Jaina scriptures as Jina Vardhamāna Mahāvīra.1 In Buddhist literature, he is referred to as Nigantha Nathaputta (sometimes, Nathaputta), meaning the bondless son of the Nāta (Nātha) or Nāya or Jnātṛ clan of Vaiśāli. He is further described as gatatta (one whose heart has been in the attainment of his aim) yatatta (one whose heart is restrained) and thitatta (one whose heart is steadfast).2

Birth and Chidhood

According to Jaina sources, Mahāvīra was born in circa 599 BC at Kujāragrāma of the kingdom of the kingdom of Vaiśāli (near modern Patna). His father Siddhārtha was a ksatriya chieftain of the Jnātṛ clan and his mother was Triśala, a sister of the Vaisāli ruler, Cetaka. He was brought up in royal luxury. Thus, like his contemporary the Buddha, Mahāvīra represents the kṣatriya opposition to the growing power of the Brahmanical priestly class, the caste system and the elaborate sacrificial rites which at times involved animal and human immolation.3

Accounts of Mahāvīra's life differ in the scriptures of the two traditions - the Digambaras (sky-clad or naked) and the Śvetāmbaras (white-clad). Śvetāmbara texts say that his birth was heralded by fourteen dreams which his mother had seen: namely, a white elephant, a white bull, a lion, Śrī—the goddess of beauty, garlands of mandāra flowes, the full moon, the rising sun, a large and beautiful flag, a vase of precious metal filled with water, a lake full of lotuses, an ocean of milk, a celestial abode in the sky, a heap of jewels and a blazing fire. The Digambara texts add two more: a lofty throne and a pair of fish playing in a lake. Śvetāmbaras record a mysterious story that he was conceived to a Brahman couple Rśabhadatta and Devanandā. Sakra, the king of gods, is said have miraculously transferred the embryo to the womb of Triśālā. This story is omitted by the Digambaras. A similar discrepancy exists with regard to Mahāvīra’s renunciation. Śvetāmbaras believed that he postponed his departure from home life until both his parents passed away so as not to cause them any anguish.

Renunciation and Enlightenment

According to Ācārāngasūtra, both his parents were already followers of Jina Pārs’va (circa 850 BC), the Jaina Tirthankara preceding Mahāvīra (Section 1002),
and committed ritual suicide. Very little is said in texts of either traditions about Mahāvīra’s childhood. Svetāmbaras claim that he married Princess Yasodā and had a daughter named Priyadarsinā. Digambaras, on the contrary, say that he was inclined toward worldly life and remained a bachelor. Both traditions agree that his renunciation took place at the age of thirty years. The event is glorified in Jaina texts with elaborate accounts of miracles. Laukantika gods, (i.e. those who were about to attain emancipation) are said to have carried him in a palanquin in a great procession to a park outside the city. Digambaras recount that he abandoned his garments and garlands, pulled out his hair with his hands and became a naked ascetic. The Svetāmbara account adds that he put on divine robes, donated by Sākra, wore them for thirteen months until he lost them accidentally. The adoption of nudity by Mahāvīra has been a subject of much discussion. It is quite probable that the disciples of Pāsāva did wear garments, even if they had restrictions like limiting them to one. The Buddhist scriptures refer to the fourfold restraints of the Niganthas (D. I, 57), namely catuyāmasamavara. The Sāmaṇṭāphalasutta explains them as four ritualistic approaches to the use of water. Jaina texts speak of such restraints in exactly the same ethical terms as the Buddha does: i.e. non-injury, truthfulness, non-theft and celibacy. Mahāvīra’s addition probably was non-possession, which extends to nudity. (Svetāmbaras, however, dispute what Mahāvīra added to Pāsāva’s vows (Jaini 1979 p.16 and 19). Another explanation is that the four restraints of Jainas were non-injury, truthfulness, non-theft and non-possession and that Mahāvīra added celibacy as the fifth.

Like the Buddha who practised various forms of austere asceticism for six years from renunciation to enlightenment, Mahāvīra wandered from place to place and observed severe ascetic penances for twelve years. Long foodless, waterless fasts are said to have lasted as long as a week. Svetāmbara texts state that during the entire period of twelve years, he took food only on the eleventh day of every month. Sometimes, he had not drunk water for even six months. He had sat in the scorching sun to meditate and experienced violence in the hands of hostile crowds. “He meditated free from aversion or desire, attached neither to sounds nor to colours... he never behaved carelessly” (Acīrāngasūtra 512-521). He suffered verbal abuse from people. He demonstrated incredible patience and tolerance. His single-minded austerities enabled him to develop miraculous power. According to Svetāmbara sources, Makkhalī Gosāla of the Ajivika sect offered to be a disciple of Mahāvīra to acquire such powers.

Twelve years, six months and fifteen days from renunciation, Mahāvīra attained enlightenment, which the Jaina scriptures describe as reaching ‘the highest jñāna (knowledge) and darsanā (intuition), called kevala which is infinite, supreme, unobstructed, unimpeded, complete and full’ (Kalpasūtra 120). With enlightenment he became “a Jina and a Arhat (worthy of workshop); he became a kevalin, Omniscient, comprehending all objects”. He knew whence beings came and where they will be reborn. “He knew the ideas and thoughts, the food, doing, desires and deeds of all the living beings in the world.” (Jaini 1979 p. 28)

**Spiritual Career and Nirvāṇa**

According to Digambara texts, Mahāvīra converted Brahman Indrabhūti Gautama sixty-six days after the enlightenment. He was the first to become a gaṇadhara (=supporter of the community; i.e. the first mendicant disciple). He and his two brothers and eight other Brahmans constituted the nucleus of the original four gaṇadhara. “Having mastered the Jina’s doctrine upon hearing his divine sound, they in turn composed all the Jaina litanies, rules of conduct, and so on” (Jaini 1979 p. 36). Svetāmbara sources describe Mahāvīra’s encounter with Indrabhūti Gautama as involving a sacrificial rite. Mahāvīra had on this occasion delivered a sermon on Ahimsā (non-injury) and dissuaded the three Brahman brothers and 1500 of their disciples to abandon the sacrifice.

Mahāvīra, like the Buddha, became an active participant of and a portentous meditation to the religious and cultural ferment which characterized India of the sixth century BC. Whereas the Buddha preached what he realized by himself and thus claimed some degree of originality, Mahāvīra was a reformer of an existing religion of which Pāsāva was the latest exponent. Svetāmbara sources depict Mahāvīra with human characteristics, engaged in mundane activities. The Digambaras portray him in a supernatural form; for instance, he did not preach to the people. What the people heard was a divine sound (divyadhvani) which miraculously emanated from his crystal-clear body for which gods created an assembly hall wherever he went (Jaini 1979 p. 35). Indicative of his life as a wandering preacher are the accounts of Svetāmbaras on places where he spent the four-month rainy seasons: first in Ashthakāgramā, three in Campā and Pystipamā, twelve in Vaiśāli and Vānpīgramā, fourteen in Rajāghara and the suburb of Nalandā, six in Mithilā, two in Bhadrakā, one in Śrāvasti and the last in the town of Pāvā in King Hastipāla’s office of the scribes. (Kalpasūtra 122).
Mahāvīra's forty-two years career as an effective promoter and reformer of Jainism ended with his death at the age of seventy-two years at Pāpā or Pāvā. His passing away is described in Jaina texts as entering "into nirvāṇa and becoming a siddha, i.e. one who is fully liberated and forever free of embodiment" (Jaini: 1979 p. 37). His intense activity and charismatic leadership resulted in a significantly enlarged Jaina community. Kalpasutra (133-135) and Jinacarita (134-137) give the following figures: 14,000 Sramanas or monks with Indrabhūti at their head, 36,000 nuns with Candana at their head, 159,000 male lay votaries under Śānkhāśātaka and 318,000 female lay votaries under Sulasā and Revati. The nirvāṇa of Mahāvīra and the enlightenment of his first disciple Indrabhūti are jointly celebrated by the Jainas in a festival of light which coincides with Hindu Dipāvali.

Chronology:

The Jaina scriptures make no mention of the Buddha, whereas the Pali Buddhist Canon has many references to the fourfold discipline (catuyāmavamsavarā) of Jainism and its exponent Nīgantha Nātaputta. There is no doubt that Nātaputta refers to Mahāvīra Vardhamāna who is known from jaina sources to be a scion of the Kṣatriya Jnātṛ clan. The traditional chronology and the more recent calculations of Western scholars show that Mahāvīra was a contemporary of the Buddha:

According to traditional chronology of Buddhists and Jains:

<table>
<thead>
<tr>
<th>Buddha</th>
<th>Mahāvīra</th>
</tr>
</thead>
<tbody>
<tr>
<td>623-543 BC</td>
<td>599-527 BC</td>
</tr>
</tbody>
</table>

"Shorter Chronology" as calculated by Western Scholars:

<table>
<thead>
<tr>
<th>Buddha</th>
<th>Mahāvīra</th>
</tr>
</thead>
<tbody>
<tr>
<td>563-483 BC</td>
<td>549-477 BC</td>
</tr>
</tbody>
</table>

But the traditional chronology on which the Buddhists and the Jainas celebrated the 2500th anniversary of the death of their founders in 1956 and 1975 respectively contains a major flaw. According to Sangitisutta, Dasuttarasutta and Pāsādikasutta (D. 29, 33, 34) of Dīghaniκāya, and Śāmaγāmasutta of Majjhimanikāya (M. 104), Mahāvīra predeceased the Buddha. The suttas describe in detail the disputes and dissensions caused among the Jainas on account of Mahāvīra's death. In Śāmaγāmasutta, the Buddha tells Ananda how to handle similar dissensions if they occurred among his disciple. Two other suttas reflect the scholastic action which Śāriputta initiated to prevent a similar situation with the death of the Buddha. Both suttas suggest that Śāriputta engaged himself in making an extensive subject index for the Buddha's teaching. Such a task would have entailed several years and Śāriputta himself predeceased the Buddha. The "Shorter Chronology" is equally incompatible with the afore-mentioned information we have from the Buddhist Canon. What is most plausible is that Mahāvīra passed away around 489 BC, (i.e. about six years before the Buddha). If so his birth has to be dated in 561 B. C. More research is needed to reconcile the discrepancy in currently accepted dates.

Buddhist Canonical References to Mahāvīra

The Buddhist literature goes further and details the circumstances which led to the death of Mahāvīra. The conversion of his lay devotee Upāli to the teachings of the Buddha is narrated in detail in Upālighahapatisutta of the Majjhimanikāya (M. 56). Nīgantha Nātaputta himself comes to Upāli's residence to verify the news. Upāli praises the Buddha and the sutta ends with the statement, "But because Nātaputta could not bear the eulogy of the Buddha, then and there hot blood issued from his mouth." The commentary of the sutta completes the tradition: "He fell down, was taken outside the town on a litter and then on to Pāvā, where he died, for few beings are able to live after discharging blood" (MA. III 99-100).

While there is no record of any meeting between the Buddha and Mahāvīra in Buddhist canonical or commentarial sources, the Buddha is said to have met a number of Mahāvīra's disciples. Sakuludāyi (DPPN. p. 957 is mentioned as a famous Jaina monastic whom the Buddha met in his visits to two Jaina monasteries at Moranivāpa and Sappini. Samyuttanikāya (S. iv. 398) records the only discussion which Mahāvīra had with a disciple of the Buddha, namely: Cita-gahapati. While Jaina monastic Dīgha Tapassī met the Buddha but was not converted to his teachings, Asibandhakaputta, Abayarājakumāra and general Siha, like Upāligahapati, became disciples of the Buddha.

In what details and accuracy the Buddhist canonical and commentarial sources discuss the teachings and practices of Mahāvīra is a moot point. (For a comprehensive discussion, See JAINISM). King Ajātasattu's report to the Buddha in Sāmaṇḍhapala-sutta is restricted to Catuyāmavamsa and relating to the use of water. (D. 2) [Cf. 1. B. Horner's interpretations in...

**MAHĀVYUTPATTI**, a Buddhist lexicon written in Sanskrit, the contents of which are so miscellaneous that it serves many purposes such as a dictionary of synonyms, a Sanskrit vocabulary, a list of names or epithets, a manual of Sanskrit grammar or even as a reference work on doctrinal instruction. These varied contents are all on Buddhism with a bias towards the Mahāyāna.

Neither its period of composition nor its authorship is known. But as Āśvaghosa and Kanis'ka are mentioned and as allusions to Greek astrology are found, the work can generally be attributed to the third or the fourth century A.C.

The work begins with the usual salutation to the Buddha “Sākyamuni”. The first item is a list of synonyms for the Buddha, followed by a list of past Buddhas, which includes the Dhayāni-Buddhas of the developed Mahāyāna along with the Buddhas of the Pali tradition like Dipankara.

At times the work reads like a commentarial work on the lines of the usual Pali commentaries. It has certain close similarities with the pali work, the *Niddesa*. For instance, the *Mahāvyutpatti* list of synonyms for *sattva* (section 207) almost corresponds to the *Niddesa* list at *Nd*. 1, 12, while the list of diseases in section 284 is very much similar to *Nd*. 1, 17.

An instance of its instructions on grammar is found is section 210 where the complete declension of *vrksa* is given, while section 97 gives a list of terms of salutation.

These features show that *Mahāvyutpatti* seems to have been composed for instruction mainly on Buddhist doctrinal matters along with the correct use of the Sanskrit language. Expansion of vocabulary also appears to have been one of the main aims of the author. In general, the work seems to have been intended as a manual of instruction for both students and scholars. The person who masters the words and phrases listed here, along with the concepts conveyed by them, should certainly be a versatile scholar in keeping with the concept of scholarship in vogue at the time.

The *Mahāvyutpatti* has been published as volume XIII of the *Bibliotheca Pali* under the editorship of J. P. Minayeff in 1911 with notes, etc. in the Russian language. For further details, see F. W. Thomas, *Indian Historical quarterly*, II, 1926, pp. 501 ff.

A. G. S. Kariyawasam

**MAHĀYĀNA**: The compound *Mahāyāna* comprises of *mahā* meaning great and *yāna* meaning vehicle, means “Great Vehicle”. The idea of *mahā* has reference to the religious goal of the Buddhists who call themselves the followers of the Mahāyāna. It is their assertion that, while they endeavour to realize the superior goal of Buddhahood, the other Buddhists seek to realize the inferior goals of Arahanthood and Paccekabuddhahood, the goals which in their view do not ensure complete emancipation. Hence the Buddhists outside the pale of Mahāyāna came to be referred to as followers of Hinayāna, the “inferior vehicle”.

Although the tradition of ideas which contributed to the emergence of Mahāyāna Buddhism dates back to the time of the Second Buddhist Council, i.e., the second century after the *parinibbāna* of the Buddha, the principal doctrines of the Mahāyāna are of much later origin. The second Buddhist Council marks an important milestone in the history of Buddhism as it is from this point onwards that the Theravadins and those who seceded from them started writing their own historical accounts and developing their own interpretations of the teachings of the Buddha.

According to the *Cullavagga* the Second Council was convened to decide on the ten points (*dasa-vatthu*) of the Vajjian monks of Vesāli. As both contending parties failed to reach agreement, the ten points were referred to a committee (*ubbhikā*) under the rules of *Vinaya* and upon the committee rejecting them, were turned down by the assembly of seven hundred members convened for the purpose. The Council which was thus convened decided on the content of the *Dhamma* and the *Vinaya*. The other party rejected the decision of the committee and is said to have held another Council of their own. This Council had ten thousand participants and was hence known as the Mahāsaṅgīti.

According to the Dipavamsa account they developed their own interpretation of the texts and had a canon of their own. Those who accepted the doctrines as adopted by this Council came to be known as the Mahasanghikas.

The Northern Buddhist traditions attribute other reasons for the Second Buddhist Council. According to one tradition, recorded by Bhavya and attributed to the Sammihitas, the dispute was caused by five controversial propositions raised by one Mahadeva. The issues related to doctrines and not to monastic rules. Vasumitta's account of the Second Council, too, agrees with that given by Bhavya.¹

Attempts have been made to rationalize the discrepant traditions. One hypothesis is that there had been in fact a composite ground of difference for the schism, but the Ceylonese tradition fixed upon that part of it, viz, Vinaya, which seemed to the orthodox monks of the Theravada school to be more important, while traditions preserved by the later scholars and schoolmen, Bhavya and Vasumita, were those which related to the doctrinal part in which they were more interested. That the Five Points mentioned by Bhavya and Vasumita, were not mythical or illusory, but had been subjects of debate and were actually debated in ancient times, has been proved by Poussin's identification of them with a set of 'heresies' noted in the Kathavatthu. The first four of them are in the nature of an attack on the presumption cherished by the Theravada of an Arhat's perfections, - heresies ascribed by the commentator on the Kathavatthu to sub-sects of the Mahasanghikas”.²

The importance of the Second Buddhist Council lies not in its successful rejection of the views of the dissident monks, but in the recognition that the dissidents successfully stamped on variant interpretations on matters of discipline or of doctrine. It was in fact, as proved by the history of the sasana of the next hundred years, the opening of the flood-gates for more liberal interpretations, because from both schools more and more dissident sects sprang up during this period. Though strange as it may seem, there were more schools from the Theravadins than from the Mahasanghikas.³

Thus the Mahasanghikas who commanded a bigger following at their Council which was held concurrently some distance away from the scene of the Theravada Council, were zealously dedicated to their cause. "Yuang Chwang records that the Mahasanghikas had a complete canon of their own which they divided into five parts, viz., the sūtra, the Vinaya, the Abhidharma, the Dhāraṇīs and miscellaneous. The vinaya of the Mahasanghikas, according to Yuang Chwang, was the same as that compiled at Mahakassapa's Council. He writes that he studied the treatises of the Abhidharma with two monks at Dhanakaṭaka in the South. He carried 657 Sanskrit works from India back to China and translated them into Chinese under the orders of the Emperor. Among them were fifteen Mahasanghika works on the Sūtra, the Vinaya and the Abhidharma. Still earlier, Fa-hien had taken away a complete transcript of the Vinaya from Pataliputra to render into Chinese. Nanjio's Catalogue furnishes us with the names of the Mahasanghika Vinaya texts, the Bhikṣu-vinaya and the Bhikṣuni-vinaya, which are extant in Chinese only. The only original work of the Mahasanghika sect available to us is the Mahavastu, or the Mahavastu-avadāna. It is the first book of the Vinaya-pitaka of the Lokottaravādin of the Mahasanghika school. According to it, the Buddhas are lokottara (supramundane) and are connected only externally with the worldly life. This conception of the Buddha contributed much to the growth of the Mahāyāna philosophy. The biography of the Buddha is the central theme of the Mahāvastu and it gives us the history of the formation of the Saṅgha and the first conversions. It is written partly in Sanskrit and partly in Prakrit or a mixed Indian dialect allied to Sanskrit. The work was probably composed between the 2nd century B. C. and the 4th century A. C.".⁴

¹ These are found in Chinese translations by Huan-Tsang and Paramartha; S. Dutt, *Buddha and five after centuries*, 130.
³ While nine schools are recorded to have sprung up from the Mahasangikas 15 schools have sprung up from the Theravadin-diagram facing. p. 112, 2500 yrs. of Buddhism.
⁴ *ibid*.
later off-shoots of the Mahāsāṅghika sect and differed somewhat from the original Mahāsāṅghikas in their views".

The Mahāsāṅghikas, like the Theravadins accepted the principal teaching of Buddhism like the four noble truths, the eightfold-path, the anātma, the theory of karma, pratītya-samutpāda, the thirty-seven bodhipākṣiya-dharmas and the stages of spiritual advancement. "According to them the Buddhas are lokottara (supramundane); they have no sāśra dharmas (defiled elements); their bodies, their length of life and their powers are unlimited; they neither sleep nor dream; they are self-possessed and always in a state of samādhi (meditation); they do not preach by words, they understand everything in a moment (ekakṣaṇika-citta); until they attain parinirvāṇa, the Buddhas possess kṣayajñāna (knowledge of decay) and anutpādajñāna (knowledge of non-origination). In short, everything concerning the Buddhas is transcendental. The Mahāsāṅghika conception of the Buddhas contributed to the growth of the later Trikāya theory in Mahāyāna. Thus the Mahāsāṅghikas conceived of the Buddha docetically and gave rise to the conception of the Bodhisattvas. According to them, the Bodhisattvas are also supramundane, and do not pass through the four embryonic stages of ordinary beings. They enter their mothers' wombs in the form of white elephants and come out of the wombs on the right side. They never experience feelings of lust (kāma), malevolence (vyāpāda) or injury (vihimsā). For the benefit of all classes of sentient beings, they are born of their own free will in any form of existence they choose. All these conceptions led to the deification of the Buddhas and Bodhisattvas. A section of the Mahāsāṅghikas, the adherents of Mahādeva, maintains that Arhats also have frailities; that they can be taught by others; that they still have a degree of ignorance, and a degree of doubt; and that they can acquire knowledge only with the help of others. Thus, Arhathood is not the final stage of sanctification".

It is important to note that from the Second Council onwards, while there had been no known attempts at bringing the two dissenting parties together, the history of the sāsana from this important historical event becomes in fact the history of these two schools of Buddhism. It in other words also means that whatever the doctrinal developments that took place after this point of separation were in fact those which further strengthened the separate identities of the two traditions of Buddhism.

The trend of thought started by the Mahāsāṅghika was further developed by their sub-sects like the Bahusrutiyas and the Caityakas. The Bahusrutiyas held, "That the teachings of the Buddha concerning anityatā (transitoriness), duḥkha (suffering), sūnya (the absence of all attributes), anātman (the non-existence of the soul) and nirvāṇa (the final bliss) were lokottara (transcendental), since they led to emancipation. His other teachings were laukika (mundane). On this point the Bahusrutiyas may be regarded as the precursors of the later Mahāyāna teachers. They also accepted the five points of Mahādeva as their views. In some doctrinal matters they had a great deal in common with the Śālā schools, while in others they were closely allied to the Sarvāstivādins".

"The Caityavāda shool originated with the teacher Mahādeva towards the close of the second century after the parinirvāṇa of the Buddha. He is to be distinguished from the Mahādeva who was responsible for the origin of the Mahāsāṅghikas. He was a learned and diligent ascetic who received his ordination in the Mahāsāṅghika Sangha. He professed the five points of the Mahāsāṅghika and started a new Sangha. He professed the five points of the Mahāsāṅghikas and started a new Sangha.4 They shared the basic doctrines of the original Mahāsāṅghikas. In addition to these, they held that one acquires great merit by the creation, decoration and worship of caitya; even a circumambulation of caityas generates merit. They also held that the offering of flowers, garlands and scents to caityas were likewise meritorious acts. One acquires religious merit by making gifts and one can also transfer such merit to one's friends and relatives for their benefit. It may be noted here that this conception was quite unknown in early Buddhism, but became an important doctrine in the Mahāyāna.

"It is thus apparent that the doctrines of the Mahāsāṅghikas and their offshoots contain germs from which the later Mahāyāna doctrine developed. They were the first school to deify the Buddha and the Bodhi...
MAHĀYĀNA

satta, which ultimately led to the complete deification of the Buddha and the Bodhisatvā in Mahāyāna, and to the consequent popularity of the religion among the masses. Their conception of Sambhogakāya led to the Trikāya theory which is one of the prominent features of Mahāyāna. The worship of caityas and the making of gifts advocated by the branches of the Mahāsāntigika school was to a large extent responsible for the evolution of the popular form of Buddhism. Tēl Mahāsaṅghikas can, there for, be said to be the precursors of Mahāyāna movement, through which Buddhism came to attract more people than it would otherwise have done”.

While the religious aspects of Mahāyāna have thus been largely subscribed to by the Mahāsāntigika schools, the systematisation of its philosophical aspects has been the work of the Madhyamaka and the Yogācāra schools. Nāgarjuna or Ārya Nāgarjuna 2nd cent A. C.) as he is sometimes referred to, was the founder of the Madhyamaka school. He was followed by a galaxy of Madhyamaka thinkers such as Āryadeva (3rd century A.C) Buddha paśita (5th century A.C.), Bhāvaviveka (5th century A.C.) Candrakīrti (6th century A.C.) and Sāntideva (7th century A.C.). Nāgarjuna wrote a number of works of which the Madhyamakakārikā is regarded as his masterpiece, as it presents the Madhyamaka philosophy in a systematic manner. The school is so called on account of the emphasis it lays on the Madhyamā-pratijñā. The Madhyamaka explanation of the middle path differs from what is found in the Pali texts. Here, it “stands for the non-acceptance of the two views concerning existence and non-existence, eternity and non-eternity, self and non-self, and so on. In short, it advocates neither the theory of reality nor that of the unreality of the world, but merely of relativity. It is however, to be noted that the middle path propounded at Banaras has an-ethical meaning, while that of the Madhyamakas is a metaphysical concept.

In the invocation in verse at the beginning of his Madhyamakakārikā Nāgarjuna describes pratītya-samutpāda by means of eight negatives. “There is neither origination nor cessation, neither permanence nor impermanence, neither origination nor cessation, neither permanence nor impermanence, neither unity nor diversity, neither coming-in nor going out”.

Pratītya-samutpāda according to the Mādhyamika view is the middle path which avoids the two basic views of existence and non-existence. It is the relative existence of things which they explain as sūnyatā. By sūnyatā, the Mādhyamikas do not mean absolute non-being, but relative being. Sūnyatā being the central idea of its philosophy, it is designated as sūnyavāda. The Mādhyamakakārikā also distinguishes between two kinds of truth, the samyrti satya (conventional truth) and the paramārttha satya (absolute truth). The former is born not of ignorance or delusion and gives a false impression of reality, while the latter is the realization that worldly things are non-existent like an illusion or an echo. The former is only a means, while the latter is the end. Therefore, viewed from the relative stand point, pratītya-samutpāda explains worldly phenomena, but looking at from the absolute stand point, it means non-origination at all times and is equated with Nirvāṇa or Sūnyatā.

Buddhāpatita and Bhāvaviveka initiated a new phase in the development of the Madhyamaka system. “Buddhāpatita takes the essence of the Madhyamaka method to consist in the use of reductio ad absurdum arguments alone (prasāṅga-vākyā). The true Mādhyamika cannot uphold a position of his own; he has therefore no need to construct syllogisms and ad­duce arguments and examples. His sole endeavour is to reduce to absurdity the arguments of the opponent on principles acceptable to him. We have the evidence of Candrakīrti to say that Buddhāpatita held prasanga (reductio ad absurdum) to be the real method of Nāgarjuna and Ārya Deva. He therefore initiates the Prāsangika School of the Mādhyamika.

“Bhāvaviveka (Bhavya), a younger contemporary of Buddhāpatita criticises the latter for merely indulging in refutation without advancing a counter-position. He seems to have held that the Mādhyamika could consistently advance an opposite view. When the sakāryavāda is criticised, the opposite view of cause and effect being different should be set forth”. Bhāvaviveka is the founder of the Svātāntrika Mādhyamika school. Candrakīrti criticises him for being inconsistent as a Mādhyamika in advancing independent arguments. Bhāvaviveka seems to have held

1. ibid. 120f.
2. op. cit. 120 f.
3. op. cit. 121 f.
that the realisation of śūnyatā was not absolutely necessary for the realisation of Nirvāṇa. He also conceded that Śrāvakas and Pāccekā Buddhaḥs could also attain final release, which certainly was opposed to the ekanayāvāda of Nāgarjuna which held that votaries of other paths had to be initiated into the Śūnyatā discipline for attaining final release.

Maitreya or Maitreyanātha who lived in the third century A.C. founded the Yogācāra School and was followed by Asanga (4th century A.C.), Vasubandhu (4th century A.C.), Śthiramati (5th century A.C.), Dinnāga (5th century A.C.), Dharmapāla (7th century A.C.), Dharmakīrti (7th century A.C.) Sāntarakṣita (8th century A.C.), and Kamalaśīla (8th century A.C.), who account among the prominent teachers of this school. The school reached the height of its power and acceptance in the days of Asanga and his brother Vasubandhu. The appellation Yogācāra was given to it by Asanga, while the term Vijñānavāda was used by Vasubandhu.

The Yogācāra School, was so called because it emphasised the practice of yoga (meditation) as the most effective method for the attainment of the highest truth (bodhi). All the ten stages of spiritual progress (dasa bhūmi) of Bodhisattvahood had to be passed through before bodhi could be attained. The school is also known as the Vijñānavāda on account of the fact that it holds Vijñānapāramitā (nothing but consciousness) to be the ultimate reality. In short, it teaches subjective idealism, or that thought alone is real. The ‘Yogācāra brings out the practical side of its philosophy, while Vijñānavāda brings out its speculative features’. The Lankāvatāra Śūtra which is an important work of this school maintains that only the mind (cittamātra) is real while the external objects are not. They are unreal like dreams, mirages and ‘sky-flowers’. Citta-mātra, in this case is different from ālayavijñāna which is the repository of consciousness underlying the subject object duality. It also is the womb of the Tathāgata (tathāgatagarbha). Vasubandhu’s Vijñānapāramitāsiddhi is the basic work of this system. It repudiates all belief in the reality of the objective world, maintaining that citta (cittamātra) or vijñāna (vijñānapāramitā) is the only reality, while the ālayavijñāna contains the seeds of phenomena, both subjective and objective. Like flowing water ālayavijñāna is a constantly changing stream of consciousness. With the realisation of Buddhahood, its course stops at once”.¹

According to the Yogācārins emancipation is attained by comprehending pudgala-nairārymya (the non-existence of self) and dharma-nairāmya (the non-existence of the things of the world). The former is attained by removing the veil of passions (klesāvarana) and the latter by the removal of the veil that covers true knowledge (jñeyāvarana). “The Yogācāra recognizes three degrees of knowledge: parikalpita (illusory), paratantra (empirical), and parinispanna (absolute). Parikalpita is the false attribution of an imaginary idea to an object produced by its cause and conditions. It exists only in one’s imagination and does not correspond to reality. Paratantra is the knowledge of an object produced by its cause and conditions. This is relative knowledge and serves the practical purposes of life. Parinispanna is the highest truth or tathātā, the absolute.”¹ The first and the second correspond to the samvyrti-satya (relative truth), the third to the paramārtha-satya (highest truth) of the Madhyamaka system.

By the time of the early centuries of the Christian era, the schools which grew up in the traditions of the Mahāsāṅghikas seem to have expressed themselves in two types of religious activity. On the one land, with the transcendentalisation of the Buddhas and the Bodhisattvas, they built up a composite system of ritual and worship centred around devotion (bhakti) to these transcendental beings. Propped up by the concept of the transfer of merit, this made a massive impact on the acceptability of their practices by the masses who were thus offered convenient passage to the Buddha or the Bodhisattva paradieses of their choice and to eventual liberation with more or less no toil on their part. On the other, by the development of a systematic literary presentation of Buddhism through which they sought to clarify the deeper philosophical teachings of the Buddha which the after Buddhist schools, according to them, had failed to grasp.

While they called the non-Mahāyāna Buddhists the Hinayānists, as they sought to attain liberation through “inferior goals of Arahanthood or Pāccekā Buddhas,” they described themselves as the Mahāyānists

¹ ibid. p. 123.
² ibid. p. 123.
as they sought to attain liberation by attaining the superior goal of Buddhahood. Thus, Mahāyāna becomes the generic name by which all those traditions of thought and practice which descended from the Mahāsāṅghika sect came to be known.

Both the Mahāyāna and non-Mahāyāna schools accept that individual existence is sorrowful (dukkha) and therefore needs deliverance from it. Both accept the belief in rebirth and the existence of a moral natural law which rules the process of kamma and rebirth which are neither created by a deity nor are supervised by him. The phenomenal world is without substance and is in a state of constant flux. The empirical person, it is held, is without self and is a complex of soulless factors with which the attainment of final liberation of the individual is logically connected. Both traditions hold that liberation is only achievable through the extinction of greed (lobha), hatred (dosa) and delusion (moha). It is the path discovered by the Buddha which leads on to final emancipation whether the Buddha is held as a human teacher, superman or transcendant being.¹

A detailed study of the differences between the two major traditions shows that almost all elements which seem ‘typically Mahāyānic’ are traceable in the original Pali text, although of course they were not understood in this same sense in which they came to be understood in the Mahāyāna. The most prominent of the differences between the two traditions are as follows:

i. “In relation to the reality of the world the Hinayāna holds a psychological realism, the Mahāyāna an idealism. Consequently the Hinayāna regards suffering as real, the Mahāyāna as an illusion (which however, only the sage recognises as such).

ii. “In contrast to the Hinayāna which denies a ‘true being’ behind phenomena and avoids making metaphysical statements, the Mahāyāna teaches an Eternal Absolute under a great variety of names. This Absolute is not transcendent but something immanent in Samsāra. Even in the dharmaḥ, which by the Hinayāna are considered mere phenomenal entities, the Mahāyāna is able to see the Absolute: in their emptiness. Likewise the Mahāyāna looks at the beings in all forms of rebirth as identical in their core with the Absolute (and consequently with each other). The Mahāyāna is monistic, and the constant accentuation of non-duality its special note”.²

iii. In the Mahāyāna the historical human teacher Buddha Gotama is interpreted as a projection of the Absolute, while in the Theravāda he is regarded as a natural man and teacher, at most a superman.

iv. Nirvāṇa according to the earlier view can only be attained by one’s own effort. Mahāyāna concedes that this can be attained through assistance from outside.

v. According to the Mahāyāna merit acquired can be transferred (punya parināmanā) to others as against the earlier view that whatever one attains in one’s samsāric sojourn is one’s own achievement. There is, however, a shift from this position in the functional religion of the Theravādins as punya anumodana has found acceptance therein.

vi. While according to the Theravāda, attainment of nibbāna is the individual’s ultimate goal, the Mahāyānists consider the perfection of Bodhisattvahood as their immediate goal before the attainment of final Buddhahood.

vii. According to the Theravāda, nirvāṇa is the final deliverance from samsāric suffering whereas according to the Mahāyāna it is understood as becoming conscious of one’s Absoluteness. The individual according to the Mahāyāna already possesses Buddhahood, he merely has to become aware of this.

Mahāyāna Literature: While the Theravādins retained Pali as the language of their texts, other schools like the Sarvāstivādins used Sanskrit as the language of their writings. It was the Mahāsāṅghikas who started using Sanskrit as the language of their canon after they separated from the Theravādins. This seems to place the earliest date of the Sanskrit canon at some point in the second century after the parinibbāna of the Buddha. While the process of its completion would have taken several centuries of growth, a considerable number of its original texts have been lost.

The Mahāyāna literature falls into three main classes—Sūtras, Sāstras and Tantras. The Sūtras are the most authoritative, and no follower of the Mahāyāna

1. Hans Wolfgang Schumann, Buddhism, an Outline of its teaching and Schools, 1973, 94.
2. Hans Wolfgang Schumann, ibid. 92 f.
would wish openly to repudiate anything they contain; the authority of the Śāstras is more limited, and they are binding only on the members of the philosophical school which they represent; that of the Tantras is even more restricted, its range being confined to the few adepts of a small esoteric sect".  

Śūtras claim to be the discourses of the Buddha himself and re written in the same format as the Pali suttas beginning with the place, whether on earth or in heaven, where the sermon was believed to have been preached by the Buddha. Apart from this, nothing is known of their individual authors. The Saddharma-puṇḍarīka and the Prajñāpāramitā Śūtras count among the important Mahāyāna Śūtras. The Saddharma-puṇḍarīka is one of the earliest texts of Mahāyāna Buddhism. It is composed partly in prose and partly in verse. The date of its composition is thought to be about the first century A. C. A large part of the book is devoted to proving that Hinayāna Buddhism was preached by the Buddhas for the benefit of people of lower intelligence and modest aims, to whom the whole truth was not divulged. The text explains that the Buddha preached two kinds of truth in order to attract people of lower intellect with the ultimate objective of leading them to the highest knowledge.  

The Prajñāpāramitā Śūtra literature has been innovative in two principal ways: (i) It advocates knowledge of sūnyatā as the highest wisdom that the Bodhisattva ideal is the highest form of religious life and that (ii) knowledge of Śūnyatā is the highest wisdom.

According to Conze, “The thousands of lines of the Prajñāpāramitā can be summed up in the following two sentences, (i) One should become a bodhisattva, i.e. one who is content with nothing less than all knowledge attained through the perfection of wisdom for the sake of all beings (ii) There is no such thing as a Bodhisattva, or as all-knowledge or as a ‘being’ or as the ‘perfection of wisdom’ or as an ‘attainment’. To accept both these contradictory facts is to be perfect”. The other important developments in the Perfection of wisdom literature are the concept of skilful means (upāya kauśalya) and the practice of dedicating one’s religious merit to others to assist them to realise sūnyatā. The major exponent of the Perfection of Wisdom School was Nāgārjuna.  

If the Hinayāna Suttas are valued on account of their contents, the Mahāyāna Śūtras also posses beside that a ‘magical’ value. They are foci of transcendental power, for every truth, irrespective of the weight of its contents, is effective. It is held that the Śūtras protect those who master their contents. By inner criteria two main groups can be distinguished in the Śūtra literature. To the first group belong those devotional texts whose spiritual centre is in the Buddhism and the Bodhisattva teaching. They demand of the reader devoutness and faithful confidence in the Buddhas and have their origin in the Northern part of India. To the second group belong the philosophical śūtras. They deal mainly with the Absolute which is the centre of all Buddhhas and beings. The areas of their origin are the eastern parts of South and Middle India. The period between the first century B.C. and the sixth century A. C. is regarded as the period of origination of the śūtras. Since all important śūtras were translated into Chinese and/or Tibetan at dates which were carefully recorded, it is possible with most of them to tell when they must have existed at the latest.  

A Śāstra is a treatise attributed to an author and is either in the form of a commentary on a Śūtra or in the form of a systematic text book. Four of the well-known writers of the Śāstras are Nāgārjuna and Āryadeva (about A. C. 150) and Vasubhadhu and Asaṅga (about A.C. 400). The first two, as we have already seen are the founders of the Madhyamaka School, while the last two initiated the rival School of the Yogācārins.  

There is an important difference between the Śūtras and the Śāstras on the one hand and the Tantras on the other. While the first two are public documents in the sense that they are accessible to any one desiring to read them, the Tantras are secret documents intended only for a chosen few who are properly initiated or consecrated by a properly initiated teacher or guru. It is an unpardonable crime to let the uninitiated into their secrets. In order to hide their contents from outsiders more effectively, the Tantras employ a deliberately
The Sanskrit term Bodhisattva describes one who is an aspirant for Bodhi or enlightenment. Dayal thinks that, "the Bodhisattva doctrine probably originated in the second century B.C. The word is very old and occurs in the Pali Nikayas. Gautama Buddha speaks of himself as a bodhisatta, when he refers to the time before the attainment of Enlightenment. This seems to be the earliest signification of the word. It was applied to Gautama Buddha as he was in his last earthly life before the night of Enlightenment. The following clause recurs frequently in the Majjhima Nikaya: 'In the days before my Enlightenment, when as yet I was only a bodhisatta,' etc. The word also seems to be used only in connection with a Buddha's last life in the Mahapadana Sutta (Digha Nikaya,II.13) and the Acchariya-abbhuta-dhamma sutta (Majjhima-Nikaya, 111.119). In the Kathavatthu, certain questions are raised with regard to the bodhisatta's actions; the signs on his body, his rebirth in a state of woe, and the possibility of his harbouring heretical opinions or practising asceticism are discussed. It is clear that the previous lives of Gautama Buddha and other saints have now begun to excite interest and speculation. But there was no new systematic doctrine in the middle of the third century B.C., when the Kathavatthu was composed. The idea of a bodhisattva's renunciation of personal nirvana is stated clearly and unequivocally in the Asitasahastrika Prajnaparamita and bodhi is set up as the new ideal in the Saddharmapundarakka. These tratises belong mainly to the first century B.C. we may infer that the Mahayana doctrine in its earliest form was formulated in the second century B.C".

The Bodhisattva according to the Mahayana conception is dominated by the two forces of compassion (karuna) and wisdom (prajna). It is karuna which governs his conduct towardsal living beings both human and non-human. The Bodhisattva, in the exercise of his compassion, makes no difference between human beings and animals which principle is derived from the Buddhist attitude to life in all forms. "Scrupulous respect for the life and dignity, for the rights and wishes of all living beings is a Bhodhisattva's first and most elementary duty ...... It is quite usual for the Bodhisattvas to sacrifice their lives for animals. When he was a prince of Benares, the Bodhisatta, who subsequently became the Buddha Gautama, threw himself down in front of a tigress who had given birth to five cubs and was exhausted from hunger and thirst. 'But she did nothing to him. The Bodhisatta noticed that she was too weak to move. As a merciful man he had taken no sword with him. He therefore cut his throat with a sharp piece of bamboo and fell down near the tigress. She noticed his body all covered with blood, and in no time ate up all the flesh and blood, leaving only the bones (Swarnaprabhasottama-sutra). The Bodhisattvas have no self-interest. They live exclusively for others. Their lives are directed by compassion (karuna). Karuna is compassion without self-interest, the out-going desire to make others happy.

4. "Ahān pā sudām blūkhhaye pūbbe va sambodhā anabhīsambuddho bodhisatto va samāno .... M. 1. 163; etc.
5. In the later texts like the Buddhavamsa the names by which Gotama was known under each of the twenty-five Buddhas as bodhisatta are found. The introduction to the commentary on the Jātakas describes how the bodhisatta gave up his attainment of nibbana to attain Buddahood and makes his first resolve under the Buddha Dipaṅkara, the first Buddha in the line of the twenty-five Buddhas.
6. The Bodhisattva in the Pali texts is still only a seeker of enlightenment and does not possess any of the extra-ordinary powers of the Mahāyāna Bodhisattva.
As the Śikṣāsamuccaya elucidates, “How no action is appropriate for the Bodhisattvas if it does not (benefit) others, …… is elaborated in the noble Dharmasamāgītiśūtra. Whatever deed the Bodhisattvas (perform, be it) with the body, voice (or) mind, all that they do for (the benefit of) others, (solely) governed by the Great Compassion for all beings; (all this) has as its cause the realisation of the welfare of beings and originates from the fervent wish for the well-being and happiness of them all.

It is the deepest conviction of the Bodhisattva that there is no difference in essence between himself and all others. It is by his belief in the essential identity of all beings (sattvasamātā) and by his compassion that he can be recognised as a Bodhisattva”.¹

A Bodhisattva’s compassion is limitless and it does not make distinctions in its exercise. He radiates great friendliness and compassion over all beings and resolves,' I shall become their saviour, I shall release them from suffering’. Unlike the earthly Buddhas whose task in the world is to expound the dharma, the Bodhisattvas actively intervene in the world and willingly take the suffering of all beings on their own shoulders.²

In order to exercise the function of saving others, the Bodhisattva is prepared to give away anything that he possesses. “To the same extent that the Bodhisattva voluntarily takes the suffering of the world upon himself, he sacrifices his bodily material and karmic possessions if by so doing he can bring a being closer to liberation:

My bodies (in all rebirths) as well as all the property and pleasure which I have acquired (and will acquire) in the Three Times (past, present and future), I give away indifferently for the welfare of all beings (Bodhicaryāvatāra, 3.10)”.³

It was through its teachings on the Bodhisattva that Mahāyāna introduced the concept of the transference of merit acquired (punya parināmanā). The Bodhisattva does not lose his position as a Bodhisattva when he donates (parināmanā) his karmic acquisitions to those in need. The selfless compassionate giving away simultaneously yields him punya, so that his punya becomes inexhaustible. “Yet the Bodhisattva has to check his selfless offering. Alluding to stories in the Sūtras which in their description of the readiness of the Bodhisattva to sacrifice himself go beyond reasonable bounds. Śantideva says (Śikṣāsamuccaya, 2, V, p. 23) that a Bodhisattva has to be a beneficiary to all and hence ought not to sacrifice his body and person for an insignificant cause. The Prajñāpāramitā texts stress that the Bodhisattva has to control his compassion by wisdom (prajñā). Compassion regulates his relationship with beings, wisdom that with the Absolute.”⁴

According to the Mahāyāna treatises, “Two types of Bodhisattvas can be distinguished: Earthly and Transcendent ones. The former are human beings like millions of others, recognisable as Bodhisattvas only by their all-embracing compassion and their determination to strive first and foremost for the salvation of others and not to think of their own good. Everybody one meets may be a Bodhisattva. Without grumbling, patiently and ready for any sacrifice the Earthly Bodhisattvas accept rebirth after rebirth, for this enables them to remain close to suffering beings.

Transcendent Bodhisattvas are those who through the realisation of Six Perfections (pāramitā) have attained the liberating wisdom (prajñā) and thus sainthood from which there is no relapse. At the moment of their death they refuse to enter the Post-mortal, Perfect or Static Nirvāṇa which would make them ineffective to the world, but accept instead the ‘Nirvāṇa without Standstill’ or ‘Active Nirvāṇa’, a state of deliverance from which in their compassion they can continue to work for the benefit of the world. No longer are they perceptible through the sense-organs; since gross accidents have largely fallen off from them they are visible only to the spiritual eye ……”⁵

These Transcendent Bodhisattvas far surpass the Earthly Bodhisattvas. Unlike the latter, they are no longer subject to the drudgery of rebirth, but can at their free discretion assume any bodily form and appearance which is appropriate for the help they intend

4. ibid.
5. H. W. Schumann, Buddhism, 112f.
to give. Of the many transcendental Bodhisattvas named in the Sūtras some enjoy particular veneration by the Mahāyānists. The most important of them all is Avalokiteśvara, also named as Padmapāla, Lokesvara, whose outstanding characteristic is the virtue of compassion. He is the chief minister in Buddha Amītābha’s paradise. “He abrogates and nullifies the old law of karma, as he visits the purgatory of avīci and makes it a cool and pleasant place. He goes to the realm of the pretaś and gives them plenty of food and drinks; they thus regain a normal figure. The beings who are liberated from these realms, are reborn in the paradise of Sukhāvati. In the purgatories, he creates a lake of honey and wonderful lotuses, which are as large as chariot-wheels. He visits the demonesses (rākṣasīs) in Ceylon and they fall in love with him; but he converts them to the true religion …… It is distinctly stated in the Karanda-Vyūha that Avalokiteśvara is much greater than the Budhas in Merit, intelligence and the sphere of influence. His merit is incalculable, like drops of rain falling continually for a year… The apotheosis of Avalokiteśvara culminates in identifying him with the spirit of the Universe and bestowing on him all the attributes of Brahman and Isvara …”.1 Avalokiteśvara is invoked by the famous mantra, Om mani padme hum—which refers either to the Absolute that is contained in everything or to the wishfulfilling jewel which Avalokiteśvara keeps in the hollow of his hand, palms held together, in the form of a lotus bud.

Mañjuśrī is regarded as a master of wisdom and knowledge. He has trained and disciplined many Bodhisattvas. His special task is the destruction of ignorance and the awakening of knowledge. Vajrapāni is considered the destroyer of evil. With his vajra or thunderbolt sceptre he burns to ashes all temptations barring the way of the faithful. Among the other important transcendental Bodhisattvas are: Kṣītigarbha, who is the Bodhisattva who is the guardian over the hells. He continually endeavours to ease the suffering of the beings born there from the effects of their bad kamma. The Bodhisattva Mahāsthāmaprāpta is the one who opens man’s eyes to see the need for liberation. He is usually depicted with Avalokiteśvara at the side of Amītābha. While Avalokiteśvara symbolises Amītābha’s compassion, Mahāsthāmaprāpta symbolises Amītābha’s wisdom. Bodhisattva Samantabhadra is the protector of those who preach the Buddha’s doctrine. Mañjreya is the Bodhisattva who at present is in the Tusita heaven, preparing for his role as the future Buddha. As the future saviour he enjoys a cult of his own with some Mahāyāna groups.2

Through the development of the Bodhisattva doctrine, the Mahāyānists have also introduced into Buddhism the concept of prayer and supplication, which was totally foreign to Early Buddhism. When we trace the development of the Bodhisattva doctrine in the Mahāyāna literature, it is seen that in the early Mahāyāna the Bodhisattvas are inferior to the Budhas. In course of time, they acquire greater importance till they are regarded as equal to the Budhas in many respects. They are to be worshipped like the Budhas or even in preference to them. This gradual exaltation culminates in the apotheosis of Avalokiteśvara who is declared to be a kind of Buddha-maker who helps others to acquire Buddhahood while he himself remains the eternal Bodhisattva.

Also, wisdom (prajñā) and compassion (Karunā) are regarded as equally important in the early Mahāyāna. It is said that a Bodhisattva must possess the double equipment of Knowledge and Merit (jñāna-sambhāra, punya-sambhāra). Wisdom in fact is considered more important than compassion. Mañjuśrī, who represents wisdom is invoked in the opening verses of several treatises and is praised in the Saddharma-pundarika Sūtra. The glorification of wisdom found its climax in the writings of Nāgarjuna of the Madhyamaka School of philosophy. But in later Mahāyāna compassion is emphasised over wisdom. Early Mahāyāna attaches equal importance to social life and to ascetic retirement from the world. It, in fact inclines to exalt the layman-householder and the women. This position is found reversed in the age represented by treatises like the Mahāvyutpatti, Lalitavistara and the Avadānaśataka where the old ideal of celibacy and forest life is found praised. A Bodhisattva is represented as the Yogi par excellence.

In the next phase of development the quest for Bodhi is relegated to the background, while active altruism in this world of sin and suffering is regarded as almost sufficient in itself. Altruism which is one of the means of attaining Buddhahood in the early Mahāyāna, which is the goal of Bodhisattva’s quest, is forgotten.

2. cf. adoption of a similar mantra in the traditional Bon religion of Tibet - which reads, Om Matri Myre Sale Du.
in the later Mahayana. A Bodhisattva is in no hurry to win bodhi and become a Buddha as he can help all living beings more effectively as a Bodhisattva. The selfless commitment to relieve the sufferings of living creatures becomes the mission of the Bodhisattva who postpones his attainment of Buddhahood for this purpose. “Karunā (mercy, pity, love, compassion) and its personified symbol, Avalokitesvara, are all-in-all. This is the last word and the consummation of the Mahāyāna”.

A Bodhisattva’s career is a long and arduous one. It starts with the arising of the thought of bodhi (bodhi cittaotpāda). It is with this that he thinks of becoming a Buddha for the weal and welfare of the world, makes certain vows for the purpose and his future greatness is predicted by a Buddha. These three events mark the conversion of an ordinary person into a Bodhisattva. However, with the development of the Bodhisattva doctrine, the idea that the thought of becoming a Buddha can arise only in a person who is really qualified for the purpose seems to have been added on.

Thus, the preliminary stages of gotra, adhimukti-caryā and anuttara-puṣṭa have been added on as stages preceding the first stage. The individual who is to become a Bodhisattva and then a Buddha must have the proper and requisite gotra for his mission. The second is the stage of adhimukti-caryā (aspiration). In this stage the Bodhisattva is afraid of pain and is not prepared to suffer pain for the sake of others. The next stage is that of anuttara-puṣṭa (supreme-worship). A Bodhisattva must perform the following religious exercises before he can attain to the ‘Thought of Enlightenment’: (a) worship and adoration of the Buddhas (Vandāna and puṣṭa), (b) Taking refuge in the Buddha, doctrine and the Bodhisattvas (Sarana-gamanā), (c) the confession of sins (pāpa-deśanā), (d) rejoicing in the good (puṇya-anumodanā) (e) prayer and supplication (adhyeṣanā and yūcanā) and (f) declaration of altruism and self-denial (parināmanā and āma-bhāvadiparītyāgā). The last stage which immediately precedes the cittaotpāda has been described as parināmanā. Thus according to the later texts, it is only when a person has fulfilled the requirements of the gotra, adhimukti and anuttara-puṣṭa, that he is ready for the decisive step of bodhicittaotpāda. The second stage after the bodhicittaotpāda is Pranidhāna or Pranidhi which means resolve, which as D.T. Suzuki explains is, ‘strong wish, aspiration, prayer or an inflexible determination to carry out one’s will’.

According to the accepted doctrine a Bodhisattva must declare his intention (prāṇidhāna) in the presence of a living Buddha who predicts his future success in attaining Enlightenment. This is called Vyākarana or Vyākrti. Caryā meaning conduct, behaviour or course of action is the next stage of a Bodhisattva’s career. The Mahavastu divides this into four sub-divisions as Prakrti-caryā (this seems to correspond to gotra), Prāṇidhāna-caryā (caryā of aspiration), Anuloma-caryā (the caryā to regular practice) and Anivartana-caryā (caryā of non-turning back).

The Bodhisattva Bhūmi and the Mahāyāna Sūtrālankāra list another set of four caryās which are as follows: Bodhipaksya-caryā (principle conducive to Enlightenment), Abhijñā-caryā (practice of super-knowledge) Pāramitā-caryā (the practice of the Perfectins), and Satva-parīpāka-caryā (the practice of maturing living beings, i.e. by preaching and teaching).

Of these the bodhipaksya-dharma are thirty-seven in number. These are common to the Theravāda and Mahāyāna. “The latter starts with these dharmas, but adds the pāramitās and the bhūmis which constitute its special contribution to the development of Buddhism”. The six Pāramitās are really the chief factors in a Bodhisattva’s discipline and the four additional pāramitās are merely supplementary in character. The six pāramitās are mentioned and discussed in many passages of Buddhist Sanskrit literature, while the seventh, eighth, ninth and tenth pāramitās are mentioned only in a few passages and are not explained at great length.” These are as follows: dāna, sīla, kṣanti, vyāra, dhīya, prajñā, the four supplementary pāramitās being, upāya, pranidhāna, bala, and jñāna.

Dāna: Through dāna the Mahāyānists emphasised the practice of charity and self-sacrifice. They taught that dāna should be based solely on the feeling of mercy and compassion (karunā). They evolved the new and revolutionary idea of the ‘gift of merit’ by which a Bodhisattva could save all sinners from punishment. A Bodhisattva should give all that he has, his wealth, his limbs, his life and his merit (puṇya) and also his

1. Har Dayal, Bodhisattva Doctrine, 46f.
2. Har Dayal, Bodhisattva Doctrine, 64.
3. op. cit, 75.
wife and children. Stories of the gift of self-sacrifice of the Bodhi-sattvas are narrated in the Mahayana works like the, Avadana Sataka, Avadana Kalpalata, svanaprabhasa, Jatakanala, etc.

Silà: as a paramitā has been defined in three ways. It has been identified with Virtue in general, and many admirable qualities have been enumerated as its characteristics. It has also been interpreted in relation to the ideals of purification and restraint, as they are realised with the body, speech and mind (deed, word and thought). It is usually understood as referring to the five moral precepts and the ten good and meritorious. Ways of Action which constitute the "Buddhist layman’s definite code of practical ethics". The Bodhisattva Bhumi and other treatises explain that the ethical rules are not absolute. They may be infringed, if a Bodhisattva can thereby render service to an unfortunate creature.2

Kṣānti is forbearance and endurance. A Bodhisattva has to forgive all kinds of injury, insult, abuse and contempt. He endures hunger, thirst, pain, heat, cold, etc. Mahayana books are replete with beautiful and moving stories of the Bodhisattva’s illimitable kṣānti.

Virya, courage, valour, prowess, etc. It is determined endeavour for moral development and is of two kinds: the virya of preparation and initiative (sannāha-virya) and the virya of practice and activity (prayoga-virya). Virya is best described under the following aspects: (i) Moral development - A Bodhisattva has to resolutely combat all sins and vices, great and small that may drag him down. He dispels hatred by the cultivation of love, sensuality by meditating on impurity and so on. (ii) Study of the Scriptures and General education (Sikṣa-virya), a Bodhisattva studies the Doctrine well, but he also studies the arts and sciences as well. (iii) Altruistic activity (Sattrū-artha-kriyā-viryaṁ). A Bodhisattva has indefatigable energy and he acts on two great principles, “Equality of self and others” and “regard for others in place of self”. A Bodhisattva develops a healthy pride in himself and his own capacity and is therefore eager to undertake the most difficult tasks. This same pride gives him the strength to overcome all passions and endure all trials. He is determined to observe the five ‘continuities’ (ānantaryāmi) by persistence in his devotion to the Mahayana, to the ideal of self-sacrifice, to the duty of saving all beings and to the pursuit of true knowledge and perfect wisdom.3

Dhyāna: A Bodhisattva must renounce the world in all his lives after taking the great vow. A Bodhisattva who begins to practise dhyāna must go through a preliminary stage of preparation which include renunciation and solitude, the cultivation of the four brahmavihāra and the use of the kṛṣṇāyatanas. These are the ten kāsināyatanas of the Pali texts. The Mahayana explanation of the samādhis attained by a Bodhisattva is similar to the one given in the Pali texts, except for minor variations. They are very useful for a Bodhisattva for all possible purposes. A Bodhisattva can employ samādhis to heal the sick, protect people from all dangers, produce rainfall in a period of drought and famine, bestow wealth on the poor, etc.

Prajñā is wisdom and is of three kinds: that which is based on hearing the teaching for another person or from the study of Scripture (śrutamayī); that which arises from reflection (cintamayī); and that which is developed by cultivation and realisation (bhāvanamayī). The two philosophical schools, Yogacara and Madhyamaka explain prajñā in two different ways. The former identifies it with perfect knowledge and regards it as insight into the nature of Reality (tathātā). To the latter it is the mother of all the Buddhas and the Bodhisattvas. It is greater than all the other pāramitās. It is sometimes identified with sūnyatā. Prajñā and Sūnyātā are the two sources of a Bodhisattva’s moral strength. According to the Samādhirāja Sūtra the Bodhisattva is not attached to anything and is freed from all desires and fears. He acquires all the dhyānas, samādhis and samāpattis of a Buddha.

Upāya-Kauśalya may be explained as skillfulness or wisdom in the choice and adoption of means or expediency for converting others or helping them. It is specially related to a Bodhisattva’s work as a preacher and teacher. A Bodhisattva should always adapt his teaching to the capacity of the audience. The Saddharmapuṇḍarīka Sutra relates some interesting parables which illustrate this Perfection. Even trickery and falsehood seem to be permitted, if the end of converting or helping others is achieved.4

1. op. cit. 193.
2. op. cit. 207.
4. op. cit. 270.
A Bodhisattva’s career consists of several stages. He advances from one stage to another till he finally attains Enlightenment. These stages are called Bhūmis and also Vihāras. There are at least four different schemes of divisions of these in the principal Sanskrit treatises. The Prajñāpāramitā Sātaka, the Mahāvastu and the Daśabhūmikā Śūtra describe these as ten, but in different ways, whereas the Bodhisattvabhūmi speaks of even bhūmis and thirteen vihāras.

“The most systematic treatment of the subject of the bhūmis is found in the Daśabhūmikā Śūtra. The author takes us through a mighty maze, but it is not without a plan. He manages to place almost all the important concepts and categories of Buddhist philosophy in his scheme of ten bhūmis …… A Bodhisattva especially cultivates one of the pāramitas in each bhūmi”.¹ The first bhūmi is called Pramudita (joyful). A Bodhisattva enters this first stage immediately after the production of bodhicita. He rejoices exceedingly, as he realises that he has now risen above the foolish common people. He practises the dāna-pāramitā and also the other perfections according to his capacity. He pays special attention to the first of the four sangraha-vastus. In the second bhūmi which is Vimala, he frees himself from all defilements and becomes honest, self-controlled and follows the ten meritorious actions. He especially cultivates sīla-pāramitā while not neglecting the other perfections, and practises the seconded of the four sangraha-vastu which is priyavacana (pleasant speech). The third bhūmi is Prabhākari. In this, the Bodhisattva diffuses the great light of the doctrine. He practises regular self-examination and meditation and acquires all the dhyānas and the samāpattis. He especially cultivates kṣanti without neglecting the other perfections and the third of the four sangraha-vastu which is arthacaryā (promoting the good of others). In the fourth which is Arcismati he gains entrance to the light of the Doctrine by reflecting on the nature of the worlds of things and living beings. He practises the bodhipakṣya-dharma. He especially cultivates the virya-pāramitā and the fourth of the sangraha-vastus which is samānātma. The fifth bhūmi is Sudurjaya wherein the Bodhisattva performs the difficult task of maturing others and guarding his own mind. He comprehends the four Noble Truths. He practises all the sangraha-vastus in this bhūmi and especially cultivates the dhyāna-pāramitā without neglecting the others. The sixth bhūmi is Abhimukhi and in this he understands that all things and phenomena are signless and have no definite characteristics; they are not produced and not originated; they are unrelated and also corrupted since the beginning; they are like a dream and are like magically created unreal objects. He especially cultivates the perfection of Prajñā without neglecting the others. The seventh bhūmi is Dūraṅgāma, he acquires great wisdom in the choice of expedients for helping others. He understands that all the Buddhas are identical with their spiritual cosmic body. He practise all the ten pāramitās at each moment. He transcends the lower wisdom of the Hinayana. He attains liberation, but does not attain personal nirvāṇa. He especially cultivates the upāyakausalya pāramitā. In the eighth bhūmi called Acalā a Bodhisattva acquires the kṣanti called anupattika-dharma-kṣanti and is not contaminated by any actions. The Buddhas initiate him into infinite knowledge, otherwise he would enter into nirvāṇa instead of persevering in his efforts to attain bodhi for the good of all. He especially cultivates the perfection of pranidhāna in this bhūmi without neglecting the others, and pervades the whole world with the feeling of friendliness. The ninth bhūmi is Śādhamati in which a Bodhisattva acquires the knowledge of all phenomena and principles truly and certainly. He becomes a great preacher and acquires the four pratisamvids and is especially protected by the dhāranīs. He especially cultivates the perfection of bala without neglecting the others. The tenth bhūmi is Dharma-meghā in which a Bodhisattva enters the stage of consecration (abhiṣeka) and experiences many great samādhis. He performs many miracles and creates numberless magical bodies of himself. He especially cultivates the perfection of jñāna without neglecting others. An eleventh bhūmi is mentioned in the Lankāvatāra Śūtra called Tathāgata-bhūmi.²

The conception of the Buddha: Parallel with the development of the Bodhisattva doctrine, the conception of the Buddha also underwent extensive changes in the Mahāyāna writings. The Theravāda conception of the Buddha is based on the standard description of him found in the Pali Nikāya texts.³ According to this description, the Buddha was a human teacher who had, “reached the highest state of perfection and attained not only knowledge and power superior to any man

1. ibid. 283.
3. N. Dutt, Mahāyāna Buddhism, 137; D. I. 87; etc.
and god, but also the highest knowledge and power attainable. "In the Majjhima Nikāya Ananda explains why the Buddha should be considered superior to the Arhats as well, although both arrived at the same goal. He says that there is not a single bhikkhu, who can be regarded as endowed with all the qualities in all their forms as possessed by the Buddha. Moreover, a Buddha is the originator of the path not existing before, a knower and promulgator of the mārga, which is only followed by the sāvakas".  

There were other descriptions of the Buddha in the earlier portions of the Pali canon which lent themselves to other interpretations. In the Mahāparinibbāna Sutta of the Dīgha Nikāya, the Buddha tells Ananda just before his parinibbāna that the Ḟhanna and the Vinaya which have been preached and promulgated by him, will be their teacher after his parinibbāna.  

The conversation between Gopaka Moggallāna and the Venerable Ananda in the Majjhima Nikāya makes it clear that the bhikkhus after the parinibbāna of the Buddha were not to be regarded as appatissa rāna (without refuge), but as with refuge because they had the dhamma preached by the Buddha as their refuge (dhamma pâtisarana).  

Just as a traditional brahmin would claim that he is born of Brahma, through his mouth (Brahmānū putto oraso mukhato jato, brahmajo brahmanimmito), a bhikkhu who is a member of the sakya puttiya maya na maya that the Tathāgata is also described as Dhammakāya, Dhammabhūto and Brahmakāya.  

Again when the Venerable Vakkali was on his death-bed and was eager to see the Buddha in person, the Buddha came to him and said, "Alaṅk Vakkali, kim te pūtikāyaṇya diyathena. Yo kho Vakkali dhammam passati, so man passati, Yo mam passati, yo maṃ dhamman passati". This is followed by an exposition by the Buddha on the impermanence of the five aggregates of existence. Vakkali is admonished to see the dhamma which is more beneficial than seeing the filthy and impermanent physical body. Dona, the brahmin who was walking behind the Buddha, becomes curious when he noticed the sign of the wheel in his footprints. His curiosity was further strengthened by the unusual composure of the Buddha when he seated himself under a tree by the side of the road. To his inquiry whether he was a deva, a gandhabba, a yakṣa or a human being, the Buddha replies that he is none of these, but a Buddha.  

In the Mahāhathipadopama Sutta of the Dīgha Nikāya the Buddha declares that he who sees dependent origination sees the dhamma and that he who sees the dhamma sees dependent origination (Yo paticcasamuppādam passati so dhamma, passati, yo dhammam passati, so paticcasamuppādam passati ...).  

In the Mahāhathipadopama Sutta of the Dīgha Nikāya it is said that one who has attained complete mastery of the four iddhipadas can, if he so desires, live an aeon. In the Nikāya texts it is clearly stated that the mastery of the iddhis can be realized by a disciple of the Buddha after he attains the fourth jhāna. The Buddha had attained complete mastery over these, and was hence pre-eminent among those who possessed iddhi powers. It was the possession of iddhis which enable the holders of such powers to perform various miracles like assuming different forms, walking on water, etc.  

It may be noted here that the Theravādins have been consistent throughout their history in their conception of the Buddha as their human teacher, the passages cited above falling quite within these boundaries without the slightest doubt. Therefore, to the Theravādins, the ripakāya of the Buddha was only the physical body of the Buddha which had all the characteristics of a normal human body while the
dharmakāya was the collection of his teachings and the disciplinary rules collectively.¹

It was the Mahāsaṅghikas who were the first to think that the Buddhas are supra-mundane (lokottara), they have no defiled elements (sāsra dharmas), their bodies, their length of life and their powers are unlimited; they neither sleep nor dream; they are self-possessed and are always in a state of samādhi (meditation).³ The Divyavadāna has a few passages which contain the terms rūpakāya and dharmakāya but these have the same sense as those of the Pali texts. In the avadānas, however, a slight Mahāyānic tint is seen. For example, according to the Rūdryānavadāna, the rays of light which issued forth from the mouth of the Buddha when he smiled, lighted up the beings of heaven and hell.³

In the Lalitavistara the Buddha is deified but there are no traces of the Trikāya conception. It says that the Buddha appears in the world of men in order to follow the ways of the world (lokānuvartanā) which, if desired he could avoid by remaining in one of the heavens and attaining emancipation there.

According to the Abhidharmakośa of Vasubandhu, Dharmakāya is formed of the qualities by the acquisition of which a person is called a Buddha. These dharmas are: Ksayajñāna (knowledge of the destruction of suffering) anutpādaññāna (knowledge of the further non-origination of suffering), and samyagdrṣṭi (right view) of the aśīkṣas together with the dharmas attendant to the jñāna viz. the five skandhas. Thus the Abhidharmakośa replaces the concrete conception of the Dharmakāya of the Nikāyas and the Divyavadāna by an abstract one.⁳

According to Harivarman, the propounder of the Satyasiddhi school, the Dharmakāya of the Buddha is to be distinguished from that of the Arahats because it consists of the ten powers (dasa-balas), the four proficiencies (vaisāradyas), and the three recollections (smṛtyupasthānas), which the Arhats cannot obtain. The Abhisamayālaṅkāra and Pañcaviṃśatisāhasrikā-prajñāpāramitā, which are important textbooks of the Yogacara school, also maintain the conception that the various dharmas viz.: Apramāṇas, Vimokṣas, samāpattis, and soon, constitute sarvajñatā and that Sarvajñatā is the Dharmakāya. The Prajñāpāramitās also maintain the conception that the Dharmakāya is produced by dharmas, the highest of which, according to them, is the Prajñāpāramitā.⁵

The Mahāsaṅghika view that everything regarding the Buddha was transcendent was developed into the Nirmānakāya conception by the Mahāyānists. The final steps of this process are clearly seen in the Saddharmapuṇḍarīka and the Svarṇaprabhāṣa Śūtras the main thrust of which is to erase any still lingering impressions of the historical existence of Śākyamuni.

Suddhārthakaśāstra observes that it is impossible for the Buddha to perform, within a space of forty years after the attainment of Bodhi, the innumerable duties of a Tathāgata and lead incalculable Bodhisattvas to Buddhahood. Also, it is not to be understood that Bhagavān Śākyamuni left his family life and attained Bodhi at Gaya because he attained Sambodhi incalculable ages ago and has been preaching the dharma since then. Also, all that has been said about the previous Tathagathas like Diparṇaka, etc., and about their parinirvāṇa were only expedients for imparting the dharma (upāyakausalya-dharmadaśanābhiniḥśrā-nirmitā).⁶

In the Svarṇaprabhāṣa Śūtra it is observed that it is impossible for Śākyamuni who had performed so many meritorious deeds to have had such a short-span of life as eighty years: The length of his life is incalculable. It is said that it might be possible to count the drops of water in a sea, but it would be impossible to ascertain the length of his life. It is impossible to expect relics from the Buddhaśāka, as the Tathāgatas have no origin, they are ever-existing and are inconceivable. It is only the Nirmānakāya that is shown by them. Buddhās do not have relics; they do only have Dharmakāya and Dharmadhātu.

The Mahāyānic writings were aimed at showing that the Theravadins were wrong in their belief that Śākyamuni was really a man of flesh and blood and that the relics of his body existed. Accordingly they introduced the two conceptions of Nirmānakāya and Buddhakāya. Everything that has been done by the

⁵. ibid 148.
⁶. op. cit. 152.
Buddha Sākyamuni was the apparent doing by a shadowy image created to follow the ways of the world (lokānuvartana) in order to bring conviction to the people, that the attainment of Buddhahood was not an impossibility. As the Buddhas possess the knowledge of all that is to be done (kṛtyanuṣṭhānajñāna) they can take any form they desire for the enlightenment of the various classes of beings. The Pañcavimśati Prajñāpāramitā says that a Bodhisattva, after acquiring all the necessary Dharmas and practising Prajñāpāramitā, becomes a sambuddha and then renders service to beings of all lokadhatu's of the ten corners at all time by Nirmānamegha (Nirmāna clouds). This is called the Nirmānakāya.

According to the Chinese sources, Nagarjuna, in his commentary on the Prajñāpāramitā explains rūpakāya as the body born of parents, possessing the qualities of sentient beings and is subject to human frailties. It was born in Kosala while his Dharma-kāya was born at Rajagaha. “The material body was necessary for ‘earthly truth’. It was for the deliverance of beings that the buddha assumed different kāyas, different names, birth-places and the ways of emancipation. This interpretation of rūpa- and dharmakāyas is also followed in the Chinese versions of the Parinīrānasūtra and Sandhinirmocanasūtra”.

The Sūtrakārākāra explains Nirmānakāya as those forms which the Buddhas assume to render service to beings of the various worlds. It refers to the human form that the Buddha assumes to show that he acquires the skills of an average man, living a family life; then retiring from it and attaining nirvāṇa through ascetic practices. The Viśṇuparītratāsiddha explains that Nirmānakāya is meant for Śrāvakas, Pratyekabuddhas and Prthagjanas and Bodhisattvas who are not yet in one of the ten bhūmis. It may appear in all lands, whether pure of impure. According to the Chinese commentaries on this, the Buddha can transform his body or another’s body, voice and his or other’s mind to suit his purpose. The Buddha could transform himself into Sāriputra, into any other or create an altogether new aparianal body. Often, he assumed the voice of Brahma or expressed himself through the mouth of Sāriputra or Subhūti. This is why we find abstruse Mahāyāna teachings being explained by these which they were not expected to understand. The Buddha could produce in mind any thought he liked. In fact, he appeared in his Nirmānakāya as Sākyamuni with a mind suited to the ways of the world. He could also impose his thoughts on the minds of others.

According to the Abhisamayālān kārakārikā there are four kāyas of which the Svabhāvikakāya is real and the three other viz., Dharma-kāya (Śvasambhagakāya), Sambhagakāya (= Parasambhagakāya) and Nirmānakāya are unreal. These three are meant for Bodhisattvas and Śrāvakas. According to it, the entire course of life of a Bodhisattva, extending throughout his incalculable births is nothing but the Nirmānakāya which in fact is not separate from the Dharma-kāya.

According to the Lankāvatāra, the Nirmitabuddhas are not produced by actions: the Tathāgata is neither in them nor outside them. The various duties of a Tathāgata are performed through the Nirmānakāya. Vajrapāni serves as an attendant on the Nimirtanirmānakūta and not on the real Buddhas and it is the Nirmitabuddhas who explain the characteristics of dāna, śīla, dhīya, samādhi, citta, prajñā, skandha, dhātu, ayatana, etc. As the Rūpakāya or Nirmānakāya was meant for Śrāvakas, paccekabuddhas and ordinary folk who were not yet in one of the ten bhūmis, another kāya had to be devised for the benefit of all the Bodhisattvas. This body is called the Parasambhagakāya as different from the Śvasambhagakāya, a subtle body perceived by the Buddhas alone. It is this Parasambhagakāya which serves as the preacher of the various Mahāyāna Sūtras, the site being either the Grdhrakūṭa or Sukhāvatī-yyuha or one of the heavens. Grdhrakūṭa is the only place in the three dhātus considered pure for the appearance of a sambhagakāya. It may be noted here that inspite of the massive changes brought about by the Mahāyānists in the conception of the Buddha, they were still unable to forget or rise above the human conception of the Buddha of the Theravādins. It is Sākyamuni who is still the presiding Buddha of the Universe. All the Bodhisattvas, śrāvakas, grha-patis of the various lokadhātus of the ten directions came with flowers, incense, etc., to hear from him the Prajñāpāramitā. The Bodhisattvas had their own tutelary Buddhas who according to the Mahāyāna metaphysics had the same Dharma-kāya as that of Sākyamuni. They themselves

1. op. cit. 153.
2. N. Dutt, Mahāyāna Buddhism, 154.
3. op. cit. 156.
came or sent massages of greetings and flowers as tokens of their regard to Buddha Sakyamuni. These descriptions sometimes go so far as to say that the Buddhas themselves came to hear discourses from Sakyamuni whose Buddhaksetra then was the Sahalokadhātu. The gathering of Buddhhas and Bodhisattvas was so great that the sahalokadhātu had to be cleared of all the mountains, rivers, cities as well as of gods, men and other beings to accommodate them. According to the Saddharma-pundarika due to this lack of space, the Buddhas could not have with them more than one or two Bodhisattvas as attendants. According to the Satasāhasrikā and the Pañcavimsatisāhasrikā the kāya of this Buddha, “is an exceedingly refulgent body, from every pore of which steamed forth countless brilliant rays of light”1. In the Prajñāpāramitās this refulgent body was usually called the Prakṛtyātmabhāva (natural body) or Āsecanaka Atmabhāva (all-diffusing body). However, this refulgent body was not called the Sambhogakāya in the Prajñāpāramitās. It is first found only in a recast version of the Pañcavimsati-sāhasrikā Prajñāpāramitā, while the original text regarded this refulgent body as nirmita and therefore as included in the Rūpakāya. Thus, it is clear that the conception of Sambhogakāya was not differentiated from that of the Rūpa or the Nirmānakāya up to the time of Nāgarjuna. It is first presented in the Lankāvatāra Sūtra, calling it Niyanda or Dharmatāniśyanda Buddha, still the term Sambhogakāya being not current.

The Viṣṇuptimātratāsiddhi distinguishes between two Sambhogakāyas calling them Parasambhogakāya and Svamsambhogakāya. While the first is seen by the Bodhisattvas, the second is seen only by the Buddhhas of the various lokadhātus. These do not differ as regards their illimitability and immeasurability and both have colour and form as well as voice. On account of the knowledge of sameness (samatā) obtained by the Buddhhas, the body is pure (anāśrava). It can appear only in a pure land like Sukhāvatiyūha or Ćṛḍrakūṭa. The first has mahāpuṣyatsalakshanas while the second does not. The citta of the first is as unreal as that of the Nirmānakāya while the citta of the second is real and possesses the four Jñāpas.2 The rūpa of both kāyas is exceedingly subtle and expansive without limit. The subtle bodis of countless Buddhas are interpenetrable.

According to the Mahāyāna conception, the only real kāya of the Buddha is the Reality. The Mādhyamakakārikā and the Satyasiddhiśāstra call it the Svabhārika or Svabhāva kāya. It is immeasurable and illimitable. It fills all space and is the basis of the Sambhogha and the Nirmānakāyas. It is devoid of all marks (i.e. Mahā puṣyatsalakṣanās, etc.) and is inexpressible (niśprapañcā). It is possessed of eternal, real and unlimited gunas. It does not have both citta and rūpa. Dharmakāya Buddhas may have their individual Sambhogakāyas, but they have all one Dharmakāya. It can only be realised within one’s own self (pratītyātmavedya) and not be described, as that would be like the attempt of a blind man to describe the sun which he has never seen.3 The Aṣṭasāhasrikā states that he who knows that the dharma existing in the world or preached by the Tathāgata have no more existence than things seen in a dream and does not equire whence the Tathāgata came and where he goes, realises the Tathāgata through Dharmatā. “The Buddhakāya that people speak of arises through cause and condition like the sound of a flute, it involves really no appearance and disappearance. Those who run after the form and voice of the Tathāgata and conceive of his disappearance and disappearance are far from the truth”4. According to an often quoted verse in the Vajracchedikāprajñāpāramitā, the Buddha cannot be seen through his form and cannot be heard through his voice because the Buddhhas only have Dharmakāya.5

Nirvāṇa: The Mahāyānists argue that the Śrāvakas aim at the realization of only pudgala-nairātmya and not at the realization of dharmatā-nairātmya.6 Therefore, their realization cannot take them to Nirvāṇa, they take them only some distance towards it. The Sūtrālankāra

4. op. cit. 164.
5. Encyclopaedia of Living Faiths, 305; N. Dutt, op. cit. 165.
6. Pudgalanairātmya is explained by N. Dutt as the non-existence of a permanent entity like soul. It seems best understood as the cessation of the individual series of existence. Dharmatānairātmya is the realization of the non-existence of things what-soever, of the universe.
argues that the Theravadins have only personality (pudgalanimitta) as their basis for meditation, as a result of which they reach only Sravaka-bodhi or Pratyekabodhi and not Samyaksambodhi, which can only be attained by making all dharmas the basis of meditation. According to the non-mahayanists all constituted things which originate from causes and conditions are in a state of flux and devoid of any substance. There is no permanent entity in mental and physical constituents which are in a state of constant flux. The realization of nirvana is made possible through the realization of the non-existence of an atman either identical with one of the khandhas or apart from them. The Mahayanists do not admit that the skandhas really exist. These exist only in the imagination of beings suffering from defective vision due to ignorance. The truth therefore, according to the Mahayanists is Sunya or dharma nairatmya.

According to the Saddharmaupandarika he who knows the dharmas as devoid of atman knows the truth. It is because one does not possess this knowledge that one is called a Sravaka. Of the seven reasons adduced by the Sutralanakara to show why Mahayana should be considered superior to Hinayana, one is that the knowledge of the Mahayaniists is on a higher level, for it penetrates into both padgalanairatmya and dharmanairatmya. The realization of the dharmanairatmya removes the screen over true knowledge. The removal of both screens is needed for the attainment of emancipation (moksa) and omniscience (sarvajnata). Passions are obstacles to the attainment of emancipation; hence the removal of passions leads to moksa. The screen of jneya works as an obstacle to the functioning of knowledge. When it is removed, knowledge penetrates unobstructed into all objects of knowledge in detail (sarvakara) without however causing attachment of any kind, and this is called the attainment of omniscience or Bodhi.

The Theravadins do not accept the above explanations of the Mahayanists. They contend that by the removal of the screen of actions (karmavaran), of the effects of karma(vipakavarana) and of afflications (klesavarana), the Arhats attain full knowledge without any veil (anavarana). They completely eradicate all asavas from their minds, including the avijjasava and therefore attain full and complete emancipation.1

1. N. Dutt, Mahayana Buddhism, 176.

2. M. 111.2.

Mahayana Religion: The intricate philosophical fabric of the Mahayana which we have examined in the preceding pages served as the foundation upon which the impressive edifice of the Mahayana religion was built up. According to the Pali canonical texts, the path to the attainment of Nibbana was the path of gradual training, gradual practice and gradual progress (anupubba-sikkha anupubbakiriya anupubba-patipada) which constituted a process of maturing the individual through disciplined training. This is the path which lies through the three steps of sila, samadhi and pañña. Provision was available for different points of entry into this process of training which suited the particular requirements of the individual seeking spiritual training through the process. The Mahayaniists, it will be seen, evolved a system, of religious practice which, unlike the earlier system, did not require such exacting commitment from the individual, in order to attain the same ultimate spiritual goal.

Thus, according to Mahayana teachings, Nirvana is a attainable through one of the following ways:

1) The path of self-discipline
2) The path of wisdom (Prajna marga)
3) The path of the Bodhisattva (Bodhisattva marga)
4) The path of Faith (Sradha marga)
5) The path of cultic worship (puja marga)

1) The Path of self-discipline: Although the Mahyanists recognize the Noble Eightfold Path, they claim that only the specially gifted are able to follow it, and hence, it is too steep for all others. They say that it is a path for the selfish who care only for their own liberation and close their eyes to the sufferings of others.

The main objection of the philosophical Mahayana schools to the eightfold path is based on their conviction that suffering belongs to the phenomenal realm and that all beings, to the extent that they are identical with the Absolute, have always been free, though without knowing it. Liberation is therefore to be achieved by the removal of this ignorance and by the realisation of the Absolute. It is not possible to attain deliverance by mere ethical action. According to Bhavaviveka, a Madyayamika monk who lived in the sixth century A. C. the Noble Eightfold Path is not to be understood literally, but as key words to emancipating insights.

1. N. Dutt, Mahayana Buddhism, 176.
2. M. 111.2.
(i) Right View is insight into the Dharmakāya of the Perfect One;

(ii) Eight Resolve is the pacification of all imaginations;

(iii) Right Speech is the realisation that language confronted with the Dharmas falls silent;

(iv) Right Conduct is abstinence from any action (aiming at karmic merit);

(v) Right Livelihood consists of the insight that all Dharmas are without origination and destruction;

(vi) Right Effort means relinquishing Energy and Method in the knowledge that no Dharmas rise out of action;

(vii) Right Awareness means to stop brooding over being and non-being;

(viii) Right Meditation means freedom from opinions by the non-grasping of Dharmas (here ideas).1

(2) The Path of Wisdom (Prajñā-mārga): The Mahāyānists make a distinction between knowledge (jñāna) and wisdom (prajñā). While knowledge is limited to the sphere of phenomena, wisdom reaches beyond this to the infinite and the essence. Knowledge is a matter of mere intellect which can grasp only fragments of reality: wisdom on the other hand is intuitive identification with the reality of all existence and being an experience which is made with the whole of the personality after all rational limitations, views and doctrines have been discarded. It is defined as ‘omniscience’ (sarvajñata) and in the Mahāyāna is synonymous with ‘enlightenment’ (bodhi).2

The follower of the wisdom path free himself by developing wisdom because wisdom destroys craving and ignorance, the two causes of suffering. Craving feeds on sense-contacts, but it withers when the sense objects are seen through as dharma-phenomena and as illusory. Ignorance vanishes the moment the Absolute is realised.3

(3) The Path of the Bodhisattvas (Bodhisattva-mārga): The first and the second paths to Nirvāṇa require in a follower self-discipline, intelligence and commitment, abilities possessed only by a small fraction of man-kind. For the many, who are untalented the Mahāyāna offers three other ways to Nirvāṇa. The first of these is the path of the Bodhisattvas (the Bodhisattva-mārga). This can be achieved in one of two ways. The first, by relying on the Great Compassion (Mahākaruṇā) of the Bodhisattvas. It is sufficient to invoke them entreatingly because Bodhisattvas never refuse help. “On account of their inner perfection and their karmic merit accumulated through wholesome deeds in countless lives, the Transcendent Bodhisattvas are able to remove the unwholesome Karman of those in need and thus make possible their speedier emancipation. Their loving-kindness is stronger than the impending Karma of the salvation seeker.”4

Second, when a being benefits from the compassion of the Bodhisattvas, it places the seeker of such help under a heavy obligation which is re-paid by adopting the career of a Bodhisattva and undertaking to relieve the sufferings of the beings of the world. Although the Bodhisattva way is the easiest to be followed in its passive aspect, it is the most difficult path to deliverance in its active aspect. While it takes extra-ordinary selflessness to take the vow to become a Bodhisattva to devote oneself entirely to help others without thinking of one’s own liberation, it is also the path which takes the longest duration of time to teach liberation. As schumann puts it, “to be liberated is the final goal (of the Bodhisattva) but to liberate (others) is the more urgent and nobler one”.5

(4) The Path of Faith (Sraddhā mārga): Faith according to the Mahāyāna teaching is the central virtue from which all other virtues develop automatically and which unfailingly leads to rebirth in a Buddha paradise. According to the Sīkṣasānūcaya, “Faith is the guide, mother, originator, protector, increaser of all virtues, dispeller of doubts, rescuer from the flood of rebirths. Faith is the signpost to the secure city (of the Buddha paradise) .... Faith creates liking in renunciation, faith creates delight in the doctrine of the victors (i.e. the Buddhas). faith creates distinction in the
knowledge of the virtues; it leads in the direction of the Buddha goal". ¹

Śraddhā, according to its Mahāyānic conception, operates in two ways. One, it produces unimaginable merit (punya) which merit is much superior to the results of śīla, the results of which are limited to the sphere of samsāra only. Second, Śraddhā is the means by which the compassion and help of the Transcendent Bodhisattvas and Buddhas is invoked. Their help and assistance cannot be obtained by karmically wholesome actions alone. Invoking them with faithful confidence in them is more powerful than karmically wholesome action. Śraddhā is mainly directed to two Transcendent Beings; the Bodhisattva Avalokitesvara and the Buddha Amitābha (or Amitāyus). The former is appealed for help when one is in distress while the latter is a helper to salvation. The pure Buddha paradise Sukhāvati is the paradise of Buddha Amitābha which he created for himself. "In the texts the numerous Buddha paradises are divided into two groups. For the first group there is no special collective name, but the second are the so-called 'Pure Lands'. The ordinary paradises lie within our universe and more or less resemble our world, but are free from ill-will and violence. The Pure Lands on the other hand are transcendent and their inhabitants are not born into them on account of their karmic merit, but through the grace of a transcendent Buddha. They are radiating and lovely paradises of bliss. Amitābha’s paradise Sukhāvati is the prototype of a Pure Land. Each of these lands (ksetra) is under the control and care of a Transcendent Budhha, who regards it his main task to impart liberating wisdom to the beings of his paradise".²

The birth in a Buddha paradise through the grace of a Transcendent Buddha or Bodhisattva does not automatically take one to final liberation, it being only an intermediate station on the way to liberation. Therefore, rebirth in a Buddha Land serves as a good starting point to develop wisdom and attain enlightenment.

(5) The Path of Cultic Worship (Pūjā mārga) : Mahayana has developed a system of worship and ritual, the due performance of which ensures liberation for the worshipper. "Whereas Santideva (seventh century A.C.) in his anthology Śiksasumuccaya (17 p. 156f.) only quotes Śūtra passages which regard ritual practice as instrumental to better rebirth, the Saddharmapundarikasūtra (2, 78-94) characterises the worship of relics, the erection of Stūpas, the creating of Buddha images, the offering of flowers and incense, and the making of music at shrines as the way to Enlightenment. The text continues: "Those who at a Stūpa have shown (their) veneration (by placing their palms together, either in the perfect (way) or (only) with one hand, (and those who) have bent the erect head and body a single time for a moment, (95), - (moreover the people who) have at those relic containers (i.e. stūpas) said 'Honour to the Buddha!' a single time (and), be it only with distracted mind, have all obtained Supreme Enlightenment (agrabodhi)".³

The adoption of worship also necessitated the development of a system of ritual formulae and detailed procedures to be followed in such worship. While each item of offering had its own ritual formula consisting of one or more slokas preferably, each cultic object of worship too had its own ritual formula of one or more of such slokas spelling out the veneration of the worshipper. Each act of worship which followed the pūjā (the act of offering) had its allotted placing in the total procedure of the worship. While the non-infringement of the given procedure was essential, the proper recital of the formulae of pūjā and vandana too was similarly essential for the generation of results. There is evidence to show that music too was in use as part of the accepted pattern of such worship.⁴ The complete ritual structure if compiled into a text would have constituted a treatise of considerable length.

It may be noted here that it was with the complex pūjā system that the Mahāyānists accomplished their aspiration to make Buddhist practices attractive to the common folk, thereby providing an easier path to salvation. The pūjā ritual contributed in no small measure to social harmony as these also provided for public participation. As the pūjā rituals were adaptable to particular socio-religious requirements of the different schools of thought as well as of the cultural contexts in which Buddhism had to work, these came to possess regional identities. It is these regional identities, it may be noted, which became the distinctive characteristics of Buddhism to a very large extent, in each region in which it took roots by weaving itself into the religio-ritualistic fabric of the respective region by suitable adaption and adjustment as required.

Mahāyāna in China. The ancient trade route which lay through Central Asia connecting the Roman Empire with India and China took Buddhism to the Central Asian countries and China. “By the first century A.C., a number of prosperous city states had arisen in the watersheds of the oksus and Tarim rivers. The source of their prosperity was the trade between China, India and the Roman Empire. Culturally, this area was international. Some cities spoke Iranian dialects, wrote them in Indian alphabets, were ruled by Greek dynasties and issued Grecian-looking coins. Central Asian art combined Indian, Hellenistic and Iranian elements. During the first century, these states came under Chinese suzerainty. However, Indian cultural influence was dominant. Indian settlers and adventurers found their way to Central Asia, and Buddhist monks moved back and forth, travelling with the traders’ caravans.

The Chinese terminus of the Central Asian trade route was the city of Tun Huang. It was in international community, where Chinese, Kucheans, Sogdians, Khotanese and Indians lived together. It is said that thirty-six languages were spoken in its market place. The two bonds between the inhabitants were trade and Buddhism. In this way, Buddhism came overland, by stages, to the frontiers of China.”

It is recorded that Buddhism was in China once or twice during the first century A.C., although it is not recorded to have made any headway. The conversion of China seems to have begun, according to historical records, with the arrival of several translator-missionaries about 150 A.C. These missionaries came from Central Asia. Those who had grown up in Tun Huang already spoke the Chinese language, others learnt the language before starting their work. Assisted by their Chinese disciples and scribes, they concentrated on the translation of scripture as the most important part of their missionary work. It was their initial labours which thus created a nucleus of Buddhist Sūtras in Chinese which served as the foundation for the speedier spread of the religion during the following centuries.

During the third century, the Chinese Sangha was consolidated. In spite of civil wars in the country, Buddhist missionaries arrived and were welcomed. Buddhism spread throughout the country. It is recorded that Chinese pilgrims set out through Central Asia in search of scriptures and returned with texts to augment the growing canon. During the fourth century Buddhism became the dominant faith of China and during the next century it completed its domination of Chinese religious life. By the seventh century A.C., Buddhism reached its prime of the initial period, under the T’ang dynasty. While the study of Buddhism became popular, it was during this period that the famous pilgrim and translator Hsuan-Tsang returned after fifteen years stay in India with the latest form of the Yogācāra School. The worship of Amitābha became widespread particularly in Norht China.” The divergent tendencies that had operated since the early fifth century eventually produced the separation into distinct sectarian traditions, each with its own possibilities to work out”.

During the eighth and ninth centuries, the different sects built upon their foundations. The disciples of the sixth Patriarch spread the Ch’an teaching throughout China and even to Tibet. During the ninth century, Buddhism had a severe set back under the T’ang regime from which it took a long time to find some recovery at last. Under the Sung dynasty, during the eleventh, twelfth and the thirteenth centuries, though all sects and schools were studied and practised, only the Ch’an sect continued to evolve qualitatively, penetrating deeply into the culture of the period.

“The Mongols, who ruled China during the thirteenth and fourteenth centuries adopted the Tibetan variety of Buddhism, and Lamaist establishments have since then constituted a separate sect in China. The Mongols, though tolerant of all religions, patronized Buddhism lavishly. The Ming dynasty (1364-1644), which restored native rule, looked backwards to the glorious T’ang and Sung eras. Its culture was conservative, and the power of the old ways was overwhelming. Buddhism was subject to no new stimuli and envisaged no new problems. The period from the fifteenth century to the nineteenth is predominantly an age of closed vistas. Nevertheless, there were a few outstanding thinkers and leaders in each generation of monks”.

The first entry of Buddhism to China was only the beginning of a long line of live cultural contacts between India and China. As each successive phase of Indian Buddhism arrived in China, it gave rise to a new cult or school. As each of these had their own

3. op. cit. 324
Mahāyāna texts upon which they based their interpretations of the teaching, the Chinese Buddhist canon is the collection of the Chinese translations of the original Sanskrit texts and their Chinese commentaries. "Two-thirds of its contents are translations from Indian languages. Most of these were translated before 750, and thus were based on older versions of the Sanskrit texts than those employed by the Tibetan translators. Unlike the Tibetan Tripitaka, the Chinese Tripitaka includes the complete Hinayāna Sūtras (Āgamas). In fact, about one-fifth of the Taisho Tripitaka consists of Hinayāna works. Thus, though Chinese Buddhism is exclusively Mahāyāna, it has conserved the Hinayāna traditions fully".1

As the main pre-occupation of the Buddhist missionaries in China was the compilation of the Tripitaka in the Chinese language, it provided a firm foundation for the stabilization of Buddhism in the Chinese society. However, the great success of Buddhism in China was due in large measure to the skill with which it was able to weave itself into the religio-ritualistic fabric of the Chinese society. As a result, Buddhism was able to offer a system of ritual and cultic worship which greatly appealed to its Chinese followers

Chinese Buddhism thus came to possess a rich and complex system of worship. The principal form of worship was the worship of the Buddha, Dhamma and the Saṃgha which centred round the offering of gifts and services to these. While the gifts included all items required for the maintenance of the Order and the shrines, the services consisted of acts of homage and reverence to the triple gem and other centres of cultic worship. Each of these cult-centres like the stūpa, the images of the Buddhas and the Bodhisattvas, was serviced through appropriate ritual.

Those prominent among the Buddhas and the Bodhisattvas who thus were centres of cultic worship and veneration in China are Sākyamuni Buddha, Amitābha Buddha (Amit'o), Maitreya Buddha (Milo), Bhaisajyaguru Buddha (Yao-shih), Avalokiteśvara Bodhisattva (Kuan-yin), and Kṣitigarbhā Bodhisattva (Ti-tsang). Each of these cults is based on an Indian Sūtra which explains the special attributes of the holy personage.2

"The problem of the relationship and jurisdiction of the various Buddhas does not trouble the unphilosophical devotee, who either worships all in turn or concentrates on the most congenial to him. The theoretical problem is resolved by all sects in essentially the same way: the Essence Body (Dharma-kāya) is free from all determinate marks such as unity and multiplicity, and the multiplicity of Buddhas belongs to the realm of appearance".3

The Chinese Saṃgha consists of a number of sects. A sect bases itself on a distinctive textual tradition or cultic practice, while subsects represent lineages from the several disciples of the founder of the original sect, and can have minor differences of teaching. Cults consist of a special practice of devotion or of contemplation, but do not possess a lineage of masters, necessarily. Devotion to Maitreya was for long an important cult in China, but there was no Maitreya sect. Devotion to Amitābha was in practice for centuries before a lineage of teachers founded the Amitābha sect, and thereafter it reverted to the status of a cult. A cult commonly arises from a particular Sūtra. It can attract followers from all established sects without itself constituting a sect.

A sect is founded by a great master. It may be a philosophical system, a mystical insight, a devotional cult, a discipline or system of rites and initiations. It exists as long as its lineage of masters survive. When the lineage fails, its teachings may still be preserved and studied and may even be revived. A sect has a centre, since a master may confer approval on his best student, but it has no physical boundaries. One can study a sect or practise its teaching, but one cannot join a sect.

Robinson distinguishes three general types among the Chinese Buddhist sects: (i) The Classical School, which have as their heritage an Indian doctrinal system contained is a group of Sāstras (ii) The Catholic Sects which classify the different scriptures and doctrinal systems as an ascending series of accommodated teachings for beings of different intellectual types upwards to the true teaching. Their fundamental texts are the Mahāyāna Sūtras which are explained in the commentaries and other works by the founders and other

3. op. cit. 329
patriarchs of the sects and the Exclusive Sects which discard the classification of the teachings and reject all other teachings except their own. Of these, the principal schools are: (1) The Kosa School - This school was founded on the Abhidharmakosa translated by Hsuan-Tsang in the seventh century. A.C. It did not maintain a separate lineage for long after Hsuan-Tsang. (2) The Satyasiddhi School, based on Kumaraüiva’s translation of the Satyasiddhi Sûtra; this school flourished during the fifth century A. C. (3) The San-Lun (Three Treatises) School, based on three Madhyamaka texts translated by Kumaraüiva, did not arise until the early sixth century, and its lineage did not persist for many generations after its greatest master, Chi-Tsang (549-623) (4) The Fa-hsiang School based on Vijñânavâda and founded by Hsuan-tsang (600-64) whose work Ch’eng wei-shih lun (Vijñaptimatrâtisiddhi) expounds the school’s teaching. The School began to decline in the ninth century, but continued as a philosophical influence for many centuries.¹

The principal Catholic Sects are: (1) The Tien-t’ai founded by Chih-1 (538-97). It classifies the Sûtras according to the period of Sakyamuni’s life when they were supposed to have been spoken, and also according to the audiences to whom they were addressed. The final and perfect teaching of Sakyamuni, according to this sect, is that of the Lotus-Sûtra (Saddharmapuṇḍarîka), the principal Scripture of the T’ent’ai Sect. The philosophical doctrines of the school are a combination of the Madhyamaka and the Yogâcâra teachings. This sect has its own liturgy and the sect survives in China to the present day. (2) The Hua-yan, founded by Tu-Shun (557-640) and brought to completion by Fa-Tsang (643-712). It is based on the Avatamsaka (Hua-yan)Sûtra, which ranks highest in the classifications of the Hua-yan sect. According to the Avatamsaka Sûtra, Sakyamuni Buddha entered the Sâgaramudrâ-samâdhi immediately after his enlightenment in which he saw simultaneously all the teachings that he later preached and all the beings to whom he preached them. However, when he preached the contents of this vision as the Avatamsakasûtra, it proved too difficult for ordinary listeners as a result of which he preached a graded series of accommodated teachings. However, the highly intellectual teachings of this school did not become a popular sect, and after the ninth century its lineage was broken. (3) The Chen-yen is the Chinese version of the Mantrayâna, and was introduced about 720 A. C. by three Indian missionaries Subhakarasîinha, Vajrabodhi and Amoghavajra. It is based on the Mahâvairocana Sûtra and the Vajrasekara Sûtra. This sect distinguishes ten stages of the religious life, culminating in the Chen-yan stage. As the members of the original Indian Trantrayâna, the members of this sect, too, are initiated into the sect, after which only they are allowed into the secret symbolic language of the sect. This sect did not maintain a lineage in China for very long. It has been re-introduced from Japan where it had remarkable popularity.

(iii) The Exclusive Sects: There are two sects, coming under this, (1) The Pure Land Sect and (2) the Ch’an. Of these, the Pure Land Sect, is a devotional form of Buddhism centring on the Buddha Amitâbha. “One of China’s early Pure Land adherents was Hui-yuan (334-416), an eminent Buddhist master who established a monastic community on Mount Lu. In 402 he organized a society of 123 believers who performed devotion to Amitâbha and jointly vowed to be born in Pure Land. The spread of Pure Land Buddhism to the general populace occurred a century or two later as a result of the evangelistic efforts of several Pure Land masters. The first of these was T’an-luan (476-560). He embraced the Pure Land teachings at the urging of the Indian priest Bodhiruci, a famous transmitter and translator of Buddhist scriptures. T’an-luan spent his life popularizing such devotional practices as meditating on the Pure Land and chanting Amitâbha’s name. Tao-ch’o (562-645) who carried on T’an-luan’s work, added a historical dimension to the Pure Land teachings. He maintained that the world has passed into a period of decline, the age of the Latter-day Dharma (China, mo-fo; Jap., mappo) during which the earlier teachings of Buddhism no longer have efficacy. Only Amitâbha’s Pure Land offers hope of salvation and enlightenment to sentient beings”.²

Tao-Ch’o was succeeded by Shan-tao who distinguished the Saintly Road, the way to Enlightenment through self-power from the easier way to Enlightenment through external power, through reliance on Amitâbha’s grace. He held that though the saintly road may have been possible for people in the period of the True Law, or immediately after Sâkyamuni’s parinirvâna or in the subsequent period, it was not possible during the degenerate period of the Latter Law.

¹. op. cit. 330; Oxford Dictionary of World Religions, 334.
Consequently, there was no alternative to relying on external power. Shan-tao maintained that right faith is produced by Amitābha's name, co-operating with his saving power. The moment the believer places his faith in Amitābha and calls on his sacred name, "Namo Amit'o Fo" (Glory to Amitābha) the believer receives the gift of well-being and assurance of rebirth in Sukhāvati from where he attains Nirvāna. The Pure Land sect maintained a lineage until the ninth century, after which it had so thoroughly permeated all Chinese Buddhism except Ch'an that it ceased to have any reason for independent transmission.1

The Ch'an Sect is a school of prajñā (wisdom). Its teachings are transmitted directly from master to disciple. Bodhidharma was the first patriarch of this school. He was followed by Hui-k'o, Seng-ts'an, Tao-hsin, Hung-jen and Hui-neng, "Though Ch'an is the Chinese form of Sanskrit dhyāna (meditation) it is not really a school of meditation, but a school of prajñā or intuitive insight. The lofty, paradoxical utterances of Ch'an masters and their assertions that great merit is that which is filled with insight, are in the spirit of the Perfection of wisdom Śūtras. Most ideas in eighth-century Ch'an writings are simply culled from the Mahāyāna Śūtras. What is distinctively Ch'an is the fresh, incisive tone and the unwavering focus of attention on the realization of insight."

The Ch'an Sect is radical in its exclusiveness, and it exhibits a manner unlike that of other sects. But it is not radical otherwise. It has kept the monastic system, though it has its own monastic rule which requires manual labour of the monks. It has not discarded rituals or any of the normal appurtenances of Chinese Buddhism.2

Mahāyāna in Japan. In Robinson's words, "Though Japanese Buddhism does not differ very much from Chinese Buddhism in doctrine, in institutions, and social role, it is as unlike Chinese Buddhism as Japanese society is unlike Chinese society. It was intimately connected with the introduction of civilization to Japan and with the development of national institutions and values. It has shared the historical experience of the Japanese people and, thanks to the relative soundness of Japan's economy when the country was opened to Westernization, Japanese Buddhism has been better preserved and has met the impact of the modern world more successfully than Chiness Buddhism".3

The pre-Buddhist religion of Japan was a form of spirit and nature worship with no system of moral teachings or metaphysical doctrines. It was believed that, "there were numerous deities or spirits which shone with a lustre like that of fire-flies, and evil deities which buzzed like flies. There were also trees and herbs which could speak".4 It was also believed that, the country was founded by the god who descended from heaven and established the state in the period when heaven and Earth became separated. These primitive ideas have formed the basis for certain systems of worship and formed the foundation of a national life on the worship of the 'Deity who originally established the State'. This complex of beliefs and worship is known by the name, "Shinto", after the name given to it in the sixth century, and the 'Deity who established the state' came to be worshipped as the sun-goddess, the supreme deity of the Shinto religion. When this complexity of beliefs and worship came to be organized in the course of several centuries up to the eighth, emphasis was laid on the supremacy of he Sun-goddess, who was naturally adored as the protectress of agriculture and as the ancestress of the ruling family.5

The establishment of Japanese colonies in the southern part of Korea, probably in the early centuries of the Christian era, military and diplomatic engagements with Korean principalities, the perpetual influx of Chinese and Korean immigrants, broke the insularity of the Japanese and exposed them to continental culture, as by this time, due to the extension of Chinese influence and the consequent propagation of Buddhism, Koreans had undergone change and were much in advance of the Japanese. It was chiefly the Korean immigrants and some Chinese who introduced the various arts of civilization and writing, followed by the introduction of confucian ethics and Buddhism. The first name we have of a Buddhist in Japan is Shiba Tachito, a refugee from the eastern coast of China, who arrived in Japan in 522, probably through Korea. He is well remembered as a leader of the new movement because his family produced eminent Buddhist workers, the first Buddhist nun and greatest Buddhist artist of the seventh century who was Tori.
The official introduction of Buddhism to Japan was in 522 by a delegation sent by the Prince of Kudara (or Pakchoi, a principality in South Korea) to Yamato as a sign of homage and friendship. Through Buddhism the Japanese learnt for the first time that there was a deity or superman who looked after the welfare and salvation of all beings without regard to clan or nationality. The people saw, to their astonishment and admiration, the figure of a divine being represented in beauty and adored by means of elaborate rituals. This was indeed, a new revelation which was destined to rule the faith and sentiment of the nation. The first presentation of Buddhist objects was followed by a continual influx of missionaries, artisans and other immigrants, reinforcing the influence of the new religion.

It was during the reign of Prince Shotoku that Buddhism was proclaimed as the religion of the State. This was accompanied by the foundation of a grand Buddhist institution comprising four establishments: the temple proper, an asylum, a hospital and a dispensary. The temple proper served not only for the performance of Buddhist worship, but it included departments for the study of Buddhist philosophy and the sciences, for a disciplined order of monks, and their training in arts and ceremonies. The three other institutions were the first of their kind and became the models for the coming ages. This institution was called Tenno-ji and was a group of religious, educational and philanthropic organizations. In 604 the prince proclaimed a new constitution of seventeen articles which laid special stress upon moral and spiritual harmony between the sovereign and the subjects, between the superior and his subordinates, which was propounded to be the essential basis of national life and government. "The rulership of a single monarch implied the equality of all people, just as faith in the unique personality of the Buddha as the saviour of all mankind presupposed the intrinsic value and destiny of every individual to be in communion with him". The prince was a man of pious devotion and he endeavoured to explain his ideals and instruct his people by giving lectures on Buddhist scriptures in the palace and in the temples. For this purpose he selected three texts: (1) Hokke-kyō or the Lotus of Truth, expounding the scheme of Buddhist salvation, (2) Yuyima-gyō, the discourses of the lay Buddhist sage Yuyimā (Vimalakirti) and (3) Shōman-gyō, discourses between the Buddha and queen Shōman (Śrīmālā) of Benares, the ideal representative of Buddhist womanhood.

The most prominent leader of the Buddhist movements in the seventh century was Dōshō (629-700) who had studied in China under the greatest Buddhist scholar of that time, Yuan-Chang, and brought back with him new translations of Buddhist books produced by his master. Through these Dōshō introduced the religious philosophy of the Hosso School, which was destined to exercise great influence. He was a pioneer of Buddhist philosophy and logic and other sciences. He spent the last years of his life visiting the provinces, building monasteries and alms-houses, making ferries, constructing bridges and the like, thereby becoming a model for Buddhist leaders of the next century. Buddhism also rendered great service to the government, in working to confirm the belief that the peace of the country and the security of the Throne depended upon the guardianship of the Buddha and his saints. Temples were dedicated to Buddhist deities, rituals were organized in the court and official buildings; copies of the sacred texts were distributed in the provinces because it was believed that these texts would secure celestial protection. At the time of the foundation of the Court Chapel (Nai-Dojo, or Inner Sanctuary), an order was issued in 655 to set up, "a similar place of worship in every household throughout the country." The work of civilizing the country and promoting charitable work lay mainly on the shoulders of Buddhist workers. The State capital was founded at Nara in 710 and the central cathedral later known as Tōdai-ji was erected in Nara and dedicated to the Buddha Lochana, a heavenly manifestation of the Buddha Śākyamuni. In the central cathedral in Nara he is represented in a broze statue more than fifty feet in height, seated on a gigantic lotus petal, studded with minor statues of Buddhas and saints. The structure was completed in 752 and its dedication was marked by a historic function.

Although Buddhism was the dominating force of the eighth century, the indigenous religion maintained its influence upon the people, and Confucianism played an important role in social and political institutions. The interaction between these three forces brought about a synthesis whereby, instead of reacting against Buddhism, Shinto raised its prestige by identifying itself more closely than ever, with the interests of the
central government by cooperating with Buddhism. The identity of the Sun-goddess with Buddha Lochana was formally proclaimed in connection with the foundation of the Central Cathedral, when an oracle was secured from the Sun-goddess identifying herself with the Buddha and giving sanction to the building of the Cathedral. Another, more important, alliance was accomplished by means of an oracle ascribed to the Shinto god Hachiman or the "God of Eight Banners" believed to symbolize the eightfold path of Buddhist morality. The oracle declared that the god wished to pay respect to the newly founded Cathedral at Nara and accordingly, the divine cart of the god was moved and kept in a Shrine, so that he could remain a guardian of the temple. Although his worship continued at the original site, he became a Buddhist-Shinto deity and played an important role in the later history of the Japanese nation.

The union of Confucianism with Buddhism was a more natural one, because the former was to supply the latter with its practical ethical teachings, especially in inculcation of virtues. In the two-hundred and fifty years since its introduction to Japan, Buddhism achieved great results by broadening the mental vista of the people, benefiting them in welfare work, while confucianism gave them a system of moral ideas and legal institutions, and extended educational influence in the service of the government in co-operating with Buddhism. However, decadence seems to have set in due to the abuse of wealth and power acquired by the hierarchy both ecclesiastical and political. Therefore, meaningful reform was the need of the hour, the first move in this direction was taken by moving the seat of government from Nara to Miyako, the modern Kyoto. This almost impossible task, resisted by the political conservatives as well as by the religious aristocracy, was accomplished in 794 assisted by Saichō, who, due to his deep dissatisfaction with the degeneration which had set in, in the system had left Nara and founded a small monastery on Mount Hiei. Saichō was rewarded for his contribution in the task by generous government donations to his institution. The result was a great centre of Buddhism which was declared the chief seat of Buddhism in the country. In 804 Saichō sent to China by imperial decree for "the search of truth". He came back the following year with teachings of the Tendai School of Chinese Buddhism, together with material necessary for the performance of special ceremonies.

In 818, Saichō requested the government for an authorization to institute an independent seat of ordination which was resisted by the prelates of Nara. This dispute raged for several years, but was approved by the government, in 822, a week after Saichō's death.

Saichō's younger contemporary, Kūkai (774-835) went to China where he studied in the year 804-806 and became a master of the then flourishing form of Buddhism known as Shingon, a combination of mysticism and occultism. After his return, he founded a monastery on Mount Kōya, about fifty miles south of Kōya. After Saichō's death, Kūkai was brought to fame in 823 when he was appointed to the headship of the State temple Toji in Miyako. Buddhism advocated by Kūkai was an all-embracing syncretism of a highly mystic nature.

The period which comes next in importance to the period of Shingon Buddhism is the period of Amita-Buddhism, which was a religion of pious devotion freed from its association with intricate ritualism or methodic contemplation. The man who consummated this development of devotional piety was Genkū (1135-1212), better known as Hōnen, whose treatise written in 1175 signalled the independence of Amita Buddhism.

The fundamental tenet of Hōnen's religion was nothing but the placing of absolute faith in the redeeming power of the all-compassionate Buddha, embodied in the person of Buddha Amitābha, the Lord of the Western Land of Purity. Since the Buddha has completed his scheme of salvation of virtue of his long training and accumulation of merit, it is sufficient to take any and every person who will trust him and invoke his name, the "Name" being the mysterious embodiment of his saving power. The formula provided for this is, Namu Amida Butsu (Adoration to the Buddha of Infinite Life and Light). Hōnen died shortly after his freedom from banishment, after which his followers divided themselves into several sub-sects. One of these was Shinran. He carried the idea of Buddha's grace to extreme conclusions. According to him, neither virtue nor wisdom but faith was what was most fundamental. It has nothing to do with our own intention or attainment, but is solely Buddha's free gift. As the foundation of salvation has been laid down in the vows taken by the Buddha Amitābha, the mystery of his name is the sole key to salvation. Our destiny is entirely in the hands of the Buddha, and it has been encompassed into his scheme of saving all.

The School of Hōnen encountered the most formidable attacks from Nichiren, whose name meant, "Sun-Lotus" which symbolized a combination of Shinto and Buddhist ideals, the Sun embodying light and life, and the Lotus purity and perfection. He spent his early life studying all branches of Buddhism which gave him the conviction that Saichō's doctrine of the *Lotus of Truth* was the only true Buddhism. His contemplation led him to the conviction which reduced the whole of his religion to the uttering of the sacred title of the scripture in the formula *Namu Myō-Hō-renge-kyō* (*Adoration to the Lotus of Perfect Truth*).

It was sufficient according to Nichiren to utter these words as it at once elevates oneself to the highest enlightenment of Buddhahood.

The next movement of importance was that of Zen, introduced by Yeisai (1141-1215). Yeisai had been a monk in Hiei, but being dissatisfied with the scholastic doctrinalism of the institution, made two journeys to China, mastered the new method of spiritual exercise and introduced it to Japan, in 1191. He founded the monasteries in Kyushū and Miyako to train disciples in the method of Zen.

"Zen is an intuitive method of spiritual training, the aim of which consists in attaining a lofty transcendence over worldly care. The Zennist is proud to see in his method an unwritten tradition directly transmitted from Buddha to his great disciple, Mahā-Kasyapa, and then successively to the masters of Zen. Not only does the Zennist defy reasoning and logic, he takes pride in transcending the usual channels of thinking. He denounces any idea to formulate tenets, for any formulation deadens the soul and life. Zen aims at giving an intuitive assurance of having discovered in the innermost recess of one's soul an ultimate reality which transcends all individual differences and temporary mutations...". Another leader and organizer of Zen Buddhism in Japan was Dōgen (1200-1253) who too had been at Hiei and had been initiated into Zen by a disciple of Yeisai.

Zen, according to Anesaki, "Was introduced at the time when the military men were rising to the position of rulers and administrators. There was need of a religion which could fulfil the task of training the ruling class in mental firmness and resolute action and of satisfying their spiritual aspirations".

Scholars of Japanese Buddhism had always been in the habit of going to China for new knowledge, whenever the need for a fresh approach to local situations was the need of the day. It was on the basis of such new knowledge acquired that new schools of Japanese Mahāyāna Buddhism came to be established and rose into prominence.

**Mahāyāna in Tibet.** It was in the early part of the seventh century A.C., during the reign of King Nārāyana (Mih iha) that Tibet received Buddhism through the king's Nepalese and Chinese queens who were Buddhists. The princess of Nepal brought with her, as part of her dowry, the images of Aksobhya Buddha, Maitreya and Tārā. The king built a great temple in the middle of Lhasa to enshrine these images. Nepalese architects and builders and craftsmen were sent from Nepal for work on the temple. The princess from China brought an image of Śākyamuni which is said to have been taken from Magadha by the Chinese about the first century B.C. This too, was installed in a great temple built by the king in Lhasa. Both wives were canonized as incarnations of Avalokiteśvara's consort Tārā, the goddess of mercy and the fact that they had no children is pointed to as evidence of their divine nature. The Chinese princess was glorified as the white Tārā and the Nepalese princess as the green Tārā. By persuasion of the two queens, the king was converted to Buddhism. It is recorded that he ruled over the country on the basis of the ten Golden Precepts which agree with the ten rules of morality. A code of sixteen virtues was also formulated to convert his subjects. Many young men were sent to Nepal and China to study Buddhism. It was the king's Sam-bhota who was sent to India along with sixteen companions who reduced the Tibetan language to writing. From the time of its introduction, all historical events in Tibet as also the sacred Buddhist works were translated and written down in this Tibetan script. The king established several Buddhist centres and temples in his dominion and it was during his reign that the famous sandalwood image of Avalokitesvara which is worshipped even today, was brought to Tibet.

2. *op. cit.* 210
3. *Buddhism in Tibet*, K. Krishna Murthy, 14f; *Religion of Tibet*, Charles Bell, 34f. The king was also known as Srong-tsan-gam-po.
In the years following the death of Srong-btsan-sgam-po, the progress of Buddhism in Tibet was on the decline. The king Khri-Ide-gtsug-btsan who ascended the throne in 750 A. C., championed the cause of Buddhism by building many monasteries and temples. He encouraged the translation of the Sanskrit texts into Tibetan. The next great king was Khri-srong-Ide-btsan (740-786). His rule marks the zenith of Tibetan power and the affirmation of Buddhism as the national faith of Tibet. It was during his reign that the Indian teachers Śāntarakṣīta, Padmasambhava and Kamalaśīla were brought to Tibet. Shortly after Śāntarakṣīta started teaching the Dhamma, an epidemic broke out and the adherents of Bon, the ancient religion of Tibet incited the people by alleging that this calamity was a result of the wrath of the gods at the introduction of this new faith and the presence of the alien teacher. As a result, Śāntarakṣīta was advised by the king to go to Nepal. Later, he was invited back, but as resentment rose again against him, he advised the king to invite the Tantric teacher Yogi Padmasambhava, who was one of the celebrated teachers of the University of Nalanda. He was deeply versed in the Buddhist Tantras. He subdued all the evil spirits and local gods of Tibet by means of his siddhi power and Buddhism prospered. With him an era of great literary activity started in Tibet. He organized the sangha and advised the king to send a body of monks to study the Buddhist texts in the original. A site for a monastery was selected and the Sam-ye monastery was built after the model of the famous Odantapūrī Mahāvihāra of Magadha. It was consecrated by Acārya Śāntarakṣīta. According to Waddel, the top of the monastic temple was built in Chinese style, the middle part in Indian style and the lower part in Tibetan style. Acārya Śāntarakṣīta was appointed the head of the new monastery. It had a number of fine Shrīnes and a good collection of Sanskrit works. Buddhism made steady progress. A controversy over the interpretation of the Buddhist teachings arose between the followers of Śāntarakṣīta and the followers of the Chinese Ho-Shang. King Khri-srong-Ide-btsan invited Kamalaśīla from India to defend Śāntarakṣīta’s interpretation. The latter won and the followers of the Chinese sect were ordered out of Tibet. Later Kamalaśīla was murdered by the Chinese sent by Hva-sang. Towards the end of the eighth century A. C., Padmasambhava procured a number of manuscripts of Buddhist texts from Kashmir and these were translated into Tibetan. During this period, there was much literary activity and both Śāntarakṣīta and Padmasambhava collaborated in expounding the teachings of Buddhism. At their request many Sarvāstivādins monks came to Tibet to translate all Buddhist texts into Tibetan.

The period of King Ral-pa-chan (817-836 A. C.), who was a grandson of King Khri-srong-btsan and a champion of the cause of Buddhism, was an important period for Buddhism. He was so devoted to Buddhism that he made his youngest son a Buddhist monk. He gave the monks a number of privileges and administrative authority. He built a number of temples of which one went up to nine floors. As a result of his dedicated commitment to the cause of Buddhism, several Indian scholars came to Tibet. Prominent among these were Jinamitra, Sailendrabodhi, Surenadrabodhi, Prajñāvarman, Dānaśīla and Bodhimitra. Jñānasena, Jayarakṣīta, Mañjuśrīvarman, Ratendraśīla and others worked under these as Tibetan translators. They were entrusted with the task of translating the scriptures and commentaries of Nāgarjuna, Aryadeva, Vasubandhu and others. According to Rockhill, at least half of the existing collections of Tanjur and Kanjur were done by these teachers and translators. The newly built nine-storeyed palace, On-chan-po, was a centre of this translation activity. It is also during the period of Ral-pa-chan that the history of Tibet came to be written for the first time. King Ral-pa-chan is held even today in high esteem by the Tibetans as he is regarded as the incarnation of Vajrapāṇī. Till the ninth century Buddhism played an important role in the life of the Tibetan people.

However, the reign of Ral-pa-chan was also another era of set-backs to the continued progress of the religion. “Ral-pa-chan found that both Mahāyānist and Hinayānist books had been made in India, Li, Zahor, and other countries. Consequently there was a large influx of foreign words which Tibetans did not understand. And as the spelling lacked uniformity, it was difficult to study the religious books. He therefore revised the spelling and arranged for the compilation of a dictionary in which these foreign words were explained. He is said to have had the earlier translations revised according to the new spelling. He forbade the translation of works, except only those of the Sarvāstivādins, a Hinayānist sect, who tried to follow

1. Charles Bell uses the term Pö̱in to describe this. According to him it rhymes with turn, Religion of Tibet, 8.
the actual teaching of the Buddha himself, and eschewed subsequent incrustations. He prohibited the translation of works on mysticism. In fact, his object was evidently to purify the Buddhism that came to Tibet, to simplify it, and to render it intelligible to his people".  

This shift from the religion introduced by Yogi Padmasambhava naturally aroused the animosity of those who were used to the pro-pōñist deities, miracles, ritual and ceremonies. It was only Tantrism which could naturally be of appeal to people of such a background. It eventually climaxd in the assassination of the king.

The assassination of Ral-pa-chan was followed by the suppression of Buddhist monks. "Some were made to marry, others were sent to hunt wild beasts with arrows, bows, drums, and tambourines - a magical implement among the Pōñists-and those who refused were killed'. The doors of a temple would be walled up and plastered, and on the doors so plastered pictures of monks drinking wine would be painted. The work of translation was of course stopped. But the sacred books do not appear to have been destroyed. Pu-tōn tells us that they 'were mostly hidden in the rocks of Lhasa'.

After the assassination of Ral-pa-chan, his brother Lang Dar-ma who was opposed to the new religion was put on the throne, but his reign of cruelty to Buddhism did not last long, as he was murdered by a monk after a brief reign. Lang Dar-ma's assassination was followed by the division of the kingdom into two by his two sons. Subdivisions followed and in due course the whole country was parcelled out among petty chiefs. The first steps towards the revival of Buddhism were taken in Am-do, a province in the north-east of Tibet on the border of China, far away from Lhasa, and spread gradually to the centre. The total period of suppression of Buddhism lasted about seventy years, but according to some, it lasted for about one hundred and eight years. With the revival, old monastic buildings were re-occupied, new ones were erected and discipines were enrolled. The work of translating Indian books too resumed. One of the first and most prolific of these translators was a Tibetan named Rin-chen Zang-po who was ordained a monk in the fifty-seventh year after the suppression of Buddhism, and is said to have lived to ninety-eight years of age.

The eleventh century saw the spread of Muhammadan influence in India. This was also the period when many Buddhist scholars went to Tibet. Among these, the one who exercised the greatest influence was Atisha. He came from a royal family of Bengal. At an early age, he became proficient in the Vaiśeṣika system of Tantrism and defeated the most noted Buddhist logician of his time in philosophical debate. At the age of thirty-one he was fully ordained and given the Bodhisattva oaths by Acārya Dharmarakṣita at Odantapuri. He took lessons in metaphysical aspects of Buddhism from the distinguished Buddhist teacher at Magadha. He travelled out of India, seeking further knowledge. King Nyānapāla heard of his great ability and encyclopaedic knowledge of Buddhism and invited him to become head of the Vikramaśilā monastery.

King Ye-sh'ed-'od of Tibet was a devout Buddhist who worked for the cause of Buddhism. It was at his invitation that Atisha came to Tibet in 1038 A. D. when he was sixty years old, and was received with great honour. He devoted himself to the preachings of Buddhism and strove to restore them to their pristine purity. He wrote a commentary on the Kālacakra Tantra. He introduced a new calendar to Tibet. The famous Sas-kyā monastery was built during his time. His main objective was to make every Tibetan an ideal Buddhist. Even to this day, he is regarded as a living spiritual guide in Tibet.

Atiśa's great success into reverential acceptance and adoration by the Tibetans was largely due to his ability and dexterity with which he wove the Buddhist teaching into the belief and ritual structure which had been of appeal to the Tibetan mind. He was able to steer the growth of Buddhism into official as well as popular acceptance from the beginning of its revival after the persecutions of the Ral-pa-chan period.
With Atisa’s reformation started the Kadam-pa sect, the first sect in Tibetan Buddhism, based on his interpretations of the Buddha’s teaching. It was expanded by Hbrom ston-pa, one of his renowned disciples. His disciples built the Rwa-sgren monastery at Hdam-pa for the propagation of Buddhism. They put more emphasis on the quality of the adherents rather than on the numbers. “The doctrine of the Kadam-pa sect is based mainly on the well-known works, such as the Mdo-sdehi-rgyan-pa (Sūtrālankāra) Siksāsamuccaya, Byan-chub-sems-dhahi-spyod-pa (Bodhisattvācaryavatāra), Skyes-pahi-rabs-kyi-rgyud (Jātakamāla) and Ched-dur-brjod-pahi-tshoms (Uḍānavarga).” These works are known as the ‘Six Basic Texts of the bka-‘gdams-pas’. The adherents of the Kadam-pa sect assert that their doctrine is the consequence of the teachings of the Kadam-pa and Mahāmudrā. The Kadam-pa sect is divided into three sub-sects, viz., (1) The Canon sub-sector, (2) the Instruction sub-sector and (3) the Discipline sub-sector”. Its distinctive feature was its elaborate ritual and the propagation of the deities. “The full importance of the Kadam-pa lies partly in the fact that it was the first sect to be divided off from the main body of Tibetan Buddhism, and partly that it was the parent of the Ge-luk sect, and partly that it was the first sect to be divided off from the main body of Tibetan Buddhism. It is known also as the ‘Red Cap’ sect because of the peculiar red cap worn by their Lāmās. It is also known as the old ‘translation’ sect as its fundamental teachings are selected from the texts translated by Guru Padmasambhava, Açārya Sāntarakṣita, Mahāpañḍita, Vimalamitra of Kashmir and others. It is divided into several sub-sects ‘based on the adoption of different revelations’. Prominent among these are, Dorje-taka-pa, Nin-dol-lin-pa, Kar-tok-pa and Na-dak-pa. The Dorje-tak-pa takes its name from the Dorje-ta-monastery, the Nin-dol-lin-pa after the Mindol-lin its principal monastery, the Kar-tok-pa after Lama Kar-tok and the Na-dak-pa after Nah-dag, its founder. The Nying-ma-pa sect divides the entire Buddha dhamma from sūtra to the Tantra into nine Yānas: the three Hetulakṣaṇayānas, the yānas of (Śrāvakāyāna, Pratyekabuddhayāna, and the Bodhisattvāyāna); and the six Pahalvajrayānas, the Vajrayāna of result (the three outer Tantras, Kriyāyoga, Caryāyoga, and Yogatantra and the three inner Tantras, Mahāyoga, Anuyoga and Atiyoga).”

The tradition of Tibetan Buddhism established by Guru Padmasambhava in the eight century A. D., during the reign of king Khrī-sron-Ide-btsan, came to be known as the Nying-ma-pa. As we have already noted, it was Padmasambhava’s great skill with which he adapted elements of the traditional Pönist religion which won his teaching acceptance among the Tibetan people who were for ages used to the religion of the Pönist deities and ritual. This sect claims to have preserved fully the teachings of Padmasambhava and pays special worship to him, “in a variety of forms, both divine and demonical, expressive of his different moods at different times”. The creed of this sect, therefore, contains traces of the primitive religion of Tibet. The followers of the sect are said to have preserved the necromancy of the Pönist religion. They adhere strictly to the ancient rites and ceremonies in the manner probably taught by the earliest Chinese priests and contain certain symbolical words which have been incorporated into the Kanjur and the Tanjur texts. It is known also as the ‘Red Cap’ sect because of the peculiar red cap worn by their Lāmās. It is also known as the old ‘translation’ sect as its fundamental teachings are selected from the texts translated by Guru Padmasambhava, Açārya Sāntarakṣita, Mahāpañḍita, Vimalamitra of Kashmir and others. It is divided into several sub-sects ‘based on the adoption of different revelations’. Prominent among these are, Dorje-taka-pa, Nin-dol-lin-pa, Kar-tok-pa and Na-dak-pa. The Dorje-tak-pa takes its name from the Dorje-ta-monastery, the Nin-dol-lin-pa after the Mindol-lin its principal monastery, the Kar-tok-pa after Lama Kar-tok and the Na-dak-pa after Nah-dag, its founder. The Nying-ma-pa sect divides the entire Buddha dhamma from sūtra to the Tantra into nine Yānas: the three Hetulakṣaṇayānas, the yānas of (Śrāvakāyāna, Pratyekabuddhayāna, and the Bodhisattvāyāna); and the six Pahalvajrayānas, the Vajrayāna of result (the three outer Tantras, Kriyāyoga, Caryāyoga, and Yogatantra and the three inner Tantras, Mahāyoga, Anuyoga and Atiyoga).”

The Kar-gyud-pa is another important sect of Tibetan Buddhism. It is called a ‘School of successive Order’ or ‘Oral Traditionalism’. Its followers believe that their precepts have been handed down through a galaxy of teachers starting from marpa who was a native of Lho-brag and lived in the eleventh century A. C. This sect was founded by him on the basis of the teachings of his teacher Naropa, the great Indian Śūddhācārya. It has two main schools, Shangs-pa bkra-sbrug-pa and Dvags-pa bka-brgyud-pa, and a number of subsidiary sects.

The Sakya sect was founded by Khom Konchok Gyalpo. The predecessors of Khom were noted followers of the Nyingma-pa sect. It derives its name ‘Grey Earth’ from the colour of the soil where its first monastery was built in 1071 A. C. on the site of the present Sa-skya. Greatly devoted to learning, they proved to be excellent proselytizers when they came into contact with the Mongol emperors in the thirteenth century A. C. One of the Sa-skya hierarchs called Hphags-pa, became the spiritual teacher of Prince Khubilai of Mongolia, who, on coming to the throne as the first Mongol emperor of China, conferred the

4. op. cit. 32 f.
sovereignty of central Tibet upon the High Priest of Sa-skya (1270 A. C.). This was the beginning of a new era of theocratic rule in Tibet. The Sa-skya-pa produced many eminent Tibetan scholars, among whom the famous Bu-ston (1290-1364 A. C.) ranka high.\footnote{1}

The Gelukpa sect traces its origin to Tsong-kha-pa, born in the province of Amdo in eastern Tibet in 1358. With his striking powers of organization and intelligence, he set himself to the task of removing all deviations and superstitious beliefs and establishing a strong order of Buddhist monks based on discipline and celibacy. The school came to be recognized as the ‘School of the Virtuous’ (Ge-lugs-pa) and popularly described as the Yellow Hats. In 1048 he founded the Ganden monastery, not far from Lhasa. The other two monasteries, Depung and Sera, near Lhasa, and Tashilhumpo, in the Tsang province, share between them the highest religious power and prestige. They were all founded by the disciples of Tsong-kha-pa, within the next fifty years. The work of religious propagation in Mongolia and Siberia was continued by these centres of learning with such enthusiasm and vigour that after the influence of the pioneering Sa-skya-pas had dwindled due to internal rivalries, the Dge-lugs-pas came to be favoured by the powerful Mongol chiefs as spiritual leaders and later as temporal rulers of Tibet.

It was from the time of their third hierarch, Bsod-nams-rgya-mtso (1546-1587) that all hierarchs of the sect came to be regarded as Dalai Lamas of whom the most distinguished was the Great Fifth Dalai Lama (1615-1680 A. C.) upon whom the sovereignty of the whole country was conferred by the Mongolian chief Gusri Khan. After the preceding period of about seventy years during which the hierarchs of the Sa-skya sect reigned as rulers over a small part of Tibet, the recognition of the full and divine sovereignty of the Dalai Lama over the whole of Tibet was a turning point in Tibetan history.\footnote{2}

The teachings of the Zhiched-pa sect founded by Padma Sengje from south India were based on the Prajñāpāramitā Sūtra. Of these, the Nying-ma-pa, the Kar-gyud-pa, the Sakya-pa and the Geluk-pa together with the pre-Buddhist Pön have survived to the present day. While the first three are the Red Hat sects, the Geluk-pa is the Yellow Hat sect. All temples and monasteries of the different sects are regarded by the Tibetans with equal respect and regard.

As in the case of the Buddhist missionaries who went to China, the most important aspect of the missionary labours of the Buddhist missionaries who went to Tibet was the translation of Scripture. All Tibetan texts are written in elegant and accurate Tibetan language. “Many monks came to India from Tibet to study the Buddhist texts with the distinguished teachers of Nalanda and Vikramashila Universities. They acquired proficiency in Sanskrit literature under these teachers. On their return to Tibet they devised a system of vocabulary for translating Sanskrit technical terms perfectly into Tibetan”.\footnote{3} While in China, the translators paraphrased the meanings with some freedom, in Tibet a free paraphrase would have been regarded as a crime. To this day the Tibetans regard the printed word in works of history, medicine or of whatever subject as inherently sacred.

The Canon is known as Kan-gyur, i.e. ‘the translated commandments’ and the commentaries as Ten-gyur i.e. ‘the translated explanations’. According to Pu-ton,\footnote{4} one of Tibet’s most voluminous writers, the former contains one hundred volumes in one version, and one hundred and eight in another. The latter numbers no less than one hundred and twenty-five, embracing treatises on grammar, poetry, painting, biographies of saints, etc. “The faithful accuracy of these Tibetan translations—an accuracy that shines forth wherever the Sanskrit originals are available for comparison—endows them with a great value at the present day”.\footnote{5}

The pre-Buddhist religion of Tibet was known as Pön,\footnote{6} which appears to have been a form of Shamanism or Nature worship. According to accounts found in the official Chinese histories of the fifth and sixth centuries, when the Pönist religion was in full power, the religious rites of these Tibetans had included even human sacrifice.

\end{itemize}
With the gradual spread of Buddhism in Tibet, Ponism lost its popularity and influence among the people. In its endeavour to make it strong and meaningful, many Buddhist sects were transformed as Ponism. Books dealing with meditation, rituals, and philosophy came to be written which were nothing but wholesale plagiarisms of Buddhist canonical works. They founded monasteries and went in for philosophy, mysticism, and a new fashioned magic. Religious festivals and processions too were incorporated.1

Growing suspicion regarding the genuineness of the Ponist scriptures developed into resentment against them. The king, as the royal protector of Buddhism, ordered that Ponist teachers be punished severely for their conversion of the sublime teachings of Buddhism into the Ponist scriptures. Although the Ponist teachers did not yield, and the transformation of the scriptures continued secretly, Ponism definitely was on the decline. But, it was on its recovery barely a half century after its persecution and the declaration of Buddhism as the State religion of Tibet. This recovery eventually led to the assassination of the Buddhist king Ral-pa-chan and the persecution of the Buddhists in turn during the reign of Lang Dar-ma. As we have already noted, he too was murdered by a Buddhist monk after which Buddhism had its next phase of recovery.

Thus, once when Santaraksita was teaching Buddhism in Tibet during the reign of King Khrirong-led-btsan, opposition to Buddhism was aroused by the Ponists when an epidemic broke out. It gave them an excuse to incite the people alleging that the calamity was due to the wrath of the gods at the introduction of Buddhism. Santaraksita was able to subdue all the evil spirits and the local gods by means of his siddhi powers. It was Padmasambhava who in fact found the correct technique to present Buddhism to the Tibetans in the language and the ritualistic symbolism of their Ponist religion. His great success in propagating Buddhism reduced the Ponists merely to imitating the Buddhist practices and the supporting religious institutions for survival.

Next, it was during the reign of Ral-pa-chan2 in the ninth century that the Ponists were able to muster sufficient opposition to Buddhism as Ral-pa-chan favoured a serious deviation from the Buddhism propagated by Padmasambhava. The resulting persecution of the Buddhists had devastating repercussions on the progress of Buddhism and took some time for recovery. Revival as we have seen, started from an outlying region and gradually spread to the centre. It was the monumental work of Atisa who came to Tibet in 1038 A.C., at the invitation of king Ye-sh'ed-od that brought lasting stability to Buddhism, culminating in the recognition of the full and divine sovereignty of the Dalai Lama over the whole of Tibet later on.

What must be noted here is the important fact that it was the Tantric form of the Mahāyāna Buddhism that was able to survive in Tibet. The fact that even the native Ponist faith could survive only through wholesale adoption of the Tantric forms of religious practice as well as their supporting institutions goes to show the extent of the Buddhist influence on the total Tibetan religious culture.

Tantrayāna: By the seventh century A.C. when the first news of Buddhism reached Tibet, it was mainly the Toātric form of Buddhism that prevailed in India. Tantrayana, "is an occult Buddhism which arose in the second century A.C., made its literary appearance from the sixth century onwards, and in the eighth century found its way into the Buddhist universities as a subject on their curriculum. Only some of its sacred books, which are probably the oldest, survive in Sanskrit, but most of them are extant in Tibetan translations. The Tantra literature is still largely unexplored".3 Tantric texts, were written in a peculiar idiom, a language of symbols and secret conventions, which in Sanskrit was called Sāndhyābhāṣā (literally 'twilight language', because of the double meaning which underlay its words). This symbolic language was not only a protection against intellectual curiosity and misuse of yogic practices by the ignorant or the uninitiated, but had its origin mainly in the fact that the ordinary language is not able to express the highest experiences of the mind. The indescribable, which is experienced by the Sādhaka, the true devotee, can only be hinted at by similes and paradoxes".4

1. "They used to chant the famous formula, 'Om Matri Muye Sale du' in place of the sacred Avalokiteśvara formula of the Lamas, 'Om Mani Padme hum'. (Buddhism in Tibet, M. Krishna Murthy, 8).
2. Written by Murthy as Ral-pa-chan (Buddhism in Tibet, 21).
4. 2500 Years of Buddhism, 361.
Tantrayāna developed into four separate schools as Mantrayāna, Vajrayāna, Sahajayāna and Kālacakra-yanā which form the vertical division of the Tantrayāna. They are horizontally divided into four layers of realization.

**Mantrayāna:** The Mantrayānic conception of the essential identity of all beings with the absolute is interpreted as cosmic interrelatedness in popular Mantrayāna. While the Mahāyānists interpreted this identity nexus as present only in the sphere of the essential, the Mantrayāna believed this as present also in the sphere of the illusory. As a result, they came up with the deduction that it is possible to bring about any result by way of mantra, which in this context were understood as spells. This is explained as a misreading of the true meaning of Mantrayāna.

Correctly understood, mantras are syllables or sentences which a preceptor imparts to trusted pupils (sādhaka). They constitute the key with which they can unlock in themselves the way to the Absolute and thereby to liberation. Mantras in this sense are not the spells of a liberation magic. “A second instrument of the Mantrayāna are ritual gestures of the hands fingers (mudrā), which amplify the efficacy of mantras. For as any emotion expresses itself in a specific bodily reaction, so, in reverse, the assumption of a certain body or hand posture can produce the corresponding psychical state.”

**Vajrayāna:** It takes its name from the ritual sceptre of the Vajrayānic monk. As the world unfolds itself anew to each individual human being from the Absolute, he mistakes this to be two separate things whereas in reality there is only one, the Absolute. Each individual’s essential identity with the Absolute is expressible in a secret seed mantra (bijamantra). An initiate who knows the bijamantra of a Transcendent Buddha or Bodhisattva can, by concentrated repetition call him out of Emptiness into spiritual existence. Thus, the supramundane figures of the Vajrayāna are not objective realities, but subjective experiences of the Absolute.

The most important Buddhas and Bodhisattvas have thus been canonised and fixed as five Buddhas who are the personifications of Dharma and placed in the centre of the maṇḍala. Occasionally it is Akṣobhya, more often it is Vairocana, but usually Vajrasattva on whom the top position is conferred. From the tenth century onwards the term Ādi-Buddha is used to denote the personification of Dharma-kāya.

Once the respective positions of the different salvation helpers had been established, the next step was to depict their positions in the transcendental world which have been expressed in terms of diagrams and maps. In the maps of the transcendental world, the Buddhas, Bodhisattvas and subordinate deities were distributed to the four cardinal points of the compass and their paradises. The primeval Buddha, as the personified Absolute, is placed in the centre. These maṇḍalas served as aids for meditation in Tibetan monasteries.

**Sahajayāna:** It developed in the eighth century A.C. and shows resemblance to Zen. Buddhism which had in that century followers in Tibet. Its most important text is Dohākōsa of Saraha (pāda) which is a collection of 280 stanzas which are extant in Tibetan and (fragmentary) in Abahraamsa. “It is wrong to regard sorrowful existence and liberation as essentially different. Samsāra and Nirvāṇa are the same. They are sahaja ‘twinned’ (lit. ‘born -together’), and do not exist side by side, but within each other. Not quite itself and not quite something other, the Twinned is neither existent nor non-existent. All diversities are thought-constructions; in reality Dharma is the same as non-Dharma, for all things are one; everything is Buddha. With regard to formal morality, the Sahajayāna way to liberation is characterised by unconstraint.”

The inner discipline of the Sahajayāna, according to Schumann, “can be summarised in the formula: know the mind, know your own thought. All diversity, Samsāra as well as Nirvāṇa, springs forth from mind. Only he who has realised the twinship (sahaja of Samsāra and Nirvāṇa) can acquire the absolute truth. The yogin has to hold fast to the (realisation of the) twinship, and regard all things as (essentially) alike. The world is enslaved by thought; only when the mind has ceased to be mind, does the true nature of the Twinned shine forth...”.

1. Buddhism, H. W. Schumann, 158.
2. op. cit. 160
3. op. cit. 163
4. ibid. 164
5. op. cit. 165
Kālacakrayāna: In the Kālacakrayāna man is conceived as an analogue to the cosmos; his physical and mental processes run parallel to the cosmic processes. The knowledge of the secret inner relation between man and the cosmos leads the initiate to liberation. The word kālacakra seems to have denoted the circle of the zodiac originally. Kālacakrayāna understands the term as the proper name of the Primeval Buddha who supervises the course of heavenly and earthly destiny. The primeval Buddha Kālacakra is the spiritual centre of the system and forms the hub of numerous mandalas. Mystical identification with him reveals to the follower all the knowledge he needs for achieving his goal.1

Through all four schools of the Tantrayāna run the four horizontal levels of realisation which starts with Kriyātantra. It is ritual practice and is followed by those who consider cult as decisive. Second comes Čaryātantra, the 'practice of conduct' of those who regulate their daily life according to the Tantrayāna, but have only a faint idea of its deeper meaning. Third comes Yogatantra in which the adept strives for the spiritual contents of the Tantra. The crown of the system is the fourth stage, the Anuttarayogatantra, the practice of supreme union in which the adept realises the full meaning of the Tantrayāna and experiences the Absolute.

As we have already seen in our survey of Tibetan Buddhism, it was the famous Indian Tantric teachers who were drawn mostly from the staff of the Buddhist universities who contributed in large measure to the stabilization of Buddhism in Tibet. It has also become clear from these discussions that it was only the Tantric form of Buddhism with its magic and spells to control the spirits of evil and destruction, that was best able to survive in the religious environment of the traditional Pōnist faith.

In the preceding pages, we saw the extent of the transformation that the original teachings of the historical Buddha Gotama had gone through under the hands of the Mahāyāna teachers. Not only did they introduce new interpretations to the original teachings of the Buddha, in the process they transformed the historical Buddha Gotama to an apparitional body of a Universal Buddha who makes timely manifestations into the world as required.

The dissident monks who broke away from the main group after the Second Buddhist Council called their Council the Mahāsāṅgikī as they had the bigger following than their opponents. They thus came to be known as the Mahāsāṅghikas, who as we have already noted, were the forerunners of the Mahāyāna. As we have completed our survey of the development of Mahāyāna Buddhism both in India and outside India, it is relevant to see how it relates itself to the original teachings of the Buddha as recorded in the texts of the Pali canon.

The Pali canonical texts are quite clear that the Buddha was a human teacher like any of the other contemporary religious teachers of the sixth century B. C. Gangetic regions of India.2 This historical human teacher becomes transformed into a nīrmanakāya of a Universal Transcendent Buddha in the Mahāyāna. As the Buddhas are Transcendent they cannot be seen, or heard by human beings. They can manifest in the world of the humans only through the illusory nīrmanakāya and through this the Buddha seemingly follows the ways of the world, undergoing birth, decay, and even death of which he in fact has always been, beyond.

Together with this transformation, the position of the Buddha changes from that of the human teacher to an object of worship and prayer. He becomes thereby endowed with the power to provide relief as prayed for and help as requested by the faithful, bringing him closely on par with the principal deity of theistic religions in most respects.

The term Bodhisattva according to the Pali canonical texts describes the being aspiring to attain Bodhi (enlightenment) and is used almost exclusively to describe the period of life of Prince Siddhattha up to his Enlightenment. In the later texts, it has been extended to cover the period from his conception to Enlightenment and also in the same sense to describe the period of the lay lives of all previous Buddhas.3

According to the Mahāyāna there are two types of Bodhisattvas, the earthly and the Transcendent. The first are those beings who have made their resolve to become Bodhisattvas and are on their way to its attainment while the second are those who have attained perfection in the pāramitās and thereby attained prajñā.

1. Buddhism, H. W. Schumann, 166.
2. D. 1.47, 70. The names and teachings of six of such teachers; Gods in Early Buddhism, M. M. J. Marasinghe, 3974, 33.
They have refused to enter into Nirvāṇa in order to be of service to beings and are visible to the spiritual eye only. Through the concept of the Bodhisattvas, the Mahāyāna has introduced the two new concepts of saving or salvation through external power, and the transfer of merit (puṣya parināmanā). The Bodhisattvas willingly take over the burden of suffering of all beings in order to lead them to liberation.

The path to the attainment of Nibbāna according to the Pali canonical texts is the path of gradual training, gradual conduct and gradual practice1 and requires individual effort. Although the followers of Mahāyāna accept that Nibbāna is attainable through the Noble Eightfold Path, they do not accept it as suitable for and within the capabilities of all. Faithful confidence in the Buddhas and the Bodhisattvas is potent enough according to the Mahāyāna to take one to the Buddha Paradise wherein one matures to wisdom (prajñā) and Nirvāṇa. Śraddhā produces unimaginable (acintya) merit which is much superior to merit produced by sīla. Śraddhā can be given expression to by veneration and worship through stipulated ritual. Thus, the Mahāyāna introduced the two paths of Śraddhā and puja, obviating thereby the need to follow the path of spiritual development taught in the Pali canonical texts which required individual exertion.

The Mahāyānists claim that the Theravāda Nirvāṇa constitutes only partial emancipation and not the attainment of complete emancipation. They claim that the Theravadins attain only liberation from obstructing defilements, Kesāvaranā vimukti and not liberation from those which obstruct wisdom, Jñeyavaranā vimukti. This of course, is not accepted by the Theravadins. They argue that the moment one liberates oneself from the defilements, wisdom or bodhi dawns on him. Since this final attainment is the end product of a systematic process of training which matures the individual through to bodhi, it is far more realistic than the Mahāyānic claims of attaining liberation through the intervention of the Buddhas and the Bodhisattvas.

The Pali canonical traditions are quite clear that the Buddha taught the way to the attainment of enlightenment. The disciples who attained this final goal of religious endeavour as enunciated by the Buddha are described as arahants in these texts. In the Mahāvagga account of the early history of the sāsana, it is said that with the Pañcavagggiya ascetics attaining liberation, the number of arahants in the world became six ("tena kho pana samayena cha loke arahanto honti").2 The six according to this, comprised the five (pañcavaggiya) monks and the Buddha. When the number of disciples who had attained enlightenment increased to sixty, the Buddha addressing them declares, "I am freed from all snares both divine and human, you too are freed from all snares both divine and human".3 As there is no distinction indicated between the attainment of liberation of the Buddha and that of the arahants, it is not possible to argue according to these early texts that the enlightenment of the arahants is inferior to the enlightenment of the Buddha or that the enlightenment of the Buddha is superior to that of the arahants as far as the purpose of enlightenment is concerned. The terms 'arahanta' and 'Buddha' in these texts describe the individual who has attained enlightenment. The Buddha, throughout the Pali texts, never calls himself the 'Buddha' when referring to himself. Instead, he always uses the term 'Tathāgata'.4 He was referred to as the Buddha by his followers.5 However, the Mahāyānists claim that the attainment of arahanta is inferior to the attainment of Buddhahood is an ingenious misreading into the original textual position and one that is not substantiated by textual evidence. It is the Theravadins who later on got themselves caught in the Mahāyānic misreading and accepted that liberation can be attained through one of three bodhis, the arahantabodhi, paccekapabodhi or the sammāsambodhi, thereby confirming the Mahāyānic interpretation.

The two conceptions of Nirvāṇa of the Mahāyānists are similar in certain respects to the Theravada concepts of Sopādisesa parinibbāna and Anupādisesa parinibbāna.6 According to the Mahāyānists, when

1. M. 111.2: "Anupubbasikkhā, anupubbacariyā anupubbapaṭipadā".
2. Vin. 1.14
3. "Mutto'ham bhikkhave sabbapāsehi ye dibbā yeva manusā. Tumhepi bhikkave mutā sabbapāsehi ye dibbā ye ca manusā". Vin. 1.20
5. Tenasamayena buddho bhagavā Uruvelayāṁ Viharati" Vin. 1.1 etc.
6. D. III. 135; Vin. II. 239.
the liberated attains Apratīṣṭhita Nirvāṇa he lives on without becoming extinguished by death in order to work for the liberation of all beings. This is similar to the Pali canonical idea of the liberated sages working for the spiritual welfare of the worldlings Pratīṣṭhita Nirvāṇa is attained when the liberated individual loses all identity and becomes untraceable. This is similar to the Anupādīsaṃsa parinibbāṇa of the Pali texts.

Our survey of the development of Mahāyāna Buddhism and the story of its spread into countries outside India brings several important issues into focus. The missionary entry of Buddhism into any of these countries was not a single isolated historical event. It was in fact, only the beginning of a long and continuous line of live cultural contacts between the mother country and the recipient country.

While this continuous interaction provided much needed assistance by supplying resource persons as well as new scriptural material during its period of consolidation on new ground, it laid the foundation for the rise of different schools of Buddhism later on. While China and Tibet always looked up to India for such new inspiration, Japan always sought for such assistance from China, its principal benefactor.

Not only did Buddhism spread far out from the land of its birth, it has also been able to weave itself into the religio-ritualistic fabric of each country. It became not only an important element of the 'national spiritual culture' of each country, but became its principal religion as well. This meant that apart from its success in introducing its new spiritual culture into the new environment, each form of Buddhism also gathered a local identity because of which it became identifiable as the 'national religion' of each country, while at the same time conforming to a regional identity and also to a broader identity between the two principal schools of Buddhism, the Theravāda and the Mahāyāna, all accepting the same teacher and the same fundamental teachings.

MAHĀYĀNASĀNGRAHA

See MAHĀYĀNASĀMPARIGRAHA SĀTRA

MAHĀYĀNASĀMPARIGRAHA SĀTRA / MAHĀYĀNA SAMGRAHA is a Buddhist Sanskrit philosophical treatise of Mahāyāna Buddhism. The Sanskrit original is lost, but it is preserved as a Chinese translation. There are three Chinese translations recorded. Nanjio's catalogue provides the following information of the Chinese Translations.

1183 Mahāyānasāmparigraha sātra sho-ta-shan-lun

1184 Sho-ta-shan-lun
Translated by Buddhāṃa A. C. 531 of the Northern Wei dynasty A. C. 386-534, 2 Fasciculi.

The above (two) works which agree with the Tibetan Nos. 1183 and 1184 are similar translations k'yu'en Fascicle 9, fol. 1B SEQ Nanjio 261.

1247 Mahāyāna Sāmparigraha Sāstramūla
Sho-ta-shan-lun-pan
Composed by Bodhisatva Asanga. Translated by Hhuen-Kwan (Mioum-thang) A. C. 648-649 of the Than dynasty 3 Fasciculi 11 divisions.

This is a later translation of 1183 and 1184.

There appears a certain discrepancy as regards the correct title of this treatise. Nanjio does not use the term Mahāyānasāngraha at all. A treatise bearing Mahāyānasāngraha is not found in the said catalogue. As quoted above Nanjio uses the term Mahāyānasāmparigraha sātra. Similarly Mc. Goven (208-9) too had used the term Mahāyānasāmparigraha Sātra. Suzuki (p. 354) has used the term Mahāyānasāmparigraha Sātra. Rahul (Buddhist Encyclopaedia Vol. II p. 133 ff) has repeatedly used the term Mahāyāna Samgraha. According to Winternitz (vol. II p. 340) Bu-ston in his "History of Religion" has ascribed Mahāyāna Samgraha to Asaṅga along with two other works Pañcaabhūmi and Abhidharma Samuccaya. However the introduction to Srāvakabhūmi of Asaṅga, edited by Prof. Antalatal Thakur in the Tibetan Sanskrit Series appears to solve the problem when it reports that the "Mahāyāna Samgraha" is another name given to it (Mahāyāna Sāmparigraha Sāstra), vide pp. 39-40; Bu-Ston, II. 140 (Obermiller's translation) Foot note-Introduction p. IXXV.

As regards its authorship there is no controversy. The authorship is accepted as that of the famous Yogācāra philosopher Asaṅga (circa 5th century A. C.).
The treatise contains a discussion regarding the chief doctrines and the religious stand point of Mahâyâna and its contrast with Hinayâna. It also contains a summary treatment of the essentials of Yogacarabhûmi Sàstra. It is translated into Tibetan by Silendrabodhi Jinaimitra and it is available in Tibetan. Catalogued by F.T. Suzuki in the Tibetan Tripiṭaka catalogue under the entry no. 5549. According to Bu-ston, the Tibetan Historian, this treatise had been constantly consulted by Tibetan writers on Buddhism in substantiating important doctrinal tenets (A jewellery of Sârîputra translated by E. Obermiller p. 38). Buto-ston himself quotes it several times. A commentary called Mahâyânasamgraha Upanibanddhana by an author named Asvaghosa is also mentioned by Bu-ston (op. cit. p. 123).

In Japan there was a Buddhist Sect named the Shoron Sect based on the Mahâyâna Samparigraha Sàstra, which was subsequently absorbed by the Kegon Sect. (Mc. Goven 208-9). It has been translated into French under the Title "Le somme du granaet Vehicule ed 'Asanîga-Loavain 1938 by E. Lamotte.

It is one of the most important treatises of Yogacāra of mahâyâna Buddhism. It contains a summary treatment of the essentials of Yogacarabhûmi Sàstra. Moreover the treatise contains a discussion regarding the chief doctrinal and religious standpoints of Mahâyâna and its contrast with Hinayâna. Nāgarjuna, the founder of the Mādhyamika System of Buddhist philosophy declares "there is no difference between Nirvāna and Samsāra (na nirvānasya samsārat asti...) in his Mādhyamikakārikā. In the Mahâyâna samparigraha Sàstra Asanîga goes a step further and boldly declares that all Buddha dharma of which Nirvāna or Dharmakāya form the foundation, are characterized with passion, errors, sins of vulgar minds.

MAHÂYÂNAŚRÂDHOPTHÂDAŚÂSTRA, Discourse on the Awakening of Faith in the Mahâyâna is a philosophical treatise of Mahâyâna Buddhism. Its Original Sanskrit text is lost but has survived among the Chinese translations. There are two Chinese translation available, one by Paramârtha (Circa 553 A. C.) and the other by Śiksânanda (Circa 700 A. C.).

The Catalogue of the Chinese Translations of Buddhist Tripiṭaka by Bunyin Nanjio (Oxford, 1883) gives the details of the two Chinese translations as follows:

"1249 Ta-Shan-Khi-Sin-Lun-Mahâyâna-Śraddhoptâda composed by Bodhisattva Asvaghosa, translated by Śiksânanda between 695-700 A. C. of the Than Dynasty (502 - 557 A. C.)"

"1250 Ta-Shan-Khi-Sin-Lun Translated by Paramârtha in 553 A. C. of the Lian Dynasty (502-667)" - Nanjio p. 274.

The Catalogue further records: "The above two works are similar translations and they are wanting in the Tibetan K’yuena Fasc. 9, Fol. 8B. Towards the end of the Sâstra, Asvaghosa quotes a sûtra (probably Amitâyus Sûtra or Sukhâvati Vûjûha) on Buddha Amitâyus and his Buddhistsetra." p. 274. It is said that the treatise represents an advanced stage of Mahâyâna Philosophy of the 4th or the 5th century A. C. The doctrine which the treatise incorporates is Vîjñânavâda, as taught by Asanga, and the teaching of Tathâgata Garbhâ and the Tathâta which occurs in the Lankâvatâra Sûtra. It is seen that the work attempts to synthesise the teachings of Mâdhyyamika and Vîjñânavâda schools of Buddhism. Even at the present day the work is much studied in the schools and monasteries of Japan, and it is a favourite book of reference of Mahâyâna philosophy. However it is conspicuous that the Sanskrit Original is entirely unknown and is not quoted by the great masters of Mahâyâna Buddhism or their commentators.

The authorship of the Mahâyânaśrâdhopadâśâstra is generally attributed to the poet Asvaghosa, the author of the Buddhacarita. Asvaghosa the poet is sup-
posed to have been associated with the Royal Court of the Indo-Scythian Buddhist king Kanishka whose reign is generally fixed for the 2nd century A.C. But there is no consensus among the scholars as regards attributing the authorship to Asvaghosa. As an advanced stage of Mahayana philosophy which was seen in the 4th and 5th centuries, is well reflected in the treatise. Winternitz doubts the authorship of Asvaghosa. He conjectures whether the authorship has been attributed to the great poet with a view to secure a greater reputation for the book. If at all the author was non other than Asvaghosa, he prefers to call him Asvaghosa II, a philosopher more of a poet, who may have lived in the 5th century A.C. Suzuki, assuming Asvaghosa as the fonder of Mahayana, attributes Mahayana-raddhotpada-ashastra to Asvaghosa. Professor Takakusu who holds that the authorship of the poet Asvaghosa as out of question, says that the older Catalogue of Chinese texts does not contain the name of Asvaghosa as the author (Winternitz, Vol. II, p. 348) in the biography of Hsuan Tsang the authorship is attributed to Asvaghosa.

It is also said that Hsuan Tsang translated Mahayana-raddhotpada-ashastra from Chinese to Sanskrit and propagated it throughout in the five empires of India. Few Japanese scholars, especially Senshoi Murakami, also holds the view that the original Mahayana-raddhotpada-ashastra was in Chinese and was later translated to Sanskrit (Winternitz II, p. 349).

The French scholar Sylvain Levi discovered Mahayana-raddhotpada-ashastra in Japan when it was till then unknown in Europe. Under the guidance of eminent Buddhist priests of Japan, he studied it comparing it with the two Chinese versions and prepared a French Translation which he had no opportunity to print. Meanwhile Tectitara translated it into English after the second Chinese version under the title Asvaghosa's Discourse on The Awakening of Faith in the Mahayana (Chicago 1900). It is also, translated into English after Paramartha's Chinese Version by Timothy Richards, The New Testament of Higher Buddhism.

MAHAYANASUTRALANKARA is a Buddhist Sanskrit philosophical treatise of Mahayana Buddhism. Its Sanskrit original as well as the Chinese translation is extant. Nanjio’s A Catalogue of the Chinese Translation of the Buddhist Tripitaka records the details of the Chinese translation as follows:

The French Scholar Sylvain Levi discovered the Sanskrit original and edited it with a French translation (Paris 1907). His familiarity with Chinese and Tibetan enabled him to deal with the text much more efficiently than an authority acquainted with Sanskrit alone. The Text and the translation is described as a magnificent illustration of French scholarship (Nariman p. 314).

Mahayana Sutralankara has been translated into Chinese by the Hindu Prabhakara Mitra in 630-633 A. C. The Tibetan translation was done by an Indian called Sakyasimha assisted by Tibetan Lotsavas or interpreters.

According to tradition Mahayana Sutralankara was revealed by the future Buddha Maitreya to Asanga.
in the Tusita Heaven. The entire Sanskrit original is composed in memorial verses or Kārikas. The text describes tenets of Mahāyāna such as Bhūmis - the stages in the career of a Bodhisattva, the trikāya - three bodies of the Buddha, Ālayavijñāna - Store House of consciousness. As regards the authorship, the scholars hold different views. According to Sylvain Levi, the author of Mahāyāna Sūtrālāṅkāra is Asanga. Futher he attributes its commentary also to Asanga. But Winternitz (p. 341) attributes its authorship to Maitreyanatha, the teacher of Asanga. Winternitz points out that the name of Asanga is not mentioned in the text as the author, but he is described as being "Proclaimed by the Bodhisatta Vyavadātāsraya (Purifier of the doctrine). This might be an epithet of Asanga as well as of Maitreyanatha. Tibetan historian Buston attributes the commentary of Mahāyānasūtrālāṅkāra also to Vasubandhu.

Hakuju-ui says "It is still a question whether the authorship of the commentary on Mahāyānasūtrālāṅkāra belongs to Asanga or to Vasubandhu" (Lamman Studies p. 99). G. Tucci has attributed six works including Mahāyānasūtrālāṅkāra to Maitreyanatha. He is of opinion that Maitreyanatha wrote the verses (kārikās) of all the six works and his chief pupil Asanga wrote the commentaries.

Apart from Mahāyānasūtrālāṅkāra another book named “Sūtrālāṅkāra” is extant. The Sanskrit original is lost and the Chinese translation is available. Nanjio’s "A Catalogue of the Chinese Translations of Buddhist Tripitaka" provides its details thus:

No. 1182 Sūtrālāṅkāra Sāstra  
Ta-k-yan-yen-kin-lun  

The original Sanskrit text is lost. French scholar Edouard Huber identified the Chinese translation and edited it in French (1908 Paris). Fragments of Sūtrālāṅkāra have been found in Turkestan, Central Asia.

Sūtrālāṅkāra or sutra Ornament is a collection of pious legends after the model of the Jātakas and Avadānas which are narrated in prose and verse in the style of Indian poetic art. It comprises of a series of Buddhistic sermons in the guise of anecdotes transmitting morals inculcated by the Buddha.

The authorship is attributed to the great poet Asvaghosa the author of Buddhacarita, who is supposed to have been associated with King Kaniska, circa 2nd century A. C. As the Buddhacarita is quoted several times in the Sūtrālāṅkāra it is clear that the Buddhacarita was composed prior to the Sūtrālāṅkāra by Asvaghosa.

(When referring to Mahāyānasūtrālāṅkāra of Asanga, sometimes scholars refer to it as Sūtrālāṅkāra without the prefix Mahāyāna. This leads the reader to a difficult situation in distinguishing it from Sūtrālāṅkāra of Asvaghosa, unless the author’s name is given).

MAHINDA, the arahant therā who introduced Buddhism to Sri Lanka in the 3rd century B. C. According to the historical writings of Sri Lanka, the conversion of Asoka (q:v) to Buddhism was effected by a venerable monk named Moggaliputta Tissa Therā. That he was a historical figure is proved by the discovery of an inscribed casket in Stupa No. 2 at Sanchi. This therā with the help of Asoka, held a Council and expelled many undesirables from the Order of monks. This Council also settled what the true doctrines of Buddhism were. The Pali canon as it exists today is said to have been redacted at this Council which was the third to be held after the Passing away of the Bud­dha. An important decision taken at this Council was to send missionaries to preach Buddhism in the outlying provinces of the Mauryan Empire and in lands beyond. Special importance appears to have been at­tached to the mission intended for Sri Lanka. It was
headed by Mahinda Thera who, according to the Theravāda tradition, was a son of Emperor Asoka. According to the Northern Buddhist tradition he was an uterine brother of Asoka and not his son. The tradition prevailing in Sri Lanka is that, Mahinda Thera was a son of Asoka by the daughter of a merchant of Vidisa (modern Bhilsa). The Theri Sanghamittā, according to Sri Lankan writings, was the daughter of Asoka and sister of Mahinda Thera. Asoka permitted both his children to adopt the religious life so that he may become a kinsman of the Buddha's religion.

An inscription of about the 1st Cent. A.C. at Mihintale refers to the images of Mahinda Thera and three of his companions. Mahinda Thera arrived in Sri Lanka with four other theras i.e. Íthiya, Uittiya, Sambala and Bhaddasāla. These missionaries to Sri Lanka did not arrive immediately after the Third Council but tarried for some time at Vedisagiri (probably modern Sanchi) until the time was propitious. When Tissa, the second son of Maññalīka (367-307 B.C.), ascended the throne of Sri Lanka (307-267 B.C.), Mahinda Thera and his four companions arrived at Mihintale. It is said that Tissa had been a friend of Asoka, even though the two had never seen each other. The new king Tissa, soon after his accession sent an embassy to Asoka, bearing costly presents. These envoys returned to Sri Lanka, also carrying rich presents. In addition, the envoys were asked to convey to Tissa, the following exhortation from Asoka.

“I have taken refuge in the Buddha, the Dhamma and the Sangha. I have declared myself a lay disciple in the religion of the Sākya son. Seek then thou, O’ best of men, converting thy mind with believing heart, refuge in these best of gems”. To the envoys returning home he said, “Consecrate my friend, yet again as king”. Tissa had already assumed kingship and at the behest of Asoka-he was consecrated a second time. Mahinda Thera would have learnt of these developments in Sri Lanka and realising that the time was opportune for the fulfillment of his mission, he arrived in Sri Lanka with his companions.

It is said that Vedisagiri-vihāra in the Avanti country was the starting point of Mahinda Thera's journey to Sri Lanka. This was the part of India to which his mother belonged. The tradition current in Sri Lanka is that the first meeting between Mahinda Thera and Tissa, the king of Sri Lanka took place at Mihintale on the full moon day of the month of Jeṭṭha (May-June: Sinhala: poson) in the 18th year of Asoka's reign i.e. two hundred and thirty six years after the Passing Away of the Buddha. The king was at Mihintale on a hunting expedition when he met the missionaries. A conversation ensued between them and the king was soon convinced that these developments were connected with his friend Asoka's message to him. Thereafter the therī delivered a sermon the Cūlahatthipadopama Sutta, to him and to his retinue who had then joined him. Soon after his meeting with the king, Mahinda Thera and his companions who formed a chapter according to Vinaya rules, performed at Mihintale the first saṅghakammā (Act of the Order) in Sri Lanka, by conferring ordination on a lay disciple named Bhānduka who had accompanied them. They remained at Mihintale that night. They were invited to come to the city the next day. The first sermon was preached in a pavilion specially built for the purpose. The next sermon was delivered at the Elephant Stables where larger crowds gathered to hear it. As the crowds who flocked to hear the sermons became larger the next congregation was held in the spacious grounds of the Nandana Park outside the city. The king offered the Mahāmegha garden to the south of the city, to be used as the abode of the missionaries. This was later donated to the community of monks of the Four Quarters. There was also a request from the ladies of the royal household to be permitted to enter the order as nuns but Mahinda Thera informed the king that it was not possible for him to admit women to the Order and that it could be effected if his sister, the therī Sanghamittā (q. v.) was invited to Sri Lanka. Accordingly it was decided to send a mission to Asoka to send the required number of nuns as well as a branch of the Sacred Bodhi Tree to be planted at Anurādhapura. During the next three days sermons were preached to numerous congregations that had assembled at Nandana park.

The king inquired from Mahinda Thera whether Buddhism had got established in Sri Lanka but the latter replied that for that to be achieved, it was necessary to establish the consecrated boundaries so as to include the whole city within them. This was executed the very next day, the king himself having ploughed a furrow marking the boundaries of the consecrated area. In the days that followed, edifices necessary for the Sāṅgha began to come up in the Mahāmegha garden. The institution named Mahāvihāra which in course of time became a great monastic establishment had its beginnings in this wise. About a month was spent in delivering discourses to people who had come from various parts of Sri Lanka. During the vassa period (retreat during the rainy season) Mahinda Thera went
to Mihintale to spend the retreat there. The king followed him and took steps to prepare dwellings for the monks. Thereafter Mihintale became a second monastery.

Steps were next taken to build a stūpa enclosing the corporeal relics of the Buddha. These were obtained by sending an envoy to Asoka, who handed them over. They were received by the king and the people of Sri Lanka with great rejoicing and ceremonial. As decided earlier, another mission was sent to Asoka to send the Therī Saṅghamittā and also a branch of the Sacred Bodhi Tree at Buddha Gaya. This request too was readily granted. Different classes of artisans to perform the various services necessary for the Bo Tree also accompanied the sacred object. The Therī Saṅghamittā and other nuns together with the Bo Tree arrived at Jambukola and they were received with great honour. In course of time the Bo Tree arrived at Anurādhapura and was planted on the terrace prepared for it.

When King Devanāmpiya Tissa had completed his religious activities, he is said to have asked Mahinda Thera whether Buddhism had been well established in his land. To this the therī replied that it had been well planted but had not taken root. He was told that the religion will take root only when a person born of Sri Lankan parents, studies the Vinaya rules and expounds it. The king's nephew Ariṭṭha who had already joined the Order and acquired spiritual attainments was chosen for the purpose and at an assembly of bhikkhus, he expounded the Vinaya. Thereupon the king was convinced that Buddhism had been very well established in his country.

King Devanāmpiya Tissa reigned for forty years and during the whole of this period, Mahinda Thera and Saṅghamittā Therī lived in Sri Lanka. They were occupied in the propagation of the Buddhist faith. The King died in the year 267 B. C. and was succeeded by his brother Uttiya who is said to have reigned from 267-257 B. C. The Mahāvamsa records that the passing away of Mahinda Thera took place in the eighth year of Uttiya (i.e. 259 B. C.).

MAHIMŚĀSAKA, Var. MAHĪŚĀSAKA, (Skt. MAHĪŚĀSAKA), One of the eighteen schools (aṭṭhārāsa ācariyavāda) of Buddhism. These schools are sometimes referred to as nikāya or ācariyakula. At the second Buddhist Council, held a century after the demise of the Buddha the Vajjiputtaka monks who promulgated the ten theses (dasavatthuni) broke away from the original body of the sāṅgha and named themselves Mahāsāṅghika sect (Mahāsāṅghika ācariyakula), the rest being left to appropriate for themselves the name Theravāda meaning "The Orthodox Clergy". The Pali commentaries and chronicles record that in the second century after the demise of the Buddha two other schools emerged from the Theravāda:-(I) Mahīṁsāsakas and (II) Vajjiputtakas. According to this tradition the Mahīṁsāsakas were the first to secede from the Theravāda. The Mahīṁsāsakas gave rise to two other schools: I. Sākhamputtakas and II. Dhammaguttikas. The Sākhamputtikas in turn gave rise to Kasāyiyas who split later into two schools: Sāṅkantikas and Suttavādins. Thus from the Mahīṁsāsaka school five other offshoots arose in course of time.

From the Vajjiputtakas four other seceding schools arose, to wit, (I) Dhammmuttarīyas, (II) Bhadrayānikas (III) Channāgārikas and (IV) Sammitiyas. Thus during the second century after the demise of the Buddha, from the Theravāda as the parent body, these eleven seceding schools arose, making twelve in all (Paramathadipani, SHB. Vol. XXXVIII pt. 1 pp. 80-83; Dipavamsa, V. 30-54).

Vasumitra and Bhavya give a slightly variant version of the emergence of sub schools of this group. According to Vasumitra Sarvāstivāda branched off first from the Sthaviravāda (Theravāda) and from the latter appeared the Mahīśāsakas, Kasāyiyas and Saṅkrāntivādins each from the other. Out of the Mahīśāsakas developed the Dharmaguptakas.
According to the Pali tradition Sarvāstivāda branched off from the Mahīṃsāsakas. Vasumitra takes Saṃkrāntivādins as an alternate name for Sautrāntikas. Thus according to Vasumitra the Saṅkantikas and the Suṭṭavādins of the Pali tradition represent one and the same school called by him the Saṃkrāntivādins.

Some modern scholars believe in the emergence of two schools by the name of Mahīṃsāsaka, one earlier and the other later. According to this view the earlier Mahīṃsāsaka school goes back to the time of the first Buddhist Council. This makes the origin of this sect even prior to the secession of the Mahāśāṅghikas. The evidence for this view is said to be found in the Pali Cullavagga, in the episode of Elder Pūraṇa of Dakkhinagiri who was not a party to the mission of Mahadeva Thera. The Samantapāsādikā of the Pali tradition represent one and the same school called by him the Saṃkrāntivādins.

The origin of the Mahīṃsāsaka school as seen above is not clear. Mrs. Rhys Davids renders the term Mahīṃsāsaka into English as “Earth Propagandas” (Points of Controversy p. XVII). This school is said to have held the view that the earth lasts for aeons. It is unlikely that a Buddhist school came to be recognised because of this view. It is very likely that most of the schools of Buddhism go back to the communities of monks which owed their rise to the missions sent out at the end of the Third Buddhist Council at the time of Emperor Asoka. The Mahīṃsāsakas may be connected to the mission of Mahādeva Thera. The Samantapāsādikā records that Elder Mahādeva was sent to a place called Mahīṃsamaṇḍala to spread Buddhism in that country (VinA. Vol.1). The Mahīṃsamaṇḍala referred to in the Pali sources had been generally identified with modern Mysore. Although the original seat of this school has not been located with certainty, it is possible that the distinctive name by which this school came to be recognised as a separate sect is derivative with some dialectical variation indicating their origin in the Mahīṃsamaṇḍala, just as the use of the term Andhaka in Pali to designate a class of monks in the Andra country. This identification is fortified by the fact that the home of most of the sects of the Therāvāda school is to be found in the ancient mission territory. The name of a famous teacher in the group, or the name of the place where the group carried on their missionary activity, or a particular view to which they all subscribed supplied the distinguishing name for the school. In course of time in its development and spread the Mahīṃsāsaka school became the parent body of five other sub-sects (see above) and it drifted to the south as well as to the east of the centre of its origin. Thus we read of the Mahīṃsāsaka School co-existing with the Mahāvihāra in Sri Lanka in the 5th century A.C. The pali commentaries, excepting the Ājñātathakathā, and the Pali Chronicles do not refer to the existence of this sect in Sri Lanka. However in a verse in the prologue to the Ājñātathakathā (J.1.p.1.v.9), the commentator mentions that Buddhadeva - a monk of the Mahīṃsāsaka sect, requested him to compose the commentary to the Jātaka in Pali. Fa-hsion mentions that he found a copy of the Mahīṃsāsaka Vinaya in Sri Lanka which he copied and took along to China with his collection of books (Kao Seng Fa-hsien Chuan T 2080, p. 865). These facts establish that the Mahīṃsāsakas were a recognised and a well established sect in Sri Lanka and that there was no apparent hostility between the monks of this sect and the Therāvāda monks of the Mahāvihara. They may have lived in harmony with the monks of the Mahāvihara who enjoyed royal patronage and may have finally lost their identity as a separate school of monks by being absorbed into the Theravāda fraternity. Although the Mahīṃsāsaka Vinaya was found to exist in Sri Lanka at the time of Fa-hsien’s visit, it now exists only in Chinese translation (Franwallnes, The Earliest Vinaya and the Beginnings of Buddhist literature, SOR, VIII, 1956, p. 2).

The records kept by the two Chinese pilgrims Hsuan Tsang and I-Ching mention that the Mahīṃsāsaka monks of the Mahīṃsāsaka sect in Uddiyana...
ern-Turkestan. According to the biography of the translator Buddhajiva, the Mahiṃsāsaka Vinaya was commonly found in Kasmīr. It is also a well known fact that Asaṅga of Purusapura in North-west India was at first a follower of the Mahiṃsāsaka school, but was later converted to the Yogācāra school by his brother Vasubandhu. Thus it has been observed that ‘much that is usually attributed to Yogācāra is either Sautrāntika or Mahiṃsāsaka doctrine with a slight Mahāyāna slant. The Mahiṃsāsakas had a monastery to the south of Takkasilā,(Epigraphia Indica, I, 1892, p. 238) and another monastery at Nagarjunakoṇḍa on the banks of the Kṛṣṇa (Epigraphia Indica, Vol. XX, 1929-30 p. 24). Although the original sect of the Mahiṃsāsakas still remains a matter of conjecture, available facts strongly suggest that the Mahiṃsāsaka sect had connections with the Mahiṃsāmandaḷa of the Pali tradition which has been located in Northern Deccan and identified with modern Mysore. From Chinese testimony it is clear that the Mahiṃsāsaka was a school with distinct doctrines and with a literature of its own. The KathāvatthuAttakathā quotes and ascribes certain doctrinal views to this school. In the list of texts brought home by Hsuan-Tsang from India twenty two works of the Mahiṃsāsaka school are included (Franwallnus op. cit. p. 9). What was lost of the school in India and in Sri Lanka is preserved in Chinese translations. The history of Buddhism in China shows that the Mahiṃsāsakas constituted one of the main and influential schools in China. Their Vinaya remained the basis of a monastic discipline in that country. In the Salt Range, in Western Vahika, there appear to have been Mahiṃsāsaka establishment. The Kathāvatthu does not refer to the Mahiṃsāsaka school by name though it refutes the unorthodox views held by this school. The author of the Paramatthadipani, the commentary to the Kathāvatthu, mentions this school by name and says that the Mahiṃsāsakas held that the Noble Eight Fold Path was five fold (Maggakathā Kv. XX. 5; Paramatthadipani, SHB. Vol. XXXVIII. p. 203; Points of Controversy, PTS. London, 1915, p. 347). With the Andhakas they held that there are two kinds of cessation (Nirodhakathā. Kv. II, 11; Points of Controversy p. 136; Paramatthadipani, SHB. Vol. XXXVIII p. 136). With some Andhakas they held that transition from one jhāna stage to another is immediate (Jhānasankitantikathā Kv. XVIII, 6; Points of Controversy, p. 328; Paramatthadipani p. 194). With the Pubbaseliyas they held that the nidānas (links in the chain of Causal Genesis) were unconditioned (Kv. VI, 2; Points of Controversy p. 186; Paramatthadipani p. 140). With the Uttarapatakas that space is unconditioned (akāśakathā, Kv. VI, 6; Points of Controversy p. 192; Paramatthadipani p. 142), and with the Sammitiyas that the acts of self-expression (vīññā are karma and hence morally qualifiable (Kv. XV 7; Points of Controversy p. 221, Paramatthadipani, p. 170).

With the Sammitiyas and Mahāsandhiyas they held that three factors of the Eightfold Path are matter and not mental (Kv. X, 2) and that the path was five-fold (Kv. XX, 5; Points of Controversy p. 24). With the Hetuvādins they held that the spiritual faculties are not for those in worldly life (Kv. XIX, 8; Points of Controversy p. 342; Paramatthadipani, p. 200).

MAHIṢAMAṆḌALA

MAHIṢAMAṆḌALA, Var. Mahisakamāṇḍala, MAHIPAMAṆḌALA, (raṭṭham) Mahiṃsa (VinAl. p. 63, 66), name of a country converted by Elder Mahādeva, one of the missionaries sent during Emperor Asoka’s reign after the third Buddhist Council. The Samantapāsādikā mentions that elder Mahādeva went to the principality of Mahiṃsāmandaḷa, and to convert the people, he preached the sermon named ‘Divine Messengers’ (Devadūta-sutta, M. III. pp. 178-87). At the conclusion of the discourse, forty thousand beings gained insight into the dhamma, and a further forty thousand beings entered the Order. The Mahāvamsa and the Dipavamsa corroborate this statement (Mhv. XII, v. 4, 29; Dpv. viii. 5. p. 60). The subsequent history of Buddhism in this country is obscure and Buddhism did not get deep rooted in the soil of Mahiṃsāmandaḷa, as it did in Sri Lanka.

Mahiṃsāmandaḷa is generally taken as the modern Mysore (See. Smith. The Oxford History of India, Oxford, 3rd ed. 1958; p. 122). But other scholars like Fleet contend that this identification is hardly correct. He postulates Mahiṃsāmandaḷa as ‘territory of the Mahīṣa’ of which the capital was Mahīṣmahā. Fleet agrees with Pargitar in placing the capital of Mahīṣha on the island of the Narbadā river, now known as Mandhāta (Fleet, JRAŚ. 1910, pp. 425-47). Geiger also says that Mahiṃsāmandaḷa is a district south of the Vindhyān mountains, (Geiger, Trsl. Mhv. p. 84. 5).

MAHIYAṆĀΓANA THŪPA

MAHIYAṆĀΓANA THŪPA is an ancient Thūpa in Sri Lanka, situated on the banks of the river Mahaveli (Mahāvalūkā Nadi) in the Uva Province, about 20 miles from Badulla, the provincial capital city. According to the Eluattanagaluwansa (1392 A.C.), the Sinhala translation of the Pali Hathavanagallavihāravansa (Dambedeniya Period 1231-1271 A.C.), the area was known in the olden days as Minibe (modern Minipe), so called due to the presence of a variety of gems (Eluattanagaluwansa, ed. M. Piyaratana, Colombo 1953 p. 4-5). Reckoned by the ancient tradition as built on the spot sanctified by the Buddha by way of sitting on the spot, and also due to its recognition by the same tradition as the first ever thūpa to be built in the island, Mahiyangana thūpa is regarded as the oldest Buddhist shrine in Sri Lanka. In the enumeration of the 16 places sanctified by the Buddha in the Island, Mahiyangana occupies the first place:

Mahiyanganāṃ Nāgadipam
Kalyāṇam padalaśicam
Divāguham Dighaṇvī
cetiyaṃca Mutiyanam
Tissamahāvihāraṇca
Bodhiṃ Māricavattiyam
Sonnamālī mahā cetiyam
Thūpārāma bhāyāgirīm
Jetāvanam Sālacetiyaṃ
Tathā Kācaragānakaṃ
Ete solaṣa thānāni
Aham wandāmi sabbadā

According to popular tradition the Buddha paid three visits to the island out of which it was Mahiyangana he visited first. The Mahāvamsa (Ch. I verse 19-36) describes the first visit of the Buddha to the island (Mahiyangana) and the establishment of the Mahiyangana Thūpa and its history up to the reign of king Duṭṭhagamini (q.v.).

As narrated in the Mahāvamsa the Buddha foresaw Sri Lanka as the place where the Sāsana would be finally established (in the future) and for the purpose of removing the Yakkhas who were residing there to facilitate the establishment of the sāsana, he visited the island on the Full Moon Day of the month Phussa (December - January), nine months after the enlightenment. On the day, as the story runs, there was a great assembly of Yakkhas in the Mahānāga Park, which was three yojanas in length and one yojana in width, on the banks of the river Mahāvalūkā. The Buddha came to Mahiyangana and appeared in the sky over the assembly of Yakkhas above the spot where the Mahiyangana thūpa was to be established and frightened the yakkhas with rain, storm and darkness.

Mahiyanganaṁ thāne Vehāsayam thito Vuttoṭṭhātodhākārādīṃ tesam samvejanamakā (Mhv. Ch. I. v. 24)

The yakkhas were frightened and begged mercy of the Buddha. The Buddha replied, “I will surely take away your suffering and the fear, give me a place to sit, with the consent of all” (Mhv. Ch.I. v. 26). The Buddha thereafter dispelled their fear, removed the cold and the darkness and sat spreading the canmakanda (the hide used for sitting) and extended it further to emanate heat. The yakkhas afflicted with heat and fear stood around. The Buddha made them to embark on a beautiful island called Giridīpa, which was brought there for the purpose and launched it back to where it was, after the yakkhas stepped on to it.

Thereafter the Buddha preached the Dhamma to the Devas who had assembled there and many of them realised the Dhamma. When the Buddha was about to leave, Mahāsūmāna Devinda of Sumanakūta who attained the state of Sotāpanna begged of the Buddha to provide him with an object of worship. The Buddha gave him a hand-full of hair from his head. Mahāsūmāna Devinda received the hair in a golden container and enshrined it in a thūpa of blue sapphire seven cubits high, erected on the spot where the Buddha was seated. The Vamsatappakāsini (MhvA. I 98) commenting on it, provides additional information in giving the circumference of this Thūpa as 120 cubits.

The Mahāvamsa proceeds further to say that when the Buddha attained Parinibbāṇa, a monk named Sarabhu, a pupil of Sāriputta Thera, extracted the collar bone of the Buddha from the funeral pyre through his psychic powers (iddhi), proceeded to Sri Lanka accompanied by bhikkhus, deposited the collar bone in the Mahiyangana Thūpa itself and covered it (original thūpa) with a thūpa 12 cubits in height built with golden coloured stones (Medavannappāsana). The Vamsatappakāsini (ibid) provides further information to say that the Medavannappāsana stones were brought from the realm of Nāgas (Nāgabhavana) by two powerful novices Sumana and Sivali.

However it is to be noted that the Mahāparinibbāṇa Sutta (q.v.) that describes the Buddha’s Parinibbāna and the cremation of his body does not say anything
about a bhikkhu named Sarabhu extracting the collarbone from the Buddha’s funeral pyre and no mention of Sarabhu is found anywhere else.

Though the Dipavamsa records the arrival of the Buddha and the subduing of yakkhas conspicuously does not mention the establishment of the Mahiyangana Thūpa. But says that the Buddha stood on the spot where Subāṅgana Thūpa was built (later) (Dipavamsa Ch. I. v. 52). Therefore it is possible that the Mahiyangana Thūpa site was earlier known, as Subāṅgana or it might have been another name for the same site. The Mahāvamsa speaks of the immediate building of the thūpa while the Dipavamsa has identified the site only. Apparently the Dipavamsa names the site where the thūpa would be built in the future. The absence of the establishment of the Mahiyangana thūpa in the Dipavamsa needs examination by students of history. Further the Mahāvamsa does not attribute the establishment of the Thūpa to human beings. It attributes the establishment of the thūpa on earth to non human beings, namely Mahasumana Devinda of SumanāKūta. Has the author of the Mahāvamsa tried to pre date the establishment of the Mahiyangana Thūpa? i.e. connect it’s founding with the Buddha’s first visit to Sri Lanka.

The Mahāvamsa does not conclude the story of the Mahiyangana Thūpa at the point of Bhikkhu Sarabhu’s enlargement of the Thūpa and leaps to the reign of Devanampiyatissa, three centuries forward and says that a prince named Uddha Culabhaya, a Brother of Devanampiyatissa, enlarged the cetiya and made it thirty cubits high.

Devanampiyatissarañño bhātu kumārako Uddha Culabhayo nāma tām cetiyām abhūtam Tām chāḍetvā kāresī tīṃsahatthuccacetiyaṃ (Mhv. I. v. 40-41)

We are hearing of this brother of Devanampiyatissa for the first time and no mention of him is found elsewhere. Malalasekara (DPPN. Vol. I. p. 384) mentions him as a nephew of Devanampiyatissa, perhaps by an over sight. The Vamsatthapakkasini (MhvA. Vol. I) describes him as a son of Muṭasiva and adds that Uddhaculabhaya having seen the stūpa being worshipped by Arahants, devas, nāgas and gandabhas proceeded to improve it. According to the Saddharmālankāra (late 13th century A. C.) the Sinhala translation of the Pali Rasavāhini (early 13th century) it was Devanampiyatissa who got the cetiya raised to 30 cu-

From the reign of Devanampiyatissa the author of the Mahāvamsa takes the reader direct to the period of Duttthagāmini. Accordingly it is said that Duttthagāmini while subduing Tamil, staying at Mahiyangana raised the cetiya to a height of eighty cubits (from the 30 cubits raised by Uddha Cūlabhaya).

Maddantō Damile Rājā Tatrapāho Duṭṭhagāmini asūṭihatham kāresī tassa Kaṭicuka Cetiyaṃ Mahiyāṃganaṭhipo yam eso evam patīthito (Mhv. Ch. I. 40-42)

When we peruse the relevant chapters discussing the Duttthagāmini episode, it is seen that his raising the Mahiyangana Thūpa is absent, though his fighting with Tamils at Mahiyangana is described (Mhv. Ch. XXV. v. 7). However it is highly unrealistic that a king while engaged in a fierce battle with a powerful enemy devoting his time, energy and materials to put up a thūpa on the way no sooner he commenced his campaign.

The Mahāvamsa account on the founding and the history of the Mahiyangana Thūpa in the first chapter, almost at the beginning (vv 33-43) appear out of place. The Mahāvamsa author at this point is discussing the Buddha’s first visit to the island, which the Buddha is said to have undertaken nine months after attaining Enlightenment. He had yet to deal with the other two visits of the Buddha to the island, the Buddha’s parinibbāna, three Buddhist Councils, the introduction of Buddhism to the island etc. His accommodation of the Mahiyangana story while discussing an event that is said to have happened when the Buddhasāsana was only nine months old, add to the inference that he was making an effort to predate the founding of the Mahiyangana Thūpa which happened on a subsequent date in history. Yet, it is pre mature to discard the Mahāvamsa record of the founding of the Mahiyangana cetiya, which is definitely not less than 1500 years old, till archaeological or literary evidence to the contrary is encountered.

Whatever may be the case, the Mahiyangana- thūpa should be one of the earliest thūpas in the island. The Sinhala Mahābodhihīvamsa, the translation of the Pali Mahābodhihīvamsa of Upatissa (circa 11th century A. C.) which itself is based on the Sihalatīhakathā-
Bodhivamsa of the Anuradhapura period, enumerates it as one of the places where the thirty two seedlings of light fruits of the Srimahabodhi (Itaresam catunnam phalanam bijehi jate dvatinsa tarun Mahabodhipadape-Mahabodhivamsa p. 162) were planted (Sinhala Bodhivamsaya ed. Samaranayake, D.P.R., Colombo 1970. p. 329). The Mahiyangana stupa is mentioned in the Kudisanghassaavatthu in the Sahassavatthupakarana, a Pali treatise, thought to have been written during the Anuradhapura period (ed. Buddhadatta, Colombo, 1959. p. 69).

The appearance of the Bodhi concerned extant uptO date at Mahiyangana testify to the age of the Mahiyangana Thupa, which should be calculated as several thousands of years.

Improvements and renovations effected by various kings to the Mahiyangana Cetiya are recorded in the Chronicles. Voharakatissa (209-231 A. C.) erected a parasol over the Mahiyangana Stupa (Mhv. xxxvi V 34). The native-place of three Lambhakana princes - Sanghatissa, Sanghabodhi and Gotabhaya was Mahiyangana (Mhv. xxxvi V 58-59). According to the Eliuttanagalaavamsa (1392 A. C.) the Sinhala translation of the Pali Hathavanagallavamsa (Dambadeniya Period 1236-1271 A. C.). Prince Sanghabodhi was entrusted to his uncle Nanda Thera by his father Khatthiya Selabahya at the Mahiyangana Temple. (Eliuttanagalu Vamsaya ed. M. Piyaratna, Colombo, 1953. p. 7).

Sena IV (853-887 A. C.) gave a village for the maintenance of the Mahiyangana Cetiya (Mhv. Ch. LI v. 74). Similarly Kassapa IV gave a village for its maintenance (Mhv. Ch. LI v. 14). Mahiyangana is one of many shrines found dilapidated and repaired by Vijayabahu I (1059-1114 A. C. (Mhv. LX v. verse 59). Parakramabahu VI (1410-1468 A. C.) too is said to have effected some repairs to it (Mhv. XCI v. 29).

Though the Mahiyangana Thupa was dilapidated due to ravage of time it was not abandoned completely and it was a popular destination for pilgrimages even during the Kandyan period. Several Kandyan kings had visited it on pilgrimage. King Virawkrama of Senkadagala (circa 1541 A. C.) is said to have gone to Mahiyangana Cetiya on foot from his capital covering a distance of seven gavutas and held a great festival in honour of the Thupa (Mhv. Ch. XCII). King Narendrasinghe (1707-39 A. C.) is said to have visited the Thupa thrice (Mhv. Ch. XCVIII. v. 27 ff); King Vijayarajasinghe (1739-1747 A. C.) held a magnificent festival in its honour; King Kirti Sri Rajasinghe (1747-1782 A. C.) made a pilgrimage to the spot and also facilitated pilgrims from Siam to visit the shrine and to hold celebrations there (Mhv. Ch. C v. 125 f). Rajasinghe II was born at Mahiyangana while his parents were staying there for protection.

It is significant that the Mahiyangana Temple is mentioned in the Badulla Pillar inscription, which Paranavithana assigns to the reign of Udaya IV (946-54 A. C. (Epigraphia Zelanica, Vol. V, Part II, p. 176-95). The inscription concerned was meant to regulate trade and avoid malpractices. It was established, as a result of inhabitants complaining to the king who visited the shrine, about corrupt practises prevailing at the time. The edict in the inscription prescribes that a fine in the form of a certain quantity of oil to be imposed on the traders who engaged in trade on religious days, i.e. on Poya days. and the oil to be used for lighting lamps at the Mahiyangana Thupa. Though Mahiyangana was a favourite destination of pilgrims continuously, it was in a dilapidated state by the turn of the 19th century. There is no record of major repairs after the repair of Vijayabahu I (1059-1114 A. C.). It was almost a heap of fallen bricks. The repairing of the Minipe irrigation scheme by the Government brought the surrounding areas under plough in the nineteen thirties. Soon the area became a flourishing agricultural area producing an abundance of rice, the staple food. The attention of the Buddhists in the area as well as those outside at this juncture was directed towards repairing the Mahiyangana Thupa. Mahiyangana Restoration Society was formed and the foundation stone was laid in 1949 for the restoration of the Thupa.

Though not covered by section 19 of the Antiquities Ordinance on account of its location out side crown land, the Dept. of Archaeological Survey of Ceylon undertook the excavation on a request made by the Chief High Priest of the Mahiyangana temple. The main purpose of the work was to ascertain the various stages of the history of the monument and the platform on which it was built, with a view to furnish data for the preparation of designs for restoration work. The debris formed by the collapse of successive restoration was cleared in order to expose the original brickwork. In the course of clearing they came across a relic chamber dating from the 11th century A. C. that is very significant historically. The relic chamber was opened on January 3, 1951 in the presence of the
Mahanayaka of Asgiriya and other distinguished persons. To the astonishment of everyone, it was found that the inner walls of the relic chamber were painted. Although the Mahavamsa (Mhv. Ch. XXX) records the painting of the inner walls of the relic chamber of the Mahāthūpa no specimen of it had been discovered. This is the first occasion a relic chamber with paintings inside was discovered. Therefore it is a very significant discovery.

The removal of the covering slab of the relic chamber had revealed that the painted plaster of the inner walls of the Relic Chamber had, mostly, peeled down due to dampness. All the fragments were carefully collected, chemically treated and put together in the laboratory. The largest preserved fragment 1 ft. 4 inches by 1 ft. 71/2 inches depicts the Buddha seated under the Bodhi Tree with a sage looking bearded personage, probably a denizen of one of the lower Brahma worlds. The main scene represented in the paintings appears to have been the Enlightenment of the Buddha, on which occasion, the gods and Brahmas and other superhuman beings of the three worlds are said to have come to pay homage to the Great Sage. It is interesting to find among those divine personal, Vishu holding a tray of flowers in two of his four hands, and Śiva with his trident. Apart from the gods are Brahmas; there are a number of figures with shaven heads draped in the garb of monks. If the scene represented is the Enlightenment, these figures cannot represent the disciples of the Buddha. They may be identified as the denizens of the upper Brahma worlds - those of the Pure Abodes. Above the head of one of these superior Brahmas, is seen a flying figure armed with swords and shields who may represent Māra, the Evil One retreating from the scene after his discomfiture (Archaeological Survey of Ceylon Administrative Report, 1951, p. 16-18).

Paranavitana is of the view that this Relic Chamber belongs to the reign of Vijayabahu I (1058-1114 A. C.) who repaired the Thūpa for the last time, after the destruction of the Thūpa at the hands of Cholas during the first half of the eleventh century (ibid. p. 17). After removing the debris of the collapsed, successive enlargements, restoration work commenced covering the inner brick thūpa, which they identified to be the original brick thūpa. The repairs were successfully completed. The enshrinement in the new Relic Chamber took place on September 19, 1956 and the Garbanidhāna and the opening of the pinnacle took place on 12th October 1961 at an auspicious moment.

What is unfortunate in this restoration work is that all ancient features of the Thūpa have been erased in the course of these repairs and the Thūpa looks entirely a modern Thūpa today. The shrine belongs to the Asgiriya Chapter of the Siamese Sect and it is under the Administration of the Chief High Priest of the Mahiyangana Vihāra. See PLATES LI, LII, and LIII.

K. Arunasiri

MAITREYA See METTEYYA

MAITRĪ See METTĀ, BRAHMAVIHĀRA

MAJHIMAĐESA, var. Majjhimapadesa (DA. I. p. 173), Majjhadesa (Mhbv. p. 12), Skt. Madhyadesa, a territorial division, and generally refers to the central Region of Buddhist India where the Buddha was born and his early missionary activities flourished. There was an ancient division of India (about 650-325 B. C.) into five zones, namely Madhyadesa (The Middle Country), Pūrṇadesa or Pracya (the East), Dākṣinapatha (The South), Aaparanta or Pracitya (The West) and Uttarapatha or Udicya (the North). The most central of these divisions is Madhyadesa, and the terms Dākṣinapatha, Uttarapatha, etc., came into vogue only in regard to Madhyadesa (See Bhandarkar, Ancient History of India; Calcutta, 1919, pp. 42-46; S. K. Chatterji, The Cultural Heritage of India, Vol. 1, p. 46). There are several passages in the Buddhist literature that give the boundaries of the Majjhimađesa. It was bounded to the East by the town of Kajangal, beyond which was Mahāsāla, to the South-east by the river Salalavati (var. Sallavati, Skt. Saravati), to the South by the town of Setakannika, to the west by the Brahmin village called Thuna, to the North by the mountain called Usiradhaja (purathimāya disāya Kajāngalam nāma nīgama, tassa parena Mahāsālā, tato parāpaccantima janapado, purathimadakkhiṇāya disāya Sallavati nāma nadi.... dakkhiṇāya disāya Setakānikanā nāma nīgama.... pacchimāya disāya Thūnām nāma brahmaṇaṅgagīma.... Uttarāya disāya Usiraddhajā nāma pabbato. Vin. I. p. 197; DA. I. 173; AA. I, pp. 98-99; II, pp. 36-37; Mhbv. p. 12). These boundaries mentioned in the Mahāvagga of the Vinayaipitaka as marking the limits of Majjhimađesa in the time of the Buddha, appear to be authentic and reliable. Subsequent literary works, such as the Jātakas, Mahābhodhivansa, Sumangalavīlāsini and Manorathapuraṇi also have this stock description of the boundaries of Majjhimađesa.
The Divyavadāna extends the boundary to the east to include the town called Puṇḍarṇadhana also, which writers identify with North Bengal. According to the Divyavadāna the boundaries were as follows: to the east was the town called Puṇḍarkakṣa; to the south was the town called Śrāvatī and to the east of that the river called Śrāvatī; to the west were the two brahmin villages Sthūna and Upasthūnakā and, to the north was mount Usīra. “This” observes, Rhys Davids, “is evidently an echo of the old Vinaya passage. But the writer cannot have had the Pali before him. For the east and southeast have been confused, the south point (as given in the Pali) is omitted and both the names and the phraseology differ slightly throughout” (JRAS. 1904. p. 87). According to the Manusmrīti, Madhyadesa denotes the land between the Himalayas in the north, the Vindhya in the south, Prayāga or Allahabad in the east and Vināsana or the place where the Sarasvatī disappears in the West. This shows that in Manu’s time the easternmost point of Madhyadesa was Prayāga whereas that mentioned in the Buddhist work is far to the east of it (Bhandarkar, op. cit.). Thus from time to time the eastern boundary of Majjhimadesa underwent a change; but it included India, i.e. fourteen of the sixteen Mahajanapadas, Gandhāra and Kāmboja being excluded as they belonged to the Uttarapatha. The Manorathapūrīṇī tacitly refers to these Mahajanapadas when it employs majjhimesa janapadesu “in the Middle countries” (AA. II, p. 36). It is curious to note that in the same text Buddhaghosa has described Majjhimadesa as extended to include the whole of Jambudīpa, the other continents being contiguous regions (Sakalo pi hi Jambudīpo Majjhimo deso nāma, Sesadīpā paccantimā janapadā).

Buddhaghosa in the Sumangalavilāsīni, gives the extent of the Buddhist Majjhimadesa as three hundred yojanas in length, two hundred and fifty yojanas in breadth, and nine hundred yojanas in circumference (āyāmato tiyojanasate, viśthā rato, adīhhatiyā yojanasate parikhepato navayojanasthe. DA. I.173). Fleet agrees with the boundaries given of Majjhimadesa in the Mahāvagga and according to him “The details about the length, breadth and perimeter, added in Sumangalavilāsīni and the commentary on the Nidānakathā, are plainly imaginative and preposterious.... the inventor of these details had a fairly good idea of the general shape of India”. According to Fleet, “still more extravagant than the above are the measures reported by I-tsing namely 300 yojanas from east to west, 400 yojanas from north to south (JRAS. 1907, p. 653, n. 3; see also JRAS. 1910 p. 427).

Modern writers are of opinion that the Buddhist Madhyadesa “extended from Kuruksetra in the west to the town of Kajangala (Kankjoli in Santal Parganas) and the river Salīlavatī (the Salai of Chota Nagpur) in the east and from the Himalayas to the river Narmada”. It has also been observed that Patanjali (Circa 170 B. C.) following ancient Dharmasūtras, fixed Kālakavana or the Black forest (of Santal Parganas) as the eastern limit of Madhyadesa. Later this boundary was shifted to Prayāga or to Varanasi, and Bihar was included in the east. Modern Nepolese, with whom madhes (middle country) and Madhesia (an inhabitant of the Middle Country) are still terms of daily use, include Bihar in the middle country. The western limit of Madhyadesa was, according to Patanjali and Dharmasūtras Vināsava or Adarsa, i.e. the place where the Sarasvatī disappears in the desert which is 74° 50 E. He further says that in terms of natural divisions, the Madhyadesa included the regions of the Hindustan and Avadh (and optionally Bihar) in the north India plain, along with the continuous regions to their south in the Central Belt (Chatterji, op. cit. pp. 46-47).

The Majjhimadesa was a holy place on earth and according to the Pali commentaries, it is always the birthplace of all Buddhas, pacceka buddhas, the chief disciples, the great elders, the parents of the Buddhas, the universal monarch and all other well-to-do Brahmins and householders (Ettake thāne Budhā pacceka buddhā mahāsāvaka, buddhupāṭṭhākā, buddhamātā buddhapiṭṭā cakkavattirāja ti imesatā nibbattani, AA. II, 37). In the Brahāchattā Jātaka, it is mentioned that even ascetics feared to go to the Majjhimadesa as in that region lived wise men who pose one with questions, call upon one to return thanks and to repeat a form of blessing and reprove the incompetent (J. III, pp. 115-16). This was so, as philosophical discussions were very common in the Majjhimadesa.

The Sammohavinodani mentions that for the people of Majjhimadesa clay mixed with earthworms (ganduppadā) was loathsome. For them Peacock’s flesh was a delicious dish (ganduppadā... Majjhimo desavāsinam ati jręgcchā. Tesañca mūparamāṇśadinī itihāni honti, VibhA. p. 10). The yakkha Sātagīra was born in Sātapabbata in the Majjhimadesa and his friend Hemavata considered Majjhimadesa as a region where marvellous things take
place. On the day the Buddha preached his first sermon at Isipatana, Sātagira was present at the scene, but he did not hear the sermon as his mind was preoccupied with the idea of communicating with his friend who had wanted him to be informed of whenever glorious events take place at Majjhimadesa and it was glorious at Majjhimadesa when the Buddha preached his first sermon (SnA. Vol. I, pp. 197-98).

According to the Nidānakathā, there was a road from Ukkaḷa to Majjhimadesa via Uruvela and the two merchants Tapassu and Bhalluka met the Buddha immediately after his attainment of Enlightenment, on their way to Majjhimadesa on business (J. I. p. 80). The Indriya and the Sarabhanga Jātakas mention that once the sage Nārada, younger brother of Kāladevala lived in a cave in Arajjaragiri in Majjhimapadesa (J. III, p. 463; V. 134).

M. Karaluvinja

MAJHIMANIKĀYA is the second collection of discourses of the Sutta Piṭaka, which is one of the three principal divisions of the Pāli canon, the Vinaya Piṭaka and the Abhidhamma Piṭaka being the other two. Although it is commonly assumed that this collection is called the ‘Majjhima Nikāya’ because of the comparative length of its discourses, according to I. B. Horner, “The commentators appear to suggest (VinA. 26-27, DA. 23) that ‘length; pamāṇa refers to the length as well as to the number of the Discourses assigned to each of the five Nikāyas. For they speak of the ‘Suttas of long length’, dighappamāṇamāṁs suttānam, as numbering thirty-four, the ‘middle length Suttas’, majjhīmapamāṇāṁ suttāni, as numbering 152, while there are 7,762 Suttas in the Samyutta and 9,557 in the Aṅguttara. Thus the Suttas, of ‘middle length; while being shorter than those of ‘long length’, although more numerous, are longer than the Suttas in the two remaining chief Nikāyas, but not so numerous. Therefore on both counts, their position is a ‘middle’ one” (I. B. Horner, Middle Length Discourses of the Buddha, Introduction, X).

The 152 discourses of the Majjhima Nikāya have been brought under fifteen divisions called Vaggas of ten discourses each, the last Vagga being an exception, having twelve discourses, instead of the usual ten, and five of these divisions forming a group of fifty called Pannāsa. The three Pannāsas are designated the Mūla Pannāsa, the Majjhima Pannāsa and the Upari Pannāsa. The names assigned to these divisions are often derived solely from the titles of their opening sutta (or, in some cases, pair of suttas) and thus are scarcely indicative of the material found within the divisions themselves. A partial exception is the Middle Fifty, where the division titles usually refer to the principal type of interlocutor or key figure in each of the suttas they contain. Even then the connection between the title and the contents is sometimes tenuous. The entire system of classification appears to have been devised more for the purpose of convenience than because of any essential homogeneity of subject matter in the suttas comprised under a single division” (Bhikkhu Bodhi, Middle Length Discourses of the Buddha, 1995, 19).

While the fifteen divisions have each been titled, the individual discourses too have their own titles. The pattern which has been followed in titling the individual discourses ranges between the name, the doctrinal theme discussed, the principal interlocutor, the place where the discourse was expounded and the simile used in illustration. The number of the discourses coming under the first category is the highest in the Majjhima Nikāya (i.e. 63), those coming under the second being next (i.e. 53), those coming under the third being much less (i.e. 20) and those coming under the fourth being smallest in number. (i.e. 16).

Of the fifteen divisions five are titled after the title of the opening discourse of the division (e.g. 1,2,11,12,13). Another five are titled after the category of persons to whom the majority of the discourses in the division are directed. For example, those discourses which are addressed to householders are brought under the Gahapati Vagga, and those which are addressed to male disciples under the Bhikkhu Vagga, etc. The other divisions coming under this category are the eighth, ninth and the tenth. Two divisions, the fourteenth and the fifteenth are titled as the Salāyatana and the Vibhāṅga Vaggas on the basis of the subject matter discussed in the discourses included in the two divisions. The fourth and the fifth divisions are titled, the Mahā-Yamaka and the Cūla-Yamaka Vaggas on the basis of the twin-suttas these contain. The third division containing several discourses on parables is titled the Tatiya Vagga and not Opanma Vagga.

Although the authorship of the discourses in the Nikāyas is normally ascribed to the Buddha, “it is not the Buddha alone who appears in the Majjhima in the role of teacher. The work also introduces us to the accomplished disciples he produced who carried on
the transmission of his teaching. Of the 152 suttas in
the collection, nine are spoken by the venerable
Sāriputta, the General of the Dharma; three of these
(M. 9, M. 28, M. 141) have become basic texts for the
study of Buddhist doctrine in monastic schools through­
out the Theravāda Buddhist world. The venerable
Ānanda, the Buddha’s personal attendant during the
last twenty-five years of his life, delivers seven suttas
and participates in many more. Four suttas are spoken
by venerable Mahā Kaccāna, who excelled in
elaborating upon the brief but enigmatic sayings of the
Master, and two by the second chief disciple, the
venerable Mahā Moggallāna, one of which (M. 15)
has been recommended for a monk’s daily reflections.
A dialogue between venerable Sāriputta and vener­
able Puṇna Mantāniputta (M. 24) explores a scheme
of seven stages of purification that was to form the
outline for Āciyā Buddhaçhagos’s great treatise on the
Buddhist path, the Visuddhimagga. Another dialogue
(M. 44) introduces the bhikkhu Dharmadinnhā, whose
replies to a series of probing questions were so adroit
that the Buddha sealed them for posterity with the
words “I would have explained it to you in the same
way” (Bhikkhu Bodhi, op. cit. 21).

The discourses of the Majjhima Nikāya are differ­
ent from the discourses of the other three Nikāyas not
only in the richness of their variety, but also in con­
taining the largest number of discourses giving detailed
expositions on the central teachings of the Buddha.
This may perhaps have been due to the fact that the
majority of the discourses of this collection are those
which are either directly addressed to the ordained dis­
ciples of the Buddha, or are otherwise intended for
them. The Majjhima Nikāya discourses comprise a
rich variety of dialogues, sermons and Ākhyāna.
Wintemitz says: “But in this collection also each Sutta
is complete in itself and they are as different in their
value as in their nature. But even by reason of the
large number of the Suttas, their contents are much
more variegated than those of the Dighanikāya. Here
we find discussions on almost all points of religion of
the Buddha, on the four noble truths, on the Karman,
on the futility of the desires, on the reprehensibility of
the belief in the soul, on the Nirvāna, on the various
kinds of meditation, etc. These discussions are often
only uninteresting sermons, often, however, they also
have the so popular and charming form of dialogues
with a longer or shorter introduction or frame-work
narrative (Itihāsa-dialogues). General popularity is
enjoyed by the teachings through allegories, whether
an allegory is maintained through the whole speech or
a chain of allegories passes through the whole speech
in order to din one and the same teaching again and
again. Also myths and legends, are narrated, in order
to associate with them some teaching or the other as in
no. 37 where the visit of Moggallāna, the famous dis­
ciple of the Buddha to the heaven of Indra is de­
scribed...” (M. Wintemitz, A History of Indian Litera­
ture, I. 44-45). Thus, a careful study of the discourses
of this collection, is bound to be a highly rewarding
exercise in getting introduced to the profoundest teach­
ings of the Buddha.

The overall picture of the Buddha which emerges
from the Majjhima Nikāya is one that depicts him in
his role as the teacher of the disciples who elected to
lead the higher life to attain the goal which the Bud­
gha advocated, was within the reach of those who were
ready to put forth effort for the purpose. He was also
readily accessible to all those who desired his associa­
tion. In the Majjhima Nikāya we see the Buddha of­
ten finding time to visit other ascetic groups whenever
they were known to be resident in the areas he was
visiting. It becomes clear from these accounts that the
Buddha and his disciples were held in high esteem by
these non-Buddhist ascetic communities. It is in the
Majjhima Nikāya that we come across the
earliest biographical details of the Buddha which stand
in striking contrast to the later developed post-canon­i­cal and even canonical accounts of the same.

Thus, according to the Ariyapariyesana Sutta (M.
26), the Bodhisatta left the household life and donned
yellow robes at a very tender age, ‘while yet a boy, a
black-haired lad in the prime of youth, in the first stage
of life’ whilst his unwilling mother and father wept
with tear-stained faces. He had his initial training first
under Āḷāra Kālāma and then under Uddakarāmaputta.
Finding that their training did not take him to the de­
sired goal, the Bodhisatta proceeded to work alone on
his spiritual quest. According to the Mahāsīhanāda
Sutta (M. 12) and the Mahāsaccaka Sutta (M. 36) he
experimented with a wide variety of exacting ascetic
practices and finding that he was thereby getting fur­
ther and further away from his goal and also getting
almost physically exhausted, decided to give up these
severe austerities, nursed his emaciated body by tak­
ing solid food. Having regained his lost strength, he
decided to experiment by pursuing the path of the First
Jhāna which he entered into whilst he was still a young
lad when his father was ploughing the paddy fields.
This path ultimately led to the attainment of Budha­
hood.
His attainment of Buddhahood is found described in the Ariyapariyesana (M. 26) and the Mahāsaccaka (M. 36) suttas. Both relate in lean and unembellished terms his attainment of enlightenment, which they view from different angles, while M 26 takes us past the enlightenment to the decision to teach and the instruction of his first disciples. From that point on connected biography breaks off in the Majjhima and can only be reconstructed partially and hypothetically. Again, despite the absence of any systematic account, the Majjhima offers a sufficient number of cameo portraits of the Buddha for us to obtain, with the aid of information provided by other sources, a fairly satisfactory picture of his daily activities and annual routine during the forty-five years of his ministry. A commentarial text shows the Buddha’s daily schedule as having been divided between periods of instructing the bhikkus, giving discourses to the laity, and secluded meditation, during which he usually dwelt either in the ‘obode of voidness’ (M. 121.3, M. 122.6) or in the attainment of great compassion. The day’s single meal was always taken in the forenoon, either received by invitation or collected on alms-round, and his sleep was restricted to a few hours per night, except in the summer, when he rested briefly during the middle of the day (M. 36.46). The annual routine was determined by the Indian climate, which divided the year into three seasons - a cold season from November through February, a hot season from March through June, and a rainy season from July through October. As was customary among the ascetics of ancient India, the Buddha and his monastic community would remain at a fixed residence during the rainy season, when torrential rains and swollen rivers made travel almost impossible. During the rest of the year he would wander through the Ganges Valley expounding his teachings to all who were prepared to listen” (Bhikkhu Bodhi, op. cit. 22f.).

Even after his decision to take solid food, it does not appear that the Bodhisatta ever had a well-built body. According to a description found in the Sutta Nipāta, the Buddha is described as:

“Enājaṃghaṃ kisaṃ dhīraṃ appāhāraṃ alolapaṃ
muniṃ vanasmiṃ jhāyantaṃ ehi passāma
Gotamam” (Sn. 165).

“Lean, vigorous, limbed like a deer,
Naught coveting, the frugal one:
Come, let us now seek Gotama,
Still sage who museth in the glade”. (Hare, Woven Cadences, 165).

This early description of the Buddha is well supported by the Majjhima Nikāya. These show that the Buddha did not possess either an unusually or an extra-ordinarily different appearance when compared with other bhikkhus or ascetics. According to the Dīvīvibhaṅga Sutta (M. 140), the venerable Pukkusāti did not see any distinguishing characteristics either in the Buddha’s personality or behaviour. Pukkusāti, who had arrived first at the potter’s workshop and settled down for the night, would not have known that the other bhikkhus who sought his permission to spend the night was in fact the Buddha, under whose teaching he had undertaken to live the higher life, if the Buddha did not tell him. Also, the Potter, Bhaggava, when asked by the Buddha whether he could spend the night in his workshop, did not know that it was the Buddha who was making that inquiry. Also, Cūlagosinga Sutta (M. 31) and Upakkilesa Sutta (M. 128) record two instances where the park-keeper stopped the Buddha when he was entering the park to inquire how the bhikkhus whom he knew had gone there to meditate, were faring. On both these occasions, it was the venerable Anuruddha who heard the conversation between the Buddha and the park-keeper and recognizing the Buddha, requested the park-keeper to allow the Buddha in.

Thus the picture of the Buddha which can be constructed from the Majjhima Nikāya accounts, supplemented by other early canonical sources is totally in contract with the innumerable depictions of the Buddha, whether in sculpture, art or literature, all of which belong to post-canonical times and are quite in agreement with the later developed Buddhological details.

Thus, it is in the Majjhima Nikāya that we meet with the human teacher, the founder of the Order of disciples who came to be known as Sakayaputtīya Samaṇas (Samaṇā sakayaputtīyā, A. IV. 202; etc.) and guided them to their spiritual maturity along the path which he himself discovered. His disciples held him in very high esteem and admiration. To them, he was their teacher incomparable. He was the Tathāgata, the one who came in the long line of similar teachers of the past. It is significant that the Buddha is referred to as the Tathāgata throughout the canonical texts.

The majority of the discourses of the Majjhima Nikāya are recorded as having been delivered at Sāvatthi, in the state of Kosala. Here, the Buddha usually stayed at Jetavana, in the monastery built for the Order by Anāthapiṇḍika. At Sāvatthi, the Buddha oc-
casionally stayed at Pubbarāma, in the monastery built for the Order by Visākhā. It was also known as Migārāmatupāsāda. Seventy Majjhima discourses recorded to have been delivered atJetavana while six are recorded to have had their origins at Pubbarāma. In Rājagaha the Buddha often stayed at Veḻuvaṇa which was offered to the Order by King Śreniya Bimbisāra, the king of Magadha. The Buddha would also stay at the Vulture Peak (Gījджakūṭa), Isigiliṇipāta, and Jivaka’s mango grove. A total of twenty-three discourses are recorded as having been delivered in Magadhan territory. Eight Majjhima discourses are recorded to have been delivered in the Śākyan country, where the Buddha usually stayed at Nigrodhārāma in Kaplavatthu where several discourses are recorded to have originated whileDevadaha, Sāmāgama and Medhālumā are recorded as the other places where Majjhima discourses have been delivered. Eight discourses are recorded to have been delivered in the Vājjiṇ country. Whenever the Buddha was in Vesālī, he usually stayed at the Kūṭāgārasālā in Mahāvāna.

Thus, as one hundred and fifteen discourses are recorded to have been delivered in the above places, it is the remaining thirty-seven discourses which are spread over a wide area which extended, “from the Aṅgic country (close to modern West Bengal) to the Himalayan foot-hills and the Kuru country (modern Delhi)” (Bhikkhu Bodhi, op. cit. 23). These details go to show that the Buddha’s principal areas of activity were the Kosalan and the Magadhan kingdoms, visits out of these areas being quite rare and occasional, perhaps motivated by special needs only.

Not only does the Majjhima Nikāya contain detailed expositions on all important teachings of the Buddha, it also contains detailed expositions on the process of spiritual training the disciple passes through in his passage to the realization of ultimate emancipation or Nibbāna. The attainment of nibbāna, it is clearly shown, results from spiritual maturity attained through the process of systematic training supported by the disciplining of the senses.

The Majjhima Nikāya also contains many discourses which details the conduct of the disciples of the Buddha to prepare them to embark on this process of spiritual maturity. As the approaches to this training could be as varied as the number of individuals who undertake the training, the Majjhima Nikāya records the rich variety of the approaches which the Buddha adopted in guiding his followers through to their realization of arahantship. It was after such realization that they declared themselves as, “one with taints destroyed, who has lived the holy life, done what had to be done, laid down the burden, reached the true goal, destroyed the fetters of being and is completely liberated through knowledge (khiṇāsavo vaśītavā katakaraṇīyo ohiṭabhāro anupattasadadatto parikkhīṇa-bhavasamyojano sammadāṇā vimutto” M. 1.6; etc.).

This process of training starts with Sila (disciplining of the senses). It is usually explained as, “Idha ariyasāvako silavā hoti, pātimokkha samyvara-samyutto viharati, ācārogocara-sampanno anumattesu vajjesu bhayaannisāvi samādāya sikkhati sikkhāpadesu....” (M. I. 355; etc.). “Here a noble disciple is virtuous, he dwells restrained with the restraint of the Pātimokka, he is perfect in conduct and resort, and seeing fear in the slightest fault, he trains by undertaking the training precepts” (Bhikkhu Bodhi, op. cit. 461). The rules of discipline which were promulgated for the disciples were aimed at endowing them and thereby insulating them, with the individual conduct and the institutional discipline required for preparing them for the next step in the upward movement to nibbāna which is samādhi (concentration). A disciple becomes ready to embark on this second step only when he is firmly grounded in the first step whereby he can without any difficulty be described as silasampānno (one endowed with virtue).

The commencement of the advance from silica to samādhi is described in the following words, “so iminā ca ariyena silakkhandhena samannāgato imināca ariyena indriyasamvarena samannāgato iminā ca ariyena saisampajaṭhena samannāgato vivittham senāsanāṁ bhajati, araṇāṁ rukkhamilam pabbataṁ kandaram giriguhum susanām vanappatham abbhokāsām palālapuṇjam.” (M. I. 346) - (Possessing this aggregate of noble virtue, and this noble restraint of the faculties; and possessing this noble mindfulness and full awareness, he resorts to a secluded resting place: the forest, the root of a tree, a mountain, a ravine, a hillside cave, a channel ground, a jungle thicket, an open space, heap of straw’’ - Bhikkhu Bodhi, op. cit. 450).

Having thus set himself up in a suitable place to his liking, he selects his time to start his meditation, “So pacchabhāttaṁ piṇḍapaṭapaṭikkanto nissidati pallankam ābhujitvā, ujum, kāyaṁ panidhāya, parimukhāṁ, satīṁ upatthapetvā” (M. I. 346), “On
retiring from his almsround, after his meal he sits down, folding his legs crosswise, setting his body erect, and establishing mindfulness before him” (Bhikkhu Bodhi, op. cit. 451). Now, he frees himself of the five mental hindrances which weaken wisdom, “So abhijjhāṃ, loke pañhāya vigatābhijjhena cetāsā viharati, abhijjhāya cittaṃ parisodheti; byāpāpadosam pañhāya abyāpannacitto viharati, sabbapāñabhūtahitanukampī viharati... vicikicchāya cittaṃ parisodheti” (M. I. 347). “Abandoning covetousness for the world, he abides with a mind free from covetousness; he purifies his mind from covetousness. Abandoning ill-will, compassionate for the welfare of all living beings; he purifies his mind from ill-will and hatred. Abandoning sloth and torpor, he abides free from sloth and torpor, perceptive of light, mindful and fully aware; he purifies his mind from sloth and torpor. Abandoning restlessness and remorse, he abides unagitated with a mind inwardly peaceful; he purifies his mind from restlessness and remorse. Abandoning doubt, he abides having gone beyond doubt, unperplexed about wholesome states; he purifies his mind from doubt” (Bhikkhu Bodhi, op. cit. 451).

Thus, the disciple cleanses his mind of all mental hindrances and cultivates the opposite positive qualities making himself deliberate and alert, unagitated and peaceful, devoid of doubt and perplexity. Now, it is important to note here that the text just goes on to explain the mental condition of the disciple in the First Jhāna. “So ime pañcā nīvaraṇe pañhāya cetasā upakkilese paññāya dubbali karane vicce'eva kämehi vicicca akusalehi dhämmehi savatukaṃ savicareraṃ viveka jām pūisukhaṃ pathamāh jhōnaṃ upasamaṃjja viharati” (M. I. 347). “Having thus abandoned these five hindrances, imperfections of the mind that weaken wisdom, quite secluded from sensual pleasures, secluded from unwholesome states, he enters upon and abides in the first jhāna, which is accompanied by applied and sustained thought, with rapture and pleasure born of seclusion” (Bhikkhu Bodhi, op. cit. 451).

The Majjhima suttas are quite clear regarding what the disciple has to do in order to train himself in the preliminary step of Sila (virtue). But how does he proceed from Sila onwards in his upward training. How does he cleanse his mind of the five hindrances? How does he overcome the imperfections of the mind that weaken wisdom? Even if it is granted that these achievements are attainable when one has entered the meditative path by selecting a suitable site, adopting the correct posture for meditation, etc., the text is silent on how the disciple should set about his meditation. Even if it is accepted that specific instructions regarding the selection of a suitable subject for meditation, which must depend on the psychological makeup of the disciple, and how he should proceed from there onwards, cannot form part of the body of general discourses, either on the scheme of spiritual training or on the achievements on such path of training, such discourses cannot be deemed complete without at least a mere mention that the disciple has either to make a selection of the appropriate meditative technique by himself or receive individual instruction from his teacher on the meditative technique he has to adopt, in order to proceed on his course of spiritual advancement.

In the Buddhist scheme of spiritual training each and every move has to be deliberate and purposive. This means that transition from one state of spiritual attainment to the next has to be by deliberate and purposive action, specifically directed for the purpose. This is quite clearly spelt out in the Poṭṭhappāda Sutta of the Dīgha Nikāya where in the course of explaining the process of spiritual training, the Buddha emphasises that the extinction of one state and the arising of the next takes place by training specifically directed for the purpose (“Evam pi sikkhā ekā sañña upajjanti, sikkhā ekā sañña nirujjhanti”) (D. I. 182). But, it is this sikkhā (training) that is found missing from all accounts of the scheme of spiritual training in the Majjhima Nikāya.

Thus, essential and therefore vital details regarding what actually constitutes the training required to enter the first stage of samādhi after having attained fulfillment in the Sila, and what precise action constitutes the subsequent training to enable the disciple to move beyond this first stage and what action takes him to the second stage and so on, up to the stage of arahantship are missing from all accounts of the Jhanic process.

But, the accounts contained in the Majjhima Nikāya, it must be emphasized, are by far the most comprehensive canonical descriptions of the states of spiritual attainment from the first Jhāna onwards. These are contained in no less than twenty Majjhima Nikāya discourses (M. 4, 27, 30, 39, 52, 53, 59, 64, 65, 66, 76, 77, 79, 107, 111, 112, 119, 125, 128 and 138).

Of the three stages in the scheme of spiritual training, the first significant achievement in the second
When the process of development which is thus set in motion, through the meditative process reaches the first Jhāna level of development, it is identified as the first Jhāna state of development when it fits the following description, “Having abandoned these five hindrances, imperfections of the mind that weaken wisdom, quite secluded from sensual pleasures, secluded from unwholesome states, he enters upon and abides in the first Jhāna which is accompanied by applied and sustained thought, with rapture and pleasure born of seclusion. He makes the rapture and pleasure born of seclusion drench, steep, fill and pervade this body, so that there is no part of his whole body unpervaded by the rapture and pleasure born of seclusion. Just as a skilled bathman or bathman’s apprentice, which is iden­ified as such when it qualifies to be described as fol­lows: “Again, bhikkhus, with the stilling of applied and sustained thought, a bhikkhu makes the rapture and pleasure born of seclusion drench, steep, fill, and pervade this body, so that there is no part of his whole body unpervaded by the rapture and pleasure born of concentration” (Bhikkhu Bodhi, op. cit. 368). (“Puna ca param bhikkhave bhikkhu vitakkavīcarānam vipasāmā ajjhattam sampāsādanam cetaso ekodībhāvam avitakkaṃ avicāram samādhijaya pītisukhaṃ dutiyam jhānam upasampajja viharati. So imaṃ-eva kāyaṃ samādhijena pītisukhena abhisandeti parīsandeti pariśipātī pariśippharati, nāsā kiṃci sabbāvato kāyassa samādhijena pītisukhena apphuṭāṃ hotī...” (M. 1. 276).

The two passages quoted above make it quite clear that the jhanic process is not an exercise at achieving mere concentration of mind. It is a harmonizing and coverage of the totality of the psycho-physical activities of the human personality that is envisaged. Therefore, when the jhanic level is reached there is almost total harmony achieved between the activities of the mind and the body, which position makes it possible for the disciple to direct his total strength for the realization of his spiritual goal.

The accounts of the remaining steps in the scheme of spiritual training are similar to the accounts given above. The attainment of the fourth Jhāna marks an important stage in this scheme of spiritual training. The Lāṭukikopama Sutta (M 66) describes the attainment of the fourth jhāna as the attainment of imper­turbability which means that after the disciple attains the fourth jhāna he is stable and steady on his path of spiritual training with no threat of vasclilation (“Idam kho aham Udāyī aniñjitasmin vadāmi” M. 1. 455. Now this, I say, belongs to the imperturbable”, Bhikkhu Bodhi op. cit. 557). The fourth jhāna also marks an important mile-post in his upward movement as he can, after the fourth jhāna, select to set himself to attain the three higher knowledges or set himself to attain the four formless jhānas (arūpajjhānas). While the
three higher knowledges are, Pubbenivāsānussati jhāna (knowledge of the recollection of past lives), Cutīpadātā jhāna (knowledge of the passing away and re-appearance of beings) and Āsavānam khayañāna (knowledge of the destruction of taints), the four formless jhānas are, Ākāsānañāyatanā (Base of infinite space), Viññānañāya yatana (Base of infinite consciousness), Akīnañāyatanā (Base of nothingness) and Nevasaññānañāsaññāyatanā (Base of neither perception nor non-perception).

It is important to note here that the Chabbisodhana Sutta (M. 112) shows a variation to the first option for selection. In this sutta, it is said that the disciple can, after the fourth jhāna proceed straight to develop the Āsavānām khayañāna and attain liberation thereby. This sutta does not make the realization of the three higher knowledges a requisite condition for the realization of the knowledge of the destruction of taints, (M. 111, 36). There are two options available to the one who selects the arūpa jhāna path. According to the Āṭṭhakaṇāgara (M. 52) and the Mahāmālāṅkya (M. 64) Suttas, he can, after attaining the Ākīnañāyatanā jhāna (Base of nothingness) attain Āsavānām khayañāna (Eradication of taints) and attain nibbāna or as according to the Cūlasārāpama (M. 30) and the Anupada (M. 111) Suttas, attain the Saññāvedayatanirodha (Cessation of perception and feeling) after the fourth formless jhāna (i.e. Nevasaññānañāsaññāyatanā) and thereafter, “Paññāya c’assa divāsā asavā parikkhīna honi (his taints are destroyed by seeing with wisdom)” (M. 1. 204, Bhikkhu Bodhi, op. cit. 297), attain nibbānic realization.

Out of twenty Majjhima discourses which discuss the scheme of spiritual training, eleven discourses (viz. M. 4, 27, 39, 53, 65, 76, 77, 79, 112, 119 and 125) explain the scheme according to the first option, while six discourses (viz. M. 30, 52, 54, 59, 66 and 111) explain it according to the second option. We have already noted the variations available to the disciple within these two main options. It may also be noted here that according to the Sekha Sutta (M. 53) the attainment of the first four jhānas constitutes the completion of carāṇa and the attainment of the three knowledges the completion of vijjā, hence the discourse comes to be described as, “Ayaṃ vucaṭi...ariyasaśāvako vijjāsaṃpanno itipī, carāṇasaṃpanno itipī, vijjācarāṇasaṃpanno itipī” (M. I. 358).

Also according to the Sāmaññaphala Sutta of the Dīgha Nikāya, it is after the attainment of the fourth jhāna that the disciple becomes capable of mastering the various psychic powers, if he so desires (“So evam samāhitecitte Partiyodātā anāgane Vīgatūpakkilese... iddihivīdāya cittam abhiññharati abhininnāneti. So anekavīhiṃtam iddhi-viṭṭham paccanubhoti...”. D. I. 77 f.). But, it is emphasized in no uncertain terms that while accepting that the acquisition of such powers is within the disciple’s reach, after the fourth jhāna that it is not for the acquisition of such powers that the disciple trains himself in the higher life. In reply to a question by Mahāli, the Licchavi, in the Mahāli Sutta of the Dīgha Nikāya, the Buddha explains that it is not for the acquisition of such powers that the disciple leads the higher life under the Buddha’s teaching. (“Na Kho Mahāli etasaṃ samādhi-bhāvanānaṃ sacchikiriyā-hetu bhikkhū mayi brahmacariyaṃ caranti” D. I. 155). There are other acquisitions which are higher and better for the sake of which they train themselves in the higher life (“Attī kho Mahāli aṅgī ca dhammā uttaritarā ca pañītatarāca yesam sacchikiriyā-hetu bhikkhū mayi brahmacariyaṃ caranti”, D. I. 156), while accepting the validity of such spiritual experience. Thus, there is common agreement in the early texts that the fourth jhāna provides the requisite pliability and the maneuverability to launch upon a variety of higher spiritual experiences. But, although it is laid down in the texts that such experiences are within the disciple’s reach, these do not lay down what particular meditative method (s) or technique (s) or even alteration or change of such, he has to adopt from there (i.e. from the fourth jhāna) if he desires to reach these experiences.

This may be further clarified with reference to the information contained in the Kevaṇḍha Sutta of the Dīgha Nikāya. In this account, the bhikkhu who desired an answer to his question, develops such a samādhi in which samādhi a path to reach the devas appeared before him (“Atha kho so... bhikkhu tathārāpaṃ samādhim samāpajjī yathā samāhite citte devayāniyo maggo pūrvarohosi”. D. I. 215). Having completed his mission with the devas, he entered into such a samādhi in which samādhi a path to reach the brahmas appeared before him (yathā samāhite citte brahmāniyo maggo pūrvarohosi”. D. I. 220). It is clear that it was samādhi which enabled the bhikkhu to complete his mission. When translated into practical reality, this action required the adoption of new techniques or methodologies for the purpose and this is what the text is silent on.

It is clear that not only are details of practical steps which should be taken or techniques which should be adopted, in order to attain the jhānas as well as the
Other higher states of spiritual attainment absent from the Majjhima accounts of the scheme of spiritual training, they are absent from the other Nikāyas accounts as well. This seems to point to the possibility that these practical details were not in the possession of the theras who brought down the textual traditions (ghanadhura) but were brought down in the practical traditions of the forest-dwellers (vanavāsins). It may also be pointed here that while the traditions brought down by the ghanadhura theras were written down in Sri Lanka in the first century B.C., there is no mention of such an act in connection with the traditions of the vanavāsins. It is in the Visuddhimagga of Buddhaghosa that we see some of these being incorporated into the textual traditions. Commenting on this Bhikkhu Bodhi writes: "Strangely, the suttas do not explicitly prescribe specific meditation subjects as the means for attaining the jhānas, but the commentarial literature such as the Visuddhimagga enables us to make the connections", (Bhikkhu Bodhi, op. cit. 39). But the important question is whether Buddhaghosa’s records exhaust these traditions.

Although the technique which brings about samādhi is bhāvanā, the term bhāvanā is not found mentioned in the Majjhima discussions on the scheme of spiritual training. Also the two terms Samatha and Vipassanā are found only in a few textual contexts in the Majjhima Nikāya. These two are not two separate paths of meditation which the disciple has to make a selection from, but two steps in the scheme of spiritual training, (Ime kho te Vaccha dve dhamma uttarim bhāviṇā samatho ca vipassanā ca, anekadhātu-pātivedhāya samvattissanti. “In that case, Vaccha, develop further two things: serenity and insight. When these two things are developed further, they will lead to the penetration of many elements”. M. 1. 494; Bhikkhu Bodhi, op. cit. 600).

Apart from the discourses which discuss the scheme of spiritual training, the Majjhima Nikāya has a number of discourses which explain meditative processes through which one can attain aṭṭhāna (final knowledge). Of these, priority of place is taken by the Satipatthāna Sutta (M. 10). “The sutta sets forth a comprehensive system called satipatthāna designed to train the mind to see with microscopic precision the true nature of the body, feelings, states of mind, and mental objects. The system is sometimes taken to be the paradigm for the practice of ‘bare insight’ - the direct contemplation of mental and bodily phenomena without a prior foundation of jhāna and, while several exercises described in the sutta can also lead to the jhānas, the arousing of insight is clearly the intent of the method.

“Other suttas in the Majjhima Nikāya describe approaches to developing insight that either elaborate upon the satipatthāna contemplations or reach them from a different starting point. Thus M. 118 shows how the practice of mindfulness of breathing fulfils all four foundations of mindfulness, not the first alone as shown in M 10. Several suttas - M. 28, M. 62, M. 140 - present more detailed instructions on the contemplation of the elements. M. 37, M. 74 and M. 140 contain illuminating passages on the contemplation of feeling. In some suttas the Buddha uses the five aggregates as the groundwork for insight contemplation (i.e. M. 22, M. 109); in some, the six sense bases (i.e. M. 137, M. 148, M. 149); in some, the two combined (M. 147)” (Bhikkhu Bodhi, op. cit. 40).

As we have already seen above, the path of spiritual training in Buddhism, described as the path of gradual training, gradual practice and gradual progress (“anupubba sikkha, anupubba-kirya, anupubba-paññapāthā”, M. 111.2), leads through Sila, through Samādhi to aṭṭhāna. This last and final state of maturity results from the realization of the four Noble Truths. According to M. 4, M. 27, M. 39, M. 53, M. 65, M. 76, M. 77, M. 79, M. 112, M. 119, and M. 125, the knowledge of the destruction of the taints (āsavānum khayaṇāna) leads on to the realization of the four Noble Truths. “It is these four truths that the Buddha awakened to on the night of his enlightenment (M. 4.31, M. 36.42), made known to the world when he set rolling the matchless Wheel of the Dhamma at Benares (M. 141.2), and held aloft through the forty-five years of his ministry as the teaching special to the Buddhas' (M. 56.18). In the Majjhima Nikāya the Four Noble Truths are expounded concisely at 9.14-18 and in detail in M. 141, while in M 28 the venerable Sariputta develops an original exposition of the truths unique to that sutta. Yet, though they may be brought forth explicitly only on occasion, the Four Noble Truths structure the entire teaching of the Buddha, containing its many other principles just as the elephant’s footprint contains the footprints of all other animals (M. 28.2), Bhikkhu Bodhi, op. cit. 25”.

The central theme around which the Four Noble Truths are woven is that of dukkha usually translated as suffering or pain, but is best rendered as unsatisfactoriness. As Bhikkhu Bodhi explains, "The
Pali word originally meant simply pain and suffering, a meaning it retains in the texts when it is used as a quality of feeling: in these cases it has been rendered as 'pain' or 'painful'. As the first noble truth, however, dukkha has a far wider significance, reflective of a comprehensive philosophical vision. While it draws its affective colouring from its connection with pain and suffering and certainly includes these, it points beyond such restrictive meanings to the inherent unsatisfactoriness of everything conditioned. This unsatisfactoriness of the conditioned is due to its impermanence, its vulnerability to pain, and its inability to provide complete and lasting satisfaction", (Bhikkhu Bodhi, op. cit. 27f.).

"The characteristic of impermanence that marks everything conditioned leads directly to the recognition of the universality of dukkha or suffering. The Buddha underscores this all pervasive aspect of dukkha when, in his explanation of the first noble truth, he says, In short, the five aggregates affected by clinging are suffering''. The five aggregates affected by clinging (paścic'u pādānakkhandhā) are a classificatory scheme that the Buddha had devised for demonstrating the composite nature of personality. The scheme comprises every possible type of conditioned state, which it distributes into five categories....", (Bhikkhu Bodhi, op. cit. 25f.).

The third principle which is tied up with impermanence and unsatisfactoriness is that of non-self (anattāta) which describes the intrinsic characteristic of all phenomena of existence. The three together are called the three characteristics of existence (tilakkhana). "The Buddha teaches, contrary to our most cherished beliefs, that our personality—the five aggregates—cannot be identified as self, an an enduring and substantial ground of personal identity. The notion of self has only a conventional validity, as a convenient short-hand device for denoting a comosite insubstantial situation. It does not signify any ultimate immutable entity subsisting at the core of our being. The bodily and mental factors are transitory phenomena, constantly arising and passing away, processes creating the appearance of selfhood through their causal continuity and interdependent functioning. Nor does the Buddha posit a self outside and beyond the five aggregates. The notion of selfhood, treated as an ultimate, he regards as a product of ignorance, and all the diverse attempts to substantiate this notion by identifying it with some aspect of the personality he describes as 'clinging to a doctrine of self' (Bhikkhu Bodhi, op. cit. 27f.). Thus, the analytical examination of current views of self and the clarification of the Buddhist position with reference to these becomes an important theme in several Majjhima discourses (e.g. M. 102, M. 2, M. 11, M. 22, M. 28, M. 35 and M. 148).

The second Noble Truth explains the origin or the cause of dukkha which is explained as tanhā (craving). "The Buddha's discovery of the causal link between craving and suffering accounts for the apparent 'pessimistic' streak that emerges in several suttas of the Majjhima Nikāya: in M. 13 with its disquisition on the dangers in sensual pleasures, form and feeling; in M. 10 and M. 119 with their cemetery meditations; in M. 22, M. 54, and M. 75 with their shocking similes for sensual pleasures. Such teachings are part of the Buddha's tactical approach to guiding his disciples to liberation. By its own inherent nature craving springs up and thrives wherever it finds something that appears pleasant and delightful" (Bhikkhu Bodhi, op. cit. 29).

The Buddha's discovery of the principle of conditionality or interdependence led to his discovery of the link between dukkha and its cause tanhā. Therefore, dependent origination (paṭiccasamuppāda) explains both the origin as well as the cessation of dukkha. "In its fullest statement the doctrine spells out the origination and the cessation of suffering in terms of twelve factors connected together in eleven propositions. This formulation, laid down schematically, will be found at M. 38.17 in its order of arising and at M. 38.20 in its order of ceasing. M. 115.11 includes both sequences together preceded by a statement of the general principle of conditionality that underlies the applied doctrine. A more elaborate version giving a factorial analysis of each term in the series is presented at M. 9.21-66, and a version exemplified in the course of an individual life at M. 38.26-40. Condensed versions are also found, notably at M. 1.171, M. 11.16, and M. 75.24-25. The venerable Sāriputta quotes the Buddha as saying that one who sees dependent origination sees the Dhamma and one who sees the Dhamma sees dependent origination (M. 28.28) (Bhikkhu Bodhi, op. cit. 30).

The fourth Noble Truth which reveals the means to eliminate suffering constitutes the Noble Eight-fold Path. "Mentioned countless times throughout the Majjhima Nikāya, the Noble Eightfold Path is explained in detail in two full suttas. M. 141 gives a factorial analysis of the eight components of the path using the definitions that are standard in the Pali Canon.
Rebirth and Kamma: All beings except the arahants are subject according to the teaching of the Buddha to continued renewal of being until the time they attain nibbāna. Buddhism teaches that samsāric continuity takes place without a transmigrating soul. What continues through the samsāric cycle of births is 'a process, a flux of becoming in which successive lives are linked together by causal transmission of influence rather than by substantial identity'. ‘The process of rebirth, the Buddha teaches, exhibits a definite lawfulness essentially ethical in character. This ethical character is established by the fundamental dynamism that determines the states into which beings are reborn and the circumstances they encounter in the course of their lives. That dynamism is kamma, volitional action of body, speech, and mind. Those beings who engage in bad actions-actions motivated by the three unwholesome roots of greed, hate, and delusion-generate unwholesome kamma that leads them to rebirth into lower states of existence and, if it ripens in the human world, brings them pain and misfortune. Those beings who engage in good actions-actions motivated by the three wholesome roots of non-greed, non-hate, and non-delusion - generate wholesome kamma that leads them to higher states of existence and ripens in the human world as pleasure and good fortune” (Bhikkhu Bodhi, op. cit. 45).

Kammic action is action which is deliberate or purposive as defined by the Nibbadhikapariyāya Sutta of the Anguttara Nikāya (A. 111. 415). While volition (cetanā) determines whether an action is a kammic action or not, it also determines whether an action is a moral action or an immoral action. Those actions which are generated through wholesome volition (cetanā) are moral while those which are generated through unwholesome volition are immoral. According to the Ambalatthikarāhulovāda Sutta (M. 61), if an action generates results which are good to both the doer and the recipient, then that action is a moral action. If on the other hand, an action generates results which are harmful either to the doer, the recipient or both, then that action is an immoral action. Thus, for an action to be a moral action, it has to satisfy the cetanā as well as the vipāka criterion. But it must be noted here that all Majjhima discourses on kamma explain kamma with reference to its fruition (vipāka) from different viewpoints.

Nibbāna as the ultimate goal of the Buddhist religious endeavour, has formed the focal point in many discourses of the Majjhima Nikāya as the majority of its discourses are those addressed to the ordained disciples who had taken to the higher life to put forth effort for its realization. The attainment of nibbāna is the end result of the systematic training process which is designed to mature the total individual who follows it, to reach it. While it is not a state that could be attained without processing through the scheme of systematic training, it is also not possible to understand it through linguistic and other media at our disposal as all such terminology and symbolism are able to describe things within our grasp and reach, in our (spiritually) non-mature state of being. Therefore, the nearest that language can reach it is to describe it in negative terms, indicating thereby what it is not. According to the Ariyapariyesana Sutta (M. 26) Nibbāna is the, “unborn (ajātām), unageing (ajaram), unailing (abyādhim), deathless (amatam), sorrowless (asokam), undefiled (asankilitham), supreme security from bondage (anuttaram yogakkhemam). “The Buddha does not devote many words to a philosophical definition of Nibbāna. One reason is that Nibbāna, being unconditioned, transcendent and supramundane, does not easily lend itself to definition in terms of concepts that are inescapably tied to the conditioned, manifest, and mundane. Another is that the Buddha’s objective is the practical one of leading beings to release from suffering, and thus his principal approach to the characterisation of Nibbāna is to inspire the incentive to attain it and to show what must be done to accomplish this. To show Nibbāna as desirable, as the aim of striving, he describes it as the highest bliss, as the supreme state of sublime peace, as the ageless, .... To show what must be done to attain Nibbāna, to indicate that the goal implies a definite task, he describes it as the stilling of all formations, the relinquishing of all attachments, the destruction of craving, dispassion (M. 26.19). Above all, Nibbāna is the cessation of suffering, and for those who seek an end to suffering such a designation is enough to beckon them towards the path” (Bhikkhu Bodhi, op. cit. 32).
In the Sandaka Sutta (M. 76), venerable Ananda is questioned by the wandering ascetic Sandaka regarding those who have attained emancipation under the Buddha’s teaching (How many emancipated ones are there in this Dhamma and Vinaya? Kiva bahuñca pana bho Ananda imasmin dhamma vinaya sitiyathāro ti) which brings the interesting answer, “There are not only one hundred, two hundred, three hundred, four hundred or five hundred, but far more emancipated ones in this Dhamma and Vinaya, ("Na kho Sandaka ekam yeva satam na dvate satam na cattāri satam na pañca satam, athakho bhīyya va ye imasmin dhamma vinaya sitiyathāro ti (M. 1. 523). Similarly, in the Mahāsakuludāyi Sutta (M. 77) the Buddha declares that many are the disciples who live having attained the consummation and perfection of direct knowledge (abhinīvaññāna pārāmarippattā, M. 11. 22).

The Buddha was the discoverer of the path to deliverance from the eternal bondage of samsāra. All those disciples who followed the path shown by him and attained emancipation are known as ‘arahants’. The arahant therefore becomes the ideal figure not of the Majjhima Nikāya but of the entire Pali Canon as such. The disciple who can, after he has attained the completion of his training in the anupubbasicchāna, anupubbavāriyā, anupubbapātipāda, declare that he has destroyed the taints (kīna śava), lived the holy life (vissīta), done what had to be done (katakaraṇīya), laid down the burden (ohtabhāro), reached the true goal (anupattatasadatto), destroyed the fetters of being (parikṣikānaḥ), and is completely liberated through knowledge (sammaññatīvatīvatī) is the arahant.

The Kīṭāgiri Sutta (M. 70) lists seven types of disciples, “Sattime bhikkhave puggalo santo samvijjamanā lokasmiṃ, katame satta: ubhatobbāgavimutto paññāvimutto....” (M. 1. 477). Of these seven only the Ubbatobbbagavimutta and the Paññāvimutta are arahants. Explaining the first, the text, “Idha bhikkhave ekacco puggalo ye te santā vīmokkā atikkamma rūpe āruppā te kāyena phassitvā viharai, paññāya c’assa disvā āsavā parikṣikāna honti. Ayam vuccati bhikkhave puggalo paññāvimutto, Here some person contacts with the body and abides in those liberations that are peaceful and immaterial, transcending forms, and his taints are destroyed by his seeing with wisdom, this kind of person is called one liberated-in-both-ways” (M. 1. 477, Bhikkhu Bodhi op. cit. 580), explains that he has mastered the immaterial states (ārupajjānas). The second is explained as follows: “Idha bhikkhave ekacco puggalo ye te santā vīmokkā atikkamma rūpe āruppā te na kāyena phassitvā viharai, paññāyac’ assa disvā āsavā parikṣikāna honti. Ayam vuccati bhikkhave puggalo paññāvimutto, Here some person does not contact with the body and abide in those liberations that are peaceful and immaterial, transcending forms, but his taints are destroyed by his seeing with wisdom. This kind of person is called one liberated-by-wisdom”. (M. 1. 477, Bhikkhu Bodhi, op. cit. 581). The second type of disciples have thus attained arahantship without mastering the immaterial states (ārupajjānas).

These two types came to be explained as the attainments through the Samatha and the Vipassanā methods of meditation in the post-canonical traditions, obviously taking these two to be two separate and distinct paths of meditation and not as two integral steps in the same identical path, which actually they are. Another confusion seems to have arisen out of the failure to understand that both types of aspirants of arahantship follow the Silas, reach Samādhi, attain the first four jhānas and from there onwards take one of two different paths. The aspirant of the Ubbatobbbagavimutta path follows the formless jhānas and attains arahantship, while the aspirant of the Paññāvimutta path attains the three higher knowledges (viz. Puññeniyāsanussati, Āsavaṇa and Khaya) and attains arahantship.

Nathan Katz has a long and detailed discussion on the Ubbatobbbagavimutta and the Paññāvimutta. He has taken these two to be identical with what he calls the Cetovimutta and Paññāvimutta, obviously taking the latter as referring to two separate liberations (Nathan Katz, Buddhist Images of Human Perfection. 1982. 78f). It is relevant to note in this connection that all Nikāya contexts which describe the disciple’s attainment of the final knowledge of the destruction of the influxes (āsavānaṃ khaya) read as follows: “āsavānaṃ khaya anāñātva cetovimutto paññāvimutto diṭṭhevadhamme sayam abhinīna sacchikatvā upasampajjā viharati-He enters upon and abides in the deliverance of mind and deliverance by wisdom which are taintless with the destruction of the taints”, M. 1. 496, 76, 266; etc., Bhikkhu Bodhi, op. cit. 601, etc.). It is clear from these passages that the disciple who attains the destruction of the āsavas has attained both cetovimutta and paññāvimutta, without which his liberation is not complete. Continuing his discussion, Katz remarks further, “In the context of our earlier distinction of samatha or calming medita-
tion, and vipassanā or insight meditation, the Pali
commentarial tradition has distinguished the ceto-or
ubhatobhāgavimutti thus: the former follows the
samatha practices, most especially the jhāna, while
the latter follows the vipassanā practices. One
implication of this distinction is that the cetovimutti has
attained the five abhiññā, including the iddhividhā, while
the paññāvimutti has not. This is borne out in a sutta
where Susima the wanderer asks those members of the
sangha who had expressed aññā, which is to say,
those who were arahants, whether or not that expression
entailed the various knowledges of psychic powers
(iddhividhā). The arahants tell him that it did not,
since they had been freed by paññā: paññāvimutthā kho
mayam ārūso Susīmattā” (Nathan Katz op. cit. 81).

It must be noted here that the questions raised by
the wanderer Susima were regarding whether the
attainment of arahantship also meant that they had at-
tained the psychic powers. Apart from answering the
inquiry made, the sutta cannot be taken as evidence to
prove that these arahants had attained arahantship
through the vipassanā method. It has been clarified
earlier that while the attainment of the three higher
knowledges forms part of the process of attainment of
arahantship of those who select that path after the
fourth jhāna, the attainment of the psychic powers does
not form part of the process of spiritual training. We
have already seen that the attainment of the psychic powers was a special achievement which the disciple becomes capable of, if he so desired, after the fourth
jhāna.

Another important factor that must be noted in this
connection is that there is a difference between the three
higher knowledges and the five psychic powers. While
the three higher knowledges are part of the process of
spiritual training taught by the Buddha, the attainment of the five psychic powers is not, part of this process
and therefore not an essential element of the path as
we have already seen. Therefore, there is no reason to
get confused with a post-canonical division into
samatha and vipassanā to explain the two types of
arahants as the former has attained arahantship
through the mastery of the immaterial states, while the
latter has attained the same through the mastery of the
three higher knowledges.

The Socio-Religious Background of Buddhism:

The Gangetic regions of India known in the Bud-
dhist literature as the Middle Country (Majjhima desa)
comprising the area of the Kosalan and the Magadhan
kingdoms and the domains of the yet independent tribal
groups was the main area of religio-philosophical ac-
tivity which we witness from the early texts of the Pali
Canon.

While there were two distinct cultural streams, the
Śramaṇa and the Brāhmaṇa, the Buddha belonged to
the Śramaṇa cultural stream. During the early days of
his ministry, his disciples who gave up the lay life and
took up the higher life after him, did not differ very
much from the other contemporary Śramaṇa ascetics
and were known as samāṇa sakyaputtyā. When the
samāṇa sakyaputtyā grew in numbers with the wide
popularity gained by Buddhism, they came to be known
as the bhikkhusaṅgha, with a distinct dress, rules of
conduct and even residential accommodation for the
rainy seasons. We are also aware, how the latter came
to be permanent dwelling places for the bhikkhusaṅgha
later on.

The Madhyadesa witnessed almost an outburst of
Śramaṇa religious activity during this period. Not only
were there independent mendicants and mendicant
groups who had given up the lay life, known to us
from the Buddhist texts as the paribbajikas, there were
several Śramaṇa teachers who had attained popular-
ity and acceptance in that society by the time of the
Buddha. Thus, the Buddha was the youngest of the
Śramaṇa teachers of the period. The names of six
prominent teachers are known to us from the Pali texts.
The Majjhima Nikāya has several discourses which
contain discussions on their teachings. In the
Mahāsakuludāyi Sutta (M. 77) the six teachers are
described as, “heads of orders, heads of groups, teach-
ers of groups, well-known and famous founders of sects
regarded by many as saints, sāṁghino, ganino
ganācāryiyā hātā yasaossino tīthakkarā sāduṣsammātā
bahujanassa” (M. 11.2; Bhikkhu Bodhi op. cit. 630).
The Apanṇakā Sutta (M. 60) and the Sundaka Sutta
(M. 76) contain discussions on the teachings of five of
the six teachers without reference to their names.
Pūrṇa Kassapa’s doctrine of inaction (akiriyavāda),
the fatalism (niyatavāda) of Makkhali Gosala, the
nihilism (nāṭhikavāda) of Ajita Kesakambalin (M. 60,
M. 76), the atomism of Pakudha Kaccāyana and the
scepticism (amarāvikkhepi kavāda) of Sañjaya
Belatthiputta (M. 76) are subjected to close scrutiny
as wrong and harmful views which negate the purpose
of the higher life.

The teachings of the sixth teacher, Nīgāntha
Nāṭhaputta, the Jain firthankara, are found discussed
in several suttas of the Majjhima Nikāya, (M. 14, M.
of mutual intercourse. In the course of their constant peregrinations they frequently met together at rest-houses and also at meeting-places specially built for them, one of which is named significantly a Debating Hall (Samayappavādakasālā). The effects of these meetings and debates must have been considerable: they are evident at any rate in the early history of Jainism in the rules of one sect being borrowed by another and new sects growing by fission. Jacobi and Hoernle have traced in Jainism borrowings from the Acelakas and the Ājivakas, and similar borrowings may no doubt be discovered in Buddhism also. Instances occur of the members of one sect going over to another or of a secessionist party founding a new sect, as the Jaṭilas become Buddhists, the followers of Sañjaya accept the Buddha as their Satthā; (S. Dutt, Early Bud­dhist Monachism, 1960.35).

The brahmins who constituted the priestly class of the Brahmanic cultural stream was held in equally high esteem by the society, as his counterpart, the Samaṇa. Thus, in the Buddhist texts we find the two terms always used together. “The compound, Śramaṇa-Brāhmaṇa is of frequent occurrence in Bud­dhist and Jaina canonical literature; it occurs also in the edicts of Asoka with the component words reversed” (S. Dutt, Op. cit. 50). According to Majjhima Nikāya evidence, the Buddha and his disciples had quite cordial relations with the brahmins. In fact, the Buddha’s two chief disciples, besides many others came from the ranks of the brahmins. The brahmins accepted the authority of the Vedas and it was only the brahmins who could officiate at the Vedic sacrifices, the performance of which was incumbent at each and every important event in an individual’s life. Thus, they upheld the authority of the Vedas, the validity of sacrifice and the caste system.

It must be remembered that the traditional brahmins regarded the Gangetic regions, the area east of the confluence of the Ganges and Yamuna rivers, being far away from the āryāvarta, as an area unsuitable for brahmin habitation (Marasinghe, M. M. J., Gods in Early Buddhism, 1974.10). It becomes clear from the evidence in the Pāli texts that by the time of the Buddha there were brahmins of high esteem like Pokkharāsādi, Soṇadanā, Kuṭadanta, Lohicca, etc., in these regions who had been given lavish royal grants (Marasinghe, op. cit. 31). It is also clear from the Pāli texts that these brahmins had large retinues of brahmins with them to assist them in the sacrifices.

Besides the six teachers and their disciples, the presence of independent Paribbājakas groups was a common sight in the areas of Buddhist activity. Many are the instances recorded in the Majjhima of either the Buddha or one of his prominent disciples calling at their ārāmas where they were resident at the time (e.g. M. 13, M. 71, M. 76, M. 77, M. 79; etc.), pointing to cordial relations with them. But, neither the Bud­dha nor any of his disciples are recorded to have visited any of the six Śramaṇa teachers. According to the Upali Sutta (M. 56) Nigantha Nāthaputta sent his ardent follower Upāli to engage the Buddha in debate, which resulted in Upāli becoming a follower of the Buddha. Nigantha Nāthaputta is recorded to have been deeply shaken by this incident and vomited blood when he found for himself that the information was correct.

There were many sects or groups among the Paribbājakas. “Among these sects and parties there seems to have existed in primitive times a good deal
MACARA

The Buddha did not accept the brahmin claims to supremacy made on the basis of caste. In suttas like the Madhura (M. 84) and Assalāyana (M. 93) brahmin claims to supremacy and purity are taken up and shown that such claims cannot justifiably be maintained. Not only did the Buddha reject the brahmin division of society into the four castes, he set an example by establishing his castless society of, “the bhikkhusaṅgha”. When one becomes a member of the bhikkhusaṅgha he discards his lay distinctions such as name, caste, professional status, etc., and comes to be known as samanā sakayaputiya as great rivers like Ganga, Yamunā, Aciravati, Sarabhū, Māli, shed their previous names when they come to the great ocean and come to be known as as great ocean itself (A. IV. 202). “The Buddha even stripped the term ‘brahmin’ of its hereditary accretions, and hearkening back to its original connotation of holy man, he defined the true brahmin as the arahant (M. 98). Those among the brahmīns who were not yet hampered by class prejudice responded appreciatively to the Buddha’s teaching. Some of the most eminent brahmīns of the time, who were not yet hampered by class prejudice, responded appreciatively to the Buddha’s teaching. Some of the most eminent brahmīns of the time, whom there still burned the ancient Vedic yearning for light, knowledge, and truth, recognised in the Buddha the All-Enlightened One for whom they longed and declared themselves his disciples (see especially M. 91.34). Several even renounced their class privileges and with their retinues entered the Sangha (M. 7.22, M. 92.15-24). (Bhikkhu Bodhi, op. cit. 50).

Thus, it is clear from our discussions so far that the Majjhima Nikāya becomes by far the most resourceful collection of the “Dhamma” for a clear grasp of the teachings of the Buddha, and also for an understanding of the socio-religious milieu in which Buddhism sprang up to become the most influential teaching of the sixth century B. C.”

M. M. J. Marasinghe

MAJjhImA pAtIpaDĀ See MAADDHYAMA prATIpad

MACARA resembles a dolphin or a crocodile. The snout ends in a trunk like an elephant’s but shorter and often curled up so as to be inconspicuous. The body and tail are bird-like, but the early Indian forms as at Besnagar (3rd Cent. B. C.) had a distinctly fishy tail. In Indian astrology, makara is the sign of capricorn, the 10th house of the zodiac. It has also been described as a sea-monster or a swordfish. It is a mythical animal of a composite character. It is also one of the 108 magul-lakṣaṇu (auspicious symbols). Makara is the banner of the Indian god of Love (cupid). As it was initially associated with water, it had a fish tail (as at Besnagar) or the features of a crocodile (as at Kīmas Rishi cave, Bihār, 3rd Cent. B. C.). In a carving from Bhaṛhatu, the tongue is shown to project from crocodile like jaws. Later the lotus rhizome, complete with flowers and leaves, was depicted emerging from the mouth.

In a silpaśāstra work named Rūpāvaliya, in v. 148, makara has been described as follows:

Makarasya rūpā: Gajendra-hastaṃ kṛtapāda sīmhaṃ
Varāhakāraṃ hṛda matsya dehaṃ
Harāla-danīṃ Hanumanta netraṃ
Vicitrapāraṃ Makarasvabhāvaṃ

(Translation) “The makara has the trunk of an elephant, the feet of a lion, the ears of a pig, the body of a fish living in water, the teeth turned upwards, eyes like Hanuman’s and a splendid tail”.

This concept of the makara developed in Sri Lanka in the wingstones (korawak-gal) of the steps leading to shrines in Anuradhapura, where the projecting tongue, curved gracefully down to curl upward, at the bottom, with sprouts of foliage embellishing it. However, the tongues of the makaras in the makara torana differ from this arrangement and curve up, carrying animals such as swans, lions, serapendiyā and even human lovers.

This symbol has been used as an ornamental device in several ways. There is an example of an ivory casket where a makara torana with four gods is shown. Twin makaras have been shown in an ivory necklace. The bronze elephant lamp (āṭ-pahana) from Kota Vehera, Dedigama demonstrates the use of twin makaras supporting an arch with a ginisilu (flame design) above the superior edge. According to Ganadevi-sāhalla, in Ganesa’s palace, there are pictures of makaras painted on its walls. Makara-kūndala are ear-ornaments which are shown as worn by Hindu deities and Bodhisattvas. In Sinhala Buddhist art, makara-torana forms the entrance to the inner sanctuary where the image of the Buddha is placed. In Hindu art, Nadarājah is set in a niche and is surrounded by a flaming circle, which proceeds out of the twin makaras. At Beligala, there is a well-preserved moonstone and...
its design is an adaptation from the makara torana. At Kelani vihāra, there are paintings of makaras as well as makara toranas. At the entrance to Lankatilaka-vihāra (Kandy), there is a makara-torana. It is also to be seen above the main seated image of the Buddha in the sanctum.

Makara-torana is an ornamental arch springing from two profile makaras facing each other and with a kibihi face in the position of the keystone. Kibihi is the face of an awe-inspiring open-mouthed monster. In a stone pillar at Mādagoda-devale, there is a very good example of a kibihi face. A prototype of these curious ornamental arches (makara-toranas) are found in the chaitya-windows of the early Buddhist cave temples in India. Makara-torana shrines for figures of the Buddha were sometimes made of wood, carved in high relief, as in the example from Danagirigala-vihāra. There is also a small example in the Colombo Museum.

One type of extant makara sculpture has the kibihi face replaced by two makara heads turned away from each other. In Buddhist architecture there is a popular belief that in mid ocean there is a large and fearsome makara to whose trunk one may offer the paws of a lion, the ears of a boar, the body of a fish, teeth turned outwards projecting from the jaws of a crocodile, the eyes of a monkey (like Hanuman's) and the quasimythical tail of a bird. When fully evolved, the makara, with five curves consisting of a trunk of an elephant, the paws of a lion, the ears of a boar, the body of a fish, teeth turned outwards projecting from the jaws of a crocodile, the eyes of a monkey (like Hanuman's) and the quasimythical tail of a bird. Thus this state of evolution is in conformity with what is enumerated in the silpaśāstra work named Rūpāvaliya.

Kuvera's nine treasures include the lotus, makara and conch. Varuṇa, god of waters and goddesses including Gāṅgā, have the makara or fish tailed animals as vehicles. Makara-dhvaja is the emblem of Kāmadeva, the Indian Cupid. The makara has been the emblem of the Bharatas of India. In course of time, architectural specifications for the makara-torana came to be stipulated. The height of the structure should be divided into 10, 9 or 8 equal parts of which the 3 on top should be occupied by the spanning structure and the rest by the two supporting pillars (Rūpam, No. 26, April 1926). The breadth of the arch could be half its size or 4-6 danās. A crescent shaped arch decorated with leaves is called a patra-torana. That which has a central ornament flanked by two alligator heads with open jaws whose tongues terminate in those of the makara, at each end of the arch, with decorative adjuncts such as gobelins celestial figures, animals, swans, and pearl wreaths is called citra-torana. That with five curves (pañca-vaṅka) and two makara figures is called a makara-torana. Kāśyapa-samhithā also stipulates that the makara-torana must have the two fish like animals at the extremities. The central space filling spiral or festoon is called the purimā.

After the 12th Cent. A. C., the space above the arch, on either side of the kibihi, were decorated with figures of Brahmanical gods or guardian deities (lokapālas). There are instances where these intermediate spaces have been variously treated. In course of time, the number of gods increased to eight, as at Danagirigala and Vattārama shrines. At the Lankatilaka-vihāra (Kandy), there is a magnificent kibihi face above the serene samādhi statue. At the entrance to the sanctuary where the image of the recumbent Buddha has been placed at Kelani-vihāra, there is the classical example of the makara-torana.

Nandasena Mudiyanse

MAKKHA-PALĀSA. Makkha (Skt. Mrakṣa) conveys the meaning of 'hypocrisy'. It usually occurs in texts coupled with Palāsa. In the Niddesa, Makkha is explained as hardness or mercilessness (makkhayātanā makka-/yitattam nīṭhuriya-kammam-Nā. 484). It is explained as the smearing of another person's good qualities (paraghunāna makkha lañkha/ makkho-DhpA. IV. 181).

Likewise, Palāsa conveys the meaning of 'unmercifulness', 'maleice' or 'spite'. Its nearest synonym is 'Yuga-gāha'. (Vbh. 357). Palāsa has the characteristic of domineering or dominance. Hence it is a synonym for Yugaggāha (yugaggāha lañkha palaso-VvA. 71). Further the Vibhaṅga describes palāsa as
Makkha and palāsa are mentioned as the 12th and 13th items of the list of 1500 akusala dharmas (UdA. p. 318).

D. Saddhasena

MAKKHALIGOSALA, one of the six heretical teachers of India, generally treated as contemporaneous with the Buddha. Buddhist literature does not give a comprehensive account of the life and teachings of this religious teacher. His name is consistently mentioned as Makkhali-gosāla (Skt. Maskarín Gosaliputra). Buddhaghosa comments that Makkhali was his personal name and he was also called Gosalā because he was born in a cow-shed. (Makkhaliti tassa nāmam, gosalāyā jātattā Gosāloti dutiyam nāmam; DA. I. p. 143). The commentator invents a curious story to explain the name and the life of Makkhali Gosāla. It is said that he was once employed as a servant; one day while he was carrying a pot of oil (telā-ghatam) along a muddy path, he slipped and fell through carelessness, although he was warned by his master “Mā-khali” meaning “stumble not.” This, according to Buddhaghosa gave his personal name. When he found that the pot of oil was broken, through fear he fled, and his master chased him, and caught him by his garment, but Makkhali tore not for the garment and ran along naked. Later people saw him naked and took him to be an ascetic worthy of honour and respect (DA. 1: p. 142, 143-44).

In the Jaina records the name is given as Gosāla Maṅkaliputta-meaning Gosāla the son of Maṅkali. He was born at Saravana, a locality near Sāvatthi. His father was Maṅkhali and his mother was called Bhaddā. His father was a dealer in pictures—hence the name Maṅkha. Makkhali Gosāla himself followed his father’s profession before he took to religious life (Barua, A History of Pre-Buddhist Philosophy, Calcutta, 1921, p. 298; Hoerule, ed. Uvāsagādasao, p. 1).

Barua says that “neither of these accounts (i.e. Buddhist and Jaina accounts given of Makkhali Gosāla) is historical”. He points out that the true name of the philosopher seems to be Maskarín, the Jaina-prakrit form of which is Maṅkhali, and the Pali form Makkhali. The term Maskarín is explained by Pāṇini as meaning one who carries a bamboo-staff (mascara). A Maskarín is also known as Ekadaśin. According to Patanjali’s comments the name indicates a school of wanderers or sophists who were called Maskarins, not so much
Barua points out on the authority of Hoeruls extracts from the Bhagavati Sutra (Appendix to Uvasagadasao, pp. 2-4) that Makkhali Gosala became a pupil of Mahavira in the second year of the latter’s religious life, having Nalanda as their meeting place. They lived happily together for sixteen years at Paniyabhumi, and afterwards separated owing to doctrinal difference. After sixteen years they met at Sāvatthi where Makkhali Gosala had found a separate school of thought. But this chronology and the statement that make Makkhali Gosala a disciple of Mahāvīra is disputable. The Bhagavati Sutra mentions that Makkhali Gosala predeceased Mahāvīra by sixteen years, and was recognised as a teacher sometime before the latter. Gosala’s death was coincident with a great political event—the war “which king Kingvīna (Ajatasattu) of Magadha waged with king Chedaga of Vesāli” (Barua. op. cit. p. 299). In Buddhist literature, Makkhali Gosala’s views are depicted in his reply to king Ajatasattu when the latter asked the former as to what the immediate advantage in the life of a recluse. From the account found in the Sāmañña-phala Sutta it appears that he expounded his theory of purification through transmigration (samsāra-suddhi). According to him there is no cause, either ultimate or remote, for the depravity of beings; they become deprived without reason and without cause. There is no cause, either proximate or remote, for the rectitude of beings; they become pure without reason and without cause (“na tthi hetu n‘atthi paccayo sattanaṃ samkilesa, ahetu-apaccaya sattā sanakkilissanti. N‘atthi hetu, n‘atthi paccayo sattanaṃ visuddhiyā, ahetu-apaccaya sattā visujjhitī”; D.i.p 53). The attainment of any given condition, of any character, does not depend either on one’s own acts, or on the acts of another, or on human effort. There is no such thing as power or energy, or human strength or human vigour. All animals, all creatures (with one, two, or more senses), all beings (produced from eggs or in a womb), all souls (in plants) are without force and power and engergy of their own. They are bent this way and that by their fate, by the necessary conditions of the class to which they belong, by their individual nature and it is according to their position in one or the other of the six classes that they experience ease or pain - (N‘atthi attakārē… parakārē…purisa-kārē, n‘atthi bālam…viriyāṃ…purisa thāmo…purisa parakkamo.

Makkhali Gosala denied hetu-paccaya, condition and cause; the efficacy of kamma. He is an ahetu-vadā-non-causationist. From the Buddhist point of view, Makkhaligosāla was the worst of the sophists.
MAKKHALIGOSĀLA

In the Makkhali Sutta of the Anguttara Nikāya, the Buddha is mentioned to have said of this most dangerous heretical teacher as "I know not of any other single person fraught with such loss to many folk, such discomfort to many folk, with such loss, discomfort and sorrow to devas and mankind as Makkhali, that infatuated man". The Buddha thought that Makkhali Gosāla was born into the world, to be a man trap (manussa-khipam) for the discomfort, suffering, distress and distraction of many beings. (Nāham bhikkhave aññam ekapuggalam 'pi samanupassāmi yo evam bahujanāhitāya paṭipanno bahujanāsukkāya bahuno janaسا anātthāya ahithāya dukkāya devmanussānam yathāyidam bhikkhave Makkhali moghapūriso... manussa-khipaṃ maññe.....A.I. p.33).

At some other place, the Buddha denounced Makkhali Gosāla's views as the meanest, "just as the hair blanket is reckoned the meanest and lowest of all woven garments whatsoever, even so of all theories put forward by recluses, that of Makkhali is the meanest. Makkhali...Infatuated man thus proclaims, hold this view: There is no moral act; there is no efficacy of moral acts; there is no role for human effort (Makkhali.... evam vādā evam ditthi-natthi kamman, n'atthi kiriyam, n'atthi viriyan ti. A.I.p. 86).

In the Sumaṅgalavilāsinī Buddhaghosa distinguishes between the moral effects of Makkhali Gosāla's doctrine on the one hand and that of the doctrines of Pūrāpakassapa and Ajitakesakambala on the other. Pūraṇa Kassapa by his theory of the passivity of the soul, denied action; Ajita Kesakambala, by his annihilationistic theory denied retribution, while Makkhali Gosāla by his doctrine fate or non-causation denied both: action and its result (DA.I.p.166).

Makkhali Gosāla's philosophy as found in the Buddhist literature is vague and ambiguous, and commentators also find their task, hopeless. Malalasekara comments that 'He (i.e. Makkhali) seems to have believed in infinite gradations of existence; in his view, each individual thing has eternal existence, if not individuality, at least in type. He evidently had definite conceptions of numerous grades of beings, celestial, infernal and mundane, as also of the infinity of time and the recurrent cycles of existence. He seems to have conceived the world as a system in which everything has a place and a function assigned to it, a system in which chance has no place and which admits of no other cause whatsoever, of the depravity or purity of things, but that which is implied in the word fate or destiny (niyati). All types of things and all species of beings, however, are individually capable of transformation, that is of elevation or degradation in type. His theory of purification through transmigration (samsāra-suddhi) probably meant perfection through transformation (parināta) - transformation which implies not only the process of constant change, but also the fixed orderly mode progression and retrogression. All things must, in course of time, attain perfection (DPPN).

All his followers are known as Ājivakas. (For a detailed discussion of his philosophy see Barua, op. cit; Ency. Bsm. ĀIVAKAS; Basham, History and Doctrine of the Ājivakas, London, 1951).

M. Karaluvinn.

MALA, literally means rust or stain, as is ayasā va malaṃ samāthhitam, meaning 'as rust sprung from iron' (Dhp. v. 240). The term has been used figuratively as well, as in itthi malam brahmacariyassa, meaning 'woman is a defilement to higher life' (S. I. 38, 43), and in mulithiyā duccaritam, meaning, 'misconduct is defilement in woman' (Dhp. v. 242). It has also been used as a technical term with reference to things which are defiled and which in turn defile the minds of sentient beings; in short, to the taints of mind (Vism. p. 587). In this latter sense, mala is a synonym for passions (kilesa, kīṭa: Vism. 586; Abhsy. p. 44). All evil states of mind are referred to as taints or defilements (mala va papaka dhamma: Dhp. v. 242).

The texts give four different lists of taints; the most popular among them consists of the three basic passions, otherwise known as the roots of evil, namely lust (rāga or lobha), hatred (dosa, dvesā) and delusion (moha: S.V. 57; Nd. I. p. 15, II. p. 224; Vbh. 368; Vism. 587; Abhsy. 48): The Mahāniddesa in another instance (Nd. I. p. 478) adds conceit (māna) and speculative views (ditthi) to the above list of three; kilesa and duccarita in this list are apparently used as common names for those five taints. The Anguttara Nikāya has a list of three, namely, the taint of immorality (duṣṣālīyamala), taint of envy (issāmala) and the taint of jealousy (maccharamala: A.I. 105). The Vibhaṅga gives a list of nine as taints of man (nava-purisa-mala); they are anger (kodha), hypocrisy (makkha), jealousy (issā), avarice (macchariya), deceit (māyā), treachery (sātheyya), falsehood (musāvāda), evil desires (pāpičchā) and wrong views (micchāditthi: Vbh. 389). The Dhammapada (v. 243) describes delusion (avijjā, a synonym of moha) as the greatest taint.
The items given in these lists show that they include the three basic passions as well as some secondary passions like māna, diśthi, kodha, makkha, issā, maccharīya, māyā and sāthāyya.

The items like dussēyamala and musāvāda have to be considered on a different level, as they cover evil actions, rather than passions which give rise to them and sustain them. They may be taken as taints in the sense that they defile one's character.

The real taints, i.e., passions, are described as internal defilements, since they defile one's mind; as internal foes, since they work against one's spiritual progress and as internal executioners, as they kill one's good qualities (Nd. I, 15). They make people foolish and blind to the truth, and destroy their wisdom; they are therefore, harmful to the attainment of Nibbāna (Nd. I, 478-79). As rust, sprung from iron, eats itself away, even so one's own evils lead one to the states of woe (Dhp. v. 240).

The wise man must, therefore, remove his own taints as a smith removes dross from silver (Dhp. v. 239). The path to their removal is the Eightfold Noble Path (S. V. 57).

Of the three basic taints, the taint of hatred (dosamala) is destroyed by the knowledge that arises at the third stage of emancipation i.e. the knowledge of the path of the never-returner (anagāmi-magga-ñāṇa); and the other two, the taint of lust (rāga-mala) and of delusion (mohā-mala), are destroyed by the knowledge that flashes at the fourth and final stage of emancipation, i.e. the knowledge of the path to arahantship (arahatta-magga-ñāṇa: Vism. 589).

Those who have got rid of the taints in their entirety (niddhantamala: Dhp. vv. 236, 238) namely, the arahants, are therefore, called Vimala (Sn. v. 378) and nimma (Dhp. v. 243), 'those without taints'. See KLESĀ.

Upali Karunaratne

MALALASEKERA, GUNAPALA PIYASENA (born GEORGE PEIRIS; sometimes referred to as GEORGE PERCIVAL): Sri Lankan scholar, educator, diplomat and international Buddhist leader. Prof. Malalasekera was born on November 8, 1899 at Panadure (17 miles to the south of Colombo) to Mr. M. S. Peiris Malalasekera and Mrs. Dona Selestina Kuruppu Jayawardhana. After his primary and secondary education at Saint John's College, Panadure, from 1906 to 1917, he was admitted to Ceylon Medical College (1917-1918). Discontinuing medical studies, he pursued a course of studies leading to the external degree of Bachelor of Arts of the University of London in Oriental Languages, which he obtained at the age of nineteen in 1919.

Educator: Inspired by the prevailing campaign for the national and religious revival through the promotion of Buddhist education, he joined the Island's premier Buddhist school, Ananda Vidyalaya, as a teacher in 1921. Elevated to the rank of Vice-Principal in the following year, he was appointed its acting Principal in 1923. He resigned from Ananda Vidyalaya to proceed to England for tertiary education. He obtained simultaneously the degrees of MA and Ph.D. from the School of Oriental Studies of the University of London in 1925. His supervisor was Mrs. C. A. F. Rhys Davids. He returned to the Island to continue his efforts in Buddhist education. He became the Principal of Nalanda College in 1926.

As the Ceylon University College, established as an affiliated College of the University of London in 1923, expanded young Malalasekera's excellent academic credentials were recognized. In 1927, he was appointed lecturer in Sinhala, Pali and Sanskrit. He was an instant success. His excellent command of both English and Sinhala, in which his oratorical skills were outstanding, contributed to his popularity both as an academic and a Buddhist leader.
He was elected Joint Secretary of the All Ceylon Buddhist Congress, the leading Buddhist organization which he served in many capacities for over thirty years: Vice-President from 1937 to 1939 and President from 1939 to 1957 and from 1967 to his death in 1973.

Scholar: As a lecturer at the University College, he concentrated on research and his major publications belong to this period. His Ph. D. Thesis on The Pali Literature of Ceylon was published in the Royal Asiatic Society Prize Publications Series, London, 1928 (380 pages). He edited for the Government of Ceylon the Vamsatthappakasini, the Pali commentary on the Mahavamsa and it was published for the Pali Text Society by the Oxford University Press, London in 1935 (Introduction 113 pages and text 700 pages). Continuing his scholarly analysis of Sri Lankan Pali Chronicles, he undertook for the Aluvihare Series of the Royal Asiatic Society (Ceylon Branch) the edition of the unique version of the Mahavamsa which has hitherto been found only in Thai and Cambodian Manuscripts outside Sri Lanka. Twice as long as the Mahavamsa extant in Sri Lanka, this expanded version of the Chronicle showed how very important the study of Sri Lankan history was in Southeast Asia. Malalasekera's edition of this work was published as the Extended Mahavamsa in Colombo in 1937 (Introduction 53 pages and text 380 pages). Simultaneously, he worked on his magnum opus, the Dictionary of Pali Proper Names in two volumes. It was published in London in 1937 by the Secretary of State for India in the Indian Text Series. (1163 + 1370 pages) The painstaking research, presented in lucid language in a form suitable for easy reference, provided an indispensable tool which was urgently needed by students of Buddhism and Pali literature. Mrs. C. A. F. Rhys Davids speaks of Prof. Rhys David's unfulfilled plan to publish a similar dictionary of names. She says in 1937 "Then a keen and gifted student, once my pupil, consented to fill the breach. With Dr. Malalasekera, it is possible to try and begin work there and then. And now, working as men-of-will work, in the leisure intervals of an educational appointment, with yet another large task on his shoulders ... the Mahavamsa-tikā, published in 1935 ... unadulterated by a temporary breakdown through overwork, he has come as editor of the Names Dictionary to see land ahead." It was well received and on the strength of its excellent quality, the University of London awarded Dr. Malalasekera the degree of Doctor of Letters (D. Litt.) in 1938.

In 1939, he was promoted to the rank of Professor of Pali, Sanskrit and Sinh. 1a of the Ceylon University College. With the creation of the University of Ceylon in 1942, he was appointed Professor of Pali and Buddhist Civilization and was elected Dean of the Faculty of Oriental Studies. Amidst his many academic and administrative duties in the new University, he concentrated on another major work: English-Sinhalese Dictionary (14 + 1066 pages), published in Colombo in 1948.

National and International Buddhist Leader: With the prestige gained through his academic positions and the leadership in the national Buddhist movements, Professor Malalasekera directed his attention to the international Buddhist community. Invitations which came from various academic institutions in the world, took him to centres of Buddhist activity. Undaunted by the variety he saw in the Buddhist traditions of the world, he was impressed by the unity of the basic doctrines and the opportunities for cooperative action. By 1950 he was convinced that a representative body of Buddhists of all traditions was ready to form a world forum under his direction and leadership. His invitation was accepted by 129 delegates from 26 countries and the World Fellowship of Buddhists was formed in Sri Lanka with him as the Founder-President. The strong foundation which Professor Malalasekera laid to this world body contributed to its continuing success as the premier international forum of Buddhists of all traditions. The Fellowship in its 50th year now enjoys consultative and operational status as a Non-Governmental Agency cooperating with the UNESCO (since 1952) and the United Nations (since 1995). Professor Malalasekera remained the President of the World Fellowship of Buddhists during the first two years until U Chan Htoo of Myanmar was elected to succeed him.

Professor Malalasekera played a key role in the preparations for and the celebration of the 2500 Buddha Jayanti. He was particularly active in the Tripitaka Translation Committee and the Committee on Religious Awakening. He was requested to prepare a concise book on "The Buddha and His Teachings", which the Lanaka Buddha Mandalaya published in 1957 (76 pages). On his proposal, a project was launched to compile a ten-volume Encyclopaedia of Buddhism. He was invited to be its Editor-in-Chief. The groundwork for the Encyclopaedia was undertaken in 1954.
As the most widely acknowledged scholar, he was persuaded to seek election as vice-chancellor of the University of Ceylon. His failure in this bid proved to be a blessing to both scholarship and the cause of national development. He devoted his time and energy to the Encyclopaedia of Buddhism and through the worldwide network of scholars who held him in high esteem, many thousand articles were commissioned. Its office, set up in Colombo and moved to Peradeniya, was an international outfit representing all major traditions of Buddhism. He also took an active interest in the Peace initiative of the UNESCO. His book on “Buddhism and the Race Question” (co-authored with K. N. Jayatilleke) was published by the UNESCO in Paris in 1958 (72 pages).

Diplomat: The new government of Mr. S. W. R. D. Bandaranaike found in Professor Malalasekera the ideal representative to the Eastern Bloc countries with which Sri Lanka was about to establish diplomatic relations. In 1957, he was appointed as Ambassador to USSR and was later given concurrent accreditation to Poland, Rumania and Czechoslovakia. He was exceptionally successful as a diplomat and his international prestige was greatly enhanced.

From 1961 to 1963 he held concurrently the dual position of High Commissioner in Canada and the Permanent Representative to the United Nations. At the United Nations, he served as Chairman, Security Council; and member of the Fact-finding Mission to Saigon and of the Committee on Information from Non-self-governing Territories. His diplomatic career was crowned with his appointment as Sri Lanka’s High Commissioner in the United Kingdom from 1963 to 1967.

With the far-reaching reforms made in 1965 in the University system, Professor Malalasekera was invited to be the Chairman of the National Council of Higher Education, a position he held until 1971 when the government decided to establish a single university with independent campuses.

Man of Action, Innovative and Versatile: Whether in Sri Lanka or abroad, Professor Malalasekera excelled as a man of action and creative planning, with matching power of oratory in Sinhala and English to win and motivate supporters for his projects. What he accomplished through the All Ceylon Buddhist Congress was incredible. Through it became the national policy-maker in the field of Buddhism and his speech at the annual general meeting laid down guidelines for action. Education, social services, Buddhist temporalties, violence and drunkenness, and ethics received his in-depth attention. He was recognized as the most effective fighter for the rights of the Buddhists. He matched his words with action. He introduced a large-scale social service component to the programme of the Congress and set up orphanages, homes for the aged, and hospital and prison services. He also became an acknowledged mentor for many young activists. He was sought by the rising generation of artists, musicians, dancers and writers for advice and guidance. Hardly an association of theirs was organized without Professor Malalasekera as Patron. Colombo Art Association had him as its Secretary and the Colombo Art Gallery, where generations of budding national artists exhibited their maiden creations, owes its existence to his imaginative, persuasive and persevering efforts. He even organized the first Beauty Contest in Sri Lanka. The Government-sponsored Art Council of Ceylon had him as President.

Professor Malalasekera was closely connected with the development of radio broadcasting in Sri Lanka. The high quality of talks he could deliver extempore in both English and Sinhala brought him the distinction of being a frequent commentator of major events and the spokesman on various issues. He himself conducted a weekly Brains Trust (Buddhimandalaya) which discussed issues raised by the public. His Buddhist talks, especially in English, enabled the English-speaking elite to acquire an understanding and appreciation of their religion and national heritage.

Popular Touch: The more Professor Malalasekera extended his attention to public issues and the opportunities for direct communication with the people, the less was his concern with textual criticism and scholarly research. He was conscious of the general public to whom scholarly works were not readily accessible. He wrote for them popular articles specially on the history of Buddhism and Sri Lanka’s spiritual and cultural relations with neighboring countries. Among the short articles which have been frequently reprinted and widely circulated all over the world are those on “The Buddhist Doctrine of Anatta”, “Buddhism in Ceylon”, “2500 years of Buddhism”, “The God and Man in Buddhism”, “Buddhism and Problems of the Modern Age”, “Non-injury-a Fundamental Buddhist Tenet”, “Buddhism - the Strongest Influence that Moulded Asia’s Culture”, “Misconceptions about Nirvāṇa” and “Teaching of Peace and Happiness”. 
These appeared in popular journals and newspapers. He was the Editor of “The Buddhist” the organ of the Young Men’s Buddhist Association of Colombo from 1945 to 1957. His editorials dealt with a variety of subjects and displayed his wide-ranging erudition as well as his deep commitment to the advancement of Buddhism.

Professor Malalasekera offered his voluntary services to a large number of associations which pursued religious and cultural activities and many were started by him. He was president or secretary. At the early stage, he acquired the nickname of “Sakala Secretaris”, meaning “secretary of all organizations”. He was readily available as a public speaker and his audiences ranged from Sunday School Prize-giving in a remote village to sophisticated assemblies of international savants. He spoke eloquently and had a knack for being relevant and insightful. His sense of humour was excellent. As these speeches had been delivered without scripts or notes, a vast treasure of knowledge and wisdom remains to be gleaned from contemporary newspaper reports. It is a pity that most of his invaluable contributions of current thinking on social issues have to be reconstructed from memories of his contemporaries.

National and International Recognition and Honours: Professor Malalasekera was invited to serve on governmental advisory boards such as the Special Committee of Education (1942), Central Advisory Board for Education (of which he was President), Commission on Higher Education in Swabhasa (1954), Official Language Commission (1956), Committee on the Recorganization of the National Service of Radio Ceylon, and Editorial Committee of the Sinhalese Etymological Dictionary.

He was equally active overseas. He represented Sri Lanka at the Conference of Living Faiths Within the Empire (London, 1924); World Fellowship of Faiths (London, 1936); East-West Philosopher’s Conference (Hawaii, 1949); Indian Philosophical Congress (India, on several occasions); International Congress of Orientalists (several times); All Indian Oriental Conference (India, several times); Pakistan Philosophical Congress (Karachi, 1955); Royal Asiatic Society of Great Britain and Ireland (several symposia); Symposium on Buddhism’s Contribution to Art, Letters and Philosophy (New Delhi, 1956); and Convocation of Religion for World Peace (San Francisco, 1965). He also functioned as President of Asian Archaeological Congress; Asian Cultural Organization; and Indian Philosophical Congress.

Professor Malalasekera was honoured with degrees and awards for his numerous achievements. Among them are the following: Hon. D. Phil (Moscow); Hon. D. Lit. (Ceylon); Hon. D. Lit. (Vidyodaya University of Ceylon 1960); Imperial Honour of the Officer of the British Empire (O.B.E.) 1953; Chevalier de l’Ordre Nationale de Merite (France); Commander of the Order of Mani Saraphon (Cambodia); Buddhassanavepullahitadhara (Myanmar); Membre d’honneur de l’Ecole Francaise d’Extreme Orient.

Conclusion: His death on 23 April 1973 was mourned as an irreparable loss to the nation. Academic and Buddhist circles throughout the world lamented his death with glowing obituaries which highlighted his leadership role as both a scholar and an activist. The most significant memorial for him is that the numerous organizations he established or inspired others to establish have continued to flourish and their beneficiaries express their gratitude to this remarkable man of vision and action.

Arrival of Buddhism in South East Asia

MALAYSIA Arrival of Buddhism in South East Asia, Myanmar, Thailand, Cambodia and Vietnam have been Buddhist for over a thousand years. Fa-Hsien who visited Java about 414 observed that Buddhism was practiced, although it is an Indian monk called Gunavarnam who is credited with having really established Buddhism there. Later these sites were visited by I-Ching who travelled 671-695 A. C. The famous Sri Vijayan Kingdom in Sumatra was noted for its centres of Buddhist learning and the close contacts it maintained with the Buddhist University of Nalanda in the Seventh Century.

We know that during this period Malaysia also was home to many Buddhists, judging from the large number of artefacts discovered in various parts of the Malay Peninsula, especially Kedah. Among them was a clay tablet inscribed with these two verses in Sanskrit:

Whatever natures have arisen through causes, their cause the
Tathagata has declared and whatever is their cessation.
Speaking thus is the great ascetic (mahāsramāṇa).

Through ignorance Karma is accumulated; Karma
is the cause of rebirth. Through knowledge, Karma
does not operate; from the absence of Karma one
is not reborn.

This indicates the presence of Buddhism as early as the fourth century A. C. in the area. Mahāyāna Buddhism is believed to have flourished here up to the 8th Century A. C. and possibly much later. India’s trade links with the peninsula go back to the early centuries of the Common Era. Traders would arrive on the northern part of the west coast (Known to them as Suvaṇṇabhūmi because of the rich gold deposits they found here) in their boats, cross the land by elephant to the East Coast and continue their journey to China across the South China Sea. Settlements would have arisen to satisfy the needs of the traders, as they would have had to stay there for extended periods of time to wait for the arrival of ships or favourable weather to set sail. As at least some of them would have been Buddhist they naturally would have set up places of worship on both sides of the peninsula. Buddhist artefacts found in these places testify to this possibility.

There is evidence to indicate that some traders from the eastern coast of the Indian sub-continent were Buddhist. The northern parts of the Malay peninsula were influenced by the Theravāda Buddhism of Myanmar & Thailand, while the southern part was influenced by the Mahāyāna Sri Vijayan empire of Sumatra. They would have brought religious objects to accompany them to ensure safe journeys and set them up for worship in their temporary settlements. Artefacts found on the riverbeds and disused tin mines in Kedah seem to point out that this was the case. Buddhist influence would also have spread from the Sri Vijayan empire in Sumatra to the Malay Peninsula. However Buddhism does not seem to have played a very important role in the lives of the local people as there is no evidence of any ruler or the population having been converted en masse or even having left any mark on the culture of the people as Hinduism certainly did. After the Chola invasion of Sri Vijaya, Buddhism was weakened in the region, the final blow coming around 1300 A. C., making way for the arrival of Islam in 1411 A. C.

We are on firmer footing when we look at the spread of Buddhism via Thailand on the East Coast of the peninsula in Kelantan and Trengganu in later times. Buddhism was introduced to Thailand in the first or second century C. E. and became the dominant religion which even today plays a significant role in the Government and culture of the Thai people. As Kelantan and Trengganu were under Thai rule until the 19th Century Buddhism was widely practiced in these states. Even today many Kelantanese of Thai descent are devout Buddhists and they maintain important places of worship there. Buddhists and Muslims share a deep respect for each other and their degree of tolerance for each other is remarkable.

The arrival of the British and the development of rubber plantations and tin mines in the country created a large influx of migrants from China and Sri Lanka towards the latter half of the 19th Century. The migrants from Sri Lanka brought with them their brand of Theravāda Buddhism and they established a number of temples in the places they settled, notably in Penang.
Taiping and Kuala Lumpur. But aside from attracting English educated Chinese to their form of Buddhism they refrained from active missionary work to convert non-Buddhists to their religion. The Chinese who migrated in those days brought with them a mixture of Mahayana Buddhism, Taoism and Confucianism, established temples, schools and hospitals and welfare groups to cater for their needs. Some of these establishments were highly successful and have continued to the present day, catering to a large Mahayana population.

However, as more Chinese became English educated, they were attracted to Sri Lankan Theravada Buddhism, especially through the influence of the English speaking monks who came to serve here. Therefore a sizeable proportion of Malaysian Chinese are adherents of Theravada Buddhism, at the same time, especially in the north, many of them have adopted Thai Buddhism.

In recent years many buddhists have begun to show an active interest in Vajrayana Buddhism especially in urban areas. A very attractive aspect of Buddhism in Malaysia is that the followers of the three YANAS are quite comfortable with all of them and more freely from one to another as the occasion demands.

Overall, Buddhism is today practiced by about 18% of the total population of 21 million in Malaysia, but its adherents make no active efforts at conversion, being content largely to spread the knowledge about the religion only to those who are already Buddhists, and to counteract the missionary efforts of the proselytizing religions.

Today therefore Buddhism in all its three major forms is thriving in every part of the country and Buddhist leaders are constantly working to meet the needs of the population not only spiritually but in other areas like welfare and education as well.

There are 714 registered Buddhist organizations in Malaysia. They provide religious education for the Buddhists and are actively engaged in social and welfare work. Buddhist societies are also found in some universities, colleges and schools. There is also an active Buddhist youth movement in Malaysia headed by the Young Buddhist Association of Malaysia.

In fact there is so much Buddhist activity going on that Buddhism is slowly taking on a distinct Malaysian flavour with Chinese, Thai, Sri Lankan, Burmese and even Tibetan forms of practice being blended to satisfy the particular needs of Malaysians. One important feature is that while these different forms are so distinctly different, they do not see themselves as rivals in any way, mingling freely and recognizing their unity as Buddhists. The best evidence of this is the celebration of Wesak which commemorates the Birth, Enlightenment and Death of the Buddha. Right up to the period of Malaysian Independence from British Rule, only Buddhists of Sri Lankan origin celebrated this festival on a grand scale. But today all Malaysian Buddhists celebrate Wesak throughout the country, whether they are Theravada, Mahayana or Tibetan.

Monks and Nuns: Monks and nuns are often looked upon as religious leaders, teachers and counsellors to the lay Buddhist community. They command great influence over the lay Buddhists and play a crucial role in the development of Malaysian Buddhism. Sangha, which is the name given to the society of monks and nuns, is one of the components of the Triple Gem (the others are Buddha and Dhamma) which Buddhists pay homage to.

There are about 2000 monks and nuns in Malaysia. Amongst the outstanding are Ven. Dr. K. Sri Dhammananda, Rev. Chuk Mor and Rev. Sect. Kim Beng who are well known for their publications and lectures. Rev. Kian An of Kwan Im Teng is well known for his social welfare work, while Rev. Paik Wan of Petaling Jayà is a distinguished calligrapher and painter. There are also many other younger monks who are making outstanding contributions to the development of Malaysian Buddhism, but names are too long a list to mention.

In April 1995, the Malaysian Buddhist Sangha Council, an association with membership open only to monks and nuns, was formed. Rev. Chuk Hwang was elected as its chairman. In November 1995, this Council hosted the Sixth World Sangha Council meeting in Penang. About 800 monks from all over the world attended.

Buddhist Organizations: Unlike the temples, the 714 registered Buddhist organizations in Malaysia are generally managed by lay men, with monks or nuns as advisors. They are devoted to the study and practice of Buddhism. Chanting sessions and services are held within the premises of these organizations regularly. From time to time, Buddhist lectures are organized. Some Buddhist organizations also run weekend Bud-
dhist classes for children. Apart from these, Buddhist organizations are also actively engaged in social and welfare activities, such as blood donation, free medical services and charitable contributions to the aged and the needy.

Many of these organizations operate from modest residential homes or commercial premises while some of them, such as Fo Kuang Buddhist Association, Taiping Buddhist Association, Klang and Coast Buddhist Association, Sandakan Buddhist Association, Sarawak Buddhist Association, Kuching Tze Yin Buddhist Association own large association houses. Some of these buildings resemble temples and are often regarded as such.

Most Buddhist organizations were registered after Malaysia gained its independence in 1957. But the oldest registered Buddhist organization is the Sāsana Abdhiwurdhi Wardana Society, which manages the well-known Brickfields Buddhist Mahā Vihāra. It was formed in 1895 by a group of Buddhists of Sinhalese-Sri Lankan origin.

Operating within the premises of the Brickfields Mahā Vihāra is the Buddhist Missionary Society. Registered in the year 1962, this society is renowned for its publications such as the “Voice of Buddhism” and numerous booklets. With a membership of 10,000, it is the largest of the very few English-speaking Buddhist organisations in Malaysia. Most other Buddhist organizations use Mandarin as their means of communication.

In the year 1959, two years after Independence, the Malaysian Buddhist Association (MBA) was formed. With membership open to Buddhist temples (individual temples are usually not registered with the Registrar of Societies), organizations and individuals, it is the umbrella body of Buddhist organizations in Malaysia. However, non-Mandarin speaking and non-Mahāyāna organizations are not affiliated to it. Currently, its membership stands at 24,000.

In 1962, the MBA successfully convinced the government to declare Wesak a public holiday for Malaysia. (Records show that other Buddhist organizations, such as the Sasana Abdhiwurdhi Wardana Society, were also instrumental in bringing about this decision). This is interesting, considering that Wesak had until that time been celebrated on a large scale only by the Sinhalese in the country. But all Buddhists, especially the Mahāyāna were quick to recognize the important role this important festival would have in drawing Buddhists to the temples and making it recognizable as a major religion in the country. The MBA with other unaffiliated groups also successfully objected to the screening of films which were detrimental to the dignity of Buddhism. From time to time, the MBA, and other Buddhist Organizations such as the Young Buddhist Organizations and the BMS, communicated with the government on issues such as moral and religious education in schools, places of worship in town planning, and certain policy formulation.

One of the achievements of the MBA is the establishment of the Malaysian Buddhist Institute in Penang in 1970. This Institute provides courses in Buddhism at lower, middle and advanced level. It has since produced more than 1000 graduates, with more than 50 of them donning the robes to become monks or nuns.

In Malaysia, there are two Buddhist primary schools, and a Buddhist secondary school, namely, the Siang Lim Primary School founded by the late Rev. Dr. Kim Beng in Melaka, the Phor Tay Primary School and Phor Tay secondary school in Penang. However, these schools follow the government school syllabus and only teach an additional subject on Buddhism after normal school hours. In other schools, Buddhism is not taught. However, Buddhist Societies are allowed in some schools as part of their extra curricular activities. This is largely in response to the many representations by Buddhists, Christians, Hindus and Sikhs to have their religions taught to the children who belong to them.

Buddhist societies are also active in 4 of the 9 universities. There are also Buddhist societies in some Teacher Training Colleges. These societies provided the impetus for the development of Buddhist youth movement in the 60s and 70s.

Youth Movement: The Buddhist youth movement began with the formation of Penang Buddhist Association Youth Circle by Rev. Sumangalo, an American Theravāda monk in the year 1955. By the year 1958, there were 7 youth circles in Peninsular Malaya, and the Federation of Malaya Buddhist Youth Fellowship (FMBYF) was formed. By 1965, the FMBYF had a membership of eleven affiliates, about half of the number of existing youth bodies. However, the activities of the FMBYF came to a standstill from then on due to various reasons.
On 29th July 1970, at the First National Buddhist Youth Seminar held at the Malaya University, the delegaties resolved to dissolve the FMBYF, and in its place, a new national youth organization, the Young Buddhist Association of Malaysia (YBAM) was formed. Present at this Seminar were delegates from 17 Buddhist youth circles including societies from University Malaya and other colleges.

Today the YBAM has a total membership of 234 organizations representing about 100,000 individuals. It is in fact the single largest Buddhist organization in Malaysia. It is recognized by the Ministry of Youth and Sports as the sole representative of Buddhist Youth in Malaysia and is represented at the Malaysia Youth Consultative Council. It also affiliates itself to the multi-racial multi-religious and multi-cultural Malaysian Youth Council.

The Buddhist Gem Fellowship: Originally started as the Buddhist Graduates Fellowship (BGF) in 1980 by a group of local university graduates, the BGF has grown to become a leading group of Buddhist leaders providing training and leadership support to college students in local universities. Through the Inter-College and Varsity (INCOVAR) Camps, the BGF has been successful in providing support and training to the students in managing the Buddhist societies at the various local universities in Malaysia. Many of these students subsequently become members of the BGF when they graduate, and they are in turn helping their juniors back in campus. It changed its name from Buddhist Graduate to Buddhist Gem to attract a large number of capable and qualified young professionals to work for the Buddhist cause.

Meditation Groups and the Local Sangha: During the past 20 years, meditation has become an increasing part of Buddhist practice among devotees in Malaysia. In the Chinese Mahāyāna tradition, temples which teach meditation include Hoe Beng Si in Kuala Lumpur, Taiping Buddhist Society (Perak) and Triple Wisdom Hall and Malaysian Buddhist Institute in Penang.

In the Theravāda tradition, many meditation centres were established recently. Those in the Kuala Lumpur area include the Selangor Vipassanā Centre, Wisdom Centre and the Subang Jaya Buddhist Association. Their teacher is Venerable Su jivo who teaches meditation based on the Mahasī Sayadaw tradition. There are also other smaller meditation groups in Johor Bahru (Metta Lodge) and in Kota Tinggi (Sāntisukarāma Buddhist Centre), both in the southern state of Johor.

In the northern region, there are meditation centres in Lunas and Bukit Perak in Kedah and at the Taiping Insight Meditation Centre and Sitiawan Meditation Centre, both in the state of Perak. All these centres follow the Burmese method of meditation as taught by the late Mahasi Sayadaw.

Ti-Ratana Society: This Society was formed in 1997 by Ven. Kirinde Dhammaratana an incumbent monk at the Buddhist Maha Vihara, Kuala Lumpur to provide welfare services to all under-privileged Malaysians and it has gained national recognition for the excellent work done. It runs an orphanage for children and numerous welfare activities such as a senior citizens club and an annual Caring & Sharing event to distribute money and other material goods for the needy.

The Buddhist Maha Vihara Monks Training Center: One of the biggest problems facing Malaysian Buddhists today is the non-availability of suitably qualified local monks to serve the needs of a growing Buddhist population. These monks have to be knowledgeable in the Dhamma and must be sensitive to the particular problems that Malaysians face in leading a Buddhist life. To overcome this problem a Buddhist Monks Training Center was set up under the guidance of Ven. Dr K S Dhammananda in 1975 and will be celebrating its 25th anniversary in 2000. Since its inception it was also responsible for the setting up of the Paramadhamma Buddhist Institute at Kelaniya, Sri Lanka. Both organisations have provided the opportunity for monks from foreign countries to be trained not only to understand the Dhamma, but also to carry out Dhammadūta activities in non-Buddhist countries.

All-Night Chanting: While this particular practice is commonplace in all Theravāda countries, it was an innovation to have an annual Pirith ceremony at the Buddhist Maha Vihāra in Kuala Lumpur. The first ceremony was held in 1965 with the aim of invoking the protection of the devas on the country and its people. Over the years many eminent monks have been invited from Sri Lanka to participate in this ceremony. The practice has now been extended to many Theravāda Buddhist temples in Malaysia, those run by Sri Lankan monks in the states of Perak and Selangor. One unique feature
mony in Malaysia is the practice of inviting monks from the Mahāyāna and Vajrayāna traditions to conduct the chanting before the Sri Lankan monks begin the recitation of the Pirith.

Conclusion: Indications are that Buddhism is on the rise in Malaysia. The number of Buddhist temples and organizations which have been established over the past 20 years bear testimony to the fact that the Buddha's teachings is alive and well. Many local Malaysians have also become monks, and a number of them have been in the monkhood for more than 10 years. Many young and educated Malaysian Chinese are also rediscovering Buddhism as can be seen in the increasing enrolment in Buddhist classes at the major Buddhist centres in Kuala Lumpur and other cities. They are interested in exploring the Buddha's teaching rather than relying on traditional customs and beliefs practiced by their older parents and grandparents.

The future of Buddhism in Malaysia is bright but much needs to be done in the area of Buddhist education. This is where the major Buddhist organizations, whether Theravāda, Mahāyāna or Vajrayāna must work together with a common vision to ensure that the younger generation of Buddhists are provided with adequate and proper understanding of the teachings of the Buddha. In this way, Malaysian Buddhists can experience the new millennium with hope and optimism.

Kirinde Dhammananda

MALDIVE ISLANDS, a group of numerous islands (“One Thousand Isles”) comprising at least 17 inhabited atolls. They are situated in the Indian Ocean 400 miles south west of Sri Lanka. The people of the Maldives now profess Islam, but until about 1153-4 A.C. (Anno Hejira 548) had followed Buddhism. The comprehensive researches of H. C. P. Bell, the Sri Lankan archaeologist, showed this beyond all doubt.

The large group has Male, in their centre, as the headquarters of a unified administration. It is in the remoter and more southerly islands that the surviving traces of Buddhism have been found. These were at four places: Mundu, Gan (or Gamu) and Fua Mulaku (itself an atoll), islands of Haddummati atoll; Gan (or Gamu) island of Addu atoll. Except for bodhi trees, the constituents of ancient Sri Lanka's Religious establishments were evident in the Maldivian remains excavated and discussed by the archaeologist. These elements of a saṅgharaṇa were: thūpa-vihāra-(image house), vāta-dā-ge- (circular relic-house) and pirivena (monks’ residence). The ficus religiosa, too, had flourished although no surviving tree was reported in 1922.

The Buddhist remains, exposed as they were to the attentions of such a monotheistic creed as Islam for over seven centuries, were found to be in hopeless and almost unrecognisable state. Had they not come within the view of an experienced archaeologist like Bell, the knowledge of them may well have been lost. Bell was able to recognize a total number of 5 thūpas-3 vihāras, 1 vāta-dā-ge (tentatively suggested as such), 2 pirivenas besides appurtenant buildings enclosed by walls as so commonly found in Sri Lanka. The last named were of too uncertain a nature to describe.

How and when did the Maldivians come to embrace Buddhism? The answers to these questions have also been offered with a great degree of plausibility. The language of the people, before Arabic and later influences affected it, approaches most closely to Elu, or the “pure” speech of the Sinhalese or Sri Lanka. Thus the first colonizers of the Maldives were Sinhalese people; alternatively (and less probably) they were a band allied to the Sinhalese. In considering the two suggestions Wilhelm Geiger, an authority on Sinhalese and Maldivian linguistic studies, wrote: “the first view seems the more probable to me, owing to reasons which appear on a study of the character of the Maldivian language. This, in fact, shows a number of features which are characteristic of the Sinhalese language, and which have not arisen in the Prakrit foundation in Sinhalese, but seem to have originated on Ceylon soil itself.” (JCBRAS. XXVII, Extra No. p. 3). Maldivian Buddhist remains too show great kinship with those in Sri Lanka, particularly of Anuradhapura. In fact, among them only two features have been recognized as (probably) being unique for the islands.

Monuments: These are here described from north to south in the order of their situation. It is not known whether they are still surviving. The first atoll where they were recorded is Haddummati. Mundu Island is the northernmost point of its known ruined structures. There was here a solitary low mound of coral which was all that remained of a stūpa. The local name for it was Budu-ge (in the Sinhalese language, “Buddha-House”). The ruin had only one more feature, the curling balustrades (found incomplete) which had flanked the steps leading up to the shrine. The balustrades were the sole extant local examples of their kind in the
Maldives; they may, of course, have been a general feature as they are in Sri Lanka—but none other of the class remained.

Gan Island or the same atoll showed traces of Buddhist sites. The first is eastward and comprised a large ruined stupa, a (probable) circular relic-house, an image house, a spacious residential complex enclosed by a wall, 2 unspecified ruins and 5 wells—two of which at least were coeval with the ancient survivals. Thus it was here that the largest group had managed to survive, although not too far away from the village itself. The stupa was locally known as Hat-teli. In Sinhalese the expression would indicate seven basin-like pans which, as reported by the people of the place, Bell accepted after the discovery of a lone chatta of the pinnacle; particularly so, as he was made to understand 'that there had been seven of them. However "Hatteli" may be suggested as the corrupted pronunciation of chaitya. This stupa was the biggest of all the Maldivian structures of their types. Its original elevation, less superstructure, has been suggested as 42 feet, and the diameter at base as 105 ft. Generally it does not seem to have been very different from the "Havitta" (stupa) of Fua Mulaku, commented below. The following finds from it have been listed: a flattish circular slab of coral 4 ft. in diameter and presumed to be the central stone (Indrakila); the face, in two sections, of a colossal Buddha made of coral—the measurements being 1 1/2 ft. from chin to forehead and 1 1/4 ft. from cheek to cheek, the original height of the figure (probably a standing one) has been reckoned as 15 ft. a small seated Buddha figure of coral with traces of colouring—head, hands and lower half of the legs were missing; part of an ornamental head-dress of a Bodhisattva; one chatta from the (missing) pinnacle. The Building suggested as those of an erstwhile circular relic-house had probably been of the type at Toluvi, Anuradhapura, with the addition of a parapet with the post-and-rail design.

The image house, which also conformed to the ancient Ceylon pattern, measured 47 ft. from north to south and 43 ft. east-west. It had a large Moonstone step (10 ft. by 6 1/4 ft.), the sole Maldivian survival of its kind, it was of the simplest character, very much like the Toluvi examples. The residences were centrally sited within an enclosure 184 ft. East west by 146 ft. north-south. The wall was 8 ft. wide and had two openings. The plan of the residence itself showed it to have spread over an area 67 ft. east-west and 55 ft. north-south. It was distinguished from Sri Lanka's monastic structures by its feature of triple fronting.

At the south end of Gan existed a small group in the place known as Kuruhinna: A moderate stupa (locally) 'Mambaru' here had undoubtedly had its relic-chamber, for a square relic-casket (of coral) found in the debris could have come only from it. A few tiny beads and two coloured stones had survived the destruction of the stupa. The remains of unidentified buildings, one oblong and the other square, were also excavated. The stupa has marked features of the smaller ones at Anuradhapura, which flourished till about the 11th century A. C. In the basement platforms of the Kuruhinna structures there is a uniqueness, which marks them off from architectural types so far known.

South of Haddummati atoll is Fua Mulaku island which itself is a true atoll. There was a stupa, near the northeast sea front, called "Havitta"—corrupted from "chaitya" (Bell). This stupa was very close in design to the well known Lankârâma Dâgâba of Anuradhapura. In height and base diameter, the Maldivian stupa exceeded the Sri Lankan example. The relic chamber had been rifled; a few beads which must have come from it were found. When Bell visited this island in 1879 he had heard a report of the existence of an erect figure of the Buddha in stone. But in 1922 there was neither a report nor a trace of it.

Gan island of Addu atoll, the southernmost fringe of the Maldives where the survivals of Buddhist architecture have been investigated, had its ruins in the south-west, about 300 yards from the beach. These were classified into: stupa, and an enclosing wall around a residential complex whose form was not traceable. The memory of the former was clearly retained, for the local name given to the stupa was "ustubu".

The Maldivian population numbered 80,000 in 1939; more recent census figures are unobtainable. The people carry on a regular trade with Sri Lanka and maintain good relations with the government. In spite of undoubtedly close affinities it is curious that history is unable to establish political links between the two in ancient times. The Maldives sent tokens of homage and sought claims of protection, for the first time in 1645, as records show (Encyclopaedia of Islam). During the colonial period of the British government in Sri Lanka the Maldives were a dependency of that bigger island, but are now independent.

The ancient historical name by which the Maldives were known has not been traced from any source whether in Sri Lanka or India. It is, therefore, useful
to note a suggestion made by Polwatte Buddhadatta Thera that it might be contained in the word Maleyya (Sinhalese: Maliya) prefixed to such as Maha Deva thera mentioned among the ancient Sinhalese Theras. (Prefatory remarks to the Sahassavatthuppakaranam, p. xiv).

The above account reveals that Buddhist remains have been found in the southern atolls, the cluster which is largely isolated. The population closely resembles the Sinhalese (Encyclopaedia of Islam) and the language is a Sinhalese dialect with the natural modifications brought about by time and geographical separation from Sri Lanka. This is particularly the case with Addu and Fua Mulaku which are cut off from Huvadu (Suvadiva) by the Equatorial Channel.

Buddhism was not entirely forgotten even after the time of the conversion of the Maldivians to Islam, for it appears to have been practiced, although in small degree, even in the 13th century. Practices which are manifestly repugnant to Islam prevail to this day among the people; their origins probably lie in the "superstitions" of the older creed. In fact, according to tradition the Muslim saint who was responsible for the conversion had sufficient tact (no less than courage) to ignore these survivals.

Bibliography: W. Geiger, "Maldivian Linguistic Studies" (JCBRAS. Op. cit.); H. C. P. Bell, "the Maldives Islands - Monograph on the History, Archaeology and Epigraphy" (Govt. Press, Ceylon, 1940). The older references are scanty and are included in these two publications. The account in the Ency. Brit. Lacks the information contained in them, but the Encyclopaedia of Islam, III, 1936, gives some of it as well as other sources.

MALEVOLENCE See VYĀPĀDA

MALICE See VYĀPĀDA

MALIYADEVA, Var. Maleyya-Mahadeva, Maleiyamahadeva, Deva, an arahant thera of Ceylon (Tambapanni-dīpe). After receiving his ordination he is mentioned to have stayed for three years in the Mandaramaka-vihāra in Kallagama. He seems to have received his education from this vihara (see. Rāhula, History of Buddhism in Ceylon. Colombo, 1956, p. 293). He was honoured for his spiritual and intellectual attainment (infra). He was a contemporary of king Dutthagamini, who, once, during the Akkhakkhāyika famine, offered to Mahādeva and to four others a meal of sour-millet-gruel, which he purchased with the proceeds of the sale of his earnings. Mahādeva took his share to Samantakūṭa and shared it with nine hundred other theras (Mhv. XXXII. 30, 49). The Vamsatthappakāsini mentions that the thera Mahādeva was among the eight arahants who accepted a meal of wild boar flesh from Śāliya in his pervious birth as a blacksmith (Mhv. II. p. 606).

One day while Mahādeva was going for alms in the village named Kallagama which was close to the monastery, an Upāsīka invited the thera to her house and offered him a meal (Yāgu uluṃkaṃ) and regarding the thera as her own son invited the thera to take all his meals at her house. The thera accepted the invitation and each day, after the meal he gave thanks only in a few words - "May you be happy and free from sorrow" (sukham hotu, dukkha mucca). At the end of the rainy season (vassa) the thera attained arahanthship and the chief incumbent of the vihāra entrusted Mahādeva with the duty of preaching to the assembled people on the pavāraṇa day. The young novices informed the upāsīka that her 'son' would preach that day, but she, not aware of the capabilities of Mahādeva to preach, as she had regularly heard only the thanks giving which also was limited to a few words, thought that the novices were making fun of her, replied that everyone could not preach. But the novices persuaded the upāsīka to go to the vihāra and when Mahādeva's turn came he preached all through the night elucidating the few words he used at the thanks giving for the upāsīka, with material drawn from the three pūjakas.

At dawn only he concluded his sermon and the upāsīka became a sotāpanna (AA. I. pp. 38-39).

The Papañcasūdanī mentions that once Maliyadeva thera (preached the Cha chaṅka sutta (M. III. p. 280) in the Lohapāsāda and sixty monks who heard him preach became arahants. He also preached the same sutta in the Mahāmāndapa, in the Mahāvihāra, at Cetiya-pabbata, at Sākhya-vamśa vihāra, at Kuṭālivihaṇa, in the Mahavihāra, at Antarasobha, at Mutangana, at Vātakapapattta, at Padinigaha, at Dighavāpi, at Lokandara and at Gamendavāla and at each place sixty monks attained arahantship (MA. Vp. 101).

Once at Cittalapabbata he saw a monk of over sixty years preparing to bathe at Kuruviyakatitha and begged permission to bathe him. The elder through familiarity of his voice discovered that the request has
been made by Maliyadeva, a person worthy of showing honour, agreed to let him do so, though, no one had even touched his body during sixty years. This was an honour paid for Mahadeva's spiritual and intellectual attainment. Later in the evening the elder requested Mahadeva to preach to him. When Mahadeva preached for the gathering sixty monks, all over sixty years old, who were in the audience, became arahants. The same thing happened at Tissamahavihara, the Kalyanivihara, the Nāgamahāvihāra, the Kālakacchagāma and at several other places.

The Visuddhimagga mentions that once two monks asked Mahadeva for a subject of meditation and that he gave them the formula of the thirty-two parts of the body, which they asked him to recite for a period of four months (cattāro māsemam eva sajjhāyam karothā ti dvattimāsā kārapālim adāsi). The two monks, though versed in the three Nikāyas could become sotāpanna only by following Mahadeva's advice (Vism. p. 241).

In the Jātaka Mahādeva thera has been mentioned with several other theras as to have been associated among those various large groups (samāgama) who renounced the world in the company of the bodhisatta namely in the Kuddālaka, Mūgapakkha, Cūlasutasa, Ayogharapandita and Hatthipāla Samāgamas (J.IV. p. 490, VI. 30).

M. Karaluvinna

MALLĀ is the name of a powerful warlike clan; their territory was located in North Eastern India. In the country of the Mallas, was Kusināra the site at which Gautama Buddha passed away in Parinibbana. Thus in the Mallā country was located a place“ which the believing clansman should visit with feelings of reverence (D.II. pp. 153). The name Mallā is the name of the tribe and it has been used to denote the country in which they lived (Rhys Davids, op.cit. p. 128). According to Buddhist literature, the distance between the two capitals was three gāvutas (DA. pt. II. p. 573 and 607). According to Rhys Davids, the Mallas of Pāvā and Kusināra were independent clans “whose territory, if we may trust the Chinese pilgrims, was on the mountain slopes to the east of the Sakya land to the north of the Vajjian Confederation” (Rhys Davids, op.cit. p.19). But this location of the territory of the two Malla clans is not conclusive as Rhys Davids himself observes “some would place it south of the Sākyas and east of the Vajjians” (ibidem). From the account given in the Mahāparinibbāna Sutta, it is clear that Mallā was not considered a prosperous land and the two capital cities Pava and Kusināra were not regarded as cities of the first rank unlike Rājañā, Vesālī or Sāvatthi, during the lifetime of Gautama the Buddha. When the Buddha told venerable Ānanda that he had selected Kusināra as the place of his final passing away, Ānanda expressed his disapproval of the Buddha’s selection on the grounds that Kusināra was “a little wattle-and-daub-town, in the midst of the jungle and it was a branch township” (D. II. p. 146). Mallās had several other small towns. Anupiya was one of them, it was a
mango-grove (Anupiyam nāma ambavanam) where the Buddha spent his first week after going forth on renunciation, and it was 30 yojanas away from Rājagaha (J.I. pp. 65-66). In the Sāṃyutta and Aṅguttara Nikāyas, another small town located named Uruvelakappa is mentioned and there the Buddha lived for a short period (S.V. 28; A.IV. 438). In the vicinity of this township there was a forest-tract called Mahāvāna and once the Buddha went there for his noon day rest (divāvihāra) after his meals and met the householder Tapussa.

The Mallas, like the Licchavis, belonged to the Āryan ruling caste the ksatriyas. When the Mallas of Pāvā heard the news of the final passing away of the Buddha, they claimed a share of the remains of the Buddha, on the ground that like the Buddha they too were ksatriyas (D.II.165). In the Saṃgīti Sutta and in the Mahāparinibbāna Sutta the Mallas (both of Pāvā and Kusinārā) were addressed as Vāṣṭhas by the Buddha and venerable Ananda and others (D.III.p.209; D.II. 147), as they like the Licchavis, belonged to the Vāsiṣṭha Gotra. Rhys Davids (Dialogues of the Buddha, III.p.202, n.2) observes that “Vāsiṣṭha is apparently a leading family name among the Malls both of Pāvā and the neighbouring village Kusinārā.” Then again like their neighbours - the Licchavis, the Mallas are mentioned by the Brahmin law givers and the lexicographers, to have been born of a ksatriya mother who was formerly the wife of another vrātya (out caste) and of a ksatriya and of a ksatriya father of the vrātya type ksatriya as he had not gone through the ceremony of Vedic initiation at the proper age. In the Vaijayanti of Yādavaprakāśa the definition goes:-

“Licchavim ksatriyā vrātyāj
Jallam sa viprapāravikā
Vrātyapārvā tu sā mallam
Ksātrapāravā tu sa natam”

(Gustav oppert, ed. The vaijayanti, London, 1893, p. 72)

This definition of the lexicographer more specific on the side of the mother is not supported by the evidence in the Laws of Manu, where the stress is laid on the side of the father and the definition goes “from a vrātya (of the) ksatriya (caste), (sprang) the Jhalla, the Malla, the Licchavi, the Nata, the Karana, the Khasa and the Dravida (SBE, Vol. XXV. Bühler, trsl. The Laws of Manu, 1886, Oxford, p. 406; Manusmṛti, X. 22).

In the formation of their government the Mallas were a typical example of the samgha rāja (M. 1. p. 231). Kautilya also mentions them in his Arthaśāstra, as being governed by a samgha. i.e. a corporation of which the members called themselves rājās “whic does not mean king in this connection but rather some thing like Roman Consul or the Greek archon (Rhys Davids op. cit. p. 13; and Cambridge History of India, Vol. I.p. 157). According to Buddhaghosa the Mallas functioned as rājās in turn. When they went not called to office as rājās they were engaged in trade. Some of them went to distant countries with carts loaded with goods for trade. Pukkusā was one of them (DA II, p. 569). Unlike the Licchavis who dominated the Vajjian confederacy, which consisted of eight clans and shared the common title of Vajji and lived in amity and concord, the Mallas of Kusinārā and Pāvā preferred to be governed by their own saṅghas. Thus the Mallas of Pāvā and Kusinārā had their respective Saṅhāgāra where all matters both political and religious were discussed. When once the Buddha visited Pāvā in the course of his peregrinations, the Mallas of Pāvā invited him to their newly built council hall called the Ubbhataka (supra). From the account of the distribution of the relics of the Buddha, it is also clear, that the two (Malla) clans, while sharing the common title of Malla the clan name, lived independent of each other. Thus the Mallas of Pāvā sent a messenger to the Mallas of Kusinārā claiming a share of the remains of the Budddha. The Mallas of Kusinārā maintained that it was in their territory that the Buddha passed away and therefore whatever relics that remained belonged to the Mallas of Kusinārā. This implies that the Mallas of Pāvā had no direct dealings with, nor shared any claims with their own clans-men at Kusinārā. Perhaps they were rival groups.

The etymology of the term Malla and the literary data that they were decidedly a martial clan, it is probable according to Law, ‘that the word (Skt.) ‘Malla’ denoting a wrestler by profession was derived from the tribal name of these brave people’ (Law, Some Ksatriya Tribes of Ancient India, Calcutta, 1924. p. 151). According to the Jātaka the Mallas were zealous in manly sports such as wrestling and their general Bandula’s valour alone substantiates this (Cowell ed. Jātaka, II. p. 65).

Like all other Ksatriyas of the time, the Mallas were interested in education. Bandhula a son of Malla rāja of Kusinārā went to a far distant place, Taxila for education. The Mallas were an educated clan, and they anxiously discussed such religio-philosophical problems as Sati-Sanādhi-Viriya-Saddhā-Dukkha etc.
In the early stages of their civilization the Mallas like their neighbours Licchavis paid homage to Caityas. A shrine called Makuta-bandhana to the east of Kusinārā is mentioned in the Mahābhārata and that place was selected to cremate the dead body of the Buddha. When Jainism flourished in Eastern India, the Mallas were followers of Jainism. It was at Pāvā that the great Tirthankara Mahāvīra passed away. Buddhist literature mentioned that “at Pāvā the followers of Nigantha Nātha putra, were divided after the death of their teacher and even the lay disciples of the white-robe who followed Nāthaputta, showed themselves shocked, repelled and indignant at the Niganthas” (D. III, p. 209-10). This statement indicates that Pāvā was a strong hold of Jainism.

It is an interesting semblance to note that just as the Mallas of Kusinārā honoured the Buddha at his death, the Mallas of Pāvā (var. Pādā) along with the Licchavis honoured Mahāvīra at his death. The Jaina Kalpasūtra’s mention that to mark the passing away of the venerable ascetic, nine Malla chiefs and nine Licchavi chiefs instituted an illumination on the day of the new moon saying, “Since the light of intelligence is gone, let us make an illumination of material matter (Jacobi, Trsl. Jaina Sūtras, pt. 1. SBE Vol. XXII, p. 266) The Buddha, in the last days of his life, travelled in the territory of the Mallas, accompanied by five hundred disciples and at Pāvā he dwelt in the Mango-grove of Cunda the smith. The Mallas of Pāvā heard the news of the arrival of the Budha to their capital and invited the Buddha to their newly built council-hall called Ubbhataka saying, “Let the Lord be the first to make use of it. That it has first been used by the Exalted One will be for the lasting good and happiness of the Pāva Mallas” (D. III. p. 208; Rhys Davids, Dialogues of the Buddha, III. p. 201). To the Mallas who were assembled in the new council hall, the Buddha preached the doctrine. It was also at Pāvā the Buddha had his last meal when he was attacked with dysentery and from there proceeded to the rival Mallian city of Kusinārā.

On reaching Kusinārā, the Buddha realised that he was fast nearing his death, and while he was resting in his death bed at the Sāla Grove of the Mallas of Kusinārā, he sent Venerable Ananda to the Mallas of Kusinārā to inform them that the final passing away of the Tathāgata would take place in the last watch of that night, so that they could take the opportunity of visiting the Tathāgata in his last hours. (D. II, p. 147-148). On receiving the news, the Mallas with their men and maidens and with their wives were grieved, and sad, and afflicted at heart. And some of them wept, dishevelling their hair, and without stretched arms they wept, fell prostrate on the ground and rolled to and fro in anguish at the thought “Too soon will the Exalted One die! Too soon will the Happy One pass away! Too soon will the light of the world vanish a way!” Then the Mallas with their young men and maidens, and with their wives came to the Sāla Grove. They were the only clan that had the opportunity of honouring the Buddha just before his death. Ven. Ananda caused them to stand in groups, each family in a group, and presented them to the Buddha saying, “Lord, a Malla of such and such a name with his children, his wives his retinue and his friends humbly bows down at your feet” (ibid.). All of them were presented in this manner. It was at the Sāla Grove of Mallas of Kusinārā that the Buddha received his last convert, the wanderer Subadda, into the Order and also breathed forth his last word ‘We behold now brethren, I exhort you, saying :- ‘Decay is inherent in all component things! Work out your salvation’ and entered into the forth jhāna (Rapture) and finally passed away.

At the passing away of the Buddha the Mallas of Kusinārā met together in their noble hall and discussed means of honouring the earthly remains of the Buddha and in the meantime they received Venerable Ananda sent to them by the venerable Anuruddha with the message announcing the death of the Buddha and requesting to do whatever seemed fit for the Mallas. Then the Mallas of Kusinārā ordered their attendants to gather together perfumes and garlands to the accompaniment all the music in Kusinārā. They went to Upavattana, the Sāla Grove where the body of the Exalted One lay. There they passed the day in paying honour, reverence, respect and homage to the remains of the Exalted One with dancing, hymns, and music, and with garlands and perfumes and in making canopies of their garments and preparing decorations of wreaths to hang thereon. (D. II, p. 159). In like manner they spent six days honouring the dead body of the Buddha. Then on the seventh day the Mallas carried the body of the Exalted One to their shrine called Makuta-bandhana to the east of the city and there started to perform the cremation ceremony. The Mallas were instructed by venerable Ananda as to the manner in which to treat the remains of the Tathāgatha. Then they ordered their attendants to gather together all the carded cotton wool of the Mallas. They wrapped the body of the Exalted One in a new cloth and when that was done, they wrapped it in carded cotton wool and then again in a
new cloth and soon till they had wrapped the body of the Exalted One in five hundred layers of both kinds. And then they placed the body in an oil vessel of iron. And then they built a funeral pyre of all kinds of perfumes and upon it they placed the body of the Exalted One (D. II, p. 161-62). Before the arrival of Elder Mahakassapa the Mallas could not set the pyre alight. And when the homage of the Elder Mahakassapa and those of five hundred brethren was ended the funeral pyre of the Exalted One caught fire by itself (D. II. p. 164).

After the cremation, when the funeral pyre of the Exalted One was extinguished by spontaneous streams of water, the Mallas also brought water scented with all kinds of perfumes and poured it on the funeral pyre of the Exalted One (D. II. p. 164) and collected the bones of the Exalted One. These relics they placed in their council hall, surrounded them with a latticework enclosure of spears, and with a barrier of bows, and there, for seven days they paid homage as they did for the dead body of the Exalted One. When king Ajatasattu of Magadha, the Licchavis of Vesālī, the Sākyas of Kapilavatthu, the Brahmī of Vethadipa and the Mallas of Pāvā heard the news and lodged their claims with the Mallas of Kusinārā they flatly turned down their request for relics and told the assembled crowds “The Exalted One died in our village domain. We will not give away any part of the remains of the Exalted One” (D. II. pp. 165-66). Buddhagosa elucidates, that the crowds from the above mentioned seven cities assembled at Kusinārā and threatened to wage war against the Mallas of Kusinārā if a share of relics were not given to each group assembled ... (amhākaṁ dhatuyo va dentu yuddham va ti. DA. II. p. 607). The Mallas of Kusinārā challenged the claims put forward by the people of the above mentioned cities for relics and they maintained that they (the Mallas of Kusinārā) never sent word to the Buddha nor went themselves and accompanied the Buddha to their city. The Buddha came there of his own and sent word for the Mallas of Kusinārā. Further, they asked those assembled for relics “would you care to give us whatever treasures that are found in your territory. We have been blessed with the highest treasure found on earth and heaven and we shall not give it to you.” And had there been a war according to Buddhagosa, the Mallas of Kusinārā would have been victorious as the gods who were there to guard the relics, were on the side of the Mallas of Kusinārā. At this stage Doṇa, a brahmin, intervened and his suggestion that it would be unbecoming and unseemly to fight over the division of the remains of the Buddha who taught forbearance etc., and that the eight peoples receive an equal portion of the remains of the Buddha was accepted by the Mallas of Kusinārā. On their request the brahmin Doṇa divided the relics equally into eight parts. The Mallas of Pāvā and Kusinārā received each a portion of the remains of the exalted One and each clan took their relics to their respective capitals and made two cairns in Pāvā and Kusinārā over the remains of the Exalted One, and celebrated a feast (D. I, pp. 166-67).

The country of the Mallas was not a very important centre of Buddhism; but among the early followers of the Buddha were such eminent theras like venerable Dabba who on account of his virtues was appointed a regulator of lodging places and apportioner of ration. Khandasumana a son of a Malla rāja at Pāvā entered the Order and acquired sixfold abhirñā (Phys Davids, Psalms of the Brethren, p. 90). There were such householders as Tapussa, Roja nad Sīha who were devout lay disciples of the Buddha. The Mallian Sāṅgha at Kusināra made it obligatory to accord welcome to the Buddha, lest any person transgressing the rule be fined five hundred kahāpanas (Vin. I., p. 247). Only two suttas have been delivered in this country -sutta while the Buddha was residing at the Mango-grove of Cunda, the smith (A.V. p. 263ff.) and the other - Kinti Sutta of the Majjīma Nikāya (M. II, pp. 238-243). The Country of the Mallas gained prominence as a result of the last days of the Buddha were spent in that country and it happened to be the site of the Buddha’s parinibbāna thus claiming to be one of the four holy places for pilgrimage.

M. Karaluvina.

MĀNA - Pride, Conceit, arrogance. According to the Nettippakarana mana is of two kinds: Profitable and unprofitable. Any māna supported by which one abandons māna is profitable, but any māna which makes suffering occur is unprofitable. (Yam mānam nissaya mānam pajahati, ayaṁ māno kusalo. Yo pana māno dukkham nibbattayati ayaṁ māno akusalo - Nettippakarana p. 87)

According to another classification māna is of three kinds: seyyamāna, sadisamāna and hinamāna. When a person thinks that he is superior to others because of his birth, lineage, good virtues, caste, wealth, education, work, branch of study, science, hearing, intelli-
MĀNA

Manasikāra

If somebody produces pride with haughtiness as mentioned above, raises it like a flag, desires for prominence (self - advertisement), it is called māna. All such sorts of conceit, overweening conceitedness, loftiness, mounting a flag, assumption, desire of the heart for self - advertisement is called conceit.

D. Saddhasena

MANAS See CITTA, MIND

Manasikāra is derived from the word manas (mind) which in Buddhism is considered as an internal sense faculty or organ (indriya) which can be controlled and developed as any other faculty.

Manasikāra literally means, 'doing in the mind.' Several connotations appear in Pali texts for the term Manasikāra such as Attention, Reflection, Pondering, Adverence etc. e.g. Sammā manasikāram anvāya (by careful reflection).

The concept Manasikāra generally appears in the Suttas in combination with the word yoniso, which literally means by-way of the womb. This means yoniso manasikāra enables one to see things deeply instead of looking at them only on the surface. Thus yoniso manasikāra is wise consideration, thorough attention, wise reflection, mental advertence, reasoned attention.

Manasikāra is one of the two conditions that are conducive to arising of Right Understanding (Sammā Diṭṭhi) and of the factors of Enlightenment. Right Understanding is to perceive the unsatisfactory nature of all phenomena of existence, i.e. the true nature of aggregates which implies the realization of the Four Truths. All these, which are grasped and seen in the light of the three Signata (tilakkhana) are directed by gradually growing insight (vipassanā). The other condition is hearing the doctrine (saddhamma) from others known as paratoghoṣa. This condition is external as it is received from outside. By listening to what is wholesome our own views are formed. On the other hand Yonisomanasikāra which contributes to Right Understanding is of the highest significance among

1. S. III. p. 60.
2. D. 1, 13, 18; D. 111, 104, 108.
the other seven factors of the Eightfold Path leading to Nirvana and Enlightenment because those are being guided by Manasikāra. It is an internal condition which one has to cultivate. This is a difficult task because one has to constantly be aware of things one meets in everyday life and counteract the arising of cankers (āsavas) and the five Hindrances (Pañca Nivarana) by radical thinking and application of insight, which is equivalent to the realization of the Four Noble Truths. Manasikāra is conceived as a psychological term in Buddhist literature. It is one of the seven mental factors (cetasika) that are associated with all states of consciousness (cetanā). Manasikāra belongs to the Formation Group (samkhārakkhanda), according to Suttas. It is one of the mental factors where all phenomena of existence are summed up under the aspects of five Groups: corporeality (rupā), feeling (vedanā), perception (saññā), mental formation (samkha) and consciousness (viññāna) which is Bhavaṅga a subconscious thought process. Manasikāra is also given as one of the factors representative of mind (nāma). Nāma is used as a collective of “Feeling (vedanā), (manasikāra)... this O! Brother, is called mind/ mentality (nāma)”. It is the mind’s first contact with an object, which links the associated mental factors to the object (avajjana) creating awareness of the object. It could be either physical object (pañca-dvāra-avajjana) or mental object (mano-dvāra-avajjana). Thus it could be said that Manasikāra is the most significant factor in two specific classes of consciousness, Sensing (avajjana) at the five sense doors or sensing at the mind door which is a conscious thought process (cittavijjā) these two states of consciousness breaking through the subconscious life continuum (bhavanga) form the first stage in the perceptual process as it appears in the Visuddhi Magga as cittavīthi, viññāna-kicci Ayoniso-Manasikāra Unsystematic or Unwise Attention does not direct one to radical thinking, but leads to the arising of Cankers (āsavas) and of the Five Hindrances (Nivarana)n.

N. Narangoda

MĀNATTA is the penance attached to the commission of a Sanghādisesa (q. v.) offence. The meaning of the term regarding the Vinaya ritual is doubtful, and if taken as derived from māna it might be explained as measuring or taking measures. The Buddhist Sanskrit form is mānapya meaning something pleasant (Mahāvyutpatti, 262).

Mānatta is very often followed by another term Parivāsa which connotes “probation”, corresponding to that for membership in a religious body.

The set of vinaya rules or Pātimokkha rules for bhikkus comprises 227 sikkhāpada or disciplinary rules, whereas for bhikkhus the number of rules increases up to 311.

Out of the 227 rules, breaking one or more of the first set of four (pārajīkā) and the second set of 13 (saṅghādisesa) are grievous offences (garukāpatti). A bhikkhu who commits one or more of the four pārajīkā (defeat) offences is considered to have lost his higher-ordination (upasampadā). The thirteen-saṅghādisesa rules, when broken, require a formal meeting of the Order. If a monk is convicted of one or more of these offences he is temporarily suspended from the order. One portion of the disciplinary procedures he must undergo in order to be rehabilitated is called mānatta.

Once a monk commits a particular saṅghādisesa offence, he must announce it to one or more of the members of the Order. Thereafter he must observe the mānatta discipline for six nights. Vinaya (11. p. 38) contains the procedure as to how the order should inflict mānatta as set forth by the Buddha, on the monk named Udayin who had committed the first saṅghādisesa offence i.e. the intentional emission of semen, and who had as well announced it to other monks.

“And thus, monks, should it be inflicted: Monks, that monk Udayin, having approached the Order, having arranged his upper robe over one shoulder, having honoured the feet of the senior monks, having sat on his haunches, having saluted with joined palms, should speak thus to it: ‘Honoured Sirs, I fell into one offence... not concealed. So I honoured sirs, ask the Order for mānatta (discipline) for six nights on account of the one offence... not concealed. I, honoured Sir’s fell into one offence and a second... not concealed, time I ask the Order... not concealed. I honored sirs, fell into one offence... not concealed. And a third

1. M. I.9; D. III. 104.
2. Visn. XIV, 152.
3. S. II. 3.
time I ask the Order for manatta (discipline) for six nights on account of the one offence: the intentional emission of semen, not concealed’.

“The Order should be informed by an experienced, competent monk, saying: Honoured Sirs let the Order listen to me. This monk Udāyin fell into one offence... not concealed. He is asking the Order for manatta (discipline) for six nights on account of the one offence... not concealed. If it seems right to the Order, the Order may inflict manatta (discipline) for six nights on the monk Udāyin on account of the one offence... not concealed. This is the motion. Honoured Sirs, let the Order listen to me. This monk Udāyin fell into one offence... not concealed. He is asking the Order for manatta (discipline)... not concealed. The Order is inflicting manatta (discipline) for six nights on the monk Udāyin on account of the one offence... not concealed. If the infliction of manatta (discipline) for six nights on the monk Udāyin on account of the one offence... not concealed is pleasing to the venerable ones, they should be silent; he to whom it is not pleasing should speak. And a second time I speak forth this matter. And a third time I speak forth this matter: Honoured Sirs let the Order listen to me. This monk Udāyin... should speak. Manatta (discipline) is being inflicted by the Order for six nights on the monk Udāyin for the one offence: intentional emission of semen, not concealed. It is pleasing to the Order, therefore it is silent. Thus do I understand this.” (I.B. Horner: Book of the discipline. Vol. V, p.56)

There is a distinction between saṅghādisesa offences, which are announced forthwith on the day of commission and those which have been concealed from members of the Order for any length of time. Manatta is inflicted on the offender immediately who has not concealed the commission of the offence; i.e. who has announced it forthwith.

One who has concealed the offence has to undergo additional penalty of parivāsa (probation) for the number of days of the offence had been concealed. After the offender has behaved well under the penalty of parivāsa (probation) for concealing his offence, manatta, the penalty for the actual saṅghādisesa offence would be imposed (Vin. II. 40).

A monk may lapse into error during the period of his sentence. If, at the time of his second offence, he is still serving his probation period for the first offence which he had concealed, or has just finished probation but not started on his manatta, then he is called upon to serve his period of probation over again. But if the second offence is committed during the period of manatta or when he is about to be rehabilitated then he will serve only the full period of manatta again.

The behaviour proper for those serving a period of parivāsa or manatta is recommended in the Vinaya (Vin. II. 32). It is reiterated that he who is under a penalty should make it known to the rest of the monks. Being both guest and host should inform the other monks of his position. He should also announce it at the regular assemblies of Uposatha and pavārana. Even in the case of illness, when personal attendance is impossible, he should communicate it through a messenger who would be a full-fledged monk and not a non-higher ordained one (anupasampanna Vin. II. 32, Vin4 VI. 1166). One, who is under the manatta (discipline), has the additional burden of announcing the fact of his being under the penalty each day (Vin. II. 35). The offender cannot evade informing the fellow members that he is under a penalty. For instance, during this period he should not take to the vow of forest-residence to avoid meeting other monks who come to his residence, or not take to the vow of begging for his meals so that he may avoid occupying the last of the seats which he would have to accept in the alms hall, as a part of the penalty (Vin. II. 32). The above instances show that no monk who is under probation or manatta discipline should make a secret of it to fellow members of the Order.

Ninety-four observances are laid down as the pattern of conduct for the monk under probation (catuvatīparivāsikavatta) and are more or less identical with those for the one who is under manatta (Vin. II. 32-35). Under these penalties a number of privileges, which a monk is normally entitled to enjoy, are withdrawn from him. His authority is reduced and freedom of action is curtailed. Only the first 18 items, which are common to both, those who are under parivāsa and manatta as well as to all acts of punishments (daṇḍakamma, q.v.) run as follows.

1. He should not ordain another.
2. He should not give guidance.
3. No novice should attend on him.
4. He should not consent to an agreement to exhort to the nuns.
5. Even if agreed upon he should not exhort nuns.
6. He should not fall into that same offence for which he was granted probation.
MANATTA 600  MAÑGALA

7. Nor into another that is similar.
8. Nor into one that is worse.
9. He should not find fault with the formal act taken against him.
10. He should not find fault with those who carry out the formal act.
11. He should not suspend a regular monk’s observance.
12. He should not suspend his invitation.
13. He should not issue commands at monastic functions.
14. He should not set up authority at monastic functions.
15. He should not ask for leave.
16. He should not reprove another monk.
17. He should not remind another monk of an offence.
18. He should not quarrel with other monks.

There are four kinds of interruptions (ratticcheda) for a monk undergoing mânatta.

1. Dwelling with another (sahavāsa) monk under the same roof.
2. Being absent (vippavāsa)
3. Not announcing (anārocanā)
4. Going about with less than a group (Uhe gane caranām)

A monk undergoing mânatta should not spend the night with another monk. He should spend the night in a dwelling in which no regular monk spends. But he should be present in front of them before the day dawn. He should also announce that he is under the discipline. The offender undergoing mânatta should observe it every evening before a group of monks numbering four or more (VinA. 1. 170). If one or more of the above conditions are not met out it is an interruption (ratticcheda) and he has to undergo the discipline for an additional night.

Parivāsa and mânatta differ from each other by the number of monks attending the ritual. Parivāsa needs at least one monk other than the offender, whereas to undergo mânatta there should be four or more than that.

Due to certain unavoidable reasons some monks undergoing mânatta found it very difficult to carry through their discipline. For instance, once a large number of monks gathered together at Savattī; monks under probation were not able to carry through their probation since it was impossible to announce their position to each and every monk of the large group. In such cases offenders are allowed by the Buddha to postpone parivāsa and manatta disciplines and to take up the observance later on.

After the manatta discipline the offender of saṅghādisesa rule is rehabilitated by the order of monks by carrying out another disciplinary ritual called Abbhāhana. (See also PĀTIMOKKHA and VINAYA).

MANĀYATANA See ĀYATANA, MIND, CITTA

MAṆGALA: According to the PTS Dictionary, the term is derived from the root maṅg and is explained as, “auspicious, prosperous, lucky, and festive...”. In the Monier Williams Dictionary it is explained as: “happiness, felicity, welfare, bliss, anything auspicious or tending to a lucky issue (e.g. a good omen, a prayer, benediction, auspicious ornament or amulet, a festival or any solemn ceremony on important occasions & c...”). In the Paramatthajotika Buddhaghosa defines the term maṅgala as iddhikarana, vuddhikarana and sabbasampattikarana”.

Iddhi is a very rich concept in the Buddhist literature. A king is said to possess four iddhis, which are enumerated as personal beauty, long life, good health and popularity. The iddhi of a rich young noble consists of a beautiful garden, soft and pleasant dwelling, and different houses for different seasons and good food... According to M. 1.152, the iddhi of a hunter is the craft and skill with which he captures game, but at M 1.155 other game have an iddhi of their own by which they outwit the hunter.
Accordingly, iddhipakara means that which causes or increases an individual's material prosperity and welfare. Similarly, vuddhipakara refers to that which causes or ensues one's success and prosperity. Sabbasampattikarana is that which brings or increases the overall good fortune, accomplishment and success.

Thus, according to Buddhaghosa maṅgala includes all aspects of personal and worldly power, prosperity and welfare. The term maṅgala has also been used to describe a wide variety of things and events which were conceived as auspicious or lucky and regarded therefore as conducive to one's prosperity. Buddhaghosa introduces them under three principle divisions as diṭṭhamāṅgala, sutamaṅgala and muta maṅgala.

Diṭṭhamāṅgala is the sight of such auspicious things as the first thing in the morning such as: bhāsasakunā, a bird of prey, beluvalathθim, a young sprout of the vilva tree, gabbhθinim, a pregnant woman, kumārake, a youth, alakamathiyatte punaqghate, a decorated full pitcher, allarohitamaccha, a fresh fish, ājanθanam, a thoroughbred horse, ājanθaratham, a carriage drawn by thoroughbred horses, usabhθam, a bull, gavim, a cow, kapilagava, a young cow or the site of any other omen regarded as auspicious.

Sutamaṅgala is hearing as the first thing in the morning, of auspicious sounds or pronouncements such as vacf..hθi, prosperous, siri, happy, si, luck, glory, sirivaddhθi, increase in glory, sunakkhatθam, an auspicious constellation, sumuhuttam, an auspicious moment, sudivasam, and auspicious day, sumaṅgalam, a very auspicious day or the hearing of any other sound or pronouncement accepted as auspicious.

Mutamaṅgala is explained as, padumagandhādi pupphaṃgandhā va ghāyatī, the smelling of sweet and pleasant scents like the scents of flowers like the lotus, phussaṃantakhaṭṭam and khādati, the sensation experienced when cleaning teeth with excellent toothbrush as used by the Brahmins; paθavim va āmasati, touching the earth; haritasassam, allagomayam, kacchapan, tilavaham, phalam va āmasati, the touch of fresh grain, fresh cow dung, tortoise, a cart load of sesame seed, fruits, phussamattikāya va samālimpati, the touch of fine clay; phussaθakam va nivāseti, the sensation of wearing an excellent robe; phussaveθhanam va dhāreti, the sensation of wearing a fine head-gear or the smelling of any other scent, the tasting of any other taste, and the sensation from feeling any other touch, are included under muta maṅgala.

The belief and acceptance that the sight and smell of, or contact with, certain things can be auspicious and therefore being good luck and prosperity is naturally based on the acceptance that the sight and smell of, or contact with, things regarded as inauspicious is detrimental or harmful to one's progress, prosperity and well being. It was this belief in the inauspicious, which led to the formulation of measures regarded as potent to dispel evil and bring blessing and ensure prosperity and well being.

The Indian society of the Buddha's day evidently witnessed important occasions of life from the birth of an individual to his death and even after, covered with such protective and blessing rites. These occasions of rites are also named as auspicious (maṅgala). The Dhammadatathakathā reference where Buddhaghosa enumerates some of these as nāmakaranā maṅgalam, the naming ceremony, āhāraparibhoga maṅgalam, the feeding ceremony, Kānavijana maṅgalam, the ear-piercing ceremony, dussagahana maṅgalam, the clothing ceremony, and the cūlakappana maṅgalam, the ceremony for hair-dressing, etc., can reasonably be taken as throwing some light on these.

Emperor Asoka mentions a few of the ceremonies, which perhaps were in vogue in the contemporary society. "People perform various ceremonies on occasions of sickness, the weddings of sons, the weddings of daughters, the birth of children, and departure on journeys. On these and other similar occasions people perform various ceremonies" (Jane ucvuvac maṅgalam kalety, ābādhasi, vivahasī, paθopadane pavāhasi; atāye amnāye cā edisa ye jane bahu maṅgalam kaleti). It it also stated by Asoka that, "at such times the womankind perform manifold, trivial and worthless ceremonies"
Accordingly, *iddhikarana* means that which causes or increases an individual’s material prosperity and welfare. Similarly, *vuddhikarana* refers to that which causes or ensues one’s success and prosperity. *Sabbasampattikarana* is that which brings or increases the overall good fortune, accomplishment and success.

Thus, according to Buddhaghosa *mañgala* includes all aspects of personal and worldly power, prosperity and welfare. The term *mañgala* has also been used to describe a wide variety of things and events which were conceived as auspicious or lucky and regarded therefore as conducive to one’s prosperity. Buddhaghosa introduces them under three principle divisions as *ditthamañgala*, *sutamañgala* and *muta mañgala*.1

**Ditthamañgala** is the sight of such auspicious things as the first thing in the morning such as: *bhāsasakunāma*, a bird of prey, *beluvalathīti*, a young sprout of the vilva tree, *gabbhini*, a pregnant woman, *kumāraka*, a youth, *alaṃkatiṭṭhyate punnaghāte*, a decorated full pitcher, *ālārōhitamaccha*, a fresh fish, *ājaññāma*, a thoroughbred horse, *ājaññarathama*, a carriage drawn by thoroughbred horses, *usabham*, a bull,2 *gavīma*, a cow, *kapilagavāma*, a brown cow or the site of any other omen regarded as auspicious.

**Sutamañgala** is hearing as the first thing in the morning, of auspicious sounds or pronouncements such as: *vaddhā*, prosperous, *vaddhamāna*, increasing, growing, *punna*, full, *phussā*, blossomed, clear, *sumanā*, happy, *siri*, luck, glory, *sirivaddhā*, increase in glory, *sunakkhattam*, an auspicious constellation, *sumuhuttam*, an auspicious moment, *sudivasam*, and auspicious day, *sumāngalam*, a very auspicious day or the hearing of any other sound or pronouncement accepted as auspicious.

**Mutamañgala** is explained as, *padumagandhādi pupphagandhā vi gāhīyati*, the smelling of sweet and pleasant scents like the scents of flowers like the lotus; *phussadakhaṭṭhama vi khādāti*, the sensation experienced when cleaning teeth with excellent toothbrush as used by the Brahmins; *pathavim vi āmasati*, touching the earth; *haritasassam*, allagomayaṃ, *kacchapham*, *tilavāham*, *phalam* and āmasati, the touch of fresh grain, fresh cow dung, tortoise, a cart load of sesame seed, fruits, *phussamattikāyam vi samālimpati*, the touch of fine clay, *phussasātakam vi nivāseti*, the sensation of wearing an excellent robe; *phussaveṭhānam vi dhāreti*, the sensation of wearing a fine head-gear or the smelling of any other scent, the tasting of any other taste, and the sensation from feeling any other touch, are included under *mutamañgala*.3

The belief and acceptance that the sight and smell of, or contact with, certain things can be auspicious and therefore being good luck and prosperity is naturally based on the acceptance that the sight and smell of, or contact with, things regarded as inauspicious is detrimental or harmful to one’s progress, prosperity and well being. It was this belief in the inauspicious, which led to the formulation of measures regarded as potent to dispel evil and bring blessing and ensure prosperity and well being.

The Indian society of the Buddha’s day evidently witnessed important occasions of life from the birth of an individual to his death and even after, covered with such protective and blessing rites. These occasions of rites are also named as auspicious (*mañgala*). The *Dhammapadāṭthakathā* reference where Buddhaghosa enumerates some of these as *nāmakaraṇa mañgalam*, the naming ceremony, *āhāraparibhoga mañgalam*, the feeding ceremony, *Kanṭavijjana mañgalam*, the ear-piercing ceremony, *dussagahana mañgalam*, the clothing ceremony, and the *cūlabappana mañgalam*, the ceremony for hair-dressing, etc.,4 can reasonably be taken as throwing some light on these.

Emperor Asoka mentions a few of the ceremonies, which perhaps were in vogue in the contemporary society. “People perform various ceremonies on occasions of sickness, the weddings of sons, the weddings of daughters, the birth of children, and departure on journeys. On these and other similar occasions people perform various ceremonies” (Juan ucavucam mañgalam kalety, ābādhasi, vivahas, pajopadane pavāhasi; ataye amnaye ca edisāye jane bahu mañgalam kaleti).5 It it also stated by Asoka that, “at such times the womankind perform manifold, trivial and worthless ceremonies”

2. It is a symbol of manliness and strength
4. *DhpA*. 11. 87
Accordingly, iddhikarana means that which causes or increases an individual's material prosperity and welfare. Similarly, vuddhikarana refers to that which causes or ensues one's success and prosperity. Sabbasampatikkarana is that which brings or increases the overall good fortune, accomplishment and success.

Thus, according to Buddhaghosa maṅgala includes all aspects of personal and worldly power, prosperity and welfare. The term maṅgala has also been used to describe a wide variety of things and events which were conceived as auspicious or lucky and regarded therefore as conducive to one's prosperity. Buddhaghosa introduces them under three principle divisions as diṭṭhamaṅgala, sutamaṅgala and muta maṅgala.

Diṭṭhamaṅgala is the sight of such auspicious things as the first thing in the morning such as: bhāsasakunā, a bird of prey, belevaḷāthiṃ, a young sprout of the viḷva tree, gabbhiniṃ, a pregnant woman, kumārake, a youth, alaṃkataṭiyattē punṅaghate, a decorated full pitcher, allarohitamacchaṁ, a fresh fish, ājānām, a thoroughbred horse, ājānārahaṁ, a carriage drawn by thoroughbred horses, usabhhaṁ, a bull, gavīṁ, a cow, kapilagavaṁ, a brown cow or the site of any other omen regarded as auspicious.

Sutamaṅgala is hearing as the first thing in the morning, of auspicious sounds or pronouncements such as: bhāsaśakunā, a bird of prey, belevaḷāthiṃ, a young sprout of the viḷva tree, gabbhiniṃ, a pregnant woman, kumārake, a youth, alaṃkataṭiyattē punṅaghate, a decorated full pitcher, allarohitamacchaṁ, a fresh fish, ājānām, a thoroughbred horse, ājānārahaṁ, a carriage drawn by thoroughbred horses, usabhhaṁ, a bull, gavīṁ, a cow, kapilagavaṁ, a brown cow or the site of any other omen regarded as auspicious.

Mutamaṅgala is explained as, padumagandhādi pūphagandhā va ēkāyati, the smelling of sweet and pleasant scents as the scents of flowers like the lotus; phussadantakhaṭṭam va khaḍati, the sensation experienced when cleaning teeth with excellent toothbrush as used by the Brahmins; paṭhavim va āmasati, touching the earth; haritasassam, allagomayaṁ, kacchapan, tilavaham, phalaṁ va āmasati, the touch of fresh grain, fresh cow dung, tortoise, a cart load of sesame seed, fruits, phussamattikāya va samālimpati, the touch of fine clay; phussasāṭakam va nivāseti, the sensation of wearing an excellent robe; phussaveṇhanām va dhāreti, the sensation of wearing a fine head-gear or the smelling of any other scent, the tasting of any other taste, and the sensation from feeling any other touch, are included under mutamaṅgala.

The belief and acceptance that the sight and smell of, or contact with, certain things can be auspicious and therefore being good luck and prosperity is naturally based on the acceptance that the sight and smell of, or contact with, things regarded as inauspicious is detrimental or harmful to one's progress, prosperity and well being. It was this belief in the inauspicious, which led to the formulation of measures regarded as potent to dispel evil and bring blessing and ensure prosperity and well being.

The Indian society of the Buddha's day evidently witnessed important occasions of life from the birth of an individual to his death and even after, covered with such protective and blessing rites. These occasions of rites are also named as auspicious (maṅgala). The Dhammapadaṭṭhakathā reference where Buddhaghosa enumerates some of these as nāmakarana maṅgalam, the naming ceremony, āhāraparibhoga maṅgalam, the feeding ceremony, Kaṇṇaviṭṭha maṅgalam, the ear-piercing ceremony, dussagahana maṅgalam, the clothing ceremony, and the cūlakappana maṅgalam, the ceremony for hair-dressing, etc., can reasonably be taken as throwing some light on these.

Emperor Asoka mentions a few of the ceremonies, which perhaps were in vogue in the contemporary society. "People perform various ceremonies on occasions of sickness, the weddings of sons, the weddings of daughters, the birth of children, and departure on journeys. On these and other similar occasions people perform various ceremonies" (Jane uccaṃ maṅgalam kalety, ābādāyi, vivahāyi, pājopadane pavāhati; atāye amnāye ca edīsāye jane bahu maṅgalam kaleti). It is also stated by Asoka that, "at such times the womankind perform manifold, trivial and worthless ceremonies."

---

1. KhpA. 118f.
2. It is a symbol of manliness and strength
4. DīpA. 11. 87
5. Vincent A. Smith, Edicts of Asoka, 14, Eggermont & Hofijzer, The Moral Edicts of King Asoka, 12;
Thus while it has been regarded as maṅgala to see an auspicious object, hear an auspicious sound or to feel the comfortable sensation of wearing an auspicious robe, the ceremonies which marked the important occasions of an individual's life were also called maṅgala. It is in this context of belief and acceptance that the *Maṅgala Sutta* outline the Buddhist conception of what constitutes maṅgala or blessing brings one's prosperity. Accordingly, the factors, which bring prosperity and are hence considered auspicious according to Buddhism, are the following:

I. Non-association with the foolish
II. Association with the wise
III. Worship of the worshipful
IV. Residence in congenial place of residence
V. Be of past merit
VI. Be of high personal aspiration
VII. Be learned and professionally skilled
VIII. Be disciplined and well-trained
IX. Be of well-spoken word
X. Service to parents
XI. Care of children and wife
XII. Non-complicated livelihood
XIII. Liberality
XIV. Conduct according to the Dhamma
XV. Care of kin
XVI. Be of blameless deeds
XVII. Cease and abstain from the wrong
XVIII. Restraint in drink
XIX. Diligence in the Dhamma
XX. Reverence
XXI. Meekness
XXII. Joy
XXIII. Gratitude
XXIV. Timely hearing of the Dhamma
XXV. Patience
XXVI. Obedience
XXVII. Sight of Samanas
XXVIII. Timely engagement in discussions on the Dhamma
XXIX. Asceticism
XXX. Higher life
XXXI. Realization of the ariyan truths
XXXII. To be unmoved by the lokadhammas
XXXIII. Realization of nībbāṇa
XXXIV. To be free from grief
XXXV. To be free from difilements
XXXVI. To be secure (khema)

Those who live according to the above requirements of the auspicious will encounter no defeat and go about happily. Theirs will be the highest blessing.

While the popular acceptances regarding the auspicious combined the belief in magic and superstition, the Buddhist conception steers completely away from both magic and superstition by emphasizing that the auspicious consist in the cultivation of qualities which makes the individual auspicious not only to himself, but to the entire society in which he lives. The departure in the Buddhist conception of the auspicious is from one, where belief in the unseen power of certain specified external objects is recognized, to one, which recognizes no such magical power or influence in any external objects.

Thus, while Buddhism rejects the irrational superstitious acceptances that certain sights, sounds or contacts can bring or increase one's prosperity, it recognizes that certain external factors are relevant and therefore do influence or cause one's prosperity. These factors are therefore regarded as auspicious. The association with the wise, shunning the foolish, respect and reverence of the revered and residence in congenial residential area are the external factors which are accepted as factors which are auspicious. These, unlike those factors, which we have discussed above under the *dīṭha, sutta* and *mūta maṅgala*, do not involve belief either in magic or superstition.

The rest of the factors treated as maṅgala (auspicious) in the *sutta* seem to fall into two broad groups. In the first are those factors, which are intended to, the building up of a learned, refined individual whose learning, concern and care for his wife and family, and all around him makes his very presence in the community a blessing. The quite clear emphasis here is that the auspicious is not to be sought for in external objects, but results from one's own self-culture and good relations with one's own family and the community. The auspicious is what comes out, or emanates from the overall character and conduct of the individual and hence does not come from external sources.

In the second group are those factors that are directly relevant to the spiritual development of the individual. The attainment or accomplishment in these makes the individual the embodiment of the highest

1. *Sn. 258-69.*
qualities, and hence of the factors which are auspicious (maṅgala). It is the individual who has attained the highest spiritual accomplishment who is usually compared to the lotus flower, which stands out unsullied by the mud and water. The individual who thus attains accomplishment in the highest spiritual qualities stands in clear contrast to the rest of the worldlings and thus become auspicious by virtue of his inner attainments.

Thus, it is the cultivation of good qualities, blameless conduct, and engagement in blameless occupations, awareness of, and attention to, the needs of the other members of the community which are regarded as auspicious (maṅgala) according to Buddhism. The Pali canonical texts are not aware of any religious rites or ritual either to ward off the evil or the inauspicious, or to increase blessing and prosperity. The word pūjā found in verse 259 of the sutta, it must be noted here, does not have the sense of pūjā, which came into vogue with the development of the pūjā rites in the post-canonical Buddhism.

According to the Buddhist texts, the world is inhabited by both visible and invisible beings (diṭṭa vā ye va addiṭṭha). These invisible beings are not the micro-organisms, but do constitute a wide variety of beings that were explained by traditional mythology as beings inhabiting the heavens and the purgatories. Buddhist cosmological thinking has established that these beings do not inhabit physically remarkable areas of the solar system, but do constitute the beings of this same world, living within the same spatial boundaries as the human beings. Also, the Buddhist texts are quite clear that these invisible beings can be contacted (i.e. heard, seen and conversed with) by developing the appropriate samadhi after one reaches the fourth jhāna through the path of gradual training, gradual practice and gradual progress.

The Buddha's enlightenment was not considered complete until he attained mastery over the eightfold series of knowledge and insight, which transcended the gods. "Yāva kīvānccha me bhikkhave evam atthaparivataṃ adhivevaṇāṇadassanam na savisuddham ahosi, neva tāvāham bhikkhave sadevake loke samārake ... Anuttaram samāsambodhīn abhisambuddho ti paccaññāsīm." It was after the Buddha attained this higher knowledge and insight, i.e. the eightfold series of knowledge and insight surpassing the gods, that he revealed to the world that even the higher beings of the invisible are not able to accept prayer, sacrifice or other request and intervene in the affairs of main in response to request or supplication.

This means that the invisible beings who inhabit this world system do not have the power or the capability to inflict harm or injury or bring prosperity, well being or provide protection from harm, injury or disaster. Neither the inanimate objects of whatever description have any power to bring harm, ill luck, and prosperity of good luck.

That the Pali canonical traditions have kept within this conceptual framework is proved by the fact that we do not find evidence of any rites or consequent ritual either for blessing or for warding off evil in these texts. All religious benefits, which were traditionally derived from the sacrifice, were now guaranteed from the dāna offering without having to subscribe to the belief in the supernatural powers or of the auspicious or the inauspicious.

However, by the time of the commentarial literature the concept of the auspicious seems to have been accommodated within the ritual framework of Buddhist practice, not by accepting the validity of the superstitious belief, but by instituting the dāna offering in place of the Vedic or tribal rite which was usually held to mark the occasion. This is supported by the evidence in the commentary on the Dhammapada, according to which occasions such as, giving a name (nāmakarana maṅgala), the first taking of solid food (aḥāraparībhoga maṅgala), piercing the ears (kaṇṇavijjana maṅgala), taking up the robe (dussagahana maṅgala) and the first hair-dressing (cukkappana maṅgala), were celebrated by offering a special preparation of dāna to the bhikkhu.

1. Sn. 147
4. Anupubbāsikkhā, anupubbakiriya, anupubbhapāṭipada, M. 111.3.
5. A. IV. 304.
Emperor Asoka in his Girnar Rock Edict while describing the occasions, on which such ceremonies were held, emphasises that such ceremonies bear little fruit. Instead, he commends the "ceremonial of piety" which bears grater fruit. This explained, as, "the proper treatment of slaves and servants (dāṣabhatakāsi samyappatipati), honour to teachers (gulunā āpaciit), gentleness towards living creatures (pāñānaṃ samaye), and liberty towards ascetics and Brahmans (samaṇabambhānamānaṃ dāne). "These things, and others of the same kind, are called the ceremonial of piety (ese amne ca hedise dhammanagale nāma)."

Emperor Asoka's account of what constitutes maṅgala also goes to prove that the rites associated with the concept were not among those adopted by Buddhist practice at the time. The institution of the dāna to answer most needs arising from the belief in the auspicious seems to have been, historically much posterior to the Asoka era as shown by the reference in the Dhammapada commentary cited above.

Thus, the Buddhist teaching has introduced a rational and scientific interpretation of the concept of maṅgala (the auspicious) in place of the contemporary acceptances based purely on the belief in magic and superstition. The exposition contained in the Maṅgala Sutta is valid and relevant in the context of the thick cover of superstition and myth which envelopes Buddhism today as it did, in the days of the Buddha.

M.M.J. Marasinghe

Maṅgalalakkhana: Maṅgalalakkhana, auspicious signs that have been developed in the Buddhist traditions, fall into four sets, i.e., (1) maṅgala signs attributed to the soles of feet of the Buddha, (2) Theravāda Aṭṭhamangala used for decorative purposes, (3) Aṣṭamaṅgala of the Mahāyāna tradition, and (4) The maṅgala symbols found in the ritual deposit boxes (Garbhapātra)

1. Maṅgala signs attributed to the soles of feet of the Buddha: Physical characteristics of the Buddha are given in three suttas of the Pali Buddhist Canon. Of these Mahāpadāna and Lakkhāna suttas are found in the Dighanikāya, while the other, Brahmāyu Sutta in the Majjhimanikāya. All these suttas give details of the 32 major characteristics of the Buddha as a Great Being, but not a single maṅgalalakkhana is found in any of them. It is only the Buddhavamsa which says that the soles of feet of the Buddha are endowed with dhaṭa, vajira, patāka, ankusā, and vaḍḍhamāṇa. This indicates that the former two nīkayas are older than the latter, which can be dated to the 3rd century B.C. Even though the Buddhavamsa does not mention these five signs as maṅgalalakkhana, in the later Buddhist scriptures and Sinhalese literature they have been identified as maṅgalalakkhana. It seems to be that the origin of maṅgalalakkhana as a part of Buddhology took place during the 3rd century B.C.

The Lalitavistara of the Sarvāstivādins attributes sūrivattha, mukṭaka, nandivattha as accompaniments of the wheel signs on the soles of feet of the Buddha. They have also been identified in the later works as maṅgala signs.

2. Aṭṭhamangala (Skt. Aṣṭamaṅgala): Pali aṭṭhamangala is equivalent to Sanskrit aṣṭamaṅgala and Sinhala atamaṅgala. There are two traditions of aṭṭhamangala Sri Lanka of which one belongs to the Mahāvihāra Sect while the other to the Dhammaruci Sect of the Abhayagiri Vihara. The latter seems to be popular in the Mahāyāna countries too. Therefore these two traditions of Aṭṭhamangala can be identified as connected with the Theravāda and the Mahāyāna traditions respectively in a wider sense. Each aṭṭhamangala type contains eight signs. They have been used for different purposes, which will be discussed later.

Aṭṭhamangala of the Theravāda tradition: It is evident from about the 3rd century B.C. onwards that the Mahāvihāra tradition in Sri Lanka used eight auspicious luck bringing symbols to decorate religious buildings or objects and in ceremonies of religious or national import. The Mahāvihāra list of aṭṭhamangala or aṭṭhamangalikā includes sāṅkhā (conch shell), cakkā (wheel), pūṇāghaṭa (full pitcher), gadāyudha (mace), sirivaccha (a symbol of goddess Sri Devi), ankusā (elephant goad), dhaṭa (flag) and sovatthika (svastika). Some of these symbols have been found among the sculptures of the gateway-toranas of the Sāñchi stūpa. King Dutthagamini used aṭṭhamangalikā to adorn the trunk of the Bodhi tree in the relic chamber of the Mahāthūpa (Ruwanwiliyā) in Anuradhapura, Sri Lanka during the 2nd century B.C. Besides these he is
said to have used them to decorate a pavilion of the Lohapāšāda, a nine storied chapter-house and in the brick laying ceremony of the Mahāthūpa in Anuradhapura, Sri Lanka.

3. Āstamaṅgala of the Mahāyāna tradition: A building manual called Manjuśrīrāvastuvidyāśāstra of Mahāyāna origin was found in Sri Lanka and it is dated to the 7th century A.C. This text refers to an āstamaṅgala type which is found common in Mahayana Buddhist countries. Therefore this type of āstamaṅgala can be identified doubtlessly as the Mahāyāna āstamaṅgala. This type seems to have been used as a diagram sculptured on stone, metal and brick structures in the basis pattern of display. One primitive example was found at Kivulekada, in the north central province, Sri Lanka and it is an attani-pillar (a pillar of a grant) of king Sena I (833-853 A.C.)

Several other developed examples have been found in Anuradhapura, Polonnaruwa and Matara districts of Sri Lanka. They are different in design but similar in arrangement of eight symbols, these slabs of stones must have a ceremonial significance which will be elaborated later. These āstamaṅgala slabs have a full blown lotus in the centre and eight auspicious symbols along the four edges. The eight auspicious symbols found in these are śrīvatasa (an iconic symbol of goddess Sri Devi), mātsya (single or double fish), ankusa (elephant good), svastika, bhadrapiṭha (auspicious seat), cāmara (fly wisk) and saṅka (conch shell). These symbols have been placed with their directional significance. They also have an affiliation with eight planetary deities as shown below.

The purpose of the Mahāyāna āstamaṅgala slabs seems to be similar to that of the anointing of great grahas or planetary deities prescribed in a Tibetan text called chen-po-brgyad-kye-dkyl-bhor-du-bd-lar-ke-bahi-coga-ni-ma-bou-len-sos-bsa-ba (Āstamaṅgalagrahasāmākaraśaikartarāśayanavidhināma).

This text says that figures of planetary deities of eight directions are placed around the lotus which is in the centre of the mandala and anointed with scented water. This ceremony is called abhīṣeka (anointing) of the great eight planetary deities and the purpose of this ceremony is to invoke the eight deities to bless the country and its inhabitants and to fulfill the desires of the people.

A ritual cup of bronze with āstamaṅgala of Mahāyāna type engraved on the interior was recently unearthed at Abhayagirivihāra, Anuradhapura by archaeologists of the Cultural triangle. This proves that even the āstamaṅgala of the Mahāyāna type were used for many purposes other than anointing of eight great planetary deities.

Āstamaṅgala diagrams are used in healing ceremonies by the Sinhala Buddhists in Sri Lanka. They call it atamagala in Sinhala which is a little box made of pieces of banana stem in the shape of two squares, one above the other, which contain a small vessel with coconut blossoms. Instead of this box there is often a yantra diagram of ashes strewn on a table covered with a white cloth, which consists of two squares, one on top of the other, with a circle in the center. Such a yantra does not contain ātamaṅgala symbols, but the names of the nine planetary deities are mentioned in an abbreviated form. This type of ātamaṅgala yantras must have its origin in Kolon of Tamil Hindus, who used them in several designs.

Two foot prints of the Buddha which were found at Amaravati, India, are endowed with the following four auspicious signs: Svastika, Vajra, bhadrapiṭha, and nandiavatta. These foot prints were dated to the second century A.C.

A foot print of the Buddha from Anuradhapura, Sri Lanka, now in the Colombo National Museum is given a second century date and contains vajra, with chatra, sīrivaccha, bhnddapiṭa, sāṅkha, talavanta, dhāja, paṭaka, aṅkusa, punnaghata, macchayugala and svastika. These eleven signs may have been popular in Sri Lanka before the thirty nine signs were introduced by the commentators.

In the commentaries to the Pali Buddhist canon the number of maṅgalalakkhaṇa went up to 36. These commentaries belong to the period between the 3rd century B.C. and the 1st century A.C. Their editions
and translations into Pali took place during the 5th century A.C. the Sumangala Vilasini includes the following auspicious signs.

Satti, sirivaccha, nandi, sovatthika, vatamsaka, vaddhamanaka, macchayugala, bhaddapitha, anikusa, pasada, torana, setacchatta, khagga, talavantaka, morahattha, valavijani, unhisa, manipatta, sumanadama, niluppala, rattuppala, setuppala, paduma, pundariika, punagaha, punnapati, sannudda, cakkavala, Himavata, Sineru, candima, siiriya nakkhata etc. cattaromahadippa, dveparitudipasahassani, cakkavattiranno parisan upadaya......

The last development of maingalalakkha on the soles of feet of the Buddha possibly took place during the 12th century A.C. In this last development the number of maingalalakkha increased up to 108 as mentioned in the Jinalakhara-fikka of the 12th century A.C.

Buddha’s foot prints that are found in South and South east Asian Buddhist countries display these maingalalakkha. Among them, foot prints with 108 signs are more popular in Thailand and Myanmar. This type of foot prints were introduced to Sri Lanka most probably after the 18th century with the introduction of upasampada ordination to Sri Lanka from Thailand. The list of 108 maingalalakkha are as follows.

1. satti (spear), 2. sirivaccha (an iconic symbol of goddess Sri Devi), 3. nandiyavatta (a kind of flower by that name), 4. sovatthika (svastika), 5. vatamsaka (an ear ornament), 6. vaddhamanaka (receptacle or cup for food), 7. bhaddapitha (auspicious seat), 8. anikusa (elephant goad), 9. pasada (a storied mansion), 10. torana (an archway), 11. setacchatta (white umbrella), 12. khagga (a sword), 13. talavantaka (talipot fan), 14. mayurahattha (peacock’s feathers), 15. camar (a fly-whisk), 16. unhisa (frontal band of gold), 17. patta (bowl), 18. manji (gem), 19. sumanadama (garland of jasmine flowers), 20. niluppala (blue water lilly), 21. rattuppala (red water lilly), 22. rattapaduma (red lotus), 23. setapaduma (white lotus), 24. pundariika 25. punnakalasa (full vase) 26. punnapatta (full bowl), 27. samuddha (ocean), 28. cakkavalepabba (the universe), 29. himavantapabbata (the Himalayas), 30. merupabbata (Mt. Meru), 31. siriyanandala (the sun), 32. candamanjala (the moon), 33. nakkhatta (the stars) 34-37. superivaraye catumahidippa (the four great continents surrounded by smaller continents), 38. superivurasattaratanasamangickavatti (universal monarch with seven gems and attendants), 39. dakkhinavatta-setasankha (right-voluted white conch), 40. suvanamachayugala (a pair of gold fish), 41. cakkayudha (discus used as a weapon), 42-48. sattakulapabbata (seven mountains around the Mt. Meru), 56-62. sattasidantasagara (seven great lakes), 63. suvanamahamsaraja (a golden swan king) or supannaraja (garuda king), 64. sumsumara (crocodile), 65. dha japataka (two kinds of flags), 66. suvananavikha (golden litter), 67. suvanavavilavijani (golden yak’s tail), 68. kelasapabbata (Mt. Kailasa), 69. sikhara (lion king), 70. byaggaraja (tiger king), 71. valahakassaraja (king of valahaka horses), 72. uposathachaddantahaththiraja (uposatha king of elephants who belongs to the Chaddanta clan), 73. vaskinagaraja (a cobra king called vaski), 74. hansaraja (king of swans), 75. usabaraja (bull king), 76. eravanahaththiraja (elephant king called Eravana), 77. suvanamakara (golden dragon), 78. catumukhasuvanannav (golden boat with four bows), 79. savacchakadhenu (cow with its calf), 80. kinpurisa (male kinnara), 81. kinnari (kinnara female), 82. kuravika (an indian cuckoo), 83. mayuraraja (peacock king), 84. coicaraja (heron king), 85. cakkavakaraja (ruby goose king), 86. jivaniyvakaraja (peasant king), 87-92. chadevaloka (six heavens of gods), 93-108. solasabrahmaloka (seventeen heavens of brahmas).

4. Maingalalakkañhas found in the garbhapatras: Garbhapatras or the ritual deposit boxes with nine, sixteen and twenty five compartments have been found in Sri Lanka. Presumably they belong to the period before the 12th century A.C. Some archaeologists have identified them as yantragala without knowing the original name of them. Stella Kramrisch (1946) identified them as garbhapatra in the light of Puranas and building manuals of Hindus. She quotes the relevant description from Isanapaddhati (III, ch. XXVII, 81-106). Garbhapatra represents the ground of the temple with the respective locations of the deities. These garbhapatras have been found in South and South East Asian countries, where Theravada Buddhism or Hinduism was the dominating factor. In the context of Buddhist culture garbhapatras have been found under the pedestals of Buddha images and under the caskets of relic chambers of stūpas. They are generally square in shape, and the material used for them are stones, bricks and metal. The number of compartments is varied. Garbhapatras with nine and twenty five compartments were popular and there was only one
Garbhapātra so far found with sixteen compartments, except the one in the middle, which was meant for Brahmā. The locations for other deities are around it. The distribution of objects in the garbhapātras is as follows: Precious stones in the centre; grains and pigments in the four directions; metals and various other symbols including maṅgala symbols in the eight directions; soils in eight directions and in the centre; four varieties of lotus and tagara (Tagernamontanā coronariyā) in the four directions and in the centre.

Garbhapātra with nine maṅgala symbols: Garbhapātra with nine maṅgala symbols in nine compartments have been found buried under the pedestal of a Buddha image at Bunnahapola. The nine maṅgala symbols in it are sirivaccha, cāmara, ṣāṅkha, maccayugala, sovatthika bhaddapiṭha saṅkha, puṇṇaghaṭa and padma.

Garbhapātra with sixteen maṅgala symbols: A garbhapātra with sixteen maṅgala symbols in sixteen compartments has been found at Bunnahapola. There are seventeen compartments with the one in the centre. This central compartment is common to all garbhapātras. Sixteen compartments are located along the four sides of the garbhapātra. Maṅgalalakkhāna found in these sixteen compartments are padma, vajira, khagga, satti, kūrma, sirivaccha, saṅkha, cakkāyudha, cāmara, sovatthika, ṣāṅkha, puṇṇaghaṭa, cakka, setachatta, bhaddapiṭha, māccha. Unlike the aṣṭamaṅgala garbhapātras this does not represent the directions. This garbhapātra with sixteen compartments is named as solasamaṅgala in the Sinhalese literature. It is probably an extension to the aṣṭamaṅgala garbhapātra.

Some signs or symbols considered to be auspicious are common heritage of Hindus, Buddhists and Jains. In the Buddhist context aṭṭhutārasatamaṅgala (108 auspicious signs), aṣṭamaṅgala (8 auspicious signs) and solasamaṅgala (16 auspicious signs) with an extension of nine auspicious signs were discussed here. Of these first and second types are found in foot prints of the Buddha. Garbhapātras with 9, 16 and 25 compartments contain some auspicious signs and such garbhapāras have been found under the pedestal of Buddha images and under the relic caskets in the relic chambers of stūpas. These auspicious signs presumably represent some deities. Therefore they possess power of those deities. Some of the auspicious signs can be regarded as an iconic representation of particular deities and some others are weapons of deities. For instance, śrīvatsa has developed into anthropomorphic form of goddess Sri Devi is the personification of the concept of innate splendor. This goddess is the consort of Viṣṇu. According to Vaikhanasa sect of Viṣṇu and Sri Lakṣmi represent elements called puraśa and prakṛti or the male and female elements by the union of which creation became materialised.

It may be concluded that Buddhists seem to have shared the belief of maṅgalaalakkhāna with Hindus and Jains and they gave them a place in the Buddhology and Buddhist Civilization. People believe that the divine power attached to these maṅgala signs can fulfill the desire of those who venerate, see and touch them.

MA migliALASUTTTA, ʻthe Discourse on the Blessingsʼ, or more popularly known as 'the great discourse on the auspicious things' (Mahā Maṅgala Sutta) occurs in the Cūlavagga of the Suttanipāta (Sn. pp. 46, 47) and in the Khuddakapāṭha (Khp. pp. 2-3). The Sutta was preached by the Buddha at the Jeta's Grove in Sāvatthī, to a group of deities who visited the Buddha one day, late in the night. The spokesman of the deities tells the Buddha that many gods and men ponder as what the real auspicious things are, and requests the Buddha to reveal them for the welfare of all beings. The auspicious things, according to the
The commentary to the Khuddakapāṭha (KhpA.p.120ff) says that once there were many discussions in the whole of Jambudvīpa regarding what the real auspicious things were. Some argued that good sights (djīthamangala) constituted the auspicious, some argued that to hear something good constituted the auspicious (sutamangala), some argued that to experience a good smell or a good taste or a good bodily contact constituted the real auspicious (mutamangala). There was no consenses on what constituted the real auspicious, and the entire country was in uproar over this issue. The discussion spread gradually to the guardian deities, from them to the terrestrial deities, and likewise it spread up to the Akaniṭṭha Brahma World, and the entire country was in uproar over this matter. The discussions in the whole of Jambudvīpa regarding what the real auspicious things were. Some argued that good sights (djīthamangala) constituted the auspicious, some argued that to hear something good constituted the auspicious (sutamangala), some argued that to experience a good smell or a good taste or a good bodily contact constituted the real auspicious (mutamangala). There was no consenses on what constituted the real auspicious, and the entire country was in uproar over this issue. The discussion spread gradually to the guardian deities, from them to the terrestrial deities, and likewise it spread up to the Akaniṭṭha Brahma World, and there was no uniformity in their views regarding the auspicious things. Since there was wide disagreement among the gods, too, they sent one of their emissaries to the Buddha to get a proper clarification and the Mahāmangala Sutta constitutes that clarification.

The sutta is another example wherein the Buddha has tried to give an ethical interpretation to a current term. The term māṇgala was used popularly in the time of the Buddha, not so much to connote activities that resulted in the welfare of the individual and the society as a whole, but to connote a lot of superstitious beliefs that did not help a man's material or spiritual development. The Buddha, without discarding the term, gave it an ethical meaning in keeping with his teachings. According to the meaning given to the term māṇgala by the Buddha, it means all activities of an individual that result in the material and spiritual progress of oneself and others.

The Suttanipāta commentary (SnA. I 174) says that countless devas were present at the time the sutta was preached and a countless number of them realised the truth by listening to it.

The Maṅgala sutta is a very popular sutta, and it is one of the suttas that are chanted as Paritta (protection) at various ceremonies. According to the Majjhimanikāyā commentary it is considered as act of great merit to have it written down in a book (MA. II 806). The Mahāvamsa says (Mhv. xxxii, 43) that King Dutṭhadāsimi attempted to preach the Maṅgala Sutta at the Lohapāsāda, but could not proceed owing to nervousness.

W. G. Weeraratne

MANISĀRAMAṆJUSĀ is a further commentary on the sub-commentary Abhidhammathavinītīkā. It was written by Ven. Maha Ariyavamsa therī of the Chappata fraternity, during the reign of king Narapatī (1442-68 A.C.) of Burma. He was also the author of the Attheśālini Anuṭikā. It is said in the Catalogue of Palmleaf Manuscripts of Ceylon by K. D. Somadasa (Vol. I, p.6; Vol. II, p.5) that Ven. Ariyavamsa, before he became widely known, went to Sāgamā to study grammar under a learned therī by name Yedin (the water carrier). According to the Sāsanavamsa, he was used to keeping a mouthful of water in his mouth either to restrain his own inclination to talk, or, because he found the brethren too talkative, and hence his name Yedin (water carrier). Ariyavamsa found it difficult to persuade his Master to impart knowledge to him, but he was not discouraged. He performed the duties of a disciple and won the teacher's heart. He studied Abhidhammathasāṅgaha under the Master and was able to grasp it within a short time. The ācariya then charged him to do his part in helping others by writing a commentary on the text he felt best fitted to expound. Ariyavamsa selected the Abhidhammathavinītīkā and wrote the Manisāramāṇjusā on it.
While writing the further subcommentary, he submitted it chapter by chapter to his fellow monks for criticism, reading it aloud to elderly monks as they sat assembled on *uposatha* days in the court yard of the Punnacetiya.

On one occasion, a monk seated in the assembly uttered a loud voice of disapproval during the reading. He went up to the protester and found out that the error was regarding a gender of a word. Ariyavamsa readily accepted the mistake and offered his garment of fine cloth to the monk, thus showing his readiness to accept correction.

Maṇisāramāṇusā is hardly known in Sri Lanka today, though the catalogue of Palm leaf manuscripts referred to above records the existence of fifteen manuscripts.

K. Arunasiri

MAṆJUŚRĪ (1) one of the two most important bodhisattvas in the Mahāyāna pantheon, the other being Avalokiteśvara. Some scholars are of opinion that he is the first bodhisattva mentioned in the Buddhist scriptures.¹ Textual evidence shows that in the beginning of the bodhisattva doctrine Maṇjuśrī was regarded as the most exalted bodhisattva. But, at a later period of the development of the bodhisattva doctrine he lost this pre-eminent position to Avalokiteśvara.

The Mahāyānists generally regard him as a *dhārani*-bodhisattva or as the first of the sixty persons of matchless mind (*anupamacitta*; *Rpp.* p. 2). The Tantrists regard him as the Suprem Being or the Ādi-Buddha. He is considered to be the embodiment of wisdom (*prajñā*), of all sciences, and as such his primary function is to cleave asunder the cloud of ignorance (*avidyā*) and reveal the light of wisdom (*prajñā*). Thus his iconographical representations show him as carrying a sword with which he is said to cleave ignorance, and a book the *Prajñāpāramitā* which is symbolic of wisdom.

Though popularly known as Maṇjuśrī he has numerous other names and epithets such as Maṇjuśrī-kumāra-bhūta Maṇjuśvara, Maṇjughōsa, Maṇjubhāṇin, Maṇjurāva, Maṇjuvara, ¹ Maṇjuvajra, Maṇjunātha, Maṇjubhadra, Pañcācīra, Pañcavīra-kumārā,³ Dharmarāja, Balavarta, Mahāmati, Jñanadarpāna, Śīkhadharma, Khaḍgīn, Kumārarakṣa, Daṇḍin, Vajradhara, Niḥoltalīn, Śārdūlavāhana, Simbakhela, Vibhusana. In China he is known as Wen-chu-shih-li or Wen-chu. In Japan he is popularly called Maṇju and in Tibet he is called either Ḫjam-pa-dbyams or Ḫjam-dpal.

There is no consensus among scholars regarding the origin of Maṇjuśrī. Authorities like S. Leṉi think that Maṇjuśrī is of Tokharian origin, for the term *maṇjū* could possibly be a Tokharian word corresponding to Sanskrit *kumāra* (*JA.* 1912, I, p. 66; S. Leṉi, *Nepal* p. 330ff.). Poussain opines that the Maṇjuśrī cult originated in India, developed in China and later spread to Nepal (ERE. s. v. Maṇjuśrī). Charles Eliot is also of opinion that the term *maṇjū*, though Sanskrit, has a Central Asian ring. But he does not directly support S. Leṉi's theory. Eliot's view on this problem is not quite clear. He says that attributes of Maṇjuśrī are Indian and that there is little evidence of his foreign origin. But he also adds that it is probable that during various inroads of Graeco-Bactrian, Yūeh-chih and other Central Asian tribes into India Maṇjuśrī was introduced to the Mahāyāna pantheon from China and Central Asia and that Maṇjuśrī has in the earlier descriptions a certain pure abstract quality which recalls Amesha-spentas.³ Some scholars think that he is a real person who was deified later.⁴ According to Chinese Buddhism Maṇjuśrī was born from a lotus (for details see below).

A study of the origins of various bodhisattvas makes it clear that they are mostly metaphysical creations of Mahāyānists. One such creation is Avalokiteśvara (*q.v.*) and Maṇjuśrī, too, appears to be of similar origin.

2. Probably due to metathesis *vara>rava*.
3. Probably an error for Pañcācīra-kumāra.
6. B. Bhattacharyya, *The Indian Buddhist Iconography*: Calcutta, 1958, p. 102; A. Grundwedel (*op. cit.* p. 199), too, thinks that he is a real person; But on p. 201 he says that Maṇjuśrī may be regarded as the personification of meditation.
Though popularly known as Mañjuśri, Mañjusvara and Mañjughosa are most ancient of his many names. The term Mañju is common to both Sanskrit and Pali, and in Pali it occurs in canonical literature in the meaning of pleasant, charming, sweet, lovely with reference to the voice of Buddhas and Brahmas. The pleasant voice (Mañjusvara) is regarded as one of the eight qualities of the voice of Buddhas and Brahmas (D. II, 211, 227; PED. s. v. Mañju).

In a voice enriched by these eight qualities the Buddha preached the Dhamma he realised by attaining Enlightenment. With regard to his Enlightenment the Buddha says, 'eye is born, knowledge is born, wisdom is born, science is born, light is born. Thus, it is clear that his dhamma is wisdom (pañña) which he delivered in a pleasant (mañju) voice (sara). Most probably it was this particular aspect of the Buddha-the Buddha as the teacher, the revealer of wisdom, and in a wider sense the Buddha as the embodiment of wisdom - that was later personified as Mañjuśri. It is also probable that the concept of Brahmā, whose voice is also pleasant (mañju) influenced the character of Mañjuśri. Particularly the character of Brahmā Sānañkumāra, and to a lesser extent that of Pañcasikha appear to have influenced the evolution of the concept of Mañjūśri.

According to Theravāda Buddhism wisdom (pañña) and compassion (karunā) are the most exalted qualities of the Buddha's character, and as a matter of fact every Buddhist striving to be perfect was taught to bring in to perfection these two qualities. After the rise of Mahāyāna these two qualities were given more emphasis. At the beginning wisdom (pañña) was regarded as being the more important of the two, and its importance rose still higher with the rise of Mādhyaṃika philosophy which exalted prajñā. It was during this period of doctrinal development that Mañjūśri appeared and perhaps came to be regarded as the most important bodhisattva as being even greater than Avalokiteśvara. But this state of affairs did not last long. The bhūṣāntva doctrine, which rose by about the 2nd century B.C. more or less as a rival movement to the brahmanic deity worship and also as a reaction to the arahant ideal of the Theravādins, in the course of its development relegated to second place the perfection of prajñā and put forward altruism as the sole virtue. This doctrinal development brought into prominence the concept of Karunā and consequently its personification in Abalokiteśvara.

**Date of origin:** It is not certain as to when Mañjūśri appeared. As stated earlier scholars tend to consider Mañjūśri to be the earliest mentioned bodhisattva. Mañjūśri is very prominent in the Saddharma-pundarikā Sūtra and if the sections in which he is mentioned belong to the earliest strata of the text, it could be surmised that his origin goes back to about the 2nd century B.C., and as such his origin could be regarded as being almost co-eval with the rise of the bodhisattva doctrine. The fact that Fa-hsien and Hsuan-tsang found Mañjūśri worship prevalent in India during their visits shows that Mañjūśri worship was well established then. However, I-tsing records that during his visit he found that the Hindus believed that Mañjūśri came from China and this most probably reflects that at that time Mañjūśri worship had waned in India.

**Mañjūśri and Sānañkumāra:** As already pointed out the concept of Brahmā seems to have influenced the concept of Mañjūśri. According to Buddhism Brahmās appear as beings of learning. Brahmā Sānañkumāra is specially so. From canonical literature it becomes evident that Sānañkumāra is specially so. From canonical literature it becomes evident that Sānañkumāra performs the role of a teacher. He is also noted for his brahmaṇa, In this voice he preaches to the Tavatiṃsa

---

7. Poussain takes Manjughosa to be the earliest name (ERE. s.v. Mañjuśri). But D. L. Sveglrove (Buddhist Himalaya, Oxford, 1957, p. 61) says "His full name is Pañcaskika Mañjughosa, meaning Five-fold Crest and Gentle Voice. It is likely that the first was the original name and the second just an epithet."

8. One who possesses a voice enriched by the eight qualities is called a brahmaṇa (J. I, p. 96; V. p. 336) These eight qualities are vissātha (fluent), viśeṣeya (intelligible), mañju (sweet), savaṇīya (audible), bindu (continuous), avisāri (distinct), gambhīra (deep), nīnāda (resonant). See also PED. under each term.

9. cakkhaṇa udapādi, karaṇā udapādi paññā udapādi vijja udapādi aloko udapādi (S.V. p. 422).

10. Of the Dharma-kāya concept. The statues of Dharma, too, are combinations of Avalokiteśvara and Mañjūśri (Alice Getty, op. cit. p. 20).

11. The Noble Eightfold Path also is based on paññā and karunā (W. Rahula, What the Buddha Taught, Gordonfraser, 1959, p. 46f.)

12. See Bhattacharya, op. cit. p. 100.
MAṆJUŚRI (1) 611

MAṆJUŚRI (1)

gods. It is Sanañkumāra who conveys to these gods the Buddha’s declaration that, “Open for ye are the doors of deathlessness” Mañjuśrī. Sanañkumāra. 13

Mañjuśrī is the revealer of wisdom and as such is the embodiment of learning and all the sciences. Many texts such as the Saddharamapunḍarīka Sūtra, the Mañjuśrīrimula-kalpa, the Laṅkāvatāra-sūtra, the Divyāvadāna reveals this salient aspect of his character. He is ever young as his epithet Mañjuśrīkumārabhūta signifies. 14 The Mañjuśrīvikūḍita, a Sanskrit text translated into Chinese about the 4th century, also relates how Mañjuśrī in the guise of a handsome young man converted a woman. These similarities seem to point to the fact that the Brahmā concept, greatly influenced the development of the concept of Mañjuśrī. This early influence paved the way for further influence at a later stage, and even the consort of Brahmā, namely, Sarasvatī became the consort of Mañjuśrī. Even the epithet Brahmā came to be applied to Mañjuśrī (ERE. s.v. Mañjuśrī).

Mañjuśrī and Pañcaskika: Scholars such as Mlle. Lalou are of opinion that the concept of Mañjuśrī is related to that of Pañcaskika. 15 On this point it should be noted that Pañcaskīra or Pañcaskika occurs as a name referring to the miniature figures of Mañjuśrī. 16 Pañcacakīra -probably meaning five braids of hair-is an epithet of Mañjuśrī. Pañcaskika is also a name of a particular mūdra belonging to Mañjuśrī. Pañcacakīramudrā is also sacred to him (BHS. p. 315). 17

The Mañjuśrīrimulakalpa contains numerous references to Mañjuśrī’s head which it describes as being adorned with five braids or locks of hair. 18

In Pali canonical literature Pañcaskika 19 is represented as a gandabba, a celestial musician, a favourite attendant of Sakka. Once Sanañkumāra is said to have assumed the form of Pañcaskika when he preached to the gods 20 (D. II, 211). Through its connections with Sanañkumāra Pañcaskika’s character could have had some impact on the formation of the character of Mañjuśrī.

Mañjuśrī and Kārttikeya: His stock epithet Kumārabhūta appears to have also led to the curious blend with the Hindu god Kārttikeya who is also called Skanda, Kumāra. Thus in the Mañjuśrīrimulakalpa he is called kārttikeya-Mañjuśrī (Mmk. p. 33). Like Skanda he is described as sitting on a peacock.

Mañjuśrī in India: Mañjuśrī who probably came into existence with the rise of the bodhisattva doctrine was regarded as the formost among the bodhisattvas. As the revealer of prajñā he, at first, occupied a position higher than even that of Avalokiteśvara but later when karuṇā preceded prajñā Mañjuśrī was relegated into second place. Numerous Mahāyāna texts refer to Mañjuśrī as the revealer of prajñā. The Gandavyūha Sūtra says that Sudhana attained Enlightenment through the favour of Mañjuśrī. Śāntideva is said to have been initiated into the sciences by Mañjuśrī. He is highly praised in the Ratnakāranḍavyūha Sūtra. He is the principal interlocutor in the Laṅkāvatāra Sūtra. The Mañjuśrīrimulakalpa contains the Mañjuśrī-mantra which claims to include within itself all sciences. By the power of this mantra one can attain all things and it has the power to destroy the mantras of evil doers and even to blot out all sins. The importance of Mañjuśrī rose to such heights that in the Nāmasaṅgīta

13. Buddhaghosa says that Sanañkumāra in his previous birth practised jhāna while yet a boy with his hair tied in five knots (pañcacakīla kumāra-kāle) and was reborn in the Brahma world jhāna intact. He liked this guise and continued to be ever young (DA. II, p. 640). Purānic tradition also alludes to his ever youthfulness.

14. Har Dayal (The Bodhisattva Doctrine, London, 1932. p. 46f) thinks that the title kumāra is probably nothing more than a complementary epithet for the bodhisattvas, who are regarded as "ever youthful", and perhaps also as "princes of Buddha’s realm". H. Zimmer says: “Kumārabhūta which means, “He who has become (bhūta) the anointed, crown prince (kumāra), for he has been blessed by the sacrament of the sprinkling with holy water that consecrates the heir apparent or co-ruler of the existing kingship. Mañjuśrī has attained the dignity of the Buddha, the spiritual monarch, though himself still a junior, a bodhisattva. He represents the potential Buddha dwelling within the bodhisattva.” (H. Zimmer, The Art of Indian Asia, Bollingen Series, XXXIX, Vol. I, p. 198 f.). It should also be noted that ‘Kumārabhūta’ is the stock epithet of Mañjuśrī and it was only later appended to the names of other bodhisattvas.

17. For details see BHS. s. v. cīra.

18. For e. g. sarvatālāmākārabhūṣita-pañcacakīrapaśobhitā; pañcacakīrapaśobhitam sīram bāladārakālāmkālānkrītaṃ (Mmk. pp. 41, 305). For more details refer the Mañjuśrīrimulakalpa and also BHS. s. v. cīra.ka.

19. Regarding Pañcaskika see the DPPN. s. v. Pancaskika.

20. This is because all gods liked Pañcaskika (DA. II, p. 640).
he is referred to as the Ādi-Buddha. The Mahāyānists believe that the worship of Mañjuśrī eventually confers upon the worshipper, wisdom, retentive memory, eloquence and also the ability to master all sciences.

The Mañjuśrī-gūnākṣetrayūhā tells how Mañjuśrī took his bodhisattva vow. It says: "As the chain of births is endless, so long shall I live that holy life for the well-being of all creatures. Let us produce the bodhicitta in the presence of our Lord. I invite all the world, for I shall deliver it from poverty. From this day unto the day of my attaining Enlightenment I will not cherish any feeling of malice, stubbornness, envy or grudge. I will practise continence and shun all lusts. I will follow the self-restraint and morality followed by the Buddhhas. I will not attempt to attain Enlightenment quickly. I will remain until the end of chain being even for one living being’s sake. I will purify a measureless number of Buddha fields. I will acquire a name renowned in all the ten directions. I will make pure all my verbal, mental and bodily actions. I will never do a bad act."

Mañjuśrī as a dhyānibodhisattva is regarded as an emanation of either Aksobhya or Amitābha. He is also regarded as belonging to several kulas. Probably it was after the rise of Tantrism that the worship of Mañjuśrī developed into a particular cult. The Sādhanamālā records over (op. cit. p. 100 ff) forty sādhanaś addressed to him. B. Bhattacharyya lists fourteen different forms of Mañjuśrī as conceived by the Tantrists. These forms are Vajradhatu-Vağśvara, Mañjughoṣa, Mañjuvajra, Mañjukumara, Arapacana, Sthiracakra, Vadirat, Siddhaika vira, Vajrananga, Manjavajra, Mañjukumara, Arapacana, Sthiracakra, Vadirat, Siddhaika vira, Vajrananga, Nāmasaṅgī-Mañjuśrī, Vağśvara and Yamantaka. Besides these, Alic Getty (op. cit. p. 95) refers to three other forms, namely, Simhanāda-Mañjuśrī, Mahārājaṭilā Mañjuśrī, and Dharmaśaṅkāsamādhi-Mañjuśrī. Normally Mañjuśrī is represented without a consort and as such Elliot describes him as a male Athene, all intellect and chastity, (C. Elliot, op. cit. p. 19) But sometimes Śarasvatī, or even Lakṣmī is named as his consort.

Though Mañjuśrī lost his position of pre-eminence to Avalokiteśvara and though numerous other bodhisattvas rose to prominence, the Mañjuśrī cult did not completely disappear from India. An eulogy on Mañjuśrī occurring in the Śīkṣasamuccaya points to the fact that even during the seventh century he was held in high esteem. The eulogy says: "With the dark blue colour of a swarm of bees, wearing an ascetic’s dress, carrying a chaplet of various sweet and blossoming flowers, traversing a multitude of Buddha fields, mighty, invincible, taking away every obstacle, emitting the water of quenching for the fires of ghostly existence and hell, pursuing the good of the beings who may be converted, standing in the abysses of transmigration, wearing the ornament of strength for causing the opening of the world’s eyes, wise, strong in body, causing people to feel confident. With all my being, glory again and again to that concentrated salvation which has for name Mañjuśrī, a great lake of joy for those tormented with different pains, a mighty cloud for satisfying the hells of thirst in the three worlds, a wishing-tree filling the ten regions with blossoming flowers that the world desires, venerated by the lotus-eyes of the world, rejoiced by reaching their desires, praised by hundreds of bodhisattvas, their hair shivering with admiration. I revere Mañjuśrī with ever increasing salutations. Honour to thee, Mañjuśrī, sorrow’s physician, giver of the feast of happiness, by whom in every way we live."

The Mañjuśrīmūlakalpa also says that in the future Mañjuśrī will be born as Buddha Mañjūdhvaja (Mmk. p. 591).

Mañjuśrī in China: The Mañjuśrī cult spread from India to China via Central Asia at a very early date. According to the Chinese belief, Mañjuśrī was informed by Gotama Buddha that it was his duty to turn the Wheel of Law for the salvation of the Chinese people. The place chosen for his manifestation was Wutai Shan (Pañcāśīra) mountain in the Shan-shi province. The legend relates that the five peaks were of

21. This passage is quoted in the Śīkṣa. p. 13.
22. B. Bhattacharyya (op. cit. p. 116) takes this to be another variation of the Vağśvara form.
23. For detailed descriptions, see under each name.
24. Lakşmī, the goddess of fortune is regarded as the consort of Vağśu and is identified with Śrī. The similarity between the two names Śrī and Mañjuśrī probably brought them together.
25. See Śīkṣa p. 365.
26. The anthology Kuang Hung Ming Chi contains an eulogy on an image of Mañjuśrī by the Chin writer Yi-shin an (265-420 A.C.). For details see A.C. Soper, Literary Evidence for Early Buddhist Art in China, (Artibus Asiae), Supplement Vol. XIX, p. 32f.).
27. Note that Mañjuśrī has such epithets as Pañcācīra, Pañcāśīka and Pañcāśīra.
five different colours and made of diamond, sapphire, emerald, rubies and lapis lazuli; that a flower grew on each peak and that there was a pagoda on each peak. When the time came for the manifestation of Mañjuśrī Gotama Buddha caused a golden ray of light to issue from his forehead which darted and pierced a jambu-tree that grew at the foot of the mountain. As it was pierced by this ray of light a lotus sprang from it and from that was born Mañjuśrī. His complexion was yellow; he had one face and two arms. With the right he wielded a sword and with the left he carried the book of wisdom (prajñāpāramitā). Thus, he was born without the intervention of a father and a mother and free from pollution of the common world. Chinese Buddhist sources record that activities of Mañjuśrī at Mount Wu-t’ai Shan were brought to the notice of Emperor Ming-Ti. In the meantime, murmurous Sanskrit Buddhist texts connected with Mañjuśrī, such as the Mañjuśrīgaṇa-ksetrayuha, the Mañjuśrīvikrīdita were translated into Chinese and these works caused the Mañjuśrī cult to spread rapidly and establish firmly in China. Thus, by the 4th century Mañjuśrī worship was widely prevalent and the main temple dedicated to him was erected during this period. By the 6th century the Mañjuśrī cult was so well established in China that I-tsing records that even Indians believed that the Mañjuśrī cult originated in China and was later transmitted to India. It is said that both Vajrabodhi and Prajñā went to China to worship Mañjuśrī. In 824 A.C. envoys from Tibet came to China to obtain a statue of Mañjuśrī. The lamas officially recognised that Mañjuśrī was incarnate in the Chinese emperor (JRAS. Ns. xi, p. 522; JASB. 1882, p.41). The 4th day of the 4th month came to be regarded as the birthday of Mañjuśrī. But as in India in China too the Mañjuśrī cult was overshadowed by the cult of Avalokiteśvara, and it never became as widespread and accepted as the cult of Avalokiteśvara.

Mañjuśrī in other Asian countries: Though Mañjuśrī is held in high esteem by all Buddhists his cult did never reach the proportions reached by the cult of Avalokiteśvara.

The Nepalese tradition regards Mañjuśrī as the person who brought civilization to Nepal and thus assign to him an exalted position in the pantheon. The Svayambhū-Purāṇa records that Mañjuśrī, who was residing on the Pañcasūra mountain in China, came to know about the appearance of the Ádi-Buddha from a lotus that grew in the pond called Nāgavāsā in Nepal, and decided to visit Nepal. He, assuming the form of Viśvakarma and being accompanied by a king called Dharmakara and a large number of disciples, came to Nepal and saw that the whole valley was submerged in water. He with his scimitar cleaved the surrounding mountains and drained the water. When the valley became dry he walked about in all directions and finally erected a high wall to support the stalk of the lotus from which the Ádi-Buddha appeared. This he called the Satya-giri. For sometime he resided on a mountain which was called Mañjuśrī-pavata and after accomplishing his task, he established Dharmakara on the throne and went back to the Pañcasūra mountain. This legend made Mañjuśrī very popular in Nepal, and numerous temples of worship dedicated to Mañjuśrī were built there.

In Japan, too, Mañjuśrī is held in high esteem. Texts such as the Vimalakirtinirdśa helped to establish his importance, and his images are known from about the 7th century A.C. According to the Shingon teaching Mañjuśrī is said to take charge of the souls of dead persons from the second week after death.

In Java, too, Mañjuśrī worship became very popular. In 1343 A.C. king Adityavarman is said to have erected an image of Mañjuśrī Tjandi Djago. Colossal images of Mañjuśrī are also found in temples such as Tjandi Mendut and Singasari.

In Khotan also Mañjuśrī seems to have been held in high esteem, for Vairocana, who spread Buddhism in that region, is considered as an incarnation of Mañjuśrī.

He is highly honoured and worshipped in Tibet, too. Atisha, Tsong-kha-pa, and even Sa-skya-Pandita are regarded as being incarnations of Mañjuśrī. It is the fierce form of Mañjuśrī known as Yamāntaka that is most popular in Tibet. The Tibetans believe that in this form Mañjuśrī saved their country from Yama who threatened to depopulate the whole of Tibet. (For details see YAMĀNTAKA).

Mañjuśrī worship appears to have been known in Sri Lanka too, for the Mahāyānists there are said to have made images of Mañjuśrī from very early times. One such image was discovered at Elahera, in the Matale district, in the Central Province. The relief at Isurumuniya (Anuradhapura) which is popularly referred to as “The Lovers” is considered to be a representation of Shīracakra, a form of Mañjuśrī, and his consort. But his identification is not accepted by all.

**Iconography:** In his simplest form Mañjuśrī is represented as being seated cross-legged on a lotus seat carrying his stock symbols, the sword and the book (the Prajñāpāramitā) in his right and left hands respectively. In some representations the sword and the book are placed on lotuses the stems of which are held by Mañjuśrī. The number of faces, hands, symbols he carries and such other features vary from form to form. As Vajrasattva, Mañjuśrī, Siddhaivāra, Vāgīśvara, Mañjuyara, Arapacana, Shīracakra and Vādīrāh he has one face and two arms. As Vajrāṅgā he has one face and four or six arms. As Mañjukumāra and Mañjuvajra he has three faces and six arms. As Nāmasāngī he has three faces and four arms and as Dharmahatuvāgīśvara he has four faces and eight arms.

The symbols that he carries, too, vary from form to form. As Dharmahatuvāgīśvara he is represented as carrying a bow and an arrow, a noose and a goad, and a bell and a vajra in his three pairs of hands. As Vajrāṅgā, a god of love; he carries a fully strung bow mounted with an arrow of lotus bud. The other two pairs carry a sword and a lotus, and a mirror and an asoka twig with red flowers. His complexion, too, varies. Yellow and white are the most prominent colours. Pratyālaṅga, vajraparyanka, ardhaparyanka, lalita, mahārajaśilā are some of the sitting postures depicted by his statuary representations. His different forms adopt mudrās such as dhyāna, varada dharmacakra. In one form he rides a lion, in another tiger, but often he is represented as being seated on a lotus seat.

Occasionally he is represented with his sakti. Some of his representations bear miniature figures of either Amitābha or Akṣobhya whose emanation he is considered to be. See PLATE LIV.

S. K. Nanayakkara

**MAÑJUŚRĪ (2)** a bodhisattva: In the early Mahāyāna, wisdom and mercy are regarded as equally important and a Bodhisattva should possess the double quality of knowledge and merit (jñānasambhāra and punyasyambhāra). Wisdom is considered to be somewhat more important than Mercy. Mañjuśrī who represents wisdom is invoked in the opening verses of several treatises and he is praised in Saddharma-puṇḍarīka-sūtra. The early Mahāyāna recognises an oligarchy of bodhisattvas and eight are mentioned as a group of equal rank. The list begins with Mañjuśrī.

Mañjuśrī means “Gentle Glory” or “Sweet Splendour”. He is named in Ch. 11 of Saddharma-puṇḍarīka and is regarded as a master of wisdom and knowledge. He has trained and disciplined many bodhisattvas. He has been aptly called “all intellect and chastity”. The epithet kumāra or kumāra-bhūta is often applied to him. It has been interpreted as ‘ever young’ or ‘prince royal’, a consecrated heir of the Buddha.

The place assigned to Mañjuśrī in the Buddhist Pantheon is one of the highest. Mahāyānists consider him to be one of the greatest of bodhisattvas. Many believe that the worship of Mañjuśrī confers upon them wisdom, retentive memory, intelligence and eloquence and enables them to master sacred scriptures. Therefore it is no wonder that his worship was widely prevalent among the Mahāyānists. They conceived him in various forms and worshipped him with various mantras. Those who could not form any conception of him according to Tantric rites, attained perfection by simply muttering the mantras.

---

36. N. Mudiyanse, op. cit, Appendix B.
It is difficult to fix the exact date when Mañjuśrī entered the Buddhist Pantheon. His image is not to be found among Gandhāra or the Mathurā sculptures. Asvaghosa, Nāgārjuna and Āryadeva do not mention him in their works. His name occurs in the Sukhāvativyūha as well as in the Amitāyus-sūtra (which are somewhat early texts). Since then Mañjuśrī is mentioned in subsequent Sanskrit (Buddhist) texts and in the accounts of Chinese travellers such as Fa-Hsien, Hiuen-Tsang, I-Tsing and others and his images are found among the sculptures of Sarnath, Magada, Bengal, Nepal and other places.

Many details about Mañjuśrī are to be found in Svayambhū-Purāṇa dealing with the glories of Svayambhū-kṣetra in Nepal. The Ādi-Buddha manifested himself here in the shape of a flame of fire and so it is called Svayambhū-kṣetra or the Palace of the Self-Born. This place is consecrated with a temple of Ādi-Buddha and close to it is the Mañjuśrī Hill, now known as the Sarasvati-sthāna. The information about Mañjuśrī as gleaned from the Svayambhū-Purāṇa is given below in brief.

It is mentioned in this text that Mañjuśrī hailed from China, where he was living in Pañca-sīrṣa (The Hill of 5 peaks). He was a great saint with a good number of disciples and followers including the king of that country Dharmākara by name. One day Mañjuśrī received divine intimation that the self-born Ādi-Buddha had manifested himself in the form of a flame of fire on a lotus rising from the Lake Kālihrada in Nepal. He forthwith started for Nepal to pay homage to the god and was accompanied by a large number of disciples and his two wives and King Dharmākara of China. When he came to the lake, he found the god inaccessible, being surrounded by the vast expanse of water. With great difficulty he approached the flame of fire and paid his homage. He contemplated of various ways of securing access to the god and began to go round the lake. In course of time, he cleft asunder with his sword the southern bar barrier of hills. The result was that the water rushed through that opening, leaving a vast stretch of dry land behind, which is known as Nepal valley. Through that opening the water of Baghmafi even now flows down and it is still called ‘Kot-bar’ or ‘sword cut’.

Mañjuśrī lost no time in erecting a temple consecrating the flame of fire and very near to the temple on a hillock he made his own habitation. On the same hill he made a vihāra (or monastery), still known as the Mañjupattana, for his disciples. Lastly he made Dharmākara, the king of Nepal. These and many other pious deeds are ascribed to Mañjuśrī in the Svayambhū-Purāṇa. Putting everything in proper order, Mañjuśrī returned home and soon obtained the divine form of a Bodhisattva, leaving his mundane body behind.

From the above it appears that Mañjuśrī was a great person who brought civilisation to Nepal from China. He had extraordinary engineering skill and was a great architect. It is not possible to say exactly when he came to Nepal from China, but there is no doubt that in the 4th century A.C., he was well known as a Bodhisattva. He wielded great influence in the minds of the Buddhists and the Mahayānists worshipped him in various forms and various ways. He is known in almost all the countries in the continent of Asia where Buddhism made its sway. Various countries conceived various forms of Mañjuśrī and it is a subject which is very extensive and involved.

Buddhists believe that gods emanate from one or the other of the Dhyāni Buddhas, or 4 or 5 of them collectively. But it had not been possible to assign Mañjuśrī to a particular Dhyāni Buddha or to one particular group of Dhyāni Buddhas. There is evidence that the list of the five Dhyāni Buddhas was completed sometime after Sañādeva, if not considerably later, though two or three of them were known prior to him. It is after Sañādeva that the priests of Vajrayāna conceived the idea that all gods should emanate from one or other of Dhyāni Buddhas or four or five of them collectively, in the same way as Avalokiteśvara emanated from Amitābha.

Mañjuśrī was introduced into the Buddhist Pantheon after Avalokiteśvara and nobody has any doubt as to his human personality. But Avalokiteśvara was an abstract idea and never a human being. It is said that Dhyāni Buddha Amitābha, in his anxiety to create, caused a golden ray of light to appear from his head and in it originated the Bodhisattva Avalokiteśvara. With Mañjuśrī the case is otherwise. He was regarded as a Bodhisattva in the same way as Asvaghosa, Nāgārjuna, Āryadeva, Asanga and many others were regarded as Bodhisattvas in the time of Hiuen-Tsang. But this is no reason why Mañjuśrī should not be regarded as an emanation from any one of the Dhyāni Buddhas. Some considered him to be an emanation from Amitābha, others from Akṣobhya, still others from the group of the five Dhyāni Bud-
Cases are however, on record that Mañjuśrī is not affiliated to any of the Dhyāni Buddhas i.e. in other words, regarded as independent.

Thirty-nine sādhanas in the Sādhanamālā are devoted to the worship of Mañjuśrī and forty dhyānas describe 14 different forms of the Bodhisattva. In finding out the names of the different varieties, special stress has been laid on the mantras rather than on the colophons of the sādhanas. In determining the names of the different varieties, special stress has been laid on the mantras rather than on the colophons of the sādhanas. In determining the names of gods, the mantras are the safest guide, especially when one deity has a great many forms. The 14 varieties have each a different name. Vāgiśvara, Mañjuvāra, Mañjughoṣa, Arapacana, Siddhaikavīra, Vāk, Mañjukumāra, Vajrānāga, Vādirāt, Nāmasaṅgīti, Dharmadhātu-vāgiśvara, Sthiracakra, Mañjunātha and Mañjuvajra.

Ordinarily, Mañjuśrī carries the sword and the book in his right and left hands. In representations, we sometimes find these two symbols placed on lotuses. He is accompanied sometimes by Yamārī or by his sakti alone. Sometimes he is accompanied by Sudhanakumāra and Yamārī and sometimes also by the 4 deities, Jālinikumāra, also called Sūryaprabha, Candraprabha, Keśīni and Upakesīni. Though the last four are required to be present with Arapacana, they are found represented in other places also.

Emanations from Amitābha: The following two varieties of Mañjuśrī should bear the effigy of their sire Amitābha, one on the tongue and the other on the crown. The former is Vāk and the other is Dharmadhātu-vāgiśvara.

(a) Vāk- Mudrā is samādhi: Āsana is vajraparyanka.
Special characteristics, ornaments and dress: He is one faced, and two armed. In the Sādhanamālā there is one dhyāna describing him.

(b) Dharmadhātu-vāgiśvara - Faces four, Hands eight; Āsana, talīta. Images in stone or in bronze are not common. Painters of Nepal, do even now prepare paintings of this deity.

Emanations from Akṣobhya: No less than 4 varieties of Mañjuśrī are distinctly said to bear the images of Akṣobhya on their crown.

Emanations of the five Dhyāni Buddhas: Altogether four varieties of Mañjuśrī are said to bear the images of the five Dhyāni Buddhas on their crown, thereby suggesting that Mañjuśrī is a Pañcavirakumāra.

Images of this deity in his various aspects have been found in India. Some of the sculptures which have been illustrated are as follows:

(a) Mañjuvāra and Mañjuśrī in Mahārājalilā in the Indian Museum

(b) Dharmacakra Mañjuśrī, Arapacana Mañjuśrī, Vāgiśvara and Nāmasaṅgīti-Mañjuśrī from Nepal

(c) Siddhaikavīra from Samath

A standing bronze statuette of Mañjuśrī Bodhisattva (height 2 inches) was found in Sri Lanka at a place called Alahāra (Matale District, Central Province) and is now preserved in the Anuradhapura Museum. (Cat. No. G44). It is of small proportions and the details are not very clear. This figure shows Mañjuśrī in his simplest form with the sword raised in his right, the left hand resting on the waist with the arm bent at the elbow. He wears a conical head-dress. The drapery below the waist shows elaborate flounces at the sides as in the sculpture of Avalokiteśvara (Kuṣṭarajāgala) at Weligama. The upper part of the body appears to be bare. Ornaments though indistinct now, seem to have been worn. The point of the sword is placed so as to touch the head-dress. In his simplest form, Mañjuśrī carries the sword in his right hand and the Prajñāpāramitā manuscript in his left. This sculpture does not show the manuscript but the other symbol, the sword is sufficient proof to identify it as a representation of Mañjuśrī. With regard to date, it has been suggested that it could be of an early workmanship as the 4th or 5th century.

Many of the Indian sculptures of this deity are shown as seated. But the sculpture from Alahāra, Sri Lanka is a standing representation. It is not possible to identify this figure with any of the known aspects of Mañjuśrī such as Mañjuvajra, Mañjughoṣa, Dharmadhātu-vāgiśvara and so forth. The sculpture may be regarded as one of the simplest representations of this deity and therefore belonging to a period before the iconographic type was elaborated into subdivisions.
A Sanskrit inscription on a rock at Tiriyay (about 30 miles north of Trincomalee, Sri Lanka) contains references to Bodhisattva Avalokitesvara, Mañjuśrī and the sanctity of Girikāṇḍika-caitya. In this inscription Mañjuśrī is referred to as Mañjuvāk in stanza No. 6. (The record is in verse, in Nāradakata metre (Nos. 1-10) and Upajāti metre (No. 11). A circular relic house (vāṭa-dā-gē) has been built on the same rock about 200 feet away. The inscription has named it as Girikāṇḍika-caitya (Sin. Girihānu-sāya). Stanza No. 5 states that this stūpa is the abode of Avalokitesvara. The next stanza eulogises Mañjuvāk.

Munirapi Mañjuvāg madana doṣa viśādaharaḥ kanaka vibhūṣaṇa jvala vicitrītā gātra rucir anniyatamupātī yatra sukumāra tanur Bhagavān tādahāmapi praṇaumī Girikāṇḍikacāityavaram

The mention of the triad, the Buddha Śākyasinha, Avalokitesvara and Mañjuśrī (in addition to the stūpa in which was enshrined the hair relic of the Buddha given to the two seafaring monks Trappussaka and Valiika) gives a glimpse of the Mahāyānist forms of worship in the 7th century (to which period this inscription has been assigned).

The stanza quoted above describes the physical appearance of Mañjuśrī in glowing terms: i.e. the sage who is the burning poison of mental transgression, of delicate body and who attains indeed a splendour of body heightened by the brightness of golden ornaments. In the premises of the vāṭa-dā-gē, it is very likely that there was an image of Mañjuśrī also (in addition to those of the Buddha Śākyasinha and Avalokitesvara), the aesthetic qualities of which enraptured the poet to such degree. The words “Girikāṇḍi-gatam Sugatam-ahamapi pūjāyāmi” (Stanza No. 9) refer to the Buddha image within the shrine. The presence of a hair relic could also be interpreted as the presence of the sage himself.

4. Ch. XI of the Saddharmam-Prṇḍarika-sūtra states, "The Bodhisattva Mañjuśrī proclaimed the 'Lotus of the Good Religion' in the Kingdom of the Nāgas at the bottom of the ocean and the youthful daughter of the Nāga king heard the sermon and understood all the doctrines. As a result she attained Enlightenment and changed her sex on the spot'. The merit of the preacher of the Lotus-sūtra and of the faithful hearing of this sermon is praised again and again.

5. The main contents of the Gaṇḍavyuha-sūtra are the wanderings of the youth Sudhana, who travels all over India on the advice of Bodhisattva Mañjuśrī, in order to obtain the highest knowledge essential for Enlightenment.

6. In Tantric ritual literature, there is a Buddhist God of Love, Vajrānātha, an incarnation of Mañjuśrī, who is invoked in sādhanas 59 and 60 (of the Śādanamālā), where it is taught how a man can get a women into his power.

7. According to the texts named Tārā Tantrā and Tārā Rahasya, the cult of Mañjuśrī was taken from India to China. It became so popular in China that people in India said, Mañjuśrī lived in India and his cult was then again taken from China to Nepal. I-Tsing calls attention to an Indian book in which China is praised because it is the home of Mañjuśrī.

Nandasena Mudiyanse

MANJUSRI, L. T. P. About 38 miles from Colombo, along the road to Galle, lies the town of Alutgama, which is on the border that separates the Southern Province from the Western Province. However, Alutgama belongs to the western province and it was there that L.T.P. Manjusri, the well-known painter was born in the year 1902, into an extremely poor family. The poverty of his family was such that he had to borrow a shirt to wear to school. As he had no books of his own, he did his lessons by reading the books of his classmates as he walked with them to school. His early education was not of any long duration. When he was about 10 or 11 years of age, he had to go out into the world to seek his fortune. His first engagement was as an apprentice to a carpenter. Next he betook himself as a companion to a relative of his who was a ballad singer. Later he worked as an assistant salesman in a small shop in Beruwala, which belonged to one of
Manjusri, L. T. P.

It was while working in this shop that he watched with great interest, Buddhist monks and novices (bhikkhus and sāmanera) walking in procession or going about their daily alms-begging rounds. He had earlier been told by his colleagues that meditation exercises could in the long run confer supernatural powers such as travel by air or the state of being invisible to onlookers. He had seen such supernatural exercises being performed by yellow-robed arahat bhikkhus as depicted in several temple paintings.

His grandfather was one Kovis Gurunnanse who had been a Buddhist monk in his youth. Young Manjusri was deeply influenced by the Buddhist traditions with which he came to be associated with. So at the age of thirteen he had the opportunity of being made a novice (a sāmanera) under the tutorship of two eminent scholars - Ven. Telvatte Ariyavamsa and Ven. Telvatte Amaravamsa. He was admitted to the Maṅgala Pirivena where he absorbed himself intensively in his studies of Sinhala, Pali, Sanskrit and Buddhism. When he was twenty years of age, he had earned for himself a considerable reputation as a scholar of standing. He became one of a quartet of brilliant young monks who were soon to become eminent men in their respective fields. They were: Ven. S. Mahinda, the Tibetan bhikkhu, the great poet who rose to the height of a national hero; Ven. Kalalalle Anandasagara (better known as K. S. or Sagara Palansuriya) also a poet, author of Sudo Sudu, and politician who gave up his robes and later became a member of Parliament; finally Ven. Walpola Rahula, writer, scholar and academician who was at one time Vice-chancellor of the Vidyodaya University and later the Chancellor of the University of Kelaniya.

Manjusri had to go through a period of intense intellectual and scholarly activity during the 1920s. At an early age he had mastered the Sanskrit language and had learned to read and write Bengali. Equipped with his book learning in Bengali and having got a train ticket to Madras given to him by his friends, Manjusri set out for Sāntiniketan in order to pursue his studies further. He stayed in that well-known institute of learning from 1932 to 1934 and from 1936 to 1937. As made known to the rest of the world by Manjusri himself, it was there that he first began to paint, his interest having been aroused by the artists he met and the numerous outstanding artistic creations he came across there. In studying these works of art, he discovered a new medium of expression and new talents and abilities in himself. He had taken with himself to Sāntiniketan copies of Sri Lankan temple murals and when these were exhibited he found that there was an enthusiastic response to his creations. This was an encouragement to him as an artist. Thereafter he focussed his interest on the temple paintings, which had been a part of his familiar monastic environment since his youth.

He paid a brief visit to Sikkim in 1937 to study the Lamaist religious and artistic traditions of that country. This visit had changed him into an entirely new way of life as shown by his interest in connection with Gotami Vihāra paintings. Manjusri spent his days travelling throughout the country, visiting temples and ancient sites, sketching and painting or studying and copying murals. By the early 1940s he had abandoned his scholarship and become entirely absorbed in art.

In 1943, Manjusri helped to form the '43 Group', a small but highly gifted and dedicated group of modernist painters who challenged the prevailing 'Academicism' of contemporary Sri Lankan painting. Although more or less restricted to an elite and foreign-oriented audience, the artists of the '43 Group' - preeminent among them Justin Deraniyagala, George Keyt and Ivan Peiris - produced a remarkable body of work from the 1940s to the 1960s, constituting one of the most important schools of 20th century painting in Asia. Manjusri's somewhat surrealist-inspired paintings were quite different from anything else that could be seen in the work of the other '43 Group' painters, as were his general artistic and social interests. He broke away from the group two years later and held his 'one-man show' in 1945, where he exhibited original paintings as well as mural copies, representing the bulk of his artistic output since his return to Sri Lanka in 1937.
The exhibition was so successful that he held another in 1947, a 'farewell exhibition' on the eve of a visit to Europe. He travelled in Europe from 1947 to 1949, visiting England and Austria and holding exhibitions in London and in Vienna. See PLATE LV.

In 1950, after his return to Sri Lanka, Manjusri gave up his robes and embarked on a full time career as an artist and journalist. From 1951 onwards he was employed as a freelance writer on the Ceylon Times. He wrote a number of illustrated articles on temple paintings during this period. He married in 1955 and from 1956 to 1968 he was on the permanent staff of the Associated Newspapers of Ceylon (the Lake House Group), where he wrote and illustrated a number of articles in both Sinhala and English language papers and journals, on a variety of subjects. During this period he continued to paint and to study and copy the temple paintings. Since his retirement in 1968, he was able to devote himself entirely to his art, assisted by his own son Kushan, who is himself an accomplished painter. Besides being represented in a number of national and group exhibitions, Manjusri has held a number of one-man shows of his works since his return to Sri Lanka and especially in the 1960s and 1970s. This includes several annual exhibitions at the Samudra Gallery in Colombo, especially that of 1969; a major show at the Alliance Francaise in 1970, at the National Art Gallery in 1972 and a joint exhibition with his son Kushan at the Art Gallery in 1976. He lived to a fairly old age, always active and energetic. In June 1981, he passed away, aged 79. See PLATE LV.

Nandasena Mudiyanse

MAṆJUŚRĪBHĀṢĪTAVĀSTUVĪDYĀŚĀTRA, also called citrakarmaśāstra is a Buddhist Sanskrit text ascribed to Bodhisattva Mahāsūri. It existed in ola manuscript form till recent times and has now been edited and published. It is the only śilpa text which has so far come to light containing information about Buddhist monastic architecture and iconography. The contents have been divided into 17 chapters. The first three chapters (which constitute half the text) deal with monastic architecture, and has been called Vāstuśāstra. The remaining 14 chapters deal with iconography, iconometry and modelling of images of Dhyāni Buddhas and Bodhisattvas. This second part of the text has been named citrakarmaśāstra by reason of its being designated as such in the colophons to chapters 4-17. The two parts belong to one and the same text and have been published under the uniform title of Vāstuvidyāśāstra and Citrakarmaśāstra.

The manuscript was discovered at a Buddhist temple in Gampola, Sri Lanka. It contains about 1600 slokas. It has not been possible to trace a second manuscript of the work anywhere in Sri Lanka. The available text has been written in Sinhala script of about the 14th-15th centuries A.C. The original text was probably composed during 11th to 12th centuries. The text furnishes for the first time a wealth of hitherto unknown information about the way in which Buddhist monasteries were planned and constructed in ancient Sri Lanka.

The work is unmistakably a product of the Mahāyāna school. Apart from its authorship being ascribed to Manjusri, the Bodhisattva of Wisdom and Learning, it gives descriptions of the five Mahāyāna Schools and the eight great Bodhisattvas in connection with the arrangement of statues in the sanctum of the image house and also mentions the Buddha śākīs, Mahāyānist gods and minor deities in its section of iconography. The figures of the five Dhyāni Buddhas are among the objects to be deposited in the site of a caitya as well as in the reliquary underneath a Buddha statue. The work also states that a mantra inscribed on a metal leaf should be enshrined in the relic chamber of a caitya. That this too was a Mahāyānist practice is proven beyond doubt by the discovery of a number of copper plaques containing dhāraniś, from the debris of the dilapidated caitya in the Vijayārāma, an ancient Mahāyānist monastery lying about 5 km. to the north of Anuradhapura.

The type of monastery (ārāma) described in this text was to be located in open space, with a retaining wall supporting a raised quadrangle containing the building complex, encircled by a walk and a moat, beyond which lay a coconut, arecanut or bamboo grove, and there are striking similarities between these monasteries and those found in Anuradhapura and Polonnaruva in North Central Sri Lanka. Therefore it is very likely that this text had its origin within Sri Lanka itself.

If the various layouts of the monasteries (discussed in the work) are considered, it will be seen that some of them show close affinities with a specific group of Mahāyānist establishments that existed on the outskirts
of Anuradhapura (and also in certain other parts of the island) about the period 9-10th centuries A. C. These monasteries have been described as pabbata-vihāras (Sk. parvata-vihāras) on account of the elevated position of their central quadrangles which contained the four religious edifices, namely the caitya, the bodhivesāman, the prātimāgṛha and uposathagṛha. Immediately outside this sacred quadrangle ran a circumambulatory walk. The residential and other non-religious buildings were accommodated in the low lying area between this walk and the moat on the boundary.

The work opens with the salutation 'namas sarvajñāya' followed by a brief account of the legendary origin of the vāstuṣāstra attributed to the Buddha himself, who unfolds the science in response to a query by Bodhisattva Mahāyāna who in turn imparts it to the world of mortals. This brief narrative is followed by a summary of the contents.

Chapter I enumerates the twenty four types of ārāmas with their geographical locations as well as their positions within a given site and also on the periphery of a site. The names of twelve ārāma types are given along with an alternate plan (vikrānta) for each type, thus bringing the total number to twenty four. The twelve types are known as Hastyārāma, Sīrīhārāma, Daṇḍārāma, Padmārāma, Bhiksunyarāma, Sītalāgulma, Gokulārāma, Anvārāma, Bhujāṅgaphanārāma, Harṇsapakṣa, Nāvākāra and Cakrārāma. It should be noted that these names are not to be found in any of the Indian śīpa texts. It is therefore reasonable to assume that these ārāma patterns are an independent development in ancient Sinhala monastic architecture. Three types, the Hastyārāma, the Sīrīhārāma and the Harṇsapakṣa are laid out definitely following the figures of the respective animals, and five types, the Daṇḍārāma, the Padmārāma, the Bhujāṅgaphanārāma, the Nāvākāra and the Cakrārāma, following the shapes of the respective objects i.e. rod, lotus, cobra-hood, ship and wheel. The Bhiksunyarāma appears to be a type of monastery for Buddhist nuns and the stipulation that it should be located in close proximity to another monastery further strengthens this possibility. Anvārāma has also a definite plan, but it is difficult to ascertain the pattern followed by the Gokulārāma and the Sītalāgulma.

Chapter II covers a little less than half of the whole text. It consists of 635 verses and is the longest of all the chapters. It begins with a short account of how the gnomon or sun dial used for ascertaining the cardinal points should be placed. The most important feature of the monastery envisaged in this text is that all buildings, sacred and residential were located in one large quadrangle, almost square in shape, which was raised above the ground level by means of a retaining wall built on all four sides. The only type of ancient monastery belonging to the first millennium, which is built on a well discernible plan are the so-called pabbata-vihāras (as mentioned earlier). The building complex consisted of a rectangle almost square in shape. The measurements are given in hastas (i.e. the ancient cubic of 24 aṅgulas). The retaining wall to be built round the area, its width, height and the mouldings are next described. Once the construction of the wall was complete, the placing of the deities (vāstudevatās) in the site commenced. For this purpose, the court within the confines of the wall was divided lengthwise and breadthwise into five equal parts. The twenty five squares thus obtained, were dedicated to the twenty five deities of the site. After assigning the deities to the respective koṣṭhas, the very important ritual of garba-vidhāna or impregnation of the site was carried out. This ritual consisted of depositing in each koṣṭha, an object symbolic of the respective deity. The depositing of the symbolic objects was done at ground level (prakṛti-sthala). The foundation was laid with stone and the rest of the empty space within the wall was filled with earth.

The work next describes in detail the layout of the different ārāma patterns. The positions of the various edifices within a monastery varied according to the direction in which the main entrance was located. Thus there are, forty six different plans discussed here. The work divides all edifices into two groups, the major (mukhya) and the minor (gaṇa). The major edifices are five in number. They are the four most important sacred buildings i.e. the caitya, the bodhivesāman, the prātimālava and the sabhā, and the prāṣāda which was the residential quarters for the monks. The sabhā was a religious building (uposathagāra) where the community of monks assembled to perform ecclesiastical acts.

The work mentions more than twenty kinds of ancillary buildings which might well belong to a monastery of average size. Of these the bhojanalaya (refectory) and the bhaktaśālā (kitchen) are the commonest and indispensable adjuncts, to any monastery complex. Next in importance comes the non-descript pratharmya which in all probability was a residential
building reserved for visiting monks. Other buildings which should be mentioned are the hospital (rogaśaya), flower-hall (puspamandapa), urinal (srutāśālā), lavatory (malamokṣa), granary (dhānyaavāsaka), drumming hall (bherigrīha), dance-hall (nṛtya-mandapa), preaching hall (dharma-mandapa) and conference or lecture-hall (vyākhyāna-mandapa).

In this text, the stūpa (otherwise called caitya) has been given special treatment. The whole of Chapter III is devoted to it in connection with its construction and other details. The chapter opens with the specifications for the bricks to be used in caitya construction. The measurements are given in aṅgulas. The text goes on to enumerate five types of caitya. The four easily recognizable types are given as dhānaryāśā, padmātaka (i.e. padmākara), ghaṭākāra and budbudakṛtī. The term pālandaṅkāra appears to be a corrupt form for pālandyākāra (onion or bulb shaped). The ghaṭākāra and the āmalaka types are not mentioned at all, probably because they were not popular in Sri Lanka. Something interesting about the list given in this text is that each type seems to have been associated with a particular type of monastery.

The work enumerates ten different types of ground distinguished from each other by means of vegetation, soil structure and physical features. Of the ten types, only the first four, namely anūpa, jāṅgala, sādhārana and dhimrakā are briefly discussed as they are considered to be the types best suitable. The commencement of the work was preceded by an elaborate ceremony. During the course of the ceremony the four boundary lines were laid. Next commenced the construction of the first chamber. In the middle of the site an area measuring one hasta a side was smeared with cow-dung (as a purificatory rite). On the floor space was drawn the pīṭha and upapīṭha diagram, the former consisting of nine squares and the latter twenty five squares. In the pīṭha plan of nine squares were placed a heap of sāli rice (on the middle square up to a height of seven aṅgulas). In the remaining eight squares the eight kinds of auspicious symbols (aṣṭamangalas) were placed. Thereafter work was started in connection with the garbhagrha. The walls of the chamber were built most probably with bricks. Once the walls were completed the chamber was closed with stone slabs and bricks. The work of the lower part of the dome covering the first chamber must have followed next.

Before the work on the second chamber (garbhagrha) commenced there was another consecration ceremony. The layout out this chamber was that of upapīṭha which consisted of 25 squares. There were deities occupying the sixteen squares on the periphery. They were Iśa, Mahendra, Āditya, Antarikṣa, Agni, Gṛhaśaṭa, Yama, Mṛṣa, Pīṭ (Nirṛṣa), Puṣpadanta, Varuna, Roga, Vāyu, Bhallāta, Soma and Āditi. Brahmā occupied the centre and the eight squares around it were occupied by Āpavatsa, Ārya, Śāvitrī, Vivasvat, Indra, Mitra, Rudrajaya, Bhūmīndra (Pṛthivīdhara). In this chamber, most probably in the niches on the four walls, figures of the four divine Buddhas Akṣobhya, Vairocana, Ratnasambhava, and Amitābha were deposited with their heads turned towards the east, north, west and south respectively. A figure of Amoghasiddhi was placed above that of Amitābha. The four Buddhaśaktis, Tārā, Locanā, Prajñā and Māmukhī were next placed in the four corners beginning with Iśa. Various other items worthy of veneration were also placed and the chamber was closed by laying the top bricks. The text makes no mention of any relics being deposited.

Above the top brick layer of the second chamber was placed the repository of gems which is an essential feature of the interior of any caitya. Strict specifications are given for its measurements. It has to be a perfect square measuring 4,5,6,7,8,9,10,11 or 12 aṅgulas a side. Its width also may be in relation to the width of the outer wall or of the inner wall of the caitya. It is likely that the tiered plinth and the bell of the caitya were built with two concentric walls differing in thickness. The repository of gems or ratnanyāsa was divided into nine chambers. In these were deposited pearls, diamonds, sapphires, rubies etc. Oblations were offered to the receptacle before the gems were deposited in it. This description of the garbhagrha and ratnanyāsa agrees with the arrangement of plans of Sri Lankan stūpas. Most of these stūpas contain three chambers except that of Topāvāva which contained six chambers. The general arrangement of the existing examples is that the uppermost chamber which is the largest, is on level with the upper terrace of the plinth of the stūpa and the third or the lowestmost, generally smaller in size, on ground level. In these instances, the ratnanyāsa (called yantrāgala in Sinhala) occurs below the chamber and not above it as mentioned in our text.

The most valuable information which our text provides concerns the prototype of that stone pillar which runs through the axis of the dome and known in Sinhala as yūpa. In this text it is called gajasamadana gajāpādaka. The type of caitya described...
belongs to a very early period when *gajastambhas* were made of wood. It had three heights, *adhama*, *madhyama* and *uttama* measuring thirty and a half hasta, thirty five and a half hasta and thirty nine and a half hasta, respectively. The post was fitted on to a shaft fixed to a base placed above the receptacle of gems. The *chatradanda* is known as *yaṣṭi* in the Divyāvadāna. According to the text of the *Vāstuvidyāśāstra*, it was, like the *gajastambha*, made of wood. It is said to be three *hastas* in length and three *āṅgulas* less than the *gajastambha* in width. A copper shaft (*kīla*) was fitted to the tapering end of the *chatradanda*. Its lower end was fitted on to the lid of the relic chamber in the *harmikā* sealing completely the hole in the lid. It was coated with plaster and supported a pile of umbrellas placed one above the other. This text does not make any mention of a *harmikā* or *hatari kotuva* on the top of the dome. But immediately after describing the *chatrāvalī*, it speaks of such decorative motifs as festoons of lotuses and rows of pearls and gems employed on the *caitya*. As the text (in connection with these details) is corrupt it is not possible to say anything conclusively about the *harmikā*. Originally the term *dhatu-garbha* referred to the *harmikā*.

The relic casket took the form of a miniature *stūpa* and was made of metal. It contained a nine chamber reliquary, four or five *āṅgulas* square. The nine chambers were dedicated to the nine deities (i.e. the eight Dīkṣālas with Brahmā in the centre). In the eight outer squares were placed the eight kinds of grain, the five kinds of metal and the eight kinds of precious stones. The relics, if there were any, were placed in the central chamber dedicated to Brahmā. A *mantra* inscribed on a leaf of gold, silver or copper was also deposited in the same chamber. The *mantra* is in the form of an appeal to the five Tathāgatas and the chamber deities to protect the relics and other deposits from possible danger. After inscribing the *mantra*, the leaf was bathed in purified water and then smeared with sandal-wood ointment. The receptacle was first inserted in the casket which was then placed in the centre of the *harmikā*.

The remaining chapters (i.e. 4-17) deal with iconography, iconometry and related subjects. The contents of each chapter are given below in brief.

**Ch. 4.** Classification and selection of trees for doorframe ornamentation and image making etc.

**Ch. 5.** Method of cutting and seasoning of wood.

**Ch. 6.** Ground plans and locations of the Buddha and Bodhisattva figures in the sanctum chamber.

**Ch. 7.** The technique of clay-modelling, cutting of trees for armature (*sūla*) and fixing of wooden sticks together (*aṣṭābandha*).

**Ch. 8.** The ritual connected with the laying of jewels prior to fixing of the *sūla*. Measurement of the altar and the *mantra* to be recited.

**Ch. 9.** The tying of cords round the *sūla*.

**Ch. 10.** Winding strings round to support the clay that forms the body of the image.

**Ch. 11.** Characteristics of clay suitable for image-making.

**Ch. 12.** Method of preparation of lime-stone paste.

**Ch. 13.** Canons of proportions

**Ch. 14.** Measurements to be obtained by means of plumbline.

**Ch. 15.** Iconographic details of the five Dhyāni Buddhas and Bodhisattvas.

**Ch. 16.** The characteristics and the application of pigments.

**Ch. 17.** The ritual of taking out the eyes preceding their replacing.

**References**

2. The *Vāstuvidyāśāstra* ascribed to *Maṇjuśrī*, (Trs.). E. W. Marasinghe, Sri Satguru Publications, Delhi 1989

This work is entirely in the spirit of Mantrayāna. In the major portion of the work, the Buddha while being in the assembly speaks only to Mañjuśrī. In the first three chapters, Mañjuśrī himself speaks and in the last two chapters, Goddess Vijaya. The Buddha gives instructions as to magic rites with mantras, mudras, manḍalas etc. In Ch. IX for instance, “the Great king of Sciences”, the mantra of Mañjuśrī, is taught, which includes all sciences within itself, by means of which one can attain all things, which destroys all the mantras of evil doers, blot-out all sins etc. It is called the Kihum Mantra. In Ch. XIV, the same powers are claimed for the Bhrīum Mantra. There is very little trace of Buddhism in this manual of magic, though the worship of the ‘three jewels’ is mentioned in Ch. 47. The work was translated into Chinese as a Mahā- Vaipulya-sūtra between 980 and 1000 A. C. and into Tibetan as a Tantra in the 11th century.

Bibliography

4. Mañjuśrī-Buddhaksetra-Guna-vyūha is included in the Ratnakūṭa (which constitutes a large section of the Chinese Tripitaka and the Tibetan Kanjur). Ratnakūṭa is a collection of 49 sūtras. Mañjuśrī-nāma-saṅgīrī is also a Tantric text which has been edited by Minayeff in 1887.

MANOPAVICĀRA

MANŪKAMMA

See KAMMA

MANOPAVICĀRA, investigation (upavicāra) by mind (mano) of sense objects that come in contact with the senses, whether a particular object gives ground for pleasure (somanassa) or sorrow (domanassa) or neutral feeling (upekkhā). These three aspects of in-
vestigation, when applied to each of the six sense-objects, become eighteen, which are here termed athārāsa-manopavicāra (M. III. 239 f; D. III. 244 f; S. IV, 232; A. I, 175-176).

In the suttas we find manopavicāra being identified with vedanā (S. IV, 232) while it is placed after six bases of sense contact (phassa M. III, 239; A. I. 175). In the commentaries it is explained as representing two activities of the mind, namely, vitakka, initial application and vicāra, sustained application of the mind with regard to an object, and it has been explained as determination by investigating after having considered by reflecting (vitakkena vitakketvā vicārena paricchindati: DA. SHB, p. 758; cp. AA. II. 278; PsA. SHB, 69; Vsrm. 114 ff).

Its identification with vedanā, the fact that it follows phassa and also its explanation as vitakka and vicāra demonstrate that manopavicāra represents a stage in the cognitive process. This is strengthened by sutta passages, which describe the arising of what is called papañca (q.v.).

In the Madhupinājikasutta, for example, the stages are given of a cognitive process which culminate in the arising of papañca. Coming together of three factors, it says, is called contact (phassa) which gives rise to feelings (vedanā). The stages that follow are saññā, cognition, and vitakka which results in papañca (M. I., III, f.). Manopavicāra seems to represent three stages in this process, namely vedanā, saññā and vitakka which is naturally accompanied by vicāra.

Saññā here represents the actual cognition of an object. Man does not rest satisfied with mere cognition, he begins to examine it and determine. This is discriminative activity of the mind, which results in grasping the major and minor characteristics, (nimitta and anuvyanjana) of the object cognised. A man, on seeing an object, for example, investigates and determines its colour, shape, and so on; he concludes that it is beautiful or ugly or neutral. This entire process is called manopavicāra.

It is this manopavicāra that is responsible for the arising of different passions in the mind. An ordinary man, incapable of understanding the real nature of things cognises that they change and are impermanent etc., contemplates unwisely (ayoniso manasikaroti) and takes or rather mistakes things impermanent as permanent, things painful as pleasurable and things unsubstantial as substantial; in short, he takes a perverse view of them (vipallāsa: Netti. 115; Viparyāsa: Mdhvr. 452). Depending on outward appearance of the objects he decides one object as agreeable and another as disagreeable. Towards agreeable object he develops a liking and is attracted; he begins to crave for it. This is how lust (råga) arises. Similarly he dislikes disagreeable objects and becomes averse to them; he begins to hate them. This is how hatred (dosa) arises. These are two of the basic passions (mūlakleśa) that arise due to ignorance (moha), another basic passion.

None of these passions will arise if a man is able to wisely contemplate on the objects he cognised; that they are impermanent (anicca), miserable (dukkha) and unsubstantial (anatta). Wise contemplation (yonisomanasikāra) gives no opportunity for manopavicāra; one does not grasp the minor and major attributes of the objects cognised. This is called restraint as regards the senses (indriyasañjvara) or guarding the doors of the senses (indriyesu guttadvārātā). By developing this quality, one becomes disgusted with the objects cognised (nibbidā); on being disgusted, one becomes dissociated (viratta) and free (vimutta) from them.

Upali Karunaratne

MANORATHAPŪRĀNI: The Manorathapūrṇi is the commentary on the Aṅguttara Nikāya which is the fourth book of the Sutta Piṭaka. In this text, the contents are arranged in the ascending order, the entire text consisting of eleven chapters (Nipātas). These eleven chapters contain 9557 suttas, the majority of these being shorter than the majority of suttas of the other three Nikāyas.

The list of commentaries cited by Buddhaghosa includes a text referred to as the Aṅguttaratthakathā.1 Although it is not clear whether the present Manorathapūrṇi is a direct translation of the original Sinhala Aṅguttaratthakathā or is the edited work, cleared of contradictions and repetitions to be in agreement with the canonical texts and other commentaries, it can safely be said that it is the edited product bearing witness to Buddhaghosa’s great erudition.

Commenting on the *Manorathapūrani*, Winternitz remarks, "the *Manorathapūrani* contains about a hundred legends. Among them we find for example 13 extremely interesting stories from the life of the *Therīs*, the early women-disciples of Buddha, which are very valuable to us as additions to the *Therīgāthās*. The wreath of legends with which the Buddhistic narrators have surrounded their female saints certainly throws some light on the real life and feelings of those women who gave up the world in order to follow the Buddha. The section begins with the life-story of Mahāpajāpati Gotāmi, the aunt and foster-mother of the Buddha who became the first nun. Her story is of course told already in the *Vinayapitaka*. After this story which gives the impression of a true happening, follows the wonderful legend of Khemā the queen, proud of her beauty, who does not even take cognizance of the existence of the Buddha for a long time; but one day the Buddha makes appear before her the phantom of a charming, beautiful goddess who, before her eyes, becomes older and older until she stands before her as an infirm old woman and at last falls down dead; then Khemā too is reminded of her impending fate and begs the king for permission to enter the community of the nuns.

Another one, Uppalavānṇā, is so marvellously beautiful that the princes of the whole of India want to marry her, and the father is greatly embarrassed, and the daughter solves the problem by becoming a nun. The legend of Kisāgotamī and of the mustard-corn comes here again. Most touching of all is the story of Patacārā whose contents may be retold here in short. Patacārā is the daughter of a rich merchant in Sāvatthī. She falls in love with a worker employed in her house and allows him to seduce her. After becoming pregnant she would like to come back to her parents. The husband agrees, but puts off the departure from day to day, until at last she departs alone. He follows her and joins her just at the moment when, having pains on the way, she gives birth to a child. Then they come back to their house. The same thing is repeated at the birth of their second child. But while she delivers the child on the way there is a big storm. Her husband makes a protective roof for her with twigs of trees. While he is cutting grass to cover it, he is bitten by a snake and dies. The sorrowing mother continues her journey with her two children. She comes to a river which she cannot cross with both her children at the same time. So she leaves back the older boy on the bank, carries the younger one to the other bank, lays him down and comes back to the older boy. While she is in midstream a hawk comes flying to the younger child. She raises her hands to scare away the hawk. This the older boy sees who thinks that his mother is signing him to come to her. So he gets into the water and is washed away. In the meantime the hawk has flown away carrying the younger child. Full of grief the woman continues her journey to Sāvatthī. Arriving there she learns that her parental home has been destroyed by a cyclonic storm and that her parents have died. They are just about to be burnt on the pyre. The wretched woman breaks out wailing and lamenting, tears her clothes from off her body and wanders about for many days naked and mad. One day at last she comes across the Buddha who is just preaching. And the Lord lets his feelings of benevolence flow on her and says, 'Sister, come back to your senses: Sister, come back to your senses'. As soon as she hears the words of the Lord she is overwhelmed with the feeling of shame. A man throws a piece of clothing at her and she covers herself. Through one verse of the Buddha she is fully converted and she has become later one of the most highly esteemed nuns of the community.

In some of these stories we find motifs of fairytales which belong to the common property of world literature, whether they have wandered out of India or they have been taken over by Indians from foreigners. Thus Uppalavānṇā was in earlier birth—the Buddhistic narrators are never content with describing the events in the life of their saints only in their last birth—the girl Padumāvati born from a lotusbud. When she walked, lotus flowers sprouted under her footsteps. As she is the favourite queen of the king of Banaras her co-wives became jealous of her. When the king is away fighting a battle they rob her of her new born babies in whose place they place a bloody block of wood. She is driven away, but soon the babies who have been put in a wooden box are fished out and the truth is discovered. Similar stories are current in the literature of these fairy tales east and west. At another place of the *Manorathapūrani* we find the story of Ghosaka the merchant. This story appearing again and again in India and widespread in the whole world, tells of a boy of poor circumstances but born under a lucky star who, in spite of all attacks on his life, at last attains a high position through the help of a young girl who falls in love with him and replaces a letter which is meant to bring death upon him with another letter by which his marriage with herself is brought about. A second attack on the life of the young man is foiled like Schiller's ballad of 'Gang nach dem Eisenhammer', by making the abettor of the murder of his son die in accordance with the proverb 'The biter
will be bitten’. The majority of the stories are however, only edifying stories. One of those, for example, tells of a merchant whom Mara in the guise of the Buddha tempts in order to teach him a false doctrine, but the merchant recognises him as Mara, since the Buddha cannot have taught something like that.”

While punya was not an acquisition that could be given away or shared by the doer at his discretion according to the canonical texts, the first occurrence of the term pattidāna is come across in the Manorathapūrāṇi as an explanation of the term ātitheyya in the story of Veḷuṅkaṭakī Vandamātā in the Mahāyāṇa Vagga of the Sattaka Nipāta.2 Explaining the textual phrase, “Evam me bhavissati ātitheyyaṃ ti”, as, “Evam attano pattidānam yacitvā ayam te dhammakathikasokkāro ti”, introduces the term pattidāna.

It was thus the commentarial literature which was used to introduce the new concepts which were not only essential but indispensable in the assimilatory process. All local deities who had their own individual cults were provided a place in the ritual but devoid of their cults, and were assigned the task of providing protection and exercising vigilance over the welfare of those who gave their punya generated from offerings made to the Buddha and other centres of cultic ritual on his behalf and in his name.

Not only the Manorathapūrāṇi, but many other commentarial and other post-canonical works as well were put in the service of this massive assimilatory process, the like of which was already taking place in the neighbouring Indian sub-continent in the assimilation of tribal cults and ritual.3 While there was urgent need for providing supporting literature for the smooth functioning of the new ritual and cultic practices, it is quite reasonable to think that these were written in the language of the people. This seems a fair argument for the existence of commentarial and other texts like the Bodhivamsa in Sinhala. Also, it seems quite reasonable to think that at a later period it was desired that these literature too should be rendered into the language of the canonical texts, to fulfill which function the services of the great scholar Buddhaghosa was made use of.

MĀNUŚI BUDDHAS

The Mortal Bodhisattvas were brought into existence by their respective Mortal Buddhas and their Sāktis. They have been named as follows:

1. Mahāmati  2. Ratnadhara  3. Ākāsagañja  
7. Ananda

The names of Mortal Buddhaśaktiś and Mortal Bodhisattvas are available in Nepalese texts. Yasodharā and Ananda are familiar names. Yasodharā was the wife of Prince Siddhārtha and Ananda was the disciple who was closely associated with the Buddha.

In the Indian Museum sculpture (No. B. G. 83) Maitreya (the future Buddha) has also been shown as a Mortal Buddha. It is said that he partakes of the nature of a Mortal Buddha, though he is not a Buddha yet. He is said to be in Tusita heaven and in due course he will make his descent to the earth in human form. The belief is that he would come to earth, after the lapse of 4000 years in which time the Order of the Buddha Gautama would have disappeared. Asanga is said to have visited Maitreya in Tusita heaven and the latter initiated him into mysteries of Tantra. Hiuen Tsang records the existence of a colossal image of Maitreya in Udāyana (U-chang-na). The sculptor is said to have gone several times to Tusita heaven to ascertain his correct form before carving it. Maitreya may be represented as a standing figure, richly decorated and holding in his right hand the stalk of a lotus. He is distinguished from Padmapani mainly by the figure of a small stūpa (caitya), which Maitreya bears on his jātāmakaṭṭa. In some instances in Indian sculpture, his hands form the usual dharmačakra-mudrā; in the left there is a vase, round, oval or pointed, or there may be the stems of flowers which support his two characteristic symbols, the vase and the wheel.

Maitreya may also be shown seated as a Buddha with legs interlocked or both hanging down. His colour is yellow and his images sometimes bear the figures of the five Dhyāni Buddhas on the aureole behind them. The small stūpa on the jātāmakaṭṭa of Maitreya is said to refer to the belief that a caiyya on the mount Kukkuṭapāda near Bodh Gaya covers a spot where Kasyapa Buddha is lying. When Maitreya descends to earth, he would go direct to the spot which would open by magic and Buddha Kasyapa would give him the garments of a Buddha. In the Śādhanamāla there is a description of Maitreya as a principal deity. There are also other descriptions where he is shown as a minor deity. When he accompanies...
MĀRA

628

MĀRA

minor god, he generally carries the chowrie in the right and the Nāgakasesara flower in the left. According to this sādhana, his complexion is yellow like gold. He sits in the paryāanka attitude. In one of his hands he bears the sprout of a full blown Nāgakasesara flower.

The concept of Triratna or Ratnaratraya has also some connection with that of Mānuṣi Buddha. Triratna means the three precious ones i.e. the Buddha, the Law and the Order. There is a suggestion that this Trinity may have been adopted from Trimūrti of the Hindus i.e. Brahmā, Viṣṇu and Śiva. The Triratna takes many forms e.g. Trikāya. There is also the Nepalese concept of a triple existence of each Buddha as a Nirvāṇa Buddha, Dhyāni Buddha and Mānuṣi Buddha.

Nandasena Mudiyanse

MĀRA : (fr. Mr. later Vedic, māra, killing, destroying, bringing death, pestilence, cp. Lat. mors, death, morbus, illness, Lith. māras, death, pestilence) death; usually personified as Np. Death, the Evil one, the Tempter (the Buddhist Devil or Principle of Destruction). Sometimes the term māra is applied to the whole of the worldly existence, or the realm of rebirth, as opposed to Nibbāna. (s.v. PED.).

Thus, the term Māra seems to have been derived from the Vedic Mṛtyu, first one of the titles of Yama and in the later Samhitās, the messenger of Yama, the King and ruler of the dead. “Death is the path of Yama and once he appears to be identified with death (mṛtyu) Yama’s foot-fetter (padāśa) is spoken of as parallel to the bond of Varuna. Owing to such traits and also to his messengers, Yama must to a certain extent have been an object of fear in the Rgveda. But in the Atharva Veda and the later mythology Yama, being more closely associated with the terrors of death, came to be the god of death (though even in the Epic his sphere is by no means limited to hell). In the later Samhitās Yama is mentioned beside Antaka, the Ender, Mṛtyu, Death and Nirṛti, Decease, and Mṛtyu is his messenger” (A. A. Macdonell, Vedic Mythology, 1963, 172).

Although Māra has been named after a title of Yama, the Vedic god of Death, it must be noted here that in Buddhism he has not been assigned the Vedic functions of Yama. In the Pali Nikāya texts, Yama is still the King of the underworld. It is Yama who questions those who are born into the Niraya, after which only they are taken away by the guardians of the Niraya (Nirayapālā) for due punishments. Quite in keeping with the laws relating to the operation of kamma in Buddhism, Yama, could not be vested with any executive authority to determine the nature, duration or the intensity of the punishments which should be undergone by those who are born into the Niraya.

Thus, despite his name, Māra in the Buddhist literature, is not associated with death, destruction or calamity. He is also known by other names such as maccu (death), kāṇha (the dark), antaka (the end maker), namuci (one from whom there is no release), pamattabandhu (friend of the slothful), etc. What was said of the title Māra earlier is true of these titles too, as the textual contexts where these names are used do not associate Māra with functions indicative of these names in their Vedic contexts. This is because in the mythology of Māra that we come across in the Buddhist texts, we actually see the process of adoption from popular mythologies of evil current at the time of Early Buddhism and also see how they have been adapted to meet the special doctrinal requirements of Buddhism.

It would be most useful at this point to have an idea of the pool of mythological material from which Buddhism had its selection. Obviously, in the composition of the outer shell of Māra, the rich Vedic Brahmanical material has been most useful as this form placed Māra quite comfortably within the Vedic ranks. The title Māra which, as we have already seen, was a
title of Yama brought with it to Buddhism, all the associations of the Vedic god of Death, though these were never accepted into Buddhism.

It must be noted here that it was intended that these Vedic associations lingered in the background while the new god of Death and Evil thus modelled was made to play a much modified role in his new form and in his new setting. Thus, the Vedic outer shell of Mara brought with it to Buddhism all the fearsome associations of Yama, the Vedic god of Death. This outer shell seems to have been filled with material quite different from the expectations of this outer form. A close examination of the functions which have been assigned to the new god thus created seems to suggest that the material used for the inner stuffing of this Vedic outer shell has come from sources other than the Vedic.

It is important at this point to understand what Mara stands for in the Pali canonical texts. Although references to Mara are found scattered throughout the Pali canonical texts, the principal texts which are exclusively devoted to the activities of Mara are the Mara Sanyutta (S. 1. 103-127) and the Bhikkhuni Sanyutta (S.1.128-135). In the Mara Sanyutta which contains twenty-five suttas in three vaggas, Mara appears twenty times to the Buddha and four times to the disciples and once to Venerable Samiddhi. The last sutta of the third varga records the visit of the daughters of Mara who came, hoping to bind the Buddha in the web of sensuality when their father, having failed in his many attempts to succeed went away dejected having given up hope completely.

In twenty out of twenty-five instances recorded in this Sanyutta it is the Buddha whom Mara approaches and more often than not (i.e.in thirteen out of twenty) the Buddha is alone when Mara approaches him. "These attempts to assail the Buddha are not confined to any one place, such as Uruvela, for example. This appears to indicate either, as Windisch suggested, the widespread geographical extent over which these legends were known and narrated originally, or else an intention to demonstrate from the life of the Buddha that Mara may be encountered everywhere. There is a similar variety of occasions on which Mara makes his approach: when the Buddha is alone, or when surrounded by bhikkhus whom he is instructing, or when he is addressing a large gathering, when he is on his alms-round, or when he is preparing for sleep. Similarly in the five cases where Mara approaches bhikkhus, sometimes it is when they are alone, sometimes it is when the Buddha is instructing them. The times of Mara’s approach also vary: the middle of the night (1.2, 3, 6, 11.1), towards dawn (1.7), the early morning (11.8), etc. One thus learns from these suttas that Mara may make his approach at any time of day or night (T. O. Ling, Buddhism and the Mythology of Evil, 1962, 119f.).

As Ling explains, "Some hostile purpose always lies behind Mara’s approach, whether this is actually mentioned in the sutta, or only implied. Sometimes it is to inspire terror into the Buddha, (1.2; 3; 6; 11.1) or into the bhikkhus, in order to cause confusion (11.7; 111.2). Sometimes it is to reproach the Buddha (1.7), or to correct him (1.1), or to confuse his hearers (11.2;4,6,9). In short, Mara’s purpose is usually either to interrupt the Buddha’s or the Bhikkhus’ meditation, or to interfere with the Buddha’s preaching. It will also be noted that not infrequently Mara assumes a disguise: for example; a king-elephant (mahatāvat hathirājavānam) 1.2; a king-snake (mahantam sapparājavānam) 1.6; divers visible shapes, beautiful and ugly (uccāvacā vannanibbh... subhā c’eva asubhā ca) 1.3; a bullock, 11.6; a ploughman, 11.9; and a brahmin, 111.1" (T. O. Ling, Op. cit. p. 120).

The above discussions reveal that the purpose of the Mara’s visits to the Buddha or to the disciples is to disrupt their spiritual progress by distracting them from their determined endeavour to reach the Nibbanic goal. Thus, to the Buddhists, Mara is no more the god who is responsible for death or destruction as the Vedic Yama. His sole concern is with those who are making selfless effort to attain nibbanic emancipation. A parallel seems to be found in the Jaina tradition. They seem to have believed in the existence of an evil power which manifests either as god or as demon to obstruct the sage in his efforts to attain enlightenment. In the description of the enlightenment of Pārśvanātha, the historical founder of Jainism, it is a god by the name of Śaṃvara or Meghamālin who employs all possible means at his command to prevent Pārśva from attaining enlightenment. In the account of the enlightenment of Mahāvīra too, there is the story of similar attempts by a god who is also described as demon Vana Vyantaraka Yakṣā Šūlapāni. Apart from these, according to the Sitrakṛtaṇa, an older text of the Jains, Mara is the creator of Māyā because of which the world appears different from what it is (Marasinghe, M., M. Devils, Gods in Early Buddhism, 1974, 196).

The above observations should show the source from which the inner stuffing of Mara’s visit to the Buddha or the bhikkhus has come. But, it must not be
Śramaṇa religious element of which Jainism formed a part only, does not account for the entirety of the inner stuffing of Mara. Material drawn from the currently popular demonology has complemented the above major element of the Mara's inner stuffing. "The canonical scriptures of Buddhism, while they are primarily intended to set out the doctrine of the Buddha, also afford some interesting sidelights on the beliefs and practices of the people of India in the sixth century B.C. Spirit beliefs are found in association with Buddhism from the very beginning. Non-Buddhist evidence of these beliefs is available in the Vedic literature, particularly in the collection of hymns and charms known as the Atharva Veda. From these two sources, Buddhist and non-Buddhist, a picture emerges of a world of popular belief peopled by all kinds of spirit-beings, many of whom are demonic, and who in many ways resemble the demons, ogres, goblins and the like, which have held a large place in the beliefs of men of many parts of the world" (T. O. Ling, op. cit. p. 15).

It is because of the fusion of such elements of popular demonology with the Mara mythology that, "Mara emerges from the background of popular demonology, and has obvious affinities with it. There is no sharp division between the popular yakka - mythology and the Mara-mythology. Material belonging originally to the former has, without much apparent readjustment, been pressed into the service of the latter. A good example of this is the protective chant found in the Māratajjanīya Sutta, now addressed to Mara" (T. O. Ling, op. cit. p. 44).

The parallels which Ling perceives between the popular beliefs about demons and the Mara mythology are as follows: (i) The demons cause terror on humans which they usually achieve by making loud noises. The time of their greatest power is night. Mara frequently tries to assail the Buddha when he is meditating in the darkness of the night (S. 1.109, 113, 119; Thag. 46, 49). (ii) Demons are able to move about freely and assume all kinds of shapes. Mara likewise assumes various guises and shapes; a ploughman, an old brahman, various visible shapes beautiful or ugly (S. 1.104, 115, 117). (iii) They often appear in the shape of animals or weird birds. It can be seen that among the forms Mara assumes are those of animals and reptiles, either terrible or vexatious: a king-elf, a king-snake, a wandering bullock, etc. (S. 1.103, 106, 112). (iv) They are able to enter into and possess human beings. Mara is recorded as entering into or possessing the brahmin householders of Pañcasāla (S. 1.114), the Brahmas of the Brahma-realm of Baka, the Brahma (M. 1. 326), Venerable Mahāmoggallāna (M. 1. 332), etc.

"In the Pali canon Mara is in fact sometimes explicitly referred to as a yakka. It may be noted as of some interest that in the Mahāvastu also he is called the 'great yakka'. What is more significant, however, is that not only in name is Mara a yakka, but he is also clearly characterized as such by the kind of similarities which have just been listed. Another trait linking Mara with the popular demonology is seen in the occasional ascription to him of the name Kenha, which according to the Dīgha-Nikāya, was also the ancient, common name for a pisāca" (T. O. Ling, op. cit. 44).

Thus, it becomes clear from the above discussions that in the Buddhist Mara we have a combination of three main strands of Indian mythology, the Vedic, the Śramaṇa and the popular demonological. The last strand could more appropriately be described as tribal as it has been clearly shown that the terms yakka, pisāca, etc., refer to tribal peoples who maintained their distinct tribal identities until their domains were annexed by the rapidly expanding empires resulting in the complete loss of their tribal identities (Marasinghe, op. cit. pp. 106, 222f.). It was after such total absorption of some of these smaller tribal peoples who were not as widespread as the Nāgas, that society was left only with the legends and myths which grew and were woven around them.

Thus, the Vedic outer shell, filled with Śramaṇa stuffing with a spicy addition of popular demonological matter, made the Buddhist Mara a distinctly Buddhist development. "This emergence of Mara as the single figure dominating the background of demonological ideas in Pāli Buddhism is the more remarkable in view of the trend of Indian mythology at the time of the rise of Buddhism. In Hebrew demonology, in the centuries immediately before Christ, the tendency was towards a unifying of the evil spirit-hosts under their various princes, and towards a coalescence of these demon-princes. In ancient Indian mythology, however, the tendency appears to have been in the reverse direction, according to A.A. Macdonell, 'The older Rg-Vedic notion of the conflict of a single god with a single demon, mainly exemplified by Indra and Vrta, gradually developed into that of the gods and the Asuras in general being arrayed against each other in two hostile camps" (T. O. Ling, op. cit. p. 46).
It must be understood that this distinctive character of the Buddhist Māra was not purely due to his multi-strand origin, but was more due to the uniqueness of the functions he was required to perform in Buddhism. He could not possess destructive powers like the Vedic gods of death and destruction as he could not be allowed to operate alongside the Buddhist law of kamma, according to which beings reaped the consequences of their good or bad actions, without the intervention of an external power, whether god or demon. Although Buddhism did recognize the existence of various types of beings invisible to the naked human eye, it has been quite emphatic that such beings do not possess the power to harm, injure or even otherwise intervene in the affairs of men, either in consonance with or against, his will or aspirations. Therefore, it could not recognize evil spirits such as Yakṣa Śułapāṇi or Meghamālin of the Jains who could summon all evil spirits under their command and control to obstruct the enlightenment of the sage.

Thus, Māra, though accommodated within the fold of the Buddhist mythological beings, has not been vested with any power or authority as such power or authority was not compatible with the doctrinal tenets of Buddhism. It may be recalled here that even the deadly Yama, the Rg Vedic god of death and the king and ruler of the underworld (Macdonell, op. cit. 172) has been reduced in Buddhism to a mere passive on-looker at the uninfluenced operation of the law of kamma (Marasinghe, op. cit. 270). This is the process of transformation that he has been made to undergo in Buddhism after his adoption. Māra, likewise, despite his multi-strand origin, is the one who is for ever keeping his watchful eye on those who are endeavouring to attain Nībāṇa, waiting for the slightest faltering on their part to disrupt their spiritual progress.

However, it is important to keep in mind that the canonical records of Māra's encounters are records of Māra's foiled attempts. The symbol of Māra has thus been used as a doctrinal device to warn the disciples of the need to be steadfast in their effort without allowing the slightest opportunity for the ever alert Māra to disrupt their work.

Once accommodated within Buddhism the Māra legend like all other legends has undergone profuse growth in the post-canonical literature. According to the canonical texts, Māra dares not appear in his usual form lest he is known and, more important, disappears the moment he is known. The usual lament of Māra, when he is discovered by the Buddha being, "jānāti ма́ ṇ ḍ ḍ hagāvā, jānāti ма́ ṇ ḍ sugatō" (the Lord knows me, the Blissful One knows me). "The later books, especially the Nidānakathā of the Jātaka Commentary and the Buddhavamsa commentary contain a very lively and detailed description of the attempt made by Māra to create a temptation in the Buddha as he sat under the Bodhi-tree immediately before his Enlightenment. These accounts describe how Māra, the devaputta, seeing the Bodhisatta seated, with the firm resolve of becoming a Buddha, summoned all his forces and advanced against him. These forces extended to a distance of twelve yojanas to the front of the Bodhisatta, twelve to the back, and nine each to the right and to the left. Māra himself, thousand-armed, rode on his elephant, Girimekhalā, one hundred and fifty leagues in height. His followers assumed various fearsome shapes and were armed with dreadful weapons. At Māra's approach, all the various Devas, Nāgas and others, who were gathered round the Bodhisatta singing his praises and paying him homage, disappeared in headlong flight. The Bodhisatta was left alone, and he called to his assistance the ten pāramī which he had practised to perfection.

"Māra's army is described as being tenfold, and each division of the army is described, in very late accounts, with great wealth of detail. Each division was faced by the Buddha with one pāramī and was put to flight...... Māra and his followers fled in utter rout, and the Devas and others gathered round the Buddha to celebrate his victory" (DPPN, II. 614).

These elaborate accounts of the Māra's attempt at invading the Buddha at the seat of Enlightenment according to Malalasekara had their origin in the Padhāna Sutta version of the event. "There is no doubt that the Māra legend had its origin in the Padhāna Sutta (q.v.). There Māra is represented as visiting Gotama on the banks of the Nerañjārā, where he is practising austerities and tempting him to abandon his striving and devote himself to good works....." (Malalasekara, DPPN, 11.615). The Padhāna Sutta of the Sutta Nīpāta, it must be remembered, is an ancient Pāli poem and as such, contains the poet's version of the Buddha's enlightenment experiences. This poetic version, it may be recalled here, reminds one of the Jain canonical accounts of the Kaivalya (enlightenment) of their Tīrthāṅkaras.

It is important to note here that despite all the luxurious growth of the Māra legend in the post-canonical Buddhist literature, there has been no major change in
the conceptual position of Mara. He is still the persistent, but ever unsuccessful attempter of disruption of the spiritual endeavour of the disciple. The post-canonical literature shows how successfully the later writers used the story of Mara for religious edification.

M. M. J. Marasinghe

MARAṆA - The customary stock definition of maraṇa runs as follows:

“........... sattanikāyā cuti cavanātā bheda antaradāhānam, maccu maraṇam kālakiriyā, khandanaṁ bheda kalebarassa nikkhepo, idam veuccati maraṇam ....” (M. I. 49).

“....... the falling away, the passing away, the breaking up, the disappearance, the death and dying, the action of time, the breaking up of the group (of grasping), the laying down of the body - this, your reverence, is called dying.”

Mararāṇa refers in the ordinary sense to the drying up of the vital faculty that is contained within the five forms of one bhava or becoming (the life span of one existence). This is called jīvitindriyopacchedamaranā. The word maraṇa contains 3 aspects: Samuccchedamaranā of the Arahant when having destroyed his āsava-s, he makes an end of suffering or Saṃsāra; Khaṇika maraṇa by which is meant the almost simultaneous arising and falling away of one thought moment of the psycho-physical process, which is from the Buddhist point of view the absolute, paramatta sense of the word, and Sammutimarana which refers to the conventional usage of the word as “the tree died” or “greed died away”

Bhikkhu Naṇāṭiloka gives a clear account of the word in his Buddhist Dictionary and Manual on Buddhist Terms: “‘death’ in ordinary usage, means the disappearance of the vital faculty confined to a single life time, and therewith of the psycho-physical life-process conventionally called ‘man, animal, personality, ego’, etc. Strictly speaking however, death is the continually repeated dissolution and vanishing of each momentary physical mental combination and thus it takes place every moment.”

Visuddhimagga (VIII.p.238) states: “In the absolute sense, beings have only a very short moment to live, life lasting as long as a single moment of consciousness lasts. Just as a cart-wheel, whether rolling or whether at a standstill, at all times only rests on a single point of its periphery, even so the life of a living being lasts only for the duration of a single moment of consciousness. As soon as that moment ceases, the being also ceases. For it is said ‘the being of the past moment of consciousness has lived, but does not live now, nor will it live in future. The being of the future moment has not yet lived, nor does it live now, but it will live in the future. The being of the present moment has not lived, it does live now but it will not live in the future.’”

In the sense of samucchedamaranā, bhikkhu Nyāṇāṭiloka states (op.cit) “the coming to an end of the psycho-physical life-process of the Arahant or perfectly Holy One, at the moment of his passing away may be called the final and ultimate death, as up to that moment the psycho-physical life-process was still going on from life to life.”

It must be mentioned that maraṇa in the ordinary sense of jīvitindriyopaccheda consists of two classes: kāla maraṇa (timely death) and akāla maraṇa (untimely death).

Kāla maraṇa occurs due to puṇṇakkhaya maraṇa which is the decay or waning of the effect of one's regenerative kamma that sustains the life process and ayukkhaya maraṇa is the decay due to the natural decline of the life process as a result of ageing, and ubhayakkhayena (due to both).

Akāla maraṇa is caused by kammupaccheda kammavasena which is destructive or supplanting kamma. It destroys the influence of a weaker kamma and effects only its own result. (See Vissuddhi Magga, Ch. VIII).

Death in the ordinary sense (jīvitindriyopaccheda maraṇa) which is combined with old age, forms the twelfth link in the formula of dependent origination or paṭiccasamuppāda.

Conventionally, the chain in the cycle, of causes and effects ends with jāti, jāra, vyādhi, and maraṇa, i.e., birth, decay, decease death, resulting in sōkāri devadukkhadomanass' upāyāsā (sorrow, lamentation, pain, grief, despair).

The Dhammacakkappavattana sutta (Vin. 1. 10) gives a broad definition of what Dukkha implies, one aspect of it being maraṇa: “Idam kho pana bhikkhave
In many *suttas*, the Buddha is at pains to explain how *dukkha* which characterises existence, may be overcome. For example, in the *Sammadīṭṭhi Sutta* it is stated: “From the uprising of birth is the uprising of ageing and dying, from the stopping of birth is the stopping of ageing and dying: the course leading to the stopping of ageing and dying is the Aryan eight fold way itself, that is to say, perfect view, perfect thought, perfect speech, perfect action, perfect way of living, perfect endeavours, perfect mindfulness and perfect concentration” (*M.I. 49*).

The passage which ends this sutta explains in a more detailed manner how the phenomenon of death, which eventuality is faced by all beings may be stopped. This passage elevates the subject to the plane of ethics: “From the uprising of ignorance is the uprising of the cankers, from the stopping of ignorance is the stopping of the cankers, the course leading to the stopping of the cankers is this Aryan eight fold way itself…”

And the passage goes on: “When the disciple of the Aryans comprehends the cankers thus, comprehends the uprising of the cankers thus, comprehends the stopping of the cankers thus, comprehends the course leading to the stopping of the cankers thus, he, having got rid of all addiction to attachment, having dispelled addiction to shunning having abolished addiction to the latent view “I am”, having got rid of ignorance, having made knowledge arise, is here-now an end - maker of anguish”.

A passage in the *Sāṅgīti Suttanta* (*D.III, 235*) concerns itself with the ethical values which condition the state of existence after death:

“Five kinds of losses, to wit, of kinsfolk, of wealth, disease, loss of character, loss of sound opinion. No being, friends, because of any of the first three kinds of loss, is after death and bodily dissolution reborn to disaster, to evil destiny, to downfall, to purgatory. But this happens because of the last two kinds of loss.”

Ethics figure in another passage which mentions death: (*D.III, 258*) “Eight rebirths due to giving gifts. Herein, friends, a certain person gives a gift to a recluse or brahman in the shape of food, drink, raiment, vehicle, wreathes, perfumes and ointments, bedding, dwelling and lights. That which he gives, he hopes to receive in his turn. He sees a wealthy noble or brahman or householder surrounded and attended by, and en-
joying the five forms of sensuous pleasures. And he thinks, 'Ah! If only I may be reborn at the dissolution of the body after death as one amongst wealthy nobles, or brahmans or householders!' This thought he holds, fixed, firmly established, and expands it. This thought set free in a lower range and not expanded to anything higher, conduces to rebirth within that range. And this, I affirm, only in the case of a moral person, not of one who is vicious. The mental aspiration, friend of a moral person succeeds because of its purity."

Dukkha, it's cause and the allying of it are at the central core of the Buddha's teaching. The Sutta Nipata declares these truths in poetry. Verse 574 states:

“How insignificant is man's lot here,  
How brief, obscure, how trouble, fraught with ill!

There is no means whereby man shall not die:  
Death follows on decay: such is life's cause ....  
........................................... young and mature,  
The fool and sage, come all within the power  
Of death: death is for all the common lot;  
And death’s victims passing to yon world,  
No father saves his son, no kith his kin....  
Who draws out the dart wins calm of mind not  
Based on trust, and, grief o’ercome, is griefless, cool!"

Again (verse 742-3) in the Sutta Nipata we meet a distillation of the Buddhist perception of the unavoidable fact of death which characterizes existence, its course and how it may be overcome:

“Attachment forms becoming: men become,  
Fares ill; death follows birth; this is ill's cause.  
Hence by right knowledge, by attachment’s end  
Wise men, by, knowing end of birth, come not.”

Nigrodha, the wanderer, once questioned the Buddha (D. III, 52) as to the difference between the Buddha's doctrine and the way the Buddha's followers lived, on the one hand, and the way Nigrodha's self-mortifying ascetic followers lived on the other. The Buddha explained that the ascetic life per se does not necessarily constitute the way to emancipation for there were various types of ascetic practices during his time which were founded on a variety of erroneous views. The Buddha's way was concerned with the psychological content of an individual's mind bent on seeking liberation than leading an ascetic life itself. He pointed out that even among ascetics: “..... there are bad things not put away, corruptiong, entailing birth renewal, bringing suffering, resulting in ill, making for birth, decay and death in the future. And it is for the putting away of these that I teach the norm, according to which if ye do walk the things that corrupt shall be put away the things that make for purity shall grow and flourish, and ye shall attain to and abide in, each one for himself even here and now, the understanding and the realization of full and abounding insight.”

Elaborating on this statement, the Buddha explained how a renunciate could, having first restrained himself with the fourfold restraints, take himself to a secluded spot and having overcome the five hindrances attain jhānic states and penetrate the knowledge of his past births or the coming into being and passing away of other beings according to their deeds, which knowledge conduces to enlightenment and liberation form samsāra: “Those with wrong views, acquiring for themselves that karma which results in wrong views, they on the dissolution of the body after death, are reborn in some unhappy state of suffering or woe; but such and such being, good in act and word an thoughts, no revilers of Aryans, holding the right views, acquiring for themselves that karma that result from right view, they, on dissolution of the body, are reborn in some happy state in heaven.”

Almost the identical passage occurs in the Sampsādanīya suttanta (D. III, p. III) when Ven. Sariputta ascribes to the Budha such supernormal knowledge as Pubbennivasānussati āṇa and Cutisāpātā āṇa with which knowledge acquired through meditational jhānas the Buddha was able to observe the rising and passing away of beings according to their views and deeds resulting therefrom “Moreover, Lord, unsurpassable is the way in which the Exalted One teaches the norm concerning knowledge of the decease and rebirth of creatures. Thus some recluse or Brahman, by the means aforesaid, reaches up to such rapture of mind, that rapt in thought, he sees with pure deva-eye, surpassing the sight of man, beings as they decease and are reborn; he recognizes beings as mean or noble, as ill-favoured or well-favoured as blest or wretched, passing on according to their deeds; such and such worthy folk, ill-doers in act, word or thought, revilers of the Noble Ones, holding wrong views, acquiring karma resulting from wrong views, all reborn after death, at the dissolution of the body, in some unhappy state of suffering or woe. But such and such worthy folk, well-doers in act and word ... in some happy state in heaven.”
How the knowledge of past birth is realised is found in many suttas such as the Sāmaññaphala sutta, (D. I. p. 4). There is another passage (A. I, 164) explaining how a meditator who has overcome the pañca nivarana, may attain the jhānas: “... with mind composed, made pure and translucent ... bends down his mind to acquire knowledge of the fall and rise of beings from one existence to another, with the deva-sight, purified and surpassing that of men, he beholds beings deceasing and rising up again, beings both mean and excellent, fair and foul, gone to a happy state, gone to a woeful state according to their deeds (so as to say: alas! these worthies given to the practice of evil deeds, of evil words, of evil thoughts, scoffing at the Noble Ones, of perverted views land seaping the fruits of their perverted views-these beings on the dissolution of the body after death arose again in the Waste, the Woeful Way, the Downfall, in Purgatory! Or: Ah! these worthies, given to the practice of good deeds, of good words, of good thoughts. Not scoffing at the Noble Ones, but of sound views and reaping the fruits of their sound views-these beings on the dissolution of the body after death arose again in the Happy Lot, in the Heaven World. Thus with the deva-sight purified and surpassing that of men, he beholds beings deceasing and rising up again....”

Another interesting passage states (S. V 224) that the Bhārādvāja, the Ven. Scrap Hunter, had declared gnosis. When the other bhikkhus asked the Buddha how the Ven. Bhārādvāja knew this, the Buddha replied that he had cultivated three controlling faculties of mindfulness, concentration and insight. They end in destruction, the Buddha added, destruction of rebirth, old age and death: “Monks, it was because he saw full well that rebirth was destroyed, that old age and death were destroyed, that the Bhārādvāja, the Ven. Scrap Hunter was able to declare gnosis, to wit: “I knew full well that destroyed is rebirth, lived is the holy life, done is the task, there is no more of being here for me.”

Marana, death, is of course, a fact of existence but the doctrine points out and stresses that repeated death, results from the pursuit of sense pleasures. The solution for the ending of death is the stopping of birth by developing those qualities which encourage dispersion and attachment, the getting rid of desire and attachment to material shapes and other sense objects which bind one to the cycle of recurring birth and death.

Another passage states: (M. I, 86) “And what, monks, is the escape from pleasure of the senses? What ever, monks, is the control of desire for and attachment to pleasures of the senses.”

The sutta, moreover emphasises that one of the perils in the pleasures of the senses, when sense pleasures are the cause, sense pleasures the provenance, sense pleasure the consequence, the very cause of sense pleasures, is dying. Many examples are cited as to how this happens: “Kings dispute with kings. Nobles dispute with nobles, householders dispute with householders, a mother disputes with her son, a son disputes with his mother, a father disputes with his son, ..., and those who enter into quarrel, contention, dispute and attack one another with their hands and with stones and with sticks and with weapons, these suffer dying then and pain like unto dying.”

The Buddha not only expanded the perils of dukkha immanent in existence in many a sutta but also underscored the supreme security attainable, untainted by those perils. One such passage states: (M. I, 173): “Then, monks, the group of five monks being thus exhorted, thus instructed by me, being liable to birth because of self, having known the peril in what is liable to birth, seeking the unborn, the uttermost security from the bonds-Nibbāna-won the unborn, the uttermost security from the bonds-Nibbāna, being liable to ageing because of self... won the un-ageing... being liable to decay because of self... won the undecaying... being liable to dying because of self... won the undying .... being liable to sorrow because of self... won the un-sorrowing... being liable to stain because of self, having known the peril in what is liable to stain, seeking the stainless, the uttermost security from the bonds-Nibbāna-won the stainless, the uttermost security from the bonds-Nibbāna, knowledge and vision arose in them: unshakeable is freedom for us, this is the last birth, there is not now again becoming....”

This idea is encapsulated succinctly in a verse: (A. I, 162):

“He who is tamed, devout, just, virtuous, Truth-speaking, shame faced, done with birth and death, One perfect in the holy life, load-free, Detached from worldly ties, whose task is done, Taintless, are gone beyond all states, not clinging To anything, are utterly released....”

Another aspect of maraṇa is focussed on in the Pāśādika Sutta (D. III, p. 135): “It may happen, Cunda, that wanderers teaching other doctrines than ours may say: How is it brother, does a Tathāgata
exist after death? Is that true, and is any other view absurd? They so asking are thus to be answered: Brother this hath not been revealed by the Exalted One. Or, they may say: Does a Tathāgata not exist after death.... or does a Tathāgata neither exist nor not exist after death.... or does he both exist and not exist after death? Is this true, is any other view absurd?"

The Sutta goes on to state that the questioners may inquire why the Buddha has not revealed this whereupon the answer must be made thus: “Because it is not conducive to good, nor to un-worldliness, nor to passionlessness, nor to tranquillity, nor to peace, nor to insight, nor to enlightenment, nor to Nibbāna. Therefore, it is not revealed by the Exalted One”.

Rather than this answer reflecting an evasion of the issue, it seems to reflect the Buddha's attitude to pseudo intellectual curiosity which has very little to do with the real desire to enter the path of liberation from saṃsāra.

Suvimalee Karunaratna

MARĀṆĀNUSSATI: The word anusati is derived from the Skt. Anusmrti (anu+smṛ). It means remembrance, collection, thinking of, mindfulness.

Maranānussati means mindfulness of death which has been advocated in some suttas as beneficial for the attainment of emancipation. It is keeping in mind the object of dying, of the ceasing of sense faculties.

The Dasuttara Suttanta (D. III. 272) in its style of classifying the main points of the doctrine, cites certain things that help one to attain emancipation. Among other things, mindfulness and concentration are mentioned several times as things to be developed. It also specifies the subjects that should be reflected or meditated on as the Four Applications of Mindfulness (D. III. 277). Other subjects mentioned for meditating on are: the Buddha, the Norm, the Order, the Moral Precepts, Renunciation and the Devas (D. III. 280;250). A later addition includes anāpānasati, maranānussati, kāyagatāsati and upasamanussati. (A.I. 30; 42).

The Buddha said (A. III. 306):

"Maranāsati bhikkhave bhāvītā bahulikatā mahapphalā hoti, māhanisamsā amatagadhā amatapariyosanā. Kathāṁ bhāvītā ca bhikkhave maranāsati, kathāṁ bahulikatā mahapphalā hoti mahānisamsā amatagadhā amatapariyosanā?"

“Monks, mindfulness of death, when made to become, increased, is very fruitful, great in weal, merging in the deathless having the deathless as consumption. How so, monks.....?”

And the passage continues: “Consider the monk who, when day declines and night sets in, reflects, thus: “The chances of death for me are many, snake, scorpion, or centipede may bite me and bring death and hinder me, I may stumble and fall, the food I have eaten may make me ill, bile may convulse me, phlegm choke me, cutting winds within rack me and bring death and hinder me”. Monks, let that monk reflect thus: “Have I given up every evil and wicked thing which were I to die to-night, would hinder me?” Monks, if, on reflection, he knows that he has not, let an urge in great measure be made by that monk, an effort, an endeavor, an exertion, a struggle, let him get mindfulness and self-possession.

“Monk, just as were his cloth and hair on fire he would make an urge in great measure, an effort, an endeavor, an exertion, a struggle, would get mindfulness and self possession, to put out the fire thereof; even so let an urge in great measure be made by him, an effort, an endeavor, an exertion, a struggle, let him get mindfulness and self-possession to give up every evil and wicked thing.

“But if, monks, on reflection he knows there is no evil or wickedness that has not been given up by him, which were he to die that night, would hinder him, let him live with zest and delight, training himself day and night in the ways of right.

“And let him act likewise, monks, when night is spent and day breaks,..... Monks, mindfulness of death, when made thus become, made to increase, is very fruitful, great in profit, merging in the deathless, having the deathless as consumption.”

In another passage (A. III. 305-6) the Buddha says: ‘.... the monk who makes mindfulness of death became thus: “Were I to abide mindful as I munch and swallow one morsel.....” and he who thinks thus: “Were I to abide mindful of the Exalted One’s word as I breathe in and out or out and in, much would be done by me.” - those monks are said to live earnestly; keenly they make mindfulness of death become for the destruction of the Sankers.

“Wherefore, monks, train your selves thus: we will live earnestly; keenly we will make mindfulness of death become for the destruction of the Cankers.
Train yourself thus, monks"

This same passage is repeated in *Visuddhimagga*, Chapter VIII. Further, by way of explanation, it states: "So short in fact is the extent of life that it is not certain even for as long as it takes to chew and swallow four or five mouthfuls. This is how death should be recollected as to the limitedness of the extent."

Another passage in the *Sutta Pitaka* (A. I. p. 30) states: "Monks, there is one thing which if practiced and made much of, conduces to downright revulsion and disgust, to ending, tranquility, full comprehension, to perfect enlightenment, to Nibbana. What is that one thing? It is calling to mind the Buddha... Dhamma... the Order... the moralities... giving up... the devas... in breathing and out breathing... death... the bodily constituents... tranquility. This one thing conduces to Nibbana."

It is stated in the (*Visuddhi Magga* Chapter VIII): "He who wishes to develop this meditation, should retreat to solitude, and whilst living secluded he should thus wisely reflect: 'Death will come to me! The vital energy will be cut off!' Or 'Death! Death!' To him, namely, who does not wisely reflect, sorrow may arise just as to a mother whilst thinking on the death of her beloved child. Again, by reflecting on the death of a disliked person, joy may arise, just as to enemies whilst thinking on the death of their enemies. Through thinking on the death of an indifferent person, however, no emotion will arise, just as to a rean whose work consists in cremating the dead at the sight of a murderer with drawn sword one becomes filled with horror. Thus, whenever seeing here or there slain or other dead beings, one should reflect on the death of such deceased persons who once lived in happiness and one should rouse one's attentiveness, emotion and knowledge and consider thus: 'Death will come, etc.' ... Only in whom who considers in this way, will the hindrances (*Nivaranas* q.v.) be repressed; and through the idea of death, attention becomes steadfast, and the exercise reaches neighborhood concentration. (*Upacāra samādhi)*

According to the *Visuddhimagga* (Ch. VIII) there are eight ways of meditating on death:

1. Meditating on death as having the appearance of a murderer, because this image of a murderer appearing with a sword about to cut off one's head is apt, refers to that which comes with birth and it takes away life.

2. Meditating on death as the ruin of success, i.e. the final ruining of life's success just as Emperor Asoka who conquered so many realms but had to face death at the end. As *Samyutta Nikāya* (1.102) puts it:

   "As though huge mountains made of rock
   So vast they reached up to the sky
   Were to advance from every side,
   Grinding beneath them all that lives
   So age and death roll over all,
   Warriors, priests, merchants, and craftsmen,
   The outcasts and the scavengers
   Crushing all beings, sparing none
   And here no troops of elephants
   No charioteers, no infantry
   No strategy in form of spells,
   No riches, serve to beat them off
   Just so should death be recollected".

3. Meditating on death by comparison, firstly by comparison with those of fame, then with those of great merit, with those of great strength, with those of great supernormal power, by comparison with those of great understanding by comparison with Pacceka Buddhas (*Sn* 351) and with the greatest sage of all, the fully Enlightened Buddha. We must note here that even in the case of the Buddha, he was subject to mortality.

4. Meditating on death as a sharing of the body with many, such as the different kinds of worms, several kinds of internal diseases and external causes of death such as snakes, scorpions, etc. or by falling a victim to accidents.

5. Contemplating death as to its frailty and vulnerability.

6. Contemplating death as something that is signless, i.e. it is unpredictable and comes unannounced as it were, i.e. people are not born with their span of life marked out nor by sign that one will die by a certain illness, nor with the sign that a person will die at a certain specific time or where the body will be laid down nor is there a sign of the persons destiny where he will go to, heaven or somewhere else.

7. Death should be meditated on as limiting the extent of one's life. As it is said in the *Samyutta Nikāya* (1.108):
“Brief time have sons of men on earth to live. Let the good man herein much trouble take. Acting as were his turban all ablaze. There is no man to whom death cometh not. Just as a drop of dew on the tip of a blade of grass, when the sun gets up, straightway dries up and lasts not a while; even so, brāhmaṇa, like a dewdrop is the life of man, insignificant, trifling, fraught with much ill and trouble... For the born there is no immortality.

“Just as a bubble appears on the water when the sky-deva rains down big drops, but straightway bursts and lasts not a while; even so, brāhmaṇa, like a water-bubble is the life of man, insignificant, trifling, fraught with much ill and trouble.... For the born there is no immortality.

“Just as the line of a stick on water straightway vanishes and lasts not a while; even so, brāhmaṇa, like the line of a stick on water is the life of man, insignificant, trifling, fraught with ill and trouble... For the born there is no immortality.

“Just as a mountain river, winding here and there, swiftly flowing, taking all along with it, never for a moment or for an instant or for a second pauses, but rushes on, swirls along and sweeps forward; even so, brāhmaṇa, like a mountain river is the life of man, insignificant, trifling, fraught with ill and trouble... For the born their is no immortality.

“Just as a strong man might fashion a gob of spitte on the tip of his tongue and spit it out with utmost ease; even so, brāhmaṇa, like a spittle-gob is the life of man, insignificant, trifling, fraught with ill and trouble... For the born there is no immortality.

“Just as a lump of meat, thrown into an iron pot, heated the livelong day, straightway splits up and lasts not a while; even so, brāhmaṇa, like a lump of meat is the life of man, insignificant, trifling, fraught with ill and trouble... For the born there is no immortality.

“Just as a cow, about to be slaughtered, being led to the shambles, each time she raises her foot is nearer to destruction, nearer to death; even so, brāhmaṇa, like a doomed cow is the life of man, insignificant, trifling, fraught with much ill and much trouble. By mantras awaken the people! Do good! Live the godly life! For the born there is no immortality.

8. Death should be meditated on as to the shortness of the moment. In the ultimate sense the life moment of living beings is extremely short, being only as much as the occurrence of a single conscious moment. Just as a chariot wheel, when it is rolling, rolls, (that is, touches the ground) only on the point of (the circumferences of) its tyre, and, when it is at rest, rests only on one point, so too, the life of living beings lasts only for a single conscious moment. When that consciousness has ceased, the being is said to have ceased, according as it is said: “In a past conscious moment he did live, not he does live, not he will live. In a future conscious moment not he did live, not he does live, not he will live. In the present conscious moment not he did live, he does live, not he will live”.

Buddhaghosa concludes his exposition of maraṇānusassati in Ch. XXIII of the Visuddhimagga with the following observations: “A bhikkhu devoted to mindfulness of death is constantly diligent. He acquires perceptions of disenchantment with all kinds of becoming (existence). He conquers attachment to life. He condemns evil. He avoids much storing. He has no stain of avarice about requisites. Perception of impermanence grows in him, following upon which there appear the perception of pain and not self. But while beings who have not developed (mindfulness of) death fall victims to fear, horror and confusion at the time of death as though suddenly seized by wild beasts, spirits, snakes, robbers or murderers, he dies undeluded and fearless without falling into any such state. And if he does not attain the deathless here and now, he is at least headed for a happy destiny on the break up of the body.”

It is clear from the textual passages and Buddhaghosa’s expositions that maraṇānusassati does not guarantee the attainment of Nibbāna because it is a meditation based on several abstract mundane mental objects, not insight meditation or vipassanā, which is meditating on one’s body, feelings, thoughts and mental phenomena which arise and pass away continually bringing into focus anicca, dukkha, anatta, and actually perceiving reality in the psycho-physical process.
However, though maranānussati does not lead one into absorption, it brings one up to neighbourhood concentration which is beneficial for the development of further meditational skills in the direction of emancipation.

MĀRGA See MAGGA

MARICAVATTI: Maricavaṭṭi or Maricavattika Cetiya and its monastery complex was built by king Dutṭhagāmini in 161 B.C. at Anuradhapura. The Mahāvamsa devotes chapter xxvi for the Maricavatṭi almost entirely, and has named the chapter as “Maricavatṭi vihāramahā nāma chabbīsatismo paricchedo- the inauguration of Maricavatṭi Thūpa.” But conspicuously the Dipavamsa is silent on Maricavatṭi. According to the Mahāvamsa record, king Dutṭhagāmini on the 7th day after the coronation, having subdued Tamils and occupying the city of Anuradhapura, proceeded to the Tissa tank (Tisāvāpi) for the customary water sports with his royal retinue.

As usual, the king’s sceptre containing the relics (of the Buddha) (sadhatukā kuntan) was taken in the royal procession. The bearers of the sceptre (kuntadhārakā) deposited it in the place where Maricavatthūpa would be established (in future). After having enjoyed the water sport, the king intending to return in the afternoon, ordered the bearers of the sceptre to take it up. The bearers were unable to move the sceptre from the spot where it was deposited. The king, having witnessed the miracle, was highly delighted, offered garlands and incenses to it and returned to the city after making necessary arrangements for its protection. Afterwards the king built a cetiya enclosing the sceptre (kunta) and a vihāra surrounding the cetiya.

Kuntan parikkhipitvā cetiyam tattha kāraya
Thūpaṃ parikkhipitvā vihārānca akāraya
(Mhv. Ch. XXVI verse 13)

The construction of the cetiya and the vihāra was completed in three years and a great festival (vihāramahā) was arranged for the consecration, where hundred thousand bhikkhus and ninety thousand bhikkhusis assembled. There the king addressed the saṅgha: “Venerable Sirs, having forgotten I have enjoyed a chillie preparation (maricavaṭṭi) without sharing it with the saṅgha. I built this as a repentance for the offence, and let the saṅgha accept it.” Having proclaimed so the king sprinkled water (dakkhiṇadakam) and offered it to the saṅgha.

At this instance the Mahāvamsa proceeds to describe the grand festival organised for the consecration of the Maricavaṭṭi Cetiya and vihāra. The pavilion put up for the purpose had its feet (pāde) in the waters of the Abhaya tank, i.e. extended up to the shore of the tank. With that the (Mahāvamsa author) quips “it is not necessary to describe the rest of the space further (sesokā kathā va ka?).” The king provided alms to the saṅgha for seven days and offered requisites worth a hundred thousand and there was no monk who did not receive a gift. It is said that the king spent nineteen crores excluding the wealth spent (for the construction of the cetiya and vihāra etc.).

It is observed that the Mahāvamsa author does not explicitly say that the Maricavaṭṭi cetiya was so named because of the king’s declaration, that he built it as a repentance. He leaves it for the readers to come to that conclusion. The immediate reason for the construction of the cetiya was the inability to move his kunta from the spot where it was kept. At the time of the commencement of he cetiya, the king did not make any mention of his “chillies episode”. It was after completing the cetiya in three years, and during the consecration ceremony that the king divulged the secret, that he built it as a punishment for himself, for eating “a chillie preparation” alone. There appears some inconsistency between the incidents regarding the kunta and chillies. Apparently the Mahāvamsa author has made an unsuccessful attempt to connect the two incidents.

According to Malalasekera (DPPN. Vol. II p. 448) the king had violated a vow of his childhood. Ma alasekera refers to the Mahāvamsa xxii verse 80 as the vow concern, which read as;

Kuladevatānaṃ no tātā bhikkhunāṃ vimukkhā mayaṃ
Na hessāmā ciṃtevā bhāgam bhājīthā imam i ca
(Mhv. Ch. XXII verse 80)

“Sons you partake this handful of rice thinking that you will not go against our kuladevāta (Mahāsaṅgha).” The vow the king got his sons to undertake has a wider

1. Sirisoma M. H. Mirisaweti Sihapaya (Sinhala) published by the Dept. of Archaeology, Colombo, 1991. p. 6 points out that the English as well as the Sinhala translators have erroneously translated “kunta” as a spear and explains that kunta was not a weapon but a sceptre or the emblem of kingship.
meaning viz., not to go against, not to be hostile or not to betray the saṅgha and not a etiquette pertaining to the partaking of food. The Mahāvamsa at any time does not speak of a vow the King Kākavaṅnatissa supposed to have got his sons to enter, to refrain from eating without sharing with the saṅgha.

The Pūjāvaliya, a Sinhala treatise of the 13th century A.C. (National Library Services Board Edition, Colombo 1999, p. 498) does not make a mention of the incident connected to the Kunta, when relating the story of Maricavatī. There it is said that the king built Maricavatī as a repentance for eating a chillie preparation without sharing with the saṅgha. The Saddharmālankārāya, another Sinhala treatise of the 14th century A.C. too, has dropped the kunta incident when narrating the Maricavatī episode. But there, too, it is said the king built the Maricavatī as repentance for breaking a vow the parents got them to make, not to eat anything without giving to the saṅgha (Saddharmālankārāya edited by M. Piyaratana, Colombo, 1971, p. 551). According to the Pali Thūpavamsa (circa 12th century edited by Dhammaratana, B. Colombo, 1896, p. 51) and the Sinhala Thūpavamsa (edited by Lankananda, L. & Piyaratana, M. Horana, Colombo, 1939, p. 166) written not long after its Pali counterpart, the king Duttthagāmini after his coronation had been contemplating whether he had violated the vow to refrain from partaking of any food without offering to the saṅgha, which his parents got him and his brother to agree upon. It is said that he recollected he had once enjoyed a chilli preparation for breakfast without sharing it with the saṅgha and was waiting for an opportunity to rectify the mistake. However the great vow that they will not turn against the saṅgha (kula devatānaṃ bhikkhūnam no vimukhā bhavāma) which the parents got them to enter upon, as per the Mahāvamsa report, apparently has been substituted with a vow to refrain from eating any thing without offering it to the saṅgha in the subsequent accounts.

There is inscriptive evidence to show that in the 9th and 10th centuries A.C. it was known as Mirisavatī Vehera. Accordingly the Anuradhapura slab inscription of Salamevan Abbaya Kassapa V (Circa 929-39 A.C. Epigraphia Zelanica, Vol. I, p. 46) and the Jetavanārama slab inscription of Mahinda IV (Circa 1026-42 A.C.) (ibid. p. 222) refer to it as Mirisivatī vehera. Sirisoma M.H. (loc. Cit. p. 5) explains the term viṭṭi to mean a place or a locality. Since ancient times in Sri Lanka, people are used to identify a Thūpa or a Vihāra by the name of the village or the land it sited on viz. Mahiyātāgana thūpa, Mihintalā cetiy. Kalyāṇi cetiy, Dīghavāpi cetiy etc. have been name after their locations. Hundreds of such examples are available even today. The Mahāvamsa author of the 5th century A.C. is apparently trying to explain the etymology of the name of the Thūpa that originated in the second century B.C., so as to enhance the piety of his hero King Duttthagāmini, connecting it with the chillie episode. It is conjectured that the Thūpa built on a spot once cultivated with chillies, came to be known as Maricavatī cetiya.

Further marici in Pali also means a miracle. Maricavatī Cetiyā is the first large cetiyā built in the island. Though the Mahāvamsa does not give the original height of the thūpa, it is evident from the fact that it took three years to complete that, it was of a fairly large size. To the people who had up to that time seen only small cetiyas Maricavatī would have appeared as a miracle. The origin of the term Maricavatī could be explained that way too. Whatever be the possible conjecture, it is advisable not to discard ancient literary traditions till literary or archaeological evidence to the contrary are discovered.

According to Sir Emerson Tennent, Duttthagāmini constructed Maricavatī to commemorate the recovery of his kingdom (Smither James, G. Architectural Remains of Anuradhapura, London. 1894, p. 19). Though there is no evidence to substantiate his view, his view appears very much appropriate in the light of the fact that he commenced the work on Maricavatī only seven days after his consecration as the king of the entire island.

It is also significant that the Maricavatī Cetiyā apparently does not contain a major bodily relic of the Buddha, like the Thūpārāma or the Mahāthūpa, other than the relic said to be contained in the kunta which was enshrined in it. Apparently the Maricavatī cetiyā appears to have lost its position after the construction of the Mahāthūpa. Nevertheless in the course of its history, several kings renovated it, repaired it, raised its height, added new features to it and maintained it as any other cetiyā.

King Gajabahu (Gajabāhuka Gāminī) 174-190 A.C. provided a mantle (kaṇḍuka) for the Maricavatī Thūpa (Maricavatika thūpan ā kaṇḍuka ca akārayī (Mhv. Ch. XXXV verse 21).
King Vohârikatissa (269-291 A.C.) provided a canopy for the cetiya and in addition, the king is reported to have put up a wall (Mhv. Ch. XXXVI verse 33-37). King Gothañhaya (309-322 A.C.) built a “Rectory” (uposathâgâra) there.

Thiipârâmecâ Manisomârâme Maricavattite
Dakkhinâvahvihâre ca uposathahgarââni ca
(Mhv. Ch. XXXVI Verse 107)

King Vasabha (127-171 A.C.) provided the Cetiya with a mantal (kaicukahaça akârayi (Mhv. xxxv. verse 121). King Kassapa II built a mansion (Pâsadâ) and gave it to a Mahâ therâ residing at Nâgasâla (Mhv. Ch. XLIV. verse 149). King Kassapa IV entrusted the Bodhi tree at Maricavati to the bhikkhu(n) in ruins built (rebuilt) it adorned with various offerings and offered it to the Theravâda bhikkhus having performed a grand festival. He also granted 500 villages for their sustenance” (Mhv. Ch. LII, verse 44-46).

Devâ, mother of Sakka senâpati (wife of Kassapa V. 913-923 A.C.) provided a diadem-jewel for the Buddha image in the vihâra, a halo, an umbrella and a robe which the Mahâvamsa describes thus:

Duṭṭhagâmini Râjena katam Maricavattikâm
Nâṭham vihâram kâretvâ nanâ avâsabhusitaṃ
Thera vamsaja bhikkhuṃa aḍa katâvâ mahâ mahâram
Tesam paṅcasatânam ca bhogagâme adâpayi

“The King having seen Maricavatti built by King Duṭṭhagâmini in ruins built (rebuilt) it adorned with various âvâsas and offered it to the Theravâda bhikkhus having performed a grand festival. He also granted 500 villages for their sustenance” (Mhv. Ch. LII, verse 44-46).

Sā eva paṭibimbassa satathuno maricavattitam
Cûlamaniṇi pâdajâlan akâ chattam ca āvaram
(Mhv. Ch. LII, verse 65)

King Dappula IV (923-934 A.C.) gave a village for its maintenance following the footsteps of former kings. (Mhv. Ch. LIII, verse 2). King Mahinda IV (956-972 A.C.) is said to have commenced work of a pâsadâ called ‘Candana’ and provided a village for its maintenance (Mhv. Ch. LIV, verse 40). However as the Mahâvamsa says he commenced (pâsadâm candanaṃ nâmâ kâtum maricavattitam akârambham) the work and does not say that he completed it. Some doubt his completion of the building. But according to the next verse the king got a golden casket made, enshrined the hair relic (of the Buddha) (kesadhâtu) in it and deposited it there (at the Candana pâsadâ) and made offerings to it.

As far as the available reports are concerned it was King Parakramabahu I (1153-1186 A.C.) who repaired the Maricaââti Cetiya for the last time, after it was destroyed by Tamils. According to the Mahâvamsa (Ch. LXXVII verse 99) he found Maricavatti thûpa (Ratanavâluka Cetiya Abhayagiri Thûpa and Jetavana Thûpa) destroyed by Tamils, covered with giant trees and infested by bears and leopards. He got the jungles cleared and repaired the thûpas and the thûpa yard and got the Thûpa whitewashed. But less than half a century later it was completely destroyed by the South Indian invaders and does not appear to have been restored again.

According to the records (Râjaratnakârâya, p. 38) King Duṭṭhagâmini “deposited infinite riches” in the thûpa. James Smither; observes in this connection “This statement is not exaggerated and that the building (thûpa) once contained a large amount of treasures, may be judged from the ruthless manner in which the formidable work of its demolition has been performed (Architectural Remains of Anuradhapura, Ceylon, London 1894, p. 19).

Papaṅcasûdâni, the Majjhima Nikâya commentary (MA. II, p. 145) records an interesting incident supposed to have occurred during the consecration ceremony of the Maricavati vihâra (Maricavâttivihâra Mahâ). As already mentioned 100,000 bhikkhus and 90,000 bhikkhuṇis attended the consecration ceremony and the king provided alms for all. A little sâmanera seven years old, was seen carrying a bowl of hot gruel. It was so hot that he had to put the bowl now in the fold of his robe and now on the ground. Another sâmaneri (young nun) seven years of age, witnessed his difficulty and gave him a plate (thalaka) for him to carry the hot bowl in it. Years passed by and there was a famine in Sri Lanka (possibly the famine Bâmînityâ). Many monks and nuns, including the sâmanera and the sâmaneri now grown up, proceeded to a country beyond the sea (Pârasamuddaṁ) probably to Jambudipa. The sâmaneri had gone there earlier and the sâmanera (monk) subsequently. When the nun concerned heard that another bhikkhu from Sri Lanka had arrived she went to see him. In the course of their conversation they recognised each other and developed a love for each other and left the Order (reverted to the lay life). It is said that they were sixty years of age at the time.
Maricavatti thupa remained in the ruined condition up to the last quarter of the 19th century. Sir Emerson Tennent describes the condition of the Thupa as “A mere barrow of earth overrun with jungle” (Smither, James G. Architecutral Remains of Anuradhapura, London, 1894, p. 19). After clearing the jungle, the first excavation of the thupa has been undertaken apparently in 1880, under the direction of S.M. Burrows of the Ceylon Civil Service. During the excavation a magnificent vahalkada which Europeans call “frontispiece” or “External Chapel” has been discovered on the western side of the Thupa. It is considered as the best preserved vahalkada and is the most significant feature of the Maricavatti Thupa. S.M. Burrows under whose direction the excavation was executed describes the said Vahalkada thus:

“A magnificent stone chapel or external shrine was excavated some years ago on the western side of the Mirisaweeti dagoba. It is undoubtedly the finest of its kind in Anuradhapura. It presents nearly all the well-known Buddhist ornaments and combined a great massiveness with delicacy of execution,” (Smither, Loc. Cit. p. 22 note 1).

The Royal Asiatic Society, Ceylon Branch, has subscribed a considerable amount of money for the excavation of the thupa (ibid. p. 22). After the establishment of the Dept. of Archaeological Survey of Ceylon, in 1900, further excavations have been undertaken by H.C.P. Bell, the Commissioner of Archaeology, in the years 1901-1903, which included not only the thupa but also its environs. During the excavations five Monasteries (sangharamas), Alms Halls (Dana salla) and a Pirivena have been discovered. (Dept. of Archaeological Survey of Ceylon Administrative Reports 1901-1903). As already mentioned, it is clear from the Mahavamsa that the Maricavatti Thupa has had its own Bodhi, Upasathasala (Refectory) etc. Thus archaeological evidence as well as evidence from the chronicles reveal that there has been a monastery complex around the thupa.

The first attempt to restore this thupa has been undertaken as far back as 1888 with funds provided by a Siamese prince. The Siamese prince whose name is not mentioned, had entrusted Rs. 12,500/= to Sir Arthur Gordon, the Governor General of Ceylon at that time, for the restoration of the Maricavatti Thupa in 1888. The restoration was commenced, and it was possible to complete the restoration partially (nearly 2/3 of the dome) with the funds provided. (Harischandra-Sacred City of Anuradhapura, Colombo 1908 p. 38). At the expiry of funds provided, the restoration work was suspended in 1896. It is also said that the Royal Asiatic Society had brought an architect named Detall to prepare the plan for the restoration in 1900. He prepared the plan and explained the importance of restoring of the thupa. The Siamese king Rama who visited the country subsequently had volunteered to provide funds for the restoration. But apparently no action has been taken and the thupa remained for nearly a century in a half restored condition. The present programme to restore the Mirisavatti thupa was launched in 1979 under the Mirisavatti cetiya Restoration Society. Simultaneously excavations of the thupa and its vihara complex was also commenced by the Department of Archaeology. The excavations provided much more data on the thupa and the vihara complex, than in the previous excavations.

The original thupa built by King Dutthagamini and the cover (katucika) built by Gajabahu subsequently were clearly indentified during the excavations. The excavations revealed that the thupa built by Dutthagamini had a circumambulating path way (padakkhiññapatha) and high terraces (pesavas) and it resembled the Sañchi Thupa in India. Gajabahu had widened the dome covering the circumambulating path way and the terraces.

The Vihara Complex had been properly planned out side the Sand Terrace, the sacred and residential buildings separately. The residential buildings are arranged in units, each having three buildings, one large and two small (rooms) each 25 sq. ft. in extent. The large buildings of the units are built vertical to one of the entrances to the thupa and the small buildings are parallel to the large building. No other vihara complex of Anuradhapura is so connected to the main thupa, as seen at Maricavatti. The main buildings are

2. According to the Mahavamsa (Mhv. XLVI verse 15-16) king Aggabodhi (658-74 A.C.) granted many maintenance villages to the viharas of the two nikayas. Geiger Wilhelm, Culavamsa English translation part 1 p. 99 note 2 attempts to identify the said two nikayas as Mirisaveviya and Thuparama viharas, an attempt to consider Maricavatti vihara including Thuparâma as separate nikayas. But Rahula W. History of Buddhism in Ceylon, Colombo 1956 p. 195 including the note No. 4 does not agree with the interpretation and says that they are not known to be referred to as two separate nikayas.

3. In the Abhayagiri and Jetavana Vihara complex the buildings are arranged in units having five buildings each. It is thought that this originated at Mirisaveeti complex having three buildings in a unit to begin with.
supposed to be the residences of the chief monks. The Dāna sālā has been identified by the rice canoe (bhutta navā). Remains of the Bodhighara and an Image House are among the identified buildings. The large building with 60 pillars to the west of the thūpa was identified as the Upasathāgāra (refectory). There are several buildings which cannot be clearly identified till the entire complex is excavated.

It has been discovered that the stone paved compound (salapathala maiuwa) has been constructed in circa 10th century A.C. The parapet wall had been repaired during the same period. A part of the pillar that was on the thūpa in the early period was found in the compound. A stone slab with a drawing of a thūpa with letters “niyangam” has been unearthed from the thūpa compound. The drawing shows the “three pesāva (terraces) and the four cornered pile” (caturassa caya) and spire. As the letters belong to the 8-10th centuries, it is thought the drawing depict how the thūpa was seen during the 8-10th centuries. It helped to determine the design for the restoration to a certain extent. The copper tiles have been discovered during the excavations. Therefore it is clear that some of the buildings in the complex were roofed with copper tiles. The Archaeologists have observed in the course of their excavations that substantial work on the Vihāra had seen executed during 8-10th centuries A.C.

Three inscriptions belonging to the 2nd century A.C. had been discovered but they cannot be read due to their defacing. It is thought that they record contributions for paving stones in the compound, (Salapatala Maiuwa).

A four inch Buddha image in the sedentary posture under an arch way (torana) made of gold sheets was discovered 20 ft. deep from the top of the thūpa, during the excavations. It possibly belongs to the 12th century A.C.

A unique feature that the archaeologists have observed in the buildings of the unearthed monastery complex is its simplicity. Guard stones, Moonstones and Koravakgal are without usual decorations or adornments, reason for which is difficult to be determined. Sirisoma conjectures that the meditating monks were once residing here, which can be the reason for the simplicity (Sirisoma, Loc. Cit). The Vihāra complex extends to an area of approximately 50 acres. Very little has been excavated so far and a larger area remains to be excavated. During the restoration process of 1979 the cover (kañcuka) built with funds provided by the Siamese prince had to be removed completely as it was not strong enough to build upon. The work progressed steadily. But unfortunately, the night before the enshrinement of relics in the super structure, the new construction completely collapsed (in 1988), the reason for which was thought to be the seepage of water into the interior. The construction work (restoration) had to be commenced once more, from the very beginning, in March 1991. The work progressed steadily, working round the clock. It was a combine effort of the State Engineering Corporation, Buildings Dept., The Dept. of Town and Country Planning, The Ministry of Buddhāsāna, Central Cultural Fund, The Ceramic Corporation and The Gemunu Watch (Sri Lanka Army). The work was successfully completed and the pinnacle was unveiled on the Poson Full Moon Day 4th June 1993. It is said that 12 million bricks were used for the restoration.

The restored Maricavaṭṭī Thūpa is 192 ft. high and the diameter of the dome is 141 ft., the spire measures 54 1/2 ft., the pinnacle is 12 ft. high and has a crest gem 1 1/2 ft. high on it. See PLATES LVII, LVIII, LIX.

The most well known *sutta* which deals with the domestic and social duties of a layman are encountered in the *Sigālovāda sutta* (D. III 189). This *sutta* is structured along the lines of a ritual involving paying homage to six directions. It was performed by a young householder, Sigāla, after his early morning ablutions at a river. Perhaps it was a pre-Buddhist animistic rite. The commentary states that Sigāla refused to go and listen to discourses preached by the Buddha despite his parents’ treatises. However, his father, on his deathbed, made Sigala promise to perform the six directional homage every morning. The commentary adds that the deathbed wish of the father would have been expressed in the hope that the Buddha or one of his disciples would see Sigala performing the ritual and make of it an opportunity for the preaching of the doctrine. And this is exactly what happened. The Buddha gave a new meaning to the directions being honoured.

It is clear that each direction stands for the performance of a service to a specific category of persons by a householder. For example, the Eastern quarter is assigned to teachers, the Northern quarter to children, the Southern quarter to parents and symbolizes the duties and obligations between parents and children. The Western quarter is the preserve of teachers and children and their mutual obligations. The Western quarter is dedicated to marriage partners, the duties *visa vis* husband and wife and so on. With regard to the western quarter the Buddha says:

In five ways should a wife as Western quarter be ministered to by her husband, by respect, by courtesy, by faithfulness, by handing over authority to her, by providing her with adornments.

In these five ways does the wife, ministered to by her husband as the Western quarter, love him, her duties are well performed, by hospitality to the kin of both, by faithfulness, by watching over the goods he brings and by skill and industry in discharging all the business.

Thus is the Western quarter protected by him and made safe and secure.

It is noteworthy that this passage begins with the husband’s duties towards the wife which “protects” that quarter and makes it “safe” and “secure”. His protective actions spell out clearly the affection and consideration due to a wife, which form the basis for her reciprocation.
The *Sigalovada sutta's* advice on the marital relationship and the egalitarian spirit pervading it, have a direct link with the sentiments expressed in the famous Rgvedic *Surya Sukta*. The following verse illustrates the point being made.

"Take thy hand in mine for happy fortune that thou mayest reach old age with me thy husband. God, Aryaman, Bhaga, Savitar, Purandhi, have given thee to be my household's mistress. O Pushan, send her on as most auspicious, her who shall be the sharer of my pleasures, Her who shall twine her loving arms about me, And welcome all my love and mine embraces. (Rgveda Book x hymn 85, vv 37-38)

The Brāhmaṇa literature which came after the Rgvedic period, had a very different outlook on marriage. It tended to demean the honored status conferred on the wife by the Rgvedic rṣis (seers). Buddhism rejected the overbearing "ritual bondage" of women advocated in the Brāhmaṇas by Brahmanic priests.

In the *Sigalovada sutta*, the Buddha advises Sigala to put away the four vices, which include the taking of life, theft, adultery and lying. He also describes the six channels by which wealth is dissipated: addiction to intoxicating liquor, haunting fairs, gambling, associating with evil companions, idleness, frequenting the streets at unseemly hours because then he himself is without guard and protection and so also are wife and children.

In another text, we find an interesting reference about wives:

"Sussusa settha bhariyanam" (S.1.6)  
"Best among wives is she that ministers best"

The word sussūsā is derived from the verb sunāti, to listen. Sussūsā has the meaning of wishing to hear, obedience, attendance. It could also be interpreted as "lending an ear", in the sense of being a confidante, a counselor. This meaning is brought out in the following statement:

"Bhariya ca parama sakha" (S. 1 p. 37)  
"The wife is the comrade supreme" and the commentary adds "one to whom one may tell a secret that can be told to no one else."

Whatever the exact meaning of sussūsā in the context under discussion, without a doubt, the ideal wife is considered the best friend of the husband.

Among the factors that cause the downfall (parābhava) of a man is the following

"Sehi dārehi asantuṣṭho vestyāsu padissati  
Dissati parādāresu-tam parābhavato mukham"  
(Sn. v. 108)

"He not satisfied with his own wives, is seen with whores and wives of others - that (to him) is a cause of ruin."

Again, behavior which brands a person as an outcaste is the following:

"Yo nāṭīnaṁ sakkhanāṁ vā dāresu patidissati  
sahasā sampiyena vā tām jaññā "vasalo" iti"  
(Sn. V. 123)

"He who is seen in the company of wives of relatives and friends by force or with (their) consent, he is known as an outcaste"

The Māṅgala sutta (Sn. v. 262) defines conduct which result in blessings. The ethical conduct mentioned includes the following:

"Matāpitū upaṭṭhānāṁ puttadārassa sangaho"  
"Attending on parents and tender care of children and wife."

The Buddha once said that there are four ways of living together (as husband and wife) (A. II. 59).

"Chavo chavāya saddhiṁ samvasati chavo deviyā  
saddhiṁ samvasati devo chavāya saddhiṁ  
samvasati, devo deviyā saddhiṁ samvasati."

"A vile man lives along with a vile woman, a vile man lives along with a devi a deva lives with a vile woman, a deva lives along with a devi."

Elaborating on this, the Buddha explained that a vile husband is one who "takes life, steals, is a wrong doer in sense - desires, a liar, given to harsh, bitter speech and idle babble, one covetous, of a malevolent heart, a perverted view, a wicked man, an evil doer; he lives at home with heart soiled by the taint of stinginess, he abuses and reviles recluses and brahmans and his wife is of like nature."
A devi is a wife who is virtuous, of a lovely nature and abstains from all the vile actions and speech mentioned above. A deva has the same qualities.

An ideal married couple, Nakula mātā and Nakula Pūta once went to meet the Buddha (A. II. 61). They confessed to him that both of them had never transgressed against each other in deed or even thought and they wished to behold each other in the next life too. The Buddha replied that if both husband and wife desire to behold each other in this very life and the next also and if they are equally matched in saddhā (faith), sīla (virtue) cāga (generosity) and paññā (wisdom), they do behold each other in this very life and in the life hereafter. The discourse ends with the following verse in the text:

“If both believers, self controlled, well spoken, living as dhamma bids, use loving words one to the other-manifold the blessings that come to wife and husband, and to them. The blessing of a pleasant life is born; Dejected their foes, for both are good. So in this world living as dhamma bids, The pair, in goodness matched, i'the deva-world rejoicing, win the bliss that they desire.”

These qualities of saddhā, sīla, cāga and paññā are said to contribute to sīvāmpawining (S. V. 395).

We may understand from such passages that it is not the lay life per se or the pabbajja life per se, that conduces to liberation but the living of life in an ethical manner, according to the doctrine, which tends to the destruction of defilements, without which liberation cannot be attained.

Apart from these passages which give advice to both husband and wife alike regarding mutual duties and obligations, there are passages in the canon which are meant exclusively for the wife. It seems very much as if the Buddha knew and understood with his deep insight into the phycolgy of the human mind, that the woman’s lot, in the patriarchal society of his time, was particularly hard on women. Kīṣa Gothami in the Therigāthā gives utterance to the kind of suffering women had to bear (Therigāthā vv. 215-216)

“Dukkho itthihāvā akkhāto purisadhammasārathina Sappattikām pi dukkhaṃ........”

“Full of suffering is the woman’s lot so has the tamer and guide of men declared. Painful it is when living with hostile wives.....”

The Buddha seems to have taken cognizance of this situation with which woman had to cope and seems to have tried to empower them by making them develop certain ethical qualities and skills which would help them to transcend their particular lot.

If woman developed eight qualities, he advised, they would be born in heaven (A. IV263 ff.) They are the following:

1. For him, to whom her parents gave her out love for her, seeking her good, in loving kindness and fond regard, she should get up before him, retire after him, be obedient to his wishes, lovely in her ways and gentle in speech.

2. She should esteem, respect and offer hospitality to those her husband honors.

3. She should involve herself in whatever home industries being carried out in her husband’s house with dexterity and organize such with an inquiring mind. This no doubt refers to entrepreneurial skills.

4. She should know the capabilities of the servants and work people in her husband’s home. She should know their strengths and weaknesses, what they have to do and what has not been done. She should divide the food among them justly.

5. When her husband brings home money, corn, silver or gold (in modern terms we could interpret this as wealth in liquid cash, in kind or in the form of capital) she should protect that and not rob.

6. She should go to the three refuges.

7. Observe the precepts

8. Be charitable

There is much worldly wisdom in this charter of empowerment. It helps to develop skills and wisdom and self confidence. It would not only make her rise above her personal afflictions but make her indispensable to her husband as well, thus ensuring her place in her home.
The same kind of advice was given to Visākhā (A. IV. 266ff). Here, the Buddha tells Visākhā that women endowed with four qualities win power in the world: “Herein, Visākhā, a woman is capable at her work; she manages the servants; in her ways she is lovely to her lord; she guards his wealth.”

“By these qualities she wins power in this world. By four more qualities she wins power in the next world, viz. faith, virtue, charity and wisdom.”

What is meant by wisdom is explained in the same discourse:

“She is wise and is endowed with wisdom into the way of the rise and fall of things, with aryan penetration of the way to the utter destruction of ill. Such is her wisdom.”

It is obvious that partners who are well matched in qualities of industriousness and economy make their marriage successful in a material way. According to the discourse such a life is brought to fulfillment only if the married couple base their lives on ethics such as faith, virtue, generosity and wisdom which qualities result in a good life hereafter also.

On another occasion, the Buddha was invited by Mendaka’s grandson, Uggaha, for an almsgiving and was requested to advice his daughters who were getting married. Accordingly, the Buddha gave them the same advice (A. III. 36). Mendaka was Visākhā’s grandfather, according to Visākhāyavatthu (DhpA). The advice given by the Buddha was the same as that conduct advocated which if observed by wives would result in their being reborn among the fairies of lovely form (A. IV. 263).

The advice the Buddha gives Anāthapiṇḍika’s daughter-in-law (A. IV. 91) can also be considered a piece of skillful counseling, based on his knowledge of psychology. It said that when he went to Anāthapiṇḍika’s residence on one occasion he heard a great din, uproar and noise. On asking Anāthapiṇḍika what the din was about he replied that it was caused by his daughter-in-law, Sujāthā. Apparently she was very rich, coming from an exceedingly wealthy family and did not respect her parents-in-law or husband. Nor did she venerate the Buddha. On hearing this, the Buddha called her and by means of a small lecture, made her see herself rather than rebuking her with strong words.

The Buddha told Sujāthā that there were seven types of wives. One like a slayer, one like a robber, one like a mistress, one like a mother, one like a sister, one like a companion and one like a handmaid (dāsi) and wanted to know to which category she belonged, whereupon she requested the Buddha to explain more fully the categories he had mentioned. Having elaborated on the categories the passage ends with the following:

“Now she who’s called: a mistress, slayer, thief,
Who’s harsh, immoral, lacking in respect,
When cometh death
Will wander in the miseries of hell
But mother, sister or companion, slave
In precept long established and restrained,
When cometh death
Will wander in the happy heaven world.”

At the end of the discourse Sujāthā chose the category of Dāsi for herself. It is possible that the discourse had created in her a fear of going to hell. It is also possible that she had recognized herself in some of the ugly categories in the mirror the Buddha had gently held up to her, and felt sorely ashamed of her past conduct and resolved to reform herself.

Sujāthā is an exception with regard to the general position accorded to women. Her sister, Visākhā, known also as Migāra Mātā, too held such a special status in her marital home, though Visākhā was far wiser and more restrained in her conduct. It is implied that wealth bestowed on them a status of equality with their respective husbands and parents-in-law. However, the Buddha did not give wealth or birth a privileged place in his egalitarian world view. Both Visākhā and Sujāthā came in for his special attention and he sought to make them see the wisdom of his ethical code of conduct which originated from the correct view. We see very clearly in the canon that he did not condone the Brahmanical repression of women. Both husband and wife were exhorted to honor and be faithful to each other. Whatever the social conventions of the time, monogamy was upheld and decency in conjugal relations.

Suvimalee Karunaratna

MATERIALISM, dialectical. The many systems of religion and philosophy throughout the ages would seem to have had but one single goal which is both their final cause and the cause of their origion: to find
a satisfactory explanation of, and a solution to, the problems and conflicts which constitute human life. The age-long conflicts between man and man, between man and his surroundings, between man and the universe, have, of course, been observed from time immemorial. Explanations have been offered, such as natural selection, struggle for survival of the fittest, but they have not tried to solve the problem. There have been attempted solutions, which did not offer explanations as they were not based on understanding; these solutions were not to be sought in this life itself, as they were said to form part of a greater supernatural plan. "It is the function of religion", said Roger Lloyd, Canon of Winchester, "to provide an explanation of the wholeness of man's experience of the universe, and of his life, and to relate it to the essential mystery which underlies it all". This inclination to see "mystery" in daily life is both a refusal to understand the problem and also an a priori rejection of the possibility of a solution. And yet such is the idealistic explanation of man's relation to the universe. "In the plan of the Creator society is a natural means means which man can and must use to reach his destined end ... Man's obligations toward civil society are divinely imposed." Here, no solution is offered, the problem is merely shifted to a higher plane, the supernatural, where it remains shelved for an eternal future, above the reach of any human understanding and natural solution, based on an equally mysterious and supernatural origin like revelation and divine authority, manifested in further mysteries, miracles and prophesies.

The materialistic viewpoint tries to explain and solve life's greatest problem of conflict in this life itself, by showing the origin thereof to lie in material conditions where actuality conflicts with reality, and by pointing out to a solution through realisation of actual world - and-salf value. This is done, although in different terminology, by Dialectical Materialism as well as by Buddhism. And hence a short comparative study of their main tenets must find a place here.

We are here, therefore, concerned only with a comparison of two ideologies and not with comparing the two actual systems as they are found in practice in different parts of the world. Neither ideology is at present fully practised; one has seen already periods of decay and revival, and the other is not full grown yet.

It is perhaps the most controversial point in a comparative study of Buddhism and Materialism that Buddhism with all its distinctive marks which set it apart from all other religions, is still considered a religion, whereas Materialism definitely rejects the need of religion as a mere ideological theory which has grown out of conditions of life, fear, ignorance and suffering together with a desire to find a rational justification therefor. It is, of course, willingly admitted, that ignorance and fear are frequently employed both in religious and other connections for the purpose of maintaining a state favouring the selfish purposes of a small minority. In Buddhism, however, ignorance is recognised as the root of all evil conditions, the closing link in the fetters, saṅyojana of saṁsāra, the most effective hindrance to progress (nirvāna), the most stupefying of all drugs (āsava). And fear is shown to be self-reproach (hiri), scare of public opinion (ottapa), dread of consequences, anxiety of the way of woe. Instead of trading on these existing conditions as is done in other religions, where "fear of the Lord" is shown as "the beginning of wisdom," the chief concern of Buddhist ethics is the total and final eradication of these fundamental errors which are the roots of all conflict and suffering in the world. For, Buddhism as well as Materialism is primarily concerned with the ending of conflict.

The credit for discovering the existence of struggle in society is due neither to the Buddha nor to Karl Marx. The latter clearly wrote: "No credit is due to me for discovering the existence of classes in modern society. Long before me, historians and economists had described the development of this class struggle and the economic anatomy of the classes. What I did was to prove that the existence of classes is only bound up with particular historical phases in the development of production; that the class struggle necessarily leads to the dictatorship of the proletariat; and that this dictatorship itself only constitutes the transition to the abolition of all classes and to a classless society."
Likewise the Buddha does not claim to be the discoverer of the true facts of conflict (dukkha-sacca). These were proclaimed by many previous pathfinders (Tathāgata) and sages of old. But he does claim to have found anew the psychological causes with which the conflict within the individual and of the individual with society are bound up (dukkha-samudaya); the relationship between the individual and society which leads necessarily to conflict as long as the individual does not visualise himself as a product of society rather than the creator thereof; and the cessation of this conflict (dukkha-nirodha) which can be brought about only through the abolition of that individuality distinction which is the root-cause of all opposition, conflict and struggle. It is this abolition of individuality-distinction which forms the basic goal of both systems, conveniently referred to as Buddhism and Communism. It is this individuality-distinction and the endeavour to abolish it which form, therefore, the first and most essential points of contact.

"Men begin to distinguish themselves from animals as soon as they begin to produce their means of subsistence."6 The manner in which these means of subsistence are produced is, of course, not the same as the process of individual reproduction of physical existence, and depends on the nature of the actual means at their disposal. Individual productivity, both the actual product of existence and the means of production, is dependent on the material conditions in which individuals have to express their lives. And so we find in Buddhist Philosophy a large volume, the Paṭṭhāna, devoted to conditional relations in 24 modes, such as causal relation (hetupaccaya), dominance (adhipatipaccaya), contiguity (anantara-paccaya), co-nascence (sahajāta-paccaya), reciprocity (aññamañña-paccaya), dependence (nissaya-paccaya), antecedence (purejāta-paccaya), consequence (paccajāta-paccaya), presence (atthi-paccaya), continuance (avagata-paccaya) etc. The entire Paṭṭhāna is devoted first to an enquiry into these 24 ways in which A is related to B, and secondly into illustrating how in things material or mental each kind of relation and groups of relations originate.7 From this two conclusions are evident, first according to Buddhist as well as Marxist philosophy whatever arises, arises in dependence on conditions (ye dhammā hetupabhavā tesam hetu Tathāgato aha),8 and second, that whereas the Buddha always speaks of mind and matter (nāma-rūpa), to the Marxist there are only material conditions. Material does not mean made from or composed of matter, for purely material conditions in that sense would be purely mechanical and become absolute causes instead of influencing conditions. Under purely mechanical conditions history could be written in advance, whereas the most we can do is to point to some driving force which largely determines the course of history. "Even the most thorough and extreme materialist will never maintain that a thought is a composition of chemicals, or of physical elements. But he will hold that force and matter are intrinsically linked up, interchangeable, and even identical, although understood from a different viewpoint. There can be no matter which does not exercise some energy by pressure, resistance, extension, and which, therefore, in that sense is energy. Likewise there can be no energy separate from matter":9

"Violence, war, pillage, rape and slaughter, etc., have been accepted as the driving force of history":10 But conquest in itself is not a driving force, for conquest itself is forced upon the group by its need of finding new means of existence for its increasing population. Conquest as a result of war is, therefore, only a symptom of the prevailing conditions in which the group can express its means of production. It is therefore, not correct to write history in terms of warfare. History should be the story of human development, of the development of its means of existence, and the development of its means of production, from private property of feudal ownership of land and corporative property of trades. The chief pre-requisite to history is life, and life involves before anything else, food, clothing and shelter. It was the Buddha who pointed out, however, that although all life subsists on food (sabbatātā āhāraṇāthāti), this nutriment is not strictly material (kalalaṅkāra), as there is also the nutriment of contact (phassa), of volition (cetanā) and of consciousness (viññāna).11

11. D. III. 211.
Matter and Mind: Lenin too realised that materialism must have its boundaries and he created this problem exhaustively in his chief philosophical work, Materialism and Empirio-Criticism, which are critical notes concerning the reactionary philosophy of the Empirio-Critics such as Mach and Avenarius. There he draws the dividing line between materialism and idealism, "as a wall which separates the mind from the outer world". A materialist is one who "takes matter as the primus, regarding consciousness, reason and sensation as derivatives." The idealist point of view is shown as clining to the opposite, taking sensation as the primary entity. The Empirio-Critics hoped to establish a synthetic point of view.

Buddhist philosophy does not see the problem from the same angle. There is no mind as an opposite to matter. But there is a physical action on a physical organ of sense. The reaction, which comes into play, is called sensation. When this reaction becomes divorced from the action, i.e., when ideations or mental concepts are formed, or in other words, when sensations are moulded in the classifications of a deduced individuality or ego-experience, then such concepts begin to assume a self-acquired reality of their own, whereas they are only aspects of actuality, of an actual process without any real entity, either of matter or of mind. This agrees with Lenin’s definition of matter as "that, which acting upon our sense organs, produces sensation," but not with the same author's: "matter is the objective reality given us in sensation, existing independently of the human mind and reflected by it."14

It is this actuality of the materiality process and the mental reactionary process, which form the basis of Buddhist philosophy. All things are in action, although not all action is mechanical. Action is reaction, and that means interpenetration of the opposites, which presents the appearance of unity, of individuality, of entity, of substance. It is only through analysis of this apparent unity that reality will be understood as mere actuality. Such analysis will even reveal the basic laws of the evolutionary process, the arising of the I-concept from the opposition to the flow of impermanence through the grasping of and clinging to sensations in the process called memory, the retentive process by which a passing experience can be appropriated. In recognising the actual factors of this process, one may even forecast certain events as resultants from existing conditions; or by influencing these conditions it would be possible to some extent to control and direct these future events, due to the interpenetration of "matter" and "mind".

But it is impossible to draw sharp lines of demarcation; for which reason, however, it cannot be correct on the other hand to completely ignore the mental aspect of the problem and call the entire process material unless the word is used in a very special accommodating sense. “Mind” and “Consciousness” are used in Buddhist terminology not in the sense of a spiritual or immaterial entity, for they are never treated in an absolute sense. There is no mental process apart from the material one, and frequently nāma-rūpa is treated as one compound; mentalised matter. It is on this mind-body that the six senses of base depend (nāma-rūpa-paccayā salāyatanam). And again the mind is one of those senses. Sight is not possible without a reflecting thought-process. This, however, does not make the mind an independent organ, for no thought arises which has not entered through one of the five sense doors (paṭicca-dvār-āvajjana). The treatment of the mind in Buddhist psychology does not detract from its materialism on the one hand, as the mind is not considered as an immaterial entity, but is supplements on the other had the mecanic world-aspect, providing the driving force of volition which not merely sees to nature's reporductivity, but also to the many and complicated social relationships which are at the bottom of every conflict and struggle. "For the animal, its relation to others does not exist as a relation",15 unless in a very undeveloped form, as the herd-instinct, which even than is largely, if not exclusively, self-centred. It is the mental grasping of the environment which forms the food and gives the driving force to the continuation of the process which cannot be explained on purely mechanistic lines. Pure matter is even more fictitious than Kant's pure consciousness (kritik der reinen Vernunft), for pure matter cannot have any relationship with thought and cannot be known, whereas matter which is being thought about becomes food for thought and is thereby subject to the process of assimilation: mentalised matter (nāma-rupa), or matter conditioned by thought, and thought conditioned by matter. The two as separates, are unknown and unknowable. Only the conditioned effect is the world

13. As quoted in Moscow Dialogues p. 122.
as known to us. A supernatural order, believing in mind as separate and independent from matter, is denied by both Buddhism and Materialism, which have no room for the ideas of God and Soul, make no attempt to deify man's own nature, and are hence opposed to all idealistic systems of thought or religion.

Materialism in Buddhism, however, does not give to matter and independent status either. It does not recognise a substance in matter any more than it would accept a soul in mind. This view is corroborated by the latest findings of experimental science, where matter is proved to be essentially motion. Motion, however, means essentially change. Matter is not a substantial being to which change comes as something accidental, leaving the intrinsic thing -in-itself identical and eternally the same. Matter is not a static entity with a mechanical equilibrium at absolute rest. For this concept would lead to a motionless state of matter, which again would require some external force by which motion was introduced. Motion, however, need not be introduced, for it is inherently present in matter, which remains static only for so long as its dynamic force is counteracted; and even then its state of suspended energy is only relative.

The many modes of relationship between individual events greatly influence, condition and modify the effects resulting from such relationship. Rangels reduced these general laws of dialectics to: (1) the law of transition whereby a change of quantity affects the quality. Mass-production reduces the value. The individual behaves differently from the group. (2) the law of interpenetration of opposites, which is the law of life, in which life and death are inseparable. Production and consumption form such a unity that a disturbance of their equilibrium seriously affects social and international relations. (3) The law of the negation of negation, which is the law of higher synthesis in mathematics, in logic, as well as in the reproductive process of organic life, where the seed has so die in order to produce more seeds. A double negation constitutes an affirmation in logic, a positive in algebra.

Now these laws are applicable equally to the working of the mind and were as such formulated by the Buddha about 25 centuries before Karl Marx discovered that "my relation to my environment is my consciousness". For the Buddha said: "that which we will and that which we intend to do and that with which we are occupied, - this becomes an object for the support of consciousness. If there is an object, there is a foothold for consciousness." Consciousness arises as a resultant of contact with the environment, for "dependent on contact arises sensation" (phassa - paccayā vedanā); and sensation (vedanā) is the embryonic stage of the receptive thought-process, which must evolve thorough perception (saññā) and conception (sankhāra) to the state of full grown consciousness (viññāna).

Thus far we find perfect agreement between Buddhism and Dialectical Materialism. There is, however, a difference in the way in which it is thought that matter is presented to become a mental object. "Matter is the objective reality, give to us in sensation: there is nothing in the world but matter in motion, and matter cannot move save in space and time", said Lenin, for "the fundamental forms of all being are space and time; being outside of time is just as much an absurdity as being outside of space". Thus it would appear that Dialectical Materialism is based on a clear and definite conception of matter. However, space and time are mental concepts into which the mind categories certain experiences as events. An event is conceived of as a personal experience and thereby made static and localised in time and space. Thus the process of experiencing is killed for the purpose of retention which is a strengthening of the self-misconcept. Time and space are not forms in which beings move, but forms in which the mental process moulds its experiences, a device to retain selected effects of experience, as we endeavour to retain or call back a pleasurable feeling by giving it a name. Hence it is not matter, which moves in space and time, but space and time are mental concepts recording the movement of matter. This process of conception is not to be understood as another "form" or matrix, which finally will produce the formed product, for there is no "mind" apart from the process of thinking which is conditioned in its arising and cessation by the many factors which range from cause to influence.

17. S. II, p. 64.
18. Formula of Dependent Origination (patīcca samuppāda).
If there is nothing but matter, it is impossible to define matter, for no other inclusive generic concept would be found. Yet, if "matter is the objective reality, given to us in sensation," as Lenin said, it is not matter which is known, but only the sensation, which again cannot tell us anything of this objective reality. Hence, that "matter is all that exists" is from its very nature a categorical statement, not less imperative than Kant's concept of God.

In Buddhism matter is materiality, i.e., a characteristic state proper to whatsoever has the characteristic of being affected (ruppana), i.e., an objective actuality.

In Dialectical Materialism matter is "a philosophic category for designating objective reality", it is nature acting upon the senses and calling forth perception, which does not mean that it must be tangible matter as popularly understood. Hence any change or new discovery bearing on the nature of matter may be accepted so long as its objective existence is not denied.

Process: What Marx understood as the chief defect of all materialism, viz. that the object, apprehended through our senses, is understood only as an object, and not as sensuous human activity, is not found in the materialistic ontology of the Buddha. For here the constant stress is laid, away from the thing-in-itself, on the action of the object together with the reaction of the subject. It is the comprehensive knowledge of this mutual subject-object activity, which constitutes actuality. The thing-in-itself, substance, essence soul and similar terms do not find a place in Buddhist terminology, where the accent throughout is on non-entity (anatta) and action (kamma).

Objective truth, therefore, is eschewed in Buddhism as much as subjective truth. Truth is not static, is not theoretical, but is a "practical question". Truth is a fact, an event, which arises and ceases, which is not a static reality, but an actual process, the truth of which lies in its contradiction. "Contradiction is what actually moves the world." This central idea of Hegel's dialectical logic became the weapon of his revolting pupils, first of Feuerbach, then of Marx and Engels.

Ludwig Feuerbach in his treatise Das Wesen des Christentums (The Essence of Christianity) advocates a frank religious humanism, or materialism, in which there is nothing outside nature and man. All religious values are human values, and the beginning of philosophy should not be "I", but "I and You". But in breaking away from idealism, one should equally avoid that kind of materialism in which the old metaphysics are presented as physics. Feuerbach was not a mechanistic materialist of the type which flourished in France in the age of physics and which knew little of the biological sciences. "French materialism in general was incapable of representing the universe as a process, as one form of matter assumed in the course of evolutionary development." In other words, it was still metaphysical and static. Feuerbach preferred to call his philosophy "organistic". It is a dialectical naturalism in which there exists only organic life, organic activity, organic thinking. Man himself is a part of nature and is controlled by the same laws as those which govern the processes of nature. Yet Karl Marx refused to follow Feuerbach's abstract cultus of man which was the kernel of his religion. "Feuerbach does not see that the religious temperament itself is a social product and that the abstract individual whom he analyses, belongs to a definite form of society."

"Marx grasped the important truth that history is a process, that all phenomena of nature, including man and society, are interrelated, that nothing is permanent, that everything moves and continually changes". The important question at this stage becomes whether this universal process, this continuity of evolution, proceeds according to set laws. Hegel saw in these dialectical laws the absolute spirit of the universe, the unity of Espinoza's substance (or nature torn away from man) with Fichte's self consciousness (or human mind torn away from nature), the unity of these two contradictories: actual nature and actual mankind. Hegel accepted the absolute principle, existing from the beginning of time and composing the true life-giving soul of all beings. Passing through all the stages

23. 1st thesis on Feuerbach.
24. ibid, 2nd thesis.
25. Engels as quoted in Moscow Dialogues, p. 80.
26. Seven theses as quoted in Moscow Dialogues.
of development contained within itself, it appears unconsciously in nature, assuming the guise of natural necessity. In man it again becomes conscious and proceeds upwards until the absolute concept finally returns to itself. This is the typical idealist attitude, reading and projecting its own thought process in the universal process of evolution.

Engels turned Hegel's dialectic upside down. Real things are not pictures of the absolute idea, but ideas are pictures of real things and hence materialistic. The dialectics of the idea is merely the conscious reflex of the dialectic evolution of the real world. It is knowledge of the universal laws of motion, of the outer world as well as of inner thought, which accomplish themselves unconsciously in nature and in history in the form of external necessity through an endless succession of apparent accidents.

The Buddhist attitude towards existence is not a mere denial of real things, of being, substance, soul, entity, which would be its opposite, i.e., non-existence, nothingness, void. The thesis of being and its antithesis of nothingness are united in the synthesis of becoming. For becoming (bhava) is of the nature of a process which neither is nor is not, which essentially is arising, and in arising also ceases. This process of arising and ceasing is the basic conception that underlies the philosophies of the Buddha and of Marx. It is this process of becoming which gives rise to conflict: a psychological conflict between the ever-changing process of life as a whole and the desire for permanency of the individual resisting the passing flow; an economic conflict between the owners of the means of production, and those who by selling their labour have become part of those means of production; a historical conflict between individuals and various classes of society in their endeavour to retain or acquire the means of production, slaves, lands, tools or modern production-plants.

The solution of this conflict, which is one and the same although apparently fought on such different battlefields, is offered in Buddhism and in Dialectical Materialism in the only possible way by removal of the dialectical nature of the conflict. In the psychological realisation of the non-existence of an "Ego" the foundation of the conflict is removed. In the acquisition of the means of production by the entire community the distinction and opposition between classes will have been abolished. In the absence of opposition, this process of becoming or historical dialectics will continue without being a conflict. Whether either ideology will ever be completely successful in its achievement is a fruitless speculation. All one can do is to take the road that leads to the goal, once that has been clearly discerned.

As regards the main philosophical problems we may summarise Buddhism that ontologically it has taken the side of materialism against idealism, which is clearly proved by its denial of substance, soul, entity, ultimate cause, absolute existence, reality of time and space, eternal life, and by its substitution of these by a process of becoming, evolution, dependent origination, conditioned arising and ceasing of phenomena only, dependence of the mental process on material environment and its definite and uncompromising doctrine of no soul.

Epistemologically the cognitive activities are not taken by themselves, and are not separated from the other experiences inseparably bound up with them. The knower is above all an intelligent act of volition: he acts upon the thing known, moves and moulds it, and is at the same time moved and moulded by it. There is no knowledge without feeling and experiencing the effects upon ourselves and our object. Knowledge is action and reaction, and all the factors of this activity form together the act or process of cognition. Feeling, perception, ideation together with the material impression are essential constituents in the process of consciousness whether this be in its simplest possible position as awareness, or in more complex processes as ratiocination, whether the main spring of action is simple emotion, or the involved course of volition. This process is kept alive by its intrinsic dialectical nature of attraction and repulsion, love and hate, desire and fear, projection into a permanent self and rejection of the impermanent stream of life. And this dialectical process of the delusive thesis of a permanent "self" and the antithesis of the impermanent process of becoming is dissolved in the synthesis, is "withering away" in the realisation of "no-self", as the withering away of the state in a class-less society.

Psychologically the mind is not treated as an entity but as a forming process, subject to a conditioning environment and reflecting the absorbed tendencies acquired from those surroundings.

Ethically also Buddhism avoids the usual foundations of idealistic religions such as eternal return or punishment, salvation of an individual soul.
its doctrine of action and reaction which is not individualistic. Moral law does not derive its sanction from a divine lawgiver, but from society and life in community.

**Ethics.** Yet this ethical system as a practical application of a religious ideology seems to fail in all its attempts of approach of these two schools of thought. Even religions with such vastly different theological bases as Hinduism in its purest Vedantic form and Christianity as developed in Paulinian dogmatism, still find a common ground and many points of contact in the ethical field. But Dialectical Materialism does not seem to have an ethical problem at all and certainly does not seem to feel the need of stimulating an ethical consciousness. Comparing this with Buddhism one may equally wonder whether this stimulation of an ethical consciousness is an essential part of early Buddhism, although, no doubt, the present religious practical attitude in this respect is not very different sometimes from that of theological religions. In the original text, unadorned by commentarial "improvements", we find hardly a trace of an ethical code, apart from advice to avoid evil and to do good. Even the so-called precepts are no commandments forming part of an ethical law. They are rules of conduct which do not require a supernatural sanction either as to origin or to application, for they are natural rules following from a natural environment in a normally developed society. The laws of karma are not laws of retribution or destiny, sentences of judgement with reward or penalty, but formulas of actuality, constituted in much the same way as the laws of science, which do not bind but which generalize individual behaviour with regard to cause and effect. The law does not make society, but social life makes the law. And the development of social life in its various aspects will thereby produce corresponding laws of behaviour, of morality, of ethics which are, therefore, not divinely inspired, but dictated by one's own conscience which is another word for public opinion.

Engels is quoted as having said: As a matter of fact, every class as well as every profession has its own system of morals, and breaks even this when it can do so without punishment. Religious feeling is itself a product of society. There is no doubt that the great world teachers and reformers were thrown up by the need of the times in which they lived. Their movements were like avalanches, starting perhaps from a most insignificant event which necessitated action. But once that action, which was, therefore, a product of society at the time, was initiated, its ideological notions developed immensely, gathering material on the way while retaining its conservative force. And so it happens that those great religious movements after some time become out of date and lose their vitality, until a revival or reform becomes necessary, another symptom of the dialectic nature of the process. Religions which refuse to grow are dogmatic and dead, and will never be able to give the eternal life they promise. Buddhism has no dogmas, and its standards of morality are only fixed in so far as they are based on the natural exigences of the human constitution, physically and socially. Society is the extension of the individual, and is, likewise, as a living organism in a continuous process of growth. Such growth may be viewed by some at certain times as progress, by others at other times as a cankerous excrescence, but it can never be a mechanical sequence of arbitrary combinations of social elements. In other words, morality may grow, for better or for worse, but cannot be made. Morality must be an expression of life and not a mould into which life is impressed and suppressed. Such natural morality without any shadow of the supernatural is found in Buddhism. There are no commandments, no supreme lawgiver, no threats of punishments, but only appeals to reason, to one's social obligations, to one's natural, not acquired conditions. In this light, acts of murder, theft, debauchery, untruth and intemperance become unnatural and are, therefore, shunned by any reasonable individual. Summing up, such a life will be harmless, incapable of exploitation, and viewing others as having equal rights. It is a morality of action and not of dogmatic standards.

**Action.** This Buddhist morality of action or karma does not make an exception to the law of dialectics. In Hinduism and in Buddhism as it is misunderstood in countries which have not fully arisen from the feudal conditions of living, the teaching of karma received mostly the interpretation of fate and destiny. It was and still is the interest of the ruling class or caste to perpetuate the prevailing state of affairs, preventing less fortunate ones to advance. A typical illustration is the strong opposition of denominational schools against free education which would result in greater influence (or as they call it, interference) by Government. The teach-

27. Moscow Dialogues, p. 88.
ing of karma, interpreted as a rigid law of cause and effect, naturally produced in the masses that apathy which would retain everybody in his place. It is true, Buddhism teaches that karma is the cause, an action in some past life, producing effects in this present life. But it is not said that this is an external cause unconnected with the effect. Neither did Karl Marx say that economic forces are the only ones which rule social life. "According to the materialistic view of history, the factor which in the last instance is decisive in history is the production and reproduction of actual life. More than this neither Marx not I have ever asserted. But when anyone distorts this so as to read that the economic factor is the sole element, he converts the statement into a meaningless, abstract, absurd nature, which reaction, however, is subject to external conditions which may be favourably supporting (upathambhaka), adversely counteracting (upapīlaka), or even destructive (upaghāṭhaka). In this we see the dialectic elements of karma, which are tendencies grown from conflict and which produce in themselves further conflict of attraction and repulsion, of greed (lobha) and aversion (dosa).

Karma or man's action is essentially a social and co-operative process because action is conditioned in its arising and cessation. Hence it is impossible to say what and how much any single individual has produced in a single individual act. It is evident that man acts not always mechanically, but intentionally, whether his intentions are good or bad. It is this intention (cetanā) which makes his action moral or immoral. But in order to explain such an intentional act, it is not enough merely to state the fact of his evil intention. A man steals, because he wants to steal. The problem, however, is: why should he want it? Obviously, to satisfy some internal need. Thus the existence of that need will be the real cause of his act. And whoever has produced that cause is partly at least responsible for the evil act which finally followed. If a man steals to satisfy his craving for pleasure, which he cannot do with his honestly earned income, then all those who have created in him that hunger by advertising pleasure, by setting him an example of sense satisfaction without giving him the means thereto, by refusing to impart to him that knowledge of pleasure which is not craving of the senses, but leads to understanding and insight of the truth, all those are responsible for the evil deed. An immoral act should not only be condemned in the culprit, but blame should go to the whole society which produced him. Crime, poverty and illiteracy are not just individual shortcomings, but slurs on the reputation of the nation, of society; of the whole human race.

The doctrine of karma, if well understood, does not lead to individualism. If there is no "self" (anattā), action cannot be individual, and hence the effect of such action, merit or demerit, will not be individual either. All action bears a social responsibility; the effect or the produce belongs to the community. Like the economic system, so the moral system is essentially one. Like economic profit should go to the community of workers instead of being withheld from them by exploitation, so moral profit or merit should not be a personal reward as is promised to individual souls in an eternal heaven according to idealistic theistic religions, but moral profit too should be owned by the community. That is the Buddhist doctrine of morality, where virtue is practised for the sake of virtue, for the sake of the good of all, not for the purpose of acquiring merit for oneself, just because there is no "self" to reap the fruits in another life. Rebirth there is, but a soulless one. It is the rebirth of action under the influence of conditions, the present being the father of tomorrow. The yield of present action is having made the future. Having obtained the satisfaction of having

29. Dhp. xlv 183.
done one's duty towards the community, the sum-total of the good effect will go to the moral, social or economic improvement of the society with whose operation the good action was performed.

An objection is sometimes raised that in a classless society, where all men will have not only equal opportunities, but even equal remunerations according to their needs, the law of kama as moral retribution will have no field of application. In other words, the Buddhist doctrine of kama giving to everyone according to his deeds, seems to contradict the communist ideal of giving to everyone according to his needs. In answer it may first of all be pointed out that the very fact of a group of certain people striving together towards a common ideal indicates equality of action, which, therefore, will yield equality of effect. The firm establishment of an ideology all over the world would then merely indicate that the common action of millions had produced an effect, affecting all. And that would be quite according to the law of kama. Yet, even a solution of the class conflict by the institution of a classless society, even the eradication of disease by scientific progress, will not abolish the disease of old age which, however much deferred, finally must end in death. And the more comfortable life is being made, the more difficult it will be to part with it, the greater will be the mental conflict. It is then that the inequality of mental action will find a most fruitful field to harvest retribution according to one's deeds, according to the law of kama.

It is an injustice to Buddhism to point to the law of kama as a law of predestination. That may by the idea of kama in Hinduism with its many gods, with its reincarnation of souls, with its unknown and unknowable Brahman. That might still have been the necessary outcome of an India in bondage, economically enslaved by foreign exploitation, politically fettered by a feudal system of princely rule, intellectually shackled by a degrading caste-system, religiously tramelled by superstition and priest craft. But Buddhism which does not acknowledge caste-distinction, which has no priests and sacrifices, which condemns blind faith and encourages free thought, - Buddhism with its selfless doctrine of "no-soul", where even action is not of self, where heaven and hell can be made and unmade in this world itself, where the highest freedom of Nirvana must be sought in freedom of mind in a human form, - that Buddhism is free from superstition, free from fear, free from serfdom in any form.

MÁTIKÁ. The Pali term mātikā is equivalent to mātrakā in Sanskrit. The Pali - English Dictionary (PED) gives its meaning as 'summary'. This term is found used in the Dhammasaṅgani to denote its table of contents which is a summary of the whole text. Two sets of Mātikās are given there as Abhidhamma Mātikā and Suttanta Mātikā.

Contents of Mātikā of the Dhammasaṅgani seem to be the mātikā of the whole Abhidhamma Piṭaka. It is quite appropriate to have these mātikā in the first book of the Abhidhamma Piṭaka. The number of Suttanta Mātikā is 40 and Abhidhamma-mātikā is 124. The Suttanta mātikā must have been taken from suttas of the Dīgha, the Majjhima, the Samyutta, the Anguttara and the Khuddhaka Nikāyas and the Abhidhamma mātikā must have been taken from early Abhidhamma works or from Dhammasaṅgani itself. All these mātikās were considered to be the topics suitable for Abhidhamma.

The Theravada Buddhist tradition maintains that the Abhidhamma was a later development, but its mātikā were taught by the Buddha and hence the whole
Abhidhamma Pitaka has been considered to be the Buddha's teaching. Buddhaghosa in his Atthasālistiṇī (q.v.) says: "When the supreme Buddha, who taught us the seven treatises of the Abhidhamma Pitaka came to the Kathāvatthu, he began with an eight faced inquiry into the theory of person (or soul).... Those showing the eight aspects and their respective refutation, the table of contents has been laid down by the teacher (Expositor, London, 1985). This is how the commentarial tradition of the Mahāvihāra monks of Sri Lanka justified that the Abhidhamma was taught by the Buddha himself.

According to A-yu-wang-King Mahākāśyapa after the recitation of the Dhamma and the Vinaya recited the mātiKA, which is not corroborated by the account of the first council in the Cullavagga. But this canonical text refers, in another context, to a therā called Revata who was well versed in the Sutta, the Vinaya and the Matikā. (Cullavagga 12.1; 9-10). The Cullavagga must have been compiled during the period between the second and the third Buddhist Councils as it contains reports of the first and the second Councils. So it is to be datable to the second century of the Buddhist Era. It is evident that the Dhamma and the Vinaya were recited at the first council and at that time the mātiKA were not known. But according to A-Yu-Wang-King, after the first council Mahākāśyapa recited the Mātikā. The Buddhist tradition connected with this source attributes the authorship of the mātiKA to the leader of the first council, Therā Mahākāśyapa who lived at least several years after the conclusion of the first council. Since the Dhamma and the Vinaya were the subjects of the first council, it is not certain whether Mahākāśyapa recited or prepared the Dhamma mātiKA or the Vinaya mātiKA or both. In this case it is necessary to find out whether the Vinaya mātiKA existed earlier.

The Vinaya Pitaka of the Haimavata Buddhist Sect contains five works or sections i.e (1) Bhiksupratimokṣa (2) Bhiksunipratimokṣa (3) Kathina (4) Mātikā and (5) Ekottara. The five sections of the Pali Vinaya Pitaka of the Mahāvihāra Sect contains (1) Pāraįjikā Pāli (2) Pācitiyā Pāli (3) Mahāvagga Pāli (4) Cullavagga Pāli and (5) Parivāra Pāli. It is thus clear that the early Buddhist vinaya did not contain a section called mātiKA, but they have a later work called the Mātikattakkathā which is the commentary to the Pātimokkha. This indicates that even the Mahāvihāra Sect preserved the term Mātikā of the Vinaya in addition to the mātiKA of the Abhidhamma and the Suttanta. So, it is reasonable to accept that the Vinaya also had its topics or table of contents in the same way as the Abhidhamma.

MĀTIKA

MAYA (1)

MAYA (1): The PTS Pali-English Dictionary gives the following meanings for Maya. 1. Deceptive appearance or illusion, fraud, deceit, hypocrisy. 2. Mystic formula, magic trick. 3. Jugglery, conjuring. MayaKāra is a conjurer, a magician. Maya as an illusion is often combined with the word marici (mirage).

The word Maya appears in many suttas in the meaning of guile, hypocrisy, deceit or craftiness. On one occasion, the Buddha observed that a true samanera should not possess qualities such as covetousness, malevolence, wrath, a grudging nature, hypocrisy, stinginess, treachery, craftiness (Maya), evil desires and wrong views. (M. 1. 281 ff)

Maya appears in many stanzas of the Sutta Nipāta also in the sense of hypocrisy, guile and deceive:

"Sacco siyā appagabbo amāyo rittapesuno
Akkodhano lobhāpāram vevicchaṇi vitare muni"  
(Sn. v. 941)

"Truthful, having little to do with company, guileless, free from slander, well-disposed, the silent sage must cross over evil greed and multifarious wants".

Another stanza in the Sutta Nipāta states:

"Dukkhapakkha yad atthi kammañ uddham adho ca tiriyañ ca pi majjhe parivajjaya pa rinnaritārī
māyā mānām adho ca lobhokaddsī pariyanthām akāsa nimāritāman tām paribbajakāman ahu pattippattani" (Sn. v. 537)
"The deed resulting in sorrow shunned above, below, across, between, deceit, pride, greed and wrath, clearly understood, he tramps about. Him they call a wandering mendicant Who has attained the highest to be attained."

The deep philosophical content in the word 'Māya' comes out in the texts when it is used to describe the phenomenal world. Very often it is synonymous with miricci (mirage). The Dhammapada states:

"Phenuppamam Kāyāmimam viditvā maricīdhīmman abhisambuddhāno chetvāna mārassa papupphakāni adassanaṁ maccurājassa gacche." (Dhp. v. 46)

"Knowing that this body is like froth and unsubstantial as a mirage, one should destroy the flower shafts of Māra, the tempter and pass beyond the sight of Māra."

The same idea is echoed in yet another stanza of the Dhammapada:

"Yathā bubbulakam passe-yathā passe maricikam ēvaṁ lokam avekkhātam maccurājā na passati" (Dhp. v. 170)

"He who sees the world a bubble, he who sees the world a mirage that one who sees thus, him, Māra, the King of Death, sees not."

A fine set of similes are found in the Samyutta Nikāya on this same theme:

"Phenāpiṇḍūpamam rūpaṁ vedanā bubbulūpamā maricikūpamā saññā sankhārā kadaliūpamā Māyāpamañca viññāṇam Dipiṭādīcca bandhunā" (S. III. 142)

Form is like a mass of foam And feeling-but an airy bubble Perception is like a mirage And formations a plantain tree Consciousness is a magic show A juggler's trick entire

All these similes were made known by the "Kinsman-of-the-Sun".1

A further elaboration of māya in the Buddhist texts is found in the following passage:

"Seyyathāpi bhikkhave māyākāro vā māyā kārantevāśi vā mahāpathe māyam vidamṣeyya tam evaṁ cakkhumā puriso passeyya nijjhāyeyya yoniso upaparikkhaya. Tassa tam passato nijjhāyato yoniso upaparikkhato tucchakaññeva khāyeyya asārakaññeva khāyeyya kīṁhi siyā bhikkhave māyāya sāro." (S. III v 142)

"Again, brethren, suppose a juggler or a juggler's apprentice should make appear (a magic show) on the high road and a keen sighted man should see it, observe it, look close into the nature of it. So seeing, he would find it empty, he would find it unsubstantial, he would find it without essence. What essence, brethren, could there be in a magic show?

Buddhism's correct view is seeing with a penetrative insight the actual nature of the psycho-physical aggregates of the "being" consisting of the physical body, feelings, perception, mental dispositions and consciousness. However; the cognitive process of the ordinary person, with a mind tainted with defilements, produces only a blurred vision of reality, an illusion - māya. This, as the texts clarify, results from the grasping of the five aggregates of existence as an abiding entity (sakkayaditthi) which results in thoughts based on rāga, dosa and moha (attachment, aversion and ignorance).

The idea of māya is contained in the explanation of the cognitive process in many a text of the canon. The earliest formula describing it runs as follows:

'Cakkhuñc' āvusos paṭicca rūpe ca upajjati cakkhuviññāṇam tīnan saṅgatī phasso phassa paccayā vedanā, yam vedeti tam saññāṇati. Yam saññāṇati tam viṭakketi, yam viṭakketi tam papañceti, yam papañceti tato"
“Dependent on the visual organ and the visible objects, O brethren, arises visual consciousness; the meeting together of these three is contact; because of contact arises feeling when one feels, one perceives; what one perceives, one reasons about; what one reasons about, one is obsessed with. What one is obsessed with, due to that, concepts characterized by such obsessed perceptions assail him in regard to visible objects cognizable by the visual organ, longing to the past, the future and the present”.

This passage and similar passages that occur in the canon are relevant to the discussion of māya. This is because a thorough understanding of papañca provides an insight into the Buddhist meaning of māya taken in its wider philosophic sense of delusion. E.R. Sarachchandra points out in Buddhist Psychology of Perception a very plausible meaning of papañca which comes out in the Sutta Nipāta:

“Anuvicca papañca-nāmarūpa
ajjhattām bahiddhā ca rogamūla
sabbarogamūlabandhanā pamutto
anuvicdo tādi pavuccate tathattā” (Sn. v. 530)

“He who pierced the delusion (arising from) nāma-rūpa, (the psycho-physicality) of the existent being, internally and externally-the root of “sickness” - he is liberated from all roots and bonds of “sickness”. Such a one may be called one who has known reality.”

Sarachchandra points to the usage of the compound word papañca-nāmarūpa along with ajjhattam and bahiddhā and explains:

“.... the term nāmarūpa meant both the empirical individual, made up of physiological and psychological factors, as well as the entire world including himself, components of mind and matter. The belief that the normal thinking consciousness is the real individual is the internal sickness (ajjhattam). It is for this thinking consciousness that an external world exists. The idea of the external world is therefore, the sickness outside, (bahiddhā). He who has pierced the veil (anuvicca) is called the (anuvicita), for he has attained to the true understanding of things as they really are tathattā”

The stanza quoted above is a succinct expression of the deep doctrine of anatta. The individual falls into the error of delusion when he looks upon himself (nāma-rūpa) as a permanent entity distinct from the external world, when, in actual fact, the perceiving individual and the world perceived, both arise from papañca mind construct, based on the notion of an “I”.

Buddhism therefore considers that cognitive knowledge falls short of the correct knowledge of actual reality as that vision arising from sensory perception is corrupted by papañca which results in māya, which obstructs insight into the true nature of things as they have come to be (yathābhūtañānaddassana).

It should be noted that māya in Buddhism differs from the meaning of māya found in the monist philosophy. What is meant in the monist idea of māya found in the later vedanta doctrines is the unreality of the phenomenal world as contrasted with the one reality, the one unity, the Brahman-atman. In early Buddhism what is meant by māya is the faulty vision that clouds the unsubstantial nature of existence, the faulty perception that veils the absence of a permanent abiding reality in the empirical world. The correct view, according to Buddhism, is seeing the empirical world as anicca, asārato and suññato (impermanence) absence of an abiding essence and the emptiness in all phenomena of any underlying substratum.

It is interesting to note that in the Rgveda, the word māya was used in the simple sense of guile, deceit, hypocrisy etc., as the word was used in certain Buddhist suttas as we have seen. But in the Vedanta it is applied to the illusion of the multiplicity of the empirical universe produced by ignorance (avidya), when in reality, so they asset, there is only the One, the Brahman-atman.3 There is a foreshadowing of the vedantic meaning in certain stanzas of the Rgveda in the words “ekam sad viprā bahiddhā vadanti”. That which is One the sages call by many names”. (Rgveda CLXVI - 46). This concept comes to the fore in the Upanishads with the development of the pantheistic doctrine of

the all pervading atman which was believed to be the only reality. This resulted in the view of the empirical world as unreal which was considered mâyâ-illusion. The pantheistic view finally developed into the philosophy of non duality which regarded the phenomenal world not as an aspect of the Brahman-atman but as absolutely unreal like a mirage.

These concepts of course differ categorically from the Buddhist philosophic usage of the word mâyâ. A permanent abiding substratum in the phenomenal world and a permanent ground of all being are completely antithetical to early Buddhism. Thus the poet-philosophers of the Buddhist texts may well say:

"Aniccato sabbabhavam vipassam
ādittato' haṃ samatehi yutto
suññato asārato avekkamāno"

Suvimalee Karunaratna

MĀYĀ(2) See MAHĀMĀYĀ

MEDICINE See BHESAJJA

MEDITATION. The English word meditate is derived from the Latin meditari which connotes deep, continued reflection or a concentrated dwelling in thought. The Oxford English Dictionary gives the meaning "continuous thought or musing upon one subject or series of subjects; serious and sustained reflection or mental contemplation" for the word meditation.1 In the context of religious discourse meditation means "That kind of devotional exercise which consists in the continuous application of the mind to the contemplation of some religious truths, mystery, or object of reverence, in order that the soul may increase in love of God and holiness of life."2 These connotations of the English word meditation are compatible with the monotheistic traditions of Judaism, Christianity and Islam. In these traditions meditation is considered preparatory and contributory to the achievement of contemplation. "Meditation is usually rumination on a particular religious subject, while contemplation is a direct intuitive seeing using spiritual faculties beyond discursive thought and ratiocination."

The English term 'meditation' is often used with reference to Buddhism as the equivalent of the Pali term bhāvanā. Therefore, in any discussion of Buddhist meditation it is considered appropriate to clarify the Buddhist concept of bhāvanā. It is important to point out some significant differences between the connotations of the English term 'meditation' and the Buddhist term bhāvanā in order to clarify the unique features of the Buddhist theory and practice of mental culture. Despite the widespread belief that meditation and bhāvanā are the same, from the Buddhist point of view, meditation is rather a partial requisite of bhāvanā than its exact equivalent. Most contemporary writings on Buddhist meditation, however, do not recognize any such distinction. Greater clarity regarding this issue can be gained by a closer examination of the family of Buddhist concepts usually associated with the Buddhist theory of mental culture, placing it in the context of the general Indian contemplative traditions of mental or spiritual development. The theory and practice of Buddhist meditation itself cannot be said to be uniform, for, during the long history of Buddhism, numerous alternative theories, methods and practices have developed within the different Buddhist traditions. All of them attempt in some way to relate these theories, methods and practices to the goals and objectives of the teachings of Gotama Buddha, the founder of the Buddhist teaching. There is reason to believe that the original message of the Buddha regarding methods of mental culture could be reconstructed by a study of the Buddhist scriptural sources that belong to a period preceding the development of sectarian Buddhist teachings. The Buddhist teachings contained in the Sutta literature preserved in a large part of the texts of the Theravāda canon in the Pali language, seem to correspond closely with the teachings contained in the āgama literature preserved in Chinese in the four main āgama collections and other minor works. Both literary sources appear to contain Buddhist ideas belonging to a period in which the Buddhist tradition was not affected by sectarian division. Therefore, this body of scriptures can serve as the principal source of information for a reconstruction of the original teachings of the Buddha on the subject of meditation and mental culture. In the discussion that follows there will be heavy dependence

2. Ibid.
on the teachings preserved in the Sutta Pitaka of the Pali canon for the elucidation of the Buddhist concept of meditation.

A considerable part of the Buddhist theory and practice concerning meditation and mind development is related to methods of training the mind resulting in a transformation of consciousness. The final goal of all such exercises is liberation from the miseries of existence. Buddhism traces the miseries of existence to two fundamental causes, delusion (avijja) and craving (taṇhā). Human beings cease to produce misery for themselves and others when delusion and craving are eradicated and a profound self-transformation is brought about in respect of the cognitive and emotive structures of personality. The term bhāvanā has a wider connotation than meditation and signifies all aspects of personality development or cultivation. The development or cultivation envisaged is not confined to the development of the mind or the intellect, but to all aspects of personality including speech and bodily action. Bhāvanā involves an active, willful, and deliberate exercise that seeks to alter the unreflective and mechanical flow of mental, verbal and bodily behaviour. According to the Buddhist theory of human behaviour, causal inter-connections can be observed between the mental, verbal and bodily processes of personality. Inner mental states and processes determine overt verbal and bodily activity and overt bodily and verbal activity in turn condition inner mental states and processes. The Buddhist scheme of meditative transformation of personality has been developed with due recognition of these causal connections.

The term 'meditation' applies to the various psychological or mental devices adopted to develop or cultivate the mental, verbal and bodily aspects of personality with a view to attaining liberation from dukkha. All such development of cultivation may be referred to as bhāvanā, implying that the scope of the term bhāvanā is wider than that of meditation. The cultivation of the threefold training, sīla (moral practices), samādhi (mental composure), and paññā (insight), the eight factors of the noble path, the four bases of psychic power (cattāro iddhipādā), the four types of ethical endeavour (cattāro sammappadhānā), the five faculties (pañcindriya), the five powers (pañcabala) or the seven factors of enlightenment (sattabojjhaṅga) are instance in which a person may be engaged in the activity referred to as bhāvanā. All these qualities to be developed are later enumerated as the thirty seven enlightenment qualities (bodhipakkhiyā dhammā). The development of some of these qualities may be considered to involve meditation, whereas others may involve the application of bodily or verbal restraints or the cultivation of wholesome bodily or verbal habits. Contemplative or meditative practices apply mainly to the samādhi and the paññā stages of the threefold training. The sīla stage of the practice is considered in Buddhism as an indispensable preliminary in one's progression to the next two stages of the path of training. Samādhi effects an initial and tentative transformation of consciousness at the emotive level, facilitating the development of paññā, which occurs at the cognitive level. Paññā stabilizes the gains of samādhi bringing about ethical perfection, and delivering the individual from all samsāric misery which amounts to a fulfillment of the ultimate goal of the Buddhist way of life.

According to the early Buddhist scriptures, the Buddha claimed to have attained the incomparable full enlightenment (anuttaram sammasambodhī) only when he fully comprehended the Four Noble Truths by his own higher knowledge without relying on the authority of a sacred revelation. He also maintained that what he had realized could not be understood by means of rational speculation. Like in the case of some of his contemporaries, the foundation of the higher life (brahmacariya) that the Buddha taught was claimed to rest on certain truths realized by his own higher insight. Buddhism emerged at a time when various world-views were being propounded and action-guiding principles of life were being laid down by a host of teachers who claimed to have had insight into ultimate reality and the highest good of human beings. The teachers who subscribed to the Brahmanical tradition believed that the principles of truth and goodness were to be known in terms of what was laid down in the sacred Vedic scriptures (anussavīkā). There was also a class of teachers who believed that such principles should be sought by the exercise of the rational powers of the intellect (rakkhīvāmsī). A third class of teachers claimed that they obtained extra-ordinary insight into truths not contained in the sacred revealed traditions by the ex-
ercise of their own higher powers of cognition (pubbe anussuttesu dharmesu sāmam yeva dharmam abhiññāya).7 The Pali Nikāyas also refer to sixty-two world-views, among which are mentioned several theories based on some kind of meditative training of the mind.8 The Buddha claimed to belong to the class of thinkers who based their theories on meditative experience. This shows that Buddhism, like some of the other Indian systems of thought, recognized the validity of judgements made regarding the nature of reality on the basis of meditative training of the mind.9 Judgements made by the untrained mind are considered to distort the nature of reality because they are affected by numerous unwholesome emotions, mental biases and prejudices. Meditative training of the mind is considered necessary in order to overcome the perversion of perceptions, views and thoughts that occur under the ordinary untrained condition. The untrained mind is affected by hindrances (nivarana), and in order to see things as they really come to be in accordance with the principle of conditioned arising (paticecasamuppāda), the mind should be purified of the hindrances and defilements (upakkilesa) that affect unbiased and clear comprehension.

Techniques of meditative training of the mind, and rapturous experiences attained by such training appear to have been known in India before the emergence of Buddhism. According to the Pali canonical scriptures, the Buddha, in his quest for the highest good, and emancipation from the ills of existence approached renowned teachers of such techniques who lived within a very short time the rapturous states of mind. Having applied himself rigorously to the contemplative practices taught by them, he attained a state of mental composure, within which they had certain perceptions associated with the meditative development of the mind (abhisaññāniruddha).10 The Buddhist claim is that the Buddha made a distinctive contribution in the history of Indian thought to the theory of meditation and its ultimate objectives. This contribution could be elucidated in terms of the Buddhist distinction between tranquility meditation (samatha) and insight meditation (vipassanā).

It is reasonable to assume that the different stages of tranquility (samatha) meditation mentioned in the Buddhist canonical literature were a result of a development and systematization of the meditative techniques that were already in existence in pre-Buddhist ones, the Buddha appears to have radically modified the theory and practice of meditation in accordance with his own view of the nature of reality and his distinct goals and objectives. The Buddha was not in favour of using the meditative experience in order to construct metaphysical theories about the nature of reality. According to the Brahmajāla Sutta, some teachers during the Buddha's time attempted to derive answers to certain metaphysical questions left aside

7. Ibid. Also see K. N. Jayatilleke, Early Buddhist Theory of Knowledge (George Allen and Unwin Ltd. p. 171.
8. In Dighanikāya Vol. I, p. 22 for instance, it is said that some recluses and Brahmans (samañabrāhmaṇa), by means of effort, zeal and endavour and proper contemplative direction of the mind (atappaṁ anvāya padhāraṁ anvāya aruyogaṁ anvāya satiṁnaṁanasiṅkaranam anvāya) attained a state of mental composure, within which they had certain perceptions about the nature of reality.
9. This however, does not imply that the Buddha did not think that meditative experiences could sometimes be misinterpreted resulting in erroneous conclusions.
10. This is evident from the account in the Ariyapariyesana Sutta where the Buddha mentions how he followed the practices of the two teachers Alarakālāma, under whose guidance he attained the rapturous experience of the sphere of nothingness (aikiṁcānāyataana) and Uddakarāmaputta, under whose guidance he attained the rapturous experience of the sphere of neither consciousness nor unconsciousness (nevasaṁānānāsānāyataana) - See Majjhimanikāya Vol. I, p. 164.
11. See Dighanikāya Vol. I, p. 63ff (Sāmaññaphalasutta) for a full account.
by the Buddha as unanswerable by means of meditative experience. From the fact that they had a meditative experience of a world, which is finite or infinite, they concluded that the world is really finite or infinite. Reference is also made to persons who were able to develop certain forms of supercognition like the ability to remember their previous existences, and on the ground of such experiences, concluded that there is an enduring self (atta), which is distinguishable from the body that perishes. The Buddha considered the construction of such metaphysical views as an abuse of meditative experience. According to him such views are a consequence of misdescribing one’s experience due to one’s enthusiasm to affirm certain dogmatic positions regarding the ultimate nature of the universe. Buddhism does not seek to attain through meditation, insight into a different order of reality. What it seeks to attain is insight into the characteristics of this very empirical world of mind and matter, without being duped into a perverted perception of that world as consisting of the characteristics of permanence (nicca), happiness (sukha), and enduring substantial reality of the nature erroneously attributed to the metaphysical Self (atta). Buddhist meditation does not aim at knowing the reality of God, Self or Brahma, or knowing some extra-empirical transcendental reality in a different realm of Being, but seeks to liberate the mind from greed, hatred and delusion that give rise to the defilements or influxes (āsava) that produce misery (dukkha).

The theory and practice of Buddhist meditation is closely linked to the Buddhist concept of Dependent Origination, which according to the Buddha, is the philosophical middle way. The philosophical middle way of the Buddha rejected both eternalism (sassatavāda) and annihilationism (uccheda vāda). The Buddha considered both these views about the nature of reality as extremes. The first was sometimes expressed as the view that ‘everything exists’ (sabbam attihī) and the second as the view that nothing exists (sabbam naththi). Those who adhered to the first view were engaged in the search for eternal essences. What they pursued in their practice of meditation was the liberation of the eternal Self from its bondage to the transient body or the merging of the individual self with the eternal cosmic Self by rejecting the illusion of duality and realizing the non-dual nature of reality. The second was sometimes expressed as the view that ‘nothing exists’ (sabbam naththi). Those who held the latter did not recognize the continuity of things depending on causal conditions. Both views entailed a philosophical position about the nature of a person. According to the first view, the real person is an eternal and indestructible essence. One form of this view subscribed to a strict dualism of body and soul as in the Sankhya system of philosophy. According to the second view, the person is nothing but the body. When the body perishes the person is also annihilated. The Buddha described the first as the view that the body is a reality which is distinguishable from the soul (ātī, jīva, ațī, sarīra) and the second as the view that the body is identical with the soul (tām jīva, tam sarīra). According to the Buddha, both these erroneous views are consequences of being tied to attachment, clinging and dogmatism (upāyupādañābinivesavānibhado). The right view of the nature of reality can be expressed only in terms of the principle of dependent arising (paticcasamuppāda). Buddhist meditation aims at insight into this principle. What Buddhism refers to as the insight into conditionality of phenomena and their dependent arising (idappaccayaṭā paticcasam uppādo), insight into the three characteristics of existence, (anicca, dukkha and anatta) and insight into the four noble truths (dukkha, samudaya, nirodha and magga) are essentially the same kind of insight.

The Buddhist tradition grants that methods of attaining altered states of consciousness by reaching meditative raptures were known among pre-Buddhist teachers, but denies that the highest good can be attained by experiencing such meditative raptures alone. They may involve highly blissful experiences but the incorruptibility of the mind of a person who comes out of those rapturous states of meditative experience is not assured. They are temporary experiences of calm, bliss and happiness that can be enjoyed by a person who has developed the skill to attain them. This is supposed to be the reason why the Buddha, in his

13. It is said that some recluse and brahmans, attained a certain concentrated and rapturous state of mind consequent upon a deliberate direction of the mind with resolute effort (ātappaṁ anvāya padhānaṁ anvāya anuvaya anvāya appamādaṁ anvāya sammā manasikāraṁ anvāya tathāriṇaṁ cetosanādhīṁ phusati yathā smāhite citte antasaṅhi lokasmiṁ viharati) Ibid. Vol. I, p. 22.
search for the highest good, was not satisfied with the meditative attainments that he mastered at the two teachers Āḷāra Kālāma and Uddaka Rāmaputta. He left those teachers and attempted to experiment on his own regarding the possibility of attaining full liberation, so that one is assured of not reverting to a corruptible state of mind. According to the Buddhist tradition, the Buddha made an original contribution by utilizing the mental development secured by means of higher levels of mental composure (samādhi) to attain insight resulting in the eradication of all corruptions of the mind. In order to attain the Buddhist goal of liberation it is necessary to practice methods of mental training that lead to tranquility (samatha) as well as methods of mental training that led to insight (vipassanā). Although the two may in principle be practiced separately, the Buddhist theory draws attention to the greatly beneficial effects of practicing them side by side in such a way that they mutually support each other. Insight is facilitated by a mind that is free from the disturbances of the unwholesome emotions. The mental prejudices and biases have to be removed for the proper direction of the mind of insight. For this purpose a high degree of equanimity (upekkhā) and mindfulness (sati) have to be established. Tranquility meditation fulfills this task.

The Poṭṭhapāda and the Sāmaññaphala Suttas of the Dīghanikāya contain two significant accounts of the meditative process. The Poṭṭhapāda Sutta account gives the progressive stages of samatha beginning with the first meditative rapture (pāṭhamajjhāna) and ending with the highest attainment of meditative rapture known to the Buddhist system of meditation, namely, the cessation of perception and sensation (saññavedayitanirodha). The Sāmaññaphala Sutta account initially introduces the preliminary training of conduct necessary for someone who wishes to attain the higher fruits of meditation in the life of a recluse, and subsequently goes on to describe the successive meditative raptures up to the fourth jhāna. The characteristic of the fourth jhāna is that, with its attainment, equanimity and mindfulness get firmly established. The Samannaphala Sutta states that at this point in the meditative process the mind becomes composed, pure, clean, stainless, free from defilements, soft, pliable and steady, enabling a person to direct it for the purpose of gaining insight.16 The Sāmaññaphala Sutta does not mention the four formless attainments (arūpasamāpatti) and the attainment of cessation (niruddha) mentioned elsewhere in the Pali canonical sources. The Poṭṭhapāda Sutta too, like the Sāmaññaphala Sutta describes the meditative process from the first jhāna to the fourth jhāna, but does not speak of directing the mind to insight after the attainment of the fourth jhāna. Instead it describes how one could progress to the formless attainments and finally attain the cessation of perception altogether.

The objective of the Poṭṭhapāda Sutta account is to show that the various progressive degrees of subtlety acquired in perceptual experience in the meditative process does not enable us to reach the experience of an absolutely subtle and eternal essence. When one has reached the highest degree of subtlety the option is open to reach the cessation of perceptual experience altogether. This Buddhist view of the nature of meditative experience is in accordance with the Buddhist denial of eternal essences and its rejection of all eternalist theories of the nature of reality. A clear contrast between the objectives of pre-Buddhist and the Buddhist systems of meditation can be noted here. In the pre-Buddhist systems of meditation the attempt was to discover through the application of meditative techniques some subtle eternal reality. Buddhism, however, maintains that no matter how subtle a meditative experience may be, as long as it is conditioned, it cannot be eternal. Buddhism warns against the attachment and clinging that might develop towards subtle meditative experiences, for they can only prolong the process of becoming resulting in the continued arising of misery. Thus, according to the Buddhist theory, meditation is not a means by which one could experience some eternal essence as the reality. Meditation is used in Buddhism as a means of gaining insight into impermanence, unsatisfactoriness and soullessness of all phenomena resulting in the calming of all passions or the destruction of the threefold craving, craving for sense pleasures (kāmanihā), craving for existence (bhavatānīhā), and craving for annihilation (vibhavatānīhā).

The objective of the eternalist philosophers who followed non-Buddhist systems of meditation was to attain a certain state of deep samādhi, which they described as the integration of the individual soul with the Supreme Being or the cosmic Spirit. The Yoga tradition of India systematized by Patañjali makes evident the marked distinction between the aim of Buddhist meditation and meditation in the non-Buddhist

metaphysical systems. The Yoga philosophy of Patañjali that derived its metaphysical basis from the Sankhya doctrines considered that the ignorance that leads to suffering consists of the confusion of the spirit with our psychomental experience. Yoga philosophy maintained that "it should be a metaphysical knowledge that supervenes to end this (metaphysical) ignorance. This metaphysical knowledge leads the disciple to the threshold of illumination, that is, to the true "Self." In the early Buddhist scriptures the term Yoga does not have any metaphysical connotation, but simply means 'effort' or 'application'. In the Indian philosophical school that came to be known as Yoga, it was given the meaning "the union of the living self with the supreme self". There are similarities between the early Buddhist teachings on meditation and classical Indian Yoga in respect of methods of calming the mind and attaining one-pointedness and deep levels of mental composure. Despite these similarities, early Buddhism radically differs from the latter in respect of the ultimate goal of the practice of meditation.

The eternalist metaphysicians who followed non-Buddhist systems of meditation considered the attainment of a certain state of deep samādhi, described as an integration of the individual soul with the Supreme Being or the cosmic Spirit as the sole aim of meditation. The Buddha recognized the immensely blissful experience of deep states of meditative rapture involving the loss of the sense of duality of subject and object. Yet, from the Buddha's point of view such experience was considered to be within the sphere of the conditioned and dependenty arisen. Due to the latent craving for survival (bhavatānā) that still persists in a subtle form, one becomes perturbed by the thought that the self might be annihilated. Therefore, one tends to interpret the blissful experience in such meditative states in terms of the presupposed metaphysical self. Buddhism does not presuppose such a metaphysical self. Consequently, the question of the annihilation of the self also does not arise. The stillness of mind (samādhi) attained by means of tranquility meditation is considered in Buddhism as a prerequisite for the skill with which the three characteristics of empirical reality, transience (anicca), unsatisfactoriness (dukkha) and selflessness (anatta) are to be observed. When the stilled mind is harnessed to see the rising and falling nature of all mental and material components of the empirical world, including the experiences gained in deep states of meditative rapture, knowledge that leads to the eradication of the skandhas (āsavakkhayānaṇa) or emancipating insight (vimuttiñānadassana) arise. Thus, Buddhist meditation considers insight (pannā) and samādhi, as its final goal. The Buddha advocated disciples to cultivate samādhi because when the mind is well composed (samāhito) one sees things as they have really come to be (yathābhūtānampassati). Thus samādhi is used in Buddhism as an effective instrument to gain insight.

The first four meditative attainments, described as the first, second, third and the fourth jhāna, represent progressive stages of refinement of consciousness through a willful direction of the mind. The first jhāna represents a transcendence of the grossest form of consciousness consisting of sensuous desires (kāma) and unwholesome states of mind (pāpakā akusala dharmā) experienced by most ordinary beings in their waking life. With the attainment of the first jhāna the meditator experiences joy and ease (viveka jāmaṭi .piṭisukhaṇ) that is born of such transcendence. However, at this stage the mind does not become fully composed because of the activity of applied and sustained thought (vitakka vicāra). At the stage of the second jhāna, the mind is freed from applied and sustained thought and the meditator experiences joy and ease born of perfect composure and one-pointedness of mind (samādhiyam cetaso ekodiḥāvān). After this stage the meditator attempts to rid the mind of the attachment to joy (pītiya ca virāgā) as well as to cultivate equanimity and mindfulness. Therefore, the meditator can be described at this stage of meditative culture as a person who is equanimous, mindful and abiding in ease (upekkhako satimā sukhavahāri). Finally, the meditator transcends even any psychological tie with ease and disease, happiness and unhappiness (sukhassa ca pahānā dukkha sa ca pahānā... somanassa domanassānaṃ atthaṅgamā) and attains an immensely heightened stage of purity of mind consisting of equa-
nimity and mindfulness (upekkhāsatipārisuddhiṃ). It is at this stage that the mind is considered to be fully prepared to move in the direction of higher knowledge.

Other than those mentioned in connection with the Sāmaññaphala Sutta and the Poṭṭhāpāda Sutta, there are scattered references in the Pali Nikāyas to various samatha meditation practices and the meditative experiences acquired through them. Frequent mention is made of the four Brahmavihāra. As stated in these instances, the four Brahmavihāra, loving kindness (mettā), sympathy (karunā), sympathetic joy (muditā) and equanimity (upekkhā) are considered as wholesome states of mind to be meditatively cultivated in the form of thoughts of loving kindness etc. In this practice the meditator is required to willfully generate these thoughts within one's own mind and spread them in all directions over the entire universe in an unrestricted and unbounded manner. The purpose of adopting these different subjects as the basis for meditation practice is the elimination of the unwholesome qualities of the mind and the cultivation of wholesome qualities. The cultivation of mettā brahmavihāra can be effectively applied for the elimination of hatred and the development of loving kindness. The Dvedhāvitakka Sutta of the Majjhimanikāya contains the rationale for the choice of such subjects for meditation. In this Sutta the Buddha speaks of his own experience of the way in which an inclination of the mind is produced by the preoccupation of the mind with a particular type of thought activity (vitakka). A person who constantly entertains thoughts of ill-will makes such thoughts habitual leading to the development of ill-will as a dominant character trait. Therefore, the Buddhist meditation tradition has enumerated numerous topics considered to be suitable for the purpose of eliminating unwholesome psychological traits. The end in view is purification of the mind by removing greed, hatred and delusion. The topics are also chosen and recommended in accordance with the dominant character traits of the person concerned. The Buddha has been credited in the Buddhist tradition with an exceptional insight into the most suitable medita-

24. Anguttaranikāya Vol. IV, p. 357. See also the reference to these stages of the dead body in the Satipaññhānasutta.
MEDITATION

Meditation of beings, the overcoming of sorrow and lamentation, the disappearance of dis-ease (dukkha) and psychological depression, the attainment of understanding and the realization of Nibbāna. The emphasis in the Sutta is not on the attainment of any meditative rapture, but on the active harnessing of the mind to observe body and mind and penetrate into the realities, the characteristics and the processes connected with them. The practice involves tremendous mental effort (ātāpi) and full alertness or awareness (sampajāna), and a mind free from the influences of attachment and repulsion (vinayeya loke abhijhā domanassam). Four forms of intense observation called anupassanā are proposed in the Sutta.

The first form of intense observation applies to the body and bodily processes (kāye kāyānupassi). The meditator is required to begin this practice with the intense observation of the flow of the in-breath and the out-breath, which is a bodily activity that unceasingly occurs in every living being. The body is to be observed in all its movements and postures with perfect mindfulness and awareness without leaving any room for clinging or attachment to any observed component. When mindfulness is firmly established the meditator is required to do a mental dissection of all the anatomical parts of the body bringing to consciousness all its concealed impurities. The meditator is also required to imaginatively contemplate the unsatisfactory nature of one's own body in comparison with the body of a dead person undergoing different stages of putrefaction. This intense attentive observation of the nature of the body is aimed at gaining insight into the way in which the body and its processes arise and pass away (vayadhammānupassi vā kāyasmin viharati samudayadhammānupassi vā kāyasmin viharati).

The second intense observation to be made is of the flow of sensations, pleasurable, painful and neutral (vedanāsu vedanānupassi). Mindfulness should be firmly established in such a way that every moment of change in the mode of sensation is clearly observed. Here too, the attempt should be confined to an act of purely knowing what is going on without any tendency to produce attachment or clinging to any element of the process (yāvadeva niñamatiyāya patissati anissito ca viharati na ca kiñci loke upādiyati).

The third intense observation concerns the flow of different modes of thought such as one that is lustful, free from lust, hateful, free from hatred, delusive, free from delusion and so on (citte cittānupassi). The purpose is the same as the above, leading to an understanding of the fickle nature of the mind as well as the dependent arising of thought processes.

The fourth intense observation is to be carried out by the meditator regarding the various mental and material categories identified in the Buddhist analysis of reality consisting of mind and matter (dhammesu dhammānupassi). This can be considered as the point at which one reaches the culmination of the practice by understanding thoroughly the mental hindrances, the five aggregates of personality, the six sense spheres and their respective objects, the psychological ties that arise due to the interaction between the senses and their objects, the presence or absence of the factors of enlightenment within one's self, and finally the four noble truths.

A striking feature of this account of insight meditation is that it does not have reference to any mystical or metaphysical phenomena. The method adopted is entirely psychological and therapeutic. It involves the close, detached observation of the whole of mental and material reality. The final outcome is insight that frees the mind from all defilements thereby putting a final end to the process of dukkha. Buddhaghosa deals with vipassanā under the name of paññabhāvanā interpreting the Buddhist path of sīla, samādhi and pañña in terms of the seven purifications mentioned in the Majjhimanikāya.27

In the later Theravāda tradition systematized mainly in the Visuddhimagga of Buddhaghosa, new concepts and new technical terms relating to meditation were introduced. Kammathāna for instance is such a term used to denote both the subjects of meditation and the methods of practising them. The term ārammana is used in the sense of an object of concentration in meditation. The concept of nimitta acquired great significance in Buddhaghosa’s description of meditative experience. Other terms like parikammannimitta, denoting the object selected for meditation such as the kasina devise, uggahanimitta, denoting a mental image grasped out of the former, and paṭibhāganimitta denoting an abstract idea or after image of the object that develops after continued practice, have been introduced by Buddhaghosa. They are also related to other new terms that describe the progress of mental composure (samādhi).

Parikammasamādhi is explained as preliminary concentration. The uggahanimitta is said to appear under a developed stage of concentration called upacārasamādhi (access concentration). The concentration of the mind known as appanā samādhi is supported by the pātibhāganimitta. According to the commentarial account it is appanā samādhi that leads up to the state of jhāna. The commentarial literature gives more elaborate techniques of practising meditation making use of new technical terminology, but all these techniques developed within the Theravāda tradition continued to remain within the domain of the psychological, being free from mythological and mystical associations. The emphasis on insight leading to the eradication of the roots of evil and the attainment of a final end to dukkha continued to be the ultimate goal.

In Mahāyāna Buddhism the whole discipline of meditation appears to have been radically restructured in the light of new Mahāyāna doctrines. With the emphasis of the Bodhisattva ideal in the Mahāyāna as opposed to the Arahant ideal of early Buddhism, the goal of Mahāyāna practice did not emphasize the urgency of self purification and the attainment of freedom from samsāric suffering. Tibetan Buddhism that absorbed the principles of Tantra introduced many new techniques as ritual, mythical, mystical or magical aids for the ultimate realization. It combined techniques of visualization and mantra repetition with the practice of meditation. Representations of various demons, gods, Buddhas, and Bodhisattvas were utilized as aids for mental culture. However, they were not considered as ultimately real, but as visualized forms of the basic psychic forces good and bad, within the mediator himself or herself. The Tibetan methods, combined with other visualizations, encouraged the mediator to cultivate the Buddha awareness within oneself by consciously visualizing the inclusion of the Buddha's characteristics into one's own person.

Later forms of Mahāyāna Buddhism that spread in China and Japan also introduced many innovations in the Buddhist practice of meditation. Although early Buddhism does not have any place for the grace of a deity for the achievement of salvation, the Pure-Land (Ching-tʻu) school of Buddhism practiced the repeated chanting of the name of Amitābha as an effective method of realizing the goal through divine grace. Chan (Zen) Buddhism, however, like early Buddhism emphasized personal enlightenment through intense and rigorous meditation. Various new devices like the Koan that produces instant enlightenment were introduced in the Zen tradition. Interchanges between meditation masters and their pupils were called Koan. Koan took the form of a puzzle introduced by the teacher to the student as an aid to the final intuitive understanding of ultimate truth. Rinzai meditation developed the utilization of Koan in novel and highly imaginative ways with the aim of unifying one's own mind with the Buddha mind, which was considered to be the ultimate goal of the practice.

Buddhist meditation has now become part of the global spiritual culture due to the close interaction between Eastern and Western spirituality. Numerous forms of meditation belonging to both Theravāda and Mahāyāna appear to draw increasingly many enthusiasts, young and old, who wish to experiment with the practice in their own mental lives. In Eastern as well as Western countries great centres of Buddhist meditation seem to be growing, and there is reason to believe that at least some of these centres, effectively cater to the needs of spiritual seekers.

P. D. Premasiri

MENANDER See MILINDA

MERIT See PUṈA

METTĀ is derived from the root mid to love, and the word mitra (Vedic) or mita (Pali) friend. It denotes love, amiety, sympathy, friendliness and active interest in others.

The word mettā occurs frequently in Pali texts in connection with the path to emancipation. Thus, the following phrases are very common: Mettā sahaṅathena cetasā (with a heart full of love) Mettā karoti (to be friendly or to sympathise with) and "metta cittām" (with a kindly thought) "mettā vihārim" (abiding in kindliness) and "mettamsa" (being sympathetic; showing love towards).

An interesting meaning of mettā is given in the Sutta Nipāta Āṭṭhakathā as hita - suka - upanaya - kāmata i.e. "desire of bringing welfare and good to one's fellowmen". Sutta Nipāta, stanza 73 states the following:

"Metta, upekkha, karuna, vimutti iisevamiino muditafica kale sabbena lokena aviriujjhamiino eko care khaggavisanakappo" 

"Love, equanimity, compassion, release. Pursue, and timely sympathetic joy, at odds with none in all the world fare on as lonely as a rhinoceros."

The mental state of mettā embraces all beings. Karunā embraces sufferers. Muditā is that state of mind which extends kindly thoughts to those who are happy and prosperous. Upekkhā includes in its embrace humanity whether pleasant or unpleasant, good or bad, lovely or ugly, loved or unloved.

The practice of Mettā Bhāvana has been advocated in many suttas as a stage in the path of deliverance. For instant, in the Udumbarika Sīhanāda Sutta, (D. III. 49-50) Nigrodha asks the Buddha, "In what way, Lord, does austerity win topmost rank and reach the pith?"

In reply, he is told that one should take upon oneself the fourfold restraints and sitting down in solitude, meditate, letting his mind fraught with love pervade one quarter of the world, and so, too, the second quarter, the third and the fourth. Thus the whole wide world above, below and everywhere should he continue to pervade with thoughts of loving kindness sublime, beyond measure, free from hatred and ill will. He should then do the same with karunā, muditā and upekkhā in turn.

"So ime pañca nīvarane pañhāya cetaso upakkilese paññāya dubbali-karaṇe mettā-sahagatena cetasā ekam disam pharitvā viharati, tathā dutiyam, thathā tatiyam, tatha catutthham. Iti uddham adho tiriyaṃ sabbadihi sabbattatāya sabbavantam lokaṃ mettā-sahagatena cetasā vipulena mahaggatena appamāṇena averena, avyāpajjhena pharitvā viharati..."

At D. III. 247, the following is categorically asserted: "Emancipation of the heart through love, brother, this is how you become, delivered from meleolence."

"Nissaraṇam h'etam āvuso vyāpādassa, yadidam mettā ceto-vimutti."

And in the Tevijja Sutta (D. I. 250 ff) the identical passage quoted above ends with the following words.

"Verily this, Vāsetṭha, is the way to a state of union with brahma."

"Ayaṃ pi kho Vāsettha brahmānaṃ sahavyatāya maggo."

The Buddha also pointed out in the Udumbarika Sīhanāda Sutta that meditation on mettā alone would not be enough to gain supreme insight. To do so one should, having pervaded the whole world with love-filled sublime state of mind, direct the mind to one's former births and then with a pure deva vision observe how beings come into existence and pass away according to their deeds. This is a reference to pubbenivasānuussati āna and cutuppapātā āna which, besides āsavakkhaya āna are the characteristics of an emancipated person. It is clear from this passage and other passages in the text that the cultivation of mettā, karunā, muditā, and upekkhā is a necessary means for the attainment of insight but does not constitute the goal of emancipation itself.

In the Anguttara Nikāya (A. V. 344) the following is stated:

"Then again, house fathers, a monk, by the calming down of the thoughts and directed and sustained, enters upon the second musing, that calming of the innerself, that one-pointedness of mind apart from thought directed and sustained that is born of mental balance, zestful and easeful, and having attained it abides therein. Likewise he attains the third musing.... the fourth musing.... He thus ponders: This fourth musing is just a higher product; it is produced by higher thought. Then he comes to know: Not even that which is a higher product... is impermanent, of a nature to end. Fixed on that he wins destruction of the cankers.... he passes utterly away, not to return (hither) from that world.

"This one condition, housefather, has been clearly enunciated by that Exalted one.... whereby a monk....wins the unsurpassed peace from bondage not yet won".

The practice of mettā bhāvana is seen as a means of suppressing the nīvaranas by cultivating the opposite of vyāpāda gradually eliminating them. For instance, in the Cakkavatti Sīhanāda Sutta (D. III) the Buddha asks: "What is the meaning of wealth for a brother (monk)? and the reply is the same as quoted above:
"Herein that a brother abides letting his mind fraught with love pervade one quarter of the world, and so; too, the second quarter, and so the third, and so the fourth. And thus the whole wide world, above, below, around and everywhere and altogether does he continue to pervade with love-burdened thought, abounding, sublime and beyond measure, free from hatred and ill will."

In the final passage in the sutta the Buddha asks, "And what is the meaning of power for a brother? Herein, that a brother by destruction of the deadly taints, enters into and abides in that untainted emancipation of mind and of insight, which he by himself has both known and realized. This is power for a brother".

Regarding the Brahmihiaras it is stated at D. III. 223 ff.

"Herein, brethren, a brother lets his mind pervade one quarter of the world with thoughts of love... pity... sympathy in joy... equanimity, and so the second quarter, and so the third and so the fourth. And thus the whole wide world, above, below, around and everywhere does he continue to pervade with heart... far-reaching, grown great and beyond measure, free from anger and ill-will..."

"Idhåvuso bhikkhu mettå sahagatena cetasa ekam disam pharitvå viharati, tathå dutiya tathå tatiya, tathå catuttathå. Iti uddham 'adhó tiriya saddhå sabbattå sabbavantå, lokåm metta-sahagathåna cetåsa vipulåna mahagatåna appamånaåna averena avyåpajjena pharitvå viharåti..."

And the Mahå Sudassana suttanta (D. II. 186) states: "Then, Ananda, the great king of glory went out from the chamber of the great complex, and entered the golden chamber and sat himself down on the silver couch. And he let his mind pervade one quarter of the world with thoughts of love; and so the second quarter, and so the third and so the fourth. And thus the whole wide world, above, below, around and everywhere does he continue to pervade with heart... far-reaching, grown great and beyond measure, free from the least trace of anger or ill-will..."

It is said that after this meditation, the great king of glory, Mahåsudassana, entered the world of Bhråma.

"So cattåro brahma-vihåre bhåvetvå käyassa bhedå param maråna brahmalokåpagå ahosi."

We note here that the great king of glory, Mahå Sudassana, did not attain Nibbåna after this practice of the brahmavihiaras but he did access the world of Bhråma. Sanyutta-Nikåya (S. V. 119) develops this argument further. Here it is stated that for the one who aspires for heart's release by cultivating the limb of wisdom that is mindfulness accompanied by goodwill (mettå) has as its highest attainment the beautiful for one who has not penetrated still higher:

"Subhaparamåham bhikkhave mettå cetovimuttim vadåmi. Idha pañåssa bhikkhuno uttaråvimuttim appatìvijjhanto."

Heart's release by cultivating mindfulness accompanied by compassion (karuåti) has, as it's highest aim the sphere of infinity of space of one who has not penetrated still further.

Heart's release by cultivating mindfulness accompanied by sympathy (mudåtå) has as its highest attainment the sphere of the infinity of consciousness for one who has not penetrated still further.

As for the heart's release by cultivating mindfulness accompanied by equanimity it has as its highest attainment that sphere of knowledge of the existence of nothing, for the one who has not penetrated still higher:

"Aïkaññåyatana paramåham bhikkhave upek;kå cetovimuttim vadåmi. Idha pañåssa bhikkhuno uttaråvimuttim appatìvijjhanto tî."

The limits attainable by cultivating the Brahmihiaras are apparently the above and do not go beyond to nevasaññåna-saññåyatana or the attainment of nibbåna.

In the Sångå-suttanta (D.III. 229) salient points of the doctrine are presented in numerical groupings as in the Ånguttara Nikåya. The concept of mettå is stated in several of these numerical categories. An example is the following:

"Cattåri dhamma-padåni: Anabhijjå dhamma-padåm, avyåpåda dhamma-padåm, sammå-sati dhamma-padåm, sammå-samådhi dhamma-padåm."

That is to say, four items of the doctrine (vital for the attainment of the highest goal) are: 1. Disinterestedness or non-attachment, 2. Amity 3. Perfect mindfulness and 4. Perfect concentration.
The plan of classifying important items of the doctrine in numerical groupings has a mnemonic objective. Here, the four chief points to remember (in connection with the attainment of the highest goal) are non-covetousness or śaga, non-hatred or mettā, mindfulness or sati and concentration or samādhi. The first two hindrances in the five hindrances (Nivaranaş) are kāmacchanda and vyāpāda the opposites of which are respectively, anabhijñā and avyāpāda. The opposites of the other three hindrances may be easily subsumed under sati and samādhi viz, thinamiddha, uddaccha kukkuccha and vicikicca. Avyāpāda or mettā is therefore a very vital element in the doctrine for suppressing and finally eliminating the five hindrances.

There are many other instances where mettā is mentioned in this sūta which sets itself out to highlight important points of the doctrine. Kindness and love are mentioned in the numerical category of two’s. (avihimsā ca soccyyika).

In the numerical category of the three’s the three good roots are mentioned viz.disinterestedness, love, intelligence (alobha kusala mūlaṁ, adosa kusala mulaṁ and amoha kusala mūlaṁ). Three kinds of good thoughts are of renunciation, of amity and of kindness:

(Tayo kusala-vitakkā: Nekkhamma - vitakko, Avyāpāda-vitakko, avihimsā- vitakko).

In the numerical group of sixes there is a significant reference to mettā where a full definition of its dimensions are given. It runs as follows:

“Six occasions of fraternal living. Herein friends, where a brother’s kindly act towards his fellow disciples has been attested, as wrought publicly and in private, that is an occasion of fraternity, causing affection and regard and conducing to concord, absence of strife, harmony, union. The second and third occasions are those of kindly speech and kind thoughts. In the next place, when a brother who has honestly, righteously, obtained gifts distributed these impartially among his fellow disciples and has everything in common with them, even to the contents of his alms-bowl, that is an occasion of fraternity, etc. Next when the character and the moral habit of a brother are without rupture or flaw, are consistently practised, unblemished making a man free, commended by the wise unperverted, and conducing to rapt concentration, and he, so virtuous dwells openly and privately among his fellow disciples that is an occasion of fraternity, caus-

ing affection and regard, and conducing to concord absence of strife harmony, union. Lastly, when a brother lives with his religious life (guided by) that ayan, safe guarding belief which leads him who so lives to the perfect destruction of sorrow, - when thus equipped lives among his fellow disciples publicly and privately, that is an occasion of fraternity....like the “foregoing”:

“Cha sāraṇiya dhammā. Idh’ āvuso bhikkhu mettaṁ kāya kammaṁ paccupaṭṭhitaṁ hoti sabrahmacārasī vī c’eva raho ca, ayaṁ pi, dhanno sāraṇiya piya karanō karaṇo saṅghāya avivādāya sāmaggīya ekābhāvāya samvattati. Pun ca param āvuso bhikkhu mettaṁ vacī-kammaṁ....mettaṁ mano-kammaṁ pacca-paṭṭhitam hoti sabrahmacārasī vī c’eva raho ca ayaṁ pi dhanno sāraṇiya piya-karaṇo karaṇo saṅghāya avivādāya sāmaggīya eki bhāvāya samvattati....”

Further evidence of the importance of Mettā in the Buddhist doctrine is supplied in the Anguttara-Nikāya (A. V. 209):

“Monks that Ariyan disciples thus freed from coveting, freed from malevolence, not bewildered but self-possessed and concentrated, with a heart possessed of amity, abides irradiating one quarter of the world, likewise the second, third and fourth quarters of the world; likewise above, below, across, everywhere, for all sorts and conditions he abides irradiating the whole world with a heart possessed of amity that is wide spreading grown great and boundless, free from enmity and untroubled.

“He comes to know thus: Formerly, this heart of mine was confined, it was not made to grow; but now my heart is boundless, well made to grow. More over what so ever deed belongs to a limited range, now it stays not in that range, it stands not still in that range.

“Now what think ye, monks? If from his youth up this young man should make the heart’s release by amity to grow, pray would he do any wicked deed?”

“Surely not, Sir”

“Pray, can any ill contact one who does no wicked deed?”

“Surely not Sir. How shall ill contact such a one?”
Indeed, monks, this heart’s release by amity must be made to grow whether by a woman or a man. A woman or a man cannot take this body and go away. This mortal being, monks, is but a between thoughts. He comes to know thus: I have done here with this body born of action, all of that must be left here. Then it will not follow me and come to be, hereafter.

Thus made to grow, monks, the heart’s release by amity conduces to no returing for the monk of insight won in this life, but he has not yet penetrated release beyond that’

In the Anguttara Nikāya (A. V. 382) is found a passage familiar to many Buddhists for it has been included in the Khuddhakāpatthā as a paritta:

“Monks, eleven advantages are to be looked for from the release of heart by the practice of amity, by making amity to grow! by making much of it, making amity a vehicle and basis, by persisting in it, by becoming familiar with it, by well establishing it. What are the eleven?

“One sleeps in comfort, one wakes in comfort one sees no evil dreams. He is dear to human beings; he is dear to non-human beings. Devas guard him; fire, poison or sword cannot harm him. He is able to concentrate quickly. His countenance is serene. At death he is not confused in mind and if he has not attained the highest in this life, he will be born in the Brahmalokagāra world.”

Mettā is regarded as a “maturing force” which brings into fruition merit. It directs the mind to a state of composure, the necessary foundation for the development of mindfulness and pātiñjata. Mettā has the result of overcoming one’s self-interest so that one may identify one’s interest with the interest of others, universally.

In the well-known Metta Sutta of the Sutta Nipāta the first three stanzas stipulate how one should conduct oneself if one wishes to attain that ultimate state of calm. These stanzas talk of sila or morality such as what is set out in the Sāmaññaphalasutta but in great brevity. In the last two lines of the third stanza is sounded the theme of the Metta Sutta, viz., “sabhe sati bhavantu sukhitathā” (May all beings be happy!).

The theme exfoliates in the following stanzas in great detail. Verses 49, 150, & 151 build up the practice of radiating metta to all beings:

As a mother would protect her only child with her own life so must one develop a heart of unbounded love Above, below and across Unhindered by hatred or enmity”.

The limit of the practice of mettabhāvanā is explained in stanza 151:

“Whether standing, sitting or lying down one should establish, free from torpor, a state of mindfulness and this it is said is living with Brahma”.

The view expressed here is that the highest attainable by the practice of the Mettā Bhāvanā is the Brahma world. It is in the last stanza (v. 151) that the goal unique to Buddha is stated.

“Having given up all views, virtuous and possessed of insight attachment to sense desires discarded for certainly, he will not return to another birth”.

This is the ultimate stage reached, i.e. Pañña which is bereft of views and desire for sensual existence. It is seen that the whole sutta is designed along the lines of sila, sāmaññī, pañña in a graduated unfolding of the path to Nibbāna for the saṅgha as well as the laity.

Stanza 507 of the Magha Sutta of the Sutta Nipāta states:

So vitarago pavineyya dosam mettām cittaṁ bhāvayam appamānaṁ rattimdham satam appamatto sabbhā disā pharathe appamānaṁqanṁ”. 

Mettā bhikkhave cetovimuttiya āsevitāya bhāvitāya bahulikatāya yānikatāya vathukatāya anuṭṭhitāya paricitāya susamāraddhāya ekādasānisaṁsā pātiñjikākatame ekādasa?

Sukham supati, sukhanā paribujjhati, na pāpakā supinānām pari sati, manusānānām piyohoti, amanussānām piyo hoti, devatā rakkhati, nāssā aggī va visam va satham va kamati, tuvaçaam cittaṁ samādhiyati, mukhavānno vippasidatā asammulho kālam karoti, uttarāṁ appaṭṭivijjanto brahmalokapagō hoti".

Stanza 507 of the Magha Sutta of the Sutta Nipāta states:

So vitarago pavineyya dosam mettām cittaṁ bhāvayam appamānaṁ rattimdham satam appamatto sabbhā disā pharathe appamānaṁqanṁ”.

Stanza 507 of the Magha Sutta of the Sutta Nipāta states:
“With passion gone and hate expelled
Let him in boundless measure then
Quicken a heart of amity
Everyday and night with zeal suppress
All quarters to infinitude

Suvimali Karunaratne

METTEYYA (MAITREYA), BALAÑGODA ANANDA, an erudite and highly venerated bhikkhu of Sri Lanka who passed away on the 18th July 1998 aged 102 years. What is significant about this bhikkhu is that he lived an active and illustrious life until his death.

He was born on the 25th of August, 1896, in Kirindigala, a hamlet in Balangoda in Sri Lanka. His parents were N. A. Methias Appuhami and B. Heenmenike, and as a child he was named William Punchi Mahattaya. His mother died two weeks after his birth and he was fostered thereafter by his mother’s elder sister.

He received his primary education at the Kumara Vidyalaya in Balangoda and was ordained as a novice at the age of 14 years, at the Sri Nandaramaya in Udumulla, Balangoda, and he was named as Balangoda Ananda Maitreya at the Ordination Ceremony.

From early childhood he evinced deep interest in learning classical Pali Buddhist texts in addition to learning Sanskrit and Sinhala literary works, and was a mature student of Buddhist Philosophy of the Southern and the Northern traditions even as a young bhikkhu.

In July 1916 he received his Higher Ordination (upasampadā).

Ananda Maitreya thero joined Ananda College in Colombo to follow a higher course of English for bhikkhus under the direction of P. de. S. Kularatne, one of the leading revivalists of Buddhist education in Sri Lanka in the 20th century. Kularatne recognized the extraordinary potentialities of this young bhikkhu and appointed him as a member of the teaching staff of Ananda College in 1922. When Nalanda College in Colombo was started subsequently he joined its staff as a teacher.

Ananda Maitreya thero started his Buddhist missionary career in Kerala in 1926 and subsequently he made many visits to the United Kingdom, France, Sweden, America, Canada, Malaysia, Burma, Japan, India and Thailand on invitation for Dhammadūta activities. He was the author of several books on Pali, Buddhism and Buddhist literature, the first of them being a life of the Buddha titled Sākyasinhavadiinaya.

In July 1930 he founded the Dharmānanda Pirivena. He was elevated to the position of Sanghanāyaka of the Sabaragamuwa Saddhammanavamsa Nikāya in 1954.

When the Vidyodaya University in Sri Lanka was founded in 1959, Ananda Maitreyathero was appointed Professor and Head of the Department of Mahāyāna Buddhism. He was elevated to the position of Dean in 1963 and in 1966 he was appointed as Vice-Chancellor of the same University.

Ananda Maitreya thero was elected in 1969 as the first President of the Unified Amarapura Mahā Sanghasabha. He was the recipient of two extremely rare distinctions as a bhikkhu conferred by the Government of Burma. He was one of the eminent Buddhist scholars selected to represent Sri Lanka in the Chaṭṭha Sangāyāna (the sixth Buddhist convocation) held in Burma for the 2500th Buddhajayanti in 1956. At the conclusion of the convocation Ananda Maitreya thero was conferred the title of Aggamahāpandita (Great Learned Scholar) by the Government of Burma and several years later he was decorated with the highest title conferred to a bhikkhu by the Government of Burma, namely Abhidhaja Mahā Raṭṭhaguru (The Supreme Spiritual Preceptor of the Land of Burma).
In recognition of Ananda Maitreya theru's extraordinary contribution to the world of learning the Vidyodaya University and the Vidyalankara University of Sri Lanka conferred on Ananda Maitreya theru the Degree of Doctor of Letters (D. Litt).

Five years before Ananda Maitreya Mahā theru passed away Ven. Itāpāne Dhammalankara theru, a pupil and a great admirer of the Mahā theru compiled and published a biography of the Mahā theru. The compiler of the biography in his foreword says: "From the 24th of March 1991 I had the opportunity of meeting the Mahā theru daily at his monastery for twenty days. Without grumbling or without showing any sign of fatigue the Mahā theru kept on describing incidents of his life from his childhood, for nearly five hours daily".

The biography of Ananda Maitreya Māha theru, running to over 208 pages and published in Sinhala as well as in English was first published in 1993 and up to the year 2001 ten editions of the biography have been published.

Chandra Wickramagamage

METTEYYA (MAITREYA), the future Buddha, the fifth and the last in the present kappa (Buw. XXXII, 21). At the present time the future Buddha is living in the Tusita deva-world (Mhv. XXXII, v. 73). There is a tradition that Nātha is the name of the future Buddha in the Tusita deva-world. It is suggested that Metteyya is the clan (gotta) name of the future Buddha (G. P. Malasekera DPPN. II. p. 661).

According to the Cakkavatti-sīhanāda-sutta, he will be born, when human beings will live to an age of eighty thousand years, in the city of Ketumati (present twenty days. Without grumbling or without showing any sign of fatigue the Mahā theru kept on describing incidents of his life from his childhood, for nearly five hours daily"

The Anāgatavamsa gives further particulars. It says that Metteyya will be born in a very eminent Brahman family and his personal name will be Ajita. For eighty thousand years he will live the household life in four places Sirivadāḍha, Vaḍhamāna, Siddhaththa and Candaka. Candra-mukhi will be his chief wife and Brahvacchādhanā his son. Having seen the four signs, while on his way to the park, he will become disgusted with household life and will spend a week practising austerities.

Then he will leave home accompanied by the four-fold army, his ministers, relatives and friends. At the head of this gathering will be eighty-four thousand khattiya maidens. Along with a large following he will go forth from home into homelessness. Once he has entered the homeless state eighty-four thousand learned brahmans, too, will enter into homelessness after him. Thereafter the two brothers Isidatta and Purāṇa, Jātimitta, Vijaya, Saddhika, Sudhanā, Saṅgha, Saṅghā, Saddhara, Sudatta, Yasavatī and Visākhā, each with eighty-four thousand companions, will become his followers. He will arrive at the bodhi-tree on the very same day that he leaves the household. On the same day he will attain Enlightenment and preach in Nāgavana. King Sankha will later ordain himself under this Buddha.

According to the Anāgatavamsa Metteyya's father will be Subrahmā, the chaplain to king Saṅkha, and mother will be Brahmavā. His chief disciples will be Asoka and Brahmadeva among monks, and Padum and Śukanā among nuns. Śiha will be his personal attendant. Sumana, Saṅgha, Yasavatī and Saṅghā will be the chief patrons. His bodhi-tree will be the Nāgatre. After the Buddha's parinītāna, his teachings will continue for one hundred and eighty thousand years (Anāgv. p. 46 ff.).

According to the Mahāvamsa king Kākavanṇapātissa and Vihāramahādevi, parents of Dūthagāmiṇi, will be Metteyya's parents. Dūthagāmiṇi himself will be his chief disciple and Saddhāṭissa his second disciple, while prince Sāli will be his son (Mhv. xxxii, v. 81 ff. Miln. p. 159).

The worship of bodhisatta Metteyya seems to have been popular in ancient Sri Lanka. Dhatuseṇa adorned his image with all the paraphernalia of a king and ordained a guard for it within a radius of seven yojanas (Mhv. xxxviii, v. 68).

Dappula I. made a statue in honour of Metteyya, fifteen cubits high (Mhv. xliv. v. 62). It is believed that Metteyya spends his time in the Tusita deva-world preaching the dharmma to the gods, and, in emulation of his example, king Kassapa V, used to recite the Abhidhamma in the assemblies of monks (Mhv. lii, v. 47). Parakkamabahu I. had three statues built in honour of Metteyya while Kittisirirājasiṁha erected one in the Rajatavihāra and another in the cave above it (Mhv. lxxiv, v. 75; v. 248, 259).
MICCHĀDIṬTHI

The belief in Metteyya, the future Buddha is widely prevalent among the Buddhists of Sri Lanka and almost all temples contain his statue. It is the common wish of all Buddhists that they may meet Metteyya Buddha, listen to his preaching and attain Nibbāna under him (J. vi. p. 594; MhvA. 687. DhsA. p. 430.) See PLATE LX.

S. K. Nanayakkara

MICCHĀDIṬTHI. In discussing the concept of Micchādiṭṭhi it behoves to discuss it in relation to Diṭṭhi (q. v.) and Sammādiṭṭhi (q. v.). Taken by itself the word diṭṭhi means a philosophical standpoint, religious belief or dogma, a heretical view, and is generally associated with a derogatory meaning. The Metta Sutta (Sn. p. 26, v. 152) says: A virtuous person should not be led by dogmatic views, but should be guided by insight into the true nature of things (diṭṭhihīca anupagamma silavā dassanena sampanno). From the Buddhist standpoint the viewing of phenomena in terms of anicca (tranciency), dukkha (unsatisfactory), anatta (souless) and paṭiccasamuppanna (dependently arising) constitute dassana (insight). The Paramatthaka Sutta of the Sutta Nipāta (Sn. p. 156, v. 796) says: Disputes in the world cannot be avoided when a person clings (dogmatically) to a view and calls it alone is the Truth and all else is false (Paramanti detṭhisu paribbasāno yaḥ uttarat kurute jantu loka, hīna ti aṁhe tato sabbamāhu, tasmā vivādāni aniṭṭhata).

Sammādiṭṭhi is the first limb of the Noble Eightfold Path in Buddhism. The Mahācattārisaka Sutta (M. III, 71-8) which contains a wide and detailed discussion of the Eightfold Path points out that there are two levels in sammādiṭṭhi, the mundane level (lokīya) and the supra-mundane (lokuttara). According to the sutta the mundane level of sammādiṭṭhi is tainted with inflows (sāsava), leading to meritorious activities (puññaḥbhaṅgiya) and leading to sāmaśāric continuity (upadivepakka).

Then there is the higher level of sammādiṭṭhi which is noble (ariya), free from inflows (anāsava) and supramundance (lokuttara), and which forms a limb of the Path (magganga). In the mundane or the lower level, to believe in charity (atthi dinnam); to believe in the efficacy of sacrifice (atthi yīṭham); to believe in the efficacy of oblations (atthi hutam); to believe in the efficacy of good and bad actions (atthi sukaṭa-dukkatānaṁ kammanānaṁ phalam vipākam); to believe that there is this world and a world beyond, through their own wisdom and with that knowledge to others (atthi loka samamaṁ sammaggata sammāpatipanna ye imaṁ paraṁ lokam sayam abhiṁṇa saccikatvā pavaṇaṁ); to believe in charity (atthi dinriya); to believe in the efficacy of sacrifice (atthi yīṭana); to believe in the efficacy of good and bad actions (atthi sukaṭa-dukkatānaṁ kammanānaṁ phalam vipākam); to believe in this world and a world beyond, through their own wisdom and with that knowledge to others (atthi loka samamaṁ sammaggata sammāpatipanna ye imaṁ paraṁ lokam sayam abhiṁṇa saccikatvā pavaṇaṁ).

The Cakkavattisihanāda Sutta of the Dīgha Nikāya (D. III, pp. 70 ff.) which depicts the evolution of the humankind, says that micchādiṭṭhi is one dependent cause among others for the degeneration of human society. Due to micchādiṭṭhi, not only evil proliferate among human beings but their life spans, too, become short. Even immoralities such as lack of filial piety and disrespect for holy men and heads of the community become rampant in society as a result of harbouring micchādiṭṭhi. Further it is said that those who harbour micchādiṭṭhi are reborn in woeful states (M. III. p. 52), in hell or the world of animals (apāyaṁ duggatiṁ tiracchānānaṁ vā-M. I, 388, D. I, 228). The Dhammapada admonishes us not to resort to mean work, not to be heedless and not to harbour false views (micchādiṭṭhi) as these prolong the sāmaśāric life (Dhp. v. 167).

In the Saṅghī Sutta (D. III. p. 246) micchādiṭṭhi is reckoned as the fifth of six roots of contention (vivādamulāṇi) that makes a disciple irreverent and insolent towards the Buddha, the Dhamma and the Saṅgha and such a disciple will not accomplish the training. Though this reference is made regarding bhikkhus, it applies equally well to the laity also.
Micchādīthī is again referred to as the 10th of the 10 channels of sinful deeds (akusalakammappatā). Again micchādīthī is mentioned as the first of the eight wrong factors of character (micchatta - ibid p. 254, cf. 287).

Buddaghosa in the Visuddhimagga (Vism. p. 469) asserts that wrong views (micchadīthī) is the most reprehensible of all evils. His assertion implies the importance of being free from wrong views for the spiritual well being and progress of society.

In the Micchādīthī Sutta (S. IV. p. 147) the Buddha points out the way to abandon wrong views. He says: 'It is by knowing (jānato) and seeing (passato) sense organs, their objects, the cognitions and contacts as impermanent (anicca) that wrong views (micchādīthī) can be got rid of.

MIDDLEPATH See MADHYAMAPRATIPAD

MIGADĀYA See ISIPATANA

MIHINTALE, the sacred hill to the east of Anurādhapura, perpetuates its name, the memory of Mahinda Thera, the saint and teacher who left his native land to work for the spiritual well-being of the people of Sri Lanka. This place is situated about eight miles away from Anurādhapura, at the junction of the North Road and the road from Puttalam to Trincomalee. The word Mihintale is equivalent to the Pali word Mahindatthala. Ambatthala, as recorded in the Mahavamsa, is so called because of a mango-tree which grew near the first meeting place. Mahinda Thera, while being engaged in conversation with the king wished to test the latter's capacity for instruction and pointed to a tree growing close by and asked:

“What name does this tree bear, O' King?”
“This tree is called a mango-tree, sir”.
“Is there yet another mango-tree besides this?”
“There are many mango trees”.
“And are there yet other trees besides this mango-tree?”
“There are many such trees”.
“And are there, besides the other mango trees and those which are not mango trees, yet other trees?”
“There is this mango tree, Sir”.
“Thou hast a shrewd wit, 0’ ruler of men”.

Even at the present day, there are mango trees planted near the Ambatthalacetiya, in memory of the event.

The Thera again asked the king:
“Hast thou kinsfolk, 0’ king?”
“They are many, Sir”.
“And are there also some, 0’king, who are not kinsfolk of thine?”
“There are yet more of those, than of my kin”
"Is there yet anyone besides the kinsfolk and the others?"
"There is yet myself, Sir"
"Good, thou hast a shrewd wit, 0' king of men".

Mahinda Thera was accompanied by four other theras named Íthiya, Uittiya, Sambala and Bhaddasāla. Along with these theras also came a sāmaṇera (novice) named Sumana and a lay disciple named Bhāndu. When Mahinda Thera realised that the king was a keen-witted man, he preached to him the Cullahatthipadopama-sutta. At the end of the discourse, the king, along with his retinue, came to be converts to Buddhism. When the evening meal was brought to the king, the bhikkhus were invited to partake of it but the offer was politely refused with the necessary explanations. The king promised to send a waggon to bring them over to the city (of Anurādhapura), the following day. Before taking leave of the monks, the king took Bhāndu (the lay follower) aside and asked him what the monks intended to do. Bhāndu explained everything and the king became overjoyed when he heard about the theras’ relationship with his friend Emperor Asoka and also about the mission with which he was entrusted with. When the king had departed, the theras who formed a chapter, performed according to Vinaya rules, the first saṅghakamma (Act of the Order) by conferring ordination on the lay disciple, Bhāndu. Thereafter they spent the night at Mihintale and preached the Samacitta-sutta to those who assembled. The next day, the theras arrived at the capital (Anurādhapura) and spent there a month, preaching to the people. During this month, religious activities were undertaken by the king, including the donation of the Mahāmegha park to the Order. This became known in later times as the Mahāvihāra. At the end of the month, the bhikkhus retreated to Mihintale to spend the vassa (rainy season) there. The king followed them to that hill and initiated the work necessary to prepare caves as abodes for the monks. A second monastery was thus established at Anurādhapura.

Historical: The chronicles credit Devānāmpiyatissa and his immediate successors with the building of a number of stūpas in various parts of the island, including the monument enshrining a portion of Mahinda Thera’s relics on the summit of Mihintale hill. None of these stupas can be correctly identified today-with the exception of the last named monument, and that too, in the form in which it assumed after a subsequent restoration.

The story of the way in which, from the time of the introduction of Buddhism to Sri Lanka, successive rulers of this island built up or contributed to the grandeur of Mihintale, is a most interesting one, as narrated in the chronicles. According to the Mahāvamsa, for instance, Devānāmpiyatissa, to commemorate his conversion, built a monastery for the use of monks at Mihintale, where he first met Mahinda Thera. Devānāmpiyatissa was succeeded by his younger brother Uittiya (267-257 B.C.), whose historicity is proved by some inscriptions indited in caves at Mihintale. Mahinda Thera expired in the 8th year of Uittiya. His relics were enshrined in a number of stupas, including the one at Mihintale. King Lāñjatissa (119-109 B.C.), spent three hundred thousand pieces of money and built three stone terraces for offering of flowers to the Māha-cetiya on the mountain. He is also said to have enlarged the Kaññaka-cetiya.

Kūtakaṇṭatissa (42-20 B.C.) built upon the Cetiya mountain, a great building for the uposatha festival and to the east of the building, he raised a stupa of stone, and in that place on the Cetiya mountain, he planted a Bodhi tree. Bhāṭikābhaya (20 B.C. - 9 A.C.) constantly bestowed food (as alms allotted) by tickets to a thousand bhikkhus in the vihāra of the Cetiya-pabbata. His younger brother Mahādāthikamahānāga (9-21 A.C.) contributed immensely to the glory of Mihintale. He is credited with the building of Ambathala-thūpa to enshrine the relics of Mahinda Thera. The Mahāvamsa gives some more information regarding the building of this stūpa.

"Since the building (Ambathala-cetiya) was not firm, he (the king) lay down in that place, bethinking him of the merit of the Sage (Buddha), risking his own life. When he had thus made the building firm and had completed the cettīya, he set up at the four entrances four jewelled arches that had been well planned by artists and shone with gems of every kind, To be fastened to the cettīya he spent a cover for it of red stuff and golden balls thereto and festoons of pearls.

"When he had made around the Cetiya-mountain a tract of land measuring a yojana, and had made four gateways-and a beautiful road round about the mountain; and when he had then set up traders’ shops on both sides of the road and had adorned the road here and there with flags, arches and triumphal gates, and had illuminated all with chains of lamps, he commanded mimic dances, songs and music."
"That the people might go with clean feet on the road from the Kadambha river to the Cetiya mountain, he had it laid with carpets—the gods themselves might hold a festival assembly there with dance and music. Over the whole island he put up chains of lamps without a break, nay over the waters of the ocean within a distance of a yojana around. At the festival of consecrating of the cetiya, these beautiful offerings were appointed by him: the splendid feast is called here (in the country) the great Giribhāṇḍa offering".

An inscription of about the 1st century A.C. at Mihintale refers to images of Mahinda Thera and three of his companions. The damaged part of the record no doubt contained the names of the other two companions also. Thus the tradition that Sri Lanka was converted to Buddhism by a therā named Mahinda and his companions is vouched for by documents only 200 years later than the date generally ascribed to that event.

Cases of dissension among the monks who resided at Mihintale and the vicissitudes in the history of that institution have also gone on record and it may be interesting to refer to one such unfortunate incident which took place as far back as the 1st century A.C. King Kanirājānutissa (30-33 A.C.) had to intervene in a case of monks at Mihintale and some who opposed him tried to capture him in person but he escaped. He later caught the culprits and had them hurled from a precipice called Kanirā.

Valsabha (66-110 A.C.) had a thousand lamps lighted on the cetiya-pabbata. Kapiṭhatissa (165-193 A.C.) built a temple for the Ambatthala-stūpa which was subsequently repaired by Gothābhaya (254-267 A.C.). The successor of Gothābhaya (his elder son) Jetthatisa (267-277 A.C.) bestowed the Kālamattikatank on the Cetiya-pabbata-vihāra. Sirimeghavanā (304-332 A.C.) had a golden image of Mahinda Thera made and held a great festival, carrying the statue in procession from Ambatthala to his capital, Anurādhapura. Dhatuseṇa (463-497 A.C.) is credited with the building of the Ambatthala-vihāra on the cetiya-pabbata.

Aggabodhi I (564-598 A.C.) is on record as having provided a permanent water supply for the Nāgasondi tank (This is the bathing tank, now called Nāga-pokūna, situated just under the summit of the Mihintale mountain, where hewn in the rock face, the heads of a cobra seem to rise out of the water). The same king constructed the Mahinda-tāta tank (at the foot of the mountain by which the present fields of the village Mihintale are irrigated) and ordained that the statue of Mahinda Thera should be carried in procession from its bund. Aggabodhi V (726-732 A.C.) restored whatever had fallen into decay at the Cetiya-pabbata at the cost of twenty six thousand gold pieces.

Senā, the queen of Dappula II (Udaya) (807-812 A.C.) is on record as having built a stūpa on the Cetiya mountain. The king himself, having had all the great trees on the Cetiya mountain clipped, gave brightly coloured flags and streamers as offerings and furthermore, restored, as it had been formerly, the vihāra Giribhāṇḍa which had gone into rack and ruin, and granted maintenance villages to the bhikkhus dwelling there. Then again, Sena, the Army Commander in the reign of Kassapa IV (912-929 A.C.) built on the Cetiya mountain, the parivena called Hadayinda and made it over to the Dhammarucika bhikkhus.

Mahinda IV (956-972 A.C.) has to be credited with the installation of two slab inscriptions, also referred to as the Tablets of Mahinda IV at Mihintale. South of the Bhojana-sālava (dining hall) are the remains of a vihāra, on either side of the doorway of which stand these well known slabs. H. C. P. Bell (the first Archaeological Commissioner) described them as being probably the finest example of a Sinhala inscription prior to the reign of Nissankamalla. The two inscriptions, taken together, bear a long record of temple regulations and privileges. Texts and translations of these inscriptions have been published in Epigraphia Zeylanica (1).

Parākramabāhu I (1153-1186), according to Cidavamsa, restored all the important monuments at Anuradhapura as well as the entire Mihintale monastery.

A stairway, consisting of 1840 steps, leads the pilgrim or visitor from the base to the very summit of the mountain. G. E. Mitton in Lost Cities of Ceylon, described the flight of steps as "the beauty of a dream fulfilled, a stairway leading to heaven. Overhanging trees throw green shadows on the worn stone, and the shifting golden lights between may well be taken for the angel visitants. For twenty centuries or more, the uncovered feet of innumerable multitudes have ascended and descended, their owners filled with reverent awe, and seeing visions of the mighty Buddha overshadowing the island with his presence and of Mahinda, his apostle, alighting on the topmost crag which towers up into the azure sky far overhead".
Centuries of neglect had caused very serious and very extensive damage to these flights of steps and it was not only with considerable difficulty, but in some places even with grave risk of danger to life and limb that pilgrims and visitors till recently mounted to, or descended from, the shrine which was their particular goal as being the resting place of the sacred relics of Mahinda Thera. But restoration work done during the last few years, has obliterated the danger spots and appreciably eased the path of the pilgrim.

The flight of steps leads one in the first instance to the foot of the spur on which the Kantaka-cetiya stands. Next stage is the terrace on which are the remains of the refectory of a monastery and of an important structure now known as the 'bhojana-sālāva'. Only the stone base of the brick wall now remains. It is closed in all around. The interior arrangement of this structure is comparable to that of the Mahāpāli Alms Hall at Anuradhapura. There were in ancient days, two paths open to the visitor ascending the Mihintale hill, both of which converged at the 'bhojana-sālāva' terrace. The first is the much frequented flight of steps (which has already been referred to). The other was from the direction of the Kaludiya-pokuna, passing along the valley, between the main hill and the spur on which the Kantaka-cetiya stands. It is from the latter path that the flight of stone steps leading to the southern vāhalkaḍa (frontispiece) of the Kantaka-cetiya starts, and most of the original paving had more or less been obliterated in the course of time. This is the paved path which was later restored.

Kantaka-cetiya is one of the earliest religious monuments in the island and one remarkable, as displaying certain features which represent the earliest examples of the plastic art of the ancient Sinhala people. According to H. C. P. Bell, this monument was traditionally named Giribhaṇḍa. It was also popularly known as Kiribadaphavu Dāgāba. The upper part of this monument had crumbled down centuries ago, burying the base and the lower part of the dome in the debris; and the mound thus formed, with huge trees growing on it, appeared (till restoration work commenced) as if it were part of the hill itself. Archaeological Survey of Ceylon started excavation work in 1934. Some Brahmi inscriptions of about the 1st century A. C., found on a rock near by, recording grants to the "Kaṭaka-ceta", made it clear that the mound concealed the remains of the monument referred to as Kantaka-cetiya in the ancient chronicles. This conclusion is strengthened by the statement in the Mahāvaṇisa that Devānampiyatissa made a beginning with the work of building sixty eight rock cells about the place where the Kaṇṭaka-cetiya afterwards stood. Round about this monument are a large number of rock caves containing Brahmi inscriptions, some of which are datable to about the 3rd century B. C.

The chronicles are silent as to the date or time at which, or the person by whom the Kaṇṭaka-cetiya was first built, nor as to what relic it enshrined. However, the Mahāvaṇisa has recorded that King Lājataṭissa had a mantling of stone made for it. This reference is to the 1st century B. C. and therefore it becomes clear that its original foundation must have taken place a century or so earlier. Accordingly it is clear that it is one of the earliest monuments in the island, datable to a period about the 3rd to 2nd centuries B. C.

The vāhalkaḍas (frontispieces or altars at the cardinal points of the stūpa) of the Kaṇṭaka-cetiya are more profusely ornamented than those found at Anuradhapura. On the cornice below the topmost one is a frieze of gānas (dwarfs), and on the one below is a frieze of hāṃsas (geese). The brickwork above the facing contains arched niches between pilasters. In each of these there appears to have been the image of a deity made of stucco or terracotta, fragments of these figures being still in position. These images as well as the whole structure of the vāhalkaḍas, were originally painted in diverse colours, traces of which are still visible.

The friezes of gānas mentioned above are full of interest. Many of these dwarfish beings are portrayed in various lively attitudes - some playing musical instruments, one sporting with a cobra, another standing on his head and so on. Some are animal headed. There is one with the head of a horse, another with that of a bear and yet another with that of a monkey. Particularly interesting is an elephant headed gāna, apparently with one tusk, attended by other gānas holding various objects. It is possible to conjecture that this is a picture of Gaṇapati, the various attributes of the deity being held in the hands of the attendants as the figure is provided with only two hands, unlike the later images which have four.

The sculptures on the stelae flanking the vāhalkaḍas are among the earliest examples of the plastic art of the ancient Sinhala people. They are mostly of a decorative nature and some of the motives employed are reminiscent of the decorative sculptures on
the pillars of the gateways at Sanchi. The commonest motif is a foliage design springing up from a vase and crowned by a Buddhist emblem or a nāga figure, and in one case, a goddess seated on a lotus. In one example, the foliaged scroll is so designed as to form five circular spaces, one above the other, in which are, respectively the figures of a cock, a lion, a bull, a man and an elephant. In another are pairs of men and animals standing back to back on either side of the stem. These decorative designs resemble those on stelae already found at Anuradhapura stūpas, but the stelae of the eastern frontispiece are decorated in a manner quite different from the others.

The whole surface of the broader side of the stelae is divided into four rectangular panels, which starting from the bottom, are occupied by a foliage pattern, an elephant, a second foliage pattern, a peacock with young and a decorated vase from which spring leaves and flowers with birds sporting among them. The narrow sides of the stelae are decorated with a tapering stem springing from a vase, with conventionally treated leaves spreading on either side. Besides these, nāga figures in human form are found on some of the stelae. The style of the sculptures is very archaic, and they should date, from the first or second century B.C. In some of the sculptures, a certain influence of the Amaravati school can also be detected.

The Kañjaka-ctetiya is of considerable size. At the base, it has a circumference of 425 feet and stands at present, about 40 feet high. Stylistically, the reliefs of the eastern and southern frontispieces of this stūpa are shallow and flat and appearing more like silhouettes. The figure of the nāga is stiff and presents a frontal aspect; in the face there is the smile characteristic of archaic work. There is no attempt at modelling the figure to depict movement. In these and other characteristics, it is akin to the work of the earliest indigenous school of Indian sculptors at Bharhut and Sanchi. These decorative designs resemble those on stelae already found at Anuradhapura stūpas, but the stelae of the eastern frontispiece are decorated in a manner quite different from the others.

The Kṇāka-cetiya is of considerable size. At the base, it has a circumference of 425 feet and stands at present, about 40 feet high. Stylistically, the reliefs of the eastern and southern frontispieces of this stūpa are shallow and flat and appearing more like silhouettes. The figure of the nāga is stiff and presents a frontal aspect; in the face there is the smile characteristic of archaic work. There is no attempt at modelling the figure to depict movement. In these and other characteristics, it is akin to the work of the earliest indigenous school of Indian sculptors at Bharhut and Sānchi.

From the quadrangular levelled area at which the upper and lower staircases to the summit of Mihintale hill meet, a path descends on the west and gradually trends westwards until it reaches the high road between the Rājāgiriṇa hill and the Kaludiya Pokuṇa ruins, which lie at the foot of Ātveherakanda and the smaller hill known as Anai-kutṭi-kanda. Immediately after leaving the stone walled half way terrace, a smaller enclosure occurs on the left. This enclosure had two successive platforms, at the south end of which is the well known Stone bath, also known as the Lion Bath. H. C. P. Bell spoke of it as perhaps the best executed piece of spirited animal sculpture to be seen anywhere in the island. A cubical bath was formed here by cutting out the live rock. Half of it was carved from the bed rock and half was made up of stones, worked to shape and smoothed inside. The rampant lion was found broken when the Archaeological Survey first came upon it. It has since been renewed as it stood of old.

Iñidikatūsāya and Katusāya are two stupas which should find mention in connection with the ruins at Mihintale. These two monuments lie almost close to each other within the same premises. These may be regarded as the most important of a group of ruins adjoining the high road, just south of the modern hospital premises. The two names Iñidikatūsāya and Katusāya are of modern origin, probably as a corruption of the old title. In the course of construction work carried out by the Archaeological Survey, 91 copper plaques were discovered. They contain extracts from Sanskrit Mahāyanist Buddhist texts. Forty five of these are short, agreeing with corresponding passages in the Pañcavinśati-sāhasrīka-Prajñāpāramitā with some variations in reading, due to variant readings of manuscripts of the same work and copyists' errors. Sixteen of the plaques bear inscriptions containing extracts from the Mahāyāna scripture called the Kaśyapa-parivarta. The records were compared with the text of this scripture edited by Baron A von Stael Holstein from a manuscript found in Khotan. This text embodies a discourse delivered by the Buddha to Kaśyapa, one of his chief disciples.

These stupas which are definitely of a Mahāyānist character, exhibit an important development in this class of monument in Sri Lanka. The dome is elongated and the triple blem has become a series of bold stone mouldings. The dome itself is faced with stone up to a height of about two feet. The platform is square with flights of stone steps on one side, or on all the four sides. The retaining walls of the platform, as well as its paving, are of stone. The inscribed copper plaques were recovered from the masonry of the stupas during excavation work and on palaeographical grounds the script may be ascribed to about the 9th century. These stupas probably date from the reign of Sena I (846-866 A. C.). About this time, according to the chronicles, the heterodox element was very strong in Anuradhapura. The Buddhists of Sri Lanka, especially those with Mahāyānist leanings, had the prac-
tice of depositing in stupas, metal plates on which were inscribed short extracts from Sanskrit Buddhist writings.

Rājagirilena-kanda is situated about a quarter of a mile down the high road beyond the Īḍikāṭusāya. The near-by caves, according to tradition, were occupied by a king who had taken the vows of a monastic life. The name by which this hill is known, probably preserves this tradition. It has also been conjectured that lihiniya-pavu (a term which occurs in the Tablets of Mahinda IV), is identical with this hill. However that may be, the old caves on this hill represent the most interesting feature of the ruins round about. Most of the chief caves are situated about 100 feet above the ground under a spur of the hill, and have been occupied from time to time by forest dwelling monks. The brick and clay walls form, with the overhanging rock roof, well enclosed and fairly roomy shelters.

H. C. P. Bell says, “a better hermitage for Buddhist monks could hardly be selected than these airy caverns. They provided every facility for quiet retreat. These sylvan abodes command from their peaceful secluded elevation, an unimpeded restful view across many miles of dark green forest and silvery tanks”. A considerable number of cave inscriptions occur here. Of the stone inscriptions in Sri Lanka, engraved in the Nāgarī script, one is a slab found in the Rājagirilena. The script is of the 9th century and is too much effaced to be deciphered. The stanza ye dharmā hetu prabhavā etc., brings the record to a close. Considering that Mihintale was, in the ninth and tenth centuries, much under Mahāyāna influence, this may be taken as a document of that school.

About 450 yards beyond a turn into the jungle which conducts the visitor to Rājagirilena-kanda and its caves, a short by-path rises on the left from the high road for some fifty yards, to a level area where the Kaludiya-pokūṇa group of ruins is located. This is one of the most beautiful spots in the North Central Province. H. C. P. Bell was highly moved when he visited this place. He says, “The first peep of this secluded elevation, an unimpeded restful view across many miles of dark green forest and silvery tanks”. A considerable number of cave inscriptions occur here. Of the stone inscriptions in Sri Lanka, engraved in the Nāgarī script, one is a slab found in the Rājagirilena. The script is of the 9th century and is too much effaced to be deciphered. The stanza ye dharmā hetu prabhavā etc., brings the record to a close. Considering that Mihintale was, in the ninth and tenth centuries, much under Mahāyāna influence, this may be taken as a document of that school.

Kaludiya-pokūna, one to the north and another to the south. They were in a ruinous state and appeared as shapeless mounds when they were noticed by the Archaeological Survey. The reconstruction of these two gateways was carried out in 1941 and 1942, using the old material which was brought to light in excavating the mounds.

Near the remains of the monastery hard by is a bathing house, beneath a large boulder, which is of special attraction. It recalls the similar slab roofed dressing room to the shapely pokūna in the Magul Uyana (Royal Park of Anuradhapura). The boulder overhangs at a height of 13 feet to the drip line sufficiently to shelter an admirable dressing room. It was built of granite slabs and was attached to a bathing pokūna in front, now silted up. This structure was finished with much elaboration.

H. C. P. Bell was of opinion that Kaludiya-pokūna monastery was of later construction than most of the Mihintale monasteries. He suggested that it was that “Hadayunha vihāra” (the heart warming vihāra) which Kassapa IV (912-929 A.C.) built at the Cetiya-pabbata and given over to the Dhammarucika brethren. He is also said to have prepared cells or caves—perhaps by improving some of those in the nearby hills—for the use of the priests who dwell in groves. There is also the possibility that the beautiful lake is itself identical with the Porodini Pokūna which finds mention in the Tablets of Mahinda IV at Mihintale.

There are a number of inscriptions at Mihintale, in caves as well as on rocks. The early inscriptions are in the Brahmī script of the 3rd century B.C. The script is in most respects similar to those in the inscriptions of Asoka. These records number about 94 in all. On the Mihintale hill are 58 records, in Rājagirilena-kanda 9 and in Anaikūṭti-kūṭikanda there are 27. These are fairly short records and the contents give the names of the donors and in certain cases, the names which were allotted to the caves are also given. A few examples may be quoted (together with the relevant translations) to give an idea of the nature of the benefactions:

Mihintale (No. 34) Gamaṇi-Uti-maha-patih (Uti
Abi-Ti) sava leṭa
daśa-daśa rassaka, sarasaka, rassaka, rassaka
pītasā anya.

(The cave of princess (Abi) Tissa, daughter of great king Gamaṇi-Uti, who gave the ten directions, for the benefit of his father.

MIHINTALE 681 MIHINTALE
Rajagirilenakanda (No. 64) Badakarika-parumaka-
Senaha bariya upasika-
Sumanaya lena sagasa
(The cave of the female lay-devotee Sumanā, wife
of the chief Sena, The Treasurer, is given) to the
Saṅgha

Ānaikūṭṭhikanda (No. 69) Pakara-adeka Sāmudaha
lena sagaśa
(The cave of Sāmudda, the Superintendent of
Roads, is given) to the Saṅgha

The above records belong to the pre-Christian cen-
turies. There are 59 other records in Mihintale area
which are in later Brahmi script and which may be
ascribed to the 1st - 2nd centuries A.C. As examples
may be cited the following: Mihintale (No. 1107) Gamika-Udaha putaha Melā-
Nakha lena catu-disā-sagaśa (The cave of Melā-Naka,
son of the village councilor Uda, is given) to the
Saṅgha of the four quarters.

Rājagirilenakanda (No. 1112) Upalavi-vasika Tisa-
teraha pitaha Upalavi-vasika upasaka-Cūḍa-Hoṇaha
lena sagasa (The cave of the lay-devotee Cūḍa-Hoṇa
(Cūḍa-Soṇa), a resident of Upalavi, father of the elder
Tissa, a resident of Upalavi, is given) to the Saṅgha

However, there are some inscriptions belonging
to the early centuries of the Christian Era which may
be ascribed to the reigns of particular kings i.e.
Mahādāthikamahānāga (9-21 A.C.). A few examples
may be cited.

Mihintale (At-vehera rock inscription) (No. 17) The
purport of the record was to state that the stupa, in the
vicinity of which it is inscribed, was of the monarch
named Bhatika Abhaya (20 B.C. - 9 A.C.); his younger
brother and successor was Mahādāthika-mahānāga, to
whom this record may be ascribed.

Rock inscription at Kantaka-cetiya, Mihintale (No.
20).

The beneficiary of the donations in his record was
a shrine named Kaṭaka-ceta. This old Sinhala form of
the name corresponds exactly to Kaṭaka-cetiya oc-
curring in the Mahāvamsa (XVI-12). Here it is said
that Devanampiyatissa made a beginning with the work
of fashioning sixty eight rock caves at Mihintale about
the place where the Kaṭaka-cetiya (afterwards) stood.
In this record, two donations, one by a king named
Tissa and the other by a king named Nāga have been
placed on record. Two categories of revenue are re-
ferred to as donations.

Mihintale Rock inscription of Mahādāthikamahānāga (No. 21).

This is a very long epigraph going into 19 lines of
writing but unfortunately many letters have got effaced
due to weather conditions. The epigraph contains a
list of tanks, villages and other lands given to Cetagi-
ri i.e. Cetiyagiri, the ancient monastery at Mihintale.
Some of the villages granted are specially stated to
have been for a particular purpose. One of these was
connected with the images of Mahinda Thera and three
of his companions i.e. Iṭṭhiya, Uṭṭiya and Bhadrāsala.
The expression Sadhame cira-citati at the beginning
of line 15 suggests that provision had been made for
the copying of the Buddhist scriptures.

Rock inscription at At-vehera, Mihintale

The purport of the epigraph was to register a do-
nation to the Paribhanda-cetiya (at Mihintale) by a king
styled Naka-maharaja (Mahādāthika-mahānāga). The
stupa which crowns the summit of At-vehera hill may
be taken as Paribhanda-cetiya. In the well known tab-
lets of Mahinda IV at Mihintale, the name of this stupa
occurs as Kirbāṇa-pavu-dāgāb.

In the reign of Mahāsena (277-304 A.C.), when
orthodox Buddhism came into conflict with the
Vaitulyavāda (Mahāyāna), monks of the Mahāvihāra
as well as of Mihintale, found themselves persecuted,
as they refused to accept the Vaitulva doctrines.
Mahāsena (on the advice of the monk named Saṅghamitta),
issued an edict forbidding the giving of alms to these monks.
Deprived of the means of suste-
nance, the monks of Mahāvihāra and Mihintale had to
seek refuge in the highlands and the Rohana. The
Dhammarucikas of the Abhayagiri-vihāra made use
of this opportunity to seize for themselves, the his-
toric monastery of Mihintale, the cradle of Buddhism.
For nine years this unfortunate situation lasted, until
the tide turned against the Vaitulyavādins, at the inter-
vention of the Minister Meghavāma Abhaya.
Civil war was averted and the main culprit Saṅghamitta
was murdered. However the doctrines introduced by the
Vaitulyavādins persisted as we notice from the monu-
ments which have been left to posterity at Mihintale.
The two Mahāyānist stupas named Iḍikātusāya and
Katusāya have already been referred to.
About fifty yards to the north east of the Ambasthala-stupa at Mihintale, there is a rock on the face of which has been engraved a long inscription of 21 lines, covering an area of 16 1/2 feet by 8 feet. The epigraph has been seriously damaged by the action of the weather and possibly also by vandals. As a result, large portions of the writing are now totally effaced. The script shows many affinities with the Pallava Grantha alphabet of South India. It is clear however that the epigraph is in Sanskrit verse. It has been found that the verses in question belong to the Trikayastava (an eulogy) of the three bodies of the Buddhas (trikāya), accepted by the Mahāyāna Buddhists.

The Trikayastava starts towards the close of the 16th line of the record and is continued in the next two lines and for about three fourths of line 19. The three verses are in the metre named Sraddhāra. The contents of the three verses are given below in brief.

1. I worship that incomparable Dharmakāya of the Buddhas which, though not one is also not many, which is the support of the great prosperity, causing the welfare of one’s own self as well as of the others.......

2. I here do worship that Sambhogakāya of the Buddhas which is transcendent and unthinkable.......

3. I worship by all sorts of means that Nirmānakāya of the Buddhas which, for the purpose of ripening (the intellect of) beings, sometimes shines radiant as the fire.......

The script of this record resembles that of the Tiriyāy rock inscription. Both records can be assigned to the seventh or eighth century A. C. From a study of the monuments at Mihintale, it becomes clear that there was much Mahāyānist activity at that monastery during the late Anuradhapura period, although orthodox Buddhism had its origin there in the pre-Christian centuries. See PLATES LXI, LXII, LXIII, LXIV.

Nandasena Mudiyanse

MILINDA the king of Sāgala and the chief character of the post canonical Pali treatise Milindapanha (Questions of Milinda), the original of which is generally assigned to a period circa 1st century B. C., composed as a dialogue the king Milinda is supposed to have had with a celebrated Buddhist monk named Nāgasena. The historians are unanimous in identifying Milinda of the Pali literature with Menander, one of the greatest Indo Greek kings of north west India, assigned to a period circa 1st century B. C. and whose historicity is established by archaeological evidence.

There are several sources extant for the study of king Milinda out of which Milindapanha is reckoned as the foremost. The writings of Greek historians such as Strabo (born circa 63 B. C.), Plutarch and the Roman historian Justin (probably lived during the age of Antonines) provide vital information on him. Further numismatic evidence as well as archaeological evidence, too, are available on Menander.

The Greek name Menandros is found adopted by ancient authors in different ways. As already stated in the Pali literature he is known as Milinda while the Avadana Kalpalata of Kshemendra, the eleventh century A. C. Sanskrit work, calls him Milindra, which is the same as that found in the Bstan-Hgyur collection

---

1. When Alexander's empire broke up on his death, Greek soldiers on the east of India founded separate states, and the names of about thirty of them and their successors are known by their coins. Of these the most powerful and successful was

---

MEDUSA
Historians have no consensus concerning the date of king Milinda or Menander. According to Vincent Smith, king Milinda flourished in the second century B.C., while H.C. Raychoudhuri places him in the first century B.C. According to Milindapañha he was born five hundred years after the Parinibbāna of the Buddha (Parinibbānato pañcasata vasse atikkante). Jinakālamālī written in Thailand (Siam) in 1516 A.D. says that "Milinda was reigning at Sāgala in India, when king Kūṭakaṇḍatissa was reigning in Anuradhapura. But as Kūṭakaṇḍatissa’s regnal years are generally accepted as 16-38 A.C., the historians are reluctant to place Milinda to a period so late. However it is reasonable to assume that the Greek king Milinda reigned in north west India in or about the first century B.C.

The Milindapañha says that king Milinda was born at Alasanda (atthi bhante Alasanda nāma dipa tattha ayaṃ jāto). Apparently Alasanda refers to his country of birth and which is described as an island. The same source says that the village he was born in was Kalasīgāma (atthi bhante "Kalasīgāmo nāma tattha ayaṃ jāto) and the place was two hundred yojanas from Sāgala. Kālasī has not been identified, but "dvīpa" of Alasanda is taken to be a district of Alexandria under Caucasia, which appear to have been referred to as Alasanda of the Yonas in the Mahāvamsa. The "dvīpa of Alasanda has been identified with the country between the Panjshir and Kabul rivers in which ruins of Alexander’s city have been recognized near Charikar." Geiger thinks that it was probably to be identified with the town founded by the Macedonian king in the country of Paropanisadoe near Kabul valley. Therefore Milinda/Menander is generally regarded to have reigned at Sāgala which is identified as modern "Silkot". But I.B.Horner points out that he was not reigning at Sāgala but proceeded to Sāgala in order to meet the elder Nāgasena.

As usual Milindapañha commences the story of king Milinda, also that of the elder Nāgasena from their previous births, when the king was born as a novice and the elder Nāgasena as a senior monk in the same monastery. According to the story, the senior monk gave the novice "a blow with the handle of the broom" when the novice did not obey his order to throw away the rubbish he has swept. The novice after carrying out the order, and being offended made a resolution, "Through this meritorious deed of throwing out the rubbish may I, wherever I am born successively until I attain Nibbāna, be of great might, and glory like the mid day sun (Imīnā kācava caṭadenапuññākammena yāvāham nibbānam pāpunāmi etthantare nībbattanibbatta thāne majjhatikasuriyo viya mahaśakkho, mahātejo bhaveyyāmi paṭhama patthanaṃ paṭṭhapeci (Bāhirakathā Milindapañha).

After he had thrown the rubbish he (novice) went to the ford of Ganges to wash, and seeing the swirling surge of the waves of the Ganges, he made a second aspiration "May I whenever I am successively reborn until I attain Nibbāna be prompt with saying the right thing and prompt in answering the questions (carrying all before me) like this surge of water". (yāvāham nibbānam... ayaṃ imi vegoviya thānupattikapatiḥbāho bhaveyyam akkhāyapatiḥbhāno ti - Milindapañha Bāhirakathā).

The senior monk too went to the ford of Ganges to wash, and hearing the novice’s aspiration, he thought: "while he was merely instigated by me aspires thus, in what way do I not be successful"? And made the aspiration: "may I, wherever I am successively re-born until I attain Nibbāna be prompt in answering the questions (carrying all before me) like the surge of the waves of the Ganges, and may I be able to unravel promptly and explain all the answers to the questions constantly asked me by this (novice) (Yāvāham nibbānam... ayaṃ imi vegoviya thānupattikapatiḥbāho bhaveyyam...)." The Bodhisattva is the senior monk's identity. (Bāhirakathā Milindapañha).
According to the *Milindapanha* the novice was born as king Milinda of Sāgala and the (senior) monk as the elder Nāgasena. *Milindapanha* describes king Milinda’s intelligence, education, training, valour, prosperity thus:

“He was wise, experienced, clever, able; he was one who acted conscientiously at the time of doing all the (magic) devices, ceremonies and observances concerning things past, future, and present. Many were the arts he had mastered, that is to say: the revealed tradition, secular lore, the Sāṅkhya, Yoga, Nyāya and Vāsēṣika systems, accountancy, music, medicine, the four Vedas, the Purāṇas, the oral traditions, astronomy, conjuring, logic, spells, fighting, poetry, reckoning on the fingers, in a word, the nineteen arts he had mastered, that is to say: the revealed tradition, secular lore, logic, spells, fighting, poetry, reckoning on the fingers, in a word, the nineteen (arts). A disputant hard to equal, hard to overcome, he was acclaimed chief of the leaders of the numerous schools of thought. In the whole of India there was no one like King Milinda in fortitude, speed, courage and wisdom. He was rich, of great wealth and great prosperity; his prosperity thus:

- He was wise, experienced, clever, able; he was one who acted conscientiously at the time of doing all the (magic) devices, ceremonies and observances concerning things past, future, and present. Many were the arts he had mastered, that is to say: the revealed tradition, secular lore, the Sāṅkhya, Yoga, Nyāya and Vāsēṣika systems, accountancy, music, medicine, the four Vedas, the Purāṇas, the oral traditions, astronomy, conjuring, logic, spells, fighting, poetry, reckoning on the fingers, in a word, the nineteen (arts). A disputant hard to equal, hard to overcome, he was acclaimed chief of the leaders of the numerous schools of thought. In the whole of India there was no one like King Milinda in fortitude, speed, courage and wisdom. He was rich, of great wealth and great prosperity; his prosperity thus:

King Milinda extended an open challenge to all the religious teachers of the day: "Is there any learned ascetic or brahman or leader of a company, leader of a group or teacher of a group who perhaps claiming to be an “arahant” a perfect Buddha could converse with me and dispel my doubts" *Aṭṭhi koci pāṇḍito samaṇo vā bhrāhmaṇo vā sanghi gaṇi gaṇacariyo api arahantaṁ Sāṃsāramuddham pāṭjānāmāno yo mayā saddhiṁ salāpitum sakkotā kaṇkhaṁ paṭivinutem (Milindapañha Bāhirakathā)*.

In fact, as the *Milindapañha* says king Milinda used to harass monks with his talks and counter talks (So dīthi vādena paṭhāṃ puścitiṁ bhiikkhusaṅgho vipheṭhi). But there was none who could take up the challenge of king Milinda. The religious teachers of the day did not want to face the king and they were avoiding him. As *Milindapañha* says, the city of Sāgala was devoid of religious teachers for twelve years. For, whenever the king hears that there is such a one he often asks him to come. If there was some learned ascetic or brahman or leader of a group or teacher of a group who perhaps claiming to be an “arahant” a perfect Buddha could converse with me and dispel my doubts” *Tuccho vata bho Jambudīpo paḷāpo va bho Jambudīpo nattithi koci samaṇo vā bhrāhmaṇo vā yo mayā saddhiṁ sakkoti kaṅkhaṁ paṭivinutem (Milindapañha Bāhirakathā)*.

It was at that juncture that the king exclaimed “India is indeed empty, India is void indeed. There is no ascetic or brahman able to converse with me to dispel my doubts” *(Tuccho vata bho Jambudīpo paḷāpo va bho Jambudīpo nattithi koci samaṇo vā bhrāhmaṇo vā yo mayā saddhiṁ sakkoti kaṅkhaṁ paṭivinutem (Milindapañha Bāhirakathā)*

8. As stated in the *Milindapañha*, when king Milinda used to harass monks in the field of debate the monks headed by Ven. Assagutta proceeded to Devaloka invited Devaputta named Mahasena whom Sakka king of gods described as a person capable of meeting the king’s arguments, to be reborn in the human realm to take up the challenge.

9. *Milindapañha* confuses the readers when it says that the king went to “heretical” teachers such as “Makkhali Gosala” etc. who are regarded as contemporaries of the Buddha and are dead long before Milinda. However what the author of *Milindapañha* possibly meant was that the king went to contemporary adherents of the teachings of those heretical teachers or his statement that the king Milinda went to six traditional heretical teachers of the Pali literature, the idea that the author is trying to convey is possibly the king consulted the other philosophers of the day other than Buddhism.
The king was in a dilemma, when he heard of the elder Nāgāsena being described as “wise, experienced, clever and able” (pañḍita, vyatto, medhāvi vinīto visārado bahussuto). Having heard of elder Nāgāsena’s reputation, king Milinda proceeded to “Sāṅkheyya Pirivena” to meet him. According to the Milindapañha monks10 ordained Nāgāsena, educated him, trained him and sent him to Sāgala to encounter king Milinda. The elder Nāgāsena at the very outset was wise enough to propose that they should converse in the speech of the learned (pañḍitavāda) not in the speech of kings (rājavāda) to which the king readily agreed, saying: “Let the revered one converse unre­servedly, as he converses with a monk or novice or lay follower or with a monastery attendant, Let the revered one converse thus, let him not be afraid” (Homer op. cit p 39).

Though the initial meeting of the two took place at Sāṅkheyya Pirivena in-the city of Sāgala, the formal discussion took place the following day at the king’s palace. The king paid homage to the elder in a fitting manner and placed his difficulties one by one before the elder Nāgāsena. In the course of the intellectual dialogue conducted in a friendly atmosphere, elder Nāgāsena ably solved all the problems pertaining to the Buddha’s teachings raised by the king, to the entire satisfaction of the latter. At the conclusion of the discussion the king expressed his satisfaction and gratitude to elder Nāgāsena. The Milindapañha finally states that king Milinda became a lay disciple of the Buddha and took refuge (in the triple gem) “Upāsakam mam bhante Nāgāsena dhāreta aijatagge pāṇuṃpetam saranam gataṃ” (Revered Nāgāsena accept me as a lay follower as one going for refuge from that day fourth as long as life lasts (I. B. Horner. op. cit. Vo II p. 304). The Milindapañha also says that the king put up a Vihaṇa named Milindavihāra and offered it to elder Nāgāsena.

It is significant that according to the Milindapañha the king Milinda renounced worldly life and ordained himself as a Buddhist monk, having entrusted the kingdom to his son and finally attained the state of an “arahant”.

Apart from the Milindapañha account, insc­tional and numismatic evidence also provide vital formation on Milinda/Minander. The inscriptions a coins not only prove that he was a historical pers­ but also gives the extent of his kingdom. It is cle­ that Milinda, the greatest of Indo-Greek kings, ext­ cised his authority over a vast region in north we­ India, perhaps even beyond the north west. App­ ently his dominions comprised of Peshawar, the upp­ Kabul valley, the Punjab, Sind Kathiawar and west­ Uttar Pradesh. His occupation of Gandhara with tw­ great centers Puskalavati and Taxila is amply pro­ by the numerous finds of his coins. In the north h­ occupied Hazara and Swat valley. The discovery­ the Bajaus casket inscription11 proves that Swat va­ was included in his kingdom. It is also thought tha­ the king made some encroachments north of Hindukush mountain. But we know neither the exact boundaries of his kingdom nor how far he was merely overlord, rather than the actual administrative sove­ign over the various portions of his vast domain. A. K. Narain12 on king Milinda observes: “It is likely that­ it was the unsettled conditions of the time that pro­duced a man of remarkable ability, who was destined­ to become the most famous of Yavana kings in India.­ He was Menander, the Milinda of the Indian tradition”

King Milinda was known as Menander to a number­ of classical Greek historians. Menander apparently­ belongs to the house of Demetrios II who ruled Sākala­ (Euthymedia, or Euthydemia) identified with modern­ Sialkot. The Greek historian Strabo has referred to­ Menander on the authority of a reference made to­ Menander by Appolodorus. It is said that Appoi­dorus and Menander are mentioned in the list of Bhāratiyā­ Yavana princes in the writings of Justin the historian.­ But his writings are now extinct and not available for­ verification. Plutarch the Greek historian also men­tions Menander as renowned for his justice. He fur­ther states that his death (He died probably in 95 B. C.­ ERE. Vol. VIII p. 631) occurred in a camp and then­ there was dispute among several Indian cities, for the­ possession of his ashes which were subsequently di­vided and memorials erected in each of the cities.

10. According to Milindapañha he was ordained by Ven. Rohana of Vattaniya Hermitage. His other teachers were Ven. Assagutta of the same Hermitage and Ven. Dhammarakkhita of Asokarāma of Pataliputta.
11. It records the establishment of the relics of the Buddha by one Vijayamitra during the reign of king Menander on the 14th day of the month of Karitikeya-New Indian Antiquary II 1939-40 p 647 and Epigraphia Indic xxiv 1937-38 p 7.
Ananda Maitreya\textsuperscript{13} points out that burning of dead bodies is not a European custom, but an Indian custom. In addition, in the case of Menander, there has been a dispute to share his ashes, as happened after the Parinirvāna of the Buddha, where the kings quarreled over the ashes. It is also said that those who got shares of ashes built memorials enshrining them. All these facts indicate that Menander was no ordinary king but a holy person. This takes us very close to the Milindapañña report that Milinda/Menander became a Buddhist monk and finally attained the Arahant state.

The coins of Menander/Milinda also provide some indication about his religion. There are strong facts among the coins to prove that he was a Buddhist. Among the twenty coins discovered at a place called Sudur during the first half of the last century, there were two types of coins belonging to Menander. One type of coins had a figure of a Greek god (Greek God Athena) on one side and on the other side a figure of a young person like a king. Also there was the sentence "Basileos Dikion Menandrow". The other type of coins discovered at the same time had a figure of an old person similar to a king and the Dharmacakrā\textsuperscript{14} on the other side. On this data found in the said coins it is reasonable to assume that Menander was an adherent of Greek gods during his young days and a follower of Buddhism in his old age.

But W. W. Tarn\textsuperscript{15} does not agree that Menander became a Buddhist. He argues that Menander embracing Buddhism is found not in the old strata of the Milindapañña but in the latter part which is considered as a subsequent addition. He further points out that the story of embracing Buddhism was told in respect of Kaniska too.

Tarn also points out that Menander did not entrust the kingdom to his son and retired to become a Buddhist monk, but died when his son was yet a minor and his queen Agatliocleia became the regent for his son.

Milinda or Menander whose histriocity is not contested, was possibly born out of a Greek father and an Indian mother, the union that is supposed to produce genius off-springs, appear to have been a rare combination of an invincible warrior, victorious conqueror, able administrator, unavering upheld of justice, a philosopher who mastered the philosophies of the west as well as those of the east, sharp debater and as stated in the Milindapañña a saint who attained the state of an "arahant". He is the only one of those Greek or half Greek potentates whose memory has survived in India, and he is there remembered characteristically enough, not as a political ruler, nor as a victor in war, but as an intelligent and sympathetic inquirer into the religion and beliefs of his subjects (ERE. Vol. viii p. 630-31)

\textsuperscript{13} Milindapanha edited Ananda Maitriya (Sinhala Script) Colombo 1962 preface p. iv.

\textsuperscript{14} But according to Tarn (Greeks in Bactria and India, Cambridge 1938 p 263) Memander's association with the Dharmacakra has nothing to do with Buddhism. He has used it to proclaim himself "universal king (Cakravarti) but Chattrapathyā (Early History of North India, Culputta 1958. p. 41) refutes Tarn's view. He says "such a strong tradition cannot be set aside so lightly and in our view, it is quite safe to hold that Menander had embraced Buddhism. Bapat B.V. observes "It is also significant that the coins of Menander bear the Buddhist wheel (Dharmacakra). This is an unmistakable sign that he was a devout Buddhist. The 'Shinkot inscription proves beyond a doubt that the Greek king helped in the propagation of Buddhism in the region between Hindukush and Sind (P. V. Bapat, General editor 2500 years of Buddhism in India, Delhi 1987. p. 175).

\textsuperscript{15} Tarn W. W. Greeks in Bactria and India, Cambridge 1938, p. 262 f. Tarn rejects the belief that Menander was attached to the ground that on his coins he adopted Athena, the one deity who was never practically equated with the king. But this view cannot be accepted in view of the fact that king Kaniska of the Kushan was in the same way deeply attached to Buddhism used in his coins many non Buddhist figures. But menander continued his strong patronage of Buddhism - Delhi 1984 p. 116).

MILINDAPAÑHA. The Milinda Panha is the post canonical Paññatipata that deals with the dialogue a Bactrian Greek King Milinda supposed to have had with a Buddhist monk named Nagasena, on controversial points of Buddhist philosophy. The extant Milinda Panha is in Pali, and scholars1 believe that the original was either in Sanskrit or some North Indian Prakrit, written in North India or Kashmir by an author whose name has not come down to us. The original is supposed to have been lost and the extant Milinda Panha is believed to be a Pali translation made in Ceylon (Sri Lanka) at a very early date from where it had been taken to other countries such as Burma and Siam (Thailand)2, etc.

Rhys Davids3 considers it as the only treatise of the northern Buddhists which is regarded with reverence by the orthodox Buddhists of the Southern School of Buddhism and also the only one that survived among them. As the places referred to in the Milinda Panha including rivers, are in Punjab and adjacent countries and a few places to the sea coast such as Surat Bharukaccha. B. C. Law4 infers that the author of original Milinda Panha lived in Punjab in North India. It is not possible to ascertain the exact date of the composition of the Milinda Panha. The author ten quotes from various books of the canon, i.e. refers to the reciters (bhānakas) of all the five nikā and also refers to Vinaya and all the seven books of the Abhidhammapiṭaka. Therefore it is clear that was written after the closing of the canon.5 The Chinese translation of the Milinda Panha has been made between 317-420 A. C. Buddhaghosa the celebrated commentator of the 5th century A. C. attach high authority to the Milinda Panha and quotes it heavily his Visuddhimagga and his Pali commentaries. The Milinda Panha is anterior to Visuddhimagga at Buddhaghosa. Scholars point out that the Milinda Panha dialogues differ little from the canonical dialogues and could be compared only with the best dialogues of the Suttapiṭaka which suggest a higher antiquity for the treatise. Scholars are of opinion that it is not essential to think that it was written during the life time of King Milinda. Mrs. Rhys Davids says8 that it was written during the reign of Demetrius I, the successor of Milinda, having obtained the records of the dialogue preserved in the king’s palace. According to Ananda Maitreya,9 theras who heard a debate composed the dialogues in the form of verses and brought down in the oral tradition by the monks of their lineage. Winternitz thinks the author of the Milinda Panha had lived at a time when people’s memory of the Greek king was still fresh. But as there was an end to the Greek rule in India soon after the death of Memander it can hardly be presumed that he would have been remembered for more than one century. In the light of the above data the majority of scholars generally assume that the original Milinda Panha was written circa 1st century A.C.8

2. ibid op. cit
5. Burma includes Milinda Panha in the canon (Khuddaka Nikāya).
8. Mrs. Rhys Davids has a theory of her own regarding the author of MilindaPanha. She thinks that the recorded conversations of Milinda and Nagasena were edited in the New Book form after Milinda’s death by a special commission by Brahmana of Buddhist collegiate training named Mānava. She points out that the author was not a convinced Buddhist and that he detached the first portion of Milinda Panha and is in no way to be matched in style or ideas with the quite different dilemmas and the following portions (Law B. C. History of Pali Literature, Vol. II. p. 354).
The *Milindaapañha* occupies a unique position among the non-canonical Buddhist treatises. As I. B. Horner correctly points out the basic approach of the *Milindaapañha* is intellectual when compared with Buddhaghosa’s *Visuddhimagga* which has followed a meditative instructional approach or practical side of the Buddhist philosophy. The *Milindaapañha* elucidates the main tenets of the Buddhist philosophy making the best use of similes or parables. The elucidation of controversial points is presented in the form of a dialogue a king named Milinda supposed to have had with a Buddhist monk named Nāgasena.

According to *Milindaapañha* king Milinda was a well-informed scholar and a keen debater. He was well-versed in various branches of learning and was an expert in argument. He wanted to understand the true essence of Buddhism which had raised for him several difficulties and knotty problems. He approached many teachers but none could help him.9 As stated in the *Milindaapañha* the Buddhist monks of the day were afraid of him and were reluctant to face him and retreated to the Himalaya mountain. This was the situation when king Milinda met the elder Nāgasena.

At the initial meeting of the two at Sankheyya pirivena, and after exchanging customary greetings the king inquired the name of the elder. The elder Nāgasena instead of a possible short answer, gave a philosophical answer.

> "Oh great king, I am known as Nāgasena and my fellow monks call me Nāgasena. The parents when they name their children call them Nāgasena, Sūrasena, Virasena, Sīhasena etc. But those are only denotations, appellations, designations, a current usage; for Nāgasena in only a name, Since there is no person in reality."

The king replied “If revered Nāgasena, there is no person in reality who then is it that gives you the requisites of robe material, alms food, lodging and medicine for the sick, who is it that makes use of them, who is it that guards moral habits, practices (mental) development, realizes the paths, the fruits, nibbana... etc.”

The king proceeded with the argument further “if you say friends address you as Nāgasena what here is Nāgasena. Are the hairs of the head are Nāgasena.”

> “Oh no, Great King”

> “are the hairs of the body Nāgasena”.

> “Oh no”

> “are the nails... teeth, the skin.....”

> “Oh no”

> “Is Nāgasena the feelings (vedanā) perception (saññā)....” etc.

> “Oh no”

It was at this juncture that the elder Nāgasena brought forward the famous simile of the chariot and questioned the king whether the axle is the chariot etc. for which the king answered in the negative.

Thus the elder Nagasena explained to the king that even as different component parts individually do not make a chariot and that there is no chariot apart from the component parts, there is no person apart from material shape (rupa) feeling (vedanā) perception (saññā) habitual tendencies (sankhāra) and consciousness (viññāna) but they collectively make a person.

The king was thoroughly satisfied with the answer. With this preliminary discussion the king understood that he had met a teacher who could clear his doubts, and proposed to have the formal discussion at the palace the following day. The Elder said he was agreeable only if the king would have the dialogue not in the royal way (rājavāda); but in the academic way (panditavāda). It is clear the elder Nāgasena wished to have the dialogue similar to a dialogue between equals. As *Milindaapañha* says the king was so humble and said "be confident, you can talk to me as if you are talking to a novice or a person at your monastery."

The formal dialogue was arranged for the following day in the king’s palace at Sāgala. It is said that the king received the Elder with due respect, provided alms and having taken a low seat, took up all his dilemmas one by one with the theras. The fundamental teaching of Buddhism is the theory of No Soul (anattavāda). In place of a soul that migrates from birth to birth Buddhism presents ever changing physi-
cal and psychical phenomena. The deepest spiritual problem with which the king was confronted was his difficulty to understand the theory of kamma and rebirth in the context of ever changing physical and psychical phenomena without a transmigrating soul. The elder Nagasena solved the dilemma in a masterly way with the help of the 'simile of an infant and a grown up man', and the simile of a lamp that burns continuously during the first watch, middle watch and the final watch of the night, to the entire satisfaction on the king. The nature of nibbāna, Buddha's omniscience, whether the Buddha had ever lived, why the Buddha admitted Devadatta to the order (without looking into the problems he would create) are some of the problems discussed. Similarly the apparent contradictory statements in the canon were also taken up and discussed.

With regard to the points discussed in the Milindapañha, B. Horner observes: "its avowed aim is to dissipate occasions for doubts that may arise from the apparent inconsistency of various canonical or other statements, and to resolve these inconsistencies and these doubts so that future generations may be in possession of the true answers to such perplexing dilemmas, and further contentions about them be avoided. It is a remarkable thing that a compiler at the end of the early or classical period of Pali Literature faced these difficulties with courage, clear sightedness and intelligence. He must have either recorded conversations that had actually taken place, or were believed to have taken place between the determined and extremely acute and able king (who was probably a Greek Bactrian or, better, a Bactrian Greek, Yavana, Yona) and equally able monk Nāgasena; or else he must have thought out the conversations himself, collecting and adding to them down the years, perhaps with the aid of colleagues and pupils, and then making them the substance, core and pivot of the comprehensive work he and or his successors finally compiled." 18

Rhys Davids11 sees a similarity between the points discussed in the Kathāvatthu and Milindapañha and also agreement among their views:

"There are a number of points raised in Tissa's discussions which are also discussed by the author of the Milindapañha. In every instance the two authors agree in their views. Nāgasena in the Milinda always advocates the opinion which Tissa puts as that of Theravādins. Thus the Milindapañha may also be discussed as an attempt of the Theravādins to meet the criticisms of the opponents.

The book consists of seven books or chapters or parts. The first part named secular talk (Bāhūra kathā) deals with personal history of king Milinda and the Elder Nāgasena, commencing from their previous births and it forms the background to the dialogue to follow. The dialogue proper begins with the second book. Many scholars do not think that the Milindapañha consisting of seven books or parts as a unified product of a single author and they divide the book into earlier part and the later parts. It is the terse style of the earlier part of the work and the developed literary skill of later parts that formed the basis for their division.

M. Winteritz12 thinks "Only a small portion of the introductory book and book III are old and genuine. Even in book III some later additions have crept in. By far the largest portion of the book, more than five sixths has been added in Ceylon (Sri Lanka)."

As already stated the Milindapañha has been translated into Chinese13 and two Chinese translations are extant. In the Chinese Buddhist literature it is known as "the book of bhikshu Nāgasena Sūtra". The absence of the books IV-VII in the Chinese translation possibly confirms the opinion that the original had only three chapters.

It is also seen even in the context of the contents, there is a marked difference between the earlier part and the parts identified as the later parts. Though the earlier part takes up the dilemmas pertaining to the theory of anatta, kamma, whether the person who is
reborn is the same or different from the person who died, later parts takes up petty matters such as the purpose of venerating relics of the Buddha, why Buddha admitted Devadatta to the sāsana etc.

As regards the contents of book II, Winternitz\(^\text{14}\) observes: "If in some of his earlier births of which jātakas speak, Bodhisatta had mistakes and vices, then, the author of book V of the Milindapañña endeavors to purify him by washing it off, because for him the Bodhisatta is quite identical with the perfect Buddha.

On his opinion that the original Milindapañña had only three chapters. Winternitz further states: "the end of the third book constitutes also a good conclusion to the work which everyone would consider to be complete if books IV-VII did not follow".\(^\text{15}\)

There exists a mystery or a puzzle as regards the sources quoted by the author of the Milindapañña. He draws on innumerable canonical sources for illustration of points. He often identifies the source by its name i.e., names of suttas, names of the canonical work etc. But there are a large number of quotations where he has not divulged the source which Horner calls "silent" references. However Rhys Davids and also Horner\(^\text{16}\) have been successful in tracing the sources which the author of the Milindapañña has not given. Out of 316 entries that fall into the category of the 'silent' references Rhys Davids is successful in tracing the source except for 88 which he has left out as 'untraced'. Horner has gone further and was successful in tracing the source of some of the quotations left out by Rhys Davids as untraced. According to her (Miss Horner) approximately sixty references still remain to be traced.

The puzzle is further aggravated with regard to some verses attributed to a number of well known theras such as Sariputta, Mogallāna the Great, Anuruddha, Upali, Rāhula Vangisa, Cullapanthaka, Mogharāja, Upasena and Vanganta putta. The sources of these verses remain untraced and are named 'Extra Canonical Thera verses' by Mrs. Rhys Davids.\(^\text{17}\) Here, too, Horner\(^\text{18}\) has traced a couple of references out of 34 verses which Mrs. Rhys Davids has not been successful in tracing the source. Horner has observed that a couple of those verses are attributed to some other persons elsewhere i.e. to the Buddha, and one or two verses in the Milindapañña attribution has been confirmed. In addition to 'extra canonical thera verses' some verses of extra canonical lay-women followers are also noted namely Cula Subhadda.

As regards the inability to trace the sources of some of the quotations in the existing Pali canon, Horner offers several possibilities (I) whether there was more Pali canonical literature than has come down to us; (II) whether we are tracing them in the wrong cannon (i.e. those quotations might have been taken from the Sarvastivāda canon); (III) whether there was, from early days, a "stock, a common fund of verses" floating about from which the author or a compiler drew for his use as the occasion seemed to him to demand; (IV) whether the compiler himself coined the verses and attributed them to well known theras (For a detail discussion pl. refer to translator's introduction to Milinda’s questions, Vol. I. Horner I.B. PTS. London 1963. p. x. ff).

However Rhys Davids has observed some weaknesses in the logic of the Milindapañña. “The favourite method is to invent an analogy to explain some position and takes for granted the analogy, proves the position taken to be true and quite often when the right answer to a dilemma would be a simple matter of historical criticism, the answer given savours casuistry or is a mere play on the ambiguity of words. Then the author though he naturally avoids the blunders so often repeated in European books against Buddhism that ‘Nirvana’ eg. is a state to be reached by a “soul” after it has left the body or a state not attainable except by ‘a priest’ or ‘a monk’ - does not stand on the ancient path”.\(^\text{19}\)

“Milindapañña has a marked style of its own. Its language is most elegant and studied against the background of ancient Indian prose. It is simply a masterpiece of writing. The charm of the style is captivating and there are passages that are eloquent in their mean-

\(^{19}\) Encyclopaedia of Religion and Ethics, Vol. VIII (Article on Milinda by Rhys Davids) p. 631.
The Milinda Panha is a comprehensive exposition not only of Buddhist metaphysics, but also of Buddhist ethics and psychology. As such it is indispensable for the student of Buddhism. Apart from its importance as a Buddhist text the Milinda Panha is, also, to be valued as a historical document and a literary achievement of great eminence. The Milinda Panha provided an unsurpassed testimony to Indian Prose literature of the first century A.C. in short the Milinda Panha occupies a unique position in Indian literature, whether looked at from the point of view of metaphysics or literature or history or knowledge of geography. It is an indispensable fact that, in post-canonical literature no other treatise on Buddhism equals Milinda Panha.21

The Pali Text Society has published the Milinda Panha in two volumes edited by V. Trenckner in 1880. Two English translations are also available one by Rhys Davids under the title Questions of Milinda in two volumes (SBE. in 1890 and 1894) and another by I. B. Horner under the title Milinda’s Questions in two volumes (SBB. published by the PTS. 1963 and 1964). In addition there are two German translations (Parts by F. D. Schrader 1905; and completed by Nyanatiloka 1919) and a French translation Book I-III by L. Finot 1923. There is a Sinhala translation by Hinnat Kumuree Sumangala under the title ‘Saddhammādasaya’ written in the reign of King Kirthi Sri Rajasinghe (1747-82 A. C.) during the Kandy period. A fikā or a sub commentary22 has been written on the Milinda Panha called the Milindatikā (q.v.) or Madhuratthappakāsini acquired in Siam (Thailand) in 1922-24. According to the colophon it was written by Tiṭaka Cūlabhayatthera. Padmanab S. Jain23 who edited the fikā for PTS. doubts its reported Sri Lankan origin and suggests that it may have been written in modern ‘Cheing Mai’ in Thailand in the year 1328 A. C. by a monk belonging to the Sihala Sangha fraternity in Cheing Mai, Thailand.

As regards the merits of the fikā the Editor is of opinion that although the Milinda Panha abounds in difficult terms and abstruse doctrinal points meriting a scholarly exposition, our author has chosen only a small number of words for comment and leaves untouched several points of interest.

MILINDĀ-ТИKĀ

MILINDĀ-ТИKĀ (var. Madhuratthappakāsini) an exegetical work on the Milindapañha. It is called a āthikā 'sub-commentary' though no āthakathā of the Milinda is known to have been written.

The palm-leaf manuscript of this text has been recovered by Prof. P. Tuxen during his stay in Thailand in the years 1922-24 A. C. It was subsequently edited by Padmanabh S. Jaini in 1961, for the Pali Text Society, London.

The author of the Milinda-티kā, as given in its colophon, was a monk named Mahātipitaka Cūlābhaya, a resident of the Mahāvihāra at Anuradhapura, (cf. Milinda-티kā (PTS), pp. 71f). It is, however, strange that there is no mention of this work in the chronicles of Sri Lanka, nor in any catalogue of manuscripts. Jaini denies the author's claim that he was a Sinhalese monk. In his opinion this work was compiled in Chiang-mai in Thailand by a monk who belonged to the Sihaḷasanga there.1 (op. cit., p. xii).

Due to the obscurity of facts given therein, it is difficult to ascertain the date of this work. Nevertheless, it is evident that it was not written earlier than the beginning (or perhaps the middle) of the 13th century A. C., for a good number of texts referred to in it were written during the latter part of the 12th century. Jaini interprets the date as the 835th year of the Šakarājavassa and infers that the year 1474 A. C., could be the most plausible date.

The manuscript of the 티kā consists of 188 leaves written in legible Cambodian script. The exegesis is divided into four sections namely, Pakinnākatthavivaṇanaṃ, Jātakuddharaṇaṃ, Ganthasarūpaṃ and Samkhyaśarūpaṃ.

The Pakinnākatthavivaṇanaṃ, which begins on a promising note, is the only part that can be properly termed a 티kā on the text. In this section, it is described at length, the traditional sixfold ways of elucidating the meaning of a word. This is followed by the 티kā proper, which is purported to expound enigmatic words, phrases, etc. found in the Milindapañha. In that process Cūlābhaya therā in support of his readings, profusely quotes several other works including 티kās such as the Abhidhānappadīptika, Vinayavinnakchaya-티kā, Ānguttara-티kā, Jānātakāra-티kā and Khuddasikkhā-티kā some of which are still unpublished.

It is, however, noted that this work is of little value as an exegetical exposition. Not withstanding the fact that the Milindapañha is replete with problematic terms and abstruse doctrinal points demanding a scholarly examination, the author of the 티kā has chosen only a few of them-thus leaving out several points of interest. It is further observed that, of the 175 pañhas (91 in the Milindapañha and 84 in the Mendaka-pañha) referred to by Cūlābhaya therā, only 110 are briefly touched upon, the remaining 65 pañhas being merely mentioned.

The second part called Jātakuddharaṇaṃ covers nearly three-fourths of the whole 티kā.2 This section is apparently a commentary on those portions of the Milindapañha, which are directly or indirectly related to the appropriate Jātaka. Here, the author is obviously not content with merely tracing the verses and the Jātakas found in the Milindapañha to their original source, but reproduces all the twenty-four Jātakas together with their stories of the present paccupannavatthu and the past-story nidānakathā. The Jātakas quoted in this section seem to have been based on a Burmese recension.

Yet another noteworthy feature in the Jākakuddharaṇaṃ is the corrections effected by the author in some of those Jātakas as they are given in the Milindapañha. Having spotted those errors Cūlābhaya therā further accounts for them by saying that the king Milinda had heard those stories from others. It must be said that he was the first to note those errors and to correct them (for details see, op. cit. p. x.).

Ganthasarūpaṃ or the third section of the 티kā appears to be an appendix to the Milindapañha. “Only a few of these verses are traced to their original sources. Nevertheless, this collection of the quotations is of considerable value in determining the relation of our extant Milindapañha to the version on which this 티kā was based” (op. cit. pp. x-xi). It is, moreover, observed that the numbers given in this section do not tally with those given in the Milindapañha.

1. It may be noted in passing that when it is in favour of his argument Jaini, even provisionally, accepts the fact that the Milinda-티kā was originally written in Sri Lanka and that it was written in Sinhalese characters(cf. ibid, p. xiv).
2. The printed text does not reproduce the Jātaka stories but merely makes reference to Faubšill's edition.
The final section of the sub-commentary is called the *Samkhya-śrūpaṇam* which can also be reckoned as a sort of appendix to the principal work following the pattern of the *Sāṅgītisūttanta* of the Dīgha Nikāya. Several miscellaneous items occurring in the *Milindapañha* are collected here and presented in ascending numerical order. A remarkable feature of the work is the unusually long colophon in prose and verse. The prose passage is directly borrowed from the *Aṭṭhasālinī*.

C. S. Ranasinghe

MINAYEFF, J. P., a versatile Russian Buddhist Scholar of the 19th century who was domiciled in Rangoon, Burma. He spent many years to master Buddhist literature written in Pali and Buddhist Sanskrit and edited and published several texts written in those languages which were not brought to light up to that time. He also translated some of those texts into Russian and English. Some of the Pali and Buddhist Sanskrit texts edited by him were published in the prestigious journal of the Pali Text Society of England (*JPTS*) — They are:

1. *Cha-kesadhātu-vamsa* (The Chronicle of the Six Hair Relics) published in the *JPTS*. of 1885;

2. *Gandhavamsa* (The Chronicle of Buddhist Texts) published in the *JPTS*. of 1886;

3. *Simā-Vivāda-Vinicchaya-Kathā* (The story of the judgment regarding the controversy of boundaries) published in the *JPTS*. of 1887;

4. *Kathāvatthu-Pakaraṇa-Āṭṭhakathā* (The commentary to the treatise *Kathāvatthu*) published in the *JPTS*. 1889;

5. *Prātimokṣaśīra* (translated into Russian) published in the *JPTS*. of 1874;

6. *A Grammar of the Pali Language* (written in French and subsequently translated into English) published in the *JPTS*. of 1884;

8. *Anāgatavamsa*, published in the *JPTS*. of 1886;

9. *Sandesakathā*, published in the *JPTS*. of 1885;

In addition to the above mentioned works he is accredited to have edited or translated several Buddhist Sanskrit works which have been published in other prestigious journals of his day.

Mabel Bode in her *Pali Literature of Burma*, introduction p. 10 says: "...and we ought also to profit by the labours of brilliant and far-seeing scholar Minayeff to whom we owe the discovery and publication (to mention only one work) *Gandhavamsa*-Book history written in Burma, a short but interesting account of the earlier Pali literature of Ceylon and Burma".
